ACCOUNTING (WH) {ACCT}

099. Supervised Study. (C)

Prerequisite(s): Senior standing and 3.4 average in major related subjects.

Intensive reading and study with some research under the direction of a faculty member. Approval from the department Chair must be obtained before registration.

L/R 101. (ACCT620) Principles of Accounting I. (C)

This course is an introduction to the basic concepts and standards underlying financial accounting systems. Several important concepts will be studied in detail, including: revenue recognition, inventory, long-lived assets, present value, and long term liabilities. The course emphasizes the construction of the basic financial accounting statements - the income statement, balance sheet, and cash flow statement - as well as their interpretation.

L/R 102. Principles of Accounting II. (C)

The first part of the course presents alternative methods of preparing managerial accounting information, and the remainder of the course examines how these methods are used by companies. Managerial accounting is a company's internal language, and is used for decision-making, production management, product design and pricing, and for motivating and evaluating employees. Unless you understand managerial accounting, you cannot have a thorough understanding of a company's internal operations. What you learn in this course will help you understand the operations of your future employer (and enable you to be more successful at your job), and help you understand other companies you encounter in your role as competitor, consultant, or investor.

201. Financial Accounting I. (A)

Prerequisite(s): ACCT 101,102.

This course revisits topics covered in Introductory Financial Accounting (Accounting 101), with a focus on the asset side of the balance sheet: Cash, accounts and notes receivable, inventory, marketable securities, equity investments, PPE, and intangibles. The course also covers revenue and expense recognition issues, and generally accepted accounting principles that affect the format and presentation of the financial statements.

202. Financial Accounting II. (B)

Prerequisite(s): ACCT 101,102.

Covers liabilities and equities, especially long-term debt, convertible securities, equity issuance, dividends, share repurchases, employee stock options, pensions, leases, deferred tax, and derivative securities. Related topics covered include computation of diluted earnings per share, disclosure issues, earnings management, and basic financial statement analysis of cash flows.

203. (ACCT703) Cost Accounting. (B)

Prerequisite(s): ACCT 101,102, STAT 101,102 & ECON 001.

Deals with the application of statistical tools and decision models to accounting data for the purpose of facilitating managerial control.

205. (ACCT705) Tax Planning and Administration. (C) Prerequisite(s): ACCT 101,102.

Presents an overview of the Federal tax raising system and its impact on the planning and conduct of business operations. Draws on the disciplines of business finance, public finance, and accounting as they relate to taxation.

208. (ACCT718) Auditing. (C)

Prerequisite(s): ACCT201,202 or equivalent.

This course includes a consideration of the historical role of the auditor and the changing role in today's environment, the organization of the accounting profession, and the new influences of the Public Company Accounting Oversight Board. It introduces the students to generally accepted auditing standards, professional ethics, and legal liability. A conceptual theory of auditing is discussed and practical examples of auditing techniques and work programs are used to illustrate the application of the theory. The course also covers the auditor's reporting standards and uses case studies and professional journal articles as bases for discussion and analysis.

230. (ACCT730) International Accounting and Financial Reporting. (B) Prerequisite(s): Accounting 101, 201, 202.

The objectives of the course are to broaden the students' knowledge of how generally accepted accounting principles and financial reporting practices are developed and applied in the various countries, how the differences in principles and their application impact on financial statements and business decisions, and to enhance the students' ability to think through and

resolve international accounting and financial reporting problems.

Development of international accounting principles (the standard setting process) and comparative practices are reviewed at the outset of the course. This is followed by discussion and resolution of several technical subjects which are used as a vehicle for further consideration of comparative practices. Inflation accounting and foreign currency translation, two subjects of importance to international business, are treated. Subjects of a managerial nature (such as accounting for hedging transaction losses by using forward contracts, management control in the foreign environment, analysis of foreign financial statements, transfer pricing and international taxation) consume most of the second half of the course.

242. Financial Statements: Analysis & Reporting Incentives. (C)

Prerequisite(s): Acct 101 & Fin. 100.

The primary objective of the course is to advance one's understanding of how financial reporting is used in a variety of decision making and contracting contexts (e.g., investment decisions or lending contracts). The course is designed to improve your ability to extract and interpret information in financial statements. It will also enhance your ability to use financial statements as part of an overall assessment of the firm's strategy and valuation.

The course provides both a framework for and the tools necessary to analyze financial statements. At the conceptual level, it emphasizes that preparers and users of financial statements have different objectives and incentives. At the same time, the course is applied and stresses the use of actual financial statements. It draws heavily on real business problems and uses cases to illustrate the application of the techniques and tools.

243. (ACCT743) Accounting for Mergers, Acquisitions, and Complex Financial Structures. (A)

Prerequisite(s): Prerequisites: Acct 101, 102, 201, 202.

The objective of this course is to discuss and understand the accounting that underlies merger, acquisition, and investment activities among firms that result in complex financial structures. Key topics include the purchase accounting method for acquisitions, the equity method for investments, the preparation and interpretation of consolidated financial statements, tax implications of mergers and acquisitions, earnings-per-share considerations, the accounting implications

UNIVERSITY COURSE REGISTER

of intercompany transactions and non-domestic investments, etc.

297. (ACCT897) Taxes and Business Strategy. (C) Prerequisite(s): ACCT 101 and FNCE 101.

The objective of this course is to develop a framework for understanding how taxes affect business decisions. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, organizational form, and mergers and acquisitions. The ultimate goal is to provide a new approach to thinking about taxes that will be valuable even as laws and governments change.

705. (ACCT205) Tax Planning and Administration. (C)

Presents an overview of the Federal tax raising system and its impact on the planning and conduct of business

operations. Draws on the disciplines of business finance, public finance, and accounting as they relate to taxation.

799. Independent Study.

SM 910. Accounting Theory Research. (A)

910/911 Accounting Theory sequence. The course includes an introduction to various analytical models and modeling/mathematical techniques that are commonly used in accounting research as well as related empirical applications.

SM 911. Accounting Theory II. (A)

Accounting 910/911 sequence. Course includes an introduction to various analytical models and modeling/mathematical techniques that are commonly used in accounting research as well as related empirical applications.

SM 920. Fundamental Empirical Accounting Research. (B)

A fundamentals course that covers empirical research design and provides students with a perspective on historically important accounting research.

SM 921. Empirical Research Application I. (B)

Topical course on various specific areas such as research on analysts, regulation, and tax or methodologies such as econometric techniques, event studies, and the use of survey data.

SM 922. Empirical Research Application II. (B)

Empirical topics course in areas such as research on analysts, regulation, and tax or methodologies in econometric techniques, event studies, or the use of survey data.

AFRICAN STUDIES (AS) {AFST}

SM 232. (HIST232) Topics in World History. (C) Staff.

SM 589. (AFRC488, AFST489, HIST489, URBS489) AFRICANS ABROAD. (M)

Undergraduate Courses

SM 018. (ANTH018) Popular Culture in Africa. (C) Barnes. Freshman Seminar.

This course concentrates on popular culture in sub-Saharan Africa. It examines the way people reflect on and represent various aspects and issues in their daily lives, in public media, and through a diverse range of performative and creative outlets. It explores the way cultural traditions are created, promulgated, and perpetuated. It looks at the way popular culture deals with pleasure and pain; identity, difference, and diversity; wealth and power; modernity and history; gender relations; suppression, resistance, and violence; and local versus global processes. In short, popular culture will serve as a window through which to observe contemporary life.

050. (AFRC050, ANTH022, FOLK022, MUSC050) World Musics and Cultures. (C) Arts & Letters Sector. All Classes. Muller.

Draws on repertoires of various societies from Asia, Africa, Europe, and the Americas to examine relations between aesthetic productions and social processes. We investigate musical sounds, cultural logics informing those sounds, and social strategies of performance. Topics may include indigenous music theories, music and social organization, symbolic expressions and musical meaning, gender, religion, and social change.

062. (NELC062) Land of the Pharaohs. (M) History & Tradition Sector. All classes. Silverman, Wegner.

This course provides an introduction to the society, culture and history of ancient Egypt. The objective of the course is to provide an understanding of how ancient Egypt emerged as one of the most successful and long-lived civilizations in world history.

071. (AFRC071, ENGL071) Literatures of Africa and the African Diaspora. (M) Staff.

This course will serve as an introduction to a particularly rich arena of literature in English. It will also help students to begin to understand many of the racial subtexts underlying the culture wars in America, where too often in the full glare of cameras, an anguished voice informs the audience that "as an African, I cannot expect justice in this America." One of the things at work here is the assumption of a common Africa diasporic identity -- understood as an excluded, marginalized subtext of identity in the new world. But why is Africa being involved here? What does "Africa" mean in this new world context? What is the larger global context of these assumptions about "Africa" and what is its history? Does the term "Africa" itself have a history? What is "African literature?" This course, therefore, will also help students not only to ask fundamental questions about identity but also to understand identity as a moving and dynamic construct. How, for example, does "Africa" travel to South America, to the Caribbean Archipelago, and to Europe?

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

L/R 075. (AFRC075, HIST075) Africa Before 1800. (B) History & Tradition Sector. All classes. Babou, Cassanelli.

Survey of major themes and issues in African history before 1800. Topics include: early civilizations, African kingdoms and empires, population movements, the spread of Islam, the slave trade era. Also, emphasis on how historians use archaeology, linguistics, and oral traditions to reconstruct Africa's early history.

L/R 076. (AFRC076, HIST076) Africa Since 1800. (A) History & Tradition Sector. All classes. Cassanelli.

Survey of major themes, events, and personalities in African history from the early nineteenth century through the 1960s. Topics include abolition of the slave trade, European imperialism, impact of colonial rule, African resistance, religious and cultural movements, rise of naturalism and pan-Africanism, issues of ethnicity and "tribalism" in modern Africa.

SM 107. Freshman Seminar: World after 1800. (C) Babou.

168. (GSOC168, NELC168) Women in Ancient Egypt. (M) Houser, Wegner.

This class will examine the many roles played by women in ancient Egypt. From

goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.

190. (AFRC190, ANTH190, HIST190) Introduction to Africa. (A) Society Sector. All classes. Barnes.

During the semester we will focus on people and communities of sub-Saharan Africa and on the ways people represent, reflect on, and react to various aspects and issues in their lives and the institutions which dominate their communities. We will focus particularly on the history, contemporary expression, and inter-relationships among politics, religion, and aesthetic practice. Members of Penn's African Studies community will share their expertise with the class and introduce the University's Africa resources. Texts consist of weekly readings, films, and recordings; and class members will be expected to attend several lectures outside of class.

210. (AFRC210, HIST250, RELS210) African Religions. (M) Ofosu-Donkoh.

Religion permeates all aspects of African life and thought. There is no dichotomy between religion and society in Africa. In this course, we will survey some of the indigenous religions of Africa and examine their nature and their philosophical foundations. We will examine African systems of beliefs, myths, symbols, and rituals, as developed by African societies to express their distinctive worldviews. We will also raise some questions about the interrelationship of religion and culture as well as religion and social change in Africa, and the challenges of modern technologies to African beliefs. We will examine the future of African religions and analyze the extent to which African peoples can hold on to their beliefs in this age of rapid technological and scientific development. Emphasis will be on themes rather than on individual national or tribal religions. Case studies, however, will be limited to West Africa among the Akan of Ghana, the Yoruba of Nigeria, and the Mende of Sierra Leone. Questions are provided (a) to guide and direct reading (b) to form the basis for

discussions (c) as exercises and (d) for examinations.

213. (FOLK203) Introduction to Afro-American Folklore. (C) Staff.

An overview of the major forms of expressive culture developed by Afro-Americans. The course focuses on the continuous development of black cultural expression from slavery to the present, emphasizing the socio-historical context in which they are to be understood and interpreted.

SM 214. (AFRC214, ANTH214) Societies and Cultures of Africa. (M) Kopytoff.

An Introduction to the peoples and cultures of Sub-Saharan Africa, including culture history, languages, traditional social and political structures, and traditional religion.

225. (AFRC225) African Languages and Culture. (C) Mbeje.

The aim of the course is to provide a general perspective on African languages and African linguistics. No background in linguistics is necessary. Students will be introduced to theoretical linguistics-its concepts, theories, ways of argumentation, data collection, data analysis, and data interpretation. The focus will be on the languages and linguistics of Africa to provide you with the knowledge and skills required to handle the language and language-related issues typical of African conditions. We will cover topics related to formal linguistics (phonology/phonetics, morphology, syntax, and semantics), aspects of pragmatics as well as the general socio-linguistic character of African countries. We will also cover language in context, language and culture, borrowing, multilingualism, and cross-cultural communication in Africa.

SM 227. (AFST503, ANTH227, ANTH504) Media in Africa. (B)

This course examines the recent explosion of media culture in Africa, including radio, TV, film, internet, newspapers, and magazines. We look at the media forms themselves, studying the elements of African culture that shape the language, themes, and imagery of African media. We also study the producers of the media: the African journalists, film directors, disc jockeys, actors, and entertainers who construct the African public sphere through talent and ingenuity, drawing on cultural knowledge and social relationships. Finally, we'll turn to African audiences, learning how Africans actively engage with media forms, using media to participate in national conversations on

such topics as gender, environmentalism, corruption, and development. Throughout the course, we study how African media give expression to ethnic, political, and religious identities, playing a crucial role in the construction and interaction of communities within the larger context of nation-states.

SM 230. Law in Africa. (M) Fetni.

This course will deal with law and society in Africa. After surveying the various legal systems in Africa, the focus will be on how and to what extent the countries of Africa "re-Africanized" their legal systems by reconciling their indigenous law with western law and other legal traditions to create unified legal systems that are used as instruments of social change and development. Toward this end, the experiences of various African countries covering the various legal traditions will be included. Specific focus will be on laws covering both economic and social relations. This emphasis includes laws of contracts and civil wrongs, land law, law of succession, marriage and divorce and Africa's laws of International Relations, among other laws. Throughout this course a comparative analysis with non-African countries will be stressed.

SM 231. (AFRC231, CINE246, FREN231) Francophone African Cinema. (M) Moudileno.

This course will introduce students to recent films by major directors from Francophone Africa. While attention will be given to aesthetic aspects and individual creativity, the viewing and discussions will be mostly organized around a variety of (overlapping) themes: History; Tradition/modernity; Urban Life; Gender and sexuality; Politics. Class conducted in French.

SM 233. (FOLK233) African Folklore. (M) Blakely.

Chinua Achebe's metaproverb "proverbs are the palm wine with which words are eaten" highlights the importance of metaphor in the sophisticated rhetoric of Igbo of Nigeria and more widely in Sub-Saharan Africa. Study of proverbs and other African folklore oral genres including folktale, epic, song, praise, poetry, drama, and oratory provides a privileged lens into African worldviews and cultural values: from generational and gender relations to notions of honor, hospitality, and worldly and spiritual power. The course also reveals the vibrancy of African folklore in contemporary life through such topics as editorial poetry in daily newspapers which Tanzanians read avidly; Ivorian women's

coding and decoding of proverbs in popular cloth designs; Lesotho migrant workers' songs of struggle; and Congolese popular theatre portraying proverbial wisdom in television performances.

235. Africans Abroad: Emigrants, Refugees, and Citizens in the New African Diaspora. (M) Cassanelli.

This seminar will examine the experiences of recent emigrants and refugees from Africa, including many now living in the city of Philadelphia and the surrounding region. In addition to reading some of the historical and comparative literature on migration, ethnic diasporas, and transnationalism, students will have the opportunity to conduct research on specific African communities in Philadelphia or elsewhere in North America, Europe, or the Middle East. African emigrants' relations with both their home and host societies will be explored and compared with the experience of other immigrant groups over the past century. Topics include reasons for leaving Africa, patterns of economic and educational adaptation abroad, changes in gender and generational roles, issues of cultural and political identity, and the impact of national immigration policies.

253. (AFRC253, FOLK253, GSOC253, MUSC253) Music and Performance of Africa. (M) Muller. Prerequisite(s): Completion of MUSC 050 is recommended.

This class provides an overview of the most popular musical styles, and discussion of the cultural and political contexts in which they emerged in contemporary Africa. We will cover sub-Saharan and North Africa with a strong focus on southern Africa. Learning to perform a limited range of African music/dance will be a part of this course. No prior performance experience required, though completion of Music 050 is recommended.

257. (AFRC257, PSCI210) Contemporary African Politics. (C) Callaghy.

A survey of politics in Africa focusing on the complex relationships between state, society, the economy, and external actors. It will cover colonial rule, the independence struggle, authoritarian and democratic statecraft, military rule, ethnicity, and class, with special attention to the politics of Africa's interrelated debt, economy, and development crises.

268. (GSOC268) Women and Human Rights in Africa. (A) Staff.

Is violence against women a violation of human rights regardless of whether this

occurs in the private or public spheres? Should rape and sexual violence against women and girls in situations of armed conflict be considered as war crimes? As gender issues have become central to the development dialogue, the linkages between human rights, gender and development have become increasingly apparent and especially relevant for the African continent. A primary goal of the course will be to reveal the gendered nature of human rights issues and the current application of human rights concepts in Africa. It will also illuminate issues affecting women in all facets of life including rape and forced pregnancy during war time and expanding definitions of torture, freedom of expression, violence, internal displacement and refugees as stated in the Universal Declaration of Human Rights. Class assignments will be designed to craft a vision and application of human rights that are truly relevant to women and men alike.

292. (AFRC260, RELS211) African Religious Culture in Nigeria and in the African Diaspora. (M) Staff.

This survey course focuses on African Religious culture in Nigeria and in the African Diaspora. Students will be introduced to the ritual and philosophical foundations of Yoruba religion and culture. This course emphasizes the incorporative nature and heterogeneity of problematize essentialisms and stereotypes about these religious systems by paying close attention to the ethnographic details, historical contexts, philosophical underpinnings, and political developments of each religion in their region. Traditions we will be exploring are: Ifa Divination in Nigeria and Benin; Santeria and Regla de Ocha in Cuba and the United States; Vodoun in Haiti; Shango in Trinidad; Candomble and Umbanda in Brazil; and the American Yoruba Movement in the United States. Course readings will provide a theoretical and informative basis for dealing with the concepts of syncretism, creolization, and ethnicity.

SM 301. (AFRC301) Africa and the African Diaspora. (M) Nwadiora.

This course will take the form of an introductory seminar designed to provide undergraduate students an overview of significant themes and issues focusing on the historical, political and cultural relationships between Africans and their descendants abroad. It will encompass: a review of different historical periods and geographical locations, from Ancient Egypt to modern American, Caribbean and African states; a critical evaluation of social

movements and theories that have developed in the nineteenth and twentieth centuries among scholars of different origins in their attempt to reconstruct Africa as a center and the Diaspora as a specific cultural space; and, an exploration of representations of Africa and the Diaspora in canonical literary works and other forms of fiction like the visual arts.

323. (AFST523, HSOC356) DISCOURSES ON HIV/AIDS IN AFRICA. (C) Mathangwane.

This course focuses on the cultural and social dimensions of HIV/AIDS and its impact on African communities, that is, both the infected and the affected. It considers the different means these communities are using to combat the scourge despite certain cultural beliefs and practices which sometimes hinder diagnosis and treatment. In addition to exploring how Africans characterize the disease in their own languages, we will examine the role of the mass media, folk media, short stories, songs, popular theatre, etc. in educating people about HIV/AIDS reflecting on the strengths and weaknesses of various strategies as reflected in the success rates in some countries but not others.

SM 354. (ARTH354) African Art & Culture. (A) Blakely.

African art is a rich and varied field of study encompassing visual arts and architecture of ancient cultures, regional artistic traditions of diverse peoples in more recent precolonial and colonial times, and contemporary artists, both self-taught and formally trained. The principal goals of this course are to help students to appreciate the scope of this field while also gaining in-depth understanding of particular African artistic traditions, artists, and artworks within specific historical and cultural contexts. Topics to be considered include persistent misconceptions about African art; indigenous African aesthetics; semiotics of African visual signs and sign systems; roles of "traditional artists" in African societies; gender issues in art production, representation, and performance; historical contacts and cultural interaction; spiritual, therapeutic, and political uses of art; and interrelations of visual art with verbal and kinesthetic expression.

SM 390. (AFRC391, FREN390) Survey Francophone Lit. (M) Moudileno.

This class will explore the African city as a site of colonial and postcolonial exchanges by way of twentieth-century European and African representations. We will examine,

on the one hand, the status of the urban located in Africa in European works from the colonial period (fiction and non-fiction including Gide, Leiris, Londres). On the other hand, we will study Africans, focusing on the dreams and transformations involved in the passage from the village to the city to the metropole. Essays from history, sociology, urban studies and postcolonial theory will supplement the study of the primary texts. All readings, class discussions and written assignments in French.

SM 393. (ENGL393) Topics in Literature & Society: South African Literature. (C) Barnard.

467. (NELC467) Introduction to Egyptian Culture and Archaeology. (B) Wegner.

Covers principal aspects of ancient Egyptian culture (environment, urbanism, religion, technology, etc.) with special focus on archaeological data; includes study of University Museum artifacts.

484. (AFST590) Aspects of Kiswahili Language, History, and Culture. (M) Mshomba. Prerequisite(s): Completion of Advanced Swahili I & II.

This course taught in Kiswahili will focus on reading/writing skills and speaking/listening skills as well as structural and cultural information. The course will be structured around three thematic units: History, Politics, and Education. The course will provide resources for the Swahili speaking world: Who are first language speakers and the varieties they speak? How did Swahili spread from the coast to other Swahili speaking areas as far inland as Uganda, Rwanda, Burundi, and Congo. Swahili is a lingua franca and its importance in the spread of religion and in trade movements. Influence of other languages on Swahili and influence of Swahili on local languages will be discussed. Political and educational systems will be discussed as well.

SM 489. (AFRC488, AFST589, HIST489, URBS489) Africans Abroad: Emigrants, Refugees, and Citizens in the New African Diaspora. (M) Cassanelli.

This seminar will examine the experiences of recent emigrants and refugees from Africa, including many now living in the city of Philadelphia and the surrounding region. In addition to reading some of the historical and comparative literature on migration, ethnic diasporas, and transnationalism, students will have the opportunity to conduct research on specific

African communities in Philadelphia or elsewhere in North America, Europe, or the Middle East. African emigres' relations with both their home and host societies will be explored and compared with the experience of other immigrant groups over the past century. Topics include reasons for leaving Africa, patterns of economic and educational adaptation abroad, changes in gender and generational roles, issues of cultural and political identity, and the impact of national immigration policies.

Graduate Courses

SM 511. (HIST511) African Cultural History. (C) Feierman.

This seminar will investigate the cultural history of Africa, with a special emphasis on concepts and methods. Topics include the history of religion before and during the colonial period, the social context of knowledge transmitted orally or through literate means, the circulation of ideas, images, and practices, the changing nature and significance of popular culture and the cultural significance of popular social movements. Examples will be drawn from the whole of sub-Saharan Africa.

514. (AFRC514, ANTH514) Anthropology of Africa. (M) Kopytoff.

African culture history, as inferred from archaeology, linguistic relationships and ethnology. Culture areas of Africa and representative societies; common themes and differences; significance for anthropological concerns.

523. (AFST323) Discourses on HIV/AIDS In Africa. (C) Mathangwane.

This course focuses on the cultural and social dimensions of HIV/AIDS and its impact on African communities, that is, both the infected and the affected. It considers the different means these communities are using to combat the scourge despite certain cultural beliefs and practices which sometimes hinder diagnosis and treatment. In addition to exploring how Africans characterize the disease in their own languages, we will examine the role of the mass media, folk media, short stories, songs, popular theatre, etc. in educating people about HIV/AIDS reflecting on the strengths and weaknesses of various strategies as reflected in the success rates in some countries but not others.

SM 572. (AFRC572, COML575, ENGL586) Topics in African Literature. (M) Barnard.

This course is concerned with the context, and an aspect of the content and form, of African Literature. It is based on a selection of representative text written in English, as well as a few texts in English translation. It involves first, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions established by the writers in their use of old forms and experiments with new.

SM 593. (AFRC593, FREN593) Studies-Francophone Literature. (M) Moudileno.

Topics will vary. Seminar will focus on one area, author, or "problematique" in Francophone studies. Examples of area-focused seminar: The African Contemporary novel or Francophone Caribbean writers. Example of single-author seminar: "The Poetry and Drama of Aime Cesaire. Examples of thematic approach: writing and national identity; postcolonial conditions, autobiography.

SM 620. (ENVS620) Topics on African Environmental Issues. (B) Staff.

Africa is a land of great contrasts and possesses a rich mix of scenic beauty, impressive biodiversity, many cultures, economies and interesting history. Almost completely encircled by water and home to a network of some of the world's largest and longest rivers, Africa is also home to two vast and expanding hot deserts. While Africa contains enormous amounts of mineral wealth, it also has fifteen of the world's least developed countries. Its climate ranges from the harsh extremes in hot deserts to the Arctic Current dominated temperate climate of the southern tip of Africa and the pleasant Mediterranean climate of North Africa.

Africa's remarkable ecological diversity is unique and is an expression of the varied climates in the continent, with camels in Egypt, Goliath frogs (the largest frogs in the world) in Cameroon and the African penguins in Namibia and South Africa. Africa has extensive fertile grasslands and lush equatorial forests, yet many of its people suffer from hunger and starvation. Despite possessing some of the most scenic and pristine landscapes in the world, poor resource management has resulted in serious environmental problems in various parts of Africa, including air and water pollution, deforestation, loss of soil

& soil fertility and a dramatic decline in biodiversity through out the continent.

This course aims to explore Africa's natural environment and the impact of human activities on it. Each semester the course will offer an overview of Africa's environment as it relates to one of the following two topics 1) Water issues; 2) Environmental impact of development projects, natural resource extraction and consumption. Each semester, in addition to analyzing one of the above topics, we will pick a couple of case studies from within the US that can be used to show parallels between some of the issues discussed in the African case studies. The students will be asked to conduct research on a relevant topic in any region in Africa for a paper due at the end of the semester.

SM 628. (HIST628) Africa in the Wider World: Connections, Contexts, Comparisons. (A) Cassanelli.

This seminar is aimed at students of history, culture, literature, and the arts in the Americas, Europe, or Asia, who need to know something about African history and culture for their own research or studies. It is intended to help students identify, analyze, and incorporate selected scholarship on Africa into their particular area or disciplinary specializations. Topics covered include slavery and slave societies; diasporas and migrations, linguistic, religious and cultural transfers and survivals; and issues of identity, assimilation, nationalism, and pan-Africanism. we want to ask: how much African history, culture, language, and social structure do Americanists or other non-specialists need to know to do sound scholarship? What comparative questions should we be asking about Africa, and how can we find and utilize data that is reliable and relevant to our own work.

SM 630. (HIST630, HSSC630) African History: Core Issues of Social Process. (C) Feierman.

This graduate seminar explores the literature of African history while trying to find ways to understand history which happens on unfamiliar social and cultural terrain. The terrain is unfamiliar because the words professional historians use, and the underlying assumptions about social process, show the marks of many generations of writing about Europe. The standard histories, then, are torn between describing events in terms of European social process, in which case they do violence to the history, or finding a historical language which is closer to being locally grounded but unfamiliar to a western audience. In this course we study a

number of core issues of social process. Each one is meant to direct attention to a complex of local social forms, and each is at the heart of a major body of writings of African history. A tentative list of topics includes the following: Oral tradition; knowledge and identity; ecology and ethnicity; forms of local authority and state power; ritual, conquest, and the transformation of political authority; political economy; gender and personal dependency; the ecological history of disease; popular associations and the state; the local bases of nationalism.

SM 650. (HIST650) Topics in African History. (C) Babou.

RELIGIOUS ENCOUNTERS IN AFRICAN HISTORY. The seminar explores the rich history of interactions between followers of African Traditional Religions (ATRs) and the world religions of Islam and Christianity on the continent of Africa, from the 18th to the 20th centuries. We pay particular attention to the religious traditions Africans brought to the encounter with Islam and Christianity and the new meanings they infused into them. Religion is a central dimension of African history not only for earlier eras and world views, but especially in recent times when forces internal and external to the continent are competing for its spiritual, political, and economic control. Islam and Christianity are growing faster in Africa than any other continent. Multiple and hybrid religious identities are being formed everywhere on the continent, driven by the global pull of evangelical Christianity and political Islam and influenced by the global African Diaspora. This course will examine the causes, dynamics, and processes of religious changes in Africa both through the works of scholars who have written about them and through the examination of available primary sources.

SM 701. (AFRC701, ANTH701, ENV5701, HIST701) Graduate Seminar in African Studies. (B) Staff.

Topics vary. Please consult The African Studies Center for details.

SM 705. (AFRC705, ANTH705, FOLK715, GSOC705, MUSC705) Seminar in Ethnomusicology. (A) Muller.

Topics in Ethnomusicology. Spring 2010: Imagining Africa Musically: This seminar considers ways in which scholars write about and imagine the African continent through the lens of musical performance. We will consider a range of writings about Africa as a continent, regionally, and nationally, including north

Africa and the Maghreb through series of themes including: diaspora, cosmopolitanism, gender, spirituality, and as world music. This is a reading and listening intensive seminar.

SM 775. (ENGL775) South African Literature. (M) Barnard.

An advanced seminar in anglophone African literature, possibly including a few works in translation.

African Language Courses

170. (AFRC170, AFST517) Elementary Yoruba I. (A) Awoyale.
Offered through Penn Language Center.

The Elementary Yoruba I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Nigeria and the diaspora/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Yoruba. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content.

Students will acquire the speaking, listening, reading, and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high novice level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Yoruba II course materials.

171. (AFRC171, AFST518) Elementary Yoruba II. (B) Awoyale.
Prerequisite(s): Completion of Elementary Yoruba I, or permission of instructor.
Offered through Penn Language Center.

The main objective of this course is to further sharpen the Yoruba linguistic knowledge that the student acquired in level I. By the end of the course, the student should be able to (1) read, write, and understand simple to moderately complex sentences in Yoruba; and, (2) advance in the knowledge of the Yoruba culture.

180. (AFRC180, AFST580) Elementary Swahili I. (A) Bolger.
Offered through Penn Language Center.

The elementary Swahili I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on East Africa/Africa-related topics. The course emphasizes communicative

competence to enable the students to acquire linguistic and extra-linguistic skills in Swahili. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content.

Students will acquire the speaking, listening, reading, and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Swahili II course materials.

181. (AFRC181, AFST581) Elementary Swahili II. (B) Bolger.
Prerequisite(s): Completion of Elementary Swahili I, or permission of instructor.
Offered through Penn Language Center.

This course continues to introduce basic grammar, vocabulary, and the reading and writing of Swahili to new speakers. During this term, folktales, other texts, and film selections are used to help introduce important aspects of Swahili culture and the use of the language in wide areas of Africa.

185. (AFRC185, AFST585) Elementary Swahili: Accelerated. (C) Staff.
Offered through the Penn Language Center.

240. (AFRC240, AFRC540, AFST540, NELC481) Elementary Amharic I. (A) Hailu.
Offered through Penn Language Center.

The Elementary Amharic I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Ethiopia/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Amharic. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content.

Students will acquire the speaking, listening, reading, and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high novice level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Amharic II course materials.

UNIVERSITY COURSE REGISTER

241. (AFRC241, AFRC541, AFST541, NELC482) Elementary Amharic II. (B) Hailu. Prerequisite(s): Completion of Elementary Amharic I, or permission of the instructor. Offered through Penn Language Center.

Continuation of Elementary Amharic I.

242. (AFRC242, AFRC543, AFST543, NELC483) Intermediate Amharic I. (A) Hailu. Offered through Penn Language Center.

243. (AFRC243, AFRC544, AFST544, NELC484) Intermediate Amharic II. (B) Hailu. Offered through Penn Language Center.

245. (AFST545) Intensive Elementary Amharic I and II. (M) Hailu. Offered through Penn Language Center.

247. (AFRC247, AFRC548, AFST547, NELC583) Advanced Amharic. (C) Hailu. Offered through Penn Language Center.

An advanced Amharic course that will further sharpen the students' knowledge of the Amharic language and the culture of the Amharas. The learners communicative skills will be further developed through listening, speaking, reading and writing. There will also be discussions on cultural and political issues.

270. (AFRC270, AFST529) Intermediate Yoruba I. (A) Awoyale. Offered through Penn Language Center.

271. (AFRC271, AFST532) Intermediate Yoruba II. (B) Awoyale. Offered through Penn Language Center.

280. (AFRC280, AFST582) Intermediate Swahili I. (A) Mshomba. Offered through Penn Language Center.

281. (AFRC282, AFST583) Intermediate Swahili II. (B) Mshomba. Prerequisite(s): Intermediate Swahili I, or permission of instructor. Offered through the Penn Language Center.

284. (AFRC284, AFST584) Advanced Swahili I. (A) Mshomba. Prerequisite(s): AFST 280, LING 280, AFRC 280 or permission of instructor. Offered through Penn Language Center.

This is an advanced Kiswahili course which will engage learners in extended spoken and written discourse. Advanced learners of Kiswahili will listen to, read about, write and speak on authentic video materials, contemporary novels, and newspapers.

They will also participate in various discussions on cultural and political issues.

285. (AFRC285, AFST586) Advanced Swahili II. (B) Mshomba. Offered through Penn Language Center.

370. (AFST587) Advanced Yoruba I. (A) Awoyale. Offered through Penn Language Center.

371. (AFST588) Advanced Yoruba II. (B) Awoyale. Offered through Penn Language Center.

399. Independent Study: Language. (C) Staff. Offered through Penn Language Center.

460. (ANEL460) Middle Egyptian. (E) Silverman.
Introduction to the grammar of Middle Egyptian.

486. Yoruba Language & Culture I. (M) Awoyale. Offered through Penn Language Center.

490. African Language Tutorial I. (C) Staff. Prerequisite(s): Undergraduates must have permission of Language Coordinator. Offered through Penn Language Center.

The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor. The course will provide students with linguistics tools which will facilitate their research work in the target country. Cultural aspects of the speakers of the language will be introduced and reinforced.

491. African Language Tutorial II. (C) Staff. Prerequisite(s): Undergraduates must have permission of Language Coordinator. Offered through Penn Language Center.
Continuation of AFST 490

492. African Language Tutorial III. (A) Staff. Prerequisite(s): Permission of the department. Offered through Penn Language Center.

493. African Language Tutorial IV. (B) Staff. Prerequisite(s): Permission of the department. Offered through Penn Language Center.

494. African Language Tutorial: Advanced I. (L) Staff. Offered through Penn Language Center.

517. (AFRC170, AFST170) Elementary Yoruba I. (A) Awoyale. Offered through Penn Language Center.

This is an introductory course in Yoruba whose goals are to introduce students to the history, geographical location of the people who speak Yoruba, their culture, customs, and traditions; and, to enable students to develop communicative skills through listening, speaking, reading and writing.

518. (AFRC171, AFST171) Elementary Yoruba II. (B) Awoyale. Offered through Penn Language Center.

The main objective of this course is to further sharpen the Yoruba linguistic knowledge that the student acquired in level I. By the end of the course, the student should be able to (1) read, write, and understand simple to moderately complex sentences in Yoruba; and (2) advance in the knowledge of the Yoruba culture.

529. (AFRC270, AFST270) Intermediate Yoruba I. (A) Awoyale. Offered through Penn Language Center.

532. (AFRC271, AFST271) Intermediate Yoruba II. (B) Awoyale. Offered through Penn Language Center.

540. (AFRC240, AFRC540, AFST240, NELC481) Elementary Amharic I. (A) Hailu. Offered through Penn Language Center.

An introductory course for students with no previous knowledge of Amharic. Amharic belongs to the southern branch of Hemitto-Semitic languages which is also referred to as "Afrasian." Amharic is the official language of Ethiopia and is spoken by 14 million native Amharas and by approximately 18 million of the other ethnic groups in Ethiopia. The goals of this course are to introduce students to the culture, customs, and traditions of the Amharas. Students will develop communicative skills through listening, speaking, reading and writing.

541. (AFRC241, AFRC541, AFST241, NELC482) Elementary Amharic II. (B) Hailu. Offered through Penn Language Center.

Continuation of Elementary Amharic I.

543. (AFRC242, AFRC543, AFST242, NELC483) Intermediate Amharic I. (A) Hailu.

Offered through Penn Language Center

544. (AFRC243, AFRC544, AFST243, NELC484) Intermediate Amharic I. (B) Hailu.

Offered through Penn Language Center

545. (AFST245) Intensive Elementary Amharic: I & II. (C) Hailu.

Offered through Penn Language Center

546. Intensive Intermediate Amharic I & II. (L) Hailu.

Offered through Penn Language Center

547. (AFRC247, AFRC548, AFST247, NELC583) Advanced Amharic. (C)

Hailu. Offered through Penn Language Center.

An advanced Amharic course that will further sharpen the students' knowledge of the Amharic language and the culture of the Amharas. The learners communicative skills will be further developed through listening, speaking, reading and writing. There will also be discussions on cultural and political issues.

563. (ANEL563) Old Egyptian. (C)

Silverman.

This course is an introduction to the language of the Egyptian Old Kingdom. The grammar of the period will be introduced during the early part of the semester, using Ededl's *ALTAGYPTISCHE GRAMMATIK* as the

basic reference. Other grammatical studies to be utilized will include works by Allen, Baier, Polotsky, Satzinger, Gilula, Doret, and Silverman. The majority of the time in the course will be devoted to reading varied textual material: the unpublished inscriptions in the tomb of the Old Kingdom official Kapure--on view in the collection of the University Museum; several autobiographical inscriptions as recorded by Sethe in *URKUNDEN I*; and a letter in hieratic (Baer, *ZAS* 03. 1077. 1-9).

580. (AFRC180, AFST180) Elementary Swahili I. (A)

Mshomba. Offered through Penn Language Center.

Beginning level of Swahili which provides training and practice in speaking, reading and writing with initial emphasis on speaking and listening. Basic grammar, vocabulary and cultural skills learned gradually with priority on the spoken language. Especially during the second term, folktales, other texts and films will be used to help introduce important aspects of Swahili culture.

581. (AFRC181, AFST181)

Elementary Swahili II. (B) Mshomba. Offered through Penn Language Center.

This course continues to introduce basic grammar, vocabulary, and the reading and writing of Swahili to new speakers. During this term, folktales, other texts, and film

selections are used to help introduce important aspects of Swahili culture and the use of the language in wide areas of Africa.

582. (AFRC280, AFST280)

Intermediate Swahili I. (A) Mshomba. Offered through Penn Language Center.

583. (AFRC282, AFST281)

Intermediate Swahili II. (B) Mshomba. Offered through Penn Language Center.

584. (AFRC284, AFST284) Advanced Swahili I. (C)

Mshomba. Offered through Penn Language Center.

This is an advanced Kiswahili course which will engage learners in extended spoken and written discourse. Advanced learners of Kiswahili will listen to, read about, write and speak on authentic video materials, contemporary novels, and newspapers. They will also participate in various discussions on cultural and political issues.

586. (AFRC285, AFST285) Advanced Swahili II. (C)

Mshomba. Offered through Penn Language Center.

587. (AFST370) Advanced Yoruba I. (A)

Awoyale. Offered through Penn Language Center.

588. (AFST371) Advanced Yoruba II. (B)

Awoyale. Offered through Penn Language Center.

**AFRICANA STUDIES
(AS) {AFRC}**

SM 010. (PSCI010) FRESHMAN SEMINAR. (C)

115. (RELS112) Religious Ethics and Modern Society. (C) Staff.

This course is designed to discover Protestant, Catholic, and Jewish ethics, their contribution to the values and practices of the citizenry, as they relate in creative tension, competitive values, or conflicts of interest with contemporary medical, legal, educational, and social questions bearing upon such personal, interpersonal, and social issues as sex, abortion, euthanasia, marriage, divorce, child abuse, civil rights, care of the dying, fetal research, test tube babies, political conscience, war and peace. Students will be able to work through their own understanding of a critical issue through the development of a problem-oriented paper bearing upon the perspectives and teachings of Jewish ethics in relation to an ethical issue, or on an individual Judeo-Christian ethicist in relation to a moral problem.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 437. (PSCI437) Race & Criminal Justice. (M) Gottschalk.

Undergraduate Courses

001. (ENGL071, HIST007, SOCIO27) Introduction to Africana Studies. (C)

Humanities & Social Science Sector. Class of 2010 & beyond. Beavers, Charles, Savage, Ramsey, Shaw, Zuberi.

The aim of this course is to provide an interdisciplinary examination of the complex array of African American and other African Diaspora social practices and experiences. This class will focus on both classic texts and modern works that provide an introduction to the dynamics of African American and African Diaspora thought and practice. Topics include: What is Africana Studies?; The History Before 1492; Creating the African Diaspora After 1500; The Challenge of Freedom; Race, Gender and Class in the 20th Century; From Black Studies to Africana Studies: The Future of Africana Studies.

L/R 002. (SOCIO01) Introduction to Sociology. (C) Society Sector. All classes. Zuberi.

Sociology provides a unique way to look at human behavior and the world. Sociology is the systematic study of the groups and societies in which people live. In this introductory course, we examine and analyze how social structures and cultures are created, maintained, and most importantly, how they affect behavior. The course deconstructs our taken for granted world of social interactions and behaviors and examines what theory and research can tell about human social behavior.

L/R 006. (ASAM006, SOCIO06, URBS160) Race and Ethnic Relations. (C) Charles, Kao, Zuberi. Also offered through the College of General Studies - See CGS Course Guide.

The course will examine how social networks, neighborhood context, culture, and notions of race affect inequality and ethnic relations. The course reviews the studies of ethnic entrepreneurship, urban segregation, labor force participation, and assimilation processes. The course emphasizes how inequality affects ethnic relations as well as the economic and social integration of different groups in society.

SM 011. (SOCIO11, URBS112) Urban Sociology. (M) Staff.

A comprehensive introduction to the sociological study of cities. Topics will include theories of urbanism, methods of research, migration, history of cities, gentrification, poverty, urban politics, suburbanization and globalization. Philadelphia will be used as a recurring example, though the course will devote attention to cities around the U.S. and the world.

SM 018. (AFST018, ANTH018) Popular Culture in Africa. (C) Barnes.

Freshman Seminar. This course concentrates on popular culture in sub-Saharan Africa. It examines the way people reflect on and represent various aspects and issues in their daily lives, in public media, and through a diverse range of performative and creative outlets. It explores the way cultural traditions are created, promulgated, and perpetuated. It looks at the way popular culture deals with pleasure and pain; identity, difference, and diversity; wealth and power; modernity and history; gender relations; suppression, resistance, and violence; and local versus global processes. In short, popular culture will serve as a window through which to observe contemporary life.

SM 041. (SOCIO41, URBS010) Topics in Sociology. (C) Culhane. This course is cross-listed with SOCI 041 (Topics in Sociology) when the subject matter is related to African American or other African Diaspora issues.

Freshman Seminars. Topics vary from semester to semester. A recent topic is "Homelessness and the Urban Crisis."

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

063. (ENGL063) 20th-Century American Literature. (M) Beavers.

This course surveys American literature across the twentieth-century, considering its formal innovations in the wake of modernism, the two World Wars, the Cold War, and postmodernity. Authors treated might included: James, Wharton, Eliot, Pound, Faulkner, Hemingway, Rhys, Galdwin, Ginsberg, Plath, Pynchon, Walcott, and Morrison.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

071. (AFST071, ENGL071) Literatures of Africa and the African Diaspora. (M) Staff.

This course explores an aspect of the literature of Africa and the African Diaspora; specific course topics will vary from year to year.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

L/R 075. (AFST075, HIST075) Africa Before 1800. (B) History & Tradition Sector. All classes. Cassanelli.

Survey of major themes and issues in African history before 1800. Topics include: early civilizations, African kingdoms and empires, population movements, the spread of Islam, the slave trade era. Also, emphasis on how historians use archaeology, linguistics, and oral traditions to reconstruct Africa's early history.

L/R 076. (AFST076, HIST076) Africa Since 1800. (A) History & Tradition Sector. All classes. Staff.

Survey of major themes, events, and personalities in African history from the early nineteenth century through the 1960s. Topics include abolition of the slave trade, European imperialism, impact of colonial rule, African resistance, religious and cultural movements, rise of naturalism and pan-Africanism, issues of ethnicity, and "tribalism" in modern Africa.

077. (FOLK075, MUSC075) Jazz: Style and History. (M) Parberry, Ramsey.

Exploration of the family of musical idioms called jazz. Attention will be given to issues of style, to selected musicians, and to the social, cultural, and scholarly issues raised by its study.

SM 078. (URBS178) Urban University-Community Relations: Faculty-Student Collaborative Action Seminar. (C) Harkavy. Prerequisite(s): Benjamin Franklin Seminar.

One of the seminar's aims is to help students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom and in the West Philadelphia community. Students work as members of research teams to help solve universal problems (e.g., poverty, poor schooling, inadequate health care, etc.) as they are manifested in Penn's local geographic community of West Philadelphia. The seminar currently focuses on improving education, specifically college and career readiness and pathways. Specifically, students focus their problem-solving research at Sayre High School in West Philadelphia, which functions as the real-world site for the seminar's activities. Students are typically engaged in academically based service-learning at the Sayre School, primarily on Mondays from 3 to 5. Other arrangements can be made at the school if needed. Another goal of the seminar is to help students develop proposals as to how a Penn undergraduate education might better empower students to produce, rather than simply "consume," societally useful knowledge, as well as function as life-long societally useful citizens.

079. (ENGL080) Literatures of Jazz. (M) Beavers.

That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We'll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve

visits from musicians and critics, as well as field trips to some of Philadelphia's most vibrant jazz venues.

081. (ENGL081) African-American Literature. (M) Beavers, Davis, Tillet.

An introduction to African-American literature, typically ranging across a wide spectrum of moments, genres, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. Topics vary.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

083. (ENGL083, JWST083) 20th-Century Literatures in Dialogue. (M)

Staff. This course is cross-listed with ENGL 083 (20th Century Literatures in Dialogue) when the course content includes African, African American, or other African Diaspora literatures.

What dialogues have defined and constituted American and other literatures? This course examines critical intersections between different literatures, addressing questions of race, ethnicity, and culture. Previous versions of this course have included such titles as "African-American and Jewish American Literature." Our readings will consider a range of literary interactions, and will take a self-consciously comparative and intertextual approach.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

084. (ENGL084) Theories of Race and Ethnicity. (M) Staff.

The idea of "race" -- broadly defined as the signification of biological and socio-cultural differences as an index of human superiority or inferiority -- has played a crucial role in the literary imagination and is fundamental to studying most literatures in English. This course will examine representations of race in literary practices, and in particular the centrality of such representations to the historical unfolding of communities and nations. How do ideas of race inform and engage with literary forms and genres in a given historical moment, and how does literature in turn address the histories and legacies of racist practices? We will also analyze the connections between questions of race and questions of "ethnicity": what, for instance, is the history of this concept, and what does it mean to designate a body of imaginative writing as an "ethnic literature?"

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

L/R 101. (CINE115, ENGL101, GSOC101) Study of an Author. (C)

Davis.

This is an introduction to literary study through the works of a single author. We will read several works and approach them--both in discussion and in writing--from a range of critical perspectives. The author's relation to his or her time, to literary history generally, and to the problems of performance, are likely to be emphasized.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 103. (HIST104) Freshman Seminar: America after 1800. (C) Staff.

This course is cross-listed with HIST 104 (Freshman Seminar: America after 1800) when the subject matter is related to African, African American, or African Diaspora issues.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

106. (COML104, ENGL104) Study of a Literary Period. (C) Davis.

This is an introduction to literary study through a survey of works from a specific historical period. Some versions will begin with traditional stories or poems, including a sampling of works in translation. Others will focus exclusively on modern and contemporary American short fiction or poetry.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

112. (GSOC114, SOCI112, URBS114) Discrimination: Sexual and Racial Conflict. (B) Society Sector. All classes. Madden.

This course explores the sources of current differences in economic status by race, ethnicity and gender. First, we explore reasons for race, gender and economic differences that are not due to current discrimination. We examine the history of participation in the U.S. economy for various racial and ethnic groups and evaluate whether that history creates differences in current productivity by race and ethnicity. We examine the effects of family decisions about work within the household on gender differences in labor market productivity. Second, we review the economic theories of current discrimination in the labor market. Third,

we use data to test how well the various discrimination and non-discrimination theories explain current labor market patterns. Finally, we review the major national policies on labor market discrimination and evaluate their effectiveness in light of the theoretical and empirical evidence amassed throughout the course.

SM 114. (ENGL113) Poetry Writing Workshop. (A) Beavers. This course is not open to freshmen. Students wishing to take this course must submit a writing sample as part of the selection process.

This workshop is intended to help students with prior experience writing poetry develop techniques to generate poems along with the critical tools necessary to revise and complete them. Through in-class exercises, weekly writing assignments, readings of established poets, and class critique, students will acquire an assortment of resources that will help them develop a more concrete sense of voice, rhythm, metaphor, and the image as well as a deeper understanding of how these things come together to make a successful poem. In addition to weekly writings, students will be asked to keep a journal, and to produce a final portfolio of poems.

117. (RELS117) African American Religion. (C) Butler.

This course is intended as an introduction to movements and figures of African American religion from slavery to the present. Lectures, readings, and discussions will focus on themes related to content and methodology in the study of African American religious history. Guiding themes include the relationship between race and gender; the tension between piety and activity; the ambivalence between mainstream respectability and racial pride; and the interaction between Christianity, lived religions, and alternative traditions.

L/R 120. (SOC1120) Social Statistics. (C) Charles.

This course offers a basic introduction to the application/interpretation of statistical analysis in sociology. Upon completion, you should be familiar with a variety of basic statistical techniques that allow examination of interesting social questions. We begin by learning to describe the characteristics of groups, followed by a discussion of how to examine and generalize about relationships between the characteristics of groups. Emphasis is placed on the understanding/interpretation of statistics used to describe and make generalizations about group characteristics.

In addition to hand calculations, you will also become familiar with using PCs to run statistical tests.

135. (AFST135, SOCI135) Law and Society. (C) Fetni.

After introducing students to the major theoretical concepts concerning law and society, significant controversial societal issues that deal with law and the legal systems both domestically and internationally will be examined. Class discussions will focus on issues involving civil liberties, the organization of courts, legislatures, the legal profession and administrative agencies. Although the focus will be on law in the United States, law and society in other countries of Africa, Asia, Europe and Latin America will be covered in a comparative context. Readings include research, reports, statutes and cases.

SM 146. (ANTH146, GSOC146) Writing Multiculturalism. (M) Sanday.

Diversity is a fact of life, characteristic not only of the US national culture, but of the global culture as well. This course introduces anthropological theories of culture and multiculturalism and the method of ethnography. Students will read and report on selected classic readings. After learning the basic concepts, students will be introduced to the method of ethnography. The core of the course will revolve around "doing ethnography" by writing ethnographic field notes on participant-observation of multiculturalism. Students can use their life experience, home communities, or Penn as their field of observation. The goal of the course is to introduce beginning students to public interest anthropology. No background in anthropology is required.

147. (FOLK106, MUSC146) Studies in African American Music. (M) Ramsey.

Formerly Music 106. This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical tradition. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Specific attention is given to the ways in which black music generates "meaning" and how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments.

160. (LING160) Introduction to Afro-American and Latino English. (A) Labov.

An introduction to the use and structure of dialects of English used by the African American and Latino communities in the United States. It is an academically based service learning course. The field work component involves the study of the language and culture of everyday life and the application of this knowledge to programs for raising the reading levels of elementary school children.

SM 161. (LING161) The Sociolinguistics of Reading: A Service Learning Seminar. (B) Labov. Prerequisite(s): AFRC/LING 160 or permission of instructor.

This course will be concerned with the application of current knowledge of dialect differences to reduce the minority differential in reading achievement. Members will conduct projects and design computer programs to reduce cultural distance between teachers and students in local schools and to develop knowledge of word and sound structure.

168. (HIST168) History of American Law to 1877. (A) Berry.

This course surveys the development of law in the U.S. to 1877, including such subjects as: the evolution of the legal profession, the transformation of English law during the American Revolution, the making and implementation of the Constitution, and issues concerning business and economic development, the law of slavery, the status of women, and civil rights.

169. (HIST169) History of American Law Since 1877. (B) Berry.

This course covers the development of legal rules and principles concerning individual and group conduct in the United States since 1877. Such subjects as regulation and deregulation, legal education and the legal profession, and the legal status of women and minorities will be discussed.

L/R 172. (HIST170) The American South. (C) History & Tradition Sector. All classes. McCurry.

Southern culture and history from 1607-1860, from Jamestown to secession. Traces the rise of slavery and plantation society, the growth of Southern sectionalism and its explosion into Civil War. Midterm, short paper (5-7 pages) and final.

176. (HIST176) Afro-American History 1550-1876. (C) History & Tradition Sector. All classes. Staff. Also offered through the College of General Studies - See the CGS Course Guide.

This course will study the history of African-Americans from their first encounter with Europeans in the 16th century to their emancipation during the Civil War in the U.S. The course focuses on the variety of black responses to enslavement and forced acculturation in the New World. The differences in the slave experiences of various New World countries, and the methods of black resistance and rebellion to the slave system will be investigated. The nature and role of free black communities in antebellum America will be studied.

177. (HIST177) Afro-American History 1876-Present. (C) History & Tradition Sector. All classes. Savage.

A study of the major events, issues, and personalities in Afro-American history from Reconstruction to the present. The course will also examine the different slave experiences and the methods of black resistance and rebellion in the various slave systems.

190. (AFST190, ANTH190, HIST190) Introduction to Africa. (A) Society Sector. All classes. Barnes.

During the semester we will focus on the people and communities of sub-Saharan Africa and on the ways people represent, reflect on, and react to various aspects and issues in their lives and the institutions which dominate their communities. We will focus particularly on the history, contemporary expression, and inter-relationships among politics, religion and aesthetic practice. Members of Penn's African Studies community will share their expertise with the class and introduce the University's Africa resources. Texts consist of weekly readings, films, and recordings; and class members will be expected to attend several lectures outside of class.

SM 205. (HIST204, LALS204) Major Seminar in History: America After 1800. (M) Staff. Department Permission - Permit Required.

This course is cross-listed with HIST 204 (Major Seminar in History: America After 1800) when the subject matter is related to African, African American, or other African Diaspora issues.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 206. (HIST206) Major Seminar of the World after 1800. (C) Babou. Department Permission - Permit Required.

This course is cross-listed with HIST 206 (Major Seminar of the World after 1800) when the subject matter is related to African, African American, or other African Diaspora issues. A frequent topic is "African Intellectual History."

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

209. (AFST209, ARTH209) African Art. (M) Staff.

This selective survey will examine a variety of the circumstances of sub-Saharan African art, ranging from imperial to nomadic cultures and from ancient times to contemporary participation in the international market. Iconography, themes and style will be considered, as will questions of modernity, religious impact, tradition and colonialism.

218. (LGST218) Race, Racism, and American Law. (C) Anderson.

The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include examinations and class discussions.

225. (AFST225) African Languages and Culture. (C) Mbeje.

The aim of the course is to provide an overall perspective on African languages and linguistics. No background in linguistics is necessary. Students will be introduced to theoretical linguistics-its concepts, theories, ways of argumentation, data collection, data analysis, and data interpretation. The focus will be on the languages and linguistics of Africa to provide you with the knowledge and skills required to handle the language and language-related issues typical of African conditions. We will cover topics related to formal linguistics (phonology/phonetics, morphology, syntax, and semantics), aspects of pragmatics as well as the general socio-linguistic character of African countries. We will also cover language in context, language and culture, borrowing, multilingualism, and cross-cultural communication in Africa.

SM 230. (AFRC533, SOCI230) Special Topics in Sociology. (C) Charles, Zuberi. This course is cross-listed with SOCI 430 (Special Topics in Sociology) when the subject matter is related to African, African American, or other African Diaspora issues.

Topics vary. Recent courses offered include "African Urbanization," "Race Relations in American Cities," and "Sociology of the Black Community."

See the African Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 231. (AFST231, CINE246, FREN231) Cinema Francophone. (M) Moudileno.

This course will introduce students to recent films by major directors from Francophone Africa. While attention will be given to aesthetic aspects and individual creativity, the viewing and discussions will be mostly organized around a variety of (overlapping) themes: History; Tradition/Modernity; Urban Life; Gender and Sexuality; Politics. Class conducted in French.

L/R 232. (PSCI231) Race and Ethnic Politics. (M) Gillion.

This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Through the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court ruling, media and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.

235. (SOCI235) Law and Social Change. (C) Fetni.

Beginning with discussion of various perspectives on social change and law, this course then examines in detail the interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and

when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, the laws of the United States and other countries as well as international law, will be studied. Throughout the course, discussions will include real controversies relevant to social change such as civil liberties, gender and the law, and issues of nation-building. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.

253. (AFST253, ANTH253, FOLK253, MUSC253, GSOC253) Music and Performance of Africa. (M) Muller.

This class provides an overview of the most popular music styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be a part of this course. No prior performance experience required, though completion of Music 50 is recommended.

257. (AFST257, PSCI210) Contemporary African Politics. (C) Callaghy, Markovits.

The course will consist of an analytic survey of contemporary politics in the states of sub-Saharan Africa. It will focus on the complex relationships between state, society, economy, and external groups in Africa and will offer a conceptual framework which takes into account an African politics that is highly fluid and personalized and frequently very authoritarian in character. The course will endeavor to provide a synthesis of political, social, and economic analyses, which relate the prevailing tendency toward authoritarianism to the fragmented and rooted yet changing characteristics of African society and economy and to high levels of economic and political dependence on external actors. Particular attention will be paid to Africa's interrelated debt, economic, and development crises.

258. (ANTH227, FOLK259, LALS258, MUSC258) Caribbean Music and Diaspora. (M) Rommen.

This survey course considers Caribbean musics within a broad historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent

in Caribbean contexts--concepts such as post-colonialism, migrations, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course--diaspora. Throughout the course, we will listen to many different styles and repertoires of music, ranging from calypso to junkanoo, from rumba to merengue, and from dancehall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions, but also in relation to our own North-American contexts of music consumptions and production.

SM 276. (ENGL271) Topics In the Literature of Africa and the African Diaspora. (M) Spaces will be reserved for English Majors.

This course explores an aspect of the literature of Africa and the African Diaspora intensively; specific course topics will vary from year to year.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 281. (COML325, ENGL281, GSOC281) Topics in African American Literature. (M) Beavers, Davis, Jackson, Tillet. Spaces will be reserved for English Majors.

In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included "African American Autobiography," "Backgrounds of African American Literature," "The Black Narrative" (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 283. (AFST283, ENGL271) Topics in Anglophone African Literature. (M) Staff.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

294. (ARTH294) African American Art. (M) Shaw.

This course examines over two hundred years of artistic production by and about people of African descent living in the United States from the colonial period through WWII. While focusing primarily on the fine arts, a variety of media and artistic movements will be examined from eighteenth-century colonial portraits and the material culture of slavery to the transatlantic modernism of the early Harlem Renaissance.

SM 301. (AFST301) Africa and the African Diaspora. (M) Staff.

This course will take the form of an introductory seminar designed to provide undergraduate students an overview of significant themes and issues focusing on the historical, political, and cultural relationships between Africans and their descendants abroad. It will encompass: a review of different historical periods and geographical locations, from Ancient Egypt to modern American, Caribbean and African states; a critical evaluation of social movements and theories that have developed in the nineteenth and twentieth centuries among scholars of different origins in their attempt to reconstruct Africa as a center and the Diaspora as a specific cultural space; and, an exploration of representation of Africa and the Diaspora in canonical literary works and other forms of fiction like the visual arts.

SM 303. (ARTH301, CINE300, ENGL294) Undergraduate Seminar. (M) Shaw. Undergraduate Major Preference.

Topic varies. This course is cross-listed with ARTH 301 (Undergraduate Seminar) when the subject matter is related to African, African American, or other African Diaspora issues.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 308. (FOLK310, RELS310, URBS310) Religious Diversity in America. (M) Matter.

This course is cross-listed with RELS 310 (Religious Diversity in America) when the subject matter is related to African, African American, or other African Diaspora issues. A recent topic is "Religious

Diversity and Social Change in West Philadelphia."

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 324. (URBS324) Seminar on Strategies to Reduce Intergroup Tension in Multi-Cultural Settings: West Philadelphia and Penn as a Test Case. (B) Romer, Pouncy.

This action-research seminar explores several social science approaches to reducing intergroup tension, especially in multi-ethnic urban settings. Tools for analyzing tension are reviewed so that students can conduct their own studies of the ethnic and cultural tensions that exist in various local sites (e.g., public schools, nearby neighborhoods, and Penn itself). Students are encouraged not only to increase their understanding of the tensions in their chosen sites but also to suggest policies and interventions that can increase intergroup cooperation.

SM 355. (AFST355) Women and Ritual in Africa. (M) Blakely.

This course will focus on ritual events of Bahemba of eastern Zaire using written, audio, and film texts from the instructor's archive (developed over several years of field research in the region) and ritual events documented by other researchers in west, central, southern, and east Africa. Topics to be considered include how gender roles are constituted and experienced through African ritual, the significance of spirit possession and spirit mediumship to folk practitioners, the aesthetics of African ritual, dimensions of women's ritual power in Africa, and women's ritual leadership through different life cycle stages.

L/R 363. (HIST363) The Civil War and Reconstruction. (B) Staff. Also offered through the College of General Studies - See CGS Course Guide.

This course investigates the major ingredients - political, social, and economic - leading to the sectional crisis and war, analyzes war and leadership on both sides, and explores the major issues of Reconstruction.

SM 371. (ENGL371) Topics in the Literature of Africa and the African Diaspora. (M) Staff. Benjamin Franklin Seminar.

This course explores an aspect of the literature of Africa and the African Diaspora intensively; specific course topics will vary from year to year.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 381. (ENGL381) Topics in African American Literature. (M) Staff.

Benjamin Franklin Seminar.

In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, The Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included "African American Autobiography," "Backgrounds of African American Literatures," "The Black Narrative" (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

390. (AFST390) Debates in African Studies. (B) Staff.

An advanced course which examines current debates about African societies and debates about the study of Africa from a variety of disciplinary perspectives. This course is sponsored by the cooperative Africa Consortium between Swarthmore, Bryn Mawr, Haverford and the University of Pennsylvania and will include students from all four campuses.

SM 391. (AFST390, FREN390) Survey Francophone Literature. (M) Moudileno.

This class will explore the African city as a site of colonial and postcolonial exchanges by way of twentieth-century European and African representations. We will examine, on the one hand, the status of the urban located in Africa in European works from the colonial period (fiction and non-fiction including Gide, Leiris, Londres). On the other hand, we study Africans, focusing on the dreams and transformations involved in the passage from the village to the city to the metropole. Essays from history, sociology, urban studies and postcolonial theory will supplement the study of primary texts. All readings, class discussions and written assignments in French.

399. Independent Study. (C) Consult the Africana Studies Program for instructions. Suite 331A, 3401 Walnut.

A study, under faculty supervision, of a problem, area or topic not included in the formal curriculum.

SM 400. (CINE370) Seminar in African-American Studies. (C) Staff.

Consult the Africana Studies Program for detailed descriptions. More than one seminar may be taken in a given semester. Also offered through the College of General Studies. See CGS Course Guide. Seminars offered in the past have included "Black/Jewish Relations," "The Black Experience in the American Political Economy," "Blacks in American Film and Television," "Black Intellectual Thought," "The Black Family," and "W.E.B. DuBois: Theorizing Race."

SM 405. (HIST405, RELS439, URBS405) Church and the Urban Challenge. (B) Lamas.

Urban development has been influenced by religious conceptions of social justice. Progressive traditions within Judaism, Christianity, Islam, and Buddhism have yielded: (1) powerful critiques of oppression and hierarchy as well as (2) alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of urban development.

SM 431. (AFRC531, AFRC630, SOCI430, SOCI630) Advanced Special Topics in Sociology. (M) Charles, Zuberi.

This course is cross-listed with SOCI 430 (Advanced Topics in Sociology) when the subject matter is related to African, African American, or other African Diaspora issues. Recent courses offered include "Race, Colonialism and Methods" and "Residential Segregation."

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 472. (URBS472) Race and the City: The Origins and Prospects of the Black Underclass. (A) Hershberg.

A minority of African Americans is outside the nation's economic and cultural mainstream and is in real danger of being left behind by whites and the large majority of the black population. Debate persists

over how this group can be measured and even if underclass is an appropriate descriptive term. The course will explore the historic origins of this group and determine the degree to which the underlying causes of its problems are rooted in structural or cultural explanations. These questions are critical for contemporary public policy -- both what needs to be done to produce meaningful changes and the length of time required to bring these about.

SM 480. (URBS480) Liberation and Ownership. (A) Lamas.

Who is going to own what we all have a part of creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about: the ties that bind and those that separate; the creation of community and the imposition of hierarchies; the dream of home ownership and ecological despoliation; dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, and economic injustice, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives, and by focusing on particular global sites, students will assess and refine their views regarding ownership in light of their own social, political, religious, and/or ethical commitments.

SM 485. (HIST485) Topics in African-American History. (C) Staff.

Topics vary.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 488. (AFST489, HIST489) Africans Abroad: Emigrants, Refugees, and Citizens in the New African Diaspora. (M) Babou, Cassanelli.

This seminar will examine the experiences of recent emigrants and refugees from Africa, including many now living in the city of Philadelphia and the surrounding region. In addition to reading some of the historical and comparative literature on migration, ethnic diasporas, and transnationalism, students will have the opportunity to conduct research on specific African communities in Philadelphia or elsewhere in North America, Europe, or the Middle East. African emigres' relations with both their home and host societies will be explored and compared with the experience of other immigrant groups over the past century. Topics include reasons for leaving Africa, patterns of economic and educational adaptation abroad, changes

in gender and generational roles, issues of cultural and political identity, and the impact of national immigration policies.

Graduate Courses**522. (EDUC522) Psychology of the African-American. (B)** Stevenson.

Using the Afro-centric philosophical understanding of the world, this course will focus on psychological issues related to African Americans, including the history of African American psychology, its application across the life span, and contemporary community issues.

SM 529. (HIST529) Readings in African American History to 1900. (C) Staff.

This reading and discussion seminar will review the issues and resulting historical literature on the major transitions in the African American experience from the 16th thru the 19th century.

SM 530. (HIST530) 20th Century Afro-American Historiography. (A) Staff.

This course will study major historical works on African American history for the post-1890 period. Emphasis on intellectual, political, and cultural history, and special attention to current debates about the relevance of this history and race generally to studies and students of United States history.

SM 531. (AFRC431, SOCI430, SOCI530) Advanced Selected Topics. (C) Charles, Zuberi.

This course is cross-listed with SOCI 531 (Advanced Selected Topics) when the subject matter is related to African, African American, or other African Diaspora issues.

Topics vary. Recent topics include "Race, Colonialism and Methods," "Residential Segregation," and "The Demography of Race."

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 533. (AFRC230, LALS530, SOCI230, SOCI530) Advanced Selected Topics in Sociology. (M) Charles, Zuberi.

This course is cross-listed with SOCI 530 (Advanced Selected Topics in Sociology) when the subject matter is related to African, African American, or other African Diaspora issues. Recent courses offered include "African Urbanization" and "Critical Race Theory."

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 545. (EDUC543) Historically Black Colleges and Universities. (A)

Gasman.

Students taking this course will learn about the historical context of HBCUs in educating African Americans, and how their role has changed since the late 1800's. Students will also be expected to connect financial, societal, and/or economic connections between the role of HBCUs past and present. Specific contemporary challenges and success related to HBCUs that will be covered relate to control, enrollment, accreditation, funding, degree completion, and outreach/retention programming. Students will become familiar with HBCUs in their own right, as well as in comparison to other postsecondary institutions.

SM 570. (AFST570, COML573, ENGL570) Topics in Afro-American Literature. (M) Staff.

This course treats some important aspect of African American literature and culture. Topics vary. Consult the Center for Africana Studies for detailed course descriptions. Recent topics of the course have included: "Afro-American Women Writers," "Three Afro-American Writers: Ellison, Gaines and McPherson," "Afro-American Autobiography," and "Afro-American Literature: Black Music Among the Discourses."

SM 587. (ANTH587) Race, Nation, Empire. (B) Thomas.

This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anti-colonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts- past and present- especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony.

SM 593. (AFST593, FREN593) Studies in Francophone Literature. (M) Moudileno.

Topics will vary. Seminar will focus on one area, author, or "problematique" in Francophone studies. Examples of an area-focused seminar: The African Contemporary Novel or Francophone Caribbean Writers. Example of a single-author seminar: The Poetry and Drama of Aime Cesaire. Examples of a thematic approach: writing and national identity, postcolonial conditions, autobiography.

SM 610. (HIST610) Colloquium in American History. (A) Staff.

This course is cross-listed with HIST 610 when the subject matter is related to African, African American, or other African Diaspora issues.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 617. (SOCI617) Theories of Racial and Ethnic Incorporation. (M) Charles.

This course provides an overview of prominent theories of race and ethnicity, and is concerned with 1) Understanding the nature and persistence of race and ethnicity as meaningful social groupings in contemporary American society, an 2) Explaining the social significance of these group identities--that is, how these groupings are related to social stratification, to socio-cultural relations, and to the political and economic dynamics in American society. Special attention will also be given to such topics as immigration and the intersection of gender, race, and class.

SM 624. (SOCI624) Race Relations in American Cities. (M) Staff.

The ethnographic study of race relations in the United States. The social life and culture of urban race relations in the United States will be emphasized, stressing conceptual and methodological issues. Selected ethnographic literature will be read and discussed. Students will be expected to carry out an ethnographic site study.

SM 640. (ANTH640, COMM740, ENGL600, HIST650) Proseminar in Africana Studies. (E) Beavers, Charles, Jackson, Savage, Thomas, Zuberi.

This course focuses on the historical and cultural relationship between Africans and their descendants abroad.

SM 705. (AFST705, ANTH705, FOLK715, MUSC705) Seminar in Ethnomusicology. (A) Muller, Rommen.

This course is cross-listed with MUSC 705 (Seminar in Ethnomusicology) when the subject matter is related to African, African American, or other African Diaspora issues. Recent courses offered include "Reading Women in Jazz," "Popular Music and the Ethics of Style in the Caribbean," "Music and Tourism in the Caribbean," and "Imagining Africa Musically."

SM 706. Introduction to Africa and African Diaspora Thought. (C) Staff.

This course examines the processes by which African peoples have established epistemological, cosmological, and religious systems both prior to and after the institution of Western slavery.

SM 708. Cultural and Literary Theory of Africa and the African Diaspora. (C) Staff.

This course introduces students to the theoretical strategies underlying the construction of coherent communities and systems of representation and how those strategies influence the uses of expressive culture over time.

SM 710. (SOCI702) Political Economy and Social History of Africa and the African Diaspora. (E) Zuberi.

This course provides the opportunity for students to investigate the relationship between the emergence of African peoples as historical subjects and their location within specific geopolitical and economic circumstances.

SM 770. (COML773, ENGL770) Afro-American American Literature. (M) Staff.

An advanced seminar in African-American literature and culture.

SM 771. (FOLK770, MUSC770) Seminar in Afro-American Music. (M) Ramsey.

This seminar treats selected aspects of the history, aesthetics, criticism and historiography of African-American music. Topics will vary each time this course is offered.

SM 798. (SWRK799) Advanced Topics. (M) Staff.

This course is cross-listed with SWRK 799 (Advanced Topics) when the subject matter is related to African, African American, or other African Diaspora issues. A recent topic is "Critical Race Theory."

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

African Language Courses**170. (AFST170, AFST517) Elementary Yoruba I. (A)** Staff. Offered through the Penn Language Center.

This is an introductory course in Yoruba whose goals are to introduce students to the history, geographical location of the people who speak Yoruba, their culture, customs, and traditions; and to enable students to develop communicative skills through listening, speaking, reading, and writing.

171. (AFST171, AFST518) Elementary Yoruba II. (B) Staff. Prerequisite(s): AFRC 170 or permission of the instructor. Offered through the Penn Language Center.

This course continues to introduce basic grammar, vocabulary, and the reading and writing of Yoruba to new speakers.

180. (AFST180, AFST580) Elementary Swahili I. (A) Staff. Offered through the Penn Language Center.

Beginning level of Swahili which provides training and practice in speaking, reading, and writing with initial emphasis on speaking and listening. Basic grammar, vocabulary, and cultural skills learned gradually with priority on the spoken language. Especially during the second term folktales, other texts, and films will be used to help introduce important aspects of Swahili culture.

181. (AFST181, AFST581) Elementary Swahili II. (B) Staff. Prerequisite(s): AFRC 180 or permission of the instructor. Offered through the Penn Language Center.

This course continues to introduce basic grammar, vocabulary, and the reading and writing of Swahili to new speakers. During this term, folktales, other texts, and film selections are used to help introduce important aspects of Swahili culture and the use of the language in wide areas of Africa.

185. (AFST185, AFST585) Elementary Swahili: Accelerated. (C) Staff. Offered through the Penn Language Center.

An intensive beginning level course covering materials in AFRC 180 & 181 emphasizing spoken language and conversational skills. It provides training and practice in speaking, reading, and writing with initial emphasis on speaking and listening. Basic grammar, vocabulary,

UNIVERSITY COURSE REGISTER

and cultural skills are learned gradually through practice in speaking, listening, reading, and writing, with priority on the spoken language. Folktales, other texts, and film selections will be used to help introduce important aspects of Swahili culture and the use of the language in wide areas of Africa.

240. (AFRC540, AFST240, AFST540, NELC481) Elementary Amharic I. (A) Staff. Offered through the Penn Language Center.

The Elementary Amharic I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Ethiopia/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Amharic. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content.

241. (AFRC541, AFST241, AFST541, NELC482) Elementary Amharic II. (B) Staff. Offered through the Penn Language Center.

This course continues to introduce basic grammar, vocabulary, and the reading and writing of Amharic to new speakers.

242. (AFRC543, AFST242, AFST543, NELC483) Intermediate Amharic I. (A) Wogayehu. Offered through the Penn Language Center.

243. (AFRC544, AFST243, AFST544, NELC484) Intermediate Amharic II. (B) Hailu, Wogayehu. Offered through the Penn Language Center.

247. (AFRC548, AFST247, AFST547) Advanced Amharic. (C) Staff. Offered through the Penn Language Center.

An advanced Amharic course that will further sharpen the student's knowledge of the Amharic language and the culture of the Amharas. The learner's communicative skills will be further developed through listening, speaking, reading, and writing. There will also be discussions on cultural and political issues.

270. (AFST270, AFST529) Intermediate Yoruba I. (A) Awoyale. Prerequisite(s): AFRC 171 or permission of the instructor. Offered through the Penn Language Center.

271. (AFST271, AFST532) Intermediate Yoruba II. (B) Awoyale. Offered through the Penn Language Center.

280. (AFST280, AFST582) Intermediate Swahili I. (A) Mshomba. Prerequisite(s): AFRC 181 or permission of the instructor. Offered through the Penn Language Center.

282. (AFST281, AFST583) Intermediate Swahili II. (B) Staff. Prerequisite(s): AFRC 280 or permission of the instructor. Offered through the Penn Language Center.

284. (AFST284, AFST584) Advanced Swahili I. (C) Mshomba. Prerequisite(s): AFRC 282 or permission of the instructor. Offered through the Penn Language Center.

This is an advanced Kiswahili course which will engage learners in extended spoken and written discourse. Advanced learners of Kiswahili will listen to, read about, write, and speak on authentic video

materials, contemporary novels, and newspapers. They will also participate in various discussions on cultural and political issues.

285. (AFST285, AFST586) Advanced Swahili II. (B) Mshomba. Prerequisite(s): AFRC 284 or permission of the instructor. Offered through the Penn Language Center.

540. (AFRC240, AFST240, AFST540, NELC481) Elementary Amharic I. (A) Hailu. Offered through the Penn Language Center.

An introductory course for students with no previous knowledge of Amharic. Amharic belongs to the southern branch of Hemitto-Semitic languages which is also referred to as "Afrasian." Amharic is the official language of Ethiopia and is spoken by 14 million native Amharas and by approximately 19 million of the other ethnic groups in Ethiopia. The goals of this course are to introduce students to the culture, customs, and traditions of the Amharas. Students will develop communicative skills through listening, speaking, reading, and writing.

541. (AFRC241, AFST241, AFST541, NELC482) Elementary Amharic II. (B) Hailu. Offered through the Penn Language Center.

Continuation of Elementary Amharic I.

543. (AFRC242, AFST242, AFST543, NELC483) Intermediate Amharic I. (A) Hailu.

Offered through the Penn Language Center

544. (AFRC243, AFST243, AFST544, NELC484) Intermediate Amharic II. (B) Hailu.

Offered through the Penn Language Center

ANATOMY (MD) {ANAT}

L/L 420. Fundamentals of Human Anatomy. (L) Dr. Neal Rubinstein.

Prerequisite(s): Permission of department.

This course will provide the student with an opportunity to acquire a first-hand knowledge of structural and functional human anatomy. The course will consist of lectures and demonstrations on prosected human cadavers, student dissections of human cadavers, and introduction to various imaging modalities, including CT scans, MRIs, and 3D radiological imaging.

501. Human Anatomy: Head and Neck. (M) Drs Weisel & Teresi (Dir.), Staff.

Prerequisite(s): Permission of instructor; open to graduate and professional students only.

This course in gross anatomy provides the student with an opportunity to acquire a first-hand knowledge of structural and

functional human anatomy. The basic principle of learning is student dissection of the cadaver, supplemented by lectures, conferences, demonstrations, computer software, and independent study. The goals of the course are: to give the student a solid foundation of anatomical knowledge as a background for clinical education/practice or research; to prepare students for future, independent study of anatomy; to prepare students for the physical examination of the patient or research involving analysis of anatomical specimens; and to introduce new applications of gross anatomy for the physician and the biomedical student.

502. Gross Human Anatomy. (M) Drs Weisel & Teresi (Dir.), Staff.

Prerequisite(s): Permission of instructor; open to graduate and professional students only.

This course in gross anatomy provides the student with an opportunity to acquire a first-hand knowledge of structural and functional human anatomy. The basic principle of learning is student dissection of the cadaver, supplemented by lectures, conferences,

demonstrations, computer software, and independent study. The goals of the course are: to give the student a solid foundation of anatomical knowledge as a background for clinical education/practice or research; to prepare students for future, independent study of anatomy; to prepare students for the physical examination of the patient or research involving analysis of anatomical specimens; and to introduce new applications of gross anatomy for the physician and biomedical scientist.

505. Structural Adaptations to Function. (A) Dr Orsini and Staff.

Prerequisite(s): Permission of instructor in Veterinary School.

Veterinary gross anatomy course. The basic principles of mammalian and avian anatomy are studied in a veterinary context. The laboratory periods are given to the dissection of the dog, cat, horse, various ruminants, various laboratory animals, chicken and fish.

**ANCIENT HISTORY
(AS) {ANCH}**

L/R 025. (HIST024, NELC101) Ancient Middle Eastern History and Civilization. (A) History & Tradition Sector. All classes. Staff.

A cultural history of Middle Eastern civilization from the invention of writing to the rise of Islam.

L/R 026. (HIST026) Ancient Greece. (A) History & Tradition Sector. All classes. McInerney.

The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles' Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, "Know Thyself." For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Philip of Macedon, c. 350 BC, concentrating on the two hundred year interval from 600-400 BC.

L/R 027. (HIST027) Ancient Rome. (B) History & Tradition Sector. All classes. Grey.

The Roman Empire was one of the few great world states-one that unified a large area around the Mediterranean Sea-an area never subsequently united as part of a single state. Whereas the great achievements of the Greeks were in the realm of ideas and concepts (democracy, philosophy, art, literature, drama) those of the Romans tended to be in the pragmatic spheres of ruling and controlling subject peoples and integrating them under the aegis of an imperial state. Conquest, warfare, administration, and law making were the great successes of the Roman state. We will look at this process from its inception and trace the formation of Rome's Mediterranean empire over the last three centuries BC; we shall then consider the social, economic and political

consequences of this great achievement, especially the great political transition from the Republic (rule by the Senate) to the Principate (rule by emperors). We shall also consider limitations to Roman power and various types of challenges, military, cultural, and religious, to the hegemony of the Roman state. Finally, we shall try to understand the process of the development of a distinctive Roman culture from the emergence new forms of literature, like satire, to the gladiatorial arena as typical elements that contributed to a Roman social order.

SM 113. (CLST113) INTRO GREECE&ROMAN HIST. (A)

145. (CLST145) The Roman Empire. (M) Grey.

"They create a desert and call it peace," wrote Tacitus in describing the response of the conquered to Rome's power, but the Roman Peace also brought with it other, less dramatic changes. In this class we will concentrate on the experience of Roman culture. What was it like to be a Greek exslave and millionaire living in Rome in the age of Nero? How were the Gallic chieftains made into Roman senators? What was the Roman governor of Asia Minor expected to do when the provincials wanted a new aqueduct? We will break the Roman Empire down into a series of vignettes, using literature and archaeology to supply us with the material for a fresh look at Roman Society. What emerges is a culture more diverse, more flexible and more tolerant than is usually recognized.

150. (CLST151, HIST152) Hellenistic History: from Alexander the Great to Cleopatra. (M) McInerney.

The Hellenistic Age corresponds broadly to the three hundred year period from the career of Alexander the Great (354-324 BC) until the defeat of Antony and Cleopatra at the Battle of Actium (31BC). This was a period during which the world of the Greeks underwent extraordinary and far-reaching changes, as Greek culture was established as far afield as northwestern India, central Asia and Egypt. This class is about those changes, and attempts to evaluate the nature of Hellenism.

SM 190. (CLST190) Alexander the Great and the Growth of Hellenism. (C) Staff.

By the time he died in 323 BC at the age of 33, Alexander had conquered most of the known world and had transformed forever the shape of politics and culture. His legacy is an enduring one, since the year of his death marks a transition from the old

Greek city state to what has been called a Hellenistic (i.e. hellenized) world in which, arguably, we are still living. This course will take an interdisciplinary approach to this period by examining its history, social organization and beliefs, literature and art. We shall also explore the glamorous myths that have surrounded Alexander from his own day to the present. Our aim will be to separate fact from fiction and to determine the significance of Alexander not only for the fourth century but also for ourselves who have inherited from the world he created certain values and assumptions about politics, art, cultural diversity and diffusion, and the place of human beings in the universe.

195. (CLST195, EALC005) Worlds Apart: Cultural Constructions of "East" & "West". (M) Humanities & Social Science Sector. Class of 2010 & beyond. LaFleur/McInerney.

Multiculturalism increasingly characterizes our political, economic, and personal lives. This course will focus on real and perceived differences between the so-called "East" and "West". Taking a case study approach, we shall read and compare literary materials from classical Greece and Rome, a major source of "Western" culture, and Japan, an "Eastern" society. Through analysis of these texts, we shall explore some of the concepts, values, and myths in terms of how "East" and "West" define themselves and each other: e.g. gender, sexuality, rationality, religion, society, justice, nature, cultural diffusion, work, leisure, life, and death. Readings will include selections from Greco-Roman and Japanese myths, poetry, drama, essays, history, and philosophy. Class format will be lecture with opportunity for questions and discussion. Grading will be based on midterm and final examinations, a short paper, and class participation. No prerequisites.

SM 306. (CLST306) Greece Under Roman Empire. (M) McInerney.

"Greece, the captive, took her savage victor captive" runs the famous line from the Roman poet Horace. Traditionally the complex relationship between Greece and Rome has been seen from the Roman point of view, emphasizing the changes in Roman culture as a result of Rome's contact with the Greeks. This class takes a different approach, considering the impact on Greece. We will use the results of archaeological survey and excavation to chart the economic transformation of Greece, especially in relation to the Roman colony at Korinth. This will involve examining changes in land distribution, the

growth of road networks, and the increase in large public works such as theatres, aqueducts and baths. We will also use writers such as Dio Chrysostom and Pausanias to consider the effect on the institutions of the traditional Greek city-state of being incorporated into a single province, Achaia. We will read some of the ancient novels, such as Longus' *Daphnis and Chloe*, as well as the essays of Plutarch. There are many avenues into the past, and the particular richness of our sources for Roman imperial history makes it possible for us to approach Greece from a variety of perspectives.

SM 311. (CLST311) DISASTER ANC MED WORLD. (M)

SM 312. (CLST312) Writing History in Greece and Rome. (C) Staff.

What constituted history in ancient Greece and Rome? What claims to knowledge claims to knowledge did history make, and how did these differ from other forms of knowledge? How did historians envision their task, and how did they go about performing it? We will read the works of the major Greek and Roman historians in translation in an attempt to answer those questions. Other issues to consider include the origins and development of historical writing, the place of history within the ancient literary tradition, and the similarities and differences between the ancient and modern practice of history.

SM 314. (CLST314, HIST314) Roman Law and Society. (M) Staff.

Roman magistrates, emperors, jurists, and lawyers developed many of the fundamental legal principles that have remained at the basis of our modern legal systems. This course will introduce the students to the principal sources of the Roman law, to the nature of legal actions and trial procedures (for both civil litigation and criminal prosecution), and also to the main institutions of the legal system. There will be strong emphasis on the basic principles and norms of the Roman law itself. The main areas of the civil law that will be dealt with in detail will include the law of persons, succession, obligations (including contracts and damage), delicts and 'crimes'. The application of the law in social contexts will be studied by the consideration of historically documented cases such as a murder trial, a dispute over a sale, and divorce proceedings. The analysis of model cases will also be an important part of each student's involvement in the class.

SM 319. (CLST319) Periclean Athens. (B) Staff.

Athens in the 5th century BC witnesses a cultural flowering of extraordinary power and importance for Western culture. In this class we will examine the achievements of Athens in its Golden Age, beginning with the Persian Wars, seminal events that saw the Greeks defeat the numerically superior Persians. In the generation that followed, Athens rapidly transformed the alliance of Greek states dedicated to taking the war back to Persia into an Aegean empire, dominated by the Athenians and their fleet. At the same time, this dramatic in power and prestige was accompanied by the growth of full participatory democracy. We examine the daily working of that democracy, asking how an Athenian was trained for citizenship. What did democracy mean in practice? What did freedom and autonomy mean to a society that relied on slaves and was ruthless in its treatment of its subject? In order to answer these questions we juxtapose the breathtaking accomplishments of the Athenians, in fields such as philosophy, tragedy, comedy, sculpture and architecture, with the exclusion of women from public life, the torture and abuse of slaves, and the execution of other Greek populations.

We will follow them from the height of their power to defeat at the hands of the Spartans. The picture that emerges is a portrait of a complex people and a complicated culture. Restless, adventurous, sophisticated, crude, pious, the Athenians are a people whose culture has a special significance for us. The ties between us are not casual, but deeply meaningful.

323. (CLST323, HIST334) Greek World After Alexander the Great. (M) McInerney.

This class is designed as a detailed investigation of the world created by Alexander the Great. We will cover the three hundred year period known as the Hellenistic Age from the career of Alexander the Great (354-323 BC) until the defeat of Antony and Cleopatra at the Battle of Actium (31 BC). This was a period during which the world of the Greeks underwent extraordinary and far-reaching changes, as Greek culture was established as far afield as northwestern India, central Asia and Egypt. In the same period kingdoms controlled by Alexander's Successors used Greek culture to define their rule, establishing a Greek culture of the elite in regions which previously had been dominated by the Persians. As Greek and non-Greek worlds collided, a new interpretation of Greek

culture emerged, giving rise, among other things, to universities and professional schools, state subsidized health care, triumphalist architecture, the heroization of the noble savage, coinage with royal portraits, the deification of men and a multitude of other social, artistic and political forms familiar to us. It was an age of radical change, dislocation, as Greek populations colonized regions previously unknown to them.

398. Honors Thesis. (C) Staff.

This course is taken in the spring of the senior year by students admitted to the honors thesis program for the Ancient History major. For policies see the Classical Studies department website.

399. Independent Study. (C)

This course is taken by students doing independent work with a faculty advisor. Students admitted to the honors thesis program typically enroll in this course in the fall of the senior year, followed by CLST 398 in the spring. For policies see the Classical Studies department website.

499. Independent Study. (C)

510. (LATN510) Latin Historical Documents. (M) Staff.

The analysis of non-literary Latin texts from antiquity preserved on various types of permanent media, mainly stone and metal, is the primary concern of the discipline of Latin epigraphy. Such texts, which have been recovered in hundreds of thousands, constitute one of the most important sources of data for the modern-day historian of Rome. The student will be introduced to the conventions of editing and reading epigraphical texts, and to the major collections of Latin inscriptions. The seminar will then concentrate on different types of documents in order to understand their formatting and style, as well as the kinds of historical evidence that can be derived from them. Public and private inscriptions, from the decrees of emperors and senatorial careers to personal curse tablets and the simple tombstone epitaphs of the urban poor, will be considered as examples of the range of epigraphical texts available to the modern researcher.

SM 512. Methods in Roman History. Staff.

SM 535. (GREK609, HIST535, LATN609) Problems in Ancient History. (C) Staff.

A separate topic is offered in either the history of Ancient Near East, Greece or Rome.

SM 536. (ARTH521) Colloquium in Greek, Roman or Near Eastern History. (M) Staff.

Various topics and aspects are presented in the history of Greece, Rome and the Ancient Near East.

SM 601. (AAMW601, CLST601) Archaeology and Greek History. (C) Staff.

SM 602. Athenian Economy. (M) Cohen.

This course will examine the material and social culture of classical Athens. Through a close reading of original sources (primarily court presentation and comic productions) and through the evaluation of modern studies, we will seek to understand the societal, familial, economic, religious and sexual dimensions of the Athenian life, and to evaluate the alleged dictorial dominance of this society by the small minority of male "citizens." The class will deal with such topics as the legal, social and financial position of wealthy slaves and business women; the clandestine economy of tax evasion and bank fraud; the political and economic content of male and female prostitution.

The entire seminar will study certain core materials, and individual students will report on selected subjects. Admission is open to those with a reading knowledge of ancient Greek and/or some expertise in social science discipline broadly-defined (such as history, gender studies, economics, anthropology or law).

SM 611. (GREK611) Greek Epigraphy. (M) Staff.

An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.

SM 616. (CLST616) Ancient Economies. (C) Grey.

Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his *The Ancient Economy* have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

SM 620. Power, Money, & Gender in Ancient Athens. (M) Cohen.

This course will examine if and how "power" --- the manifold aspects of control, command and influence in a society --- transcended political arrangements in classical Athens, and manifested social, economic and sexual dimensions. Through a close reading (in Greek or English, as students prefer) of Athenian court

presentations and comic material and through the evaluation of modern studies, we will seek to understand the social, economic, and sexual dimensions of Athenian life. The class will deal with such topics as the alleged dictorial dominance of Athenian life. The class will deal with such topics as the alleged dictorial dominance of Athenian society by the small minority of male "citizens,;" the legal, social and financial position of wealthy slaves and business women; the clandestine economy of tax evasion and bank fraud; the context and functioning of male and female prostitution. The entire seminar will study certain core materials, and individual participants will report on selected subjects.

645. (ANTH645) Economics and Ancient Trade. (M) Staff.

This course will examine theoretical and empirical frameworks for pre-modern forms of exchange. We will focus on substantist and formalist economic theories and will consider the archaeological evidence for such phenomena as barter, gift exchange, administered economies, markets, local exchange, and long distance overland and maritime trade. Our goal is to develop mid-range models for reconstructing ancient economies. The course will emphasize but not be limited to complex societies of the New and Old World.

SM 721. (AAMW721, ARTH721) Seminar in Greek Architecture. (M) Haselberger.

Topic varies.

999. Independent Study. (C)

ANTHROPOLOGY (AS) {ANTH}

L/R 001. Introduction to Archaeology. (C) History & Tradition Sector. All classes. Staff.

An introduction to the history, concepts, and methods of the anthropological study of ancient peoples using archaeological illustrations to indicate the relationships of archaeological interpretations with cultural and physical anthropology.

L/R 002. Introduction to Cultural Anthropology. (C) Society Sector. All classes. Staff.

An introduction to the study of culture and human institutions, how they change, and their role in both literate and nonliterate societies.

L/R 003. Introduction to Human Evolution. (C) Living World Sector. All classes. Monge or Fernandez-Duque.

How did humans evolve? When did humans start to walk on two legs? How are humans related to non-human primates? This course focuses on the scientific study of human evolution describing the emergence, development, and diversification of our species, *Homo sapiens*. First we cover the fundamental principles of evolutionary theory and some of the basics of genetics and heredity as they relate to human morphological, physiological, and genetic variation. We then examine what studies of nonhuman primates (monkeys and apes) can reveal about our own evolutionary past, reviewing the behavioral and ecological diversity seen among living primates. We conclude the course examining the "hard" evidence of human evolution - the fossil and material culture record of human history from our earliest primate ancestors to the emergence of modern *Homo sapiens*. You will also have the opportunity, during recitations, to conduct hands-on exercises collecting and analyzing behavioral, morphological, and genetic data on both humans and nonhuman primates and working with the Department of Anthropology's extensive collection of fossil casts.

L/R 004. The Modern World and Its Cultural Background. (B) Humanities & Social Science Sector. Class of 2010 & beyond. Urban. Also fulfills General Requirement in Society for Class of 2009 and prior.

An introduction to the diversity of cultures in the world. This course is divided into

two parts. The first briefly examines different models of understanding human diversity: ethnicities, religions, languages, political forms, economic structures, cultures, and "civilizations". Students will learn to think about the world as an interconnected whole, and know the significance of culture on a global scale. The second part is an introduction to area studies, in which we undertake a survey of the different regions of the world. This semester we focus on Asia, specifically East Asia, Southeast Asia, Central Asia, and South Asia. We conduct the survey paying attention to the different aspects of human diversities, which we examine in the first part of this course. Students will acquire a greater appreciation and understanding of cultural differences in the more comprehensive social context.

L/R 012. (HIST012, SOCI012) Globalization And Its Historical Significance. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Spooner.

This course uses data from what is actually happening in the course of the semester to introduce the concepts and methods of the social sciences. It analyzes the current state of globalization and sets it in historical perspective. We will focus on a series of questions not only about actual processes but about the growing awareness of them, and the consequences of this awareness. In answering these questions, we will distinguish between active campaigns to cover the world (e.g., Christian and Muslim proselytism, opening up markets, democratization) and the unplanned diffusion of new ways of organizing trade, capital flows, tourism and the Internet. The body of the course will deal with a series of analytical types of globalization, reviewing both the early and recent history of these processes. The overall approach will be historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world. The course is taught collaboratively by two social scientists: an anthropologist and a sociologist, offering the opportunity to compare and contrast two distinct disciplinary points of view. It seeks to develop a concept-based understanding of the various dimensions of globalization: economic, political, social, and cultural.

At the end of the course students will understand the significance of globalization in the modern world, and be able to compare the approaches of different social sciences.

SM 018. (AFRC018, AFST018) Popular Culture in Africa. (C) Barnes. Freshman Seminar.

This course concentrates on popular culture in sub-Saharan Africa. It examines the way people reflect on and represent various aspects and issues in their daily lives, in public media, and through a diverse range of performative and creative outlets. It explores the way cultural traditions are created, promulgated, and perpetuated. It looks at the way popular culture deals with pleasure and pain; identity difference, and diversity; wealth and power; modernity and history; gender relations; suppression, resistance, and violence; and local versus global processes. In short, popular culture will serve as a window through which to observe contemporary life.

SM 032. (LALS032) The Rise and Fall of Ancient Maya Civilization. (M) Staff. Freshman Seminar.

The civilization of the ancient Maya, which flourished between approximately 1000 B.C. and the Spanish Conquest of the sixteenth century A.D. in what is now southern Mexico and northern Central America, has long been of wide public interest. The soaring temples of Tikal, the beautiful palaces of Palenque, the sophisticated carved monuments and sculpture, and the complex writing, astronomical, and mathematical systems of this pre-industrial civilization have been widely photographed and written about. However, revolutionary advances in archaeological research which have provided important new data about the farmers and craftspeople who supported the great Maya rulers, and the decipherment of Maya hieroglyphics writing over the past two decades have led to the overthrow of the traditional model of Lowland Maya civilization and the growth of new understandings of the development of Lowland Maya civilization, the rise of urban states, and the successful adaptation to a difficult and varied tropical environment. Through a series of case studies, this seminar will examine the research that has led to these new insights and will evaluate the exciting new models of Maya civilization and its achievements that have emerged in recent years.

SM 086. Desire and Demand: Culture and Consumption in the Global Marketplace. (M) Diggs-Thompson. Freshman Seminar.

The goal of this seminar is to understand and to investigate both historical and contemporary issues related to a culture of consumption. What cultural and socio-economic factors have led present day

patterns of consumerism? When, why, how did issues of consumer confidence, and measures of consumer spending become critical and integral to the health of global economies? What are some of the characteristics of mass and conspicuous consumption in the Americas and abroad? And, during periods of national and household austerity can and will contemporary patterns of consumption change? Course readings are interdisciplinary anthropological, historical, social, economic and political - and require a critical examination of global/local linkages. Discussions and research assignments incorporate topics such as popular culture, consumer culture, globalization, off-shore production, economics, marketing, consumer finance and the real estate market. In order to better understand the link between consumption and production factors an overarching question is what is the relationship between outsourcing and/or offshore production and modern consumption?

Group and individual projects will investigate issues pertaining to gender and consumption, class/race/ethnicity and consumption, urban re-gentrification and - after decades of flight to the (mall dominated) suburbs - the continuation of return urban migration to major cities in the United States and throughout the world. We will use as our laboratory the city of Philadelphia, observing and analyzing the consumer desires of its diverse population.

100. (ANTH654, NELC281, NELC681, SAST161) Topics In Anthropology and the Modern World: Afghanistan, Iran, Pakistan. (B) Spooner.

This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.

102. (ANTH692) American Civilization: The 20th Century. (C) History & Tradition Sector. All classes. Hammarberg.

This course covers the changing society and culture of the United States during the 20th century. It begins with American regionalism in 1900 and traces the rise of mass culture and economic depression in the period from WWI through WWII, followed by the changing conflicts of idealism, realism and popular culture to the

end of the Cold War, the rise of the internet, and the new problems posed by 21st century globalism. The course will emphasize the discussion and analysis of primary source materials, employing material culture, texts, and film as forms of evidence. The concept of culture enables us to treat the changing cultural context as the "natural" environment of Americans during the 20th century.

104. Sex and Human Nature. (B)

Living World Sector. All classes. Valeggia/Fernandez-Duque.

This is an introduction to the scientific study of sex in humans. Within an evolutionary framework, the course examines genetic, physiological, ecological, social and behavioral aspects of sex in humans. After providing the basic principles of evolutionary biology, the course will examine the development of sexual anatomy and physiology. How is sex determined? How is orgasm achieved? Why do girls and boys develop sexually at different ages? The role of ecology and social life in shaping human mating patterns will be evaluated through the use of ethnographies and cross-cultural materials on a variety of human cultures. Does everybody have sex the way we do? Why marry? Are there biological bases for love? Why do we experience jealousy? Finally, topics relevant to human sexuality today will be discussed, such as recreational sex, contraception, and sexually transmitted diseases. Examples are drawn primarily from traditional and modern human societies; data from studies of nonhuman primates are also considered.

105. Human Adaptation. (C) Staff.

Prerequisite(s): ANTH 003 or BIOL 101 or permission of instructor.

An examination of the methods and techniques of physical anthropology as applied to specific problems of biological variation in man. Emphasis will be upon physical anthropology as a biological science.

106. Anthropological Genetics. (M)

Schurr. Prerequisite(s): ANTH 003.

This course explores the use of genetics to understand human biological variation and evolution. Among the areas of genetics to be explored are dermatoglyphics (fingerprints), craniometrics (skulls and teeth), anthropometrics (body dimensions), simple Mendelian traits, molecular genetics, genetics of complex traits (skin color, height, obesity), population genetics, and disease adaptations.

SM 108. In Search of the Neanderthals. (M) Staff.

This course will outline Neandertal biology, behavior, and current debates over the place of the Neandertals in human evolution. The main goal of the course is an up-to-date understanding about who the Neandertals were, and how they lived, through the examination of paleontological and archaeological data. What did they look like? What did they eat? What sort of weapons did they make? What's this I hear about a cave bear cult? As we do this, we will also explore the history of scientific and popular thought about Neandertals and how it has reflected changes in broader societal attitudes over time. The course will include in-class, hands-on laboratory activities. The reading list will range from selected journal articles to excerpts from popular literature like 'Clan of the Cave Bear.'

SM 115. Anthropology and Philosophy. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Sabloff, P. Academically Based Community Service Course.

Students explore the contributions of anthropology, philosophy, and community service to understanding human nature and human behavior. Within the context of globalization, we will pose basic philosophical questions about the nature of human nature, capitalism, and the forces influencing people's decisions about their own lives. Anthropological accounts (ethnographies) from Asia, Latin America, England, and the USA; excerpts from political philosophers (Rousseau, Smith, Marx, Foucault, Bourdieu, and Freire); and students' first-hand experience volunteering in West Philadelphia will help students reach their own conclusions about these and other globalization issues. Students will use their ABCS (Academically-Based Community Service) experience as an anthropology laboratory, seeing social theory as it operates "on the ground."

116. (AFRC116, ANTH629, LALS116) Caribbean Culture and Politics. (M) Thomas.

This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region's long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and

upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred.

Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.

SM 120. Money in Society and Culture. (M) Staff. Freshman Seminar.

Across history and across cultures, money has profoundly shaped the social world. In its myriad forms and functions, money finds expression as object and idea, as complex technological system and potent psychological symbol. In this course we will consider the meanings that social scientists, cultural critics and popular movements have invested in the objects and practices that surround the use of money in human culture. Topics to be covered include: ideas about the origins and functions of money; the role of money in ancient and contemporary global trading regimes and political formations; diverse and multiple regimes of exchange and money use in different cultures; the impact of money on notions of value, time, social life, and moral order; ritual, magical and symbolic uses of money; and alternate money forms such as community-based currencies and digital/cyber cash. While focusing on objects and relationships associated with economic life, the course will serve as an introduction to basic concepts anthropologists use to think about society, culture and politics. Readings, classroom discussion, and guided research projects will provide the basis for a series of short writing assignments.

121. (NELC103, URBS121) Origin and Cultures of Cities. (A) History & Tradition Sector. All classes. Zettler.

The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the

past and the city in which we live and work today.

122. Becoming Human. (B) Natural Science & Mathematics Sector. Class of 2010 and beyond. Dibble. Also fulfills General Requirement in Society for Class of 2009 and prior.

Human evolutionary studies is a composite product of the fieldwork of both Paleolithic archaeology and human paleontology (or what we refer to as "stones and bones"). This marriage of two subdisciplines of anthropology produces a unique set of data that is intellectually managed and driven by theories within anthropology as a whole and even beyond -- to fields such as biology, psychology, and primate ethology, as we try to understand the origins of language, culture, and our unique physical characteristics. In this course, two archaeologists and one physical anthropologist will jointly discuss and debate the actual evidence of human evolution, describing what the actual evidence is and exploring how far can we take these interpretations.

L/R 123. (COMM110) Communication & Culture. (C) Society Sector. All classes. Agha.

The course looks at varieties of human expression -- such as art, film, language and song -- as communicative practices that connect persons together to form a common culture. Discussion is centered around particular case studies and ethnographic examples. Examination of communicative practices in terms of the types of expressive signs they employ, their capacity to formulate and transmit cultural beliefs and ideals (such as conceptions of politics, nature, and self), and to define the size and characteristics of groups and communities sharing such ideals. Discussion of the role of media, social institutions, and technologies of communication (print, electronic). Emphasis on contemporary communicative practices and the forms of culture that emerge in the modern world.

124. (JWST124, NELC155, RELS024) Archaeology & the Bible. (M) Staff.

The Hebrew Bible (Tanak) and archaeological research provide distinct, and at times conflicting, accounts of the origins and development of ancient Israel and its neighbors. Religion, culture and politics ensures that such accounts of the past have significant implications for the world we live in today. In this course we will discuss the latest archaeological research from Israel, the Palestinian Territories and Jordan as it relates to the Bible, moving from Creation to the

Babylonian Exile. Students will critically engage the best of both biblical and archaeological scholarship, while being exposed to the interpretive traditions of Anthropology as an alternative approach to the available evidence. Open discussions of the religious, social and political implications of the material covered will be an important aspect of the course.

SM 133. (LALS133) Native Peoples and the Environment. (M) Erickson. Freshman Seminar.

The relationship between the activities of native peoples and the environment is a complex and contentious issue. One perspective argues that native peoples had little impact on the environments because of their low population densities, limited technology, and conservation ethic and worldview. At other extreme, biodiversity, and Nature itself, is considered the product of a long history of human activities. This seminar will examine the Myth of the Ecologically Noble Savage, the Myth of the Pristine Environment, the alliance between native peoples and Green Politics, and the contribution of native peoples to appropriate technology, sustainable development and conservation of biodiversity.

136. Culture and Conflict in International Relations. (M) Spooner.

Selected international conflicts will be analyzed from a cultural point of view. This exercise will have the following advantages, each of which will be emphasized throughout the course: (a) students will study a series of internationally important situations from a distinctive academic point of view; (b) they will explore the analytical value of the concept of culture with the rigour with which it has been developed in anthropology, but in application to material not commonly treated by anthropologists, and (c) since anthropologists have difficulty comprehending and analyzing conflict within a cultural framework, they will at the same time be engaging in a theoretically experimental exercise by addressing questions concerning the relationship between conflict and cultural process. The course should be useful both to prospective anthropology majors and all undergraduates interested in the modern world, and will ideally attract students with a wide variety of interests.

139. (NELC182, URBS139) Ancient Civilizations of the World. (M) History & Tradition Sector. All classes. Zettler.

The archaeology of the complex societies of the Old and New Worlds from the end of

the paleolithic up to and including the earliest civilizations.

143. Being Human: Biology, Culture & Human Diversity. (C) Valeggia.

This course is an exploration of human biology from an evolutionary and biocultural perspective. Under this light, the class will provide you with general concepts for a better understanding of what it means to be human. We will see humans as mammals, as primates, and as hominids. We will explore the basics of human genetics, growth & development, nutrition, disease and life history. Biological variation in contemporary and past societies will be reviewed in reference to evolutionary processes.

SM 146. (AFRC146, GSOC146, URBS146) Writing Multiculturalism. (M) Sanday.

Diversity is a fact of life, characteristic not only of the US national culture but of the global culture as well. This course introduces anthropological theories of culture and multiculturalism and the method of ethnography. Students will read and report on selected classic readings. After learning the basic concepts, students will be introduced to the concept of culture and the method of ethnography. The core of the course will revolve around "doing ethnography" through participant/observation in multicultural settings. Students can use their life experience, home communities, or Penn as their field of observation. The goal of the course is to introduce beginning students to public interest anthropology. No background in anthropology is required.

SM 152. Fat and Society. (C) Kauer.

This course is designed to approach a topic of great interest and relevance to people--both men and women--living in the US today. The readings and concepts of fat: physiology, anatomy, body image, body weight, macronutrient, "fatty" foods, ideas about low fat and non-fat, and the morality of fat and thin. Using critical thinking skills from anthropology, students and instructor will explore meanings of fat: their origin, their effects on individuals, and on society. In particular, we will examine ideas taken for granted by society (especially the biomedical culture, as it extends into the community) about the relations between food, fatness, happiness, health and morality. Course material draws broadly from the social sciences and humanities and deals with the biological, biomedical, and socio-cultural aspects of fat in our culture. In saying "fat", we are also implicitly saying "thin", and this course is designed to

delve into the varied discourse on fat/thin, on body/body image, health, and beauty.

SM 168. Genetics and the Modern World. (M) Schurr. Prerequisite(s): ANTH 003; some background in biology and genetics is also helpful, but not required.

Without question, genetic research is making a profound impact on the modern world. It has led to many new and exciting insights in the field of biological anthropology, particularly those subareas concerned with human origins and biological diversity, and is having an equally important influence on the biomedical sciences. Furthermore, through the use of new genetic technologies, the entire human genome has been recently sequenced, giving us an opportunity to better understand the nature of human development, disease and biological variation at the molecular level. This course will explore the new findings in biological anthropology resulting from the use of these genetic methods, as well as examine the social and political implications of these advances. Among the topics to be covered in the course are the Human Genome Project, genetic testing in forensic and criminal cases, race and biological variation, genetic engineering, the genetic basis of disease, and modern human origins.

SM 184. Food and Culture. (M) Kauer, J.

In this seminar we will explore the various relationships between food and culture. Readings will draw from a range of fields aside from anthropology, including psychology, food studies, history, nutrition, and sociology. We will read about and discuss cross-cultural variation in food habits, the meanings underlying eating and food in the United States, and the different ways that individuals construct 'self' and identity through food and eating. Discussion in class will rely on in-depth reading, analysis, and discussion of the assigned texts. There will be a few short writing assignments throughout the class. In addition, students will conduct interviews and then write a paper based on both these and research in the published literature.

190. (AFRC190, AFST190, HIST190) Introduction to Africa. (A) Society Sector. All classes. Barnes.

During the semester we will focus on people and communities of sub-Saharan Africa and on the ways people represent, reflect on, and react to various aspects and issues in their lives and the institutions which dominate their communities. We

will focus particularly on the history, contemporary expression, and inter-relationships among politics, religion, and aesthetic practice. Members of Penn's African Studies community will share their expertise with the class and introduce the University's Africa resources. Texts consist of weekly readings, films, and recordings; and class members will be expected to attend several lectures outside of class.

199. Independent Study in Anthropology. (C) Staff. Prerequisite(s): Junior or senior standing and written permission of instructor and undergraduate chairman. See Department for Advisor.

A study under faculty supervision of a problem area or topic not included in the formal curriculum.

210. Death: Anthropological Perspectives. (M) Monge.

This course will cover the topic of DEATH from a bio/cultural perspective including the evolution of life history (aging and demography - mortality) as well as from an archaeological perspective (prehistory) and early history of mortuary practices. Nothing in the lifespan of humans is so revealing on the interface of culture and biology as is death and the experience of death. This course is not concerned specifically with how an individual experiences death, but in the ways that culture and biology have come to define and deal with physical death and the death experience.

211. North American Archaeology. (M) History & Tradition Sector. All classes. Preucel.

This course provides a basic survey of the archaeology of indigenous peoples of North America from the earliest inhabitants until the arrival of Europeans. The regional coverage includes the continental U.S., northern Mexico, Canada, and the Arctic. Because of time limitations, specific emphasis will be placed on the Midwest, Southwest and Southeast regions of the U.S. Topics include the history of North American archaeology, peopling of the continent, origins and evolution of agriculture, early village life, native architecture, prehistoric art and symbolism, native american cosmology and astronomy, ancient technology, outside contacts and relationships, prehistoric economies and trade, social and political structure, the rise of cultural complexity, and early contacts with Europeans. The focus will be on the archaeological record combined with analogy from ethnohistory and ethnography. This regional survey course is designed for mid-level undergraduates.

There are no formal prerequisites for the course, although it is expected that students have taken ANTH 001.

SM 219. (ANTH719) Archaeology Field Project. (A) Humanities & Social Science Sector. Class of 2010 & beyond. Schuyler. Permission of instructor required. First-hand participation in research project in historical archaeology in Southern New Jersey. Transportation provided by the university. Students will assist in excavations and archival research on local archaeological sites. Class is open to all undergraduates, no previous archaeological experience is required. Attendance will involve Fridays or Saturdays, all day from 8:00 to 5:00 including travel time to the excavations and back to the University Museum. Students enroll for only one day (F or S). Enrollment is limited so specific permission of the instructor is required (Robert L. Schuyler: schuyler@sas.upenn.edu; (215)898-6965; U Museum 412). Course may be repeated for credit and a follow up laboratory course (Anth 220 in the spring semester) will also be available during which the artifacts and documentary sources collected in the fall will be analyzed at the University Museum. Course may be repeated for credit.

220. (ANTH720) Archaeology Laboratory Field Project. (B) Humanities & Social Science Sector. Class of 2010 & beyond. Schuyler.

Follow-up for Anthropology 219. Students may enroll in either or both courses, and in any sequence; however, preference will be given to those previously enrolled in 219 that Fall. Class will meet in three hour sections on Fridays and Saturdays and will involve the analysis of artifacts, documentary records, oral historic sources and period illustrations collected on Southern New Jersey historic sites that Fall. No previous archaeological or lab experience is required. (Robert L. Schuyler: schuyler@sas.upenn.edu; (215) 898-6965; UMuseum 412). Course may be repeated for credit.

229. Underwater Archaeology. (M) Staff.

Archaeological finds are made underwater as well as on land. These underwater finds may offer vivid and unusually complete information on ancient trade patterns and politics, technology, and environments. This course will cover research on shipwrecks and on settlements and landscapes that have been preserved underwater. Attention will be paid to the special challenges and methods of underwater research and to understanding

undersea finds in their local archaeological context.

230. (ANTH633) Forensic Anthropology. (M) Monge.

This course will investigate and discuss the various techniques of analysis that biological anthropologists can apply to forensic cases. Topics include human osteology, the recovery of bodies, the analysis of life history, the reconstruction of causes of death, and various case studies where anthropologists have contributed significantly to solving forensic cases. Discussions will include the limitations of forensic anthropology and the application of DNA recovery to skeletal/mummified materials.

231. (CINE231) Anthropology and the Cinema. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Krasniewicz.

This course analyzes mass-market American films using traditional anthropological theories about symbolism, ritual, mythology, language, metaphor, narrative and discourse. The goal is to think of the movies as significant cultural artifacts that we use to make sense of the world rather than as just forms of entertainment or art. Through a study of popular American films and their related merchandise and cultural influences, we will also see how anthropology can be used to study contemporary cultures.

236. (ANTH636, NELC241, NELC641, URBS236) Iraq: Ancient Cities & Empires. (M) Zettler.

This course surveys the cultural traditions of ancient Mesopotamia, the land between the Tigris and Euphrates Rivers, a region commonly dubbed "cradle of civilization" or "heartland of cities," from an archaeological perspective. It will investigate the emergence of sedentism and agriculture; early villages and increasingly complex Neolithic and Chalcolithic cultures; the evolution of urban, literate societies in the late 4th millennium; the city-states and incipient supra-regional polities of the third and second millennium; the gradual emergence of the Assyrian and Babylonian "world empires," well-known from historical books of the Bible, in the first millennium; and the cultural mix of Mesopotamia under the successive domination of Greeks, Persians and Arabs. The course seeks to foster an appreciation of the rich cultural heritage of ancient Mesopotamia, an understanding of cultural continuities in the Middle East and a sense of the ancient Near Eastern underpinnings of western civilization. No Prerequisite.

L/R 238. (HSOC238) Introduction to Medical Anthropology. (C) Barg.

Introduction to medical anthropology takes central concepts in anthropology -- culture, adaptation, human variation, belief, political economy, the body -- and applies them to human health and illness. Students explore key elements of healing systems including healing technologies and healer-patient relationships. Modern day applications for medical anthropology are stressed.

SM 239. (ANTH501, SARS239, SARS513) Medieval Archaeology of South Asia. (E) Staff.

We will examine the major theoretical, historical and methodological problems of the archaeology of Medieval South Asia. Problems to be addressed include: What are the defining characteristics of medieval economy, society and culture? What material is available for study? Here we will review the archaeological record of the period and will explore the research problems that can be addressed using this material. We will also examine techniques for documenting objects and sites. Finally, we will consider some of the special problems of site preservation and use that affect South Asian sites. Each student will be expected to contribute actively to the class discussions, to prepare an annotated bibliography on some aspect of the course materials, to write several brief (1-2 pages) position papers assigned by the instructor, to research and write a term paper on a topic chosen in consultation with the instructor, and to present this paper in class and lead a brief discussion of its thesis. There will be no exams.

242. World Ethnography. (C) Sanday. Prerequisite(s): ANTH 002.

The aim of this course is to provide an overview of the varieties of human experience in the world culture areas identified by anthropologists. The course will concentrate on regional cultural themes and social organizational processes in each of these areas. Students will read a sample of the classic ethnographies and articles that cover central anthropological topics.

244. The Evolution of Behavior. (M) Staff. Prerequisite(s): ANTH 003 or permission of instructor.

In this course we will look at behavior from an evolutionary perspective, drawing on a variety of studies of both non-humans and humans. In particular, we will explore the extent to which our understanding of human behavior might be enhanced by knowing our evolutionary history. The focus will be on integrating biological and

cultural influences into a more complete and useful understanding of ourselves. We will discuss a number of general topics, including sexuality, diet, cognition, cultural evolution, the evolution of hierarchy, consciousness, cognition, language, and mental illness.

SM 246. (ANTH649) Molecular Anthropology. (C) Schurr.

Prerequisite(s): ANTH 003, Intro to Human Evolution; some background in biology and genetics will also be useful.

In this course, we will explore the molecular revolution in biological anthropology, and, in particular, examine the nature and theory of collecting molecular data to address anthropological questions concerning human origins, evolution and biological variation. Some of the topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations, Neandertal genetics, biogenetics of skin color, disease adaptations, and the Human Genome Project.

247. (ANTH747) Archaeology Laboratory Field Project-Summer. (L) Schuyler.

This course is a summer version of Anth 220 (see that course for full description). In summer more emphasis will be placed on field visitations. Course open to all students; no instructor permission needed. Course may be repeated for credit and students may take both anth 247 and 220. Questions: contact Robert L Schuyler; schuyler@sas.upen.edu; (215) 898-6965; Univ Museum 412/6398.

248. Food and Feasting: Archaeology of the Table. (C) Moore.

Food satisfies human needs on many levels. Anth 248 explores the importance of food in human experience, starting with the nutritional and ecological aspects of food choice and going on to focus on to the social and ritual significance of foods and feasts. Particular attention will be paid to the way that archaeologists and biological anthropologists find out about food use in the past. Contemporary observations about the central significance of eating as a social activity will be linked to the development of cuisines, economies, and civilizations in ancient times. The course will use lectures, discussions, films, food tastings, and fieldwork to explore the course themes. An optional community service component will be outlined the first week of class.

SM 254. (LTAM254) Archaeology of the Inca. (M) History & Tradition Sector. Erickson.

The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn's impressive Museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, ceque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.

258. (CIS 106, LALS268) Visualizing the Past/Peopling the Present. (M) Badler/Erickson.

Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of "ancient, mysterious, and lost" civilizations, and tours often led by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote the past? This class will focus on case studies and critiques of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art.

In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling and augmented reality programs for the new archaeological museum at the UNESCO World Heritage site of Tiwanaku, Bolivia. Although nearly abandoned for a millennium and sacked by treasure hunters, the ruins are considered one of the most important archaeological sites in South America and visited by 45,000 tourists a year. Potential class projects include fly throughs of architectural renderings, simulations of the design and engineering the pyramids, temples, and palaces, modeling of human behavior within architectural settings, and study artifacts in the Penn Museum. The results will be displayed in the Tiwanaku Museum and will serve to introduce visitors to the site.

262. Social Reorganization: Tribes, Communities and Corporations. (M) Spooner.

All human life is organized, unconsciously and culturally, at least (informal organization); in some cases also purposively, or ideologically, for specific objectives (formal organization), either general, as in modern government, or limited, as in business. This course will interrelate anthropological work on social organization with the history of formal organization in a way that will bring anthropologists into dialogue with a variety of sociological interests in organizational forms. A wide variety of ethnographic and sociological examples of formal and informal organization will be described and analyzed within the framework of the emerging modern awareness of the possibility of organizing and reorganizing society and social groups for specific short- and longterm objectives.

SM 273. (HSOC239) Globalization & Health. (M) Petryna.

In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world's poor, remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds.

The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors -- which are increasingly global in nature -- influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethical analyses, and films, and familiarizes students with critical debates on globalization and with local responses to globalizing processes.

280. Language and Culture. (M) Staff.
Prerequisite(s): ANTH 002 or permission of instructor.

Examination of language as a part of culture, as a source of knowledge about other aspects of culture, and as social behavior.

SM 282. (ENGL282) Native American Media. (M)

An intensive study of how Native American cultures have been represented and how they represent themselves in a wide range of media including: ethnographic films, Hollywood films, literature, photography, video, digital archives, and on the world wide web. We live in a historical moment witnessing an extraordinary shift in the role that indigenous people play in curating, preserving, and creatively revising perceptions of their own cultures. With the advent of the digital age, new opportunities for depicting both traditional and contemporary forms of culture open up before us in ways that are at once exhilarating and reason for concern. Intellectual creativity is warmly welcomed.

300. Senior Thesis. (A) Staff. Permit required.

Individual research under faculty supervision culminating in a thesis.

301. Senior Thesis. (B) Jackson. Permit required.

Individual research under faculty supervision culminating in a thesis.

SM 305. (ANTH609, URBS409) Anthropology & Policy: History, Theory, Practice. (B) Sabloff, P.

From the inception of the discipline, anthropologists have applied their ethnographic and theoretical knowledge to policy issues concerning the alleviation of practical human problems. This approach has not only benefited peoples in need but it has also enriched the discipline, providing anthropologists with the opportunity to develop new theories and methodologies from a problem-centered approach. The class will examine the connection between anthropology and policy, theory and practice (or 'praxis'), research and application. We will study these connections by reading about historical and current projects. As an ABCS course, students will also volunteer in a volunteer organization of their choice in the Philadelphia area, conduct anthropological research on the organization, and suggest ways that the anthropological approach might support the efforts of the organization.

SM 310. (HSOC310) Anthropology and Biomedical Science. (M) Staff.

Prerequisite(s): ANTH 243 or permission of instructor. Priority given to Penn Med students.

An examination of the role of anthropology in biomedical research, focusing upon health and disease as outcomes of biocultural systems. Where possible, students will engage in collection and analysis of data and the dissemination of the results.

SM 312. (HSOC321, URBS312) Health in Urban Communities. (A) Johnston.

This course will introduce students to anthropological approaches to health and to theories of participatory action research. This combined theoretical perspective will then be put into practice using West Philadelphia community schools as a case study. Students will become involved in design and implementation of health-related projects at an urban elementary or middle school. As one of the course requirements, students will be expected to produce a detailed research proposal for future implementation.

359. (HSOC359) Nutritional Anthropology. (M) Johnston.

Human nutrition and nutritional status within context of anthropology, health, and disease. Particular emphasis on nutritional problems and the development of strategies to describe, analyze, and solve them. Students will participate in the Urban Nutrition Initiative, an academically based community service project in local area schools.

404. Introduction to the Human Skeleton. (M) Staff. Prerequisite(s): ANTH 003 or ANTH 105.

An introduction to the anatomy and biology of the human skeleton. Laboratory work will be supplemental by lectures and demonstrations on the development structure, function, and evolution of the human skeleton.

SM 411. (GSOC511) Anthropology of Sex and Gender. (M) Sanday.

Prerequisite(s): ANTH 002.

This course surveys psychoanalytic and social theories of sex and gender. We begin with the social organization and construction of sexual expression and engendered subjectivity. The social ordering of power through the mechanisms of sexual behavior and engendered subjectivity is considered next. In addition to reading anthropological analyses of sex and gender in specific ethnographic contexts, students will become familiar

with relevant theorists such as Belsey, Strathern, de Lauretis, Foucault, Freud and Lacan. Short papers will be assigned in which students apply specific theories to interpret case material. Advanced undergraduates and graduate students are welcome.

413. Archaeology of American Southwest. (M) Preucel.

This course provides an overview of the prehistoric cultures of the American Southwest. It interweaves archaeological data, ethnohistorical accounts, ethnographic descriptions, and indigenous perspectives. Topics covered include the history of archaeological research, origins and migrations, agriculture and land use, ideology and belief systems. Special attention will be given to Chaco and Hohokam as contrasting case studies of regional ideological systems with strong connections to indigenous people today. In addition, the course addresses such historical and contemporary questions as colonization, resistance, tourism, and repatriation. Relevant ethnographic and archaeological videos will be shown and the Southwestern collections of the University Museum will be used.

L/L 415. Archaeology of Animals. (M) Staff. Prerequisite(s): ANTH 001 or permission from instructor.

This course introduces the study of animal bones from archaeological sites. Faunal analysis is an interdisciplinary science which draws methods from archaeology, biology, and paleontology. Bones, shells, and other remains yield evidence for the use of animals by humans, and evidence for the biology of animals and for past environments. The course will focus on research approaches to important transitions in human-animal relationships: the development of human hunting and fishing, animal domestication, early pastoralism, and the emergence of market economies in animal products. Class presentations will include lectures and discussion concerning research design and archaeological case material, with additional videos, slidework with field and laboratory equipment, and supervised work identifying and darchaeological materials from Museum collections.

SM 416. (COMM420) Race: Hist, Theory & Practice. (C) Jackson.

This class investigates the history of race as a socially meaningful category come from? Why/how did it develop? What are its various historical and contempomanifestations? In which ways might it be inextricably linked to other

forms of differentiation (such as class, gender, religion, ethnicity, and sexuality)? RaTheory and Practice asks students to think critically about their own political and emotional investments in race as a social/biological fact. We will examine from various fields (in the humanities, the natural sciences and the social sciences) the realities of racial thinking, highlighting the kinds of theories scholars uraces continued relevance (or irrelevance) and specifically scrutinizing some which Media Studies integrates race-based analyses into its research. Race is a complicated construct (considering how much we all think we understand it), one demands careful attention to culture and biology, mythology and history, science and superstition. This course seeks to unpack the power of race through an interdisciplinary engagement with it, using a philosophy of knowledge approach to construction and reproduction as a political and analytical category.

422. Computer Applications in Anthropology. (M) Dibble. May be repeated for credit.

Presentation of computer applications relevant to anthropological field work and analysis, primarily based on micro or portable computers. Focus each year will vary depending on development of new applications and the interests of students.

433. (LALS433) Andean Archaeology. (M) Erickson.

Consideration of culture history of native peoples of Andean area, with emphasis on pre-conquest archaeology of Central Andean region.

SM 437. (GAFL474, HSOC437) Cultural Models & Health. (C) Barg.

There is a great deal of variation among population groups in the incidence of and mortality from most major diseases. Biological and social factors can account for some of this variation. However, there is increasing evidence that behavior- and the cultural models that are linked to health behavior- play an important role, too. Cognitive anthropology is the study of how people in social groups conceive of objects and events in their world. It provides a framework for understanding how members of different groups categorize illness and treatment. It also helps to explain why risk perception, help-seeking behavior, and decision making styles vary to the extent they do. This seminar will explore the history of cognitive anthropology, schema theory, connectionism, the role of cultural models, and factors affecting health decision making. Methods for identifying cultural models will be discussed and

practiced. Implications for health communication will be discussed.

SM 441. (HSOC441) Cross Cultural Approaches to Health and Illness. (M) Barg.

This course will explore the ways that health and illness-related beliefs and behaviors develop within communities. We will identify the forces that shape these beliefs and behaviors and ultimately affect who gets sick, who gets well, and the very nature of the illness experience. Emphasis will be given to the relationships among sociocultural, political and biological factors and the ways that these factors interact to produce the variation that we see in health and illness related attitudes, behaviors and outcomes across cultures.

445. Old World Paleolithic. (M) Dibble. Prerequisite(s): ANTH 001.

Survey of European Paleolithic archaeology including survey of evidence relative to changing habitat, the human fossil finds, the technology, the subsistence activities, and of the social and cultural inferences that have been drawn.

SM 451. (ANTH751) Historical Archaeology. (M) Schuyler.

Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.

454. Quantitative Analysis of Anthropological Data. (C) Dibble.

Problem-oriented approach to application of quantitative methods in anthropological research. Emphasis on formulation of specific problems using real data sets by each student in his or her area of interest. The logic of problem solving using quantitative arguments, the investigation of data reliability and representativeness, and the use of statistical arguments in the presentation of results covered in detail. Use of digital computers as research tools will be an integral part of the presentation.

455. Lithic Analysis. (M) Dibble.

Survey of method and theory of lithic analysis, including experimentation, typology, technology, and microwear, focussing on the behavioral implications of lithic assemblage variability.

468. (LALS468) The Ancient Maya. (M) Sharer. Prerequisite(s): ANTH 001.

Examination of current understanding of Ancient Maya, emphasizing critical review of recent archaeological research and theories.

SM 477. (AAMW477, HSPV577) Molecular Archaeology. (M)

McGovern.

Seminar on a rapidly developing, interdisciplinary field. Application of inorganic and organic chemical techniques for dating and characterizing ancient material remains, and assessing their technological and cultural significance. Middle-range theory--the methodology and limitations of integrating natural scientific data with archaeological hypothesis and reconstruction--is stressed. Topics include geophysical/chemical prospecting of sites, radiocarbon dating and calibration, ceramic provenancing and trade, organic contents analysis of vessels, isotopic dietary studies, and paleogenetics.

Graduate Courses

SM 504. (AFST227, AFST503, ANTH227) Prehistory of North America. (M) Staff.

This course provides a basic survey of the archaeology of indigenous peoples of North America from the earliest inhabitants until the arrival of Europeans. The regional coverage includes the continental U.S., northern Mexico, Canada, and the Arctic. Because of time limitations, specific emphasis will be placed on the Midwest, Southwest and Southeast regions of the U.S. Topics include the history of North American archaeology, peopling of the continent, origins and evolution of agriculture, early village life, native architecture, prehistoric art and symbolism, native American cosmology and astronomy, ancient technology, outside contacts and relationships, prehistoric economies and trade, social and political structure, the rise of cultural complexity, and early contacts with Europeans. The focus will be on the archaeological record combined with analogy from ethnohistory and ethnography. This regional survey course is designed for mid-level and upper-level undergraduates and graduate students. There are no formal prerequisites for the course, although it is expected that students have taken Anthr 001 or its equivalent.

SM 506. (FOLK502, GSOC502) Fieldwork Theory. (C) Hufford, M.

This graduate seminar explores the theory and practice of folkloristic ethnography,

with a focus on sites in West Philadelphia. Through reading and exercises in ethnographic observation and writing, students consider the nature of the ethnographic encounter, its social functions and civic possibilities, and the writings, archives, films, recordings and community events that form its outcomes. Historical and contemporary reading provide an overview of ethnography as it has emerged in the social sciences over the past century, while attention to the techniques and technologies in fieldnotes, sound and video recording, photography, archiving, and sensing will develop students' skills as ethnographic scholars, writers, and community activists. Undergraduates may enroll with permission.

SM 507. (ANTH170) Primate Behavior and Ecology. (M) Fernandez-Duque.

This is a seminar that discusses methodological aspects of conducting field research on non-human primates. After discussions of issues related to the planning and design of field studies, and the proper training in necessary field techniques, students will conduct research on non-human primates. We will then discuss data management and analysis.

SM 509. (ANTH126) Who Were the Phoenicians?. (M) Hafford.

Skilled sailors and merchants or heartless baby killers? Both have been claimed in the ancient accounts for this mysterious people living along the levantine coast. The Phoenicians were a literate culture and they spread the use of the alphabet far and wide, but little of what they wrote survives. Thus, the story passed down to us comes almost entirely from their enemies and rivals. In this course we attempt to understand the Phoenicians by analyzing their archaeological remains in concert with contemporary and later textual accounts. We will delve into Phoenician cities, shipwrecks, artifacts and inscriptions looking at the culture from its humble early beginnings through to its intense colonization of the Mediterranean that was eventually stamped out by the Romans. We will thus analyze Canaanite, Phoenician and Punic life through their crafts, their architecture, their business and their politics.

SM 512. Experimental Lithic Technology. (M) Dibble.

Stone tools provide the most significant source of information about past human behavior and evolution over the past 2.5 million years. But because stone technology has been largely abandoned,

archaeologists often rely on experiments to help them determine how such tools were made and used. This course will review the kinds of experiments most often used (both actualistic and replicative), but will focus on understanding the mechanics of stone flaking through controlled experiments. As part of their study, students will take part in both designing and implementing a series of experiments involving mechanical flaking of molded glass cores, and will apply the results of this research to archaeological specimens.

SM 516. (AFST516, GSOC516, URBS516) Public Interest Workshop. (M) Sanday.

This is an interdisciplinary workshop sponsored by Peggy Reeves Sanday (Dept of Anthropology) with guest speakers from Communication Studies and other fields. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann's call for interdisciplinary cooperation across the University and to the Dept. of Anthropology's commitment to developing public interest research and practice as a disciplinary theme. The workshop will be run as an open interdisciplinary forum on framing a public interest social science that ties theory and action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. Examples of public interest topics to be discussed in class and through outside speakers include the meaning of "public interest," the ways in which the public interest is/is not addressed in the academy, and the relationship of studying the public interest to social justice. This is an academically-based-community-service (ABCS) course.

SM 519. (ANTH309) Lowland Maya: Maya History and Ethnography. (C) Staff. Prerequisite(s): ANTH 002.

Basic survey of historical and ethnographic materials on the Mayan peoples. In addition to readings covering the entire Mayan area, each year one lowland and one highland cultural and linguistic group are treated in depth. Topics include the history of Spanish contact, Colonial era society, 20th century cultural forms (social, economic, religious, etc.), and the contemporary political-economic situation of these peoples.

SM 526. Data Analysis and Presentation in Biological Anthropology. (M) Vallengia.

This is an advanced seminar for graduate and undergraduate students interested in analyzing datasets in biological

anthropology and related fields. Students will work on their own datasets, which they would have collected during the previous academic year or during the summer. We will meet to discuss and work on data organization, analysis, interpretation, presentation, and dissemination. Feedback from the class on each individual project will be an important aspect of this course, which will finish with a final oral presentation (professional meeting style) open to the department.

547. (EDUC547, FOLK527, URBS547) Anthropology & Education. (C) Hall.

An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.

SM 556. (AAMW556) Practicum in Archaeological Field Methods and Problems. (M) Dibble. Prerequisite(s): ANTH 241 or 600 and one archaeology area course or permission of instructor.

Seminar analyzing process of archaeological excavation as a problem of research design and method, stressing excavation as an integrated methodological system of research dealing with data retrieval, storage processing, integration and interpretation leading to final publication. Course intended for students proposing archaeological careers; it will be assumed participants have some practical excavation experience.

SM 557. (AAMW557, LALS557) Seminar in Archaeological Theory and Method: Archaeology of Landscapes. (M) Erickson.

Prerequisite(s): ANTH 241 or 600 and one archaeology area course or permission of instructor.

Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized toward these interpretative ends.

SM 587. (AFRC587, LALS588) Race, Nation, Empire. (B) Thomas.

This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anti-colonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts- past and present-

especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony.

SM 600. Contemporary Archaeology in Theory. (C) Staff. First-year anthropology graduate students.

This graduate seminar addresses contemporary anthropological archaeology and considers the varied ways inferences are made about past and present human behavior from the archaeological record. It reviews such fundamental topics as the use of analogy, Middle Range theory, symbolism and meaning, social and cultural evolution, ideology and power, feminism and gender, and indigenous (non-Western) perspectives. It also foregrounds basic issues regarding heritage, looting, and ethics.

602. Fundamentals of Physical Anthropology. (C) Schurr. First-year anthropology graduate students. This course is an introduction to the study of human evolution through a survey of evidence from the various subfields of physical anthropology. Special attention will be paid to current issues and problems in these subfields, and the different ways in which researchers are attempting to understand and uncover the details of human evolution. Among the areas of inquiry to be covered in this course include paleoanthropology, primatology, human biology, molecular anthropology, and evolutionary biology. Some specific issues to be explored will include the primate roots of human behavior, brain and language evolution, new fossil hominids, the origins of anatomically modern humans, and human biogenetic variation.

SM 603. (COML603) Language in Culture and Society. (C) Agha. First-year anthropology graduate students. First-year anthropology graduate students or Instructor Permission. Examination of properties of human language which enable social persons to interpret the cultural world and to act within it. Topics include principles of lexical and grammatical organization; the role of language structure (grammar) and linguistic context (indexicality) in discursive activity; referential uses of language; social interaction; markers of social role and criteria by which models of linguistic form

and function are formulated and on the empirical limits within which different models have explanatory value.

SM 605. (COML605, FOLK605, MUSC605) Anthropology of Music. (C) Staff.

Theories and methods of the ethnomusicological approach to the study of music in culture, applied to selected western and non-western performance contexts.

606. (EDUC602) Youth Cultural Formations. (M) Lukose.

This course explores anthropological perspectives on peer-based youth cultures. It explores how educational institutions, media (fashion, music, magazines), and states shape youth cultures in cross-cultural contexts through social processes such as capitalism, nationalism, and increasing globalization. The course emphasizes ethnographies and histories which explore the relationship of these wider social processes to the lived realities of young people, situated in class, gender, national and race-specific contexts.

SM 617. Contemporary Approaches to the Study of Culture and Society. (C) Staff. First-year anthropology graduate students.

A critical examination of recent history and theory in cultural and social anthropology. Topics include structural-functionalism; symbolic anthropology; post-modern theory. Emphasis is on major schools and trends in America, Britain, and France.

SM 618. Mass Media and Contemporary Society. (M) Agha. Prerequisite(s): ANTH 603 or permission from Instructor.

The course examines the role of mass media in organizing and disseminating cultural norms and values in contemporary society. Particular attention is given to two domains of organized social life, namely consumer behavior and public opinion. The course explores the ways in which mass media organize aspects of individual preference and taste, matters of identity and lifestyle, and the sense of belonging to a common culture. Issues of how individuals come to acquire common tastes and opinions, and attempt to vary upon them in defining their positional identities and stakes are central areas of concern. Materials from a variety of present-day societies is discussed in comparative terms.

620. Directed Reading and Research. (C) Staff. May be repeated for credit.

To be arranged only by consultation with academic adviser and faculty member(s) to be involved; a proposed syllabus must be presented for approval, and written papers will be required without exception. On approval of these papers one copy must be presented to the Department of Anthropology office for filing.

621. Directed Field Training and Research. (C) Staff. May be repeated for credit.

To be arranged only by consultation with academic adviser and the faculty member(s) to be involved; a proposed syllabus must be presented for approval and written papers will be required without exception. On approval of these papers, one copy must be presented to the Department of Anthropology office for filing.

SM 622. Topics in Physical Anthropology. (M) Valeggia.

Humans are characterized by several distinctive life history features, e.g. large babies, late age at puberty and first reproduction, cessation of menstruation long before death, and a long life span. In addition, our reproductive decisions are heavily influenced by society and culture. This seminar will explore human life history from an evolutionary ecology and biocultural perspective, and will analyze the possible contributions of this approach to other disciplines such as demography, sociology, medicine, and public health. We will read and discuss seminal papers and recent developments on the topic.

SM 624. Topics in Paleoanthropology. (M) Staff. Prerequisite(s): Permission of instructor.

Specific issues of anthropological interest discussed and analyzed in light of evidence available from paleoanthropology.

SM 626. Medical Anthropology: Case Studies and Methods. (M) Staff. Prerequisite(s): Permission of instructor.

Intensive analysis of the application of anthropological theory and methodology to problems of human health and health care. Offered for students in the Medical Anthropology Program. Other qualified students may enroll with the permission of instructor.

628. Language in Culture and Society: Special Topics. (M) Agha. Prerequisite(s): ANTH 603 or Instructor Permission.

The course is devoted to a single research topic of contemporary interest in linguistic anthropology. Topics vary from year to year. Readings locate current debates in relation to longstanding assumptions in the literature and new directions in contemporary research.

630. (ANTH103) Ceramics and Ceramic Analysis. (M) Zettler.

Introduction to ceramics, ceramic typology and analysis. Course will utilize largely work done on ancient Near Eastern ceramics, though it is not intended as an introduction to ancient Near Eastern ceramic sequences. Course is intended as a practical introduction for archaeologists to ceramics, the ways ceramics are collected and dealt with in the field, ceramic typology and "laboratory analyses". To provide depth the course will cover both the ways ceramics have been dealt with in the past and current trends in the study of ceramics.

633. (ANTH230) Forensic Anthropology. (M) Monge.

This course will investigate and discuss the various techniques of analysis that biological anthropologists can apply to forensic cases. Topics include human osteology, the recovery of bodies, the analysis of life history, the reconstruction of causes of death, and various case studies where anthropologists have contributed significantly to solving forensic cases. Discussions will include the limitations of forensic anthropology and the application of DNA recovery to skeletal/mummified materials.

636. (ANTH236, NELC241) Mesopotamia: Heartland of Cities and Empires. (M) Zettler.

This course surveys the cultural traditions of ancient Mesopotamia, the land between the Tigris and Euphrates Rivers, a region commonly dubbed "cradle of civilization" or "heartland of cities," from an archaeological perspective. It will investigate the emergence of sedentism and agriculture; early villages and increasingly complex Neolithic and Chalcolithic cultures; the evolution of urban, literate societies in the late 4th millennium; the city-states and incipient supra-regional polities of the third and second millennium; the gradual emergence of the Assyrian and Babylonian "world empires," well-known from historical books of the Bible, in the first millennium; and the cultural mix of

Mesopotamia under the successive domination of Greeks, Persians and Arabs. The course seeks to foster an appreciation of the rich cultural heritage of ancient Mesopotamia, an understanding of cultural continuities in the Middle East and a sense of the ancient Near Eastern underpinnings of western civilization.

SM 642. (AFRC642, GSOC642) Multiculturalism: Fieldwork and Theory. (M) Sanday. Instructor permission required.

This is primarily a fieldwork, methods, and theory course for students working in multicultural settings or on topics involving the representation of cultural difference in popular culture. This seminar course is built around student projects. Each student will write a final paper for the course based on their fieldwork. Another important component of the course is the theoretical grounding of the fieldwork. Readings will be on multicultural theory and ethnographic methods in multicultural settings. The primary ethnographic site will be on the U.S., but students working in other multicultural settings are invited to enroll.

SM 643. Globalization And Its Historical Significance. (M) Spooner.

Globalization is one of the most comprehensive topics of our time, and also one of the most controversial. This course assesses the current state of globalization, considering it in terms of economic, political, and cultural change, and follows its progress through the semester. The class will be led through the main topics and debates, introduced to conceptual and empirical tools for framing academic discussion and research about its dynamics, how and when it began, and (most particularly) how it differs from earlier episodes of historical change. Students will monitor the course of globalization in the course of the semester, take an exam on the readings and lectures, and develop their own research project on a related issue of their choice.

SM 649. (ANTH246) Molecular Anthropology. (C) Schurr.

This course explores the molecular revolution in biological anthropology, and in particular, examines the nature and theory of collecting molecular data to address anthropological questions concerning human origins, evolution and biological variation. Students will review the methods used to analyze molecular genetic data, and learn to draw evolutionary and phylogenetic conclusions from this information.

654. (ANTH100, NELC281, NELC681, SAST161) Topics In Anthropology and the Modern World. (A) Spooner.

This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.

SM 658. Discourse Analysis. (C) Agha. Prerequisite(s): ANTH 603.

Examination of current theories and methods in the study of discourse, including verbal and non-verbal communication. Each student conducts an ethnographic or historical study of a discursive practice, culminating in a class presentation and term paper. The first half of the course focuses on the study of discursive interaction in small scale face to face encounters between individuals, including methods of data collection, transcription, and analysis. The second half takes up public discourses which involve many social actors, are linked to widespread social practices, and result in the coordination of large-scale patterns of action, belief, and value in society.

SM 662. Social Reorganization: Tribes, Communities & Corporations. (M) Spooner.

A wide variety of ethnographic and sociological examples of formal and informal organization will be described and analyzed within the framework of the emerging modern awareness of the possibility of organizing and reorganizing society and social groups for specific short- and long-term objectives.

676. Culture and Conflict in International Relations. (M) Spooner.

Selected international conflicts will be analyzed from a cultural point of view. This exercise will have the following advantages, each of which will be emphasized throughout the course: (a) students will study a series of internationally important situations from a distinctive academic point of view; (b) they will explore the analytical value of the concept of culture with the rigor with which it has been developed in anthropology, but in application to material not commonly treated by anthropologists, and (c) since anthropologists have difficulty comprehending and analyzing conflict within a cultural framework, they will at the same time be engaging in a

theoretically experimental exercise by addressing questions concerning the relationship between conflict and cultural process. The course should be useful both to anthropology graduate students and to students interested in the modern world in other social sciences, and will ideally attract students with a wide variety of interests.

692. (ANTH102) American Civilization: The 20th Century. (C) Hammarberg.

Americans and their civilization in the twentieth century. The first half of the course carries forward to the Depression and World War II; the second half of the course emphasizes the period from World War II to the present. Methods and theories of cultural-historical study are addressed.

SM 695. Current Topics in Molecular Anthropology. (M) Schurr.

An examination of the nature and theory of collecting molecular data to address biological anthropological questions concerning human origins, evolution and biological variation. Students will review the methods used to analyze molecular genetic data, and learn to draw evolutionary and phylogenetic conclusions from information.

SM 701. (AFRC701, AFST701, HIST701) African Studies Seminar. (M) Staff.

Interdisciplinary seminar for discussion of issues of special interest to graduate students and faculty in African Studies. Topics vary according to the interests and expertise of instructors.

704. (COML706, EDUC706, FOLK706, URBS706) Culture/Power/Identities. (A) Lukose.

The seminar provides a forum for critically examining the interrelationships between culture, power and identities, or forms of difference and relations of inequality. The central aim is to provide students with an introduction to classic and more recent social theories concerning the bases of social inequality and relations shaped by race, class, ethnic, national and gender differences. Theories discussed in the course provide analytic tools for examining the role of social institutions, such as education, for mediating social hierarchy and difference. The class will have a seminar format emphasizing close analysis and discussion of the required readings in relation to a set of overarching questions concerning the nature of power, forms of

social inequality and the politics of identity and difference.

SM 705. (AFRC705, AFST705, FOLK715, MUSC705, GSOC705) Seminar in Ethnomusicology. (M)

Staff. Open to graduate students in all departments.

Seminar on selected topics in ethnomusicology.

707. (EDUC700) The Craft of Ethnography. (B) Hall.

This course is designed to follow after Introduction to Qualitative and Ethnographic Methods (EDUC 672). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project.

SM 710. Readings and Research in Social Organization. (M) Staff.

Study and analysis of selected problems in social organization.

SM 715. Globalization Seminar. (M) Spooner.

Weekly seminar discussions will focus on current news and opinion about social and cultural change that may be interpreted as globalization in different parts of the world. The overall objective is to develop methodological and theoretical approaches to the study of globalization. Students taking the course for credit will be required to write a research paper.

SM 717. Cultural Motion Seminar. (C) Urban.

This is a graduate seminar/workshop for students pursuing research in anthropology at any phase - from preliminary readings, to proposal writing, to dissertation write-up - that deals in some way with cultural motion. Students will be expected to present their own work, and to discuss the work of others, throughout the course of the seminar. The course is appropriate for first or second year graduate students in Anthropology seeking to define a research area or already pursuing research. It is also appropriate for third and fourth year students in the proposal-writing phase. And, finally, the seminar will provide a forum for dissertation-writing students interested in receiving preliminary feedback on their work from peers.

SM 719. (ANTH219) Archaeology Field Project. (A) Schuyler. Permission of instructor required.

This is a parallel course to Anthropology 219, but on the graduate level. It will only be open to select graduate students (i.e. historical archaeology students and some CGS MA students). Specific permission of the instructor is required in each case.

720. (ANTH220) Archaeology Laboratory Field Project. (B) Schuyler.

Follow-up for Anthropology 719 and parallel course to Anthropology 220. Class will meet in three hour sections on Fridays and Saturdays and will involve the analysis of artifacts, documentary records, oral historic sources and period illustrations collected on Southern New Jersey historic sites that Fall. No previous archaeological or lab experience is required. (Robert L. Schuyler: schuyler@sas.upenn.edu; (215) 898-6965; UMuseum 412). Course may be repeated for credit.

SM 727. Archaeology of Latin America Seminar. (M) Staff.

Prerequisite(s): ANTH 468 or ANTH 600.

Advanced seminar for students wishing to pursue study of field data, method, theoretical problems in archaeology of Latin America.

SM 730. Readings & Research In Linguistic Anthropology. (D) Agha. Prerequisite(s): ANTH 603.

The course is designed for students and faculty interested in discussing current research and/or research topics in any area of linguistic or semiotic anthropology. The primary intent of the course is to familiarize students with the literature on selected research topics and to develop their own research agendas in the light of the literature. Students may enroll on an S/U basis for 0.5 CU per semester. The course may be repeated for credit up to 4 times.

SM 731. Readings and Research in Paleolithic Archaeology. (M) Dibble. Prerequisite(s): ANTH 445 or equivalent.

Advanced seminar dealing with research developments in the earlier prehistoric archaeology of Old World.

SM 734. PostProcessual Archaeology. (M) Preucel.

Is archaeology fragmenting under the weight of antagonistic research programs each of which has its own agenda and methodology? Or is it diversifying into a collection of specialized approaches which together support a coherent and unified

theory? This seminar explores recent developments in archaeological method and theory focusing on the range of approaches that have collectively been termed "postprocessual archaeology." These approaches include various combinations and admixtures of neo-Marxism, poststructuralism, critical theory, and feminism. This seminar will examine some of the theoretical, methodological, and practical tensions within and between these positions with the goal of understanding archaeology's special relationships to the natural and social sciences.

747. (ANTH247) Archaeology Laboratory Field Project-Summer. (L) Schuyler.

This course is a summer version of Anth 720 (see that course for full description). In summer more emphasis will be placed on field visitations. Course open to all graduate students; no instructor permission needed. Course may be repeated for credit and students may take both anth 747 and 720. Questions: contact Robert L Schuyler; schuyler@sas.upen.edu; (215) 898-6965; Univ Museum 412/6398.

SM 750. (ANTH450) African American Archaeology. (M) Schuyler.

Archaeology of African Americans. Course will cover the new and productive field of the archaeology of African Americans from the 17th to the 20th

centuries. The focus will be on continental North America but some attention will also be given to West Africa (AD 1500 - present) and the West Indies. No background (or previous courses) in archaeology or anthropology is required.

SM 751. (ANTH451) Historical Archaeology. (M) Schuyler. May be repeated for credit.

General background reading and tutorial preparation in the archaeology of the modern world (A.D. 1400- 20th Century).

SM 756. Social Anthropology Seminar. (G) Spooner.

Weekly seminar discussions will be devoted to the analysis and evaluation of the social anthropology thread or threads in the history of anthropology, and their relevance to the positions and interests of cultural anthropology today. Students taking the course for credit will be required to write a research paper.

SM 757. (ANTH457) Themes In Historical Archaeology. (A) Schuyler.

Course will examine research by historical archaeologists on the basic attributes of humanity. Elements that are more biologically grounded (age, gender, race) and elements more purely cultural (ethnicity, class, occupation, nationality, religion) will both be surveyed. Recent

field findings and theoretical debates will be covered.

SM 842. (CINE842, COMM842) The Filmic. (M) Jackson.

This interdisciplinary graduate course takes "film" as its object of study, theorizing it as a medium/mode of representation. We draw on film theory, psychoanalysis, literary analysis, cognitive theory, communication studies, and visual anthropology to discuss several key issues related to the state of film/filmmaking in an age of "digital" media. We interrogate contentious notions of authority, reflexivity, and objectivity. We analyze film's claim to "realistic" (iconic and indexical) representation. We interrogate how "film" and "video" get imagined in all their visual particularity, sometimes conflated into a single visual form and at other moments distinguished as a function of the difference between photochemical and electro-magnetic processes. We also highlight the kinds of techniques filmmakers use to thematize these same issues "on screen." Students will be responsible for watching one film each week (along with the the course readings), and part of the final project involves helping to produce a group documentary/ethnographic "film" that engages the course's central concerns.

**APPLIED MATHEMATICS
& COMPUTATIONAL SCI.
(AS) {AMCS}****510. (MATH410) Complex Analysis.****520. (MATH420) Ord Differential
Equat.****525. (MATH425) Partial Dif
Equations.****530. (MATH430) Intro to Probability.****532. (MATH432) Game Theory.****567. (BE 567) Mathematical and
Computational Modeling of
Biological Systems. (M)** Prerequisite(s):
BE 324 and BE 350.

This is an introductory course in mathematical biology. The emphasis will be on the use of mathematical and computational tools for modeling physical phenomena which arise in the study of biological systems. Possible topics include random walk models of polymers, membrane elasticity, electrodiffusion and excitable systems, single-molecule kinetics, and stochastic models of biochemical networks.

599. INDEPENDENT STUDY.**601. Algebraic Techniques for
Applied Mathematics and
Computational Science, I. (M)** Staff.

We begin with an introduction to group theory. The emphasis is on groups as symmetries and transformations of space. After an introduction to abstract groups, we turn our attention to compact Lie groups, in particular $SO(3)$, and their representations. We explore the connections between orthogonal polynomials, classical transcendental functions and group representations. This unit is completed with a discussion of finite groups and their applications in coding theory.

**602. Algebraic Techniques for
Applied Mathematics and
Computational Science, II. (M)** Staff.

We turn to linear algebra and the structural properties of linear systems of equations relevant to their numerical solution. In this context we introduce eigenvalues and the spectral theory of matrices. Methods appropriate to the numerical solution of very large systems are discussed. We then turn to the problem of solving systems of polynomial equations, introducing basic properties of rings, ideals and modules. This allows us to define Grobner bases and their use in the numerical solution of algebraic equations. The theoretical content of this course is illustrated and supplemented throughout the year with substantial computational examples and assignments.

**608. (MATH608) Analytic techniques
for Applied Mathematics and
Computational Science, I. (M)** Staff.

This course covers topics from real analysis, complex analysis, and functional analysis, and their applications to the study of solutions of ODES and PDES. We begin with a review of methods from real analysis with an emphasis on Fourier analysis, approximation theory, the solution of ordinary differential equations, the method of stationary phase, and other asymptotic analytic techniques. We then consider tools from complex analysis, with an emphasis on analytic continuation, and the saddle point method.

**609. Analytic techniques for Applied
Mathematics and Computational
Science, II. (M)** Staff.

We consider analysis in infinite dimensional spaces. After covering the basic results on complete normed linear spaces, we discuss the Riesz-Fredholm theory of integral equations. We consider Hilbert space, unbounded operators, self adjointness and the spectral theorem, with applications to ordinary and partial differential equations. After a discussion of the basic Sobolev and Holder spaces, we show how to use classical, and functional analytic techniques to solve partial differential equations. The course concludes with a discussion of numerical techniques for the solution of ODES and PDES and their mathematical foundations.

999. IND STUDY & RESEARCH.

**ARCHITECTURE
(FA) {ARCH}**

Undergraduate Studios

L/R 201. Visualization I: Representation. (A) Faculty.

Prerequisite(s): This course is not open to students in their first or second freshman terms at Penn. Students must be rising sophomores to advance register for this course.

Introduces technical drawing and explores its thematic possibilities, through both an analysis of antecedents and the production of new works. These complimentary studies serve both to establish an understanding of representation as the foundation to visual communications and to develop the ability for seeing through drawing.

202. Visualization II: Fabrication. (B) Faculty. Prerequisite(s): ARCH 201.

Continues research into visualization with a special emphasis introducing the fabrication shop, tools and techniques. The capacity of materials, their manipulation and the consequences of their inter-relationships are explored as a fundamental issue in making. Through the analysis of precedents and the production of new works, visualizing these relationships compliments drawing with a material imagination and vocabulary.

301. Design Fundamentals I: Perception. (A) Faculty. Prerequisite(s): ARCH 202.

An introduction to principles of visual perception and the language of visual form. Students explore the relationship between the two-dimensional images and their corresponding three-dimensional interpretation in plan, section, elevation, axonometric, one-point perspective, and two-point perspective. Moving back and forth between these dimensions leads to the development of a working design method.

302. Design Fundamentals II: Structure and Metaphor. (B) Faculty. Prerequisite(s): ARCH 301.

An introduction to two and three-dimensional design. Students explore the relationship between form and meaning, investigating the relationship between visual structure and metaphor, acquiring creative problem-solving skills in abstract and concrete processes, developing a sense

of material and craft, and learning to communicate verbally and graphically.

401. Architecture and Landscape Design I. (A) Faculty. Prerequisite(s): ARCH 302.

An introduction to fundamental topics in architecture and landscape architecture. Issues of mapping, placement, scale, and construction are explored through studio design exercises, site visits, and discussions. Course work focuses on the preparation and presentation of discrete design projects that emphasize the acquisition of representational and analytical skills, and the development of imaginative invention and judgment.

402. Architecture and Landscape Design II. (L) Wesley. Prerequisite(s): ARCH 401.

An introduction to the fundamentals of design three-dimensional objects of use. Concepts and techniques of description, projection, and fabrication will be explored through a series of workshop exercises using parametric solid modeling computer-aided design software, rapid prototyping (3D printing), and laser cutting technology. The course is intended to provide a background in three-dimensional design fundamentals for students in engineering, business, and finearts.

Undergraduate Theory

SM 411. (ARCH711, LARP780) History and Theory I. (A) Faculty. Corequisite(s): ARCH 401.

This is a lecture course with discussion groups that meet weekly with teaching assistants.

L/R 412. Theory II. (B) Leatherbarrow. Corequisite(s): ARCH 402.

This course traces the emergence of contemporary issues in the field by exploring the architecture of the twentieth century. Buildings, projects, and texts are situated within the historical constellations of ideas, values, and technologies that inform them through a series of close readings. Rather than presenting a parade of movements or individuals, the class introduces topics as overlaying strata, with each new issue adding greater complexity even as previous layers retain their significance. Of particular interest for the course is the relationship between architecture and the organizational regimes of modernity.

Undergraduate Intensive Major in Design

431. (ARCH531) Construction I. (A) Trubiano.

Course explores basic principles and concepts of architectural technology and describes the interrelated nature of structure, construction and environmental systems. Open to Intensive Majors only.

432. (ARCH532) Construction II. (B) Falck.

A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building. Open only to Intensive Design majors.

433. (ARCH533) Environmental Systems I. (A) Malkawi.

An introduction to the influence of thermal and luminous phenomenon in the history and practice of architecture. Issues of climate, health and environmental sustainability are explored as they relate to architecture in its natural context. The classes include lectures, site visits and field exploration. Open to Intensive Majors only.

434. (ARCH534) Environmental Systems II. (B) Braham.

This course examines the environmental technologies of larger buildings, including heating, ventilating, air conditioning, lighting, and acoustics. Modern buildings are characterized by the use of such complex systems that not only have their own characteristics, but interact dynamically with one another and with the building skin and occupants. Questions about building size, shape, and construction become much more complex with the introduction of sophisticated feedback and control systems that radically alter their environmental behavior and resource consumption. Class meetings are divided between slide lectures, demonstrations, and site visits. Course work includes in-class exercises, homework assignments, and a comprehensive environmental assessment of a room in a building on campus. Open to Intensive Majors only.

L/L 435. (ARCH535) Structures I. (A) Farley.

Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course

comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Majors only.

L/L 436. (ARCH536) Structures II. (B) Farley.

A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Design majors only.

Undergraduate Electives

SM 102. Architecture Today. (A) Rybczynski.

Why do buildings by different Architects look so different? The Getty Museum in Los Angeles, for example, is quite different from the Bilbao Guggenheim; Rem Koolhaas' proposed library in Seattle seems world's apart from Tom Beeby's Harold T. Washington Library in Chicago. In addition to site function, and construction, architecture is affected by style, and today there are many different stylistic approaches. Style is neglected in most discussions of architecture yet it is central to the design and appreciation of buildings. The seminar will examine the role that style plays in the work of prominent contemporary architects both in the United States and abroad. Field trips, seminars and selected readings will form the basis for four graphic and written assignments

440. Introduction to Computers in Architecture. (B) Kearney.

This course provides an introduction to computer graphic technology in the context of current architectural practice. We use AutoCAD's latest release (now 2007) as the basic software for the course. AutoCAD is the most widely-used architectural software and provides a good grounding for exploration of other programs. Topics include basic vector graphics, two-dimensional drawing and drafting and basic three-dimensional modeling. The course is organized around a series of structured exercises that illustrate basic principles and enable students to develop greater facility with the software. The modeling emphasis is placed on quick study models as part of the design process. There is also a field trip

to the offices of Venturi, Scott Brand and Associates to see the use of computers in their practice. No experience with Auto CAD software is required.

490. Independent Study. (C) Faculty. Prerequisite(s): Permission of the Director of the Undergraduate Program.

491. Senior Thesis. (C) Faculty. Prerequisite(s): Permission of the Director of the Undergraduate Program.

499. Senior Honors Thesis. (C) Prerequisite(s): Permission of the Director of the Undergraduate Program.

Graduate Studios

501. Design Studio I. (A) Hoang and Faculty. Corequisite(s): ARCH 521.

An introductory architectural design studio through which students develop critical, analytical and speculative design abilities in architecture. Students develop representational techniques for the analysis of social and cultural constructs, and formulate propositions for situating built form in the arena of the urban and suburban environment. The studio initiates innovation through the analysis of complex systems, algorithms and the cultivation of spatial formations and behaviors that are emergent and yet defined. It introduces computation, geometric techniques, and digital fabrication. Projects explore the formation of space in relation to the body, and the development of small scale public programs.

502. Design Studio II. (B) Fierro and Faculty. Corequisite(s): ARCH 522.

This studio explores urban architecture as an embodiment of cultural values. Siting, enclosure of space and tectonic definition are stressed in order to challenge students to project relevant and inventive architectural situations.

601. Design Studio III. (A) Veikos and Faculty. Corequisite(s): ARCH 621.

The first intermediate design studio consisting of six independent sections, each with its own orientation to issues of technology and ecology. Design projects involve more complex public or institutional buildings, and require the detailed resolution of one ecological and technological dimension. Ecologies are considered in their natural, social, and technological dimensions, and in various degrees of abstraction and realization. This includes affinities between modes of analyzing and operating within natural

ecosystems and systemic models of analysis of organizations, economies, urbanisms and material cultures, alternative economies, and the cultural politics of environmentalism, as well as the study of energy and resource use, recycling, environmental quality, and biomimetics. The studio is taught in close collaboration with Visual Studies Workshop III, whose techniques and exercises are tailored to each studio section.

602. Design Studio IV. (B) Faculty.

This studio enables students to develop and resolve the design of a building in terms of program, organization, construction and the integration of structures, enclosure and environmental systems as well as life safety issues. Students select from a range of individually-directed studios within this overall framework. Each instructor develops a different approach and project for their section of this studio.

Studios incorporate the expertise of external consultants in advanced areas of technology, engineering and manufacturing.

701. Design Studio V. (C) Rahim and Faculty.

A set of Advanced Architectural Design studios are offered from which students select through a lottery. Topics and sites vary by instructor.

702. Design Studio VI. (B) Faculty.

In the final semester of the program, students select from three options: ARCH 702, an advanced design studio, ARCH 704, a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or ARCH 706, an independent design thesis, the exploration of a topic or theme under the supervision of a thesis advisor.

703. Post-Professional Architectural Design Studio. (A) Dubbeldam.

An Advanced Architectural Design Studio specifically tailored to post-professional students. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.

704. Advanced Design: Research Studio. (B) Faculty.

In the final semester of the program, students select from three options: 1) An elective design studio, selected from among

the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.

706. Independent Thesis. (B) Faculty.

In the final semester of the program, students select from three options; 1) An elective design studio; selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.

Graduate Visual Studies Workshops

521. Visual Studies I. (A) Kim and Faculty. Corequisite(s): Arch 501.

The study of analysis and projection through drawing and computer visualization

522. Visual Studies II. (B) Veikos and Faculty. Corequisite(s): ARCH 502.

A continuation of the study of analysis and projection through drawing and computer visualization.

621. Visual Studies III. (A) Faculty. Corequisite(s): Arch 601.

The final of the Visual Studies half-credit courses. Drawings are explored as visual repositories of data from which information can be gleaned, geometries tested, designs refined and transmitted. Salient strengths of various digital media programs are identified and developed through assignments that address the specific intentions and challenges of the design studio project.

Graduate Required and Designated Courses

L/R 511. History and Theory I. (A) Mertins.

The first of three required courses in the history and theory of architecture, this is a lecture course with discussion groups that meet weekly with teaching assistants. The course explores fundamental ideas and models of architecture that have emerged over the past three hundred years.

L/R 512. (ARCH412) History and Theory II. (B) Leatherbarrow.

This course traces the emergence of contemporary issues in the field by exploring the architecture of the twentieth century. Buildings, projects, and texts are situated within the historical constellations of ideas, values, and technologies that inform them through a series of close readings. Rather than presenting a parade of movements or individuals, the class introduces topics as overlaying strata, with each new issue adding greater complexity even as previous layers retain their significance. Of particular interest for the course is the relationship between architecture and the organizational regimes of modernity.

531. (ARCH431) Construction I. (A) Trubiano.

Course explores basic principles and concepts of architectural technology and describes the interrelated nature of structure, construction and environmental systems.

532. (ARCH432) Construction II. (B) Falck.

A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building.

533. (ARCH433) Environmental Systems I. (A) Malkawi.

An introduction to the influence of thermal and luminous phenomenon in the history and practice of architecture. Issues of climate, health and environmental sustainability are explored as they relate to architecture in its natural context. The classes include lectures, site visits and field exploration.

534. (ARCH434) Environmental Systems II. (B) Braham.

This course examines the environmental technologies of larger buildings, including heating, ventilating, air conditioning, lighting, and acoustics. Modern buildings are characterized by the use of such complex systems that not only have their own characteristics, but interact dynamically with one another and with the building skin and occupants. Questions about building size, shape, and construction become much more complex with the introduction of sophisticated feedback and control systems that radically alter their environmental behavior and resource consumption. Class meetings are divided between slide lectures, demonstrations, and site visits. Course work includes in-class

exercises, homework assignments, and a comprehensive environmental assessment of a room in a building on campus.

L/L 535. (ARCH435) Structures I. (A) Farley. Corequisite(s): Arch 535.

Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.

L/L 536. (ARCH436) Structures II. (B) Farley. Corequisite(s): Arch 536.

A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.

L/R 611. History and Theory III. (A) Furjan.

This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.

631. Technology Case Studies I. (A) Falck.

A study of the active integration of various building systems in exemplary architectural projects. To deepen students' understanding of the process of building, the course compares the process of design and construction in buildings of similar type. The course brings forward the nature of the relationship between architectural design and engineering systems, and highlights the crucial communication skills required by both the architect and the engineer.

632. (IPD 532) Technology: Designated Elective. (B) Faculty.

Several sections are offered from which students make a selection such as : Space/Structure; Surface/Effects.

638. Technology: Special Topics. (B) Faculty.

Several sections are offered from which students make a selection such as : Building Acoustics; High-Performance Building Envelopes; Building Systems; Lighting and Component Design.

671. Professional Practice I. (A) Gardner.

This course consists of a series of workshops that introduce students to a diverse range of practices that architects currently employ and the architectural profession more generally.

672. Professional Practice II. (B) Capaldi.

A continuation of ARCH 671. Further study of the organizational structures of architectural practices today. The course is designed as a stimulating workshop that allows students and future practitioners the opportunity to develop the analytical skills required to enter the practice world. The course meets four times during the course of the semester.

772. Professional Practice III. (B) McHenry.

This course focuses on the nature of projects in the context of activities within an architect's practice and on the idiosyncrasies of managing multiple projects. Detailed studies of the legal, financial, marketing, management and administration issues associated with the different forms of office

Graduate Electives

SM 711. (ARCH411, GRMN611) Topics in History and Theory I. (A) Faculty.

A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.

712. (GRMN611) Topics in Architectural History and Theory II. (B) Faculty.

Several sections are offered from which students make a selection. Topics and instructors will vary.

SM 715. Seminar on Architectural Criticism. (A) Rybczynski.

The practice of architecture relies on the clear and effective communication of design ideas, to clients, reviewing agencies, the public, and other interested parties. This communication occurs not only through drawings, models, and verbal presentations, but often-especially in the early stages of a project-through the written word. The aim of this course is to train students in the principles and techniques of nonfiction writing as it relates to architecture. Readings will include different types of architectural prose, but you can only learn to write by writing. Writing exercises will include brief critical reviews of existing buildings and unbuilt projects, opinion pieces, and formal presentations of buildings and projects.

718. (EALC258) Japanese Architecture. (M) Steinhardt.

An introduction to the visual, aesthetic, historical, religious, philosophical, and symbolic aspects of Japanese structures from earliest times to the mid-19th century. Through a discussion of shrines, temples, palaces, tombs, cities, and gardens the student will explore what makes Japanese architecture distinctive and how the traditions of Japanese architecture evolve over time.

722. Drawing Elective. (B) Faculty. The making of architecture is executed through the reading of lines, mathematically described to indicate the boundaries and relationships of materials. Central to the act of drawing is the act of invention; illusion precedes realization. Line, surface, shadow, and perspective, explored through different media, are the language of inquiry. As a laboratory to test both analog and digital media, the intent of the course is to test how modes of can reveal the qualitative aspects of spatial propositions. The course is organized as series of loops between media, layering and capturing their intrinsic effects and intensifying the potential for new expression. A series of investigations parallel discussions with artists and architects exploring representations of space and form; visits to galleries, museums and architecture offices provide a window into the relationship between the the instruments and media utilized to project built form and the preceding propositional representations. This course seeks to engage the intuitive and ephemeral with the highly precise, recognizing that the act and the artifact of transformation.

SM 726. (IPD 526) Contemporary Furniture Design. (B) Mueller-Russo.

This course provides a platform, in the form of furniture, to execute and deploy architectural and engineering principles at full scale. It will be conducted as a seminar and workshop and will introduce students to a variety of design methodologies that are unique to product design. The course will engage in many of the considerations that are affiliated with mass production; quality control, efficient use of material, durability, and human factors. Students will conduct research into industrial design processes, both traditional and contemporary, and will adapt these processes into techniques to design a prototype for limited production. Instruction will include; model making, the full scale production of a prototype, its detailing; design for mass production and the possibility of mass customization; design for assembly furniture case studies; software integration, 3d scanning, optimization studies; Computer Aided Manufacturing (CAM) and a site visit to a furniture manufacturer.

727. (IPD 527) Industrial Design. (C) Owen.

Industrial design (ID) is the professional service of creating and developing concepts and specifications that optimize the function, value and appearance of products and systems for the mutual benefit of both user and manufacturer. Industrial designers develop these concepts and specifications through collection, analysis and synthesis of user needs data guided by the special requirements of the client or manufacturer. They are trained to prepare clear and concise recommendations through drawings, models and verbal descriptions. The profession has evolved to take its appropriate place along side Engineering and Marketing as one fo the cornerstones of Integrated Product Design teams. The core of Industrial Design's knowledge base is a mixture of fine arts, commercial arts and applied sciences utilized with a set of priorities that are firstly on the needs of the end user and functionality, then the market and manufacturing criteria.

This course will provide an overview and understanding of the theories, thought processes and methodologies employed in the daily practice of Industrial Design. This includes understanding of ethnographic research and methodologies, product problem solving, creative visual communication, human factors / ergonomics application and formal and surface development in product scale. This course will not enable one to become an industrial designer but will enable one to

understand and appreciate what industrial design does, what it can contribute to society and why it is so much fun.

SM 731. Experiments in Structures. (A) McCleary.

This course studies the relationships between geometric space and those structural systems that amplify tension. Experiments using the hand (touch and force) in coordination with the eye (sight and geometry) will be done during the construction and observation of physical models. Verbal, mathematical and computer models are secondary to the reality of the physical model. However these models will be used to give dimension and document the experiments. Team reports will serve as interim and final examinations. In typology, masonry structures in compression (e.g., vault and dome) correlate with "Classical" space, and steel or reinforced concrete structures in flexure (e.g., frame, slab and column) with "Modernist" space. We seek the spatial correlates to tensile systems of both textiles (woven or braided fabrics where both warp and weft are tensile), and baskets (where the warp is tensile and the weft is compressive). In addition to the experiments, we will examine Le Ricolais' structural models held by the Architectural Archives.

732. Building Systems Integration. (A) Malkawi.

This course explores the interrelationships of environmental control systems by means of building type studies. Innovative systems will be emphasized. Projects such as residential, educational and commercial buildings, office and assembly buildings. The relationship between energy conservation and the principles of initial building cost versus life cycle costs will be discussed.

734. Dimensions of Sustainability. (B) Martin.

Building is an inherently exploitive act - constructing and operating building takes resources from the earth and produces waste and pollution. Do architects have an ethical responsibility to minimize these negative environmental effects? Is reducing the bad impacts the best we can do, or can we imagine architecture that could heal the damage and begin to improve the natural environment?

739. (HSPV551) Building Pathology. (M) Henry.

This course addresses the subject of building deterioration and intervention, with the emphasis on the technical aspects

of deterioration. Construction and reconstruction details and assemblies are analyzed relative to functional and performance characteristics. Case studies cover subsurface conditions, structural systems, wall and roof systems, and interior finishes with attention to performance, deterioration, and stabilization or intervention techniques.

741. Architecture Design Innovation. (A) Rahim.

The mastery of techniques, whether in design, production or both, does not necessarily yield great architecture. As we all know, the most advanced techniques can still yield average designs. Architects are becoming increasingly adept producing complexity & integrating digital design and fabrication techniques into their design process - yet there are few truly elegant projects. Only certain projects that are sophisticated at the level of technique achieve elegance. This seminar explores some of the instances in which designers are able to move beyond technique, by commanding them to such a degree so as to achieve elegant aesthetics within the formal development of projects.

SM 742. Experiments in Design. (B) Sabin.

This course uses a combination of seminar and workshop formats to explore new design techniques from a number of sources including advances in digital technology, natural models, advanced geometry and material practices in allied arts, crafts and design disciplines. This section of the course focuses on the use of algorithmic design techniques for the digital fabrication and production of ceramic modules at a range of scales and applications. Case studies will explore the role of the ceramic module and tile in architecture. The course will introduce scripting techniques in a parametric and associative environment with feedback derived from material constraints as well as performance assessments. Students will work in groups and will follow one of two project tracks: 1. Mold Production and Slip-Cast Ceramic Component Design 2. 3D Printed Ceramic Component Design

744. (IPD 544) Digital Fabrication. (B) Faculty.

A seminar and design workshop that explores associative and parametric CAD-CAM strategies, to enable an interactive continuity between conception and fabrication. Through parametric 3D constructions, students will explore how to link different aspects of the architectural projects, such as: (1) design

intention; (2) control of variation and adaptation; (3) construction constraints; (4) digital fabrication processes. The course emphasizes the cross-fertilization of formal, technical and performative aspects of the design activity.

SM 745. Non-linear systems biology & design. (A) Sabin/Jones.

Systems biology examines the nature of nonlinearities, emergent properties and loosely coupled modules that are the hallmarks of 'complexity'. New models for research and design in architecture have grown in response to radical breakthroughs in technology and an increasing interest in the use of algorithmic and generative tools within the design process. Algorithmic imaging and molecular tools found useful in analyzing nonlinear biological systems may therefore prove to be of value to new directions in design within architecture. This course situates itself at the nexus between architecture and nonlinear systems biology - and in the context of the Sabin+Jones LabStudio at UPenn - to gain insight into living systems, develop techniques for digital modeling, and create experimental designs with rigor at various length scales, from the microscopic to the human. Part seminar and part workshop, it serves to deepen knowledge of nonlinear biosynthesis, a synthesis of design thinking and tooling through the study of systems biology. Students will develop a series of digital and physical models through the use of 3D printer and a diverse range of scripting and modeling techniques in parametric and associated software. The final assignment is a design project with accompanying abstract and report.

752. (CPLN760, UDES752) Case Studies in Urban Design. (B) Larice.

Through three case studies and a final project this course explores several fundamentally different ways in which the urban design process is realized in this country: The campus as historical prototype and contemporary paradigm; the new community both modernist and neo-traditionalist; expansion/relocation of CBD; and urban/suburban in-fill. Particular emphasis is placed on the roles of planning, historic preservation and landscape architecture in the practice of urban design.

SM 756. (CPLN679) Sustainable Urban Forms. Hughes.

This seminar provides an advanced introduction to policy development and is intended to engage students in policy-making. Policy outcomes often have formal and/or scalar qualities. Yet policy developers often treat these as unintended

consequences. And designers typically operate within the constraints created by such consequences. But could design thinking improve policy outcomes? Our test bed for this examination will be the relationship between energy and urban form, which presents a critical policy challenge for young professionals from many fields. The seminar will survey current research and policy options emerging from local, regional, state, and federal governments and discuss their implications for design outcomes at the scale of buildings, neighborhoods, and regions? None of these implications have been fully explored by policy makers at any level of government. This seminar will explore each in turn, allowing students to develop a deep understanding of the policy content on this important issue as well as of the policy process in general. Students will develop projects ranging from an analysis of policy to a presentation of the design implications of existing/proposed/alternative energy policies. The intent is for the seminar to make an active contribution to this very timely policy debate.

762. Design and Development. (B) Rybczynski.

This course provides an introduction to the relationship between architectural design and real estate development. Following a discussion of fundamentals, examples focus on commercial building types, and illustrate how architectural design can contribute to real estate development. Topics include housing design commercial buildings, adaptive reuse, downtown development, mixed-use projects, and planned communities. The course consists of lectures, reading assignments, short essays, a group project, and an mid-term test. Invited lecturers include architects and real estate developers. Readings consist of a Bulkpack available from Wharton Reprographics. There is one course text: Witold Rybczynski, "Last Harvest."

765. Project Management. (A) Arena.

This course is an introduction to techniques and tools of managing the design and construction of large, and small, construction projects. Topics include project delivery systems, management tools, cost-control and budgeting systems, professional roles. Case studies serve to illustrate applications. Cost and schedule control systems are described. Case studies illustrate the application of techniques in the field.

768. (REAL321, REAL821) Real Estate Development. (B) Nakahara.

Prerequisite(s): REAL 721.

This course analyzes the development process in terms of the different functions performed by real estate developers and architects, and the interrelationships, between these two professions. Emphasis is placed on property evaluation site planning, building design, underlying economics and discounted cash flow analysis. Outside lecturers are featured.

780. Architecture in the Schools. (C) Braham.

Architecture in the schools is a 20+ year program of teaching architecture in Philadelphia area schools run by the American Institute of Architects. As a participant in the AIE (Architecture In Education) program students have the opportunity to work directly with children in the classroom making an impact on their lives and on the future of our neighborhoods and cities. Students work with a classroom teacher and a design professional to develop a weekly series of eight (1-1/2 hour) interdisciplinary experiential lessons using the built environment as a laboratory to create stimulating new ways of seeing, learning, and doing. Requirements for credit are attendance at all meetings and the submission of a brief summary report of the exercises that were used in the classroom.

999. Independent Study. (C) Faculty.

This course enables student to undertake a self-directed study on a topic in Architecture, under the supervision of a faculty member. Students are required to make a proposal for the study to the Department Chair, outlining the subject and method of investigation, and confirming the course supervisor at least two weeks prior to the beginning of the semester.

Graduate Elective Programs

500. Summer Preparatory Design Studio. (L) Mitnick.

The Summer Preparatory Studio offers an intensive drawing and design experience to candidates for admission to the Graduate Program in Architecture who have not completed the necessary design studio prerequisites or who are required to have additional design experience to qualify for matriculation into the Master of Architecture Professional Degree Program in September. Enrollment in this program does not count towards the Master of Architecture degree. The intent of the drawing component of the course is to

familiarize the student with primarily black and white mediums (pencil, charcoal, ink, etc). Exercises are designed to sharpen the student's ability to see selectively and to transform image to paper through both line and tonal renditions in freehand sketch form. Exercises will also familiarize the student with basic drafting skills necessary for architectural communication and provide an introduction to computer-aided design through applications of the intensive Rhino and Illustrator tutorials given in the Digital Navigation course. The design part of the course presents a rhythm of basic three-dimensional design studies and simple architectural studio investigations. These are intended to build fundamental skills and acquaint the student with the architectural issues of form/space, conceptualization,

These are intended to build fundamental skills and acquaint the student with the architectural issues of form/space, conceptualization, transformation of scale, simple functional and constructional problems and a sensitivity to context.

782. (ARCH482) Study Abroad Program. (L) Castillo/Fierro.

A four to six week program of study in locations that vary, such as Paris, Japan and Mexico City.

Ph.D. Program

SM 811. Architectural Research. (A) Leatherbarrow.

This is a required seminar for first year PhD and M.S. students, but is open to upper level Masters students. This course will consist of a series of presentations by members of the Graduate Group in Architecture. The several presentations will address a common theme, and will demonstrate different methods or styles of research. Readings will come from professor's own writings as well as relevant texts from other scholars. Students will lead discussion sessions, write both synopses of several presentations and a longer text that compares the presentations. This course acts as a foundation for scholarly research and publication.

812. Field Research. (B) Faculty.

First year Ph.D. and M.S. students will use this course to register for a research elective in their field of study. Courses to be taken will be selected from a list of electives offered by members of the Graduate Group of Architecture, typically the seminars offered by those faculty at the Masters level. At the outset of the course Ph.D. and M.S. students will discuss and

decide with the professor the readings, research, and writings that will be appropriate for the course, given the student's field of study.

813. Qualifying Research. (B) Faculty.

This is an independent study course for first year Ph.D. and M.S. students, supervised by a member of the Graduate Group in Architecture. A course of readings and advisors sessions throughout the semester will result in an independent study paper, which will also be used as the student's qualifying paper for the Qualifying

Examination. This research paper will be prepared as if for scholarly publication.

815. Research Report. (A) Faculty.

851. Dissertation Bibliography. (D) Faculty.

This course is essentially an independent study, undertaken by doctoral students in preparation for the Candidacy Examination. This course should be taken in conjunction with ARCH 852 after all other courses have been completed. Normally a member of the student's Dissertation Committee supervises this course.

852. Dissertation Proposal. (D) Faculty.

This course is essentially an independent study, undertaken by doctoral students in order to write the Proposal for the Dissertation. The Proposal is prepared before and defended during the Candidacy Examination. This course should be taken in conjunction with ARCH 852 after all other courses have been completed. Normally a member of the student's Dissertation Committee supervises this course.

ART & ARCHAEOLOGY OF THE MEDITERRANEAN WORLD (AS) {AAMW}

401. (CLST275) Introduction to Greek Archaeology. (M) Staff.

An introduction to the art and archaeology of ancient Greece from the Bronze Age through the Hellenistic Period. Topics to be considered include Minoan Crete, Mycenae, the Greek Dark Ages, Geometric Greece, the Archaic Period, Classical Athens, and the world of Alexander the Great. Emphasis on the consideration of the archaeological evidence, e.g., sculpture, painting, pottery, architecture and numismatics.

405. (CLST274) Art & Archaeology of Rome & Pompeii. (M) Staff.

Two key Roman cities will serve as the focus for an introduction to the archaeology and art history of the ancient Romans. Among the topics to be considered will be the development of Roman archaeology since the Renaissance, the topographical growth of the two cities, and the outlines of Roman painting, sculpture and architecture.

413. (CLST270) Ancient Athletics. (M) Romano.

The art, archaeology and history of athletics in ancient Greece. Among the topics to be included are: famous Greek athletes, female athletes, the ancient Olympic Games and other athletic festivals, ancient athletic facilities and equipment, the excavation of ancient athletic sites and practical athletics.

414. (CLST260) Ancient Cities. (M) Romano.

The historical and archaeological study of the ancient Greek city as evidenced through literature and archaeological excavation. As the term project of the course, each student is assigned a specific city to study and draw by means of a computer and an architectural drafting program.

415. (CLST416) Survey of Greek Sculpture. (M) Staff.

An examination of key phases in the development of Greek sculpture from the later Bronze Age through the Hellenistic period.

422. (ARTH422) The Art of the Ancient Near East. (C) Pittman.

A survey of the art of Mesopotamian and Egyptian cultures from 4000 B.C. through the conquest of Alexander the Great.

SM 423. (ARTH424, CLST424) Greek Vase Painting. Brownlee, A.

Painted vases constitute the most important and comprehensive collection of visual evidence that survives from ancient Greece. In this course, we will examine the development of Greek vase-painting from the 10th to the 4th century BC, with particular emphasis on the pottery of the archaic and Classical periods of produced in the cities of Athens and Corinth. We will look at the vases as objects--and the extensive collection of Greek vases in the University of Pennsylvania Museum will be an important resource for this course--but we will also consider them as they relate to broader cultural issues. Some background in art history or classical studies is helpful but not required.

L/R 424. (ARTH224, ARTH624) Art & Archaeology of Mesopotamia. (C) Pittman.

Emphasis on monumental art work of the Ancient Near East as the product of cultural and historical factors. Major focus will be on Mesopotamia from the late Neolithic to the Neo-Assyrian Period, with occasional attention to related surrounding areas such as western Iran, Anatolia, and Syria.

425. (ARTH425) Art of Ancient Iran. (C) Pittman.

This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. The format is slide illustrated lecture.

427. (ARTH427, CLST427) Roman Sculpture. (M) Kuttner.

Survey of the Republican origins and Imperial development of Roman sculpture--free--standing, relief, and architectural--from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display. Key themes are the depiction of time and space, programmatic decoration, and the vocabulary of political art.

431. (ARTH431) Early Christian and Byzantine Architecture. (C) Staff.

A survey of major architectural monuments from Early Christian times in East and

West until the 6th century A.D., and in the Byzantine lands until the Turkish Conquest.

SM 477. (ANTH477, HSPV577) Archaeological Chemistry. (M) McGovern.

SM 504. (ARTH504) Structural Archaeology. (C) Staff.

A proseminar designed to acquaint the participants with the physical evidence of buildings. It treats the properties of pre-modern building materials, their static and dynamic behavior, their contexts and reasons for their use, and the means for their procurement and working. It considers the methodologies for the historical interpretation of physical evidence, including the recording, analysis and presentation of evidence, determining the date and original form of buildings, their sequence of construction, and their subsequent modifications. Each participant carries out a small-scale field exercise.

SM 505. (CLST505) Archaeology of the Greek Iron Age. (M) Staff.

Examination of the "Dark Age" between the fall of the Mycenaean kingdoms and the emergence of the Archaic Greek culture.

SM 506. (CLST506) Greek Vase Painting. (M) Staff.

A study of Greek vase painting utilizing the artifacts of the University Museum.

SM 508. Greeks and Persians. (M) Zettler.

An examination of the cultures of the Achaemenid Empire and the contemporary Greek world from the perspectives of Classical and Near Eastern texts and archaeology.

SM 510. (CLST510) Topography of Athens. (C) Staff.

Layout and monuments of Athens from the Bronze Age into the time of Roman Empire.

SM 515. (CLST515) Geographical Information Systems (GIS) Applications in Archaeology. (M) Romano.

An introduction to the procedures and uses of GIS in modern archaeological field and laboratory work. The course will introduce the student to computerized GIS, discuss the philosophy and theory of its use, as well as the analytical potential of its utilization. Archaeological case studies will be presented. Open to graduate students. Undergraduates with permission.

SM 516. (ARTH516) Islamic Epigraphy. (M) Holod.

Topic varies.

SM 517. (ARTH517) The Islamic City. (C) Holod.

Approaches to the study of the city in the Islamic World.

SM 518. (ARTH518, NELC617) The Art of Iran. (M) Holod.

Iranian art and architecture of the Parthian, Sassanian and Islamic periods, with particular emphasis on regional characteristics in the period. Different themes are explored each time the course is offered. In the past, these have been Ilkhanid and Timurid painting, the city of Isfahan, and metropolitan and provincial architecture in the fourteenth century.

SM 519. (ARTH519) Art of Andalusia. (M) Holod.

A discussion of the arts of the Islamic period in the countries of the western Mediterranean. The particular focus is the art of Muslim Spain (Andalusia), dealing with the importance of its architectural and artistic achievements for the art of the western Mediterranean.

SM 520. (CLST520) The East Greeks. (M) Staff.

An examination of the culture of the East Aegean Greeks and the neighboring Anatolian peoples from the eighth to the fourth centuries B.C.

SM 521. (ARTH521, CLST521) Proseminar in Classical Art. (C)

Kuttner.

Topic varies.

SM 522. (ARTH522) Pro-seminar of the Art of the Ancient Near East. (C)

Pittman.

Topic varies: Art of the Late Uruk and Jemdet Nasr period; The Royal City of Susa; Assyrian reliefs; Art of Early Bronze Age of the Near East.

SM 525. (ARTH525, CLST525) Aegean Bronze Age. (C)

Betancourt. An examination of a selected problem in the Greek Bronze Age, focusing on the Minoan, Mycenaean, and Cycladic cultures. Lectures by the instructor and reports by the students will examine a series of interrelated topics.

SM 527. (ARTH527) Proseminar in Classical Architecture. (C)

Haselberger.

Topic Varies

SM 528. (ARTH528, CLST528) Proseminar in Greek and Roman Architecture. (C)

Haselberger.

Topic Varies

SM 529. (ARTH529) Vitruvian Studies. (C)

Haselberger.

Research on Vitruvius's Ten Books on Architecture, Art and Construction: Structure, sources, intended readers; analysis of theories and their relation to practice; formation of art theory; statics and aesthetics; discrepancy with the ideals of the "Augustan Revolution." Working knowledge of Latin recommended.

SM 530. (ARTH530) Chapters in Classical Architecture. (M)

Haselberger.

Topic varies.

SM 532. (CLST532) The Prehistoric Background of Western Culture.

Staff.

An introduction to the archaeology of later prehistoric Europe from the Neolithic to the Iron Age, ca. 6000 B.C. to the Roman conquest of Gaul and Britain. Includes considerations of the interactions of "classical" and "barbarian" societies; the relationship of Indo-European linguistic evidence to archaeological evidence; the possible uses of ethnography and history to interpret later prehistoric archaeology.

535. (ANTH535) Archaeology of the Mediterranean World. (M)

Staff. This course provides an analytical introduction to the archaeology of the area from Mesopotamia to north-west Europe, from the beginnings of farming to the Middle Ages.

SM 542. (ARTH542) Early Medieval Architecture. (C)

Maxwell.

A proseminar stressing familiarity with the materials and methods of research. Topic varies. Recent courses have treated North Italy, Carolingian, and Ottonian architecture. Reading knowledge of German, French and/or Italian desirable.

SM 556. (ANTH556) Practicum: Archaeological Field Methods. (C)

Staff.

The course examines and analyzes the process of excavation as a problem of research design and method, from both intellectual and organizational aspects. Archaeological research design is stressed, from excavation planning through data retrieval, storage, processing, integration and interpretation, to presentation. Guest lecturers, who present critical evaluations

of "case studies" are a regular feature. Prerequisite: excavation experience.

SM 557. (ANTH557, LALS557) Seminar in Archaeological Theory and Method. (M)

Staff.

Topic varies.

SM 601. (ANCH601, CLST601) Archaeology and Greek History. (M)

Staff.

An examination of archaeological evidence relevant to selected problems in Greek history.

SM 603. (CLST603) Archaeology & The Greek Theater. (M)

Staff.

This course will examine the written and especially the archaeological evidence for the production of Greek drama. Topics will include the theater buildings themselves, stage machinery, scene painting, and costumes. The main chronological focus will be on the fifth and fourth centuries B.C., but some attention will be paid to later developments.

SM 611. (GREK611) Greek Epigraphy. (C)

Graham.

An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.

SM 616. (ARTH617) Islamic Civilization & Visual Culture. (C)

Holod.

A one-semester survey of Islamic art and architecture which will examine visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources will be available in English translation.

L/R 620. (ARTH220, ARTH620) Greek Art and Architecture. (A)

Haselberger/Kuttner.

An intensive introduction to the art and architecture of the Greek World from Geometric to Hellenistic times, utilizing artifacts of the University Museum. Variable emphasis on topics ranging from stylistic innovation and persistence, commemorative genres, narrative, artistic program, patronage to tectonic structure, concepts of order and decoration, proportion, space, urbanism, and Vitruvian theories. Regularly taught in fall term.

**L/R 621. (ARTH221, ARTH621)
Roman Art and Architecture. (B)**
Haselberger/Kuttner.

An intensive introduction to the art and architecture of Rome and her empire from Republican and later Hellenistic to Constantinian times. Variable emphasis on topics ranging from major genres, styles, and programs of commemorative and decorative art, historical narrative, and political iconography to building types and functions and the specific Etrusco-Roman notion of space, land division, and city planning. Regularly taught in spring term.

SM 623. (ARTH623) Art and Culture of Ancient Egypt. (M) Pittman.

Survey of the art of Ancient Egypt from the Predynastic period through the New Kingdom. Emphasis on major monuments of architecture, sculpture, relief and painting; questions of stylistic change and historical context.

SM 625. (CLST625) City & Landscape Planning in Roman Corinth. (M)
Romano.

This seminar considers the procedures and the results of the Roman *agrimensors Founded on the site of the former Greek city of Julius Caesar, Roman Corinth was to become one of the great cities of the roman world. Considerable attention will be paid to the modern methods employed by the Corinth Computer Project, 1988-1997, as well as the resulting new information about the history of Roman Corinth.

SM 626. (ARTH626) Hellenistic Art. (C) Kuttner.

A survey of the principal Hellenistic arts and styles and their private and public display contexts, from the 4th c. BC rise to power of Macedon and the conquests of Alexander, through the 1st C. AD consolidation of the Roman imperial system. We will look at artifacts, architectural planning and designed landscapes for cities, sanctuaries, houses and palaces, from Italy to the Middle East; media include sculpture, painting, mosaic, and the luxury and mass-produced arts of ceramics, gems, and metalwork. Viewing art in its social and design contexts, the course will emphasize; reconstructing Hellenistic aesthetics and ideas about art history; patronage and display habits; the thematic arrangements of images and structures for political and social expression; and cultural competition and synthesis in a multi-ethnic world of Greek, "Eastern" and Roman peoples and states. Lecture format.

SM 635. (ANCH635, ARTH534, CLST635) Iron Age Greece & Anatolia. (M) Staff.

645. (ANTH645) Economy of Ancient Trade. (M) Staff.

This course will examine theoretical and empirical frameworks for pre-modern forms of exchange. We will focus on substantist and formalist economic theories and will consider the archaeological evidence for such phenomena a barter, gift exchange, administered economies, markets, local exchange, and long distance overland and maritime trade. Our goal is to develop mid-rang models for reconstructing ancient economies. The course will emphasize but not be limited to complex societies of the New and Old World.

SM 702. (ANCH702, CLST702) Greek Sanctuaries. (M) Staff.

The formation and development of key religious sites, including Olympia, Delphi, Cyrene, Selinus, Cos and Lindos.

SM 715. (CLST715) Archaeology of Troy. (M) Staff.

SM 716. (ARTH716) Seminar in Islamic Art. (M) Holod.

Topic varies.

SM 717. (ARTH717) Islamic. (C) Holod.

Topic varies.

SM 718. (ARTH718) Seminar in Islamic Architecture. (M) Holod.

Topic varies.

SM 719. (ARTH719) Islamic Archaeology. (M) Holod.

Topic varies.

SM 720. (ARTH729, CLST729) Seminar in Classical Art. (C) Kuttner.

Topic varies.

SM 721. (ANCH721, ARTH721) Seminar in Greek Architecture. (C)
Haselberger.

Topic varies.

SM 722. (CLST730) Topography of Rome. (C) Staff.

The topographical development of ancient Rome from its prehistoric beginnings to the late Imperial times with emphasis on the city's key historical and architectural monuments.

SM 723. (ARTH720, CLST614) Seminar in Aegean Art. (M)
Pittman/Betancourt.

SM 724. (ARTH724) Seminar in the Art of the Ancient Near East. (M)
Pittman.

Topic varies: Proto-Elamite glyptic art; The art of Akkad; Old Assyrian period; Neo-Sumerian period; Middle Assyrian period; Assyrian reliefs.

SM 725. (ARTH725) Seminar in Neo-Assyrian Art. (C) Pittman.

Topic varies.

SM 728. (ARTH728, CLST728) Seminar in Roman Architecture. (C)
Haselberger.

Topic varies.

SM 729. The Age of Augustus. (M)
Kuttner.

Investigation of significant monuments and modes of artistic display at Rome in the "Age of Augustus", ca. 50 BC - 20 AD.

SM 730. (ARTH730) Seminar in Early Christian and Byzantine Architecture. (M) Staff.

Prerequisite: reading knowledge of German, French, or Italian. Topic varies. Recent seminars have treated aspects of architecture of Ravenna, Rome, and Constantinople. Participants undertake research on a specific issue which they present orally to the seminar and submit in written form.

SM 736. (CLST736) The Archaeology of Coastal Northeast Africa: Cyrenaica and Marmarica. (M) Staff.

Prerequisite(s). Exposure to introductory courses. An examination of selected aspects of the Bronze Age to Late Roman period archaeology of the northeastern African coast between Alexandria and Syrtic gulf.

SM 741. (ARTH741) Early Medieval Architecture. (C) Maxwell.

Topic varies.

SM 749. Seminar in Field Archaeology. (M) Staff.

Topic Varies.

SM 750. Supervised Reading and Research. (D) Staff.

751. Participation in Archaeological Excavations. (L) Staff.

Opportunities for qualified students to join in current expeditions. Credit allowed will depend on the length of time spent in the field.

999. Independent Study. (C) May be repeated for credit.

**ART HISTORY
(AS) {ARTH}**

SM 300. Undergraduate Methods Seminar. Staff.

SM 386. (ENGL386) TOPICS - AMERICAN LIT. (M)

SM 740. MEDIEVAL ART.

Introductory Courses

L/R 001. Architect and History. (A)
Haselberger.

Human experience is shaped by the built environment. This course introduces students to the interrelated fields of architecture, art history, and engineering and explores great architectural monuments from the ancient to the modern period, from India across the Mediterranean and Europe to the US. The focus will be on understanding these works in their structure and function, both as products of individual ingenuity and reflections of Zeitgeist. Questioning these monuments from a present-day perspective across the cultures will be an important ingredient, as will be podium discussions, guest lectures, excursions, and all kinds of visualizations, from digital walk-throughs to practical design exercises.

Regularly taught in fall term, this course fulfills Sector IV, Humanities and Social Science, and it satisfies History of Art 100-level course requirements. There is only ONE recitation in this course, attached directly to Friday's class at 2-3 p.m., in order to provide sufficient time for practica and field trips.

L/R 002. The Rise of Modern Visual Media. (B) Arts & Letters Sector. All Classes. Silver/Leja.

We live in a world inundated with media and saturated with images. What might be reported through television, documentary films, or magazines was once presented via illustrated texts and prints or else commemorated in public murals or statues. This course will follow the emergence of modern media - culminating in photography, film, and digital media - in an increasingly public and democratic sphere of art. Social changes in courts and cities, especially in the wake of the Industrial and French Revolutions, resulted from increasing capitalism and democracy. Artists had to adjust to new roles, media, and means of support. This course will

introduce students from diverse backgrounds to visual media in culture and society, providing both critical and historical tools for visual literacy in the modern world. No Prerequisites.

Taught regularly in spring term. It replaces the former ARTH 102 introductory course and satisfies History of Art 100-level course requirements.

In consultation with the Undergraduate Chair, CGS students may be allowed to substitute CGS-taught ARTH 101 or 102 courses for the new ARTH 001 OR 002, respectively

SM 100. (CINE100, ENGL016, RELS104) Introduction to Art. (C)
Staff. For Freshmen Only.

Topic Varies.

101. European Art & Civilization before 1400. (B) Arts & Letters Sector. All Classes. Ousterhout, Maxwell.

This is a double introduction: to looking at the visual arts; and, to the ancient and medieval cities and empires of three continents - ancient Egypt, the Middle East and Iran, the Minoan and Mycenaean Bronze Age, the Greek and Roman Mediterranean, and the early Islamic, early Byzantine and western Medieval world. Using images, contemporary texts, and art in our city, we examine the changing forms of art, architecture and landscape architecture, and the roles of visual culture for political, social and religious activity.

102. European Art & Civilization after 1400. (A) Staff. This course satisfies the General Requirement in Arts & Letters for CGS Students ONLY and is offered only through CGS.

The great epochs of art and their relation to corresponding phases of Western political and sociological history. For the student who desires an introduction to the arts as well as for those who seek a foundation for more specialized study in the field.

L/R 103. (EALC013) East Asian Art & Civilization. (M) Arts & Letters Sector. All Classes. Davis, Steinhardt.

Introduction to major artistic traditions of China and Japan and to the methodological practices of art history. Attention given to key cultural concepts and ways of looking, in such topics as: concepts of the afterlife and its representation; Buddhist arts and iconography; painting styles and subjects; and more broadly at the transmission of styles and cultural practices across East Asia. Serves as an introduction to upper level lecture courses in East Asian art history cultures. If size of class permits, certain sessions will be held in the

University Museum or the Philadelphia Museum of Art.

104. (SAST200, SAST500) Introduction to Art in South Asia. (C) Arts & Letters Sector. All Classes. Meister.

This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as 'traditional' or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe, as diverse. This course attempts to introduce the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.

105. (ANCS101, CLST104) Ancient World Cultures. (M) Pittman.

This course presents a comparative overview of the ancient civilizations around the world. It is designed as a gateway course for the many specialized courses available at Penn. Its focus is two fold: first, the various forms that ancient cultures have developed are explored and compared and second, the types of disciplines that study these courses are examined. The course has a number of guest lecturers, as well as visits to museums and libraries to examine original documents. This course meets the requirement for the Ancient Studies Minor.

L/R 106. Architect and History. (A) Humanities & Social Science Sector. Class of 2010 & beyond. Haselberger.

The new course, designed specifically for majors and minors in the fields of Architecture, art history, and engineering, will explore great architectural monuments from the ancient to the modern period, from India across the Mediterranean and Europe to the US. The focus will be on understanding these works in their structure and function, both as products of individual ingenuity and reflections of Zeitgeist. Questioning these monuments from a present-day perspective across the cultures will be an important ingredient, as will be podium discussions, guest lectures, excursions, and all kinds of visualizations, from digital walk-throughs to practical rope-laying experiments. - No prerequisites.

L/R 107. (CINE103, ENGL095) Introduction to film Theory. (C)
Beckman.

This course offers students an introduction to the major texts in film theory across the 20th and 21st centuries. The course gives students an opportunity to read these central texts closely, to understand the range of historical contexts in which film theories are developed, to explore the relationship between film theory and the major film movements, to grapple with the points of contention that have emerged among theorists, and finally to consider: what is the status of film theory today?

This course is required for all Cinema Studies majors, but is open to all students, and no prior knowledge of film theory is assumed. Requirements: Close reading of all assigned texts; attendance and participation in section discussions; 1 midterm exam; 1 take-home final exam.

Core Courses

209. (AFRC209, AFST209) African Art. (M) Staff.

This selective survey will examine a variety of the circumstances of sub-Saharan African art, ranging from imperial to nomadic cultures and from ancient times to contemporary participation in the international market. Iconography, themes and style will be concerned, as will questions of modernity, religious impact, tradition and colonialism.

210. (ARTH610, CINE223) Post War Japanese Cinema and Visual Culture. (M) Davis.

Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course will place their films in period context, and will pay particular attention to the connections to other visual media, and to how "art" and "history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" will also be discussed. Miyazaki Hayao - also took up these issues, and referred to the "big three" will be discussed at the end of the course.

211. Art in India. (C) Meister.

A survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C. to the nineteenth century.

An attempt to explore the role of tradition in the broader history of art in India.

212. (SAST201, SAST501) Indian Temple Architecture. (C) Meister.

The wooden architecture of ancient India's cities is represented in relief carvings from Buddhist religious monuments of the early centuries A.D. and replicated in remarkable excavated cave cathedrals. This course will trace that architectural tradition, its transformation into a symbolic vocabulary for a new structure, the Hindu temple, and the development of the temple in India from ca. 500-1500 A.D.

L/R 213. (ARTH613, EALC157, EALC557) Arts of Japan. (K) Davis, Chance. May include visits to the PMA, University Museum, or other local collections, as available.

This course will introduce the major artistic traditions of Japan, from the Neolithic period to the present, and teach the fundamental methods of the discipline of art history. Our approaches will be chronological, considering how the arts developed in and through history, and thematic, discussing how art and architecture were used for philosophical, religious and material ends. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the 'artist' overtime; and the transformation of tradition in the modern age.

L/R 214. (EALC127, EALC527) Arts of China. (M) Steinhardt, Davis.

The goals of this course are to introduce the major artistic traditions of China, from the Neolithic period to the present and to teach the fundamental methods of the discipline of art history. Our approaches will be chronological, considering how the arts developed in and through history, and thematic, discussing how art and architecture were used for philosophical, religious and material ends. Topics of study will include; Shang bronzes; Han concepts of the afterlife; the impact of Buddhism; patronage and painting; the landscape tradition; the concept of the literatus; architecture and garden design; the "modern" and 20th-century artistic practices; among others.

215. Japanese Painting. (M) Davis.

An investigation of Japanese painting and practice from the earliest pictorial representations through the late twentieth

century. Painting style and connoisseurship will form the basis of analysis, and themes such as landscape, narrative, and the expression of cultural identities in painting, will be considered in the context of larger social and cultural issues. Topics include: tomb painting, Heian development of "yamato-e," ink painting and the adaptation of Chinese styles, the expansion of patronage in the 18th century, and the turn toward internationalism in the late 19th and 20th centuries. May include visits to the PMA or other local collections, as available.

L/R 216. (ARTH616, EALC227, EALC627) Chinese Painting. (M) Steinhardt.

Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting style forms the basis of analysis, and themes such as landscape and narrative will be considered with regard to larger social and cultural issues. The class will pay particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present. Visits to look at paintings at the University of Pennsylvania Museum, PMA and/or local collections will be offered when possible.

217. (ARTH617) Introduction to Visual Culture of the Islamic World 125. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Holod. Also fulfills General Requirement in History & Tradition for Class of 2009 and prior.

A one-semester survey of Islamic art and architecture which will examine visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources will be available in English translation.

L/R 218. (ARTH618) Early Modern Japanese Art and the City of Edo. (H) Davis.

Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the

reinvention of classical styles, and patronage, among others.

May include visits to the PMA, University Museum, or other local collections, as available.

L/R 220. (AAMW620, ARTH620, CLST220) Introduction to Greek Art & Architecture. (A) Haselberger, Kuttner.

This course surveys Greek art and architecture, from Sicily to the Black Sea, between the 10th and 2nd centuries BCE (Dark Age to Hellenistic). Civic, religious, and domestic buildings and spaces were intimately connected with images. These range from public sculpture and painting on and around grand buildings gardens, to domestic luxury arts like jewelry, cups vases, mosaic floors. Art and architecture addressed heroic epic religious and political themes, and also every-day life and emotions. Current themes include Greek ways of looking at art and space, and Greek ideas of invention and progress; the role of monuments, makers and patrons in Greek society; and connections with the other cultures who inspired and made use of Greek artists and styles. The course will exploit the University Museum, regional museums where possible.

L/R 221. (AAMW621, ARTH621, CLST221) Introduction to Roman Art & Architecture. (B) Haselberger, Kuttner.

An intensive introduction to the art and architecture of Rome and her empire from Republican and later Hellenistic to Constantinian times. Variable emphasis on topics ranging from major genres, styles, and programs of commemorative and decorative art, historical narrative, and political iconography to building types and functions and the specific Etrusco-Roman notion of space, land division, and city planning.

222. (ARTH622) Minoan Cycladic and Mycenaean Art. (A) Shank.

This course is designed to give the student an overview of the cultures of the Aegean Bronze Age. The art and architecture of Crete, the Cyclades and the Mainland of Greece will be examined in chronological order, with an emphasis on materials and techniques. In addition, larger issues such as the development of social complexity and stratification, and the changing balance of power during the Aegean Bronze Age will be examined. There are two texts for the course: Sinclair Hood's *The Arts in Prehistoric Greece* and Donald Preziosi and Louise Hitchcock's *Aegean Art and the Architecture*.

223. Egyptian Art. (M) Pittman.

Survey of the art of Ancient Egypt from the Predynastic Period through the New Kingdom. Emphasis on major monuments of architecture, sculpture, relief and painting; questions stylistic change and historical context.

L/R 224. (AAMW424, ARTH624) Art of Egypt & Mesopotamia. (M) Pittman.

A survey of the art of Mesopotamian and Egyptian cultures from 4000 B.C. through the conquest of Alexander the Great.

225. (ARTH625) Greek Architecture and Urbanism. (B) Haselberger.

Introduction to the art of building and city planning in the ancient Greek world, 7th-1st c. BC. Emphasis on concepts of organizing space, on issues of structure, materials, decoration, proportion, and the Mycenaean and eastern heritage as well as on theory and practice of urbanism as reflected in ancient cities (Athens, Pergamon, Alexandria) and writings (Plato, Aristotle, and others). Excursions to the Penn Museum and Philadelphia. No prerequisites.

226. Roman Architecture and Urbanism. (M) Haselberger.

Introduction to the art of building and city planning in the Roman world, 6th c. BC - 2nd c. AD. Emphasis on concepts of organizing space, on issues of structure, materials, decoration, proportion, and the Etruscan and Greek heritage as well as on theory and practice of urbanism as reflected in ancient cities (Rome, Ostia, Roman Alexandria, Timgad) and writings (Vitruvius, and others). Excursions to the Penn Museum and Philadelphia. No prerequisites.

240. Medieval Art. (C) Maxwell.

An introductory survey, this course investigates painting, sculpture, and the "minor arts" of the Middle Ages. Students will become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.

241. (ARTH641) Byzantine Art and Architecture. (C) Ousterhout.

This course surveys the arts of Byzantium from the fall of Rome to the fall of Constantinople in 1453. Study of major monuments, including icons, mosaics, architecture, and ivories will provide us with an overview of this rich artistic culture. We will pay special attention to the role of the Orthodox Church and liturgy in the production and reception of art works. Weekly recitation sections will focus on selected major issues, such as the relationship of art to the Holy, the uses and abuses of Iconoclasm, and imperial patronage. The course will also grapple with the Empire's relationship to other cultures by looking at the impact of the Christian Crusades and Moslem invasions - as well as Byzantium's crucial impact on European art (e.g., in Sicily, Spain).

242. (ARTH642) Introduction to Medieval Architecture. (C) Maxwell.

This course provides an introduction to the built environment of the Middle Ages. From the fall of Rome to the dawn of the Renaissance, a range of architectural styles shaped medieval daily life, religious experience and civic spectacle. We will become familiar with the architectural traditions of the great cathedrals, revered pilgrimage churches, and reclusive monasteries of western Europe, as well as castles, houses, and other civic structures. We will integrate the study of the architecture and with the study of medieval culture, exploring the role of pilgrimage, courts and civil authority, religious reform and radicalism, crusading and social violence, and rising urbanism. In this way, we will explore the ways in which the built environment profoundly affected contemporary audiences and shaped medieval life.

252. (ARTH652) Art in the Time of Michelangelo. (C) Cole.

Introductory survey of the art of the late Renaissance, with an emphasis on drawing, painting, sculpture, and architecture in central Italy. The course will cover works by Michelangelo, Leonardo da Vinci, and Raphael, among others.

L/R 255. Italian Renaissance Art. (C) Cole.

Survey of the visual arts in Italy in the fourteenth, fifteenth, and sixteenth centuries, with emphasis on painting, sculpture and architecture in the major cultural centers. Topics may include the origins of modern urbanism, the rise of art theory, the art of the courts, and the role of art in the religious conflicts that ended the

period. The course will devote attention to Donatello, Leonardo, Michelangelo, and Titian, among other artists.

256. Italian Renaissance and Baroque Architecture. (C) Cole.

An introductory survey of architecture on the Italian peninsula, ca. 1300-1750. The course will cover both standard types (palaces, churches, squares) and distinctive individual monuments. Topics may include urban planning, garden and fountain design, and the relation of practice to theory.

260. (DTCH230) Northern Renaissance Art. (C) Silver.

Survey of the principal developments in Northern Europe during the "early modern" period, i.e. the transition from medieval to modern art-making during the fifteenth and sixteenth centuries. Principal attention to painting and graphics with additional consideration of developments in sculpture, particularly in the regions of the Netherlands and German-speaking Europe. Attention focused on the works of the following artists: Van Eyck, Bosch, Durer, Holbein, Bruegel, and on topics such as the rise of pictorial genres, urban art markets, Reformation art and art for the dynastic courts of emerging nation-states.

261. (DTCH261) Netherlandish Art. (M) Silver.

Dutch and Flemish painting in the 15th and 16th centuries with special emphasis on the contributions of Robert Campin, Jan van Eyck and Roger van der Weyden, Bosch, and Bruegel.

SM 262. (DTCH230) German Art. (M) Silver.

This course will focus on paintings, prints, and sculptures produced in the Germanic world around 1600. Principal attention will focus on the changing role of visual culture and altarpieces but evolves into an era of "art," and collecting of pictures. German politics and religion will be examined in relation to the images. Cultural exchange with neighboring regions of Italy and the low countries.

271. (ARTH671) European Baroque Art. (C) Cole/Silver.

European art and architecture of the late sixteenth and seventeenth centuries.

275. Roman Baroque Art. (M) Cole.

An introduction to the city of Rome from the late sixteenth to the mid-eighteenth century. The course will look at works by such artists as Caravaggio, Bernini, Poussin, and Borromini, considering them

in relation to the conditions in which they were originally produced and viewed.

L/R 281. (ARTH681) Modern Architecture I. (A) Brownlee.

The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the picturesque, the Greek and Gothic Revivals, and the search for a new style.

L/R 282. (ARTH682) Modern Architecture II. (C) Brownlee.

The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time will also be devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics to be discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that will be traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.

L/R 283. (ARTH683) The Modern City. (C) Brownlee.

A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis will be placed on the history of architecture and urban design, but political, sociological, and economic factors will also receive attention. The class will consider the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.

L/R 284. Revolution to Realism: 1770-1870. (A) Dombrowski.

This course surveys the major trends in European art of the tumultuous decades stretching from French Revolution of 1789 to the rise of realism in the mid-nineteenth century. Starting with Jacques-Louis David revolutionary history paintings, we will study Napoleonic representations of empire, Goya's imagery of violence, romantic representations of madness and

desire, Friedrich's nationalist landscapes, as well as the politicized realism of Courbet. Some of the themes that will be addressed are: the revolutionary hero, the birth of the public museum, the anxious masculinity of

L/R 285. (ARTH685) Impressionism: European Art 1870-1900. (C) Dombrowski.

French Impressionism is the centerpiece of this course, which will explore paintings, and some sculptures, produced between 1848 and 1906. We consider French, Dutch, and Scandinavian artists who painted and exhibited in Paris during these years, exploring not only their historical stature and reputation, but their contemporary relevance. We will reflect on such myths of modernism as the "misogyny" of Degas; the "obsessiveness" of Cezanne; the "primitivism" of Gauguin; and, of course, the "madness" of Van Gogh. All art is considered within the context of the social, economic and political changes that were taking place in Paris--the capital of the nineteenth-century.

L/R 286. (ARTH686) Twentieth Century Art: 1900-1945. (C) Poggi.

The art of the early twentieth century is marked by a number of exciting, and sometimes bewildering, transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, montage, constructed sculpture, performance art, and new photography-based practices. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists also began to respond to the challenge photography, to organize themselves into movements, and in some cases, to challenge the norms of art through "anti-art." A new gallery system replaced traditional forms of exhibition organizers. This course will examine these developments, with attention to formal innovations as well as cultural and political contexts. The emphasis will be on major movements and artists in Europe.

L/R 287. (ARTH687) Contemporary Art: 1945-Present. (B) Poggi.

Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions

about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the "canon" of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.

288. Modern Design. (M) Marcus.

This survey of modern utilitarian and decorative objects spans the century, from the Arts and Crafts Movement to the present, from the rise of Modernism to its rejection in Post-Modernism, from Tiffany glass and tubular-metal furniture to the Sony Walkman. Its overall approach focuses on the aesthetics of designed objects and on the designers who created them, but the course also investigates such related topics as industrialization, technology, ergonomics, and environmental, postindustrial, and universal design. Among the major international figures whose graphics, textiles, furniture, and other products will be studied are William Morris, Frank Lloyd Wright, Josef Hoffmann, Le Corbusier and Charlotte Perriand, Mies van der Rohe, Alvar Aalto, Raymond Loewy, Charles and Ray Eames, Isamu Noguchi, Eero Saarinen, Paul Rand, Jack Lenor Larsen, Ettore Sottsass, Jr., Robert Venturi, Frank Gehry, and Philippe Starck.

L/R 289. Contemporary Art. (M) Butterfield.**291. (CINE209) The Road Movie. (C)** Beckman.

This course will allow us to study the changing shape of the road movie genre from Bonnie and Clyde (1967) to the French feminist revenge narrative, *Baise-moi* (Rape me), (2000). In addition to considering the possibilities and limits of genre as a category of analysis, we will grapple with a number of questions that will persist throughout the course: What is the relationship between cinema and the automobile? Is the road trip a particularly American fantasy, and if so, what does it mean when non-U.S. filmmakers adopt the road-movie genre? Is the road movie a "masculine" genre? What role do urban and rural spaces play in the development of the genre? What happens to race/gender/sexuality/national identity in the road movie? What kinds of borders does this genre dream of crossing? Do the

radical fantasies of characters within the road movie genre necessarily translate into films with radical politics?

293. History of Photography. (M) Staff.

A history of world photography from 1839 to the present and its relation to cultural contexts as well as to various theories of the functions of images. Topics discussed in considering the nineteenth century will be the relationship between photography and painting, the effect of photography on portraiture, photography in the service of exploration, and photography as practiced by anthropologists; and in considering the twentieth century, photography and abstraction, photography as "fine art", photography and the critique of art history, and photography and censorship.

L/R 295. American Art Before 1865. (M) Leja, Shaw.**296. (ARTH696) American Art: 1865-1968. (M)** Leja, Shaw.

This course surveys the history of modern art in the U.S. from its international prominence during the 1950s and then to its alleged replacement by "postmodernism." We will explore relation of this art to historical processes of modernization (industrialization, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and myriad cultural changes these developments entailed.

Undergraduate Seminars & Independent Study

SM 301. (CINE300, CINE392, ENGL294, ENGL392, VLST301) Undergraduate Seminar. (C) Meister, Holod, Brownlee, Poggi, Haselberger, Kuttner, Davis, Maxwell, Cole, Pittman, Silver, Beckman, Leja, Shaw, Dombrowski, Ousterhout. Undergraduate Major Preference.

Topic varies.

397. Senior Project in Architectural History. (C) Holod. Permission of instructor required.

Topic Varies

398. Senior Thesis. (E) Prerequisite(s): Permission of instructor required. See department for appropriate section numbers.

399. Independent Study. (C) See department for appropriate section numbers.

Intermediate Courses**412. Indian Temple Architecture. (C)** Meister.

The history of Hindu temple architecture from A.D. 400-1400, concentrating on the means by which a "language" for symbolic architecture was developed. Lab sessions with photographs as well as lectures will be included.

417. (COML417) Later Islamic Art and Architecture. (M) Holod.

Istanbul, Samarkand, Isfahan, Cairo and Delhi as major centers of art production in the fourteenth to seventeenth centuries. Attention will be given to urban and architectural achievement as well as to the key monuments of painting and metalwork. The visual environment of the "gunpowder empires".

422. (AAMW422, NELC422) Art of the Ancient Near East. (C) Pittman.

Emphasis on monumental art work of the Ancient Near East as the product of cultural and historical factors. Major focus will be on Mesopotamia from the late Neolithic to the Neo-Assyrian period, with occasional attention to related surrounding areas such as Western Iran, Anatolia, and Syria.

425. (AAMW425) Art of Ancient Iran. (C) Pittman.

This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. The format is slide illustrated lecture.

427. (AAMW427, CLST427) Roman Sculpture. (M) Kuttner.

Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.

431. (AAMW431) Early Christian and Byzantine Architecture. (C)

Ousterhout.

Architecture and its decoration from Early Christian times in East and West until the sixth century A.D., and in the Byzantine lands until the Turkish Conquest.

432. Early Medieval Architecture. (M)

Maxwell.

Selected problems in pre-Carolingian, and Ottonian architecture. The course will be conducted as a colloquium, focusing on current issues and methodologies for dealing with them. A reading knowledge of French, German, or Italian is desirable.

441. Medieval Architecture. (M)

Maxwell.

442. Medieval Art in Italy to 1400. (M)

Maxwell.

A survey of sculpture, painting, and architecture in Italy from c. 300 to 1400.

473. (DTCH473, HIST407, RELS415) Baroque Painting in Northern Europe. (M) Silver.

Emphasis on the "Golden Age" of painting traditions of Holland and Flanders from the outset of the Dutch Revolt in the 1560s to the French invasions around 1670.

Principal artists include: Pieter and Jan Brueghel, Rubens, Van Dyck, Goltzuis, Hals, Rembrandt, Ruisdael, Vermeer, and Steen. Attention to the rise of pictorial genres: landscape, still life, tavern scenes, portraiture, as well as relationship of art to the rise of Absolutist rulers, religious conflicts, and the Thirty Years War.

500-Level Seminars**SM 500. Problems of Interpretation. (L) Silver.**

Consideration of the problems of definition, analysis, and interpretation of artworks, chiefly painting, sculpture and graphic arts. Topics for consideration will include: the changing status of the artist, sites of visual display, the relationship between art and authority, the representation of cultural difference (including both national/ethnic and gender difference), and the "art for art's sake: purposes of "modernism."

Requirements will consist of short analytical papers on visual images as well as on class readings, comprised of some primary texts and samples of scholarship. Principal texts will derive from the Open University series "Art and its Histories" (Yale University Press).

SM 501. (AFRC501, SAST502) Museum Methods. (M) Staff.

Topic varies. Organized in cooperation with local museums and collections.

SM 503. Origins of Graphic Art. (M) Silver.

History of prints in the period from about 1400 to Albrecht Durer (d 1528). Relation of early Northern and Italian woodcuts, engravings, and etchings to contemporary art forms - sculpture, painting.

Topic varies.

SM 504. (AAMW504) Structural Archaeology. (C) Staff.

A proseminar designed to acquaint the participants with the physical evidence of buildings. It treats the properties of pre-modern building materials, their static and dynamic behavior, their contexts and reasons for their use, and the means for their procurement and working. It considers the methodologies for the historical interpretation of physical evidence, including the recording, analysis, and presentation of evidence, determining the date and original form of buildings, their sequence of construction, and their subsequent modifications. Each participant carries out a small-scale field exercise. No prerequisites.

SM 511. Ukiyo-e: Japanese Prints and Paintings of the "Floating World". (M) Davis.

Study Japanese woodblock prints from the seventeenth through the twentieth century. For most of the course, we will be concerned with prints from the Edo, or Tokugawa, period (1615-1868) in the style known as "ukiyo-e" ("images of the floating world") and the culture that produced them, but in the final weeks we will also consider the continuation and adaptation of woodblock printing in modern print movements. Study of prints at the Philadelphia Museum of Art and other local collections.

SM 512. (SAST512) Proseminar in Indian Art. (C) Meister.

Topic varies.

SM 513. Pro-Seminar in East Asian Art. (C) Davis.

Topic varies.

SM 514. (SAST505) Aspects of Indian Art. (C) Meister.

Aspects of sculpture, painting, iconography, or architecture in the Indian sub-continent. Topic varies.

SM 515. (SAST503) Aspects of Indian Architecture. (M) Meister.

Indian temples explored in terms of the morphology of a symbolic architecture. Topic varies.

SM 516. (AAMW516) Islamic Epigraphy. (M) Holod.

Topic varies.

SM 517. (AAMW517) The Islamic City. (C) Holod.

Approaches to the study of the City in the Islamic World.

SM 518. (AAMW518, NELC617) Art of Iran. (M) Holod.

Iranian art and architecture of the Parthian, Sassanian and Islamic periods, with particular emphasis on regional characteristics in the period. Different themes are explored each time the course is offered. In the past, these have been Ilkhanid and Timurid painting, the city of Isfahan, metropolitan and provincial architecture in the fourteenth century.

SM 519. (AAMW519) Art of Andalusia. (M) Holod.

A discussion of the arts of the Islamic period in the countries of the western Mediterranean. The particular focus is the art of Muslim Spain (Andalusia), dealing with the importance of its architectural and artistic achievements for the art of the western Mediterranean.

SM 521. (AAMW521, CLST521) Proseminar in Classical Art. (M) Kuttner.

Kuttner.

Topic varies.

No prerequisite. Open to advanced undergraduates with permission of the instructor.

SM 522. (AAMW522) Art of the Ancient Near East. (M) Pittman.

Topic Varies

SM 525. (AAMW525, CLST525) Aegean Bronze Age. (C) Betancourt.

Topic Varies.

SM 526. (AAMW526, CLST526) Material & Methods in Mediterranean. (C) Kuttner.

The art of Greece and its neighbors from the time of Alexander the Great to Roman dominion of the Mediterranean (c. 323 to 31 B.C.). Focus on painting and sculpture from major centers such as Alexandria and Pergamon.

SM 527. (AAMW527) Proseminar in Classical Architecture. (C)

Haselberger.
Topic Varies

SM 528. (AAMW528, CLST528) Proseminar in Roman Architecture. (M) Haselberger.

Topic varies.

SM 529. (AAMW529) Vitruvian Studies. (C) Haselberger.

Topic Varies.

SM 541. (HIST536, RELS536) Topics in Medieval Art. (M) Maxwell.

Topic varies.

SM 542. (AAMW542) Early Medieval Architecture. (M) Maxwell.

Colloquium on selected problems in the history of Western European architecture from the seventh century to the dawn of the Romanesque.

Topic varies.

SM 543. Topic in Byzantine Art. (C)

Ousterhout.

Topic Varies

SM 551. Proseminar in Early Renaissance Art. (M) Cole.

Topic varies.

SM 552. Proseminar in Renaissance/Baroque Art. (C) Cole.

Topic Varies.

SM 562. Northern Renaissance Art. (M) Silver.

Topic varies.

SM 579. (DTCH579, GRMN589) Seminar in Baroque Art. (M) Silver.

Topic varies.

SM 580. Neoclassical Architecture. (M) Haselberger.

This proseminar will explore the architecture of the Neoclassical century (ca. 1750-1850), the "true style", as it made its appearance all over Europe and parts of North America, with a new revival from the 1890s to the 1940s. We will do research on the intellectual preconditions and key treatises (e.g., Laugier, Stuart and Revett) as well as on selected monuments, some of them right in Philadelphia (e.g., Second Bank; Water Works; PMA). Field trips and practical instructions of analysis. No prerequisites.

SM 581. Modern Architectural Theory. (C) Brownlee.

A survey of architectural theory from the mid-eighteenth century to the present. The discussion of original writings will be emphasized.

SM 582. Proseminar in Modern Architecture. (C) Brownlee.

Topic varies.

SM 585. Proseminar in Nineteenth-Century Art. (C) Staff.

Topic varies.

SM 586. (COML586) Proseminar in Twentieth-Century Art. (C) Poggi.

Topic varies.

SM 588. Proseminar in American Art. (M) Leja, Shaw.

Topic Varies.

SM 589. Proseminar in Contemporary Art. (M) Staff.

Topic varies.

SM 593. (CINE591, COML592, ENGL591, FREN591) Topics in Contemporary Theory. (B) Beckman.

Prerequisite(s): Permission of Instructor for Undergraduates.

Topics in Contemporary Theory will introduce students to key issues, debates, and authors in contemporary theory. Course topics will include Film Theory, Theories of Gender and Sexuality, as well as focused readings of particular authors, (e.g. Gilles Deleuze, Michel Foucault).

SM 599. (SAST516) Photo Archival Studies. (M) Meister.

Topic Varies

600-Level Courses

SM 603. Prints & Printmakers. (C) Silver.

610. (ARTH210) Post War Japanese Art. (M) Davis.

Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course will place their films in period context, and will pay particular attention to the connections to other visual media, and to how "art" and

"history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" will also be discussed.

SM 611. Art in India. (C) Meister.

A survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C. to the nineteenth century. An attempt to explore the role of tradition in the broader history of art in India.

SM 612. (SAST501) Indian Temple Architecture. (C) Meister.

The wooden architecture of ancient India's cities is represented in relief carvings from Buddhist religious monuments of the early centuries A.D. and replicated in remarkable excavated cave cathedrals. This course will trace that architectural tradition, its transformation into a symbolic vocabulary for a new structure, the Hindu temple, and the development of the temple in India from ca. 500-1500 A.D.

L/R 613. (ARTH213, EALC557) Arts of Japan. (K) Davis, Chance.

This course will introduce the major artistic traditions of Japan, from the Neolithic period to the present, and teach the fundamental methods of the discipline of art history. Our approaches will be chronological, considering how the arts developed in and through history, and thematic, discussing how art and architecture were used for philosophical, religious and material ends. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the 'artist' over time; and the transformation of tradition in the modern age.

L/R 614. (EALC127, EALC527) Arts of China. (M) Steinhardt, Davis.

The goals of this course are to introduce the major artistic traditions of China, from the Neolithic period to the present and to teach the fundamental methods of the discipline of art history. Our approaches will be chronological, considering how the arts developed in and through history, and thematic, discussing how art and architecture were used for philosophical, religious and material ends. Topics of study will include; Shang bronzes; Han concepts of the afterlife; the impact of Buddhism; patronage and painting; the landscape tradition; the concept of the literatus; architecture and garden design; the "modern" and 20th-century artistic practices; among others.

615. Japanese Painting. (M) Davis.

An investigation of Japanese painting and practice from the earliest pictorial representations through the late twentieth century. Painting style and connoisseurship will form the basis of analysis, and themes such as landscape, narrative, and the expression of cultural identities in painting, will be considered in the context of larger social and cultural issues. Topics include: tomb painting, Heian development of "yamato-e," ink painting and the adaptation of Chinese styles, the expansion of patronage in the 18th century, and the turn toward internationalism in the late 19th and 20th centuries. May include visits to the PMA or other local collections, as available.

616. (ARTH216, EALC227, EALC627) Chinese Painting. (M) Davis.

Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting style forms the basis of analysis, and themes such as landscape and narrative will be considered with regard to larger social and cultural issues. The class will pay particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present. Visits to look at paintings at the University of Pennsylvania Museum, PMA and/or local collections will be offered when possible.

617. (AAMW616, ARTH217, COML619) Islamic Civilization & Visual Culture. (C) Holod.

A one-semester survey of Islamic art and architecture which will examine visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources will be available in English translation.

L/R 618. (ARTH218) Early Modern Japanese Art and the City of Edo. (M) Davis.

Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the

reinvention of classical styles, and patronage, among others.

May include visits to the PMA, University Museum, or other local collections, as available.

L/R 620. (AAMW620, ARTH220) Greek Art & Architecture. (A) Haselberger, Kuttner.

An intensive introduction to the art and architecture of the Greek World from Geometric to Hellenistic times, utilizing artifacts of the University Museum. Variable emphasis on topics ranging from stylistic innovation and persistence, commemorative genres, narrative, artistic program, patronage to tectonic structure, concepts of order and decoration, proportion, space, urbanism, and Vitruvian theories.

L/R 621. (AAMW621, ARTH221) Roman Art & Architecture. (B) Kuttner, Haselberger.

An intensive introduction to the art and architecture of Rome and her empire from Republican and later Hellenistic to Constantinian times. Variable emphasis on topics ranging from major genres, styles, and programs of commemorative and decorative art, historical narrative, and political iconography to building types and functions and the specific Etrusco-Roman notion of space, land division, and city planning.

622. (ARTH222) Minoan, Cycladic, and Mycenaean Art. (C) Shank.

This course is designed to give the student an overview of the cultures of the Aegean Bronze Age. The art and architecture of Crete, the Cyclades and the Mainland of Greece will be examined in chronological order, with an emphasis on materials and techniques. In addition, larger issues such as the development of social complexity and stratification, and the changing balance of power during the Aegean Bronze Age will be examined. There are two texts for the course: Sinclair Hood's *The Arts in Prehistoric Greece* and Donald Preziosi and Louise Hitchcock's *Aegean Art and the Architecture*.

SM 623. (AAMW623) Egyptian Art. (M) Pittman.

Survey of the art of Ancient Egypt from the Predynastic Period through the New Kingdom. Emphasis on major monuments of architecture, sculpture, relief and painting; questions stylistic change and historical context.

L/R 624. (AAMW424, ARTH224) Art of Egypt & Mesopotamia. (M) Pittman.**625. (ARTH225) Greek Architecture and Urbanism. (B) Haselberger.**

Introduction to the art of building and city planning in the ancient Greek world, 7th-1st c. BC. Emphasis on concepts of organizing space, on issues of structure, materials, decoration, proportion, and the Mycenaean and eastern heritage as well as on theory and practice of urbanism as reflected in ancient cities (Athens, Pergamon, Alexandria) and writings (Plato, Aristotle, and others). Excursions to the Penn Museum and Philadelphia. No prerequisites.

SM 626. (AAMW626) Roman Architecture and Urbanism. (M) Haselberger.

Introduction to the art of building and city planning in the Roman world, 6th c. BC - 2nd c. AD. Emphasis on concepts of organizing space, on issues of structure, materials, decoration, proportion, and the Etruscan and Greek heritage as well as on theory and practice of urbanism as reflected in ancient cities (Rome, Ostia, Roman Alexandria, Timgad) and writings (Vitruvius, and others). Excursions to the Penn Museum and Philadelphia. No prerequisites.

SM 627. (AAMW627) Neoclassical Architecture. (C) Haselberger.

An intensive introduction to the architecture of the Neoclassical century (ca. 1750-1850), as it made its appearance all over Europe and parts of North America. Following an exploration of the roots and intellectual preconditions of this "true style," a selection of major monuments in France, Germany, Britain, and the USA will be analyzed as well as some forms of neoclassical revival in the early decades of the 20th century. Field trips to the Second Bank Building and the Art Museum in Philadelphia. no prerequisites.

SM 640. Medieval Art. (C) Maxwell.

An introductory survey, this course investigates painting, sculpture, and the "minor arts" of the Middle Ages. Students will become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of

visual culture across the political and urban landscapes.

641. (ARTH241) Byzantine Art and Architecture. (C) Ousterhout.

This course surveys the arts of Byzantium from the fall of Rome to the fall of Constantinople in 1453. Study of major monuments, including icons, mosaics, architecture, and ivories will provide us with an overview of this rich artistic culture. We will pay special attention to the role of the Orthodox Church and liturgy in the production and reception of art works. Weekly recitation sections will focus on selected major issues, such as the relationship of art to the Holy, the uses and abuses of Iconoclasm, and imperial patronage. The course will also grapple with the Empire's relationship to other cultures by looking at the impact of the Christian Crusades and Moslem invasions - as well as Byzantium's crucial impact on European art (e.g., in Sicily, Spain).

642. (ARTH242) Introduction to Medieval Architecture. (C) Maxwell.

This course provides an introduction to the built environment of the Middle Ages. From the fall of Rome to the dawn of the Renaissance, a range of architectural styles shaped medieval daily life, religious experience and civic spectacle. We will become familiar with the architectural traditions of the great cathedrals, revered pilgrimage churches, and reclusive monasteries of western Europe, as well as castles, houses, and other civic structures. We will integrate the study of the architecture and with the study of medieval culture, exploring the role of pilgrimage, courts and civil authority, religious reform and radicalism, crusading and social violence, and rising urbanism. In this way, we will explore the ways in which the built environment profoundly affected contemporary audiences and shaped medieval life.

652. (ARTH252) Art in the Time of Michelangelo. (C) Cole.

An introductory survey of late Renaissance Italy, with an emphasis on drawing, painting, sculpture, and architecture in the major cultural centers. The course will cover works by Michaelangelo, Leonardo da Vinci, Raphael, and Titian, among others.

SM 655. Italian Renaissance Art. (C) Cole.

Survey of the visual arts in Italy in the fourteenth, fifteenth, and sixteenth centuries, with emphasis on painting, sculpture and architecture in the major

cultural centers. Topics may include the origins of modern urbanism, the rise of art theory, the art of the courts, and the role of art in the religious conflicts that ended the period. The course will devote attention to Donatello, Leonardo, Michelangelo, and Titian, among other artists.

SM 656. Italian Renaissance and Baroque Architecture. (C) Cole.

An introductory survey of architecture on the Italian peninsula, ca. 1300-1750. The course will cover both standard types (palaces, churches, squares) and distinctive individual monuments. Topics may include urban planning, garden and fountain design, and the relation of practice to theory.

SM 660. Northern Renaissance Art. (M) Silver.

Survey of the principal developments in Northern Europe during the "early modern" period, i.e. the transition from medieval to modern art-making during the fifteenth and sixteenth centuries. Principal attention to painting and graphics with additional consideration of developments in sculpture, particularly in the regions of the Netherlands and German-speaking Europe. Attention focused on the works of the following artists: Van Eyck, Bosch, Durer, Holbein, Bruegel, and on topics such as the rise of pictorial genres, urban art markets, Reformation art and art for the dynastic courts of emerging nation-states.

SM 661. Netherlandish Art. (M) Silver.

Dutch and Flemish painting in the 15th and 16th centuries with special emphasis on the contributions of Robert Campin, Jan van Eyck and Roger van der Weyden, Bosch, and Bruegel.

SM 662. (GRMN679) German Art. (C) Silver.

This course will focus on paintings, prints, and sculptures produced in the German-speaking lands of the Holy Roman Empire from around 1350 until around 1600. Principal attention will focus on the changing role of visual culture, which begins as a principally religious imagery, centered on icons and altarpieces but evolves into an era of "art," and collecting of pictures.

670. (COML670, GRMN670) German Literary Theory & Criticism. (M) Weissberg.

Study of the major contributions of such critics as Lessing, Benjamin, Gadamer, Iser to principles of criticism with particular emphasis on such basic concepts as mimesis, illusion, and aesthetic distance.

671. (ARTH271) European Baroque Art. (C) Cole/Silver.

SM 674. (COML674, GRMN674) Topics in Aesthetic Theory. (A) Weissberg.

Are literature and the visual arts compatible "sister" arts or bitter rivals? An investigation of the often competitive relationships among verbal and visual media, focusing on the problem of constructing and representing visual art in words. Topics include: painting, sculpture, and photography; spectatorship; the ekphrastic tradition; the gendering of narrative and visual arts. Authors include: Ovid, Winckelmann, Lessing, Goethe, Hoffmann, Eichendorff, Buchner, Keller, Sacher-Masoch, Storm, Rilke, Kafka, Th. Mann, Freud. All readings and lectures in English.

SM 675. Roman Baroque Art and Architecture. (C) Cole.

An introduction to the city of Rome from the late sixteenth to the mid-eighteenth century. The course will look at works by such artists as Caravaggio, Bernini, Poussin, and Borromini, considering them in relation to the conditions in which they were originally produced and viewed.

L/R 681. (ARTH281) Modern Architecture I. (C) Brownlee.

The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the picturesque, the Greek and Gothic Revivals, and the search for a new style.

L/R 682. (ARTH282) Modern Architecture II. (C) Brownlee.

The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time will also be devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics to be discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that will be traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le

Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.

L/R 683. (ARTH283) The Modern City. (C) Brownlee.

A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis will be placed on the history of architecture and urban design, but political, sociological, and economic factors will also receive attention. The class will consider the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.

SM 684. Revolution to Realism: 1770-1870. (A) Staff.

The death of the revolutionary hero, the search for spiritual meaning, the "rape" of the countryside by industrialization, the anxious masculinity of romanticism, abolition and its aftermath, the quest for a national identity: these are only some of the themes that will be addressed through the art of this early modern period, as they emerged in the art of painters working in France, England and Germany. Among other things, we will analyze Jacques-Louis David's "martyr portraits" of the French Revolution; the romantic "anti-heroes" of Delacroix; Friedrich's nationalist landscapes; the fantastic visions of J.M.W. Turner and William Blake; Gericault's representations of madness; and the politicized "realism" of Gustave Courbet, the painter who would so profoundly influence the later generation of Impressionists.

L/R 685. (ARTH285) Impressionism: European Art 1870-1900. (C) Dombrowski.

French Impressionism is the centerpiece of this course, which will explore paintings, and some sculptures, produced between 1848 and 1906. We consider French, Dutch, and Scandinavian artists who painted and exhibited in Paris during these years, exploring not only their historical stature and reputation, but their contemporary relevance. We will reflect on such myths of modernism as the "misogyny" of Degas; the "obsessiveness" of Cezanne; the "primitivism" of Gauguin; and, of course, the "madness" of Van Gogh. All art is considered within the context of the social, economic and political changes that were taking place in Paris--the capital of the nineteenth-century.

L/R 686. (ARTH286) Twentieth Century Art: 1900-1945. (C) Poggi.

The art of the Twentieth century is characterized by a radical break with all preceding art. Or is it? In this course, we will study the art produced in Europe and the United States between 1900 and 1945. We will examine its innovations--in style, materials, subject matter, and philosophy--and its continuing relation to artistic traditions.

L/R 687. (ARTH287, COML688) Contemporary Art: 1945-Present. (C) Poggi.

Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the "canon" of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.

689. Contemporary Art. (C) Butterfield.

SM 691. The Road Movie. (C) Beckman.

This course will allow us to study the changing shape of the road movie genre from Bonnie and Clyde (1967) to the French feminist revenge narrative, *Baise-moi* (Rape me), (2000). In addition to considering the possibilities and limits of genre as a category of analysis, we will grapple with a number of questions that will persist throughout the course: What is the relationship between cinema and the automobile? Is the road trip a particularly American fantasy, and if so, what does it mean when non-U.S. filmmakers adopt the road-movie genre? Is the road movie a "masculine" genre? What role do urban and rural spaces play in the development of the genre? What happens to race/gender/sexuality/national identity in the road movie? What kinds of borders does this genre dream of crossing? Do the radical fantasies of characters within the

road movie genre necessarily translate into films with radical politics?

SM 692. (GRMN692) Women and Film. (M) Beckman.

This course will introduce students to the work of mainstream and experimental women filmmakers from around the world. As we examine films from the nineteenth, twentieth and twenty-first centuries, we will consider how a counter-history of women's cinema alters more conventional versions of the medium's history, whether gender is a useful category of analysis for film studies, how women filmmakers have responded to each others' work, and how other markers of identity like race and class complicate utopian narratives of "sisters in cinema."

SM 693. History of Photography. (C) Butterfield.

A history of world photography from 1839 to the present and its relation to cultural contexts as well as to various theories of the functions of images. Topics discussed in considering the nineteenth century will be the relationship between photography and painting, the effect of photography on portraiture, photography in the service of exploration, and photography as practiced by anthropologists; and in considering the twentieth century, photography and abstraction, photography as a "fine art", photography and the critique of art history, and photography and censorship. Lecture/discussion, with two examinations and three papers.

SM 695. American Art before 1865. (M) Shaw, Leja.

696. (ARTH296) American Art: 1865-1968. (M) Leja, Shaw.

This course surveys the history of modern art in the U.S. from its international prominence during the 1950s and then to its alleged replacement by "postmodernism." We will explore relation of this art to historical processes of modernization (industrialization, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and myriad cultural changes these developments entailed.

700-Level Courses

SM 700. Third Year Graduate Development. (C) Davis.

UNIVERSITY COURSE REGISTER

SM 701. (AAMW701, GRMN578) Seminar in Method in the History of Art. (M) Staff.

Topic varies.

SM 710. Seminar in Indian Architecture. (M) Meister.

Topic varies.

Architecture and architectural sculpture of the Indian sub-continent explored in terms of its morphology and symbolism. Students make use of the resources of the South Asia Art Archive.

SM 711. (SAST711) Seminar in Indian Art. (C) Meister.

Topic varies.

SM 713. Seminar in East Asian Art. (C) Davis.

Topic varies.

SM 716. (AAMW716) Seminar in Islamic Art. (C) Holod.

Topic varies.

SM 717. (AAMW717) City in the Islamic World. (C) Holod.

Topic varies.

SM 718. (AAMW718) Seminar in Islamic Architecture. (C) Holod.

Topic varies.

SM 719. (AAMW719) Islamic Archaeology. (M) Holod.

SM 720. (AAMW723, CLST614) Seminar in Aegean Art. (M)

Betancourt, Pittman.

Topic varies.

SM 721. (AAMW721, ANCH721) Seminar in Greek Architecture. (C)

Haselberger.

Topic varies.

SM 722. (AAMW722) Seminar in Bronze Art. (M) Staff.

Topic varies.

SM 724. (AAMW724) Seminar in Ancient Near Eastern Art. (M) Pittman.

Topic varies.

SM 725. (AAMW725) Seminar in Neo-Assyrian Art. (C) Pittman.

Survey of the major arts of the Assyrians (ca. ninth-seventh centuries B.C.): architecture, relief sculpture, glyptic, metalwork - in the political and cultural context of the expanding Assyrian empire.

SM 726. Iconography of the Ancient Near East. (M) Pittman.

Topic varies.

SM 728. (AAMW728, CLST728) Vitruvian Studies. (C) Haselberger.

Research on Vitruvius' ten books on architecture, art, and construction. We will explore structure, sources, and intended readers of this treatise; formation of art theory and its relation to practice; statics and esthetics; Greek model vs. Italic tradition; discrepancy with the ideals of the "Augustan Revolution"; role and reception during the Renaissance and late Classical revivals (using Penn's rich collection of 16th to 20th c. Vitruvius editions); latest wave of Vitruvian scholarship. - Working knowledge of Latin, French, German helpful, but not necessary.

SM 729. (AAMW720, CLST729) Roman Architecture and Topography. (C) Haselberger.

Topic varies.

SM 730. (AAMW730) Early Christian and Byzantine Architecture. (C)

Ousterhout.

Topic varies.

SM 733. (ARCH733) Glass, Technology, and the Spectacle in Contemporary Paris. (M) Fierro.

This research seminar will examine the monumental transparent buildings completed in the last two decades in Paris as part of an enormous urban revitalization known popularly as the Grands Projects. Integrated by former president Francois Mitterand, these glass buildings were endowed by ambitious symbolic aspirations: from signifying the ascent of Mitterand's Socialist party, to commemorating the French Revolution, to representing the modernization of France to the world. The course will examine ten of these transparent buildings in depth, contextualizing contemporary issues within larger histories, critical concepts, and technological aspects immediate to glass construction.

SM 741. (AAMW741) Early Medieval Architecture. (C) Maxwell.

Topic varies.

SM 742. Problems in Medieval Art. (M) Maxell.

Topic varies.

SM 743. Medieval Typology and Iconography. (C) Staff.

Program in ANCIENT STUDIES (ANCS)

101. (ARTH105, EALC003) Ancient World Cultures. (M) Pittman.

This course presents a comparative overview of the ancient civilizations around the world. It is designed as a gateway course for the many specialized courses available at Penn. Its focus is two fold: first, the various forms that ancient cultures have developed are explored and compared and second, the types of disciplines that study these courses are examined. The course has a number of guest lecturers, as well as visits to museums and libraries to examine original documents. This course meets the requirement for the Ancient Studies Minor.

ASIAN AMERICAN STUDIES (AS) {ASAM}

001. (SOCI103) Asian Americans in Contemporary Society. (C) Kao.

This course presents an overview of sociological research on Asian Americans in the U.S., framed around the evaluation of Asian Americans as "model minorities." We begin with a brief overview of popular images of Asian Americans as seen through recent portrayals in mainstream media (movies, television). We review general sociological frameworks used to understand racial and ethnic groups in the U.S. and move quickly to document the history of Asian immigration to the U.S. We explore how Asian Americans fare in educational attainment, labor market experiences, political organizations, urban experience, and Asian interracial marriage and biracials. We examine whether and how "Asian American" is a meaningful label.

002. (ENGL072) Introduction to Asian American Literature. (C) Park.

This course will explore the varieties of Asian American Experience by considering the literary forms they take. Our readings will range from poems carved into the walls of a detention center at the beginning of the century to experiments in literary form in the eighties and nineties. The course will consider literary representations of a broad range of Asian American experience: tales of migratory labor, Chinatown stories, the extraordinary case of Japanese internment, panethnic activist literature, and the different accounts that emerge when Asian America expands beyond East Asia to include South and Southeast Asian American experience. In each instance, we will read these forms within their historical moments, ultimately asking how these formal expressions map onto the conditions of Asian America.

003. (HIST155) Introduction to Asian American History. (C) History & Tradition Sector. All classes. Azuma.

This course provides an introduction to the history of Asian/Pacific Americans, focusing on the wide diversity of migrant experiences, as well as the continuing legacies of racism on American-born APA's. Issues of class and gender as well as the impact of international politics on APA lives will also be examined.

L/R 006. (AFRC006, SOCI006, URBS214) Race and Ethnic Relations. (C) Staff.

This course is cross-listed with SOCI 006 when the subject matter is related to Asian Americans.

SM 012. (SAST052) Indians Overseas: A Global View. (B) Gambhir S. Freshman seminar.

This course is about the history of Indian immigration into different parts of the world. The course will consist of readings, discussions, observations, data collection and analysis. The topics will include cultural preservation and cultural change through generations, especially in North America, the Caribbean, the United Kingdom, and the African continent. The course will encourage organized thinking, observations and analysis of components of culture that immigrant communities are able to preserve in the long run and cultural components that undergo change or get reinterpreted. In this context, we will look at entities such as religion, food, language, and family. The course will include immigrants' success stories, their contributions, their relationship with others groups in the new society and the nature and extent of their links with India. The course will also address conflict with other sections of the host society, including discrimination against and victimization of immigrants. Other issues will include new social and cultural concerns of immigrants and the rise of new community organizations such as temples and cultural organizations to address those issues. The course will benefit from the study of other immigrant communities around the world.

SM 013. (HIST104) Freshman Seminar in Asian American History. (C) Azuma.

This reading seminar will focus on how different groups of Asians interacted with each other in the context of early twentieth-century American society, especially in Hawaii and California. Such issues as ethnicity, complexity of race relations (as opposed to conventional black-white binarism), and the intricate entanglements of class and race will also be examined.

SM 110. When Student Activism Meets Academia: Asian Americans in Higher Education. (C) Staff.

From cultural fashion shows to protests; what does it mean to be a student activist in the new millennium? Are Penn students apathetic or has the definition of activism shifted over time? Through this course, students will unpack many of the controversies regarding the discourse on

"multiculturalism" and "diversity" in higher education. We will examine a number of problems and questions regarding the status of Asian Americans in higher education. Students will explore the social phenomena that have impacted Asian Americans in higher education. In examining these phenomena, we will concentrate particularly on student experiences, curricula, campus climates, administrative practices, and educational policies.

SM 202. (CINE272, COML248, ENGL272) Topics in Asian American Literature. (C) Park.

Topics vary.

SM 203. (HIST223) Topics in Asian American History. (C) Staff.

This seminar examines the 100-year history of the Korean experience in the United States from the beginning of the 20th century to the present. Topics include: immigration patterns, adjustment to the new society, exclusion, racism, relations with other groups, economic activities, the 1.5 and second generation, religion, and social issues, among others. Equal attention is given to the pre-1965 and post-1965 periods.

We will pay particular attention to major economic, social and political events in American history, such as the immigration reform laws, the Great Depression, World War II, the civil rights movement, and the Vietnam War, which shaped the demographic changes as well as socio-economic conditions.

SM 205. (URBS207) Asian American Community Fieldwork. (C) Staff.

Through classroom discussions, writing assignments, and a semester-long group project aimed at creating change in the community, students will build skills and competencies in preparation for outreach to the Asian American community. Students will participate in service-learning projects that promote community leadership development and community education.

209. (SAST290) South Asians in the United States. (B) Khan.

This course investigates the everyday practices and customs of South Asians in America. Every immigrant group has its own history, customs, beliefs and values, making each unique while simultaneously a part of the "melting pot" or salad bowl" of American society. Yet how do people define themselves and their ethnicities living in a diasporic context? By taking into account the burgeoning South Asian American population as our model, this course will explore the basic themes

surrounding the lives that immigrants are living in America, and more specifically the identity which the second generation, born and/or raised in American, is developing. South Asians in the U.S. will be divided thematically covering the topics of ethnicity, marriage, gender, religion, and pop culture. Reading and assignments will discuss a variety of issues and viewpoints that are a part of the fabric of South Asia, but will focus on the interpretation of such expressive culture in the United States.

212. (SAST212) Race and Ethnicity in American Film and Literature. (C)
Staff.

This class explores representations of race and ethnic identity in American literature and film from the 1920's to the present. Examining the relations between fiction and cinema, we will attempt to trace common strands of theme and imagery across the cultural productions of African Americans, Latina/os, and Asian Americans, and discuss questions of identity politics and minority cultural nationalism, class, gender, and sexuality, the status of the documentary, cultural appropriation, and the relationship of art to history and tradition.

227. (HIST374) Japanese American History. (C) Azuma.

An overview of Japanese American experiences in Hawaii and the continental United States from the mid-1880s to the present. This lecture/discussion course will

examine not only the issues of racism, economic oppression, Orientalism, and sexism, but it will also attempt to understand the history of an American minority in a transnational context.

SM 241. (COML239, ENGL241, GSOC241) Oriental Tales/Exotic. (M)
Chi Ming Yang. Spaces will be reserved for English Majors.

This course explores an aspect of 18th-century literature intensively; specific course topics will vary from year to year.

SM 262. Topics in Modernism. (M)
Park.

This course is crosslisted with ENGL 210 and when the topic is "Modernism and the Orient," the following description applies.

Ezra Pound insisted that "a few hours' work" on the Chinese ideogram "goes further to jog a man out of fixations than a month's work on a great Greek author." In this course, we will consider modernism's drive both to unfix and to fix by looking closely at the place of the Orient in this literature. We will see how and when this reference elsewhere steps in: in a call to artistic renewal, during a crisis of authority, or, most importantly, in order to elaborate the artist's position vis-a-vis home. The readings are divided between those artists who use the east in a nativist vein and those who espouse internationalism. We will read, among others: Williams and Sandburg in America, Pound and Stein abroad, and the curious case of Amy Lowell.

354. (HIST354) American Expansion in the Pacific: Race, Immigration, and Citizenship in the 'Frontier.'. (C)
Azuma.

This course will delve into the continuing process of westward American expansion into the Pacific after the 1890s. Such questions as immigration, race relations, and diplomacy will be discussed in the class. Students who are interested in U.S.-Asia relations, Asian immigration, and histories of Hawaii and the Philippines as part of the American Empire are especially encouraged to take this course.

499. Independent Study. (C)

Topics selected by student-teacher conferences.

SM 590. (SOCI596) Sociology of Education. (M) Kao.

This graduate seminar will introduce students to key theoretical and empirical work in the sociology of education. We will focus specifically on the question of stratification and how systems of schooling maintain or alleviate inequality. We will also examine classical approaches to schooling, schools as organizations, schools and their effects on social mobility, (class, race, and gender) stratification in achievement and attainment, tracking/ability grouping, theories and empirical work on social and cultural capital, school choice, and cross-national expansion of education.

ASTRONOMY AND ASTROPHYSICS (AS) {ASTR}

001. A Survey of the Universe. (C)

Physical World Sector. All classes. Only one ASTR course below ASTR 011 may be taken for credit. Engineering students receive no credit for this course.

A general survey, designed for the non-major, of the facts and theories of the astronomical universe, from solar system, to stars, to galaxies and cosmology. Topics include planets, satellites, small objects in the solar system, and extraterrestrial life; stars, their evolution, and their final state as white dwarfs, neutron stars, or black holes; galaxies, quasars, large structures, background radiation, and big bang cosmology. Elementary algebra and geometry will be used. This course is not recommended for physical-science majors or engineering students.

003. The Solar System. (C) Physical World Sector. All classes. Only one ASTR course below ASTR 011 may be taken for credit.

A survey course on the Solar System designed for the non-major. The emphasis will be on understanding the origin and history of our Solar System and planetary systems around other stars using the latest observational results. Elementary algebra and geometry will be used. Physical science majors and engineering students should prefer ASTR 011 to this course.

005. Galaxies and the Universe. (C)

Physical World Sector. All classes. Only one ASTR course below ASTR 011 may be taken for credit.

A survey course on understanding stars, galaxies, and the history of the Universe. Subjects include the Sun, supernovae, black holes, the Milky Way, dark matter and dark energy, and the Big Bang. All discussions will emphasize how our knowledge of distant, exotic objects is based on physical theories such as Relativity, and tested with observations and discoveries that continue to the present day. Elementary algebra and geometry will be used. Physical-science majors and engineers should prefer ASTR 012 to this course.

006. Life in the Universe. (C) Natural Science & Mathematics Sector. Class of 2010 and beyond. Also fulfills General Requirement in Physical World for Class of 2009 and prior. Only one ASTR course below ASTR 011 may be taken for credit.

An examination of the origin and evolution of life in the Universe. This class is intended for non-majors and has no specific required science or math preparation beyond high school levels. Course material includes aspects of biology, geology, astronomy, physics, and chemistry as well as the study of and search for life in our Solar System (Mars, Europa) and elsewhere in the Universe. The origin of life on Earth and the range of extreme conditions in which life on Earth exists today will also be studied. Students will be asked to synthesize course material from lectures, readings, laboratory exercises, and homeworks to form an understanding of origin of life on Earth and the prospects for life elsewhere.

007. The Big Bang and Beyond. (C)

Natural Science & Mathematics Sector. Class of 2010 and beyond. Also fulfills General Requirement in Physical World for Class of 2009 and prior. Only one ASTR course below ASTR 011 may be taken for credit.

An introductory course for freshmen who do not intend to major in a physical science or engineering, covering theories of the Universe ranging from the ancient perspective to the contemporary hot big bang model, including some notions of Einstein's special and general theories of relativity. Topics will include the solar system, stars, black holes, galaxies, and the structure, origin and future of the Universe itself. Elementary algebra is used. Fulfills quantitative data analysis requirement.

011. Introduction to Astrophysics I.

(A) Physical World Sector. All classes. Prerequisite(s): MATH 104, PHYS 150, or concurrently.

A basic course for majors in astronomy, in other physical sciences, and in engineering. Fundamental knowledge of the solar system, its formation, stellar structure and evolution including black holes.

012. Introduction to Astrophysics II.

(B) Physical World Sector. All classes. Prerequisite(s): MATH 114, PHYS 151, or concurrently.

A basic course for majors in astronomy, in other physical sciences, and in engineering. Stars, galaxies, and the evolution of the universe.

L/L 150. Observational Astronomy.

(M) Physical World Sector. All classes. Aguirre. An observing-based astronomy course for non-science majors; no prerequisites.

Topics: how to read star-maps and find objects in the night sky, learning about astronomical phenomena as we observe them, telescope training, planets, and stars, the nature of light, and signal processing. Two one-hour daytime lectures each week plus three-hour evening lab in smaller groups. Attendance at one lab session per week is required by each student - multiple times are scheduled due to the uncertainty and unpredictability of weather conditions for observing. Requires substantial out-of-class time dedication and commitment to sharing work in small groups.

L/L 250. Astronomical Techniques.

(M) Aguirre. Prerequisite(s): ASTR 001, or ASTR 007, or ASTR 011, or ASTR 012. For science majors. If a student has only taken ASTR 001, MATH 240-241 will also be required. The observatories at DRL are used for experimental and observational practice.

Topics: spherical astronomy, timekeeping/coordinate systems, astrostatistics, telescopes, CCD's, signal processing. Two one-hour daytime lectures each week plus three-hour evening lab in smaller groups. Attendance at one lab session per week is required by each student - multiple times are scheduled due to the uncertainty and unpredictability of weather conditions for observing. Requires substantial out-of-class time dedication and commitment to sharing work in small groups.

392. (PHYS392) Nucleosynthesis, Supernovae, and Compact Objects. (C)

This is an advanced undergraduate course on the life and death of stars. The course will cover the structure of stellar interiors, nuclear reactions and the formation of elements, stellar evolution, supernovae, and the physics of white dwarfs, neutron stars, and black holes. We will approach these topics from both theoretical and observational perspectives.

503. Astronomical Methods and Instrumentation. (M)

Techniques of modern astronomical observations, including: detection; systems of light from the radio through gamma rays; sources of noise in astronomical measurements; image analysis and reduction techniques; telescope optics and adaptive optics; spectroscopic

measurements; radio interferometry and spectroscopy.

525. (PHYS503) General Relativity and Cosmology. (M)

This is a graduate level, introductory course in general relativity and modern cosmology. The basics of general relativity will be covered with a view to understanding cosmology and carrying out

calculations relevant to the expanding universe and perturbations in it. Some of the key topics in modern cosmology will be covered -- these include the cosmic microwave background, large-scale structure, gravitational lensing and dark energy. The current cosmological model and open questions driving research will be discussed briefly in connection with these topics.

533. Galaxies: Structure, Dynamics and Formation. (H)

Galactic structure and dynamics. Observed scaling relations. Models and observations of galaxy formation and evolution. Enrollment restricted to graduate students.

BIOCHEMISTRY AND MOLECULAR BIOPHYSICS (MD) {BMB}

508. Macromolecular Biophysics I.

(A) Van Duyne and Wand. Prerequisite(s): Senior undergraduate or graduate level biochemistry or biophysics.

This course introduces students to the physical and chemical properties of biological macromolecules, including proteins and nucleic acids. It surveys the biophysical techniques used to study the structure and thermodynamics of macromolecules. It is intended to be a first course for graduate students with an undergraduate background in either physics, chemistry or biology, and no necessary background in biochemistry.

509. Macromolecular Biophysics II.

(B) Van Duyne and Wand. Prerequisite(s): BMB 508 or permission of instructors. Undergraduates require permission of instructor.

This course introduces fundamental concepts in chemical kinetics and their application to problems in biochemistry such as protein folding and enzymology. There is an emphasis on dynamic processes in proteins and the techniques used to characterize them over a wide range of timescales. The latter half of the course focuses on emerging areas in biochemistry and biophysics including membrane biochemistry, single molecule methods and proteomics with an emphasis on mass spectrometry

518. (CAMB615) Protein

Conformation Diseases. (A) Argon and Ischiropoulos. Prerequisite(s): BIOM 600 or equivalent.

Protein misfolding and aggregation has been associated with a number of human diseases, ranging from Alzheimer's and Parkinson's disease to Respiratory Distress Syndrome, alpha(1)-antitrypsin deficiency and "mad cow" disease. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of conformational diseases including topics such as aggregate formation, protein degradation pathways (proteasome vs. ER-associated degradation), effects of protein aggregation on cell function and mutations which lead to autosomal dominant diseases.

554. (CHEM555) Macromolecular Crystallography: Methods and Applications. (A)

Skordalakes and Marmorstein. Prerequisite(s): undergraduate calculus and trigonometry.

The first half of the course covers the principles and techniques of macromolecular structure determination using X-ray crystallography. The second half of the course covers extracting biological information from x-ray crystal structures with special emphasis on using structures reported in the literature and presented by faculty and students.

560. Methods of Scientific Inquiry in Biological Systems. (B)

Wilson and Domotor. Prerequisite(s): Graduate students in biological sciences or permission of instructors.

The foundational, social and methodological aspects of scientific reasoning in biomedical disciplines are discussed, including: 1) theories, laws, causal/functional explanation and experimental methodology in biology and medicine; 2) case studies in selected fields of biomedical sciences with special regards to strategies in concept and hypothesis formation, discovery, gathering evidence and testing, and 3) social and moral factors pertinent to the research enterprise.

567. (CHEM567) Bioinorganic Chemistry. (A)

Dmochowski. This course covers selected topics in bioinorganic chemistry. Special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: 1) oxygen uptake and utilization; 2) oxygen transport; 3) oxygen and O atom incorporation into substrates; 4) metalloenzyme-catalyzed C-C bond formation; 5) the metallobiochemistry of DNA; 6) metal-sulfide proteins; 7) manganese containing metalloproteins; 8) photosystem II, light-driven electron transfer and the biological water-splitting reaction; 9) biological electron transfer; 10) electron transfer theory; 11) mechanisms of energy storage and release; and 12) long-distance electron transfer reactions.

580. (BE 567) Mathematical Computational Methods for Modeling Biological Systems. (B)

Schotland. Prerequisite(s): Graduate standing or permission of instructor.

This course will present a comprehensive account of the application of modeling methodology to the investigation of biological systems. The emphasis will be on an organized overview of the tools and techniques rather than the detailed mathematical structures upon which they

may rely. The course will draw examples widely from the current literature in an attempt to not only show the topical relevance of the subject matter but also to equip participants with an understanding of the diversity of domains to which the techniques and methodologies apply.

581. (BE 581) Techniques of Magnetic Resonance Imaging. (K)

Wehrl.

Detailed introduction to the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are magnetism, spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, chemical shift, flow encoding, diffusion and perfusion and a discussion of the most relevant clinical applications.

585. Wistar Institute Cancer Biology Course: Cell Cycle Checkpoints and Cancer. (A)

Kissil and Dahmane.

Prerequisite(s): Undergraduate students require permission from the course director.

This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around key signaling pathways that drive tumorigenesis with emphasis on biochemistry and genetic model systems and their relevance to human cancer. The course is taught by the organizer and guest lecturers from universities and research institutes in the Northeast. Following every lecture, the students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students, but all graduate students are invited to attend.

590. (PHYS580) Biological Physics.

(H) Goulian. Prerequisite(s): PHYS 401 or CHEM 221-222 (may be taken concurrently) or familiarity with basic statistical mechanics and thermodynamics. Recommended: Basic background in chemistry and biology.

A survey of basic biological processes at all levels of organization (molecule, cell, organism, population) in the light of simple ideas from physics. Both the most ancient and the most modern physics ideas can help explain emergent aspects of life, i.e., those which are largely independent of specific details and cut across many different classes of organisms. Topics may include thermal physics, entropic forces, free energy transduction, structure of biopolymers, molecular motors, cell signaling and biochemical circuits, nerve

impulses and neural computing, populations and evolution, and the origins of life on Earth and elsewhere.

598. Tutorial. (C) Gitler.

Literature studies in a specific research area under supervision of Biochemistry and Molecular Biophysics Graduate Group faculty, concluded by a written summary and a seminar presentation. Course offered fall, spring and summer semesters.

601. Fundamentals of Magnetic Resonance. (A) Reddy.

This course introduces basic theoretical and experimental concepts of magnetic resonance and its applications in biochemistry, biology and medicine. Topics covered include description of the phenomenon of magnetic resonance, and classical and quantum strategies to compute nuclear spin resonances in liquids, solids and biological tissues, polarization transfer and multiple quantum effects and their applications in biomedicine. Nuclear spin relaxation in solid-state materials and in biological systems will be discussed. Concepts of magnetic resonance imaging, imaging strategies, image contrast, and diagnostic applications are discussed. The course includes several practicals dealing with the demonstration of NMR hardware and experiments to compute basic NMR parameters on high resolution and clinical MRI scanners. For further details of this course, visit www.mmrrcc.upenn.edu

603. Advanced Topics in Magnetic Resonance. (K) Reddy.

Advanced topics in theory and applications of magnetic resonance spectroscopy and imaging (Nuclear Magnetic Resonance - NMR; and Electron Spin Resonance - EPR) of biological tissues and solid-state materials to problems in biochemistry, biology, bioengineering and medicine.

604. (BE 619) Statistical Mechanics. (H) Schotland. Prerequisite(s): CBE 618 or equivalent.

A modern introduction to statistical mechanics with biophysical applications. Theory of ensembles. Noninteracting systems. Liquid theory. Phase transitions and critical phenomena. Nonequilibrium systems. Applications to reaction kinetics, polymers and membranes.

610. Life and the Electromagnetic Spectrum. (H) Vanderkooi. Course meets for 8 weeks and is offered for 1/2 credit.

Spectroscopy applied to biological molecules. Emphasis is placed on the common principles of absorption and relaxation techniques for infrared and

visible light and includes discussion of light absorption and emission processes used by living organisms.

611. Advanced X-ray Diffraction Methods. (J) Van Duyne. Prerequisite(s): BMB 554/CHEM 555 or equivalent, or permission of instructor. Course meets for 8 weeks and is offered for 1/2 credit.

Advanced topics in macromolecular x-ray diffraction. Crystallization, synchrotron data collection, data processing, anomalous diffraction, phasing methods, density modification methods, refinement. Emphasis is on applications and currently available methodology.

614. Membrane Structural Biology. (A) Lemmon. Course meets for 8 weeks and is offered for 1/2 credit.

A survey of biological membranes and membrane-associated processes. The composition and physical properties of cell membranes will be considered, as well as structural aspects of membrane proteins. The functions of different membranes in the cell will be discussed, with an emphasis on a biophysical understanding of the processes.

616. Medical Problems in Modern Biochemistry. (K) Nelson.

Prerequisite(s): Undergraduate biochemistry; undergraduates need permission of course director. This course on metabolic pathways will focus on the clinical aspects of energy metabolism, with an emphasis on how we maintain a continuous supply of glucose in the body without eating continuously. Topics covered include: glycolysis, citric acid cycle and oxidative phosphorylation, glucose homeostasis, glycogen metabolism, gluconeogenesis, fatty acid oxidation and ketone utilization. The course will combine didactic lectures with discussions on clinical cases. The overall emphasis is on the integration of these pathways and how defects in one pathway can have consequences on general metabolism.

618. Applications of High Resolution NMR Spectroscopy to Problems in Structural Biology. (I) Wand.

Prerequisite(s): Undergraduate biochemistry and physical chemistry and BMB 601, or permission of instructor. A lecture-based course designed to introduce graduate students to applications of modern high-resolution multinuclear and multidimensional NMR spectroscopy to problems in structural biology. The course will first introduce classical definitions and descriptions of nuclear magnetic resonance and a convenient formalism for the analysis

of advanced NMR experiments. Concepts and applications of multidimensional homonuclear ¹H NMR and multidimensional heteronuclear spectroscopy of proteins and nucleic acids will be described. Resonance assignment strategies including analysis of triple resonance spectroscopy will be covered. The origin, measurement and extraction of structural restraints and their use in structure determination will be surveyed and illustrated with recent examples.

619. Protein Folding. (I) Axelsen and Englander. Course meets for 8 weeks and is offered for 1/2 credit.

Introduction to the folding of mainly soluble proteins but also membrane proteins; critical readings in the current literature and important earlier literature; class discussion of papers with didactic lectures as required. Exposure to principles and use of equilibrium kinetics, thermodynamics and range of biophysical technologies as they occur in the real literature

622. Physical Principles of Mechano-Enzymes. (J) Goldman and Ostap.

Prerequisite(s): BIOM 600 or equivalent. Please discuss background with instructors if this prerequisite is not met. Course meets for 8 weeks and is offered for 1/2 credit. This course will provide an introduction to the biochemical, structural, and mechanical properties of energy-transducing enzymes. We will emphasize the relationships of mechanical, thermal, and chemical forces in mechano-enzyme function.

624. Ion Channels and Pumps. (H) Kallen and Lu. Prerequisite(s): Permission of course directors. Course meets for 8 weeks and is offered for 1/2 credit.

This course will introduce students to the fundamentals of ion channel function, with the course loosely organized around major classes of ion channels (voltage, mechanical and ligand gated). Discussion will focus on methods of study, mechanisms of ion selectivity and gating, and pathophysiology of human diseases (channelopathies). Intended for 2nd year graduate students or 1st year students with a strong background in biophysics or physiology.

625. Optical Methods in Cell Physiology. (J) Salzberg. Prerequisite(s): Undergraduate physics; calculus. Course offered for 8 weeks for 1/2 credit.

This course will provide an introduction to the principles and application of modern optical methods to the investigation of physiological processes. These include

optical measurement of membrane potential, fluorescent indicator measurement of intracellular ion concentrations, single molecule fluorescence measurements, TIRF, FRET, LRET, confocal and multi-photon microscopy, and dynamic light scattering. The course will consist of lectures and discussions of original literature. Intended for 2nd year graduate students, but MD/PhDs and postdocs are welcome.

626. Mass Spectrometry and Proteomics. (J) Speicher. Course meets for 8 weeks and is offered for 1/2 credit.

This course will provide a detailed introduction to proteomics and mass spectrometry. The role of mass spectrometry in both characterizing proteins for traditional protein structure-function studies and identification of proteins in proteome studies will be emphasized. Targeted and global proteomes, quantitative protein profiling and compositional proteomics, and applications of proteome studies will be discussed. Intended for first and second year graduate students and others with an interest in proteomics and mass spectrometry.

627. Computer Programming for Biochemists and Biophysicists. (I)

Sharp and Van Duyne. Prerequisite(s): Familiarity with Unix recommended. Permission of instructor for nonBGS students. Course meets for eight weeks and is offered for 1/2 credit.

An introductory course on programming and algorithms for scientists with an emphasis on applications to biophysics. Students will learn to write, debug, and execute basic programs through lectures, in-class workshops, and programming projects outside of class.

628. Principles of Scientific Instruments. (J) Liebman. Course meets for eight weeks and is offered for 1/2 credit.

Proper use of the tools of one's trade is essential to quality assurance. General confidence in the infallibility of scientific instruments can be the cause of serious misapplication of research effort. This course systematically reviews first principles of instrument detection, operation, calibration, truth testing, trouble shooting and data analysis. Approaches to error appraisal and avoidance are developed using common laboratory examples. Anyone who cares is welcome. And we should all care.

630. BIOCHEM PROBLEM-SOLVING.

633. SEMINAR IN BIOCHEM/BIOPH.

SM 650. Current Biochemical Topics. (C) Black and Shorter.

Participation in the "Dr. George W. Raiziss Biochemical Rounds", a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions.

699. Laboratory Rotation. (C) Shorter.

Supervised "mini-projects" for graduate students in Biochemistry and Molecular Biophysics. Seminar presentation required. Course offered fall, spring and summer sessions.

700. (PHRM630) Select Topics Chemistry. (C)

Petersson/Cooperman/DeGrado. Prerequisite(s): Strong background in undergraduate chemistry required and at least one semester of biological chemistry desirable.

The course will focus on current topics in chemical biology, particularly experiments in which 1) chemical synthesis enables one to probe or control biological systems in novel ways or 2) manipulation of biological systems facilitates novel chemical syntheses. As the goal of the course is to familiarize students with innovative recent experimental approaches and to stimulate them to conceive of their own new methodology, students will be responsible for delivering presentations on topics selected from the literature and generating several novel research proposal ideas, one of which will be elaborated into a full proposal. The prepared seminar will allow students to explore topics not covered in Professor Petersson's lectures or to research one of those topics in more depth. The proposal will be evaluated for creativity, feasibility and impact.

SM 705. Candidacy Exam Preparation Course. (B) DeGrado and Lemmon.

This course is designed for second year BMB students to prepare them for the Candidacy Examination, which must be completed in the spring semester of the second year. The course is given for 6 weeks in the beginning of the spring semester.

990. Master's Thesis Research. (C) Staff. See Department for section numbers.

995. Dissertation Research. Staff. See Department for section numbers.

BIOENGINEERING (EG) {BE}

099. Independent Study in

Bioengineering. (C) Prerequisite(s): Freshman or Sophomore standing in BE (Both BAS and BSE).

An individualized research-based learning experience on a biomedical research problem. Requires preparation of a proposal, literature evaluation, and preparation of a research paper and presentation. Regular progress reports and meetings with a faculty advisor are required.

L/L 100. Introduction to

Bioengineering. (A) Corequisite(s): MATH 104, PHYS 140 or 150. Open to Freshmen only.

Survey course introducing students to the breadth of bioengineering. Course consists of weekly guest lectures and a series of small projects and reports that allow students to explore different facets of bioengineering.

L/R 200. Bioengineering I: Introduction to Biomechanics and Biomaterials. (A)

Prerequisite(s): Sophomore standing, MATH 104, 114, PHYS 140, 141 or PHYS 150, 151. Corequisite(s): MATH 240.

Application of statics and dynamics to simple force analyses of the musculoskeletal system. Introduction to the fundamentals of strength of materials. Biomechanics of soft and hard tissues: microstructure and mechanical properties. This course is intended to provide a solid foundation in statics and mechanics of materials with particular focus on human joint biomechanics. The first portion of the course will present fundamental concepts of force and mechanics of rigid and deformable bodies. The remainder of the course will consist of an introduction of materials science and engineering, including the classification and bulk properties of implantable materials, and will also address specific topics including torsional loading and bending. By the end of the course, it is anticipated that students will be able to integrate the origin of tissue mechanical properties with structure/function analyses of load-bearing tissues in the human body.

L/L 209. Bioengineering Lab I. (A)

Corequisite(s): BE 200. Students taking BE 209 are required to be enrolled in BE 200 and to have completed the physics and chemistry laboratories scheduled during the freshmen year.

BE 209 is the first laboratory course in the Bioengineering curriculum. It is required for both BSE and BAS majors. It is intended for the fall semester of the semester.

L/L 210. Bioengineering Lab II. (B)

Prerequisite(s): BE 209. Corequisite(s): Math 241.

Second term of a two-year sequence designed to integrate real world experiences into various Bioengineering Science courses. Experiments and projects in mechanics, material and chemical applications to Biomedical Engineering.

SM 225. Technology and Engineering in Medicine. (C)

Prerequisite(s): First year college physics, chemistry and biology or AP credit; Sophomore and higher standing only.

This course will provide an examination of technology and its impact on medicine, with an emphasis on the intersection of engineering with medicine and health. Basic foundations of historical perspective, constraints on technological development, and the promise and peril of technological impact on medicine will be discussed. Modules will also focus on specific technological advances as a basis for the discussion. Planned topics include: implants with emphasis on cochlear devices and sensory rehabilitative devices. Reading will integrate topics of the impact of technology on medicine, as well as examine societal issues related to effects technology in health care.

L/R 301. Bioengineering Signals and Systems. (A)

Prerequisite(s): BE 210, MATH 241.

Properties of signals and systems and examples of biological and biomedical signals and systems; linear, time invariant systems; Fourier analysis of signals and systems with applications to biomedical signals such as ECG and EEG; frequency analysis of first and second order systems; the frequency response; of systems characterized by linear constant-coefficient differential equations; introduction to digital and analog filtering, sampling and sampling theorem and aliasing.

L/R 303. (EAS 303) Ethics, Social and Professional Responsibility for Engineers. (A)

Prerequisite(s): Junior Standing.

Provides an overview of the ethical and professional responsibilities of engineers, as engineering professionals, as members of engineering organizations, and as participants in medical or scientific research. The course will make extensive use of student group presentations and role playing in the analysis of cases based on real-world problems with ethical dimensions. The case studies will vary from year to year, but will be chosen to reflect the full range of engineering fields and disciplines including areas of Bioengineering and Biomedical research.

305. Engineering Principles of Human Physiology. (B)

Prerequisite(s): Junior Standing.

Analysis of cellular and systems-level human physiology with an emphasis on clinical applications. Particular emphasis is on mechanisms of function in the neural and cardiovascular systems.

310. Bioengineering Lab IV. (B)

Corequisite(s): BE 350.

Fourth semester of a two year sequence designed to integrate real world experiences into various Bioengineering and Bioengineering Science courses. Laboratory emphasizing biotransport and biomedical instrumentation.

L/R 324. Chemical Basis of Bioengineering II. (A)

Prerequisite(s): PHYS 140, 141 or 150, 151, MATH 240, CHEM 101, 102.

Advanced topics in physical chemistry including solution and colloid chemistry, electrochemistry, surface phenomena, and macromolecules applied to biological systems.

330. (MSE 330) Soft Materials. (C)

L/R 350. Transport Processes in Living Systems. (B)

Prerequisite(s): MATH 241 or equivalent, PHYS 140 or 150.

Introduction to basic principles of fluid mechanics and of energy and mass transport with emphasis on applications to living systems and biomedical devices.

400. Preceptorship in Clinical Bioengineering. (B)

Introduction to the integration of biomedical engineering in clinical medicine through lectures and a preceptorship with clinical faculty. This course is for BE

majors ONLY, with preference given to BSE students.

440. (BE 540) Biomolecular and Cellular Engineering. (C)

This course provides an introduction to the quantitative methods used in characterizing and engineering biomolecular properties and cellular behavior, focusing primarily on receptor-mediated phenomena. The thermodynamics and kinetics of protein/ligand binding are covered, with an emphasis on experimental techniques for measuring molecular parameters such as equilibrium affinities, kinetic rate constants, and diffusion coefficients. Approaches for probing and altering these molecular properties of proteins are also described, including site-directed mutagenesis, directed evolution, rational design, and covalent modification. Equilibrium, kinetic, and transport models are used to elucidate the relationships between the aforementioned molecular parameters and cellular processes such as ligand/receptor binding and trafficking, cell adhesion and motility, signal transduction, and gene regulation.

441. Engineering Microbial Systems. (C) Prerequisite(s): Biol 121, Biol 202, BE 209, BE 210 or permission of the instructor.

This course is designed to expose students to the principles underlying engineering microbial systems. The fundamentals of DNA, RNA, and proteins will be reviewed. An emphasis will be placed on recombinant DNA technologies, mutagenesis, cloning, gene knockouts, altered gene expression and analysis, with practical real world examples of their application. Throughout this course we will also focus on case studies and critical literature evaluation.

L/R 444. (BE 555) Nanoscale Systems Biology. Prerequisite(s): Background in Biology, Chemistry or Engineering with coursework in thermodynamics or permission of the instructor.

From single molecule studies to single cell manipulations, the broad field of cell and molecular biology is becoming increasingly quantitative and increasingly a matter of systems simplification and analysis. The elaboration of various stresses on cellular structures, influences of interaction pathways and convolutions of incessant thermal motions will be discussed via lectures and laboratory demonstration. Topics will range from, but are not limited to, protein folding/forced unfolding to biomolecule associations, cell and membrane mechanics, and cell motility,

drawing from very recent examples in the literature. Frequent hands-on exposure to modern methods in the field will be a significant element of the course in the laboratory. Skills in analytical and professional presentations, papers and laboratory work will be developed.

450. (BE 550) Hemodynamics. (A)

Prerequisite(s): BE 350 or equivalent, or permission of the instructor.

Development of concepts about the operation of the mammalian cardiovascular system as conceived in the years 198 (by Galenus), 1628 (by Harvey), and 1998 (at Penn by A. Noordergraaf).

455. (MEAM455, MEAM544) Continuum Biomechanics. (A)

Continuum mechanics with applications to biological systems. Fundamental engineering conservation laws are introduced and illustrated using biological and non-biological examples. Kinematics of deformation, stress, and conservation of mass, momentum, and energy. Constitutive equations for fluids, solids, and intermediate types of media are described and applied to selected biological examples. Class work is complemented by hands-on experimental and computational laboratory experiences.

470. Medical Devices. (B)

Prerequisite(s): Junior or Senior standing in Bioengineering, or permission of the instructor.

This course discusses the design, development, and evaluation of medical devices. Emphasis is placed on the process of matching technological opportunities to medical needs. Medical devices are analyzed from three viewpoints: technology driven applications, competing technologies, and disease-related technology clusters.

480. Introduction to Biomedical Imaging. (A) Prerequisite(s): BE 301 or ESE 325.

Introduction to the mathematical, physical and engineering design principles underlying modern medical imaging systems including x-ray computed tomography, ultrasonic imaging, and magnetic resonance imaging. Mathematical tools including Fourier analysis and the sampling theorem. The Radon transform and related transforms. Filtered backprojection and other reconstruction algorithms. Bloch equations, free induction decay, spin echoes and gradient echoes. Applications include one-dimensional Fourier magnetic resonance imaging, three-dimensional

magnetic resonance imaging and slice excitation.

483. (BE 583) Molecular Imaging. (C)

Prerequisite(s): BIOL 215 or BE 305 or permission of the instructor.

This course will provide a comprehensive survey of modern medical imaging modalities with an emphasis on the emerging field of molecular imaging. The basic principles of X-ray, computed tomography, nuclear imaging, magnetic resonance imaging, and optical tomography will be reviewed. The emphasis of the course, however, will focus on the concept of contrast media and targeted molecular imaging. Topics to be covered include the chemistry and mechanisms of various contrast agents, approaches to identifying molecular markers of disease, ligand screening strategies, and the basic principles of toxicology and pharmacology relevant to imaging agents.

490. Research in Bioengineering. (C)

Prerequisite(s): Junior/Senior Standing.

An intensive independent study experience on an engineering or biological science problem related to BE. Requires preparation of a proposal, literature evaluation, and preparation of a paper and presentation. Regular progress reports and meetings with faculty advisor are required.

492. Research in Biomedical Science. (C) Prerequisite(s): Junior or Senior Standing.

Second semester of a year-long project.

495. Senior Design Project. (A)

Prerequisite(s): BE Senior Standing.

Design projects in various areas of bioengineering; projects are chosen by the students with approval of the instructor in the Spring semester of the Junior year; a project brief, interim reports, a final report, and a presentation are required. Also emphasized are report writing, scheduling, project risk assessment, multidisciplinary environments and ethics.

496. Senior Design Project. (B)

Prerequisite(s): BE Senior Standing.

Second semester of a year-long design project.

497. Senior Thesis in Biomedical Science. (C)

Prerequisite(s): Senior Standing in Applied Science Biomedical Science Program (BAS students only).

An intensive independent project experience incorporating both technical and non-technical aspects of the student's chosen career path. Chosen topic should incorporate elements from the student's

career path electives, and may involve advisors for both technical and non-technical elements. Topics may range from biomedical research to societal, technological and business aspects of Bioengineering. A proposal, regular progress reports and meetings with a faculty advisor, a written thesis, and a presentation are required.

498. Senior Thesis in Biomedical Science. (A) Prerequisite(s): Senior Standing in Applied Science Biomedical Science Program (BAS students only). Second semester of a year-long project.

502. From Biomedical Science to the Marketplace. (A) Prerequisite(s): First year graduate level, or Senior standing in Bioengineering, or permission of the instructor.

This course explores the transition from discovery of fundamental knowledge to its ultimate application in a clinical device or drug. Emphasis is placed upon factors that influence this transition and upon the integrative requirements across many fields necessary to achieve commercial success. Special emphasis is placed on entrepreneurial strategies, intellectual property, financing and the FDA process of proving safety and efficacy. Current public companies in the medical device and drug industry are studied in detail and critiqued against principles developed in class.

505. Quantitative Human Physiology. (B) Prerequisite(s): BE 305.

Introduction to human physiology using the quantitative methods of engineering and physical science. Emphasis is on the operation of the major organ systems at both the macroscopic and cellular level.

510. Biomechanics and Biotransport. (A) Prerequisite(s): Math through 241; BE 350, BE 324 as pre-or corequisites.

The course is intended as an introduction to continuum mechanics in both solid and fluid media, with special emphasis on the application to biomedical engineering. Once basic principles are established, the course will cover more advanced concepts in biosolid mechanics that include computational mechanics and bio-constitutive theory. Applications of these advanced concepts to current research problems will be emphasized.

L/R 512. Bioengineering III: Biomaterials. (B)

This course provides a comprehensive background in biomaterials. It covers surface properties, mechanical behavior and tissue response of ceramics, polymers

and metals used in the body. It also builds on this knowledge to address aspects of tissue engineering, particularly the substrate component of engineering tissue and organs.

513. Cell Biology. (A) Prerequisite(s): Graduate Standing or permission of the instructor.

Introduction to cell and molecular biology with emphasis on quantitative concepts and applications to multicellular systems.

517. (ESE 517) Optical Imaging. (C) Prerequisite(s): ESE 310 and ESE 325 or equivalent.

A modern introduction to the physical principles of optical imaging with biomedical applications. Propagation and interference of electromagnetic waves. Geometrical optics and the eikonal. Plane-wave expansions, diffraction and the Rayleigh criterion. Scattering theory and the Born approximation. Introduction to inverse problems. Multiple scattering and radiative transport. Diffusion approximation and physical optics of diffusing waves. Imaging in turbid media. Introduction to coherence theory and coherence imaging. Applications will be chosen from the recent literature in biomedical optics.

519. Cellular-Level Neural Simulation and Modeling. (M) Finkel.

Cellular level simulation of neurons at the biophysical level. Topics include cable theory, the Hodgkin-Huxley formalism for different channelspecies, synaptic interactions and plasticity, information measures in network activity, neuromodulation, and applications to modeling neurological disease.

520. (INSC594) Computational Neuroscience and Neuroengineering. (B) Finkel.

Computational modeling and simulation of the structure and function of brain circuits. A short survey of the major ideas and techniques in the neural network literature. Particular emphasis on models of hippocampus, basal ganglia and visual cortex. A series of lab exercises introduces techniques of neural simulation.

521. Brain-Computer Interfaces. (C)

Prerequisite(s): BE 301 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used the BE labs, BE 209/210/310). Some basic neuroscience background (e.g. BIOL 215, BE 305, BE 520, INSC core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.

The course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twice weekly lectures and "hands-on" weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures.

530. (PHYS585) Theoretical Neuroscience. (C)

537. (CIS 537) Biomedical Image Analysis. (C) Prerequisite(s): Math through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.

539. (ESE 539) Neural Networks, Chaos, and Dynamics: Theory and Application. (B)

Physiology and anatomy of living neurons and neural networks; Brain organization; Elements of nonlinear dynamics, the driven pendulum as paradigm for complexity, synchronicity, bifurcation, self-organization and chaos; Iterative maps on the interval, period-doubling route to chaos, universality and the Feigenbaum constant, Lyapunov exponents, entropy and information; Geometric characterization of attractors; Fractals and the Mandelbrot set; Neuron dynamics: from Hodgkin-Huxley to integrate and fire, bifurcation neuron; Artificial neural networks and connectionist models, Hopfield (attractor-type) networks, energy functions, convergence theorems, storage capacity, associative memory, pattern classification, pattern

completion and error correction, the Morita network; Stochastic networks, simulated annealing and the Boltzmann machine, solution of optimization problems, hardware implementations of neural networks; the problem of learning, algorithmic approaches: Perception learning, back-propagation, Kohonen's self-organizing maps and other networks; Coupled-map lattices; Selected applications including financial markets.

540. (BE 440, CBE 540) Biomolecular and Cellular Engineering.

This course provides an introduction to the quantitative methods used in characterizing and engineering biomolecular properties and cellular behavior, focusing primarily on receptor-mediated phenomena. The thermodynamics and kinetics of protein/ligand binding are covered, with an emphasis on experimental techniques for measuring molecular parameters such as equilibrium affinities, kinetic rate constants, and diffusion coefficients. Approaches for probing and altering these molecular properties of proteins are also described, including site-directed mutagenesis, directed evolution, rational design, and covalent modification. Equilibrium, kinetic, and transport models are used to elucidate the relationships between the aforementioned molecular parameters and cellular processes such as ligand/receptor binding and trafficking, cell adhesion and motility, signal transduction, and gene regulation.

546. (BMB 546) Fundamental Techniques of Imaging I. (H)

This course covers the fundamentals of modern techniques in biological and in vivo biomedical imaging. This practical course consists of a series of hands-on lab exercises, covering major imaging modalities, but also extends to non-radiology modalities of interest in biological, pathological or animal imaging (e.g., optical imaging). Topics include x-ray, mammography, MRS, MRI, PET, and ultrasound. The emphasis will be on hands-on aspects of all areas of imaging and imaging analysis. Small groups of students will be led by a faculty member with technical assistance as appropriate.

547. Fundamental Techniques of Imaging 2. (C)

This course is a continuation of the course Fundamental Techniques of Imaging 1 (BE546). It builds upon the fall course instruction and continues to expose students to the fundamentals of modern techniques in biological and in vivo

biomedical imaging. This course consists of a series of hands-on lab exercises, covering major imaging modalities, but also extends to non-radiology modalities of interest in biological, pathological or animal imaging (e.g., optical imaging). Topics include SPECT, Micro-CT, diffuse optical spectroscopy, in vivo fluorescence imaging, and computed tomography. The course will continue to emphasize the hands-on aspects of all areas of imaging and imaging analysis. Small groups of students will be led by a faculty member with technical assistance as appropriate.

550. (BE 450) Hemodynamics. (A)

Prerequisite(s): BE 350 or equivalent, or permission of the instructor.

Development of concepts about the operation of the mammalian cardiovascular system as conceived in the years 198 (by Galenus), 1628 (by Harvey), and 1998 (at Penn by A. Noordergraaf).

L/R 552. (CBE 552) Cellular

Engineering. (M) Prerequisite(s): Math through 241; BE 350, BE 324 as pre- or corequisites. Molecular & cellular biology.

The goal of this course is to introduce students quantitative concepts in understanding and manipulating the behavior of biological cells. We will try to understand the interplay between molecules in cells and cell function. A particular focus is on receptors - cell surface molecules that mediate cell responses. We will also try to understand processes such as adhesion, motility, cytoskeleton, signal transduction, differentiation, and gene regulation.

553. Principles, Methods, and Applications of Tissue Engineering.

(B) Prerequisite(s): Graduate Standing or instructor's permission.

Tissue engineering demonstrates enormous potential for improving human health. While there is an extensive body of literature discussing the state of the art of tissue engineering, the majority of this literature is descriptive and does little to address the principles that govern the success or failure of an engineering tissue. This course explores principles of tissue engineering, drawing upon diverse fields such as developmental biology, immunology, cell biology, physiology, transport phenomena, material science, and polymer chemistry. Current and developing methods of tissue engineering as well as specific applications will be discussed in the context of these principles.

554. (CBE 554) Engineering Biotechnology. (M)

Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.

L/R 555. (BE 444, CBE 555, MEAM555) Nanoscale Systems

Biology. (A) Prerequisite(s): Background in Biology, Chemistry or Engineering with coursework in thermodynamics or permission of the instructor.

From single molecule studies to single cell manipulations, the broad field of cell and molecular biology is becoming increasingly quantitative and increasingly a matter of systems simplification and analysis. The elaboration of various stresses on cellular structures, influences of interaction pathways and convolutions of incessant thermal motions will be discussed via lectures and laboratory demonstration. Topics will range from, but are not limited to, protein folding/forced unfolding to biomolecule associations, cell and membrane mechanics, and cell motility, drawing from very recent examples in the literature. Frequent hands-on exposure to modern methods in the field will be a significant element of the course in the laboratory. Skills in analytical and professional presentations, papers and laboratory work will be developed.

556. Mechanical Forces: Cells/Tissue. (M)

This course will explore the biological effects of mechanical forces at the molecular, cellular and tissue level in specific tissues (blood vessels, cartilage, bone, brain, lung, and skeletal and cardiac muscle). The importance of physical forces in the health, disease, development, remodeling and injury of these tissues will be highlighted. An understanding of these specific systems will provide a foundation for discussions of the molecular basis of mechanotransduction, mechanically induced trauma, as well as the manipulation of the mechanical environment in biotechnology and tissue engineering applications. Throughout the course, the use of engineering principles and methods to understand and model mechanically induced biological phenomena will be stressed.

L/R 557. From Cells to Tissue: Engineering Structure and Function.

(C) Faculty. Prerequisite(s): Math through 241; BE350, BE324 as pre- or corequisites; Molecular & cellular biology.

The goal of this course is to introduce students to quantitative concepts in understanding and manipulating the behavior of biological cells. We will try to understand the interplay between molecules in cells and cell function. A particular focus is on receptors - cell surface molecules that mediate cell responses. We will also try to understand processes such as adhesion, motility, cytoskeleton, signal transduction, differentiation, and gene regulation.

L/R 559. Multiscale Modeling of Biological Systems. (C)

Prerequisite(s): Undergraduates who have taken BE 324 or equivalent courses in Quantum Mechanics and/or Statistical Physics need no permission. Others, email instructor for permission.

This course aims to provide theoretical, conceptual, and hands-on modeling experience on three different length and time scales that are crucial to biochemical phenomena in cells and to nanotechnology applications. Special Emphasis will be on cellular signal transduction. 60% lectures, 40% computational laboratory. No programming skills required.

L/R 562. (CBE 562) Drug Discovery & Development. (B)

L/R 567. (AMCS567, BMB 580) Mathematical Computation Methods for Modeling Biological Systems. (C) Prerequisite(s): BE 324 and BE 350.

This is an introductory course in mathematical biology. The emphasis will be on the use of mathematical and computational tools for modeling physical phenomena which arise in the study biological systems. Possible topics include random walk models of polymers, membrane elasticity, electrodiffusion and excitable systems, single-molecule kinetics, and stochastic models of biochemical networks.

575. Injury Biomechanics. (B)

Prerequisite(s): ENM 500 or 510, BE 510 or MEAM 519 or equivalent. A background in physiology and anatomy is also recommended.

This course is intended as an introduction to investigating the mechanics of injury, from the organism to the tissue level. The students will be exposed to both formal didactic instruction and selected field work. The course will cover principles in

continuum and analytical mechanics, and will use application in injury research to illustrate these concepts. The course will be divided into three major units. The first unit will be an introduction to variational principles of mechanics and calculus of variations, and will apply these concepts to injury problems (e.g., occupant kinematics during a collision, vehicle kinematics, impact to padded surfaces). Special emphasis will be placed on converting a system input into a body response. The second unit of the course will be used to discuss the effect of gross body motion on tissue and organ mechanical response. Material models of biological tissue will be discussed, and examples relating body motion to tissue response will be reviewed. In the final unit of this course, students are required to research and review a problem of their choice and present a report detailing an engineering based solution to the problem.

580. (PHYS582) Medical Radiation Engineering. (B)

Prerequisite(s): Junior standing.

This course in medical radiation physics investigates electromagnetic and particulate radiation and its interaction with matter. The theory of radiation transport and the basic concept of dosimetry will be presented. The principles of radiation detectors and radiation protection will be discussed.

581. (BMB 581) Techniques of Magnetic Resonance Imaging. (M)

Detailed survey of the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are: history of MRI, fundamentals of electromagnetism, spin and magnetic moment, Bloch equations, spin relaxation, image contrast mechanisms, spatial encoding principles, Fourier reconstruction, imaging pulse sequences and pulse design, high-speeding imaging techniques, effects of motion, non-Cartesian sampling strategies, chemical shift encoding, flow encoding, susceptibility boundary effects, diffusion and perfusion imaging.

583. (BE 483) Molecular Imaging. (C)

Prerequisite(s): BIOL 215 or BE 305 or permission of the instructor.

This course will provide a comprehensive survey of modern medical imaging modalities with an emphasis on the emerging field of molecular imaging. The basic principles of X-ray, computed tomography, nuclear imaging, magnetic resonance imaging, and optical tomography will be reviewed. The emphasis of the

course, however, will focus on the concept of contrast media and targeted molecular imaging. Topics to be covered include the chemistry and mechanisms of various contrast agents, approaches to identifying molecular markers of disease, ligand screening strategies, and the basic principles of toxicology and pharmacology relevant to imaging agents.

584. (MATH584) Mathematics of Medical Imaging and Measurements. (M)

Prerequisite(s): Math through 241 as well as some familiarity with linear algebra and basic physics.

In the last 25 years there has been a revolution in image reconstruction techniques in fields from astrophysics to electron microscopy and most notably in medical imaging. In each of these fields one would like to have a precise picture of a 2 or 3 dimensional object, which cannot be obtained directly. The data that is accessible is typically some collection of weighted averages. The problem of image reconstruction is to build an object out of the averaged data and then estimate how close the reconstruction is to the actual object. In this course we introduce the mathematical techniques used to model measurements and reconstruct images. As a simple representative case we study transmission X-ray tomography (CT). In this contest we cover the basic principles of mathematical analysis, the Fourier transform, interpolation and approximation of functions, sampling theory, digital filtering and noise analysis.

591. Anatomy and Biomechanics of Synovial Joints. (B)

Anatomy and Biomechanics of Synovial Joints in Health and Disease.

612. Materials Affecting Cell and Molecular Function. (B)

This course provides advanced knowledge regarding the effect of the various classes of materials on tissues, cells and molecules, with the emphasis on musculoskeletal tissues. Topics include the effect of particulate matter, controlled release carriers and scaffolds for tissue repair. Emphasis is placed on recent developments in tissue engineering of bone and cartilage. The course discusses the use of materials science techniques in the study of tissue-engineered constructs. Data in the literature related to the subject matter will be extensively discussed and the students will write two articles on selected topics.

619. (BMB 604) Statistical Mechanics. (C) Prerequisite(s): CBE 618 or equivalent.

A modern introduction to statistical mechanics with biophysical applications. Theory of ensembles. Noninteracting systems. Liquid theory. Phase transitions and critical phenomena Nonequilibrium systems. Applications to reaction kinetics, polymers and membranes.

630. (EE 630) Elements of Neural Computation, Complexity and Learning. (M) Prerequisite(s): A semester course in probability or equivalent exposure to probability (e.g. ESE 530).

Non-linear elements and networks: linear and polynomial threshold elements, sigmoidal units, radial basis functions. Finite (Boolean) problems: acyclic networks; Fourier analysis and efficient computation; projection pursuit; low frequency functions. Network capacity: Feedforward networks; Vapnik-Chervnenkis dimension. Learning theory: Valiant's learning model; the sample complexity of learning. Learning algorithms: Perception training, gradient descent algorithms, stochastic approximation. Learning complexity: the intractability of learning; model selection.

645. Biological Elasticity. (C) Prerequisite(s): BE 510 or equivalent.

Large deformation mechanics of biological materials. Nonlinear elasticity theory, strain energy functions, constitutive laws of hyperelastic and viscoelastic biological materials. Applications to heart, lung, and arteries.

650. Adv Biomed Imag Applic. (C)

655. (MSE 655) Advanced Topics in Biomaterials. (M) Prerequisite(s): BE 512 and MSE 506 or permission of instructor.

The effect of nearly inert and bioactive materials on surrounding tissues.

Mechanisms of bone tissue growth enhancement with bioactive ceramics. Elasticity and strength of porous coated and ceramic coated implants. Tissue remodeling around coated implants.

L/R 662. (CBE 618, MEAM662) Advanced Molecular Thermodynamics.

Review of classical thermodynamics. Phase and chemical equilibrium for multicomponent systems. Prediction of thermodynamic functions from molecular properties. Concepts in applied statistical mechanics. Modern theories of liquid mixtures.

SM 699. Bioengineering Seminar. (C)

700. Special Topics in Bioengineering. (M)

The research areas discussed will be those of the participating BE faculty who will direct the discussions and present background material. The purpose of the course is to present current research being done in the bioengineering Graduate Group and study relevant literature. The grade will be based on class participation and a final paper or presentation. Course content and staffing varies from year to year.

799. Research Rotation. (C) Prerequisite(s): PhD Students only.

For students who are fulfilling the Bioengineering research rotation requirements

895. (BIOM895) Methods in Bioengineering Education. PHD students only.

This course provides training in the practical aspects of teaching. The students will attend seminars emphasizing basic pedagogical skills. Depending on the course setting for the practicum portion, student will obtain hands on experience developing and delivering lectures, leading recitations, developing and supervising

instructional laboratories, preparing and grading homework, grading laboratory reports, and preparing and grading examinations. Practicum experiences will be supervised by a faculty mentor. Students will meet during the practicum portion of the course to discuss difficult situations encountered in the classroom/laboratory and to constructively review each other. Final evaluations will be based on mentor, peer, and student feedback.

899. Independent Study. (C) Graduate Students Only.

The purpose of BE 899 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Rather than a research or design project, BE 899 is a one-on-one or small-group course with a professor. Students must submit a proposal outlining the study area along with the professor's approval. A paper or presentation is required.

990. Masters Thesis. (C)

For Master's students who have completed the course requirements for the Master's degree and are strictly working to complete the Master's Thesis leading to the completion of a Master's degree. Permission Required.

995. Doctoral Dissertation Status. (C) Prerequisite(s): For Ph.D. Candidates only.

Ph.D. Students register for Doctoral Dissertation Status after they have advanced to Ph.D. candidacy by completing the Candidacy Exam which consists of the Dissertation Proposal Defense.. Permission required

999. Thesis/Dissertation Research. (C)

For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.

BIOLOGICAL BASIS OF BEHAVIOR (AS) {BIBB}

L/L 109. (BIOL109, PSYC109) Introduction to Brain and Behavior. (C) Living World Sector. All classes. Medina and Muzzio.

Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological bases of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders. Familiarity with elementary physics and chemistry may be helpful.

L/R 217. (PSYC117) Visual Neuroscience. (B) Staff. Prerequisite(s): BIBB 109, PSYC 001, COGS 001 or VLST 101.

An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, anatomy and physiology of the visual pathways, retinal processing, properties of visual cortex, and color vision.

227. (PSYC127) Physiology of Motivated Behaviors. (C) Grill.

The regulatory physiology of motivation will be discussed in detail, including the coordination of behavioral and neural mechanisms in motivation.

231. (BIOL231, PSYC131) Animal Behavior. (C) Seyfarth/Cheney. Prerequisite(s): PSYC 001 or BIOL 102 or BIOL 122.

The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.

240. Human Chronobiology and Sleep. (M) Dinges. Prerequisite(s): BIBB109. Students may not receive credit for both this course and BIBB 040.

Topics to be covered include basic principles of chronobiology; neuroscience mechanisms of circadian rhythms and sleep; phylogeny and ontogeny of sleep; human sleep and sleep disorders; circadian dysfunction; circadian and sleep

homeostatic influences in human health and safety.

L/R 249. (PSYC149) Cognitive Neuroscience. (C) Living World Sector. All classes. Thompson-Schill. Prerequisite(s): PSYC 001 or BIBB/PSYC 109.

The study of the neuronal systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.

L/L 251. (BIOL251) Molecular and Cellular Neurobiology (formerly Cellular Neurobiology). (A) Schmidt, M./Abel/Peachey. Prerequisite(s): BIOL 101 and 102, or BIOL 121; PHYS 102 or 151 strongly recommended. Lab fee \$150. (3hrs. lec., 3hrs. lab, 1.5 c.u.).

Cellular physiology of neurons and excitable cells; molecular neurobiology and development. Topics include: action potential generation; synaptic transmission; molecular and physiological studies of ion channels; second messengers; simple neural circuits; synaptic plasticity; learning and memory; and neural development.

260. (PSYC139) Neuroendocrinology. (C) Flanagan-Cato. Prerequisite(s): BIBB 109, one year of Biology, or Permission of Instructor.

This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.

269. Autonomic Physiology. (A) Heerding. Prerequisite(s): BIBB 109.

This lecture course is designed to introduce the student to the functioning of the autonomic nervous system (ANS), which is critically involved in the maintenance of body homeostasis through regulation of behavior and physiology. The course will begin with a review of the basic anatomy and physiology of the ANS including the sympathetic, parasympathetic and enteric divisions. The mechanisms by which the ANS regulates peripheral tissues will be discussed, including reflex and regulatory functions, as will the effect of drugs which modulate ANS activity. The role of the ANS in regulating behavior will be

addressed in the context of thirst, salt appetite and food intake. Finally, the course will cover the result of over-activation of the sympathetic nervous system as manifested in chronic stress.

270. (PSYC125) Drugs, Brain and Mind. (B) Prerequisite(s): BIBB 109, Intro Biology and Intro Psychology.

The course will begin with a review of basic concepts in pharmacology including: routes of drug administration, drug metabolism, the dose response curve, tolerance and sensitization. Following a brief overview of cellular foundations of neuropharmacology (cell biology, synaptic and receptor function), the course will focus on various classes of drugs used to treat neuropsychiatric disorders including, among others, depression, schizophrenia and anxiety. We will additionally consider mechanisms mediating the mind-altering, addictive and neurotoxic effects of abused drugs.

310. Laboratory in the Structure of the Nervous System. (A) Miselis. Prerequisite(s): BIBB 109 permission of instructor. Lab Fee: \$100.

A laboratory course designed to familiarize the student with the fundamental gross and histological organization of the brain. The mammalian brain will be dissected and its microscopic anatomy examined using standard slide sets. Comparative brain material will be introduced, where appropriate, to demonstrate basic structural-functional correlations.

350. Developmental Neurobiology. (C) Staff. Prerequisite(s): BIBB 109 or Permission of instructor.

This course will focus on cellular and molecular mechanisms of the organogenesis of the central nervous system. A goal of the course will be to understand the form, function and pathology of the adult nervous system in terms of antecedent developmental processes.

399. Independent Research. (C) Standing Faculty. Prerequisite(s): BIBB 109 and permission of the Director.

Individual research of an experimental nature with a member of the standing faculty leading to a written paper. The grade is based primarily on a serious term paper describing original research carried out by the student. Students must submit a proposal prior to registering. During the semester, students must attend two seminars led by the BBB Director or Associate Director to discuss planning an independent research project, ethical

concerns in research and writing a scientific paper. Attendance at the meetings is mandatory. Students wishing to do research in hospitals with investigators who are not standing faculty at Penn should inquire about College 99 at the College Advising Office. Students doing more than one credit of independent study will be required to present a poster at the annual BBB Symposium.

SM 410. Behavioral Medicine: Experimental & Animal Models. (C) Ulm. Prerequisite(s): BIBB 109. Previously BIBB 390.

Fundamentals of Behavioral Medicine concerns itself with the description of ideology, disease and treatment from the perspective of a functional analyses. It is the intent of this course to extend the traditional structural analysis that traditional medicine provides.

SM 421. Functional Imaging of the Human Brain. (B) Newberg. Prerequisite(s): BIBB 109.

The ability to utilize different imaging techniques in disciplines such as psychology, psychiatry, neurology, and cognitive neurosciences is a growing field and presents many interesting problems and possibilities. This course is an upper level seminar course for individuals pursuing one of the above mentioned fields and/or premedical course work. The course would provide a detailed overview of functional brain imaging and its potential uses. Issues regarding advantages and disadvantages of different modalities, study design image analysis and interpretation, and how each of these relates to various neurological and psychological phenomena will be discussed. The classes will cover the following specific topics in this general time frame: Introduction to functional brain function, basics of nuclear medicine imaging (including instrumentation, image acquisition, and radiopharmaceuticals for positron emission tomography and single photon emission computed tomography), imaging of neurological disorders, imaging of psychological disorders, introduction to activation studies, image analysis and statistical problems, study design, literature review, journal article presentation, tour of Penn imaging facilities, interpretation of imaging studies, implications for clinical and research, and implications for understand the human mind and consciousness.

430. Neurobiological Basis of Autism. Holloway. Prerequisite(s): BIBB 109.

This course covers the signs and symptoms of Autism Spectrum Disorder (ASD), such as their lack of language, eye gaze aberrations, deficits in joint attention, avoidance and inadequacies of social interaction, hand flapping, and self stimulating behaviors. We will learn about diagnostic tools, such as the ADOS and ADIR. We will cover the neurobiological changes specific to the brains of autistic children such as in the cerebral cortex white matter amygdala, brainstem, cerebellum and neural communication systems. We will also focus on genes associated with autism, many of which regulate neuronal communication systems. They include NRXN1, NLGN3, NLGN4, SHANK3, CNTNAP2, CHD10, BZRAP1 and MDGA2, DLX1 and DLX2, fragile X, Tuberous Sclerous 1, Neurexin 1 Tuberous Sclerous2, Rubinstein-Taybi Syndrome, Neurofibromatous 1, and Rett's syndrome. Additionally covered are some of the more popularized issues such as autistic savants, vaccines and mirror neurons. Finally, we will discuss brain plasticity and treatment choices, such as drugs and early behavioral interventions.

SM 431. (PSYC451) ANIMAL COMMUNICATION.

SM 441. (PSYC441) Genetics, Evolution, and Behavior. (C) Norman.

The first half of the course treats Behavioral Genetics (e.g., genetic and environmental components of IQ, personality, and psychopathology, gene-environment interaction), and the second half deals with Evolutionary Psychology (e.g., evolution of altruistic, cooperative, and competitive behavior). There are no prerequisites, but previous courses in Psychology, Biological Basis of Behavior, Anthropology, Biology, or Statistics would be helpful preparation. For additional information see <http://www.psych.upenn.edu/~normal/441> Overview.htm

SM 451. (PSYC407) Behavioral Genetics. (K) Price. Prerequisite(s): Basic statistics or permission of instructor.

This course covers basic principles of human and animal behavioral genetics, including normal variation and extreme phenotypes represented by behavioral, psychiatric and neurologic disorders. The course will focus on methods necessary to critically evaluate research findings on normal and abnormal human behavior. Animal models will also be reviewed. The

first third of the class is in lecture format and reviews basic genetic methodologies as they apply to behavior. The remainder of the class is in seminar format and covers recently published work related to behavioral genetics.

SM 475. Neurodegenerative Diseases. (M) Lexow.

This course will familiarize students with advances in our understanding of the clinical features and pathogenesis of a wide range of neurodegenerative diseases, including Alzheimer's disease and other dementias, prion diseases, Parkinson's disease and atypical parkinsonisms, neurodegenerative ataxias, motoneuron diseases, degenerative diseases with chorea, iron and copper disorders, and mitochondrial diseases. Students will analyze original research reports on a range of proposed pathological cellular processes that may represent steps in cell death pathways leading to neuron loss seen in these diseases. Significant emphasis will be placed on the fast-expanding field exploring genetic contributions to neurodegenerative disease, as identification of genetic mutations pathogenic for familial neurodegenerative diseases has been a major driving force in neurodegenerative research and pointed researchers towards essential molecular process that may underlie these disorders. Strategies for therapeutic intervention in the management, prevention, and cure of neurodegenerative disease will be addressed.

SM 481. Behavioral Pharmacology. (B) Heerding. Prerequisite(s): BIBB 109.

This seminar course reviews the behavioral effects of drugs in animals, the general biological and psychological principles of drug action, and the relationship between drugs that affect brain monoamine and opiate systems and their behavioral effects. Introductory lectures on general topics will be followed by advanced discussion of specific topics in a journal club format through student presentations.

SM 482. Clinical Psychopharmacology. (M)

Prerequisite(s): BIBB 109 or 269 or permission of instructor.

This course examines the history, rationale and putative mechanism of action of drugs used in the treatment of psychiatric disorders. Emphasis is placed on neurobiological processes underlying psychopathology and pharmacological intervention. Drugs currently in use as well as new drugs in development will be

covered. Strategies, techniques, issues and challenges of clinical psychopharmacological research will be addressed and new approaches to drug discovery, including the use of pharmacogenomics and proteomics to understand variability in drug response and identify new molecular drug targets, will be covered in depth. Specific drug classes to be considered include antidepressants, anxiolytics, typical and atypical antipsychotics, narcotic analgesics, sedative hypnotics, and antiepileptic medications. A contrasting theme throughout the course will be the use of drugs as probes to identify neural substrates of behavior.

492. Experimental Methods in Synaptic Physiology. (C) Kaplan.

Prerequisite(s): BIBB 251. Lab fee \$100.

In this lab course, a small number of students (12-20) meet once per week to discuss topics in synaptic physiology and to become proficient at sharp electrode techniques for intracellular recording, using isolated ganglia from the snail *Heliosoma*. The first part of each class will consist of

discussion of weekly reading from the primary literature, with the remainder of the class devoted to hands-on experiments. After learning to record from and characterize single neurons, students will study synaptic transmission by stimulating incoming nerve trunks or by recording from pairs of interconnected neurons. As a midterm assignment, students will prepare and present a short research proposal using this model system, to be evaluated by the class. For the last half of the course, the class will work together on one or two of these proposals, meeting at the end of each class to pool our data, analyze the results and discuss their significance.

499. Senior Honors Thesis. (C)

Standing Faculty. Prerequisite(s): BIBB 399, permission of BIBB Director and a GPA of 3.3 or better. Corequisite(s): BIBB 400.

Continuation of BIBB 399 research. Students will be required to present their oral defense and a poster at the annual BBB Symposium Honors Seminar.

585. (BE 530, INSC594, PHYS585, PSYC539) Theoretical and Computational Neuroscience. (M) Balasubramanian.

This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.

**BIOLOGY
(AS) {BIOL}****003. "What every lawyer, businessperson, and citizen needs to know about molecular biology".**

(C) Living World Sector. All classes. Staff. Prerequisite(s): High school biology required. May not be counted toward the Biology Major. Only offered through the College of Liberal and Professional Studies.

This seminar is intended for students who do not plan to take any additional biology courses, but would like to know what "all the excitement" of modern biology is about. We will cover both the basics of molecular biology and how biotechnology effects our lives. Specific topics will include: DNA fingerprinting, environmental and health applications of genetic engineering and the human genome project.

SM 011. Humans in a Microbial World. (A) Living World Sector. All classes. Brisson.

Microbes are a fundamental part of life on this planet. This course will explore the causes and consequences of the distribution and abundance of microbes (microbial ecology) as well as microbial evolution on human health and disease risk. We will address the interplay between human society and microbial ecology and evolution in shaping disease risk and directing scientific study. This course will apply concepts from basic biology, ecology, and evolution to study infectious microbes as living creatures.

SM 014. Descent with modification: An introduction to the science of evolution. (A) Living World Sector. All classes. Sniegowski. Prerequisite(s): High school introductory biology would be helpful.

Evolution provides the unifying framework for the biological sciences and has been confirmed by a huge and diverse body of evidence. Public opinion polls show, however, that evolution continues to be socially and politically controversial in the United States. In this seminar, we will explore the scientific basis for evolution by reading and discussing historical sources, a current nonspecialist text on evolution, and selected papers and articles from the scientific and popular literature. With our knowledge of evolutionary fact and theory as background, we will also discuss social and political opposition to the teaching of evolution. Grading will be based on

participation in class discussions and on performance in several brief writing assignments. There is no course prerequisite, but high school introductory biology would be helpful.

L/L 042. (BIOL175, NURS042) An Introduction to Microbiology and Human Biochemistry. (B)

Pohlschroder/Lafferty-DellaValle. Prerequisite(s): NURS 40 (Principles of General and Organic Chemistry) or CHEM 101 and 102 or the equivalent courses from an accredited college or university. Lab fee \$150. (1.5 c.u.; 7 hours).

This lecture and laboratory course introduces students to cellular biochemistry, molecular genetics, and microbiology to provide an understanding of the fundamental processes of living organisms, particularly as observed in bacteria and humans. Topics will include the organization and characteristics of prokaryotic and eukaryotic cells, the structural and functional relationships of the major biomolecules, interrelationships of the various metabolic pathways, and the basics of molecular biology and immunology.

L/L 101. Introduction to Biology A.

(A) Living World Sector. All classes. Staff. Biology Majors and Pre-Medical students should take either BIOL 101 or 121. BIOL 101 is the companion course to BIOL 102, may be taken before or after BIOL 102. Lab fee \$150. (3 hrs. lec., 3 hrs. lab, 1.5 c.u.).

General principles of biology that have been established by studies of microbes, animals, and plants and the viruses of these organisms will be covered. Emphasis will be on the basic chemistry of life, cell biology, molecular biology, and genetics. The study of developmental pathways and evolutionary trends in life cycles will be explored using plants as model organisms.

L/L 102. Introduction to Biology B.

(B) Living World Sector. All classes. Staff. BIOL 102 is the companion course to BIOL 101, may be taken before or after BIOL 101. Lab fee \$150. (3 hrs. lec., 3 hrs. lab, 1.5 c.u.).

General principles of biology focusing on structure and function of animals, with emphasis on the principles of physiology, development, evolution, ecology, and the diversity of adaptations.

L/L 109. (BIBB109, PSYC109) Introduction to Brain and Behavior. (C) Living World Sector. All classes. Medina and Muzzio.

Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological basis of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders. Familiarity with elementary physics and chemistry may be helpful.

L/L 121. Introduction to Biology - The Molecular Biology of Life. (C) Living World Sector. All classes. Staff.

Prerequisite(s): Solid high school biology and strong high school chemistry or CHEM 001 or 101 taken concurrently. Biology Majors and Pre-Medical students should take either BIOL 101 or 121. BIOL 121 is the companion course to BIOL 124, may be taken before or after BIOL 124. Lab fee \$150. (3 hrs. lec., 3 hrs. lab, 1.5 c.u.).

An intensive introductory lecture and laboratory course covering the cell and molecular biology, biochemistry, and genetics of animals, bacteria, and viruses. This course is comparable to Biology 101, but places greater emphasis on molecular mechanisms and experimental approaches. Particular attention is given to the ways in which modern cell biological and molecular genetic methods contribute to our understanding of evolutionary processes, the mechanistic basis of human disease, and recent biotechnological innovations.

123. Introductory Molecular Biology Laboratory. (C) Bassiri. Prerequisite(s):

Advanced Placement credit for BIOL 101 or 121. Students may not take both BIOL 121 and 123 for credit. Lab fee \$150. (3.5 hrs. lab, 0.5 c.u.).

An intensive introductory laboratory course emphasizing how molecular biology has revolutionized our understanding of cell and organism functions.

L/L 124. Introductory Organismal Biology Lab. (C) Robinson.

Prerequisite(s): Solid high school biology or advanced placement credit for BIOL 102. BIOL 124 is the companion course to BIOL 121, may be taken before or after BIOL 121. Students may not take both BIOL 102 and 124 for credit. Lab fee \$150. (1 hr. lec., 3 hrs. lab, 0.5 c.u.).

An intensive introductory laboratory course in organismal biology.

140. (BIOL440) Humans and the Environment. (A) Natural Science & Mathematics Sector. Class of 2010 and beyond. Janzen. Prerequisite(s): Sophomore standing or greater. Some biology background suggested.

Intensive exposure to current issues and solutions in contemporary human interactions with the environment. Global in scope, but focused on case histories. Emphasis on providing biological and sociological background for a given major environment-human interaction, and state-of-the-art suggested solutions.

L/L 175. (BIOL042, NURS042) Principles of Microbiology. (B)

Lafferty/Pohlschroder. Prerequisite(s): NURS 041 or BIOL 101 or 121 or 091 and one semester of college chemistry. May not be used in the Biology Major. Lab fee \$150.

This lecture and laboratory course covers concepts of Microbiology basic to an understanding of the fundamental processes of living organisms. The organization and characteristics of prokaryotic cells, their growth requirements and mechanism of energy generation as well as their role in pathological processes are discussed. The role of the immune system in defense is covered as well.

L/R 202. Cellular Biology and Biochemistry. (C) Staff. Prerequisite(s): BIOL 101 and 102, or BIOL 121. Strong high school background in chemistry or CHEM 102 recommended.

An introduction to protein structure, enzyme kinetics, mechanism of enzyme action and allosteric regulation of enzyme activity; introduction to cell structure and function including membrane structure, membrane receptors and signal transduction, motility, and the cell cycle.

L/R 215. Vertebrate Physiology. (A) Rome/Ren. Prerequisite(s): BIOL 102 or 121 or 124.

The course will focus on integrative aspects of physiological function of vertebrates. Comparative, environmental and quantitative approaches will be used. Major topics include muscle, the cardiovascular system, respiration, renal function and the nervous system.

221. (BIOL527, GCB 527) Molecular Biology and Genetics. (C)

Bonini/Gallagher/Guild. Prerequisite(s): BIOL 101 or 121.

This course will survey the discipline of molecular genetics. Two broad areas will be considered 1) Molecular Biology: DNA replication, transcription, translation,

regulation of gene expression in both prokaryotic and eukaryotic systems, and genomics and 2) Genetics: basic Mendelian & molecular genetics.

L/R 230. Evolutionary Biology. (B)

Sniegowski/Schmidt, P. Prerequisite(s): BIOL 101 and 102, or BIOL 121.

Theories and mechanisms of evolution, with emphasis on the genetic basis of evolutionary change.

231. (BIBB231, PSYC131) Animal Behavior. (C) Cheney/Seyfarth/White. Prerequisite(s): BIOL 102 or 121 or PSYC 001.

The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.

240. Ecology: from individuals to ecosystems. (A) Helliker/Casper. Prerequisite(s): BIOL 102 or 121.

The study of living organisms in their natural environment, spanning the ecological physiology of individuals, the structure of populations, and interactions among species, including the organization of communities and ecosystem function.

L/L 251. (BIBB251) Molecular and Cellular Neurobiology. (A) Schmidt, M./Abel/Peachey. Prerequisite(s): BIOL 101 and 102, or BIOL 121; PHYS 102 or 151 strongly recommended. Lab fee \$150. (3hrs. lec., 3hrs. lab, 1.5 c.u.).

Cellular physiology of neurons and excitable cells, molecular neurobiology and development. Topics include: action potential generation, synaptic transmission, molecular and physiological studies of ion channels, second messengers, simple neural circuits, synaptic plasticity, learning and memory, and neural development.

275. (BIOL575) Introduction to Microbiology. (I)

Pohlschroder/Daldal/Goulian. Prerequisite(s): BIOL 101 or 121.

Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, and pathogenesis as well as examples of applied microbiology.

L/L 306. Histology. (C) Prerequisite(s): BIOL 101 and 102, or BIOL 121 and 202 preferred. Lab fee \$150. Only offered through the College of Liberal and Professional Studies.

This course is designed to introduce the undergraduate student to the structure of tissues at the cellular level and to the way in which those tissues are assembled into organs. This knowledge of structure will be the basis for discussion of tissue and organ function.

325. Marine Biology. (J) Petraitis. Prerequisite(s): BIOL 102 or 121 or permission of instructor.

An introduction to marine biology and oceanography. Topics will include chemical and physical oceanography, a survey of form, function and phylogeny of algae, invertebrates and vertebrates, and an examination of ecological and evolutionary principles as applied to marine organisms and ecosystems.

330. Comparative Vertebrate Anatomy and Evolution. (M) Dunham.

Prerequisite(s): BIOL 102 or 121. Students registering for section 001 must also register for BIOL 336 (lecture + lab). Students may take just the lecture by registering for section 002. Please contact the Biology department for permission.

This course will survey the phylogeny and anatomy of vertebrate organisms from a comparative evolutionary perspective. The lecture will concentrate on the history, diversity, structure and function of vertebrates. Students registering for BIOL 330 section 001 must also register for BIOL 336 section 101, the lab portion of the course. Students wishing to take only the lecture (section 002) must contact the Biology department for permission.

336. Comparative Vertebrate Anatomy Lab. (B) Dunham.

Corequisite(s): BIOL 330 lecture is required. Lab fee \$150. (3 hrs lab., 0.5 c.u.).

Laboratory portion of BIOL 330 Comparative Vertebrate Anatomy and Evolution. Students will learn comparative anatomy through dissection of representative vertebrates. Students registering for BIOL 330 section 001 must also register for this lab.

L/R 354. Developmental Biology. (B) Wagner J. Prerequisite(s): BIOL 202 and 221.

A view of how an animal embryo is specified to develop and differentiate into a wide spectrum of cell types, and how the spatial patterns and axes of embryos are

determined. The course will focus on genetic and molecular approaches, but will also cover the comparative anatomy of developing embryos to the extent necessary to understand the conserved aspects of embryonic patterning. Special emphasis will be placed on organisms with particular advantages for the study of embryonic development: e.g., mouse, frog, zebrafish, and *Drosophila*. The first half of the course will cover cell fate restrictions, cloning animals using nuclear transfer, stem cell biology, formation of the embryonic axes in vertebrates and *Drosophila*, and patterning of the neural tube and mesodermal tissues. The second half of the course will focus on emerging ideas and findings in the field, with emphasis on analysis of original literature.

399. Independent Study. (C)

Laboratory or library research with a faculty member in the Department of Biology. Research may also be conducted elsewhere on campus but sponsored by a faculty member in Biology. A final paper is required. Apply at the Biology Academic Office, 102 Leidy Labs.

400. Field Botany. (I) Rhoads/Block.

Prerequisite(s): BIOL 101 or 124 or permission of instructor.

Students will learn to identify plants in the field using keys and manuals; lab exercises will also include the use of quantitative techniques for measuring plant populations and characterizing plant communities. Students will also learn how to collect and prepare herbarium specimens. Most of the class time will be spent outdoors.

402. Biochemistry. (B) Rea/Staff.

Prerequisite(s): BIOL 202, CHEM 241, the latter of which may be taken concurrently. CHEM 242 is recommended and may also be taken concurrently.

Basic principles of protein characterization, enzyme kinetics and mechanism, membrane structure and function, metabolism, and biochemistry of energy and signal transduction. A problem-solving approach will be employed and emphasis will be placed on the application of quantitative methods to biochemical problems. Each of the five major sections of the course will be concluded with group discussions specifically directed at the solution of numerical problems and the interpretation of experimental results. In order to maximize the opportunities for students to think critically, analytically and creatively, most of the material covered in the course will be tested using take-home examinations. Students will have the

option of attending sessions in which the recent original literature will be discussed.

404. Immunobiology. (C) Staff.

Prerequisite(s): BIOL 202 and BIOL 221. Only offered through the College of Liberal and Professional Studies.

Early development of microbiology, pathology, and immunobiology; molecular and cellular bases of immune phenomena including: immunity to pathogens, immune diseases, autoimmunity, and hypersensitivity.

SM 406. Molecular Mechanisms of Infectious Disease Biology. (A) Roos.

Prerequisite(s): BIOL 101 and 102, or BIOL 121; BIOL 202 and 221 are strongly recommended.

This course is designed for advanced undergraduates and beginning graduate students with a particular interest in infectious disease biology. Note that this course is not a comprehensive survey of the field and is not appropriate for students seeking a lecture course on disease. The primary objective of this course is to teach students considering a career in the biomedical sciences how to read, discuss, and question research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of pathogen interactions with host cells and organisms, and implications for basic research and therapeutic development.

SM 407. Cancer Cell Biology. (B)

Keith. Prerequisite(s): BIOL 121 (or BIOL 101/102); BIOL 202, 221, and permission of instructor.

This course will focus on the molecular mechanisms by which fundamental cellular processes are disrupted in the development of cancer.

410. Advanced Evolution. (I)

Sniegowski/Plotkin. Prerequisite(s): BIOL 230 or permission of instructor.

Mechanisms of evolution at the genetic and populational levels. Empirical and theoretical approaches to natural selection, population structure, gene flow, and quantitative genetics will be emphasized.

414. Advanced Ecology. (K)

Petraitis/Casper/Dunham. Prerequisite(s): BIOL 240 and one semester of calculus or permission of instructor.

Theoretical and conceptual background of core issues and questions in population, community, and ecosystem ecology. Topics include physiological ecology, demography, the growth and regulation of

natural populations, species interactions, and biogeochemical cycling.

415. (ENVS416) Freshwater Ecology. (B) Bott. Prerequisite(s): BIOL 101 or 121 and one semester of college chemistry.

Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted.

L/R 421. (CAMB421) Molecular Genetics. (A) Weinberg. Prerequisite(s): BIOL 221 or equivalent course.

A detailed analysis of gene structure and expression in both prokaryotic and eukaryotic organisms. Rapid advances in DNA technology and genomics will be emphasized. The application of these advances to the molecular genetic analysis of development, cell function and disease will be discussed.

422. Human Genetics and Genomics. (K) Tishkoff. Prerequisite(s): BIOL 221.

In this course we will discuss the identification and characterization of genetic diversity in the human genome, the genetic basis of normal variable traits, and the genetic basis of human disease. The study of human genetics impacts almost every aspect of our society, from medicine to law enforcement to how we view ourselves. An ability to understand the basics of genetic analyses will serve you well since in your lifetime you are almost certain to be faced with a major decision involving your heredity; and society will be forced to make major reforms in medicine and law because of our increasing genetic knowledge. Human genetics is a topic that gets frequent attention in the press. Reports about genes for traits ranging from breast cancer to criminal behavior are constantly in the news. Our society is engaged in a debate about the implications of genetic typing, particularly with the advent of personalized genomics. By the end of this class you should be able to sort fact from fiction and to have a better understanding of the science behind the study of the human genome.

423. Plant Ecology. (M) Casper.

Prerequisite(s): A year of introductory biology or equivalent.

The course consists of both lecture material and hands on research involving questions in plant population or community ecology. Quantitative information from published studies will be discussed, and students, working in teams, will summarize and analyze data from class experiments.

425. Biochemistry and Molecular Genetics Superlab. (C) Wagner J.

Prerequisite(s): BIOL 202 or 221 or an equivalent course are recommended. Lab fee \$150.

Intensive laboratory class where open-ended, interesting biological problems are explored using modern lab techniques. Topics may include protein structure/function studies; genetic screens, genomics and gene expression studies; proteomics and protein purification techniques; and molecular cloning and DNA manipulation. The course emphasizes developing scientific communication and independent research skills. Course topics reflect the interests of individual Biology faculty members. This course is recommended for students considering independent research.

SM 432. (PSYC431) Animal

Cognition. (B) Cheney. Prerequisite(s): BIOL 231/BIBB 231/PSYC 131.

This course considers the sorts of knowledge that animals have of their environment, their location in space, and their conspecifics. How do different animal species remember where food is located or find their way home? What is the adaptive significance of recognizing other individuals' social relationships or dominance ranks? The behavior of animals from a variety of different taxa is considered, ranging from invertebrates to apes. Emphasis is placed on animals living under natural conditions, though some research on learning and memory in captive animals is also discussed.

SM 436. Molecular Physiology. (A)

Ren. Prerequisite(s): A year of introductory biology or equivalent.

This course is designed for advanced undergraduate and graduate students who are interested in molecular physiology of sensory signal transduction. The major topics to cover will be signal transduction mechanisms used by membrane ion channels and receptors that detect the sensory stimuli (light, sound, temperature and tastes, for example) and transmit the signals to the nervous system. Modern molecular/structural techniques (patch clamp, protein crystallization, molecular genetics, expression cloning and protein purification) will be introduced along with each topic. References will be primary research articles. Students will critically evaluate research discoveries by reading and presenting one to two original research papers. Each student is required to write a 10-page research proposal and to critique proposals written by fellow students.

438. Systems Biology: Integrative physiology and biomechanics of the muscular system. (B) Rome.

Prerequisite(s): 1 year physics, 1 year chemistry, and BIOL 215 or 251.

The course will focus on muscle function from the level of molecules to whole animal locomotion. At each level of organization, muscle function will be explored from mechanical and energetic viewpoints. The course will include lectures, demonstrations, and several guest expert lectures. Students will also be introduced to realistic musculo-skeletal modelling and forward dynamic simulations to explore integrated function.

440. (BIOL140) Advanced Analysis of Humans and the Environment. (A)

Natural Science & Mathematics Sector.

Class of 2010 and beyond. Janzen.

Prerequisite(s): Permission of instructor.

Advanced version of BIOL 140: Humans and the Environment. Additional readings and course work as directed.

442. (INSC575, PSYC421) Neurobiology of Learning and Memory. (M) Abel/Muzzio.

Prerequisite(s): BIOL 251/BIBB 251 and PSYC 1, or permission of instructor.

This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.

446. Statistics for Biologists. (A)

Plotkin. Prerequisite(s): MATH 104 or equivalent; or permission of instructor.

Introductory probability theory. Principles of statistical methods. Problems of estimation and hypothesis testing in biology and related areas.

448. Principles of Drug Action.

Manning. Prerequisite(s): Biol 202.

Principles of Drug Action covers the concepts of pharmacological sciences as they relate to biochemistry, cell biology, and drug therapy. The intent of the course is to provide a solid grounding in targets of drug action, dose-response relationships, pharmacodynamics, and pharmacokinetics. The grounding is achieved by a discussion of these concepts explicitly and, through selected examples, implicitly. The first part of the course covers each of the concepts. Emphasis is placed on the integration with principles of cell biology and biochemistry. The second part of the course covers selected therapeutic applications. The

applications chosen fall within four areas: cardiovascular, brain and behavior, antipyretic and antiinflammatory, and antimicrobial. They are used to recapitulate important concepts and provide insight into the interplay between pharmacology and human physiology. The applications and the areas they represent are by no means comprehensive, but students will be able to pursue additional interests through papers.

L/L 450. Plant Systematics. (K)

Rhoads/Block. Prerequisite(s): BIOL 101 or 124 or permission of instructor. Lab fee \$150.

Plant Systematics is a study of diversity in the flowering plants emphasizing evolutionary relationships. Learn how DNA sequence data have revolutionized the interpretation of plant evolution by providing direct evidence of phylogenetic relationships. Each class will combine lecture and lab sessions where plant samples will be examined. The course includes a field trip to Bartram's Garden.

451. (BIBB479, PSYC479) Systems Neuroscience. (B) Schmidt, M./Medina.

Prerequisite(s): BIOL 251/BIBB 251 and permission of instructor.

This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.

465. Ecological Techniques in Conservation. (B) McShea.

Prerequisite(s): Previous field experience and introductory statistics recommended. Course will be taught at the Smithsonian Institution's Conservation & Research Center adjacent to Shenandoah National Park just outside Front Royal, Virginia in January (preparatory lectures at Penn) and March (field work at CRC). Students must pre-register. Prepayment of transportation and living expenses required. Students should be prepared for strenuous, extended field work under varied weather conditions.

The main focus of this course is to provide an overview of techniques used by conservation biologists and wildlife managers. The emphasis is on field work and most of each day will be spent outside attempting to collect real data on real organisms. The general topics covered will be survey techniques for forest birds, small mammals, white-tailed deer, and

vegetation. A brief introduction to Geographic Information Systems and Global Positioning Systems is also included. Each topic will start with an introductory lecture the night before and then field work during the day.

475. Advanced Microbiology. (H)

Pohlschroder/Daldal. Prerequisite(s): BIOL 221, BIOL 275, or permission of instructor.

Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology.

Following an overview of basic microbiological principles, the course will focus on in-depth discussions of selective cutting edge topics, including emerging technologies in microbiology. In addition to lectures given by experts in the field, students will present scientific papers on selected topics.

476. Microbiology Lab. (A)

Pohlschroder/Daldal/Bassiri.

Prerequisite(s): BIOL 275 or 475 recommended previously or concurrently. Lab fee \$150. (3 hours lab, 0.5 cu).

This course will provide practical, indepth laboratory experience with isolation, characterization, genetic and molecular biology of microorganisms.

480. (CAMB480) Advanced Cell Biology. (A) Guo. Prerequisite(s): BIOL 202.

This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for Cell Biology. Biology 480 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies.

SM 482. (CAMB482) Communication at the Cellular Level. (M) Gallagher.

Prerequisite(s): BIOL 202 or permission of instructor.

The evolution of multicellularity required that cells be able to both send and receive signals from their neighbors. The development of organs and differentiation of cells and tissues requires reliable and continuous communication between cells. Consequences of inappropriate or

anomalous signaling include development abnormalities and cancer. This class will examine mechanisms of cell-to-cell signaling between bacterial, plant, and animal cells with an emphasis on the cell biology of development. Particular attention will be given to the mechanisms by which biomolecules are able to traffic from cell to cell and cross membranes and the role of the cytoskeleton in signaling.

483. (CAMB483) Epigenetics. (B)

Wagner D. Prerequisite(s): BIOL 221.

This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from an alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X-chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.

SM 484. (CAMB484) Cell Motility and the Cytoskeleton. (A) Svitkina.

Prerequisite(s): BIOL 202.

Cytoskeleton and cell motility plays a crucial role in many aspects of normal and pathological physiology of individual cells, tissues, and whole organisms, including morphogenesis, immune response, wound healing, oncogenesis, and infection. This course will cover current topics in cell biology with emphasis on cytoskeleton and cell motility and their roles in these processes. Lectures, student presentations, and discussions in the class will be based on primary scientific literature.

SM 486. (CAMB486) Chromosomes and the Cell Cycle. (B) Lampson.

Prerequisite(s): BIOL 202 or permission of instructor.

Life depends on the propagation of genetic material from one generation to the next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that

the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding.

488. (CAMB578, INSC578) Advanced Topics in Behavioral Genetics. (J)

Abel/Bucan. Prerequisite(s): Permission of Instructor.

This course focuses on the use of genetic techniques to study the molecular and cellular bases of behavior. Particular emphasis will be given to the role of genetic approaches in understanding the biological processes underlying memory storage, circadian rhythms, and neurological and psychiatric disorders. Reverse genetic approaches utilizing gene knockout and transgenic technologies, as well as forward genetic approaches using mutagenesis and quantitative genetic techniques will be discussed.

499. Advanced Independent Study. (C) Staff.

Prerequisite(s): BIOL 399 in the same laboratory as the proposed BIOL 499.

A second semester of independent study, in most cases extending the research undertaken for the Biol 399. Apply at the Biology Academic Office, 102 Leidy Labs.

L/R 501. Principles of Biological Science. (L) Waldron/Bergey. Open only to middle school teachers in the MISEP program.

This course will provide a strong background in biology for middle school teachers in the MISEP program. The major topics will be animal and plant biology, cell biology and genetics, and evolution and diversity.

SM 526. (CAMB526, MOLB526) Experimental Principles in Cell and Molecular Biology. (A) Staff.

The course aims to introduce principles of current experimental techniques used in modern biology.

527. (BIOL221, GCB 527) Genetics for Computational Biology. (C)

Bonini/Gallagher/Guild. Prerequisite(s): BIOL 101 or 121. Permission of instructor needed.

This course will survey the discipline of molecular genetics. Two broad areas will be considered: 1) Molecular biology: DNA replication, transcription, translation, and the regulation of gene expression in both prokaryotic and eukaryotic systems and genomics and 2) Genetics: basic Mendelian & molecular genetics.

535. Ecological Modeling. (K)

Dunham.

Survey and development of mathematical theories in ecology, particularly theories of population growth, predation, and competition, as well as other topics of current interest.

536. (CIS 536, GCB 536)**Computational Biology. (B) Kim.**

Prerequisite(s): College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics encouraged; programming experience encouraged.

Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of

algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the "pencil and paper" level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples.

Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis.

SM 537. (CIS 635, GCB 537)**Advanced Computational Biology.**

(A) S. Hannehalli, L. Wong.

Prerequisite(s): BIOL 536 or permission of instructor.

Discussion of special research topics.

540. (CAMB541, MOLB541) Genetic**Analysis. (B) Poethig. Prerequisite(s):**

BIOL 221 or permission of instructor.

The logic and methodology of genetic analysis in plants and animals. This lecture course will focus on the use of mutations to study gene function and higher order biological processes, methods for reporting and manipulating gene expression, and analysis of the genetic basis of natural variation.

544. Mathematics for Biologists. (J)

Dunham.

Review of basic mathematics designed to equip students to handle applications to model problems in biological science. Topics to be considered will depend on the interests and needs of the student.

556. Advanced Statistics. (K) Petraitis.

Prerequisite(s): BIOL 446 or equivalent, and permission of instructor.

Advanced statistical methods, including multivariate techniques (in particular discriminant functions, principal components, multiple correlation, and regression) and the design and analysis of experiments.

SM 615. Seminar on Environmental and Evolutionary Biology. (C) Staff.

Selection and presentation of current papers of interest in the areas of environmental and evolutionary biology.

SM 700. Topics in Molecular, Cellular, and Developmental Biology.

(A) Staff. Course open to Biology graduate students only.

Faculty research presentations in Cell and Molecular Biology.

999. Independent Study and

Research. (C) May be taken for multiple course unit credit.

BIOMEDICAL GRADUATE STUDIES (MD) {BIOM}

501. Mechanisms of Disease and Therapeutic Interventions. (C) Dr. Mitch Lewis and Dr. Carolyn Cambor. Prerequisite(s): BIOM 600 Cell Biology and Biochemistry.

This is the first offering of a graduate course in cellular pathology analogous to an existing medical course with the same name. The course was designed to complement BIOM 600 Cell Biology. This course will cover basic cellular pathology and the five basic pathological processes that underlie all diseases: cellular responses to injury, tissue response to injury, tissue repair processes, hemodynamic disorders and neoplasia. The course consists of virtual lectures, reading assignments, and one discussion class each week. Sufficient background in immunology and genetics will be provided as it relates to pathological processes.

502. Molecular Basis of Disease I. (B) Dr. Mitch Lewis and Dr. Carolyn Cambor. Prerequisite(s): BIOM 501 or by permission of course directors. This course is reserved for BGS students only. BIOM 502 will provide students an in-depth look at 3-4 human diseases. The focus will be on understanding the pathophysiology of the diseases and how research has not only enhanced our knowledge of the disease mechanisms but has also led to improved therapy for patients with these diseases. Students will spend 2-4 weeks on each disease. The 2007 diseases will include: diabetes, atherosclerosis, chronic myelogenous leukemia and colon cancer. Students will follow a paradigm for learning about diseases that can be applied to the study of any disease. They will first learn the normal anatomy, histology, and physiology of the organ(s) involved in the disease. Then, they will learn the pathophysiology and molecular basis of each specific disease. Finally students will discuss the research in the field and how this led to current therapeutic approaches for each disease. Ideas for future research needed in each disease will also be explored.

SM 510. Case Studies in Translational Research (CSTR). (A)

Drs. Mitch Weiss, Emma Meagher and Skip Brass. This course starts on August 27, 2007. It is held on either Monday or Wednesday from 2 - 3:30 pm.

This course is open to MD/PhD, VMD/PhD and Biomedical Graduate Studies PhD students. All second year combined degree students are expected to take this course unless excused by Dr. Brass. Enrollment is limited to 24 students but interested VMD/PhD and BGS students are welcome as space permits

CSTR is a seminar style course where groups of students work with selected Penn faculty to prepare a discussion and literature review on disease topics. Topics will include gene therapy for hemophilia, retinal disease and wound healing, cytokine therapies for immune disorders, genetic sleep disturbances and vaccine development. Most of the course will focus on the analysis of successful translational research projects that are taking place here at Penn.

520. Concepts and Methods in Biostatistics - Basic. (L)

Dr. Phyllis Gimotty.

This course is for BGS students who have not had any formal biostatistics training. The course will start with the basics and cover standard biostatistical methods. Students will analyze data from a class dataset and will present their work at the end of the course.

521. Concepts and Methods in Biostatistics - Intermediate. (L)

Dr. Phyllis Gimotty.

This course is for BGS students who have had a formal course in statistics or biostatistics. We will briefly review basic concepts and spend more time on discussing statistical methods. Students will analyze a small dataset of their own and will present their work at the end of the course.

555. Control of Prokaryotic and Eukaryotic Gene Expression. (B)

Drs. Paul Lieberman and Tom Jongens. Prerequisite(s): Permission of Instructors.

Regulation of gene expression including chromatin structure, transcription, DNA modification, RNA processing, translation,

control of gene expression via microRNAs and post-translational processing.

599. GTMS CLINICAL CLERKSHIP.

600. Cell Biology and Biochemistry. (A) Dr. John Weisel, course director. Theme Directors: Drs. Michael Marks, Mark Lemmon, Kevin Foskett and Xiaolu Yang. Prerequisite(s): Permission of Instructor.

BIOM 600 is an intermediate level graduate course designed to introduce students to the molecular components and physiological mechanisms that underlie the structure and function of cells. The course is designed as an in-depth survey to cover general concepts central to the field of biochemistry and cell biology and to emphasize these concepts within the context of current scientific research questions and technical approaches. Lectures will focus on recent discoveries in contemporary cell biology involving (i) basic cellular biochemistry; (ii) mechanisms of membrane transport and excitability; (iii) intracellular compartmentalization and protein/vesicle targeting, organelle biogenesis; (iv) cytoskeletal architecture, cell motility and adhesion; and (v) molecular mechanisms of signal transduction. Efforts will be made to familiarize students with recent technical advances in molecular, biochemical, microscopic, spectroscopic, and electrophysiologic techniques.

799. Independent Study.

895. (BE 895) Methods in BE Education.

**BUSINESS AND PUBLIC POLICY
(WH) {BPUB}**

201. (BPUB770) Political Economy of Social Policy. (C) Staff. Prerequisite(s): ECON 1 or equivalent.

This course explores the economics and politics of public policy to provide an analytic structure for considering why, how and with what success/failure government intervenes in a variety of policy areas; the environment, income redistribution, social security, regulation/deregulation. Finally, the course examines the increasing importance of allowing competitive markets to provide publicly funded services, taking advantage of private management approaches to fostering innovation in public management: vouchers (for medical care, education and housing), and contracting with private firms for provision of "public" services.

202. (BPUB664, TRAN201) Principles of Transportation. (B) Allen.

Prerequisite(s): None, but microeconomics helpful. Some elementary economics will be utilized and will be developed in class.

This course is an introductory course designed to familiarize the student with the subject matter of transportation.

Expenditure in the transportation industry totals 16% of the US Gross Domestic Product and transportation and other supply chain expenditures in many firms are second only to labor costs. While the industry has been substantially deregulated in the last 25 years, the transition to deregulation is not complete and the legacy of 100 years of regulation still exists. In addition, the industry is unique in the sense that a major portion of the major factor of production (its infrastructure) is publicly financed. These factors make the industry different from others and suggest different management policies. Topics covered include: location analysis, mass transport, costs and pricing analysis, regulation and deregulation, and economic development.

203. Business in the Global Political Environment. (C) Bailey. Prerequisite(s): ECON 001 or equivalent.

This course focuses on business issues that are mediated through the public sector. Specific governmental policies towards markets will be examined, including antitrust policy, economic regulation and deregulation, social regulation, and market infrastructure (intellectual property, fraud and securities regulation.) The course

includes discussion of corporate responsibility and ethical issues in international business. Lectures and case studies focus on currently pending actions worldwide, including Internet related issues. The course applies theoretical principles of strategic thinking, industrial organization, and political science to studying the interactions between multinational firms and political institutions.

204. (BPUB777, BPUB960) Cost Benefit Analysis. (B) Pack, J.

Prerequisite(s): Microeconomics.

Cost benefit analysis -- the principal tool for project and policy evaluation in the public sector. For government whose "products" are rarely sold, the valuation of costs and benefits by means alternative to market prices is necessary. It is the counterpart to cost accounting in private firms and provides guidance for avoiding wasteful projects and undertaking those that are worthwhile. Given government regulations, cost benefit evaluations are critical for many private sector activities. Real estate developers, manufacturing firms, employers of all types are required to provide evaluations of environmental impacts and of urban impacts for their proposed projects. They too must engage in cost benefit analysis, in the valuation social benefits and costs.

Government analysts, consultants, and private firms regularly carry out cost benefit analyses for major investments -- bridges, roads, transit systems, convention centers, sports stadia, dams -- as well as for regulatory activities -- OSHA workplace safety regulations and the Clean Air Act are two important examples.

206. (BPUB772, REAL206, REAL772, REAL972) Urban Public Policy and Private Economic Development. (C) Pack, J. Prerequisite(s): Microeconomics.

This course considers the pervasive interactions between real estate developers and government. Governments influence real estate development in many ways: through zoning laws, taxes, public expenditures, impact fees, infrastructure, building codes, environmental regulations, to name just a few. Private real estate developers are the prime movers in determining urban development patterns. Thus, we will consider how private development is influenced by, and influences, government regulation, the government policies listed above and how governments influence and respond to private activity.

As a "case study" of this interaction between government and real estate

developers and markets, we will consider one of the major policy interventions currently being advocated, adopted, and considered by governments throughout the country - growth controls or smart growth to deal with the alleged problem of urban sprawl. To this end, we will consider what is meant by urban sprawl, why it is considered a problem - by whom - why growth controls are considered a solution to the problem, the possible effects of growth controls on various groups, the views of developers about both urban sprawl and growth controls. Several guest lecturers from the private, not-for-profit, and public sectors are scheduled to make presentations.

212. (LGST212, PPE 212) Economic Analysis of Law. (C) Asher.

Prerequisite(s): ECON 1.

The course is designed to teach students how to think as an economist about legal rules; to evaluate alternative legal rules against standards of economic efficiency and distributive justice; and to understand the nature of the legal process and several specific areas of the law. With the use of alternative texts, both deductive and inductive reasoning will be employed to study the formation and interpretation of legal rules.

230. (BPUB773, FNCE230, FNCE730, REAL230, REAL730) Urban Fiscal Policy. (A) Inman. Prerequisite(s):

Introductory Economics, FNCE 101.

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

236. (FNCE236, REAL236) International Housing Comparisons. (B) Wachter. Prerequisite(s): None.

This course focuses on international comparisons of housing finance systems and housing market outcomes. This includes comparative analyses of the financial and economic factors that underlay housing market differences and

similarities. Changing housing market institutions and policies in developed and emerging economies are examined. The course also addresses the implications of the integration of global financial markets for national housing markets. International speakers present their views on institutional innovations and the policy setting process in their respective markets. Various approaches to understanding these issues will be used, including readings, written assignments, and group projects.

L/R 250. (BPUB950) Managerial Economics. (C) Seim. Prerequisite(s): ECON 001, AP credit or the equivalent; MATH 103, AP credit or the equivalent.

This course introduces students to "managerial economics," the application of microeconomic theory to management problems. Microeconomic theory is a remarkably useful body of ideas for understanding and analyzing human behavior in a variety of contexts. Our goal in this course is to get you to internalize this body of theory well enough so that you can analyze management problems. While this is a "tools course", we will be mindful of applied business problems throughout the course. After presenting the competitive model we will dwell on other market structures more like those encountered by typical firms (monopoly, oligopoly, monopolistic competition). We will spend some time on microeconomic lessons on the development and use of market power, as well as strategic interaction among firms. Finally, we will spend some time on the theory of market failure.

261. (BPUB761, BPUB961, ESE 567, OPIM261, OPIM761) Risk Analysis and Environmental Management. (M) Kunreuther. Prerequisite(s): None, but microeconomics helpful.

This course is designed to introduce students to the complexities of making decisions about threats to human health and the environment when people's perceptions of risks and their decision-making processes differ from expert views. Recognizing the limitations of individuals in processing information, the course explores the role of techniques such as decision analysis, cost-benefit analysis, risk assessment and risk perception in structuring risk-management decisions. We will also examine policy tools such as risk communication, incentive systems, third party inspection, insurance and regulation in different problem contexts. The problem contexts for studying the interactions between analysis, perceptions, and communication will include risk-

induced stigmatization of products (e.g. alar, British beef), places (e.g. Love Canal), and technologies (e.g. nuclear power); the siting of noxious facilities, radon, managing catastrophic risks including those from terrorism. A course project will enable students to apply the concepts discussed in the course to a concrete problem.

288. (BPUB788, BPUB988) International Industrial Development Strategies. (C) Pack, H. Prerequisite(s): Wharton Managerial Economics or an undergraduate intermediate microeconomics course.

The course analyzes the problems of emerging markets. The course considers the industrialization strategies they have chosen and the recent financial and macroeconomic problems they have encountered. Particular emphasis will be given to the recent problems of Latin American and Asian countries that experienced rapid growth for considerable periods only to encounter major reversals in the last half of the 1990s. The implications of this experience for the private and public sectors will be considered in detail. The role of foreign aid, the World Bank and the International Monetary Fund in dealing with crises in developing countries will be explored in detail.

289. Nations, Politics, and Markets. (C) Pack, H. Prerequisite(s): Econ 2 or its equivalent, Finance 102.

This course is designed for students who are interested in pursuing an international career and for those who plan to work for industrial and financial corporations that operate in emerging markets. The course will deal with the economic and political problems of macroeconomic adjustment, corruption, the transition economies, and international financial transactions. All of these topics will be illustrated with in-depth studies of economies in Africa, Asia, Latin America, the Middle East, Eastern Europe, and China.

298. (BPUB798, MGMT798, PPMT998) Privatization: An International Perspective. (C) Choksi. Prerequisite(s): None.

Privatization is sweeping the globe. The redefinition of boundaries between the public and private sectors creates new and exciting opportunities for businesses and policy makers. This course will review the international experience with privatization - the Thatcher privatizations of the 1980s, the current sale of utilities, airlines, and telecommunication companies in emerging and developed economies. We will analyze

the ongoing transformation of post Communist countries. Students will learn how to value state-owned assets using real option value techniques. We will discuss bidding strategies in privatization auctions. The last part of the course offers an introduction to project finance as a new form of cooperation between the public and private sectors.

664. (BPUB202, TRAN201) Economics of Transportation. (B) Allen. Prerequisite(s): None, but microeconomics helpful.

This course is an introductory course designed to familiarize the student with the subject matter of transportation. Expenditure in the transportation industry totals 16% of the US Gross Domestic Product and transportation and other supply chain expenditures in many firms are second only to labor costs. While the industry has been substantially deregulated in the last 25 years, the transition to deregulation is not complete and the legacy of the 100 years of regulation still exists. In addition, the industry is unique in the sense that a major portion of the major factor of production (its infrastructure) is publicly financed. These factors make the industry different from others and suggest different management policies. Topics covered include: location analysis, mass transport, costs and pricing analysis, regulation and deregulation, and economic development.

720. Behavioral Economics and Prediction and Betting Markets. (B) Wolfers. Prerequisite(s): None.

This class considers an intriguing and growing set of non-traditional markets, including trading (or gambling) on the outcome of sporting events, elections, political risks, corporate outcomes, public policy and economic statistics. We will explore these markets, drawing on insights from economics and psychology, and highlighting the parallels between these markets and other existing markets. We will examine the potential uses of these markets in the business and public policy domains. Importantly, the success of these markets depends on whether these markets yield efficient forecasts, which in turn depends on factors such as market design, and the biases exhibited by individual traders. We then turn to discussing recent advances in behavioral economics and attempt to apply psychologically-grounded theories of information processing to a particular set of prediction markets: sports betting. Assessing potentially profitable trading strategies with a critical eye, we will discuss not only investment

opportunities, but what these findings reveal about both human psychology and the operation of markets.

761. (BPUB261, BPUB961, ESE 567, OPIM261, OPIM761) Risk Analysis and Environmental Management. (M) Kunreuther. Prerequisite(s): None, but microeconomics helpful.

This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnerships in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem.

770. (BPUB201) The Political Economy of the Public Sector. (C) Staff. Prerequisite(s): A basic understanding of microeconomics.

This introductory course explores the economics and politics of public policy to examine why, how and with what success/failure government intervenes in a variety of areas: the environment, income redistribution, social security, regulation. The course also examines the growing importance of allowing competitive markets to provide publicly funded services, taking advantage of private management approaches to fostering innovation in public management: vouchers (for medical care, education and housing), and contracting with private firms for provision of "public" services. Although not current events course many of these issues will incorporate discussion of the issues in the context of a new presidential administration, in an unusual economic environment.

772. (BPUB206, REAL206, REAL772, REAL972) Urban Public Policy and Private Economic Development. (B) Pack, J. Prerequisite(s): Microeconomics.

This course considers the pervasive interactions between real estate developers and government. Governments influence real estate development in many ways: through zoning laws, taxes, public expenditures, impact fees, infrastructure, building codes, environmental regulations, to name just a few. Much of the time in the course is spent understanding the effect on residential and commercial real estate

development of these government interventions.

As a "case study" of this interaction between government and real estate developers and markets, we will consider one of the major policy interventions currently being advocated, adopted, and considered by governments throughout the country - growth controls or smart growth to deal with the alleged problem of urban sprawl. To this end, we will consider what is meant by urban sprawl, why it is considered a problem - by whom - why growth controls are considered a solution to the problem, the possible effects of growth controls on various groups, the views of developers about both urban sprawl and growth controls. Several guest lecturers from the private, not-for-profit, and public sectors are scheduled to make presentations.

773. (BPUB230, FNCE230, FNCE730, REAL230, REAL730) Urban Fiscal Policy. (A) Inman. Prerequisite(s): MGEC 621, FNCE 601.

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

777. (BPUB204, BPUB960) Cost Benefit Analysis. (B) Pack, J. Prerequisite(s): Microeconomics.

Cost benefit analysis -- the principal tool for project and policy evaluation in the public sector. For government, whose "products" are rarely sold, the valuation of costs and benefits by means alternative to market prices is necessary. It is the counterpart to cost accounting in private firms and provides guidance for avoiding wasteful projects and undertaking those that are worthwhile. Given government regulations, cost benefit evaluations are critical for many private sector activities. Real estate developers, manufacturing firms, employers of all types are required to provide evaluations of environmental impacts and of urban impacts for their proposed projects. They too must engage

in cost benefit analysis, in the valuation of social benefits and costs.

Government analysts, consultants, and private firms regularly carry out cost benefit analyses for major investments -- bridges, roads, transit systems, convention centers, sports stadia, dams -- as well as regulatory activities -- OSHA workplace safety regulations and the Clean Air Act are two important examples.

784. (MGMT784) Managerial Economics and Game Theory. (C)

Thomas. Prerequisite(s): Intermediate microeconomics. It is expected that the student has been introduced to some basic game theory. There will be a quick review of the basics and some recommended supplemental readings for those who have little or no background in game theory.

The purpose of this minicourse is to develop students' abilities to apply game theory to decision making. Development of the tools of game theory and the application of those tools is emphasized. Game theory has become an important tool for managers and consultants in analyzing and implementing tactical as well as strategic actions. This course will primarily focus on examples useful for developing competitive strategy in the private sector (pricing and product strategy, capacity choices, contracting and negotiating, signaling and bluffing, takeover strategy, etc.). Game theory can also be used to address problems relevant to a firm's organizational strategy (e.g. internal incentives and information flow within a firm) and to a firm's nonmarket environment (e.g., strategic trade policies, litigation and regulation strategy).

788. (BPUB288, BPUB988) International Industrial Development Strategies. (C) Pack, H. Prerequisite(s): Wharton Managerial Economics or an undergraduate intermediate microeconomics course.

The course analyzes the problems of emerging markets. The course considers the industrialization strategies they have chosen and the recent financial and macroeconomic problems they have encountered. Particular emphasis will be given to the recent problems of Latin American and Asian countries that experienced rapid growth for considerable periods only to encounter major reversals in the last half of the 1990s. The implications of this experience for the private and public sectors will be considered in detail. The role of foreign aid, the World Bank and the International Monetary Fund in dealing with crises in developing countries will be explored in detail.

789. Nations, Politics, and Markets.

(C) Pack, H. Prerequisite(s): FNCE 602.

This course is designed for students who are interested in pursuing an international career and for those who plan to work for industrial and financial corporations that operate in emerging markets. The course will deal with the economic and political problems of macroeconomic adjustment, corruption, the transition economies, and international financial transactions. All of these topics will be illustrated with in-depth studies of economies in Africa, Asia, Latin America, the Middle East, Eastern Europe, and China.

798. (BPUB298, MGMT798)

Privatization: An International

Perspective. (C) Choksi. Prerequisite(s):

None.

Privatization is sweeping the globe. The redefinition of boundaries between the public and private sectors creates new and exciting opportunities for businesses and policy makers. This course will review the international experience with privatization - the Thatcher privatizations of the 1980s, the current sale of electric utilities, airlines, and telecommunication companies in emerging and developed economies. We will also analyze the ongoing transformation of post Communist countries. Students will learn how to value state-owned assets using real option value techniques. We will discuss bidding strategies in privatization auctions. The last part of the course offers an introduction to project finance as a new form of cooperation between the public and private sectors.

SM 900. Research Seminar. (F)

Waldfoegel. Prerequisite(s): None.

Permission of instructor required.

After doctoral students complete their coursework they typically learn how to do research in two ways, by watching others present research (see BPUB 962, which gives course credit for participating in the Wharton Applied Economics Seminar), and by preparing and presenting their own research. This course is meant to provide a venue where Wharton doctoral students whose work has an applied economic flavor can present their research as it progresses. We will meet weekly, on Thursdays at noon for student research presentations. The course provides a venue for moving research forward, including both papers assigned for other classes and research leading toward a dissertation. This course aims to bring students a hands-on understanding of the research process itself, and the course is appropriate for all doctoral students with applied

microeconomic interests who have completed at least one year of their doctoral program. This one-credit course meets Thursdays 12-1:20. Our first (organizational) meeting is the first Thursday of the semester. We will determine our meeting frequency based on enrollment and the timing of student presentations. Our expectations of students' research presentations vary with students' progress in their respective programs.

911. Empirical Public Policy. (B)

White. Prerequisite(s): A graduate-level statistics or econometrics course.

This course examines econometric research on a variety of topics related to public policy, with the goal of preparing students to undertake academic-caliber research. The course is not an econometrics or statistics course per se; rather, it focuses on research designs with observational data and how econometric techniques are applied in practice. The course aims to train students to do applied economic research that involves measuring effects of theoretical or practical interest. It proceeds in two major parts. The first part examines endogeneity and inference about causal relationships, instrumental variables methods and critiques, and panel data methods. The second part of the course addresses 'structural' econometric modeling. Topics covered in this part include sorting and selection, entry models, and counterfactual analyses of policy changes. The course proceeds by analyzing, in detail, approximately 24 well-known empirical research papers in applied economics or related fields. These include public economics and tax policy, labor economics, law and economics, health care policy, industrial organization and competition, transportation demand and policy, and others.

The course is participatory in nature.

Students are required to prepare research proposals and to complete an empirical research paper that can develop into (part of) a dissertation.

951. Political Economy. (A) Inman.

Prerequisite(s): PHD course with advanced microeconomics.

This course will introduce the students to the basic models of formal political economy and methods for empirically estimating those models from policy data, both for the developed and developing economies. Topics to be covered will include Downsian electoral competition and median voter politics, theories of legislative politics including minimum winning coalition and universalistic (pork-barrel) politics, models of lobbying and

political corruption, models of executive influence in legislative settings. Particular attention is paid to the role of formal (constitutional) and informal (non-constitutional) institutions as they determine policy outcomes in democratic societies, including majoritarian (first-past-the-post) and proportional representation systems of elections, partisan (party) and non-partisan (special interest) legislatures, executive agenda-setting and veto powers, federal and unitary forms of governance, and finally, the role of judicial review. Policy applications will focus on fiscal policy (taxes, spending, and debt), though students should feel free to apply the analysis to other public policies of interest. Students should have a firm understanding of micro-economic theory and applied econometrics.

960. (BPUB204, BPUB777) Cost Benefit Analysis. (B) Pack, J.

Prerequisite(s): Microeconomics.

The principal tool for project and policy evaluation in the public sector. For government, whose "products" are rarely sold, the valuation of costs and benefits by means alternative to market prices is necessary. It is the counterpart to cost accounting in private firms and provides guidance for avoiding wasteful projects and undertaking those that are worthwhile. In addition, given government regulations, cost benefit evaluations are critical for many private sector activities. Real estate developers, manufacturing firms, employers of all types are required to provide evaluations of environmental impacts and of urban impacts for their proposed projects. They too must engage in cost benefit analysis, in the valuation of social benefits and costs. PhD students will write a paper on a theoretical or applied issue in cost-benefit analysis in lieu of the final examination.

Government analysts, consultants, and private firms regularly carry out cost cost benefit analyses for major investments -- bridges, roads, transit systems, convention centers, sports stadia, dams -- as well as regulatory activities -- OSHA workplace safety regulations and the Clean Air Act are two important examples.

961. (BPUB261, BPUB761, OPIM261, OPIM761) Risk Analysis and Environmental Management. (M)

Kunreuther. Prerequisite(s): None, but microeconomics helpful.

This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of

terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnerships in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem.

SM 962. Applied Economics Seminar. (F) Waldfoegel. Prerequisite(s): None.

The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented; after attending the seminar - and the ensuing discussion of the paper - students will prepare follow-up evaluations of their referee report reports, due one week after the seminar.

987. Regulatory Policy. (C)

Seim/Waldfoegel. Prerequisite(s): Doctoral level economics (e.g. ECON 701, 703 or ECON 680, 682). Corequisite(s): This course acquaints students with topics in applied industrial economics that are most relevant to business school doctoral students. The course aims to provide both methodological training in some of the approaches of contemporary empirical work, as well as topical depth in a variety of areas. Topics covered include, but are not limited to, entry modeling, product selection, concentration and product targeting, distributional effects of market allocation, endogenous sunk costs and market structure, information and competition, the challenges of selling information goods, historical lock-in, and innovation.

988. (BPUB288, BPUB788) International Industrial Development Strategies. (C) Pack, H. Prerequisite(s): MGEC 621.

The course analyzes the problems of emerging markets. The course considers the industrialization strategies they have

chosen and the recent financial and macroeconomic problems they have encountered. Particular emphasis will be given to the recent problems of Latin American and Asian countries that experienced rapid growth for considerable periods only to encounter major reversals in the last half of the 1990s. The implications of this experience for the private and public sectors will be considered in detail. The role of foreign aid, the World Bank and the International Monetary Fund in dealing with crises in developing countries will be explored in detail.

TRANSPORTATION (TRAN)

201. (BPUB202, BPUB664) Principles of Transportation. (C) Allen.

This course studies the use of transportation as an instrument of social policy and the role of government (via regulation) in the industry. Topics covered include: location analysis, mass transport, costs and pricing analysis, regulation and deregulation, and economic development.

CELL AND MOLECULAR BIOLOGY (MD) {CAMB}

L/R 421. (BIOL421, BIOL528)

Molecular Genetics. (A) Weinberg. Prerequisite(s): Intermediate level course in Genetics/Molecular Biology (equivalent to Biol 221).

A detailed analysis of gene structure and expression in both prokaryotic and eukaryotic organisms. Advances in DNA technology and genomics will be emphasized. The application of these advances to the molecular genetic analysis of development, cell function, and disease will be discussed.

480. (BIOL480) Advanced Cell Biology. (A) Wei Guo. Prerequisite(s): College level biochemistry and cell biology.

This course is designed for beginning graduate students and advanced undergraduate students with a particular enthusiasm for Cell Biology. CAMB/BIOL 480 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course that provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies. There is no assigned text; students learn to critically evaluate current literature by reading original papers on selected topics in modern cell biology. Accordingly, class participation/discussion is essential and the grade will be determined significantly by that. In addition, there will be two exams including answering short questions and an essay critiquing an original paper that is selected on a topic in Cell Biology.

SM 482. (BIOL482) Current Topics in Plant Molecular Biology. (M)

Prerequisite(s): BIOL 205 or permission of instructor.

Lectures and student seminars on topics in plant molecular genetics, cell biology, physiology, development and other areas of current research in plants.

483. (BIOL483) Epigenetics. (B)

Wagner. Prerequisite(s): BIOL 221.

This course will investigate epigenetic phenomena: heritable alternative states of gene activity that do not result from altered nucleotide sequence. Recent findings suggest an important role of these phenomena in normal development, as well as in oncogenesis. Many, but not all, epigenetic phenomena are based on the fact that in the organism DNA is organized into a higher order structure, the chromatin. We will therefore first discuss the implications of chromatin for gene activity. We will then investigate epigenetic phenomena such as DNA methylation, genomic imprinting, RNA interference, silencing, and co-suppression. This course is a combination of lecture and discussion using current scientific literature.

SM 485. (BIOL485) The RNA World: A Functional and Computational Analysis. (B)

SM 486. (BIOL486) Chromosomes and the Cell Cycle. (B)

Lampson, M. Prerequisite(s): The course is designed for advanced biology students who have taken BIOL 202 or equivalent. It is also open to graduate students.

Life depends on the propagation of genetic material from one generation to next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanism that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding.

There is no textbook for the course. Readings from the primary literature will be assigned for each meeting and provided as pdf files. Presentations of these papers and class participation, including questions and critical evaluation, are an essential part of the course. Grading will be based on one in-class exam during the semester (30%), a final paper (30%), and class participation (40%, including paper presentations).

510. (IMUN510) Immunology for CAMB Students. (B)

Y. Chen, G. Silvestri, J. Wherry. Prerequisite(s): BIOM 600 or instructor permit. Priority given to students in the MVP & GTV programs of CAMB. CAMB students only.

The purpose of this course is to give a thorough grounding in Immunology to Cell and Molecular Biology graduate students with an emphasis on the role of the immune system in combating infectious and neoplastic disease and its role in immunopathological states such as autoimmunity and allergy. This is a required course for CAMB students in the Microbiology, Virology and Parasitology program and the Vaccine and Gene Therapy program, replacing IMMU 506 (Immune Mechanisms). It may also be used as an elective by other CAMB students such as those from the Cancer Biology program and Cell Biology and Physiology program.

The course is divided into two parts. The first deals with innate and adaptive immune mechanisms, the structure, function, and molecular biology of antigen receptors and major histocompatibility complex molecules; the development, activation, and differentiation of lymphocytes and other hematopoietic cells involved in immunity. The second part will cover the immune response in infection by bacteria, viruses, and parasites, and in pathological states such as cancer, allergy, and autoimmunity. The course is comprised of two 1.5-hour lectures per week. There will be two exams. The first will be taken after part I, and the second after part II of the course. Both will be closed book and in-class exams.

The formal part of the course is comprised of two 1.5 hour lectures per week. In addition each week there will be an informal 1.5-hour meeting, on Fridays, which will be used to introduce the students to specialized techniques used to measure immune responses or to discuss topical issues relating to the application of immunological knowledge in fighting disease with emphasis on the primary literature in the field. There will be two exams. The first will be taken after part I and the second after part II and III of the course.

511. Principles of Development. (B)

M. Mullins, S. DiNardo. Prerequisite(s): Previous courses in molecular and cellular biology are recommended. Undergrad background in cell biology and molecular biology required. NON-BGS students require permission from course directors to register.

This graduate course, which will include lectures and readings from the literature, is designed to provide a foundation in the principles of developmental biology. Topics covered will include: fertilization and cleavage, pattern formation, gastrulation, germ layer formation, tissue specification, morphogenesis, tissue differentiation, organogenesis, stem cell biology, and developmental evolution. The use of modern molecular biology, genetics, and embryological manipulations will be discussed in the context of the analysis of developmental mechanisms.

512. Cancer Biology and Genetics. (B)

John Lynch, Katherine Nathanson. Prerequisite(s): BIOM600 or course director permission. Non-CAMB students must contact the course director prior to registration. Students are permitted to audit this class for non-credit with the permission of the course director.

The course objective is to introduce the students to important and current concepts in Cancer Biology and Cancer Genetics. The lectures are organized into 4 broad thematic groups: A) Cell-Autonomous Mechanisms (e.g., tumor suppressor and oncogene function, DNA repair pathways, senescence, apoptosis); B) Non Cell-Autonomous Mechanisms (e.g., tumor microenvironment, hypoxia, angiogenesis); C) Organ Systems (e.g., pancreatic cancer, hematopoietic malignancies); and D) Therapeutic Approaches (e.g. protein kinase inhibitors, immunotherapy, radiation therapy). The organizers, along with faculty from the School of Medicine, the Wistar Institute and CHOP, with expertise in the corresponding areas provide lectures for the course. The students are expected to present, and participate in discussions of one or more key recent papers at Journal Clubs that are held at the end of each thematic group. There will be mid-term and final exams of short essays relevant to the lectures.

SM 513. (GCB 513) Evolution in Cancer. (A)

Dr. Carlo Maley and Dr. Lauren Merlo. Prerequisite(s): Permission of the instructor. Preference is given to students who have completed CAMB 512 and medical students.

Cancers evolve by mutation and natural selection. This is the basis for both why we

get cancer and why it so hard to cure. We will survey the cancer literature through the lens of evolutionary and ecological theory and review how that theory does and does not apply to cancer biology. This seminar is restricted to graduate students.

This course is a graduate seminar course with both student and faculty presentations and discussions.

SM 518. Current Topics in Ion Channels. (C)

Deutsch, C. Prerequisite(s): Basic knowledge of ion channels, Cell 600 or equivalent.

The course is a seminar format, specifically a journal club format, targeted to graduate students and MD/PhD students interested in ion channels. It meets for one hour, once a week for graduate students and once every other week for the entire group with formal presentation. On alternate weeks a faculty member meets with students to discuss and review the contents of each selected article for the subsequent week's presentation. This is an elective course meant to excite and intellectually enlighten students regarding the latest advances in ion channel research. It includes a wide range of ion channel topics from basic biophysics, structure, and physiology to cell biology and clinical applications. It is attended by faculty, students, and postdocs from the departments of Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Biophysics, Psychiatry.

We require a written critique of each paper presented by other participants during the semester, submitted prior to the formal presentation of the paper. This critique will be graded by a faculty member, as will the student's participation in both the preparatory sessions and formal presentation sessions. In addition, the student will make one formal presentation, also graded by a faculty member. A final grade would be based on all three of these components.

SM 522. (BIOL522) Human Evolutionary Genom. (J)**SM 526. (BIOL526) Experimental Principles in Cell and Molecular Biology. (A)**

Cashmore. Prerequisite(s): Permission of instructor.

The course aims to introduce principles of current experimental techniques used in modern biology.

SM 530. The cell cycle and cancer.

(A) Diehl, Alan; McMahon, S; Kushner, J. Prerequisite(s): Prerequisite of CAMB 512 and/or BIOM 600 or equivalent graduate level advanced cell biology course. Anyone without BIOM600 or equivalent must obtain instructor permission.

This seminar course will focus on molecular and biochemical events that regulate cell cycle transitions and their relevance to human cancer. Topics will include control of the G1/S, G2/M transitions and S-phase initiation/progression. Participants will gain an understanding of the specific roles played by cyclins, cdks, and their inhibitors. The regulation of the cell cycle by tumor suppressor genes such as p16, Rb and p53, and by oncogenes such as cyclin D, cdc25A, MDM2, and c-myc, will also be explored. Where appropriate, the focus will be on understanding regulation of cell cycle control through transcriptional control of gene expression, protein-protein interactions, posttranslational modifications, (eg. phosphorylation), or regulation of protein stability, (eg. via ubiquitin-targeted degradation). Although achieving an improved understanding of mammalian cancer is a goal of the course, much of our knowledge of the cell cycle derives from work done in more genetically tractable organisms such as yeast, drosophila, and xenopus. Therefore a great deal of emphasis will be placed on studies performed in these model systems.

532. (PHRM532) Human Physiology. (A)

Kevin Foskett. Prerequisite(s): Although not a formal prerequisite, a good foundation in cell biology at the level of BIOM/CAMB 600 (or an equivalent upper level undergraduate course) is strongly recommended. A general understanding of the chemistry and biochemistry of macromolecules, and of basic molecular biology will also be assumed. This course is not open to undergraduate students.

This course will present a survey of the physiology of most of the major organ systems. It will integrate knowledge of cellular and molecular mechanisms into an understanding of function at the tissue, organ, and organism levels. It will begin with a brief review of membrane physiology, followed by electrophysiology and signaling in nerve. Then, after a brief outline of neural control systems and their role in homeostasis, it will present motility and muscle, the cardiovascular system, respiration, the renal and gastrointestinal systems, and selected topics from the endocrine system. As well as providing a basis of integrative physiology for students in fields such as bioengineering and

pharmacology, it should be of interest to students of cellular and molecular biology and genetic engineering who will need to appreciate the roles of specific systems and molecules at higher levels of organization.

SM 534. Seminar on current genetic research: Modeling Human Disease in Diverse Genetic Systems. (B) A.

Gitler, T. Lamitina. Prerequisite(s): CAMB 605 or CAMB 542 or permission of the instructor. Priority for enrollment will be given to CAMB graduate students. PENN undergraduates must obtain permission from instructors to enroll.

An advanced seminar course emphasizing genetic research in model organisms and how it informs modern medicine. Each week a student will present background on a specific human disease. This is followed by an intense discussion by the entire class of ~2 recent papers in which model organisms have been used to address the disease mechanism and/or treatment. As a final assignment, students will have the opportunity to write, edit, and publish a "News & Views" style article in the journal "Disease Models and Mechanisms". Offered spring semester.

541. (BIOL540) Genetic Systems. (B)

Poethig. Prerequisite(s): A college-level introductory course in genetics / molecular biology.

The genetics of different organisms (mouse, *Drosophila*, *C.elegans*, *Arabidopsis*, etc.) will be considered with the various techniques employed to study the action of genes in these organisms.

SM 542. (PHRM542) Topics in Molecular Medicine. (A) Section 401:

Stanger, Greenberg. Section 402: M. Atchinson, N. Mason.

TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery. There are two sections for the course -- 401 and 402. Section 401 is for first year MD/PhD students only and section 402 is for VMD/PhD and PhD students.

SM 546. Seminar in Medical Virology: HIV Pathogenesis. (J) D. Weissman, R. Collman, L. Montaner, R. Bushman.

Prerequisite(s): Strong background in cell biology, immunology or virology fulfilled by 1st yr CAMB (previous BGS courses); CD - Module 1 of med school curriculum; very strong UG background. Instructor permission required for non-CAMB graduate students.

This course will introduce students to diverse basic principles that contribute to viral pathogenesis. We will use HIV as a model to illustrate specific elements that relate to disease development, emphasizing a) pathogenesis, b) immunology, c) retroviral replication cycle, and d) vaccine development. Offered spring semester.

One two-hour class weekly for the course of the semester. The first class will include two 45-minute introductory lectures given by the course instructors. Each week, a student will lead the class in the dissection and discussion of published papers on a specific topic. The format that we will follow will be a 20-minute introduction presented by the student followed by the analysis of one to two articles, which will be presented by the student and discussed by the class.

547. Fundamental Virology. (A) P.

Lieberman and R. Harty. Prerequisite(s): Prior coursework in genetics and biochemistry. First priority to MVP students, then CAMB students, then GCB students.

The course provides a detailed introduction to virology aimed at graduate students in the biomedical sciences.

548. Bacteriology. (A) Zhu, J.;

Prerequisite(s): Intro to Microbiology/Bacteriology. Priority given to graduate students.

The format of this course will be two lectures and one student presentation/paper discussion per section. The course will begin by introducing approaches to the analysis of host-pathogen interaction. It will cover the general concepts and recent advance of how bacterial pathogens prepare to infect the host, the successful strategies bacteria used to infect the host, and how they survive after the infection.

549. Parasites and Parasitism. (A)

Farrell, J.; Permission needed from course director for non-CAMB students.

Parasites infect over one quarter of the world's population and parasitic diseases are a leading cause of death globally. "Parasites and Parasitism" is to be offered to first and second year MVP students over a seven-week block in the spring semester.

The course will begin with an introduction to the major protozoan and helminth pathogens of humans, their geographic distribution and the diseases they cause. Subsequent lectures will emphasize a variety of topics from the current research literature using specific parasitic pathogens as examples. These will include how various protozoans enter cells and adapt to different intracellular habitats or how helminths utilize different strategies to survive within the GI tract. Malaria and schistosomiasis will serve as examples for how parasites cause disease while trypanosomes and leishmaniasis will be discussed as models for how parasites survive or evade immune elimination. Finally, several helminth and protozoan systems will be used to demonstrate the intimate association between parasite and vector that leads to efficient transmission. In addition to lectures, weekly discussion sessions will provide an opportunity for students to review papers or research specific topics and present their findings to their colleagues

550. Genetic Principles. (B) Sundaram,

M. Course open to BGS students only, priority given to CAMB and GCB students. Students outside of CAMB or GCB require permission from course director to register.

This is a required course of the Genetics and Gene Regulation Program and is designed to provide students with a comprehensive overview of genetic concepts and methodology. The course is organized into three parts: I Fundamental genetic concepts; II Genetics of model organisms (with a focus on yeast, worms, flies and mice); III Human genetics and disease. Each week there will be two lectures and one associated discussion/problem-solving session. Discussions emphasize practical aspects of generating and interpreting genetic data. Offered spring semester.

578. (BIOL488, INSC578) Advanced Topics in Behavioral Genetics. (J)

Abel/Bucan. Prerequisite(s): Permission of Instructor.

This course focuses on the use of genetic techniques to study the molecular and cellular bases of behavior. Particular emphasis will be given to the role of genetic approaches in understanding the biological processes underlying memory storage, circadian rhythms, and neurological and psychiatric disorders. Reverse genetic approaches utilizing gene knockout and transgenic technologies, as well as forward genetic approaches using mutagenesis and quantitative genetic techniques will be discussed.

597. (INSC597) Developmental Neuroscience.

(A) Michael Granato, Jon Raper. Prerequisite(s): Background in introductory biology (molecular and cellular biology recommended.).

The developmental neuroscience course opens with a brief summary of classical experimental embryology and key developmental concepts. Topics covered in the course include: vertebrate and invertebrate pattern formation; neural cell determination; growth cone guidance; synapse formation and plasticity; programmed cell death; neural growth factors; special sense organ development. Each week includes two lectures and a small group discussion in which one or two important papers are analyzed in detail. Each student must write three short grant-style reports (approximately 2 pages each). No exams are given.

SM 601. Advanced Virology Seminar.

(B) Krummenacher, C. Non-CAMB students must obtain instructor approval.

This seminar course covers current topics and important concepts in virology. Students will read papers from the literature on specific topics in virology, and then present a seminar with the guidance of a faculty member. Grades will be based on the quality of the seminar(s) and participation in class discussions.

SM 605. CAMB First Year Seminar.

(A) Catherine Lee May.

Topics and course instructors vary yearly. The seminar focuses on classic papers and the intellectual development of thought in cell and molecular biology. Multiple sections are taught by faculty from the different programs within the Graduate Group. Required course for CAMB PhD Students. Other BGS students eligible space-permitting.

SM 608. Regulation of Eukaryotic Gene Transcription.

(A) T. Kadesch. Prerequisite(s): BIOM 555 (or equivalent) and permission of instructor. Exceptions for MD/PhD students. CAMB students will receive priority.

An advanced seminar course emphasizing the molecular biology and molecular genetics of transcription in eukaryotes. Based on the current literature, the presentations and discussions will familiarize the student with present day technology and developing principles.

609. (IMUN609) Vaccines and Immunization Therapy.

(A) David Weiner, Ph.D., Paul Offit, M.D., Emilio Emini, Ph.D., Jean Boyer, Ph.D.

Vaccination is perhaps the most successful medical intervention. The goal of this course is to expand on students' general understanding of the immune system and to focus this understanding towards the application of vaccination and immune therapies for the 21 century. Furthermore, the course will give the student a sense of how these principles are applied to vaccine and immune therapeutic development. The course covers basic science as well as the clinical, regulatory, ethical, and political issues and implications of modern vaccines and world health.

Initial lectures review immune mechanisms believed to be responsible for vaccine induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism as well as vaccines for cancer. An appreciation for the application of laboratory science to the clinical development and studies of vaccines is provided in the next section of the course along with lectures, which focus on the regulatory, safety, and ethical implications of vaccines in different world situations. The financial implications of specific vaccines on global health is one focus of the course.

The course is lecture style with many, many guest lecturers who are experts in their particular area. There are required readings to provide the student context and background for the diverse lectures topic. Students are graded on course participation, a final project/exam. The project is to design in a written report a vaccine strategy for a current pathogen of importance that does not as yet have an effective vaccine or immune therapy. Strategies used should build on the material presented in the class lectures. The course is intended for graduate students or medical students in various MS, Ph.D., or MD/Ph.D. programs on the campus, as well as local scientists and professionals in the community. As a prerequisite students should have taken biology, biochemistry, or immunology courses at the advanced college level.

610. Molecular Basis of Gene Therapy.

(A) James Wilson, M.D., Ph.D. Prerequisite(s): Background in biochemistry, cell biology, and molecular biology. If student is not currently enrolled in BGS or a PhD program s/he must request special permission. Please send an email with transcripts, (undergrad and graduate) along with a letter explaining why you are interested in taking the course to Dr. James M. Wilson (wilsonjm@mail.med.upenn.edu).

This is a team-taught, survey course that focuses on the basic science relevant to achieving efficient and effective gene transfer in animal models and humans for the treatment of disease. The course includes a unit devoted to a variety of vectors useful for gene transfer, with the remainder of the course devoted to the study of current gene therapy approaches using specific diseases as models. Prior background in biochemistry, cell biology, and molecular biology is essential. Aspects of organ system anatomy and physiology, virology, and immunology that are relevant to the course material are included in the course. Because of rapid movement in this field, specific topics vary somewhat from year to year. Offered every fall.

615. (BMB 518) Protein Conformation Diseases.

(B) Yair Argon; Harry Ischiropoulos. Prerequisite(s): BIOM 600 or equivalent.

Protein misfolding and aggregation have been associated with a number of human diseases, ranging from Alzheimer's and Parkinson's Disease to Respiratory Distress Syndrome, alpha(1)-antitrypsin deficiency and Mad Cow Disease. This course will cover the common principles underlying such diverse diseases. The course will consist of lectures, directed readings, and student presentations and will cover seminal and current papers on the cell biology of conformational diseases. Examples of topics are cellular inclusion bodies, protein degradation pathways (proteasome vs. ER-associated degradation), effects of protein aggregation on cell function and mutations which lead to autosomal dominant diseases.

Target audience is primarily 1st year CAMB students or other students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdoc are welcome.

SM 618. Introduction to Viral Pathogenesis. (J) Neal Nathanson.

Prerequisite(s): Introductory courses in virology (or microbiology) and in immunology are recommended. First priority to virology students - 2nd priority to CAMB students.

This course reviews the fundamentals of viral pathogenesis, and covers the following general areas: virus cell interactions, viral tropism and cellular receptors, sequential steps in viral infection; immune responses to viral infections, virus-induced immunopathology, virus-induced immunosuppression; viral virulence; viral persistence, oncogenic viruses, host susceptibility to viral diseases, HIV and AIDS; viral vaccines.

SM 620. Thematic Concepts in Developmental Biology. (A) DiNardo, S. Prerequisite(s): BIOM 600 (CELL 600); Gene Regulation; a developmental biology course (CAMB 511 or equivalent) is suggested not required. CAMB students have priority.

The goal of this seminar course is to foster discussion about general strategies used by cells and organisms to solve fundamental problems during development. This is not a survey course in Developmental Biology. Rather, we focus on an overarching theme for the semester (see below), enabling us to define the issues central to that theme, and explore attempts to uncover solutions using different model systems. Primary research papers are assigned for discussion, and all students are expected to contribute thoughtfully and energetically to the discussion each week. Prior years' topics have been: "Cell migration in Development", "Evolutionary Development", "Developmental links to Disease", "Cell Biology in Development", "Stem Cells", "Rulers, Clocks & Oscillators in Development". Offered fall semester.

SM 630. Topics in Human Genetics and Disease. (A) N. Spinner, T. Shaikh, E. Shore, M. Devoto, S. Grant. Prerequisite(s): CAMB 550 or discuss with faculty.

Building on the foundations of the Human Genome and HapMap projects, as well as parallel efforts in model organisms, research in human genetics and genomics is progressing rapidly. Our understanding of basic concepts in genetics, and Mendelian and non-Mendelian human genetic disease is proceeding at an unprecedented pace. This course will provide students with an overview approaches to understanding current problems and techniques in human genetics. The format will be an advanced

seminar course, with directed reading and students presentations.

Every week, students are expected to participate in a 2-hour class session, and two students will present recent publications in human genetics and disease. After each session, instructors will meet with presenting students for 30 min. to provide individual feedback. Course directors will attend each class, and guest preceptor with relevant scientific expertise may also participate. Students will be assigned readings for the first half of the course, and then select their own papers for the second half of the course. Presentations will be prepared in consultation with course directors. Students must meet with instructors at least one to two weeks prior to the presentation date. In class, the student discussion leaders will i) present background information necessary to understand the assigned paper (10-15 min.), ii) lead discussion of the paper, focusing on critical evaluation of the methods and results, and iii) talk about the future directions for this research.

A short written assignment will be due by the end of the course. This written work will be in the form of a review piece or "news and views" format commonly seen in scientific journals. The topic of this review can be based on one of the two topics the student presents in class, or on a separate topic approved by the instructors. The review should be approximately 1,000 words or less (no more than 4 double-spaced pages).

Grading: Students will be evaluated based on class participation (25%), their first presentation (25%) and their second presentation (25%), and the written assignment (25%).

SM 631. (PHRM631) Cell Adhesion and the Cytoskeleton. (A) Dave Boettiger, Jeff Field. Prerequisite(s): BIOM600 or similar course in molecular cell biology. Limited to BGS, SAS, and Engineering graduate group students. Others by permit only.

This is a seminar course in the molecular mechanisms underlying the organization, dynamics and signaling through cell adhesion and the cytoskeleton. The course will cover the basic principles and biology of the molecules involved in cell-cell and cell-matrix adhesion and their interface with the cytoskeleton. This is an advanced seminar course. Students will present papers that will be selected to highlight classical and emerging methods including genetic screens, pharmacological studies, physical approaches, and genomic approaches. The issues addressed include regulation of cell adhesion, control of cell

motility, and roles of adhesion and adhesion signaling in cancer and cardiovascular disease. Students will also present one paper of their own choosing. All presentations will be prepared in consultation with a faculty member with expertise in the specific area. The course requires a minimum of seven registered students to be offered.

632. (PHRM632) Cell Control by Signal Transduction Pathways. (B)

X. Hua, J. Field. Prerequisite(s): BIOM 600, cell biology, or other course focusing on cell and molecular biology. Priority given to CAMB graduate students. Open to non-CAMB graduate students who have taken BIOM 600 or other related course. Not open to non-graduate students.

This course, "Cell control by signal transduction pathways", will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. The primary signal transduction pathways to be examined include those mediate by Notch, TGF- β , TNF- α , Ras, and Rho. We will also discuss intracellular signaling in response to DNA damage and explore in depth some of the key classes of enzymes involved in transmitting signals including kinases and phosphatases.

In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that aren't necessarily definitive, but are interesting and could lead to new potential questions/areas for future investigation. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weakness and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a signal transduction paper for in-class presentation and will also write a short "News and Views" style article based on the paper they have chosen. The goal is that the course will lead students to think more about experimental design and interpretation rather than re-iteration of the biology they have learned as undergraduates.

SM 633. Advanced Seminar in Gene Therapy. (K) Dr. James M. Wilson.

Prerequisite(s): Background in biochemistry, cell biology, molecular biology, and immunology.

This year's Advanced Seminar in Gene Therapy will cover controversial topics in the field. It will meet on Wednesdays from 4:30 - 6:30pm. The goal of this seminar is to provide graduate students with an understanding of the challenges, both experimentally and practical, that face the gene delivery field. At least two sessions will deal with ethical issues. With the exception of the first class meeting, each of the weekly, two-hour sessions will be devoted to a discussion of two recent papers. All students are to have read the papers. Evaluation will be based on attendance (required), active participation, and preparation of reviews of papers. Students will be introduced to the process of manuscript review and will be asked to provide critical reviews for two manuscripts.

Students who are not in CAMB need to request permission from the course director, Dr. James Wilson, via email: wilsonjm@mail.med.upenn.edu.

SM 637. Gene Therapy: Vectors, Immunology, and Disease. (J) Y.

Chen and J. Riley. Prerequisite(s): Background in molecular biology, virology and immunology.

This seminar course is designed to provide students with a cohesive understanding of virology and immunology of gene therapy. Three major themes will be covered: vectors, vector immunology and gene therapy of genetic and acquired diseases. The topics to be covered are viewed as an extension of topics covered in CAMB 610 (Molecular Basis of Gene Therapy), although CAMB 610 is not an absolute prerequisite for this seminar. Each class will consist of a brief introduction by an instructor, reviewing background information related to the theme discussion. The topics are explored through discussions, led by assigned students, of seminal research articles. Students are expected to have thoroughly reviewed the assigned articles and be able to present and discuss various aspects of the papers. Regular attendance and active participation in the discussions, which focus on critical evaluation of experimental design, data presentation and interpretation, is essential. Student evaluation will be based on attendance, in-class presentation (for 50% of the letter grade), and a take-home exam (for another 50% of the grade).

SM 638. Advanced Seminar in Cell Death and Survival. (H) X. Yang, W. El-Deiry, B. Keith. Prerequisite(s): BIOM 600. Instructor permit needed for anyone who has not taken BIOM600.

The objective of this seminar course is to familiarize students with the pathways of cell death and cell survival in mammalian species as well as other organisms. The course has a strong emphasis on cancer and clinical applications of basic signaling. Specific areas that are covered include 1) the history of apoptosis research leading to the Nobel Prize in Medicine in 2002, 2) the structure, biochemical modifications and interactions that regulate death signaling in the cell intrinsic and extrinsic pathways, and 3) in vivo models that demonstrate physiological relevance. Additional emphasis is placed on understanding cell survival pathways including negative regulators of cell death and cross-talk with tumor suppressor and oncogene survival pathways.

An effort is made each semester to include emerging topics including autophagy, ER stress signaling pathways, and the impact of micro-RNAs, as well as the tumor microenvironment on cell survival and cancer. There is a strong interest in therapeutic applications and future directions that are always part of the discussions and later in the course become the main focus. Students are expected to read and to participate in the discussion of all assigned papers, and students are responsible for presenting the papers and leading discussions on a rotating basis. In addition students prepare a News & Views type of report on an additional topic of interest.

SM 650. Genome Maintenance, Cancer and Aging. (B) E. Brown, B. Johnson, and R. Greenberg.

Prerequisite(s): Previous completion of CAMB 530 or equivalent introduction to cell cycle and DNA damage response regulation is recommended. Priority will be given to students in the Cell and Molecular Biology Graduate Group, followed by other Biomedical Graduate Studies graduate groups. If class fills, priority must be given to Cancer Biology Students.

DNA damage checkpoint and repair genes are important suppressors of cancer and aging. These processes function as part of a complex interconnected network of DNA recognition and processing, checkpoint signaling cascades and DNA repair. Because these processes preserve genome integrity, how they cooperate with one another is strongly related to their ability to suppress cancer and aging. To study this emerging research area, students in CAMB

650 critically evaluate key research findings published in the last five years. In addition to providing an advanced understanding of DNA damage checkpoints, DNA repair and the connections of these processes with cancer and aging, this course is designed to allow students to gain experience in critiquing scientific literature both independently and through group discussion.

Short take-home problem sets accompanying assigned literature and participation in class discussions will make up 50% and 30% of each student's final grade, respectively. In the final two weeks of the course, each student will study and propose a future research topic in the field of DNA damage responses, cancer and aging. Students will be expected to pose a question and propose how the question will be experimentally answered. In the final week of the course, each student will turn in a one page summary of this proposal and will present their proposal to fellow students for discussion and critique. The one page proposal, presentation, and critique will comprise 20% of each student's final grade.

SM 691. Advanced Topics in Cell Biology & Physiology. (J) Holzbaur.

Prerequisite(s): BIOM 600 or a similar survey course in cell biology. Permission needed for all non-CAMB students. Permission needed for all non-CAMB students.

This course, together with its companion CAMB 692, offers an advanced, in depth analysis of selected topics in cell biology and physiology. CAMB 691 and 692 are complementary courses that focus on different aspects of cell biology; these courses are offered on an alternating basis in the spring semester. The courses can be taken in either order, but require BIOM 600 or an equivalent background in basic cell biology. CAMB 691 will focus on key issues at the forefront of research in the areas of (1) channels and transporters, (2) protein trafficking through cellular pathways, and (3) cytoskeletal dynamics and molecular motors. The course format pairs faculty presentations with student-led discussion sessions highlighting important papers from the primary literature. Students will be evaluated on their presentations, their participation in class discussions, and weekly problem sets. Offered alternately in the spring semester with CAMB 692.

SM 692. Advanced Topics in Cell Biology and Physiology II. (K) Morris Birnbaum. Prerequisite(s): BIOM 600 or a similar survey course in cell biology, or the permission of the instructor. Permission needed for non-CAMB students. Priority given to CAMB graduate students.

An in-depth consideration of key topics in cell biology and physiology. This course will focus on three major aspects: (1) signal transduction; (2) cell cycle and apoptosis; and (3) cell division. The course format will include both faculty lectures and student-led discussion sessions focusing on important papers from the primary literature. Students will be evaluated on their presentations and participation, as well as problem sets. Offered alternately in the spring semester with CAMB 691.

695. Scientific Writing. (B) H. Nelson, J. Katz. Prerequisite(s): BIOM 600, BIOM 555 and CAMB 605. Course open only to second year CAMB graduate students. If space permits, will open up to non-CAMB BGS graduate group students.

This 7-week course is designed for second year graduate students preparing for qualifying examinations. This course first introduces students to basic scientific writing skills. Participants will review the general principles of clear, persuasive writing, and will apply these principles to writing for a scientific audience. Particular emphasis will be placed on the structure, style, and contents of scientific papers and grant proposals. Each week students will complete a brief written exercise; the majority of class time will be spent in discussing student writing.

Evaluation: The goal of the course is to encourage active interaction among students. Ideal endpoints include improved self-editing, and development of effective strategies for offering and receiving editorial recommendations among peers. Grading will be predominantly based on class attendance and participation, not on the quality of the writing itself.

696. Parasitology Research. (B) D. Artis, D. Greenbaum. Prerequisite(s): CAMB 549-001, Parasites and Parasitism.

This is a paper-based seminar course. Each week a student is assigned a recent seminal paper related to parasitology research. The papers are chosen by guest faculty. Students are required to provide concise but comprehensive background and present the paper in a journal club style format. A principal aim of the course is to develop the ability to think outside of the box and to cultivate the skills necessary for developing the ability to critically appraise one's own research and that of others. The ability to present and review work will be tested.

SM 697. Biology of Stem Cells. (B) G. Cotsarelis, W. Pear, P. Gadue. Prerequisite(s): BGS Core Courses. Non-BGS students will be admitted only with permission of the course directors.

The goal of this course is to introduce graduate students to the field of stem cell biology through lectures and reviews of important contributions from the literature. Topics include stem cell niche biology, epigenetics and reprogramming, tissue specific stem cells such as hematopoietic and epithelial stem cells, tissue regeneration, tissue engineering, and ethical and legal issues of stem cell and regeneration biology. The future potential and challenges in stem cell and regeneration biology will be discussed. Important aspects of stem cell identification and characterization utilizing multiple model systems will also be a focus. Offered Spring Semester. Limited to 16 students.

698. Elective Tutorials in Cell Biology. (A) Burkhardt, Janis.

Prerequisite(s): Cell 600 or an alternative senior undergraduate, graduate, or professional school course in Cell Biology. This tutorial course is designed to provide students with an in-depth knowledge of a specific topic in cell biology through directed readings with a faculty member. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their thesis projects or

to expand on a topic that the student found interesting in one of their basic courses.

SM 700. Topics in Microbiology. (B) S. Cherry and J. Zhu. Prerequisite(s): One of the MVP Pathogen classes (Virology, Parasitology, or Bacteriology).

This course is designed for second year students in the MVP program, and focuses on pathogen-host interactions. Students make a presentation designed for 30 minutes on a topic of their choice. The topic can be something that they are working on, or simply something that they are interested in. They are requested to provide sufficient background, discuss what is known and what is not known about the topic, and then frame two to three Specific Aims. The success of the courses rests entirely upon the quality of the faculty and students involved. In past years, the class has been very interactive, with each of the 11 classes lasting about 1.5 hours. The discussions are deliberately wide-ranging, and review recent literature, techniques, and how to construct a grant. Generally, two faculty will be in attendance.

SM 752. (GCB 752) Genomics. (B) Riethman, Cheung.

Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete set of cellular instructions encoded in the DNA of specific organisms, including dozens of bacterial species, the yeast *Saccharomyces cerevisiae*, the nematode *C. elegans*, and the fruit fly *Drosophila melanogaster*.

The goals of the course are to 1) introduce the basic principles involved in mapping and sequencing genomes, 2) familiarize the students with new instrumentation, informatics tools, and laboratory automation technologies related to genomics; 3) teach the students how to access the information and biological materials that are being developed in genomics, and 4) examine how these new tools and resources are being applied to specific research.

995. Dissertation.

CHEMICAL AND BIOMOLECULAR ENGINEERING (EG) {CBE}

099. Undergraduate Research and Independent Study. (C) A maximum of 2 c.u. of CBE 099 may be applied toward the B.S.E degree requirements.

An opportunity for the student to work closely with a professor in a project to develop skills and technique in research and development. To register for this course, the student writes a one-page proposal that is approved by the professor supervising the research and submitted to the undergraduate curriculum chairman during the first week of the term.

111. Modern Engineering Problem Solving. (A)

The application of computer tools to engineering problem solving.

L/R 150. Fundamentals of Biotechnology. (A)

Principles of cell biology, biochemistry, and molecular biology will be summarized from an engineering perspective, and examples of biologically based molecular technologies and industrial biochemical processes will be presented.

160. Introduction to Chemical Engineering. (B)

This course will provide students with an introduction to analysis of processes used in the chemical and pharmaceutical industries. Emphasis will be placed on the development of flow sheets and material balances for chemical processes. Students will also be introduced to modern process simulation software.

L/R 230. Material and Energy Balances of Chemical Processes. (A)

Prerequisite(s): CBE 160, Sophomore standing.

Analysis of processes used in the chemical and pharmaceutical industries. Mass and energy balances, properties of pure fluids, equations of state. Heat effects accompanying phase changes and chemical reactions.

L/R 231. Thermodynamics of Fluids. (B)

Hollaran. Prerequisite(s): CBE 230. Thermodynamics and its applications to chemical processes; forms of energy and their interconversion; phase and chemical equilibria; heat engines and thermal cycles.

L/R 350. Fluid Mechanics. (A) Hollaran. Prerequisite(s): CBE 231.

Physical properties; fluid statics; Bernoulli equation; fluid kinematics; conservation laws and finite control-volume analysis; conservation laws and differential analysis; inviscid flow; The Navier-Stokes equation and some exact solutions; similitude, dimensional analysis, and modeling; flow in pipes and channels; boundary layer theory; lift and drag.

L/R 351. Heat and Mass Transport. (B)

Prerequisite(s): CBE 350. Steady-state heat conduction. The energy equation. Fourier's law. Unsteady-state conduction. Convective heat transfer. Radiation. Design of heat transfer equipment. Diffusion, fluxes, and component conservation equations. Convective mass transfer. Interphase mass transport coefficients.

L/R 353. Advanced Chemical Engineering Science. (A)

Prerequisite(s): CBE 231.

Applications of physical chemistry to chemical engineering systems. Equilibrium statistical mechanics of ideal gases, dense fluids and interfacial phases. Chemical reaction rates. Collision and transition state theories. Heterogeneous catalysis. Electronic structure and properties of solids.

371. Separation Processes. (B)

Prerequisite(s): CBE 231.

The design of industrial methods for separating mixtures. Distillation; liquid-liquid extraction; membranes; absorption. Computer simulations of the processes.

375. (ESE 360) Engineering and the Environment. (B)

Prerequisite(s): Sophomore Standing.

The principles of green design, life cycle analysis, industrial ecology, pollution prevention and waste minimization, and sustainable development are introduced to engineers of all disciplines as a means to identify and solve a variety of emerging environmental problems. Case studies are used to assess the problems and devise rational solutions to minimize environmental consequences.

L/R 400. Introduction to Process Design. (A)

Prerequisite(s): CBE 371.

Process synthesis, steady-state simulation, second-law analysis heat integration, cost estimation and profitability analysis, plant-wide controllability assessment.

L/L 410. Chemical Engineering Laboratory. (A) Prerequisite(s): CBE 351, 371.

Experimental studies in heat and mass transfer, separations and chemical reactors to verify theoretical concepts and learn laboratory techniques. Methods for analyzing and presenting data. Report preparation and the presentation of an oral technical report.

430. (CBE 510, MSE 430) Introduction to Polymer Science. (B) Prerequisite(s): BE 223, CBE 231, CHEM 221, MEAM203, MSE 260, or equivalent course in thermodynamics or physical chemistry.

Plastics, rubbers, proteins, epoxies, networks, and such are polymeric materials, because all of these materials have many ("poly") small repeat units ("mers") covalently bonded together. Polymers have unique physical properties and applications due to their considerable molecular size, numerous conformations and chemical variety. This course focuses on physical and chemical properties and applications of polymers in solution, the crystalline state, the glassy state, and the rubbery state. Class demonstrations and laboratory exercises. This introductory course is intended for a broad cross-section of science and engineering majors including bioengineers, chemical engineers, chemists, mechanical engineers and materials scientists.

L/R 451. Chemical Reactor Design. (A) Prerequisite(s): CBE 231 and CBE 351.

Design of reactors for the production of chemical products. Continuous and batch reactors. Chemical kinetics. Effects of back-mixing and non-ideal flow in tubular reactors. Heterogeneous reactions. Construction and economic analysis of reactors.

L/R 459. Process System Design Projects. (B) Prerequisite(s): CBE 400.

Design of a chemical process based on recent advances in chemical engineering technology. Weekly design meetings with faculty advisor and industrial consultants. Comprehensive design report and formal oral presentation.

L/R 460. Chemical Process Control. (B) Prerequisite(s): CBE 353.

Dynamics and control of linear single-input, single output (SISO) systems in chemical processes. Laplace transforms. Dynamic responses of linear systems to inputs in time and transform domains. Frequency domain analysis. Feedback control strategies. Stability. Controller

tuning. Advanced control, including cascade and feed forward control. Introduction to multiple-input, multiple-output (MIMO) control.

479. Biotechnology and Biochemical Engineering. (A) Prerequisite(s): CBE 150 or equivalent. Junior/Senior Standing in Engineering.

An overview of several important aspects of modern biotechnology from a chemical engineering perspective: DNA, enzymes and other biomolecules, cell growth and metabolism, cellular and enzymatic reactors, bioseparation techniques, molecular genetics, and biotransport processes.

L/L 480. Laboratory in Biotechnology and Genetic Engineering. (C)

Prerequisite(s): CBE 479 or Permission of the Instructor.

Laboratory methods in biochemical and genetic engineering. Molecular cloning techniques. DNA amplification and sequencing techniques. Culture of microbial cells. Recovery and purification of a microbial product enzyme. Measurement of enzyme activity.

508. Probability and Statistics for Biotechnology. (L)

This course is designed as an overview of probability and statistics including linear regression, correlation, and multiple regression. The program will also include statistical quality control and analysis of variance with attention to method of analysis, usual method of computation, test on homogeneity of variances, simplifying the computations, and multi-factor analysis.

510. (CBE 430, MSE 430) Polymer Engineering. (B)

This course focuses on synthesis, characterization, microstructure, rheology, and structure-property relationships of polymers, polymer directed composites and their applications in biotechnology. Topical coverage includes: polymer synthesis and functionalization; polymerization kinetics; structure of glassy, crystalline, and rubbery polymers; thermodynamics of polymer solutions and blends, and crystallization; liquid crystallinity, microphase separation in block copolymers; polymer directed self-assembly of inorganic materials; biological applications of polymeric materials. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, molecular templating of sol-gel growth using block copolymers as templates; structure-property of conducting and optically active polymers;

polymer degradation in drug delivery; cell adhesion on polymer surface in tissue engineering.

520. Modeling, Simulations, and Optimization of Chemical Processes. (M)

Nonlinear systems: numerical solutions of nonlinear algebraic equations; sparse matrix manipulations. Nonlinear programming and optimization; unconstrained and constrained systems. Lumped parameter systems: numerical integration of stiff systems. Distributed parameter systems: methods of discretization. Examples from analysis and design of chemical and biochemical processes involving thermodynamics and transport phenomena.

521. Fundamentals of Industrial Catalytic Processes. (M)

This course will introduce students to the important concepts involved in industrial catalytic processes. The first part of the course will review some of the fundamental concepts required to describe and characterize catalysts and catalytic reactions. The majority of the course will then focus on applying these concepts to existing heterogeneous catalysts and catalytic reactions, including discussion of the actual process design and engineering. Descriptions of some homogeneously catalyzed processes like polymerization and the synthesis of acetic acid will also be covered.

535. Interfacial Phenomena. (C)

This course provides an overview of fundamental concepts in colloid and interface science. Topics include the thermodynamics of interfaces, interfacial interactions (e.g. van der Waal's interactions, electrostatics, steric interactions), adsorption, the hydrodynamics and stability of interfacial systems, self assembly, etc. Connections to self-assembly and directed assembly of nanomaterials and emerging topics are explored. Pre-requisites: undergraduate thermodynamics, some familiarity with concepts of transport phenomena (including fluid flow and mass transfer) and differential equations

540. (BE 540) Biomolecular and Cellular Engineering. (A)

This course provides an introduction to the quantitative methods used in characterizing and engineering biomolecular properties and cellular behavior, focusing primarily on receptor-mediated phenomena. The thermodynamics and kinetics of protein/ligand binding are covered, with an

emphasis on experimental techniques for measuring molecular parameters such as equilibrium affinities, kinetic rate constants, and diffusion coefficients. Approaches for probing and altering these molecular properties of proteins are also described, including site-directed mutagenesis, directed evolution, rational design, and covalent modification. Equilibrium, kinetic, and transport models are used to elucidate the relationships between the aforementioned molecular parameters and cellular processes such as ligand/receptor binding and trafficking, cell adhesion and motility, signal transduction, and gene regulation.

545. Electrochemical Energy Conversion and Storage. (C)

Prerequisite(s): Introductory chemistry and an undergraduate course in thermodynamics (e.g. CBE 231, MEAM 203).

Fuel cells, electrolysis cells, and batteries are all electrochemical devices for the interconversion between chemical and electrical energy. These devices have inherently high efficiencies and are playing increasingly important roles in both large and small scale electrical power generation, transportation (e.g. hybrid and electric vehicles), and energy storage (e.g. production of H₂ via electrolysis). This course will cover the basic electrochemistry and materials science that is needed in order to understand the operation of these devices, their principles of operation, and how they are used in modern applications.

L/R 552. (BE 552) Cellular Bioengineering. (B)

Application of chemical engineering principles to analysis of eukaryotic cell biological phenomena, emphasizing receptor-mediated cell function. Topics include receptor/ligand binding kinetics and trafficking dynamics, growth factor regulation of cell proliferation, cell adhesion, cell migration and chemotaxis, and consequences of these in physiological situations such as the immune and inflammatory responses, angiogenesis, and wound healing.

554. (BE 554) Engineering Biotechnology. (B)

Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.

L/R 555. (BE 555, MEAM555)

Nanoscale Systems Biology. (A)

Discher. Prerequisite(s): Background in Biology, Chemistry or Engineering with coursework in thermodynamics or permission of the instructor.

From single molecule studies to single cell manipulations, the broad field of cell and molecular biology is becoming increasingly quantitative and increasingly a matter of systems simplification and analysis. The elaboration of various stresses on cellular structures, influences of interaction pathways and convolutions of incessant thermal motions will be discussed via lectures and laboratory demonstration. Topics will range from, but are not limited to, protein folding/forced unfolding to biomolecule associations, cell and membrane mechanics, and cell motility, drawing from very recent examples in the literature. Frequent hands-on exposure to modern methods in the field will be a significant element of the course in the laboratory. Skills in analytical and professional presentations, papers and laboratory work will be developed.

560. Biomolecular Engineering. (M)

This course will cover current state of the art in engineering approaches to design, optimization, and characterization of biomolecules. Particular emphasis will be placed on proteins. Fundamental physical biochemistry of biological macromolecules will be reviewed to provide a basis for understanding approaches to de novo protein design, combinatorial directed evolution, methods for analysis of structure and function, and practical applications for this class of molecules. Much of the course material will be drawn from the current literature.

L/R 562. (BE 562) Drug Discovery and Development. (A)

Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS): Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menton Reaction; Competitive Inhibitor; FLINT, FRET, TRF, FP, SPA, alpha-screen; Enzyme HTS (protease); Cell based screening; Fura-2 ratio, loading signaling; Gfp-calmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics/Automation; Z-factor; SAR, Positioning Scanning; Microarray HTS;

IC50, % Conversion in HTS and IC50, Assay Optimization.

563. Dev & Manuf of Biopharm. (C)

New drug development and regulatory compliance related to small molecules and biologics, overview of biopharma industry, regulation and development process for new chemical entities and biologics, formulation of pharmaceutical dosage forms, current Good Manufacturing Practices, chemistry manufacture and controls, overview of Common Technical Document (CTD), managing post-approval changes - formulation, process, packaging, and analytical.

564. Drug Delivery. (C)

In this course, students will learn about drug distribution throughout the body by diffusion and transport in the blood, pharmacokinetics of drug distribution in body compartments, particulate systems for drug delivery, biodegradable polymers for drug delivery, gene delivery systems, transdermal patches, nanotherapeutics, and other novel drug delivery systems. In addition to the lectures and homework assignments, the students will read current journal articles and prepare a case study in teams on a new drug using literature sources.

L/L 580. Masters Biotech Lab. (C)

Reserved for students in the Master of Biotechnology Program.

In this course, students will learn biochemical and genetic engineering laboratory skills including molecular cloning techniques, DNA amplification, culture of microbial cells and mammalian cells, inducible promoters, recovery and purification of a microbial product, luciferase assay, use of fluorescence immunostaining and image analysis, 96-well plate and 384-well plate assays, and western blotting. The course includes pre-lab lectures that review the scientific basis for the lab techniques. In addition to performing the labs and writing lab reports, the students will read current articles from journals and write a report on a new development or technique from the literature

617. (ESE 617, MEAM613) Control of Nonlinear Systems. (A)

PID control of nonlinear systems; steady-state, periodic and chaotic attractors. Multiple-input, multiple-output systems; decoupling methods and decentralized control structures. Digital control; z-transforms, implicit model control, impact of uncertainties. Constrained optimization; quadratic dynamic matrix control.

Nonlinear predictive control. Transformations for input/output linearized controllers.

L/R 618. (BE 662, MEAM662) Advanced Molecular Thermodynamics. (A)

Review of classical thermodynamics. Phase and chemical equilibrium for multicomponent systems. Prediction of thermodynamic functions from molecular properties. Concepts in applied statistical mechanics. Modern theories of liquid mixtures.

619. Application of Thermodynamics to Chemical Engineering II. (M)

An introduction to statistical mechanics and its applications in chemical engineering. Ensembles. Monatomic and polyatomic ideal gases. Ideal lattices; adsorption and polymer elasticity. Imperfect gases. Dense liquids. Computer simulation techniques. Interacting lattices.

621. Advanced Chemical Kinetics and Reactor Design. (A)

Mechanisms of chemical reactions. Transition state theory. Langmuir-Hinshelwood Kinetics. Absorption and catalysis. Simple and complex reaction schemes. Design of idealized reactors. Fluidized reactors. Solid-gas reactions. Residence time distributions. Reaction and diffusion in solid catalysts. Reactor stability and control.

L/R 640. (MEAM570) Transport Processes I. (A)

The course provides an unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered.

641. Transport Processes II. (K)

A continuation of CHE 640, with additional emphasis on heat and mass transport.

700. Special Topics. (M)

Lectures on current research problems or applications in chemical engineering. Recent topics have included heat transfer, polymer science, statistical mechanics, and heterogeneous catalysis.

UNIVERSITY COURSE REGISTER

701. Scattering Methods/Colloidal and Macromolecular Systems. (M)

The scattering of light, x-rays and neutrons in (1) the characterization of macromolecules in solution and the solid state, (2) the study of solid-state polymer morphology, and (3) the characterization of inorganic, organic and biological systems of colloidal dimensions. Both theory and experimental methods will be covered.

702. Surface Science. (M)

Techniques in surface science. Surface characterization techniques. Applications to MOCVD, surface chemistry, and surface physics.

737. Biotechnology Seminar. (M)

899. Independent Study. (C)

990. Masters Thesis. (C)

995. Dissertation. (C)

999. Thesis/Dissertation Research. (C)

For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.

CHEMISTRY (AS) {CHEM}

L/R 001. Introductory Chemistry I. (A)

Physical World Sector. All classes.
Corequisite(s): CHEM 051. Application for permission must be submitted to the department.

Similar in coverage to Chemistry 101. This course explores the basic concepts and principles of chemistry, with a greater emphasis on problem solving. It is designed for students with a lesser background in chemistry and/or mathematics. It is suitable for chemistry majors, non-majors, or preprofessional students.

L/R 012. Environmental Chemistry.

(C) Physical World Sector. All classes. The course requires math literacy at the high school algebra level (2 years) and a willingness to learn Excel. Students must also have taken one year of high school chemistry.

The course aims to teach chemical content and principles in the context of significant environmental issues. Topics to be covered include: composition of the atmosphere; protecting the ozone layer; chemistry of global warming; traditional hydrocarbon fuels and energy utilization; water supply, its contaminants, and waste water treatment; acid rain; nuclear energy; and new energy sources. Students will develop critical thinking ability, competence to better assess risks and benefits, and skills that will lead them to be able to make informed decisions about technology-based matters.

L/R 015. Honors Chemistry I. (A)

Physical World Sector. All classes.

An advanced course for students who have had AP Chemistry in high school. Included in the course coverage are: quantum mechanics of atoms, molecules and crystalline solids; statistical mechanics of gases, liquids, and solids; and coordination chemistry.

SM 022. Structural Biology. (C)

Natural Science & Mathematics Sector.
Class of 2010 and beyond. Freshman Seminar.

This course will explain in non-mathematical terms how essentially all biological properties are determined by the microscopic chemical properties of proteins. It will also explain how research results, especially those of structural biology, are presented to its various audiences.

051. Introductory Chemistry

Laboratory I. (A) Corequisite(s): CHEM 001. Lab fee \$150. When a student enrolls simultaneously in a laboratory course and a corequisite course, but subsequently drops or withdraws from the corequisite course, the student must drop or withdraw from the laboratory course.

An introductory laboratory course covering aspects of qualitative and quantitative analysis, determination of chemical and physical properties, and chemical synthesis.

L/L 053. General Chemistry

Laboratory I. (C) Corequisite(s): CHEM 101. Lab fee \$150. When a student enrolls simultaneously in a laboratory course and a corequisite course, but subsequently drops or withdraws from the corequisite course, the student must drop or withdraw from the laboratory course.

A general laboratory course covering aspects of qualitative and quantitative analysis, determination of chemical and physical properties, and chemical synthesis.

L/L 054. General Chemistry

Laboratory II. (C) Corequisite(s): CHEM 102. Lab fee \$150. When a student enrolls simultaneously in a laboratory course and a corequisite course, but subsequently drops or withdraws from the corequisite course, the student must drop or withdraw from the laboratory course.

Continuation of CHEM 053.

L/L 055. General Chemistry

Laboratory I for Freshmen. (A)
Corequisite(s): CHEM 101, Section 004. Lab fee \$150. When a student enrolls simultaneously in a laboratory course and a corequisite course, but subsequently drops or withdraws from the corequisite course, the student must drop or withdraw from the laboratory course.

A general laboratory course covering aspects of qualitative and quantitative analysis, determination of chemical and physical properties, and chemical synthesis. This 0.5 c.u. lab course is an alternative to CHEM 053, but is only open to freshman students who are also enrolled in the special freshman section of CHEM 101 - Section 004.

L/L 056. General Chemistry Laboratory II for Freshmen. (B)

Corequisite(s): CHEM 102, Section 001. Lab fee \$150. When a student enrolls simultaneously in a laboratory course and a corequisite course, but subsequently drops or withdraws from the corequisite course, the student must drop or withdraw from the laboratory course.

Continuation of CHEM 055. This 0.5 c.u. lab course is an alternative to CHEM 054, but is only open to freshman students who are also enrolled in the special freshman section of CHEM 102 - Section 001.

L/R 101. General Chemistry I. (C)

Physical World Sector. All classes.
Corequisite(s): CHEM 053.

Basic concepts and principles of chemistry and their applications in chemistry and closely-related fields. The first term emphasizes the understanding of chemical reactions through atomic and molecular structure. This is a university level course, treating the material in sufficient depth so that students can solve chemical problems and can understand the principles involved in their solution. It includes an introduction to condensed matter. This course is suitable for majors or non-majors and is recommended to satisfy either major or preprofessional requirements for general chemistry. This course is presented for students with high school chemistry and calculus. Students with a lesser background than this should take Chemistry 1.

L/R 102. General Chemistry II. (C)

Physical World Sector. All classes.
Prerequisite(s): CHEM 101. Corequisite(s): CHEM 054.

Continuation of Chemistry 101. The second term stresses the thermodynamic approach to chemical reactions, electrochemical processes, and reaction rates and mechanisms. It includes special topics in chemistry.

L/R 221. Physical Chemistry I. (A)

Prerequisite(s): CHEM 102, MATH 114, PHYS 150.

Introductory quantum mechanics, atomic and molecular structure, chemical bonding, and microscopic understanding of physical and chemical properties of molecules.

L/R 222. Physical Chemistry II. (B)

Prerequisite(s): CHEM 221, PHYS 151.

Continuation of CHEM 221. Principles and applications of thermodynamics, and a molecular-based understanding of macroscopic properties.

L/L 223. Experimental Physical Chemistry I. (B) Prerequisite(s): CHEM 221. Lab fee \$300.

Important methods, skills, and apparatus used for the acquisition and interpretation of quantitative information about chemical systems will be discussed in principle and used in the laboratory.

L/R 241. Principles of Organic Chemistry. (C) Prerequisite(s): CHEM 102.

Fundamental course in organic chemistry based upon the modern concepts of structure and mechanism of reactions.

L/R 242. Principles of Organic Chemistry. (C) Prerequisite(s): CHEM 241.

Continuation of CHEM 241.

L/L 245. Experimental Organic Chemistry I. (C) Prerequisite(s): CHEM 241. Corequisite(s): CHEM 242. Lab fee \$300.

A basic laboratory course in which both the theoretical and practical aspects of a variety of organic reactions and multistep syntheses are emphasized. Modern chromatographic, instrumental, and spectroscopic techniques are applied to experimental organic chemistry. Course should be taken concurrently with CHEM 242 or in the semester immediately following. For safety reasons students will not be permitted to wear contact lenses in the laboratory.

PLEASE NOTE THE FOLLOWING: For the Summer and LPS offering of CHEM 245, it is a 2-semester course. Part 1 is taken in the first term for 0.0 CU and then Part 2 is taken in the second term immediately following the first for 1.0 CU.

L/L 246. Experimental Organic Chemistry II. (A) Prerequisite(s): CHEM 242 and 245. Corequisite(s): CHEM 261 should be taken concurrently or previously completed successfully. Lab fee \$300.

Advanced laboratory work on the synthesis, structure, and properties of organic compounds. Infrared, ultraviolet, and nuclear magnetic resonance spectroscopy. Lectures cover the theoretical basis and applications of modern spectroscopic methods. For safety reasons students will not be permitted to wear contact lenses in the laboratory.

251. Principles of Biological Chemistry. (C) Prerequisite(s): CHEM 102. Corequisite(s): CHEM 241.

Fundamentals of biological chemistry, including the structure of biological

macromolecules and their mechanism of action, intermediary metabolism, and the chemical basis of information transfer.

L/R 261. Inorganic Chemistry I. (A) Corequisite(s): CHEM 241 may be taken concurrently.

An introductory survey of the bonding, structure, and reactions of important metal and nonmetal compounds.

299. Directed Study and Seminar. (C) Prerequisite(s): Permission of undergraduate chairman.

Directed study projects and seminars as individuals or small groups under the supervision of a faculty member.

399. Independent Research. (C) Prerequisite(s): Permission of undergraduate chairman; a B average in chemistry, mathematics, and physics.

Independent project under the direction of a faculty member.

441. Advanced Organic Chemistry: Reactions, Mechanisms, and Stereoelectronic Effects. (A) Prerequisite(s): CHEM 242.

Study of important types of reactions and functional groups, with emphasis on synthetic usefulness, mechanisms, and stereoelectronic principles.

443. Modern Organic Synthesis. (A) Prerequisite(s): CHEM 241 and 242.

Introduction to advanced organic synthesis. Study of important synthetic reactions including: oxidations, reductions, and methods for the formation of carbon-carbon bonds, with an emphasis in chemoselectivity, stereoselectivity and asymmetric synthesis. Survey of modern methods for the synthesis of small, medium and large ring systems. Analysis of modern synthetic strategies, with illustrative examples from total synthesis of natural and unnatural products.

451. Biological Chemistry I. (A) Prerequisite(s): CHEM 242, 221 (may be concurrent), and 251 or permission of instructor.

Structure, dynamics, and function of biological macromolecules. Properties of macromolecular assemblies, membranes and their compartments. (Formerly, CHEM 450-I).

452. Biological Chemistry II. (B) Prerequisite(s): CHEM 242, 221, and 251 or permission of instructor.

Physical and chemical description of macromolecular information transfer. Gene

organization, replication, recombination, regulation and expression. (Formerly, CHEM 450-II).

462. Inorganic Chemistry II. (C) Prerequisite(s): CHEM 261 or its equivalent and permission of instructor.

A detailed treatment of the theory and application of modern physical methods for the elucidation of structure and mechanism in inorganic and organometallic chemistry. An introduction to symmetry and group theory is followed by the application of these concepts to vibrational and electronic spectroscopy of inorganic complexes. Magnetic resonance is discussed in detail, including topics such as EPR, fourier transform methods, dynamic systems, and 2-dimensional NMR.

500. METHOD OF CHEM TEACHING.

521. Statistical Mechanics I. (A) Prerequisite(s): CHEM 222.

Principles of statistical mechanics with applications to systems of chemical interest.

522. (PHYS661) Statistical Mechanics II. (B) Prerequisite(s): CHEM 521.

A continuation of CHEM 521. The course will emphasize the statistical mechanical description of systems in condensed phases.

523. Quantum Chemistry I. (A) Prerequisite(s): CHEM 222.

The principles of quantum theory and applications to atomic systems.

524. Quantum Chemistry II. (B) Prerequisite(s): CHEM 523.

Approximate methods in quantum theory and applications to molecular systems.

525. Molecular Spectroscopy. (C)

A modern introduction to the theory of the interaction of radiation and matter and the practice of molecular spectroscopy. Conventional microwave, magnetic resonance, optical, photoelectron, double-resonance, and laser spectroscopic techniques will be included.

526. Chemical Dynamics. (B)

Theoretical and experimental aspects of important rate processes in chemistry.

555. (BMB 554) Macromolecular Crystallography: Methods and Applications. (A)

The first half of the course covers the principles and techniques of macromolecular structure determination using X-

ray crystallography. The second half of the course covers extracting biological information from X-ray crystal structures with special emphasis on using structures reported in the recent literature and presented by the students.

557. Mechanisms of Biological Catalysis. (C) Prerequisite(s): One year of organic chemistry and a biochemistry course, or permission of instructor.

Reaction mechanisms in biological (enzymes, abzymes, ribozymes) and biomimetic systems with emphasis on principles of catalysis, role of coenzymes, kinetics, and allosteric control.

559. Biomolecular Imaging. (B)

This course considers the noninvasive, quantitative, and repetitive imaging of targeted macromolecules and biological processes in living cells and organisms. Imaging advances have arisen from new technologies, probe chemistry, molecular biology, and genomic information. This course covers the physical principles underlying many of the latest techniques, and defines experimental parameters such as spatial and temporal resolution, gain, noise, and contrast. Applications to cellular and in vivo imaging are highlighted for confocal, two-photon, and force microscopies; single-molecule, CARS, and fluorescence correlation spectroscopy; FRET and fluorescence bleaching; mass spectroscopy; MRI, PET and SPECT. The role of molecular imaging agents comprised of proteins, organic or inorganic materials is widely discussed.

564. Organometallics. (C)

This course is focused on molecular species that contain metal-carbon bonds, and the role of these compounds in catalytic processes and organic synthesis. Aspects of the synthesis, structure and reactivity of important classes of organometallic compounds such as metallo alkyl, aryl, alkene, alkylidene and alkylidyne complexes are surveyed for the d and f

block metals. Emphasis is placed on general patterns of reactivity and recurring themes for reaction mechanisms.

565. Main Group Chemistry. (C)

This course encompasses a comprehensive survey of the chemistry and properties of the p-block elements of the periodic table. Topics include syntheses, structures and reactivities of important compounds. In addition, alternative bonding theories which have been used to explain the unique properties of these compounds are critically examined.

567. (BMB 567) Bio-inorganic Chemistry. (C)

The course covers selected topics in bioinorganic chemistry; special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: (i) oxygen uptake and utilization; (ii) diatomic oxygen transport; (iii) diatomic and monoatomic oxygen incorporation into substrates; (iv) metalloenzyme-catalyzed C-C bond formation; (v) the metallobiochemistry of DNA; (vi) metal-sulfide proteins; (vii) manganese-containing metalloproteins; (viii) Photosystem II: light-driven electron transfer and the biological water-splitting reaction; (ix) biological electron transfer; (x) electron transfer theory; (xi) mechanisms of energy storage and release; and (xii) long-distance electron transfer reactions.

600. Tutorial Studies. (C) Both terms. May be repeated for credit with permission of instructor.

Readings and discussion on various topics with various faculty members.

700. (PHRM630) Selected Topics in Chemistry. (C)

May be repeated for credit and may be taken for multiple course unit credit if more than one topic is offered in a term.

900. Chem Teaching Methods.

999. Independent Study and Research. (C) May be taken for multiple course unit credit.

(1) Advanced study and research in various branches of chemistry. (2) Seminar in current chemical research. (3) Individual tutorial in advanced selected topics.

Undergraduate BIOCHEMISTRY Courses (BCHE)

299. Undergraduate Research Projects. (C) 10-20 h., 1-2 c.u., admission by permission of the biochemistry undergraduate chairman.

Independent Research.

300. Senior Research Projects. (C) 10-20 h., 1-2 c.u., admission by permission of the biochemistry undergraduate chairman.

SM 404. Biochemistry Laboratory. (E) Year long course --initial registration must occur in Fall term, 0 c.u. for first term and 2 c.u. for second term, 10h. CHEM 451 or permission of instructor required.

Independent research projects in the laboratories of individual faculty members. A list of possible research supervisors is available in the Biochemistry office (357 Chemistry). In addition to their laboratory projects, students will attend a weekly seminar in which their own and related work will be discussed.

580. (PHYS580) Biological Physics. (C) Prerequisite(s): Physics 150-151 or 170-171, Math 104-114 or Math 104-115. Recommended: concurrent Physics 230 or prior Physics 250, basic background in chemistry and biology.

CINEMA STUDIES (AS) {CINE}

SM 061. (FNAR061, VLST061) Video I. (C) Buck/Van Cleve/Reynolds/Mau.

This course provides students with the introductory skills and concepts needed to create short works using digital video technologies. Students will learn the basics of cinematography and editing through a series of assignments designed to facilitate the use of the medium for artistic inquiry, cultural expression and narrative storytelling.

SM 062. (FNAR062) Video II. (C) Buck/Reynolds. Prerequisite(s): CINE 061.

Video II offers opportunities to further explore the role of sound, editing and screen aesthetics. Through a series of three video projects and a variety of technical exercises, students will refine their ability to articulate more complex and creative projects in digital cinema. In addition, advanced level production and post-production equipment is introduced in this course.

SM 063. (FNAR063, FNAR663) Documentary Video. (C) Heriza. Prerequisite(s): CINE 061.

A digital video course stressing concept development and the exploration of contemporary aesthetics of the digital realm, specifically in relation to the documentary form. Building on camera, sound and editing skills acquired in Film/Video I and II, students will produce a portfolio of short videos and one longer project over the course of the semester. Set assignments continue to investigate the formal qualities of image-making, the grammar of the moving image and advanced sound production issues within the documentary context.

SM 065. (FNAR065, FNAR665) Cinema Production. (C) Mosley.

This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of films.

L/R 103. (ARTH107, ENGL095) Introduction to Film Theory. (C) Beckman.

This course offers students an introduction to the major texts in film theory across the 20th and 21st centuries. The course gives students an opportunity to read these central texts closely, to understand the range of historical contexts in which film theories are developed, to explore the relationship between film theory and the major film movements, to grapple with the points of contention that have emerged among theorists, and finally to consider: what is the status of film theory today? This course is required for all Cinema Studies majors, but is open to all students, and no prior knowledge of film theory is assumed. Requirements: Close reading of all assigned texts; attendance and participation in section discussions; 1 midterm exam; 1 take-home final exam.

105. (RELS105) Religion and Film. (M) Staff.

Introduction to different ways in which religion is represented in film. Emphasis upon religious themes, but some attention to cinematic devices and strategies. Although most films studied will deal with only one of the major historical religious traditions (Hinduism, Buddhism, Judaism, Christianity and Islam), the selection will always include at least two of those traditions.

SM 116. (ENGL116) Screenwriting Workshop. (C) Staff.

This course will look at the screenplay as both a literary text and a blue print for production. Several classic screenplay texts will be critically analyzed (REBEL WITHOUT A CAUSE, DOCTOR STRANGELOVE, PSYCHO, etc.) Students will then embark on writing their own scripts. We will intensively focus on: character enhancement, creating "believable" cinematic dialogue, plot development and story structure, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext and visual story-telling. Class attendance is mandatory. Students will submit their works-in-progress to the workshop for discussion.

160. (ENGL061) British Cinema. (M) Beckman. Penn-in-London.

Fran_ois Truffaut once famously suggested that there was a certain incompatibility between the terms cinema and Britain ; Satyajit Ray declared, I do not think the British are temperamentally equipped to make the best use of the movie camera ; and throughout the history of film criticism,

British cinema has been condemned for its theatrical style, lack of emotion, imitation of Hollywood and/or European cinema, and failure to achieve a national character. Yet in spite of this history of dismissal, British cinema has a long and complex history that we will begin to explore through film screenings, critical reading, and visits to archives and museums. Topics covered will include: Early Cinema of Attractions ; British cinema's relation to other countries; war propaganda and the British documentary film; cinematic adaptations of British literature; British film theory; British experimental film/moving images in the art gallery; British cinema and identity. Requirements: attendance at screenings/discussions/trips; final paper; film journal.

165. (RUSS165, SLAV165) Russian and East European Film. (M) Todorov.

The purpose of this course is to present the Russian and East European contribution to world cinema in terms of film theory, experimentation with the cinematic language, and social and political reflex. We discuss major themes and issues such as: the invention of montage, the means of visual propaganda and the cinematic component to the communist cultural revolutions, party ideology and practices of social engineering, cinematic response to the emergence of the totalitarian state in Russia and its subsequent installation in Eastern Europe after World War II; repression, resistance and conformity under such a system; legal and illegal desires; the nature of the authoritarian personality, the mind and the body of homo sovieticus; sexual and political transgression; treason and disgrace; public degradation and individual redemption; the profane and the sublime ends of human suffering and humiliation; the unmasking of the official "truth" as a general lie.

SM 201. (ENGL291, GRMN259) Topics in Film History. (M) Katz, Corrigan, Decherney, Beckman.

This topic course explores aspects of Film History intensively. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 202. (ARTH290, COML292, ENGL292) Topics in Film Practice. (M) Katz, Corrigan, Decherney, Beckman.

This topic course explores aspects of Film Practice intensively. Specific course topics vary from year to year. See the Cinema Studies website at

<<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

203. (COMM140) Introduction to Film, Form, and Context. (C) Messaris.

This course will trace the development of the classical Hollywood cinema, as well as significant alternatives to this dominant mode of representation, by relating analyses of the formal elements of film texts to discussions of film industries and audiences as well as the larger social, historical context. A variety of analytical methods and perspectives will be applied to films drawn from different times and countries in order to consider the cinema as a cultural construction.

204. (COMM262) Visual Communication. (C) Messaris.

Examination of the structure and effects of visual media (film, television, advertising, and other kinds of pictures).

208. (ARTH292, GSOC228, GSOC234) Topics in Gender and Cinema. (C) Beckman.

This topic course explores aspects of Gender in Film intensively. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

L/R 220. (EALC125) Chinese Cinema. (B) Staff.

This topic course explores aspects of Chinese Cinema. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 225. (THAR273, THAR275) Topics in Theater and Cinema. (M) Staff.

This topic course explores aspects of Film and Theater intensively. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 232. (LALS240, PRTG240, SPAN223) Luso-Brazilian Film. (M) Arts & Letters Sector. All Classes. Gouveia.

This course will survey films from different Portuguese-speaking countries. Still unknown to many viewers, Luso & Brazilian films include a variety of genres and styles. We will explore films from the cultural perspective of Portugal, Cape Verde, Mozambique, and Brazil. The first segment of this course will expose students to theoretical approaches to the study of

film. The second segment of the course will focus on Portugal and Portuguese-speaking countries in Africa. We will also discuss emblematic Portuguese filmmakers such as Manuel de Oliveira and African writers whose work has been translated to the screen such as Mia Couto and Germano de Almeida. The third segment will focus on Brazilian films produced since the mid 1990s.

In the early 1990s, there was a virtual collapse of Embrafilme (the state agency that funds most Brazilian films). Brazilian cinematic production only resumed around 1995. Throughout the last 8 years numerous quality films have been released, many of them directed by a new generation of filmmakers. Films like *Cidade de Deus*, *Carandiru*, *Onibus 174* present a critical view of political, social and economic issues in post-dictatorial Brazil. Most of the films also provide commentaries on (and are themselves part of) the effects of economic and cultural globalization. Inequality, corruption, poverty, violence, crime, drugs, and prejudice are themes that permeate all of these films. The course will be conducted in English.

241. (COMM241) Feature-Length Motion Picture Production Laboratory I. (C) Messaris.

Prerequisite(s): COMM140/CINE203 and/or COMM262/CINE204.

This course gives students the opportunity to participate in the _ production of a feature-length fiction film. Students engage in all _ aspects of production, including: screenplay writing, production _ design, cinematography, production sound, acting, and directing. The _ course is intended as a follow-up to COMM 140, Film Forms and _ Contexts, and COMM 262, Visual Communication. Students who have not _ taken either of those courses should consult with the instructor _ before enrolling. COMM 241 is followed by COMM 242. Students may _ enroll in either or both.

L/R 245. (FREN230) French Cinema. (M) Met.

This topic course explores aspects of French Cinema. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 272. (ASAM150, ASAM202, ENGL272) Asian-American Literature and Film. (M) Staff.

This topic course explores aspects of Asian-American Literature and Cinema intensively. Specific course topics vary

from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 295. (ENGL266) Topics in Cultural Studies. (M) Decherney.

This topic course explores aspects of Film Cultural Studies intensively. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 300. (AFRC303, ARTH301) Cinema and Other Arts. (C) Beckman.

This topic course explores aspects of Film in others arts intensively. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 340. (COML300, COML382, ITAL300, ITAL380) Topics in Italian Cinema and Culture. (M) Staff.

Modern Italy has added to the traditional belle arti of painting, sculpture and architecture new fields like fashion, industrial design and film. "Made in Italy" has come to stand all over the world for quality workmanship and fine design. Yet this same country has been involved in the last hundred years in two terrible world wars, a brutal fascist dictatorship, violence both political and criminal and a flood of emigration. In this course we will review that history, its triumphs and disasters, by combining film and written texts. Both media are equally important and ought to enrich each other. The weekly film is part of that work and you will be expected to do the assigned reading as well. This course will be open to seniors and juniors, and sophomores (with special permission).

L/R 352. (COML241, GRMN256, RELS236) Devil's Pact Literature and Film. (C) Arts & Letters Sector. All Classes. Richter.

For centuries the pact with the devil has signified humankind's desire to surpass the limits of human knowledge and power. From the reformation chap book to the rock lyrics of Randy Newman's Faust, from Marlowe and Goethe to key Hollywood films, the legend of the devil's pact continues to be useful for exploring our fascination with forbidden powers.

SM 370. (AFRC400) Blacks in American Film and Television. (C) Bogle.

An examination and analysis of the changing images and achievements of

African Americans in motion pictures and television. The first half of the course focuses on African-American film images from the early years of D.W. Griffith's "renegade bucks" in *The Birth of a Nation* (1915); to the comic servants played by Steppin Fetchit, Hattie McDaniel, and others during the Depression era; to the post-World War II New Negro heroes and heroines of *Pinky* (1949) and *The Defiant Ones* (1958); to the rise of the new movement of African American directors such as Spike Lee (*Do the Right Thing*), Julie Dash (*Daughters of the Dust*), Charles Burnett, (*To Sleep With Anger*) and John Singleton (*Boyz n the Hood*). The second half explores television images from the early sitcoms "Amos 'n Andy" and "Beulah" to the "Cosby Show," "Fresh Prince of Bel Air," and "Martin." Foremost this course will examine Black stereotypes in American films and television--and the manner in which those stereotypes have reflected national attitudes and outlooks during various historical periods.

This course will also explore the unique "personal statements" and the sometimes controversial "star personas" of such screen artists as Sidney Poitier, Dorothy Dandridge, Paul Robeson, Richard Pryor, Oscar Micheaux, Spike Lee, Bill Cosby, Eddie Murphy, and Whoopi Goldberg. The in-class screenings and discussions will include such films as *Show Boat* (1936), the independently produced "race movies" of the 1930s and 1940s, *Cabin in the Sky* (1943), *The Defiant Ones* (1958), *Imitation of Life* (the 1959 remake), *Super Fly* (1972), and *She's Gotta Have It* (1986) and such television series as "I Spy," "Julia," "Good Times," "The Jeffersons," "Roots," "A Different World," "I'll Fly Away," "LA Law," and "Hangin' With Mr. Cooper."

SM 392. (ARTH301, COMM291, ENGL292, ENGL392) Topics in Cinema Studies. (M) Corrigan.

This topic course explores aspects of Cinema Studies intensively. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 462. (COMM462) Visual Communication and Social Advocacy. (M) Messaris. Prerequisite(s): COMM 262 / CINE 262.

The course explores the use of video and other visual media for social causes. Students choose their own area of interest, conduct background research, design and produce videos, and post them on-line. The

course uses a seminar format, and class size is limited to fifteen people.

504. (COMM562) Out of Hollywood: Literature to Film. (B) Shawcross.

Since the beginnings of the motion picture industry, producers and directors have drawn from existing literary works for adaptation to the "big screen." The past decade has proven to be no exception. We will explore several screen adaptations from the recent past and consider the artistic challenges, the financial compromises, and the technical realities of translation from one medium to another, as well as the motivations behind these film adaptations. Films may include *The Age of Innocence* (1993), *Smoke* (1994), *Clueless* (1995), *Emma* (1996), *Trainspotting* (1996), *Fight Club* (1996), *L.A. Confidential* (1997), *Out of Sight* (1998), and *Bridget Jones's Diary* (2001). Listed films are based on: Edith Wharton's *The Age of Innocence* (1920), Paul Auster's "Auggie Wren's Christmas Story" (1992), Jane Austen's *Emma* (1816), Irvine Welsh's *Trainspotting* (1993), Chuck Palahniuk's *Fight Club* (1996), James Ellroy's *L. A. Confidential* (1990), Elmore Leonard's *Out of Sight* (1996), Helen Fielding's *Bridget Jones's Diary* (1996), and Jane Austen's *Pride and Prejudice* (1813).

SM 550. (ARTH550, COML552, GRMN550) Topics in German Cinema. (K) Staff.

This graduate topic course explores aspects of German Cinema intensively. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

599. Independent Study. (C)

SM 619. (COMM619) The Politics and Practices of Representation. Sender.

This course engages with the following question from both theoretical and practical perspectives: Who says what about whom, under what circumstances, in which medium, with what effects? We will spend the first two thirds of the semester investigating different approaches to this question, looking at insider accounts, processes of othering, realism and other narrative conventions, the ethics of consent, "objective" and "biased" shooting techniques, the politics of editing, the role of the intended audience in the production of a work, and so on. We will simultaneously cover the technical aspects of production that will enable you to produce digital video projects: shooting

(Canon GL1s), lighting, sound, editing (Final Cut Pro on Mac), graphics, music, and so on. During the final third of the semester all students will produce short (5-10 minute) documentary and/or experimental digital videos.

SM 680. (COML595, FREN680) Topics in French Cinema. (M) Met.

This graduate topic course explores aspects of French Cinema intensively. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

SM 694. (SPAN694) Mexican Cinema. (M) Staff.

This seminar will address the specificity and uniqueness of Spanish America's cultural production, that is, those elements that make the Spanish American case differ from the paradigmatic postcolonial situation, and which make recent developments in postcolonial studies not fully applicable to it. We will explore these issues in the context of the literary production of the twentieth century in Spanish America from roughly the twenties to the present, that is, the epoch encompassing the larger metropolitan cultural phenomena of Modernism and Postmodernism.

SM 793. (ASAM510, COML653, ENGL591, SAST610) Topics In Film Studies. (M) Staff.

Topic varies.

SM 842. (ANTH842, COMM842) The Filmic. (C) Jackson.

This interdisciplinary graduate course takes "film" as its object of study, theorizing it as a medium/mode of representation. We draw on film theory, psychoanalysis, literary analysis, cognitive theory, communication studies, and visual anthropology to discuss several key issues related to the state of film/filmmaking in an age of "digital" media. We interrogate contentious notions of authority, reflexivity, and objectivity. We analyze film's claim to "realistic" (iconic and indexical) representation. We interrogate how "film" and "video" get imagined in all their visual particularity, sometimes conflated into a single visual form and at other moments distinguished as a function of the difference between photochemical and electro-magnetic processes. We also highlight the kinds of techniques filmmakers use to thematize these same issues "on screen." Students will be responsible for watching one film each week (along with the course readings),

and part of the final project involves helping to produce a group documentary/ethnographic "film" that engages the course's central concerns.

SM 846. (COMM846) Ordinary People and the Media: The Demotic Turn.

This course will explore the proposition that we are witnessing a 'demotic turn' in media culture: the development of a broader, possibly even a new, field of

relations between media and culture in which the participation of ordinary people has become a more fundamental component than ever before. Rather than necessarily signifying the rise of a democratic politics or a process of media democratization, the politics of that participation are contingent and instantiated rather than determined in advance. The course will explore how this politics of participation actually plays out in a range

of contemporary media 'hot spots' - reality television, user-generated content online, debates about the future of journalism in an online environment heavily populated by bloggers and citizen journalists, the connection between the commodification of celebrity and the construction of social identities, utopian and dystopian readings of the potential of new media, and populist formations of talk radio.

CITY AND REGIONAL PLANNING (FA) {CPLN}

402. (CPLN502) Urb & Reg Economics.

423. (CPLN623) Housing in Developing Countries.

442. (CPLN642) Downtown Development. (A)

450. (CPLN550) Intro to Trans Planning. (A)

L/R 500. (URBS440) Introduction to City Planning: Past, Present and Future. (A) Birch.

Orientation to the profession, tracing the evolution of city and regional planning from its late nineteenth century roots to its twentieth century expression. Field trips included.

SM 506. Negotiation & Conflict Resolution. (B) Sokoloff.

This course builds on approaches to interpersonal negotiation to learn perspectives and methods for working through problems and challenges. In the first part of the course students develop a foundation based on understanding basic principles of bargaining and negotiation from two perspectives - information based and principal based bargaining - and then move to focus on concepts, theories and practices that are concerned with building consensus and finding common ground. This latter notion, "common ground" refers to the values, beliefs, concerns or perspectives that people hold in common. At the same time, just holding values in common is not sufficient to guarantee people will act on those values, etc. in the same, or even similar ways. Thus, we will look at how to move from talk to productive action.

507. Urban Design Methods. (A) Larice.

This seminar focuses on professional and research techniques in the practice of urban design. Seminar topics in the first half will examine research methods associated with measuring, analyzing and guiding design in urban contexts, including: environmental behavior & psychology, cognition, mapping, morphology, design regulation and policy. The second half of the course includes professional techniques in:

communication, self-representation, design roles, processes, and ethics.

509. (HSPV671) Law of Planning and Urban Development. (B) Keene.

Overview of the constitutional and legal principles framing planning and urban development.

520. (CPLN333) Introduction to Community and Economic Development. (B) Wolf-Powers.

Cities across the United States are being revitalized today with the help of professionals, entrepreneurs, community-based groups, and individual householdsto the social and cultural amenities that urban centers offer. Yet poverty and inequality remain serious problems, and they find spatial manifestation in distand inner-ring suburban neighborhoods. Planners and activists interested in neirevival face a variety of opportunities and challenges as they grapple with houaffordability for old and new inhabitants, confront the implications of increasdiversity, and respond to imperatives to build local wealth, develop human capiconnect residents to metropolitan economies and housing markets. Community orgaare taking on new roles in this context, even as their traditional functions incommercial revitalization grow more complex and contested.

SM 528. (URBS428) Research Seminar 21st Century Urbanism. (B) Staff.

530. Introduction to Land Use Planning. (A) Daniels.

Overview of the methods and tools for managing land use and shaping the built environment. Explores principles of successful plan creation emanating from theory and case studies.

531. Introduction to Environmental Planning & Policy. (A) Daniels.

Overview of national programs for protecting the environment, managing natural resource areas, preserving biodiversity, and remediating brownfields, in an overall framework based on sustainability. covers basic principles of geology, hydrology, limnology, and climatology, Oregon's Land Use Transportation Air Quality (LUTRAQ) connection, environmental impact assessment, environmental justices.

540. (URBS540) Introduction to Property Development. (B) Landis.

This course is designed to acquaint students with the fundamental skills and techniques

of real estate property development. It is designed as a first course for anyone interested in how to be a developer, and as a foundation for further courses in urban development and real estate.

SM 545. (SOCI453, URBS453, URBS543) Metropolitan Growth and Urban Poverty. (B) Nowak.

See URBS 453.

L/R 550. (CPLN450) Introduction to Transportation Planning. (A) Weinberger. Prerequisite(s): CPLN 540.

Exploration of the technological and design aspects of urban transportation systems including discussion of land use patterns, facilities operations, congestion, and environmental issues. Highlights current policy debates revolving around mobility issues, federal and state legislation, and metropolitan organization responsibilities.

SM 560. (URBS360) Introduction to Graphics for Urban Design. (B) Rairigh.

This course introduces students to visual literacy and the use of a variety of software packages. Through a series of assignments and in class discussions participants develop a visual vocabulary and skills to function in and between AutoCAD, Adobe Creative Suite, and 3D modeling software.

L/R 600. Planning Problems Workshop. (B) Staff.

Applicaton of planning skills to problems experienced by selected neighborhoods. Students work in teams to develop solutions. Juried presentation required.

601. Independent Study. (C) Faculty.

SM 620. Techniques of Urban Economic Development. (B) Staff.

An examination of public, private and non-profit methods of promoting economic development in cities and regions. Topics to be covered include revenue strategies including use of industrial development bonds, tax increment financing, tax abatements/incentives; adminstrative efforts including creation of economic development corporations and special development districts and other approaches designed to encourage growth and prosperity in urban areas.

621. (URBS416) Metropolitan Food Systems. Vitiello.

This course introduces students to the planning and development of metropolitan food systems. Major topics include regional planning and policy; sustainable

agriculture; food access and distribution; and markets. The class includes a mix of lectures, discussion, and field trips; and students will work on real-world projects in Philadelphia. Ultimately, the course aims to develop students' broad knowledge of food systems planning in the global North and South, with an emphasis on community and economic development strategies for sustainable food systems and food security.

623. (CPLN423) Housing in Developing Countries. (B) Hoek-Smit.

Exploration of human settlement planning in transitional and developing economies. Includes review of the theoretical framework of economic development and development planning.

L/L 624. Workforce Development and Metro Labor Markets. Wolf-Powers.

Examines metropolitan labor markets through two lenses: the growing discussion of the importance of "knowledge work" to regional economic competitiveness and the persistent challenges of unemployment, underemployment and working poverty. Coursework helps students translate research on labor markets and workforce development into usable knowledge for economic and community development practice.

625. HOUSING & COM DEV POLICY. Staff.

Overview of regional/metropolitan analysis and forecasting. Covers cohort survival and input/output techniques, employment and residential location models, and the role of transportation in determining spatial patterns.

632. (LARP741) Operational Analysis of Travel. (A) Takyi.

Examination of urban transit operations planning and analysis, staffing, coordination, and technology choices.

641. Green Development. (B) Staff.

Green Development will introduce students to the design, development, marketability, and financing of environmentally sustainable buildings and large-scale development projects. Topics to be covered include: design elements and performance of green buildings; LEED program provisions and certification; best practices in green development regulation, planning and financing; and regulatory and incentive programs to promote sustainable development projects.

642. (CPLN442) Downtown Development. (A) Levy.

City Planning 642 will take a brief look back at the first major period of federal intervention in cities between the 1930s and the 1960s to see what lessons are relevant to today's efforts to revitalize downtowns. The course will provide an overview of the changing role of the downtowns, how and why they have evolved, diversified and been redeveloped and how they are repositioning themselves in a new regional and global context. There will be a focus particularly on the role of business improvement districts in the United States, Canada and a few international cities, how they relate to municipal government and redevelopment efforts, the types of services they provide, and the possibility that their roles could be transformed and expanded in a renewed federal era.

650. Transportation Planning Methods. (B) Staff.

Transportation methods is a survey course exploring the 'how to' of regional travel and demand forecasting; bus service and operations planning, station access planning, traffic calming and a host of other topics in transportation planning.

658. Urban Markets and Residential Development. (B) Glen. Prerequisite(s): CPLN 623 or CPLN 680.

This class will explore the history of disinvestment in inner-city neighborhoods and the public sector's response to the challenge of re-building those communities with a particular emphasis on affordable housing programs and policies - and how those initiatives have created new urban markets with unique challenges and opportunities for the public, private and non-profit development sectors. The course will focus on how to develop residential and mixed-use projects, using a variety of public incentives and private financing sources to address market and community objectives.

660. Theory and Principles of Urban Design. (A) Barnett.

An introduction to the theoretical basis for beliefs and practices in city and environmental design, including the relation of the built environment to the natural environment, the organization of groups of buildings, the use and meaning of public places, and the relation of technology to land use and community.

L/L 671. Inner City Housing Markets. (C) Bodek. Corequisite(s): CPLN 552101 - Housing Renovation Lab.

Focus on the theory and practice of revitalizing neighborhoods through the experience of renovating a house in West Philadelphia. Attention to design, finance, and planning aspect of project.

SM 672. (URBS206, URBS506) Public Environment of Cities. (B) Staff.

675. Visualization and Modeling. (B) Staff. Prerequisite(s): CPLN 504.

This course will introduce students to the use of GIS and related spatial analysis tools for 3-D urban and environmental visualization and simulation. In the first half of the course, student will learn how to construct 3-D data and visualization models from GIS and spatial data sources; how to extract spatial data from visualizations; and how to animate them for purposes of analyzing urban and environmental change. In the second half of the class, students will learn how to use spatial simulation procedures (including Repast, urban simulation, and air and water simulation models) to construct and analyze alternative scenarios.

SM 676. (URBS270, URBS670) The Immigrant City. (M) Vitiello.

Immigration is a controversial issue, dividing Americans from Congress to big cities to small towns. What's at stake in these debates? What does immigration mean for cities and regions? And what roles should policy makers, planners, and community organizations play in shaping migration and its impacts? This course examines these questions in the context of immigrant, refugee, and receiving communities in the United States. It surveys public policy and community and economic development practices related to migration, at the local, regional, and trans-national scale. Class readings, discussions, and regular visits to a variety of Philadelphia's immigrant neighborhoods explore themes including labor markets, political mobilization, social and cultural policy, and the built environment.

677. Land Conservation Finance. (A) Staff.

This course examines how private, non-profit land trusts and state, federal, and local governments can pay for conservation easements and land acquisition in order to protect valuable resources and manage growth. Topics include: purchase of conservation easements and land, taxes, funding referenda, sale of bonds, borrowing funds from banks, fund raising, foundation

grants, installment purchase agreements, like-kind exchanges, bargain sales, and purchase and resale of land. The course will involve several case studies. This course can count toward the Certificate in Land Preservation.

SM 679. (ARCH756) Sustainable Urban Forms. (B) Hughes.

This seminar provides an advanced introduction to policy development and is intended to engage students in policy-making. Policy outcomes often have formal and/or scalar qualities. Yet policy developers often treat these as unintended consequences. And designers typically operate within the constraints created by such consequences. But could design thinking improve policy outcomes? Our test bed for this examination will be the relationship between energy and urban form, which presents a critical policy challenge for young professionals from many fields. The seminar will survey current research and policy options emerging from local, regional, state, and federal governments and discuss their implications for design outcomes at the scale of buildings, neighborhoods, and regions? None of these implications have been fully explored by policy makers at any level of government. This seminar will explore each in turn, allowing students to develop a deep understanding of the policy content on this important issue as well as of the policy process in general. Students will develop projects ranging from an analysis of policy to a presentation of the design implications of existing/proposed/alternative energy

policies. The intent is for the seminar to make an active contribution

701. Planning Studio. (B) Kise.

Intensive study of a selected planning topic. Teams of students work with clients to develop alternative scenarios and produce plan and implementation strategies. Multiple presentations required.

702. Planning Studio. (B) Barnett.

Intensive study of a selected planning topic. Teams of students work with clients to develop alternative scenarios and produce plan and implementation strategies. Multiple presentations required.

703. Planning Studio. (B) Staff.

Intensive study of a selected planning topic. Teams of students work with clients to develop alternative scenarios and produce plan and implementation strategies. Multiple presentations required.

704. Planning Studio. (B) Yaro.

Intensive study of a selected planning topic. Teams of students work with clients to develop alternative scenarios and produce plan and implementation strategies. Multiple presentations required.

709. State Planning. (C) Mandelbaum.

760. Public Realm Studio. (A) Larice.

This intensive foundation studio focuses on the physical planning and design skills necessary in shaping the public realm. Students will undertake a series of targeted exercises that introduce them to project

conceptualization, context analysis, programming, site planning, technical issues, and detailed design of public space in cities. Focusing on issues pertinent to local municipalities, students will work collaboratively and individually over the semester on design elements that cover a range of scales. Intellectual objectives within the studio include: the links between theory and practice, the development of principles to guide design, understanding associations between design and stakeholder-user interests, and exploring larger issues of sustainability and participation in design practice. Emphasis on the pragmatics of problem solving and implementation will be balanced with essential skills in visioning, critical thinking and design leadership.

796. Professional Project. (C) Staff. Capstone project, supervised by a faculty member.

800. Doctoral Seminar. (A)

Birch/Landis.

This scholar-oriented seminar explores how academic researchers define researchable questions and craft research designs. Open only to PhD students, the weekly seminar functions as an introduction to the general issues of academic research in the field of City and Regional Planning as well as

999. Independent Study and Research. (C) Staff. Ph.D. candidates. Independent study and research under faculty supervision.

**CLASSICAL STUDIES
(AS) {CLST}**

L/R 100. (COML108) Greek & Roman Mythology. (C) Struck.

Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? Investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

SM 102. Classical Traditions. (M)

Wilson. Course requirements will include weekly reading responses, four quizzes, and a final exam.

The Romantic poet Shelley once declared that, "We are all Greeks now". By contrast, the twentieth century poet Louis Macneice challenged the idea that we can even understand what it was like to live in ancient Greece: "It was all so unimaginably different/And all so long ago." In this course, we will study what continuities there are between contemporary society and those of ancient Greece and Rome; the ways in which our culture is fundamentally different from theirs; and the reasons why medieval, early modern, and modern people have chosen either to look back to antiquity, or to turn away from it. Is our identity shaped by the Greeks and Romans, or not? And how did we get from their culture to our own? We will survey different strands of the "classical tradition", ranging through literature, history, philosophy, art, science, language and psychology. We will also think about what

the terms "classical" and "tradition" might mean.

L/R 103. (PHIL003) History of Ancient Philosophy. (A) History & Tradition Sector. All classes. Meyer.

An introduction to the major philosophical thinkers and schools of ancient Greece and Rome (The Presocratics, Plato, Aristotle, Stoics, Epicureans, and Sceptics). Topics to be covered include: nature of the universe, the relation between knowledge and reality, and the nature of morality and the good life. We will also examine some of the ways in which non-philosophical writers (e.g., Homer, Hesiod, Aristophanes, and Thucydides) treat the issues discussed by the philosophers.

104. (ANCS101, ARTH105) Ancient World Cultures. (C) Pittman.

This course presents a comparative overview of the ancient civilizations around the world. It is designed as a gateway course for the many specialized courses available at Penn. Its focus is two fold: first, the various forms that ancient cultures have developed are explored and compared and second, the types of disciplines that study these courses are examined. The course has a number of guest lecturers, as well as visits to museums and libraries to examine original documents. This course meets the requirement for the Ancient Studies Minor.

SM 113. (ANCH113) INTRO GREECE&ROMAN HIST. (A)

145. (ANCH145) The Roman Empire. (M) Grey.

"They create a desert and call it peace," wrote Tacitus in describing the response of the conquered to Rome's power, but the Roman Peace also brought with it other, less dramatic changes. In this class we will concentrate on the experience of Roman culture. What was it like to be a Greek ex-slave and millionaire living in Rome in the age of Nero? How were the Gallic chieftains made into Roman senators? What was the Roman governor of Asia Minor expected to do when the provincials wanted a new aqueduct? We will break the Roman Empire down into a series of vignettes, using literature and archaeology to supply us with the material for a fresh look at Roman Society. What emerges is a culture more diverse, more flexible and more tolerant than is usually recognized.

195. (ANCH195, EALC005) Worlds Apart: Cultural Constructions of "East" & "West". (M) Humanities & Social Science Sector. Class of 2010 & beyond. LaFleur/McInerney.

Multiculturalism increasingly characterizes our political, economic, and personal lives. This course will focus on real and perceived differences between the so-called "East" and "West." Taking a case study approach, we shall read and compare literary materials from classical Greece and Rome, a major source of "Western" culture, and Japan, an "Eastern" society. Through analysis of these texts, we shall explore some of the concepts, values, and myths in terms of how "East" and "West" define themselves and each other: e.g. gender, sexuality, rationality, religion, society, justice, nature, cultural diffusion, work, leisure, life, and death. Readings will include selections from Greco-Roman and Japanese myths, poetry, drama, essays, history, and philosophy. Class format will be lecture with opportunity for questions and discussion. Grading will be based on midterm and final examinations, a short paper, and class participation. No prerequisites.

199. Independent Study. (C) Staff.

Coursework and/or research undertaken independently by the student, supervised by a faculty member.

SM 202. (ARTH202) Mycenae, Pylos and Troy. (M) Tartaron.

The Iliad of Homer recounts the tale of a great war fought by Greek and Trojan armies before the walls of Troy's lofty citadel. This foundation epic of Western literature tells of gods, heroes, and magical places already part of a deep past when Homer's work was set to writing, ca. 700 B.C. Does the Homeric story of the Trojan War have a basis in real events? Scholars have long pointed to the Mycenaean civilization, which flourished on the mainland of Greece in the Late Bronze Age (ca. 1600-1200 B.C.), as the inspiration for the Homeric stories. In this course, we will examine the archaeology of the great centers of the Late Bronze Age in Greece and Anatolia, particularly Mycenae, Pylos, and Troy. Our main aim will be to better understand the social, political, and economic context of this Late Bronze Age world, which may shed light on the possibility that a "Trojan War" of some kind actually occurred. The primary focus on archaeology is supplemented by readings from Homer's Iliad and Odyssey.

207. VIS ROME ART LIT & CIN.

Farrell.

Artists, writers, and filmmakers have been drawn to and repelled by the intense experiences offered to them by the city of Rome. This course surveys the cultural record of those experiences in various media from antiquity to the present. We will consider the city as a center of culture, a den of iniquity, a religious sanctuary, and a political capital as depicted in the works of (among others) Cicero, Fellini, Goethe, Piranesi, Montaigne, Kubrick, Juvenal, Byron, Luther, and Freud.

L/R 211. (PHIL211) Ancient Moral Philosophy. (B) Society Sector. All classes. Meyer.

A survey of the ethical theories debated by philosophers in Classical Greece and Rome. Plato, Aristotle, Stoics, Epicureans and Pyrrhonist Sceptics offer competing answers to the fundamental question raised by Socrates: How are we to live? That is, what is the best life for a human being? These philosophers generally agree that virtue is an important part of the best human life, but disagree about whether it is the greatest good (Epicurus, for example claims that pleasure is the highest good), or whether there are any other goods (for example, health, wealth, family). Much attention is paid in their theories to accounts of the virtues of character, and to the place of wisdom in the best sort of human life.

SM 216. Imagined Worlds: Pastoral, Utopia, and the Golden Age. (M) Wilson.

Fantasy literature runs through the European tradition. Some poets and writers, from Hesiod (Theogony) to C.S. Lewis (The Magician's Nephew), have imagined a time before our world, a Golden Age when there was no need of work. Others have contrasted contemporary urban society with an idyllic, pastoral life in the countryside. Others again have described alternative and perhaps more desirable worlds, in far away countries (More's Utopia) or on other planets, or under an alternative political regime (for instance, Aristophanes' Lysistrata, or Plato's republic). Why do people want or need to imagine other worlds? Is this literature escapist? How can the description of an alternative time or place change our perceptions of our own world? Course requirements will include short writing assignments, four quizzes, and a final exam.

L/R 220. (ARTH220) Introduction to Greek Art and Architecture. (A) Staff.

This course surveys Greek art and architecture, from Sicily to the Black Sea, between the 10th and 2nd centuries BCE (Dark Age to Hellenistic). Civic, religious, and domestic buildings and spaces were intimately connected with images. These range from public sculpture and painting on and around grand buildings gardens, to domestic luxury arts like jewelry, cups, vases, mosaic floors. Art and architecture addressed heroic epic religious and political themes, and also every-day life and emotions. Current themes include Greek ways of looking at art and space, and Greek ideas of invention and progress; the role of monuments, makers and patrons in Greek society; and connections with the other cultures who inspired and made use of Greek artists and styles. The course will exploit the University Museum, regional museums where possible.

240. (COLL004) Scandalous Arts in Ancient and Modern Communities. (M) Humanities & Social Science Sector.

Class of 2010 & beyond. Rosen.

What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, Howard Stern and Snoop Doggy Dogg have in common? Many things, in fact; but they are all fundamentally united by an authorial stance that constantly threatens to offend prevailing social norms, whether it be through obscenity, violence or bigotry. This course will examine our conceptions of art (including literary, visual and musical media) that are deemed by certain communities to transgress the boundaries of taste and convention. It juxtaposes modern notions of artistic transgression, and the criteria used to evaluate such material, with the production of and discourse about transgressive art in classical antiquity. Students will consider, among other things, why communities feel compelled to repudiate some forms of art, while others into "classics".

267. (COML167) Ancient Novel. (M) Wilson.

The ancient Greek and Roman novels include some of the most enjoyable and interesting literary works from antiquity. Ignored by ancient critics, they were until fairly recently dismissed by classical scholars as mere popular entertainm ent. But these narratives had an enormous influence on the later development of the novel, and their sophistication and playfulness, they often seem peculiarly modern--or even postmodern. They are also an important source for any understanding of ancient culture or society.

In this course, we will discuss the social, religious and philosophical contexts for the ancient novel, and we will think about the relationship of the novel to other ancient genres, such as history and epic. Texts to be read will include Lucian's parodic science fiction story about a journey to the moon; Longus' touching pastoral romance about young love and sexual awakening; Heliodorus' gripping and exotic thriller about pirates and long-lost children; Apuleius' Golden Ass, which contains the story of Cupid and Psyche; and Petronius' Satyricon, a hilarious evocation of an orgiastic Roman banquet.

270. (AAMW413) Ancient Athletics. (M) Romano.

The art, archaeology and history of athletics in ancient Greece. Among the topics to be included are: famous Greek athletes, female athletes, the ancient Olympic Games and other athletic festivals, ancient athletic facilities and equipment, the excavation of ancient athletic sites and practical athletics.

302. (COML302) Odyssey & Its Afterlife. (B) Murnaghan.

As an epic account of wandering, survival, and homecoming, Homer's Odyssey has been a constant source of themes and images with which to define and redefine the nature of heroism, the sources of identity, and the challenge of finding a place in the world.

This course will begin with a close reading of the Odyssey in translation, with particular attention to Odysseus as a post-Trojan War hero; to the roles of women, especially Odysseus' faithful and brilliant wife Penelope; and to the uses of poetry and story-telling in creating individual and cultural identities. We will then consider how later authors have drawn on these perspectives to construct their own visions, reading works, or parts of works, by such authors as Virgil, Dante, Tennyson, Joyce, Derek Walcott, and Louise Gluck.

SM 304. Archaeology of Troy and Gordion. (M) Rose.

An introduction to the archaeology of the sites of Troy, in northwestern Turkey, and Gordion, capital of the Phrygians and the seat of King Midas. The course will focus on the results of new excavations at both sites, which have altered our understanding of war and destruction in Anatolia during the Bronze and Iron Ages. The two sites will be viewed against contemporary historical developments in Greece and Assyria. Greek, Roman, and Medieval attitudes toward Troy and Gordion will also be considered.

SM 306. (ANCH306) Greece Under Roman Empire. (M) McInerney.

"Greece, the captive, took her savage victor captive" runs the famous line from the Roman poet Horace. Traditionally the complex relationship between Greece and Rome has been seen from the Roman point of view, emphasizing the changes in Roman culture as a result of Rome's contact with the Greeks. This class takes a different approach, considering the impact on Greece. We will use the results of archaeological survey and excavation to chart the economic transformation of Greece, especially in relation to the Roman colony at Korinth. This will involve examining changes in land distribution, the growth of road networks, and the increase in large public works such as theatres, aqueducts and baths. We will also use writers such as Dio Chrysostom and Pausanias to consider the effect on the institutions of the traditional Greek city-state of being incorporated into a single province, Achaia. We will read some of the ancient novels, such as Longus' Daphnis and Chloe, as well as the essays of Plutarch. There are many avenues into the past, and the particular richness of our sources for Roman imperial history makes it possible for us to approach Greece from a variety of perspectives.

SM 310. (GAFL510) Ancient and Modern Constitutionmaking. (C) Mulhern.

What actually was it that the Greeks were thinking of when they used the word politeia-- an expression that we often translate by "constitution"? What do their thoughts suggest about prospects for constitutionmaking today? This course builds on contemporary scholarship to reconstruct what we may call the constitutional tradition as it develops in the main ancient texts, which are read in English translations. The ancient texts are taken from Herodotus, Xenophon, the Pseudo-Xenophon, Thucydides, Plato, the author of the Aristotelian Athenian Constitution, Aristotle himself, Polybius, Cicero, Augustine, and the codifiers of Roman law. The course traces this tradition through the Middle Ages and the Renaissance and the great thinkers of the Seventeenth Century, following linguistic and other clues that carry one up to Madison and put the product of the U.S. Constitutional Convention in a somewhat new light; and it continues through Nineteenth Century and Twentieth Century constitutionmaking into today's constitutionmaking efforts in Eastern Europe.

The course is conducted interactively as a group tutorial. The professor offers a prelecture to the class each week on the text that they will read next to help them understand its historical, literary, and political context. In the next class, the students read short papers on the text, and these papers are discussed by other students and by the professor. The professor then provides a summary lecture on the text just completed and a prelecture on the reading set for the next class. At the end, the students have reconstructed the constitutional tradition for themselves from the sources.

SM 318. (ANCH318, ARTH301) Augustan Cultural Revolution. (M) Farrell.

In founding an empire, Caesar Augustus claimed to restore the Roman Republic; but in fact he presided over a revolution in a cultural as well as a political sense. This course examines the innovations in intellectual life, social organization, and artistic expression that gave form to imperial ideology during its earliest phase.

SM 319. (ANCH319) Periclean Athens. (M) Staff.

Athens in the 5th century BC witnesses a cultural flowering of extraordinary power and importance for Western culture. In this class we will examine the achievements of Athens in its Golden Age, beginning with the Persian Wars, seminal events that saw the Greeks defeat the numerically superior Persians. In the generation that followed, Athens rapidly transformed the alliance of Greek states dedicated to taking the war back to Persia into an Aegean empire, dominated by the Athenians and their fleet. At the same time, this dramatic in power and prestige was accompanied by the growth of full participatory democracy. We examine the daily working of that democracy, asking how an Athenian was trained for citizenship. What did democracy mean in practice? What did freedom and autonomy mean to a society that relied on slaves and was ruthless in its treatment of its subject? In order to answer these questions we juxtapose the breathtaking accomplishments of the Athenians, in fields such as philosophy, tragedy, comedy, sculpture and architecture, with the exclusion of women from public life, the torture and abuse of slaves, and the execution of other Greek populations.

We will follow them from the height of their power to defeat at the hands of the Spartans. The picture that emerges is a portrait of a complex people and a complicated culture. Restless, adventurous,

sophisticated, crude, pious, the Athenians are a people whose culture has a special significance for us. The ties between us are not casual, but deeply meaningful.

SM 320. Greek and Roman Magic. (M) Struck.

The Greeks are often extolled for making great advancements in rational thinking. Their contributions to philosophy, architecture, medicine, and other fields argue that they surely did advance rational thought. However, this view gives us an incomplete picture. Many Greeks, including well-educated, prominent Greeks, also found use for casting spells, fashioning voodoo dolls, toting magical amulets, ingesting magic potions, and protecting their cities from evil with apotropaic statues. In this course you will learn how to make people fall in love with you, bring harm to your enemies, lock up success in business, win fame and respect of your peers, and also some more general things about Greek and Roman society and religion -- you will also learn what "apotropaic" means.

SM 324. Age of Caesar. (M) Damon.

A course on Roman culture and society in a period of tumultuous political change, the lifetime of Julius Caesar (100-44BCE). Focuses on the interplay between shifting political and military realities and developments in social organization and literary production at Rome and in the wider Mediterranean world. The reception of Caesar in later ages will also be considered. Readings (all in translation) will include Catullus, Cicero, Lucretius, Plutarch, Sallust, Suetonius, and, of course, Caesar himself.

SM 327. Ancient Philosophers. (M) Wilson.

What was a "philosopher" in ancient Greece and Rome? How were philosophers viewed by non-philosophers in antiquity? What was the difference between philosophers and sophists? And how do ancient representations of philosophers compare to modern ideas about the position of intellectuals in society? The central figure to be studied will be Socrates, whom we will approach through Plato and Xenophon as well as Aristophanes' Clouds. We will compare and contrast the representations of Socrates with those of other ancient philosophers, through readings that will include parts of Diogenes Laertius' Lives, Seneca, and Marcus Aurelius. All Greek and Latin texts will be read in translation.

SM 350. Greek and Roman Universe. (M) Farrell.

This course traces history of how the ancient Greeks and Romans thought about the physical universe. We will begin by considering early mythical conceptions and then take account of how philosophical and scientific investigation, geographical exploration, expanding political horizons, and large-scale cultural change affected knowledge of perception of the earth and the cosmos throughout antiquity and into the early middle ages.

SM 360. (COML354, ENGL229) The Epic Tradition. (M) Copeland. Benjamin Franklin Seminar.

Ancient epic and its post-classical reception in European traditions of epic, romance, and other genres. Texts and approaches may vary from year to year.

Among Arthurian romances we will read at least one by the French poet Chrétien de Troyes, as well as the English "Sir Gawain and the Green Knight" and selections from Malory's "Morte Darthur". All readings will be in modern English. Course requirements will consist of one short paper and one longer (research-based) paper (which will be presented in two stages, draft and final version).

SM 371. (HSOC353) Greek & Roman Medicine. (M) Rosen.

The history of modern medicine as we know it in the West is remarkably recent; until the nineteenth century prevailing theories of the body and mind, and many therapeutic methods to combat disease, were largely informed by an elaborate system developed centuries earlier in ancient Greece, at a period when the lines between philosophy, medicine, and what we might consider magic, were much less clearly defined than they are today. This course will examine the ways in which the Greeks conceptualized the body, disease, and healing, and will compare these to medical culture of our time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and whenever possible we will juxtapose these writings with modern discourse about similar topics. Several visitors from the Medical School are expected to participate on a regular basis. All readings will be in English and no previous background in Classical Studies is required.

SM 396. (COML383, ENGL394) History of Literary Criticism. (M) Copeland. Benjamin Franklin Seminar.

This is a course on the history of literary criticism, a survey of major theories of literature, poetics, and ideas about what

literary texts should do from ancient Greece to examples of modern European and American thought. The course will give special attention to early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (where we will concentrate on English writers such as Philip Sidney and Ben Jonson). We'll move into modern and 20th century by looking at the literary (or "art") theories of some major philosophers, artists, and poets: Kant, Wordsworth, Marx and Engels, Matthew Arnold, and the painter William Morris, T.S. Eliot, and the philosopher Walter Benjamin. We'll end with a very few samples of current literary theory.

398. Honors Thesis. (C) Staff.

This course is taken in the spring of the senior year by students admitted to the honors thesis program for the Classical Studies major. For policies see the Classical Studies department website.

399. Independent Study. (C) Staff.

This course is taken by students doing independent work with a faculty advisor. Students admitted to the honors thesis program typically enroll in this course in the fall of the senior year, followed by CLST 398 in the spring. For policies see the Classical Studies department website.

SM 402. Post-Baccalaureate Individualized Studies in Greek. (D) Staff. Corequisite(s): CLST 403.

Advanced individualized study in Greek for students enrolled in the Post-Baccalaureate Program in Classical Studies. Permission of the instructor required.

SM 403. Post-Baccalaureate Individualized Studies in Latin. (D) Staff. Corequisite(s): CLST 402.

Advanced individualized study in Latin for students enrolled in the Post-Baccalaureate Program in Classical Studies. Permission of the instructor required.

SM 406. Topics Classical Studies. (B) Staff.**416. (AAMW415) Survey of Greek Sculpture. (M)** Staff.

An examination of key phases in the development of Greek sculpture from the later Bronze Age through the Hellenistic period.

SM 418. (COML510, ENGL524) Medieval Education. (M) Copeland.

This course will cover various important aspects of education and intellectual culture from late antiquity (c. 400 A.D.) to the later Middle Ages (c. 1400 A.D.) across Europe. We will look especially at how the arts of language (grammar, rhetoric, dialectic) were formalized and "packaged" in late antique/early medieval encyclopedias (e.g., Martianus Capella's "Marriage of Mercury and Philology," Cassiodorus' "Institutes of Divine and Secular Learning," Boethius and Augustine on rhetoric, Donatus and Priscian on grammar, Boethius on dialectic, Isidore of Seville on all the sciences), and at how later theorists and systematizers recombined and reconfigured knowledge systems for new uses (especially monastic education, including notably Hugh of St. Victor's "Didascalicon"). We will also look at how the earlier and later Middle Ages differentiated between "primary" and "advanced" education, how children and childhood are represented in educational discourse, how women participate in (or are figured in) intellectual discourse (Eloise, Hildegard of Bingen, Christine de Pizan), how universities changed ideas of intellectual formation, and how vernacular learning in the later Middle Ages added yet another dimension to the representation of learning.

Among the later texts to be covered will be Abelard's "Historica Calamitatum," John of Salisbury's "Metalogicon," selections from Aquinas and other university masters, Jean de Meun's "Roman de la Rose," Christine de Pizan's "Chemin de Long Estude," Gower's "Confessio Amantis" (book 7), and possibly selections from Dante's "Convivio."

Students from all disciplines across the humanities are welcome. Classics are encouraged to enroll, as well as, of course, medievalists and early modernists. Readings will all be available in English translation, but many of the readings can be done in the original languages (Latin, Old French or Middle French, Italian) as students wish (on an individual or collective basis). Class discussions, however, will always have reference to available translations. One seminar paper (15+ pages) will be required, along with (probably) one report.

427. (AAMW427, ARTH427) Roman Sculpture. (M) Kuttner.

Survey of the Republican origins and Imperial development of Roman sculpture--free-standing, relief, and architectural--from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city

and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display. Key themes are the depiction of time and space, programmatic decoration, and the vocabulary of political art.

436. (PHIL436) Hellenistic Philosophy. (M) Meyer.

Greek philosophy in the Hellenistic period (323-31 BCE) is dominated by three schools, which continue to be influential well into the era of the Roman Empire: Stoicism, Epicureanism, and Scepticism. Our focus this year will be on the Stoics, with emphasis on their natural philosophy, theology, and ethics. Significant Stoic claims we will examine include: the theory of fate, the insistence that the world is governed by divine providence, and the view that following nature is the key to living a good life, while such things as health, family, and material well-being are of no value. Sources to be read include Cicero, ON THE NATURE OF THE GODS, and ON DIVINATION; Marcus Aurelius, MEDITATIONS; Epictetus, HANDBOOK; and Seneca, ON ANGER and selected letters. All texts will be read in English translation; no knowledge of Greek or Latin will be presupposed.

499. Independent Study. (C) Staff.

SM 500. Materials and Methods. (A) Staff.

Introductory graduate proseminar on the study of the ancient Greco-Roman world. Topics include: history of the discipline; textual scholarship; material culture; social, political, and intellectual history; relations between classical studies and other humanities disciplines.

SM 502. Greek Meter. (M) Ringe.

Prerequisite(s): A fluent reading knowledge of ancient Greek.

This course will cover the theory of ancient Greek verse forms, the relation between traditional Homeric metrics and formulaic analysis, the development and use of specific metrical systems by post-Homeric poets, and the use of meter in Greek verse to create literary and dramatic effects. Work for the course will include the reading and scansion of a substantial body of ancient Greek verse in class; the grade will be based on classwork and a final paper.

SM 503. Historical Grammar of Greek. (M) Ringe/Cardona.

Prerequisite(s): A fluent reading knowledge of ancient Greek.

Investigation of the grammar of Classical Greek from the viewpoint of historical linguistics. The course will offer historical explanations for numerous structural peculiarities of the Greek language and anomalies of Greek grammar, touch on the relationship of Greek with other languages, and incidentally introduce the student to some basic concepts of language analysis likely to be useful in teaching Greek and learning other languages.

SM 505. (AAMW505) Archaeology of the Greek Iron Age. (M) Staff.

Examination of the "dark age" between the fall of the Mycenaean kingdoms and the emergence of Archaic Greek culture.

SM 506. (AAMW506) Greek Vase Painting. (M) Staff.

A study of Greek vase painting utilizing the artifacts of the University Museum.

SM 508. (PHIL510) Imagining the Orient. (M) Staff.

The critical theorist Edward Said has written, "The Orient had been since antiquity a place of romance, exotic beings, haunting memories and landscapes, remarkable experiences." In this course, we will explore the west's visualization of "The Orient" by focusing upon three specific locations: the mid-east as antiquity's "original orient" and south-east Asia and India/Tibet as the contemporary west's locations for war/darkness and peace/enlightenment, respectively. We will use theoretical work, fiction, and travel writing (ancient and modern) to supplement our examination of films such as Apocalypse Now, The Cup, The Man Who Would Be King, Three Seasons, and A Year of Living Dangerously. By working between and among a variety of media, we will be able to attend not only to what "the Orient" is or means but to the process of that imagining process.

SM 509. (ANCH509) Advanced Readings in Greek and Latin. (A) Staff.

SM 510. (AAMW510) Topography of Athens. (M) Staff.

Layout and monuments of Athens from the Bronze Age into the time of Roman Empire.

SM 514. (COML514, ENGL504) History of Language. (M) Staff.

An introduction to the methods of historical linguistics through a study of English from its prehistoric origins to the present day, with emphasis on the Old and Middle English periods: also writing systems; the development of comparative linguistics in the nineteenth century and ideas about language before the nineteenth century; semantic change; English lexicography; concepts of "correct" English and prescriptive grammar in the eighteenth century; the material recovery of a literary text (example: Chaucer's CANTERBURY TALES). Two exams, weekly problems and exercises.

SM 515. (AAMW515) GIS Applications in Archaeology. (M) Staff.

An introduction to the procedures and uses of GIS in modern archaeological field and laboratory work. The course will introduce the student to computerized GIS, discuss the philosophy and theory of its use, as well as the analytical potential of its utilization. Archaeological case studies will be presented. Open to graduate students. Undergraduates with permission.

SM 523. Greek and Roman Magic. (M) Staff.

SM 525. (AAMW525, ARTH525) Aegean Bronze Age. (M) Betancourt.

An examination of a selected problem in the Greek Bronze Age, focusing on the Minoan, Mycenaean, and Cycladic cultures. Lectures by the instructor and reports by the students will examine a series of interrelated topics. Topic varies.

SM 526. (ARTH526) Material & Methods in Mediterranean Archaeology. (M) Staff.

SM 601. (AAMW601, ANCH601) Archaeology and Greek History. (M) Staff.

An examination of archaeological evidence relevant to selected problems in Greek history.

SM 602. (AAMW501) INTRO ARCH CERAMICS. (A)

SM 603. (AAMW603) Archaeology and the Greek Theater. (M) Staff.

The course will examine the written and especially the archaeological evidence for the production of Greek drama. Topics will include the theater buildings themselves, stage machinery, scene painting, and

costumes. The main chronological focus will be on the fifth and fourth centuries B.C., but some attention will be paid to later developments.

SM 608. Ancient Greece and the Modern/Post-Modern World. (M)
Rosen.

It is commonplace to regard Classical antiquity in some sense as the "foundation" of Western culture, yet few people ever examine more closely how or whether this may be so. Can we in fact speak meaningfully of a cultural continuum from Greco-Roman antiquity to the present? Do we see in the ancient Greeks a reflection of ourselves or of an entirely alien culture? This course will explore how the Greeks of the "classical" period (5th-4th Centuries B.C.E.) addressed a set of concerns and problems fundamental to most human cultures, and will compare their approaches to these issues to those of modern society. Topics will include political organization, gender relations, family culture, art and society, among others. Sources will be wide-ranging and comparative, including such material as Plato, Thucydides, Euripides, Benjamin Franklin, Freud and Rap Music.

SM 610. (ENGL525) Chaucer's Classicisms. (M) Copeland.

This course takes Chaucer's uses of antiquity as a point of entry into questions about the ancient lineages of medieval literary and intellectual culture. The coverage of Chaucer's writings in relation to classical and late classical authors will be quite substantial. We will survey the medieval textual histories of Virgil, Ovid, Horace, Statius, and Boethius as they materialize in specific Chaucerian sites, including: "Troilus and Criseyde", "Knight's Tale". "Legend of Good Women", "House of Fame" (and perhaps one other dream poem), "Boece", and Nun's Priests's Tale". These texts are sites for opening broader inquiries about the uses of antiquity in the Middle Ages: medieval transformations of ancient theories of narrative, of allegory and allegoresis, and of hermeneutics, translation, and invention; medieval receptions of ancient pedagogical discourses (including how classical authors were used in medieval schooling) and reconfigurations of ancient systems of knowledge; and medieval assimilations of ancient intellectual currents (Platonisms, scientific epistemologies, theories of language and signification). To these ends we will also look at various late classical expositors who mediated many of these problems to the Middle Ages, including Fulgentius,

Martianus Capella, Macrobius, Priscian, and St. Augustine.

This seminar will be designed to address the interests of two constituencies: classicists who want to know more about the medieval fortunes of ancient traditions; and medievalists and early modernists, for whose ongoing research the long diachronic structure of this course can offer a good foundation. The course is designed to accommodate the particular expertise that classicists can bring to study of post-classical literary history. For non-classicists considering the course, knowledge of Latin isn't a requirement, but it is certainly helpful. Readings of Chaucer will be in Middle English. Course texts will include The Riverside Chaucer, Loeb editions of Horace and Boethius, a photocopied packet of primary and secondary readings, and possibly some paperback English translations of late classical sources (e. g. Macrobius). Requirements will consist of one research paper and (depending on size of the class) one or two brief discussion presentations.

SM 612. (COML616, GSOC612) Sex and Gender in Ancient Greece. (M) Murnaghan.

A study of how sexuality and sexual difference figured in the social practices and representations of the ancient Greek world. Topics for discussion include medical constructions of the male and female bodies, the politics of prostitution, the intersections of gender and slavery, depictions of sexuality in lyric poetry, drama, philosophy, legal discourse, and the novel, and the cultural significance of same-sex sexual relations. Emphasis will be placed on the role of ancient gender arrangements and sexual practices in contemporary discussions, such as the feminist rediscovery of ancient matriarchies, Foucault's reconstructions of ancient models of the self, and the recent debates about the Colorado Amendment 2 Case. The course is open to interested graduate students in all fields, and no knowledge of Greek is required.

SM 616. (ANCH616) Ancient Economies. (C) Grey.

Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his *The Ancient*

Economy have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

SM 625. (AAMW625) City and Landscape in Roman Corinth. (M) Romano.

This seminar considers the procedures and the results of the Roman agrimensors who planned the city and landscape of the Roman Colony of Corinth of 44 B.C. Founded on the site of the former Greek city by Julius Caesar, Roman Corinth was to become one of the great cities of the Roman world. Considerable attention will be paid to the modern methods employed by the Corinth Computer Project, 1988-1997, as well as the resulting new information about the history of Roman Corinth.

SM 701. (ENGL701) Piers Plowman. (M) Copeland.

This course takes the great kaleidoscopic poem *Piers Plowman* as its ostensible subject and point of departure for thinking about the literary cultures in the late fourteenth and early fifteenth century, as well as their continuity with older and indeed later literary and intellectual discourses. The cultural lens of *Piers Plowman* takes in a fascinating range of social and historical categories, including the political (political organization, rebellion, state formation, labor, law, reforms); language (Latin and vernacular, literacy, mixing of dialect, registers, rhetorical modalities, and genres); religion (orthodoxy and heterodoxy, piety, apocalypticism, spiritual "literacies") geography (from pilgrimage to fantasy to agricultural labor); intellectual histories; and the very status of textuality itself.

In considering these problems we will read a variety of *Piers* intertexts, including selections from penitential manuals, Lollard sermons and trial records, treatises on translation, rebel broadsides, radical knock-off versions of *Piers Plowman* such as *Piers the Plowman's Creed* and *Mum and Sothsegger*, and selections from better known works such as *The Book of Margery Kempe* and *Chaucer's Parliament of Fowls*. We will also make use of earlier Latin and continental materials (in English translation) that illuminate the intellectual

traditions on which Piers Plowman draws. Requirements will include two oral presentations and a final paper. Students outside of medieval studies, and outside of English literary studies, are warmly encouraged to take this class, as Piers is truly a nexus of intellectual and cultural histories. It is also a very moving text about work, poverty, and social action.

SM 702. (AAMW702, ANCH702) Greek Sanctuaries. (M) White.

The formation and development of key religious sites, including Olympia, Delphi, Cyrene, Selinus, Cos and Lindos.

SM 703. THE ANCIENT HOUSE. (A)

SM 721. Ovid, Fasti. (M) Staff.

SM 728. (AAMW728, ARTH728) Roman Architecture & Topography. (M) Haselberger.

An intensive exploration of Rome's urban topography during the Late Republican and Imperial periods. Using primarily monumental and archaeological sources, and also including ancient texts, the goal will be to visually reconstruct a limited area of one's choice. The nearly completed Lexicon Topographicum Urbis Romae (4 volumes, so far) serves as the basic reference work. We will also receive first-hand information on methods and progress of the current publication project Mapping Augustan Rome, as it is developing in cooperation with the Corinth Computer Lab under Dr. David Romano, University Museum. - Of interest for students of art history, architecture, archaeology, and Classics. Knowledge of Latin and some familiarity with Rome will be a plus, but are not required.

SM 735. (JWST735, RELS735) Papyrology. (F) Staff.

Selected topics from current research interests relating to early Judaism and early Christianity.

999. Independent Study and Research. (C) Staff. Prerequisite(s): Permission of Graduate Chair and instructor required.

For doctoral candidates.

GREEK (GREK)

015. Elementary Modern Greek I. (M) Staff. Offered through Penn Language Center.

Study of Modern Greek language, designed for students with no knowledge of Modern Greek. Basic oral expression, listening

comprehension, and elementary reading and writing.

016. Elementary Modern Greek II. (M) Staff. Prerequisite(s): GREK 015 or equivalent. Offered through Penn Language Center. This section is reserved for heritage learners or by permission of instructor.

Continuation of Elementary Modern Greek I, with increased emphasis on reading and writing.

017. Intermediate Modern Greek I. (M) Staff. Prerequisite(s): GREK 015 and 016 or equivalent. Offered through Penn Language Center.

This course is designed for students with an elementary knowledge of Demotic Modern Greek, and aims mainly at developing oral expression, reading and writing skills.

018. Intermediate Modern Greek II. (M) Staff. Prerequisite(s): GREK 015, 016, and 017 or equivalent. Offered through Penn Language Center.

Further attention to developing oral expression, reading, and writing skills for students with knowledge of Demotic Modern Greek.

SM 101. Elementary Classical Greek I. (A) Staff.

An introduction to Classical Greek morphology and syntax. This course includes exercises in grammar, Greek composition, and translation from Greek to English. Emphasis is placed upon developing the ability to read Greek with facility.

SM 102. Elementary Classical Greek II. (B) Staff. Prerequisite(s): GREK 101 or equivalent.

Students complete their study of the morphology and syntax of Classical Greek. We begin the semester with continuing exercises in grammar and translation, then gradually shift emphasis to reading unadapted Greek texts.

SM 112. Intensive Elementary Greek. (L)

An introduction to the ancient Greek language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere with some background in learning other languages, or who need to learn Greek rapidly. The course covers the first year of college-level Greek, equivalent to GREK 101 + 102 at more than twice the normal pace. For further information on

Penn's Greek curriculum, visit the Classical Studies department website.

115. Greek/Heritage Speakers I. (C) Staff.

This course is intended to help Heritage Speakers or students with prior knowledge of conversational modern Greek or even Ancient Greek that would not fit into the beginners or intermediate classes. We review grammar as a whole, read original text, songs, video and other media and increase vocabulary and fluency in modern Greek language. Content of text is mostly informative about Greece, like culture, history, society etc., Expectation from students is to properly use the language, provide written work on various subject and make conversation in class. For finals we have presentations on topics related to the material covered in class.

116. Greek/Heritage Speakers II. (B) Staff.

It is the continuation of GREK 115 with completing Grammar (passive voice as well as unusual nouns and adjectives etc..) and adding more challenging reading and writing material. The completion of this course satisfies the language requirement. ALL students completing the HSI 115 are eligible to enroll. ALL OTHERS will have to take a placement test.

SM 203. Intermediate Classical Greek: Prose. (A) Staff. Prerequisite(s): GREK 102 or equivalent.

SM 204. Intermediate Classical Greek: Poetry. (B) Staff. Prerequisite(s): GREK 203 or equivalent.

This course is an introduction to reading Greek poetry, with an emphasis on the characteristics that differentiate the grammar, diction, and sentence structure of poetry from that of prose. The readings are primarily from Homer.

SM 212. Intensive Intermediate Greek. (M) Staff. Completion of this course fulfills the Penn language requirement. For further information on Penn's Latin curriculum, including placement and language requirement, visit the Classical Studies department website.

An introduction to the basic history and conventions of Greek prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year Greek (e.g., GREK 112). The course covers the second year of college-level

Greek, equivalent to GREK 203 + 204 at more than twice the normal pace.

SM 309. Topics in Greek Literature. (M) Staff. Prerequisite(s): Reading knowledge of Greek or permission of instructor.

This course is for those who have completed Ancient Greek 204, Greek 212, or equivalent. Close reading and discussion of a Greek author or a particular genre of Greek literature. Topics will vary each semester and the course may be repeated for credit. For current topic visit the Classical Studies department website.

399. Supervised Study in Greek Literature. (C) Staff.

This course is taken by students doing independent work with a faculty advisor. Students admitted to the honors thesis program, and focusing primarily on Greek literature, typically enroll in this course in the fall of the senior year, followed by CLST 398 in the spring. For policies see the Classical Studies department website.

401. Greek for Advanced Students. (C) Staff.

For graduate students in other departments needing individualized study in Greek literature.

SM 409. (PHIL403, PHIL406, PHIL409) Readings in Greek Literature. (M) Staff. Prerequisite(s): A 100- or 200- level course or equivalent. The cross-listing with Philosophy is not always applicable.

An advanced reading and discussion seminar on varying subjects in Greek literature: authors, genres or topics. Focus will vary each semester, and the course may be repeated for credit.

SM 480. Advanced Readings. (M)

Staff. Prerequisite(s): A 100- or 200- level course or equivalent.

For the needs of advanced undergraduates and graduate students.

SM 503. Historical Grammar of Greek. (M) Ringe. Prerequisite(s): A fluent reading knowledge of Greek.

Investigation of the grammar of Classical Greek from the viewpoint of historical linguistics. The course will offer historical explanations for numerous structural peculiarities of the Greek language and anomalies of Greek grammar, touch on the relationship of Greek with other languages, and incidentally introduce the student to some basic concepts of language analysis likely to be useful in teaching Greek and learning other languages.

SM 530. Selected Readings. (M) Staff.

For the needs of graduate students and advanced undergraduates.

SM 601. (ANCH603) Graduate Greek Prose. (M) Staff.

Reading and discussion of authors and texts to be announced. May be repeated for credit.

SM 602. (COML606, ENGL705) Graduate Greek Poetry. (M) Staff.

Reading and discussion of authors and texts to be announced. May be repeated for credit.

SM 605. Historians. (M) Staff.

A study of Herodotus and/or other historians.

SM 607. Homeric Language. (M) Staff.

A close look at the artificial Homeric dialect from the point of view of historical linguistics. Some reading of Homer will also be involved, but for the purpose of investigating the language, it will be taken for granted that students can translate the text.

SM 608. Greek Dialects. (M)

Ringe/Cardona.

A study of Greek dialects.

SM 611. (AAMW611, ANCH611) Greek Epigraphy. (M) Staff.

An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.

SM 612. Plato's Symposium and Phaedrus. (M) Kahn.

A close reading and analysis of Plato's two major dialogues on love.

999. Independent Study. (C) Staff.

For doctoral candidates.

LATIN (LATN)

SM 101. Elementary Latin I. (A) Staff.

This course provides an introduction to the Latin language for beginners, with explanation of basic grammatical concepts. Students begin reading and writing Latin within the first few weeks of the course.

SM 102. Elementary Latin II. (B) Staff. Prerequisite(s): LATN 101 or equivalent.

This course continues the introduction to Latin grammar, reading, and writing begun in Latin 101. Students also begin to read longer passages of unadapted Latin by ancient authors.

SM 112. Intensive Elementary Latin. (L) Staff.

An introduction to the Latin language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere with some background in learning other languages, or who need to learn Latin rapidly. The course covers the first year of college-level Latin, equivalent to LATN 101 + 102 at more than twice the normal pace. For further information on Penn's Latin curriculum, visit the Classical Studies department website.

SM 203. Readings in Latin Prose. (A)

Staff. Prerequisite(s): LATN 102 or equivalent.

This course is for those who have completed Latin 102, Latin 112, or equivalent (such as placement score of 550). You are now ready to begin reading real Latin! We will read a selection of passages from Latin prose authors, focusing on language and style.

SM 204. Introduction to Latin Poetry. (B)

Staff. Prerequisite(s): LATN 203 or equivalent.

This course is for those who have completed Latin 203 or equivalent (such as placement score of 600). We will read a selection of passages from Latin poetic authors, focusing on language and style.

SM 212. Intensive Intermediate Latin. (L)

Staff. Completion of this course fulfills the Penn language requirement. For further information on Penn's Latin curriculum, including placement and language requirement, visit the Classical Studies department website.

An introduction to the basic history and conventions of Latin prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year of Latin (e.g., LATN 112). The course covers the second year of college-level Latin, equivalent to LATN 203 +204 at more than twice the normal pace.

SM 309. Topics in Latin Literature. (M)

Staff. Prerequisite(s): Reading knowledge of Latin or permission of instructor.

This course is for those who have completed Latin 204, Latin 212, or equivalent (such as placement score of 650, or AP score of 4 or 5). Close reading and discussion of a Latin author or a particular genre of Latin literature. Topics will vary

each semester, and the course may be repeated for credit. For current topic visit the Classical Studies department website.

399. Supervised Study in Latin Literature. (C) Staff.

This course is taken by students doing independent work with a faculty advisor. Students admitted to the honors theses program, and focusing primarily on Latin literature, typically enroll in this course in the fall of the senior year, followed by CLST 398 in the spring. For policies see the Classical Studies department website.

401. Latin for Advanced Students. (C) Staff.

For graduate students in other departments needing individualized study in Latin literature.

SM 409. (RELS432) Readings in Latin Literature. (M) Staff.

An advanced reading and discussion seminar on varying subjects in Latin literature: authors, genres or topics. Focus will vary each semester, and the course may be repeated for credit.

SM 502. Selected Readings: Poetry. (M) Staff.

Readings in Latin poetry for graduate students and advanced undergraduate students. Authors to be announced. May be repeated for credit.

SM 503. Historical Grammar of Latin. (M) Ringe/Cardona. Prerequisite(s): A fluent reading knowledge of Latin.

Investigation of the grammar of Classical Latin from the viewpoint of historical linguistics. The course will offer historical explanations for numerous structural peculiarities of the Latin language and anomalies of Latin grammar, touch on the relationship of Latin with other languages, and incidentally introduce the student to some basic concepts of language analysis likely to be useful in teaching Latin and learning other languages.

510. (ANCH510) Latin Historical Documents. (M) Staff.

The analysis of non-literary Latin texts from antiquity preserved on various types of permanent media, mainly stone and metal, is the primary concern of the discipline of Latin epigraphy. Such texts, which have been recovered in hundreds of thousands, constitute one of the most important sources of data for the modern-day historian of Rome. The student will be introduced to the conventions of editing and reading epigraphical texts, and to the major collections of Latin inscriptions. The seminar will then concentrate on different types of documents in order to understand their formatting and style, as well as the kinds of historical evidence that can be derived from them. Public and private inscriptions, from the decrees of emperors and senatorial careers to personal curse tablets and the simple tombstone epitaphs

of the urban poor, will be considered as examples of the range of epigraphical texts available to the modern researcher.

SM 601. Graduate Latin Prose. (M) Staff.

Readings and discussion of authors and texts to be announced. May be repeated for credit.

SM 602. (COML600) Graduate Latin Poetry. (M) Staff.

Reading and discussion of authors and texts to be announced. May be repeated for credit.

SM 609. (ANCH535) Cicero: Fall 44 BCE. (A) Butler.

This course covers the period from Cicero's fateful decision to return to Rome (August, 44) up to the meeting of the Senate that declared Antony an outlaw (Jan 1, 43). We will read the Ciceronian texts of this very hot autumn more or less in real time (i.e., on the dates of composition or delivery), including the first 3 Philippics, the *De officiis*, and a number of letters. Among our goals will be to consider Cicero's simultaneous efforts at self-presentation in 3 genres (oratorical, philosophical, epistolary) and to learn the tricks and rhythms of his "final style."

999. Independent Study. (C) Staff.

For doctoral candidates.

**COGNITIVE SCIENCE
(AS) {COGS}**

**001. (CIS 140, LING105, PHIL044,
PSYC107) Introduction to Cognitive
Science. (A) Brainard/Ungar.**

Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce undergraduates from many areas to the problems and characteristic concepts of Cognitive Science, drawing on formal and

empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between them.

The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in

Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.

301. Independent Study. (C) Staff.

398. Senior Thesis. (C) Staff.

This course is a directed study intended for cognitive science majors who have been admitted to the cognitive science honors program. Upon admission into the program, students may register for this course under the direction of their thesis supervisor.

**COLLEGE
(AS) {COLL}****SM 135. The Art of Speaking. (A)**

Weber. Students need to apply and are interviewed by the instructor and Associate Director of CWiC.

This course is designed to equip students with the major tenets of rhetorical studies and peer education necessary to work as a CWiC speaking advisor. The course is a practicum that aims to develop students' abilities as speakers, as critical listeners and as advisors able to help others develop those abilities. In addition to creating and presenting individual presentations, students present workshops and practice advising. During this ABCS course, students will practice their advising skills

by coaching and mentoring students at a public school in West Philadelphia.

SM 220. Literatures of the World. (M)

Arts & Letters Sector. All Classes. Staff from the various Language and Literature departments.

Literatures of the World" is an "umbrella course" covering a family of related courses numbered COLL 221 to 229 each dealing with a particular non-English literature in its original language. These courses, several of which are taught each semester, encourage the understanding of literature within the social contexts in which it was created and examine the works' continuing significance in the modern literary arena. They also introduce students to works of creativity and cultivate their powers of textual perception by providing them with tools for literary analysis, interpretation and criticism. Although the content of the

various courses is drawn from specific literary traditions, the emphasis in each course is on developing and strengthening students' general capacity for understanding meaning. The interpretive strategies for literary analysis that the students acquire are universal and applicable to any modern literary tradition. A crucial component of any of these classes is writing analytical essays, thereby training the students to formulate their thoughts in a coherent, well-articulated manner.

The current roster includes courses from the following departments: Germanic Languages & Literatures (German); Near Eastern Languages & Literatures (Arabic, Hebrew); Romance Languages (French, Spanish); Slavic Languages (Russian); and, South Asia Studies (Hindi).

**SOCIAL GERONTOLOGY
(AS) {CGS}**

**541. (FOLK541) Academic Writing
and Research Design in the Arts and
Sciences. (M) Rabberman.**

Have you ever noticed that scholars in different academic disciplines seem to speak different languages? Have you wondered how scholars put together a plan

for their research, explain their findings, and organize and write their papers? The class is designed to introduce MLA students and other advanced students to the research and writing conventions used by scholars in the arts and sciences. With attention to disciplines in the humanities, social sciences, and sciences, we will identify and explore some of the theories, sources, language and qualitative and quantitative methodologies that scholars use as they conduct original research in their fields. Throughout the class, we will

also discuss writing conventions across the arts and sciences, with special attention to the structure of argument; the use of evidence; voice and style in both traditional academic writing and more innovative forms of writing; and documentation conventions. Students will develop an original research project through incremental writing assignments, and will write a formal research proposal (15-20 pages), which can be used as their Capstone proposal if they wish.

COMMUNICATIONS (AN) {COMM}

L/R 110. (ANTH123) Communication & Culture. (C) Society Sector. All classes. Agha.

The course looks at varieties of human expression - such as art, film, language- as communicative practices that connect persons together to form a common culture. Discussion is centered around particular case studies and ethnographic examples. Examination of communicative practices in terms of the types of expressive signs they employ, their capacity to formulate and transmit cultural beliefs and ideals (such as conceptions of politics, nature, and self), and to define the size and characteristics of groups and communities sharing such ideals. Discussion of the role of media, social institutions, and technologies of communication (print, electronic). Emphasis on contemporary communicative practices and the forms of culture that emerge in the modern world.

123. Communication and Popular Culture. (M) Sender.

Popular culture has been variously dismissed as mere trivia, "just entertainment;" it has been condemned as propaganda, a tool of mass deception; and its consumers have been dubbed fashion victims and couch potatoes. This course considers these critiques, as well as those that suggest that popular culture offers valuable material for the study of social life. We will consider the meanings and impact of popular culture, including its effects on how we see ourselves, others, and American life; who makes distinctions between high, middlebrow, and low or mass culture; and how power and resistance structure the production and consumption of popular texts.

L/R 125. Introduction to Communication Behavior. (B) Society Sector. All classes.

This course is an introduction to the fundamentals of communication behavior. It focuses on social science studies relating to the processes and effects of mass communication. Research reviewed includes media use behavior and media influences on knowledge, perceptions of social reality, aggressive behavior, and political behavior.

130. Mass Media and Society. (A) Society Sector. All classes. Turow.

How might we think about the legal, political, economic, historical, and "cultural" considerations that shape what we watch on TV, read in books, stare at in billboards? What ideas are relevant for examining the enormous changes in the mass media system and the consequences of those changes? The aim of this course is to begin to answer these questions by acquainting you with the workings of American mass media as an integral part of American society.

140. (CINE203) Film Forms and Contexts. (C) Messaris.

Movies as a form of audio-visual communication: their formal language, their relationship to other means of communication (music, stories, theater, pictures), their place in the media industry, their role in culture.

225. Children and Media. (D) Jordan.

This course examines children's relationship to media in its historic, economic, political and social contexts. The class begins with an exploration of the ways in which "childhood" is created and understood as a time of life that is qualitatively unique and socially constructed over time. It continues with a review of various theories of child development as they inform children's relationship with and understanding of television and other household media. It next reviews public policies designed to empower parents and limit children's exposure to potentially problematic media content and simultaneously considers the economic forces that shape what children see and buy. Children and Media concludes with a critical examination of research on the impact of media on children's physical, cognitive, social and psychological development.

226. (PSCI232) Introduction to Political Communication. (C) Jamieson.

This course is an introduction to the field of political communication, conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates' and office-holders' uses of news. The focus of this course is on the interplay in the U.S. between television and politics. The course includes a history of televised campaign practices from the 1952 presidential contest through the election of 2008.

237. Health Communication. (M) Hornik/Staff.

An examination of the influence of public health communication on health behavior. The course will consider: intervention programs addressing behaviors related to cancer, cardiovascular disease, HIV/AIDS, drug use, obesity and others; theories of health behavior change; issues in the design of effective health communication programs; concerns about the portrayal of health and medicine on mass media.

241. (CINE241) Featurelength Motion Pic. (C) Prerequisite(s): COMM140 or COMM262.

This course gives students the opportunity to participate in the production of a feature-length fiction film. Students engage in all aspects of production, including: screenplay writing, production design, cinematography, production sound, acting, and directing. The course is intended as a follow-up to COMM 140, Film Forms and Contexts, and COMM 262, Visual Communication. Students who have not taken either of those courses should consult with the instructor before enrolling. COMM 241 is followed by COMM 242. Students may enroll in either or both.

L/L 242. (CINE242) Feature-Length Motion-Picture Production Laboratory II. (C) Messaris.

This course gives students the opportunity to participate in the production of a feature-length fiction film. Students engage in all aspects of production, including: screenplay writing, production design, cinematography, production sound, acting, and directing. The course is intended as a follow-up to COMM241, Feature-Length Motion-Picture Production Laboratory I. Students may enroll in either semester, or both.

250. (CINE150, ENGL078) Television Studies. (M)

Principles of human information processing are discussed and applied to common communication settings. Processes discussed include perception, attention, and short and long term memory. The processing of visual, verbal, and auditory information is considered in each of these structures. Applications to the comprehension and production of visual and verbal messages, conversation, group discussion, social inference making (including judgment, attribution, and empathy), the psychology of speaking and writing, and listening and reading, of attitude formation and change, and mass communication contexts.

262. (CINE204) Visual Communication. (C) Messaris.

Examination of the structure and effects of visual media (film, television, advertising, and other kinds of pictures).

275. Communication and Persuasion. (C) Cappella/Staff.

Theory, research and application in the persuasive effects of communication in social and mass contexts. Primary focus on the effects of messages on attitudes, opinions, values, and behaviors.

Applications include political, commercial, and public service advertising; propaganda; and communication campaigns (e.g. anti-smoking).

SM 299. Communications Internship. (D) Staff.

Seminar for students concurrently participating in department-approved internships in communication-related organizations. Students will develop independent research agendas to investigate aspects of their internship experience or industry. Building on written field notes, assigned readings, and classroom discussion and evaluation, students will produce final papers using ethnographic methods to describe communications within their site or industry in order to understand and critically examine their hands-on experiences.

300. Public Space, Public Life. (C) Marvin/Staff.

Public space as a communicative arena. Historical aspects, varieties of public space, public space as a cultural signifier, how public space facilitates or hinders common life, public space as a component of democracy.

SM 302. The Media and Communications Industries in Global Perspective. (C) Arsenaault.

Media and communications industries like advertising; film, television; music; radio; and publishing play an integral role in the contemporary information revolution. Around the world, these industries are perceived to be in crisis. The introduction of new communication technologies has facilitated massive changes in traditional modes of production, distribution, and consumption. Bloggers with a laptop are challenging the hegemony of established newspaper organizations. Online music delivery mechanisms like iTunes are replacing brick and mortar music stores. Using a case study method, this class will explore the structure and dynamics of different cultural industries. We will examine the perceptions about and the

realities behind how these industries operate, the challenges they face, and their implications for society. Course readings and class discussion will cover such issues as media ownership, the political economy of media, remix culture, and intellectual property. We will also examine specific case studies such as: Rupert Murdoch's global media empire NewsCorp, the Ugly Betty franchise, and the current challenges challenges facing the New York Times.

SM 309. Washington Politics and the Media. (L)

This course is designed to enhance students' understanding of the role the media plays influencing the course public policy in the nation's capital. It will provide students with opportunities to assess major issues, currently in the news, from multiple perspectives (those of Congress, the President, interest groups, the old and new media, lobbyists, political consultants and others). They will explore the emergence of multiple "narratives" the media uses to frame policy debates, how these are formed, and how they change over time. Readings and class discussions will be supplemented by appearances by guests who have had participated in important ongoing and past policy debates."

SM 322. History and Theory of Freedom of Expression. (C) Marvin.

Origins, purpose, theory, practice of freedom of expression in the West. Philosophical roots of contemporary debates about expressive limits, especially problems associated with mass communication. Major topics may include but are not limited to sexual expression, violence, hate speech, traitorous and subversive speech, non-verbal expression, artistic expression, privacy.

SM 323. Contemporary Politics, Policy and Journalism. (B) Hunt.

"Contemporary Politics, Policy and Journalism" is a course on the modern media and its impact on government and politics. It primarily covers the post-Watergate/post-Vietnam era of journalism, the past quarter century. We will focus each week on specific topics and areas of post-Watergate journalism as enumerated below. In weeks we do not have guest lecturers, the first half of class will concern the assigned readings and the second half of class will talk about current press coverage of national events over the prior week. In addition to assigned readings, students are required to stay informed about major national news stories and to follow coverage of them in the national media outlets. An important objective of this

course is to afford students the opportunity to interact and discuss the intersection of the press, politics and public policy with some of the leading practitioners in the field, people who work in the "media environment" created by the national press.

SM 325. Adolescent Media Culture & Behavior. Bleakley.

The purpose of this course is to examine the role of media in adolescent development and behavior. We will review current research several topic areas and use various theoretical perspectives to consider how adolescents interact with media and how media influence adolescents' self and behavior. The course is divided into 3 sections. First we focus on the adolescent as a consumer/audience by addressing such issues as why adolescence is a unique developmental stage, how adolescents use media, and understanding their media habits with regards to different media and technologies. The next section of the course will be devoted to reviewing relevant theoretical perspectives on how media influence self and behavior, followed by exploring the effects of media across several areas of research including violence, sex, body image, obesity, and smoking. Finally, the course will conclude with a discussion of the potential for media as a positive factor in adolescent lives with an emphasis on media interventions and campaigns for self (e.g. attitudinal) and behavior change.

330. Advertising and Society. (M) Turow.

This course will explore the historical and contemporary role of the advertising industry in the U.S. media system. Readings will include social histories of advertising, economic examinations of advertising's role in society, and critical analysis of the ad industry's power over the media.

SM 336. Local News Media and Urban Policy. (M) Kaniss.

This course will examine the nature of local news in the 21st century and the ways in which local news coverage influences urban policies, the actions of local officials, and the image of the city. The course will begin with an examination of how economic forces influence local news coverage in particular, the importance of political geography. We will look at how suburbanization and the rise of local television newscasts affected metropolitan newspapers in the 20th century, and how the more recent emergence of the Internet now affects what is considered "local news." The class will also consider

innovations in local news, including citizen journalism and "hyperlocalism," , blogs and free dailies targeted to youth. At the same time, the course will examine the changing professional values and "standard operating procedures" of local journalists in the face of new competition. We will also consider how local news is influenced by the media strategies of local public officials, and how these local officials-in particular, big-city mayors-play a role in the local news media's fortunes.

339. Critical Perspectives in Journalism. (M) Zelizer/Delli Carpini.

This course aims to provide students with a critical understanding of journalism. It combines theoretical perspectives on the making of news with primary source material produced by and about journalists. Students will analyze theoretical material on journalism -- about how news is made, shaped, and performed -- alongside articles and broadcasts appearing in the media, interviews with journalists in the trade press, and professional reviews. Topics include models of journalistic practice, journalistic values and norms, gatekeeping and sourcing practices, storytelling formats in news, and ethical problems related to misrepresentation, plagiarism, and celebrity.

SM 340. Basic Communication Research. (A) Hennessy.

This course is a general overview of the important components of social research. The first third of the semester presents a conceptual basis for assessing research quality based on the four "types of validity." We also cover the standard elements of research design including sampling, measurement, and causal inference. These concepts are then illustrated through reviews of four research areas: surveys and field studies, qualitative/ethnographic studies, content analysis, and policy/evaluation studies. The last third of the semester focuses more on descriptive and inferential statistics, measures of association for categorical and continuous variables, and the language of data analysis. For these classes, we make use of SMALL STATA, a PC program useful for learning statistics. Most modules are illustrated through class exercises based on published articles. This course fulfills the undergraduate quantitative requirement.

SM 341. Children's Media Policy. Jordan.

This course takes a philosophical, historical, and practical approach to understanding why and how the US media industries are regulated. It begins by

examining the philosophical tension regarding free speech rights vs. child protection obligations and the media effects beliefs that would drive media regulation. Next, it examines the process of media policy formation and implementation, including the role of regulatory agencies, industry lobbyists, academic researchers and child advocates in advancing distinct policy agendas. Throughout the course we survey a range of policy actions, from legislatively required parental monitoring tools (such as the V-Chip) to voluntary industry efforts (such as network restriction of junk food advertising). We consider evidence of the success of these efforts in limiting children's exposure to damaging content and in improving parents' ability to supervise their children's media use.

SM 345. Qualitative Research Methods in Communication. (C) SENDER.

This class teaches students the logics, ethics, and techniques of qualitative research in communication. The class will cover a range of qualitative with which to approach contemporary and historical questions in communication, including textual analysis, archival research, online studies, individual and group interviews, and participant observation. Students will consider the nature of evidence and evaluation when working with qualitative data, learning to analyze findings and to present their original work in written and spoken contexts. Throughout the semester students will design their own independent project and undertake a pilot study of that project.

362. Visual Communication Lab. (M) Messaris. Prerequisite(s): COMM 262.

Follow-up to Comm 262, Visual Communication. The laboratory provides an opportunity for students to explore through actual media production many of the conceptual principles and research findings discussed in Comm 262 and other communication courses. Permission of instructor required for enrollment.

SM 374. (PSCI374) Communication and Congress. (M) Felzenberg.

This course will examine how Congress goes about the business of translating the public's concerns into legislation and keeps the public informed of its progress. It will examine how the two chambers interact in this process, what role the media plays in shaping Congress's agenda and vice versa, and what impact the advent of 24 hour news, C-SPAN and the internet have had on Congressional deliberations. A historical approach will be taken in

considering the evolution of both chambers and the media's coverage of them. Students will examine differences between the House and Senate in both their institutional development and how they go about communicating with each other, the general public, and the other branches and levels of government.

SM 375. Communications and Emergency Response. Felzenberg.

A series of unforeseen and unprecedented emergencies in recent years have posed steep challenges to private businesses, non-profit institutions, and local, state and federal government. Terrorist attacks, natural disasters, hurricanes, financial collapse and other crises have posed unique communications challenges to people in positions of authority. Increasingly, they have had to implement plans, make announcements, and order evacuations, often on short notice, and strategies that have minimized damage and enhanced the security of the greatest number of people as well as those that have not. On occasion, guests, who have had been on the front lines in emergency situations will appear in class to enhance students appreciate of the extent of these challenges and to share their ideas as to how they might best be handled. Readings will focus on case studies of historical and contemporary emergency situations and how policy makers addressed them.

SM 385. Media Activism and Social Change. Garry.

This course offers students the opportunity to explore the relationship between the media industry and the public and the role groups and movements can play in holding the media accountable to serve the public interest. We will wrestle with what that responsibility looks like by engaging the following questions: What obligations do media outlets have to offer fair, accurate, unbiased and inclusive representations in news and entertainment? How do media "insiders" understand this responsibility? Is it clear when a talk show host "crosses the line?" How do we define balance? Are there really two sides to every issue? What is media advocacy? What does it look like? What are the strategies and tactics employed by media activists? How do media insiders effectively contend with media outsiders lobbying for change? These questions will be explored in historically contextualized ways, using a diverse menu of social and political movements and examining the issues with recourse to all sides of the political spectrum.

SM 395. Communication and the Presidency. (D) Eisenhower.

This course will examine the vital aspect of communication as a tool of the modern Presidency. Reading and class discussions will focus on case studies drawn from modern Presidential administrations (beginning with FDR) that demonstrate the elements of successful and unsuccessful Presidential initiatives and the critical factor of communication, common to both. This course is also an introduction to primary research methods and to the use of primary research materials in the Presidential Library system. Applications for course available in the Undergraduate Office. Preference given to ComPS students. Majors only.

SM 396. Media Events. (C) Katz.

Live broadcasts of historic events - contests, conquests, and coronations - constitute a new form of ceremonial politics whereby television joins the establishment and audience to declare a holiday. The course will analyze this genre - its diffusion, politics, aesthetics, ethnography, and effects.

SM 398. Special Topics in Communication. (D) Staff.**399. Independent Study. (D)** Staff.

Prerequisite(s): Written proposal signed and approved by faculty supervisor.

The independent study offers the self-motivated student an opportunity for a tailored, academically rigorous, semester-long investigation into a topic of the student's choice with faculty supervision. Its structure and purpose is different from the internship experience. Students must also complete and file a designated form, approved and signed by the supervising faculty member and the Associate Dean for Undergraduate Studies, which includes a topic proposal. This form must be received in the Undergraduate Office during the Add period of the semester during which the independent study will be conducted.

SM 405. Facing Race: Race and Caricature in the Historical Imagination. (C) Pearl.

Is race imaginary? If so, who invented facial distinctions and why can we see them? Do pictures change the way we think? How do artists think about the people they draw and satirize? This course will explore the relationship between caricature and perceptions of racial difference in modern western culture. We will interrogate the role that visual images play in framing our perceptions of groups and their defining characteristics. Broadly

historical, this interdisciplinary course will introduce students to scholarship in visual culture, media studies, science studies, and race theory. Students will develop skills in primary source analysis, historical methodology, and visual analysis. Assignments will include a visual analysis, 4 short papers, and a final exam.

SM 408. Children and Media: Cognitive Development. (M)

Linebarger. Prerequisite(s): COMM 125 and COMM 225.

This seminar is designed to investigate the relationships between children's cognitive development and their use of media (i.e., television, computers, the Internet, video games, electronic toys). We will examine normal patterns of children's thinking and how these patterns are situated in children's lives (e.g., contextual factors that mediate cognitive functioning). Then, students will apply these concepts to understand both the creation of and the effects associated with media.

SM 410. (SOCI409) New Media and Community Life. (C) Hampton.

Prerequisite(s): COMM 125 or COMM 130.

This upper level course provides an overview of recent research on the social implications of new media. The focus is on how recent technological innovations, including personal computing, the Internet and mobile phones may be changing the way we interact with each other, our environments and those around us. This seminar takes students beyond the basic questions of "are virtual communities real communities?" and "does the Internet destroy or save community?" to an in-depth discussion of how networks of community relations are maintained and transformed on and offline as a result of new media. The course is based around the argument that computer networks are inherently social networks, linking people, organizations and communities. This subject is heavily weighted towards the evaluation of empirical studies, the use of social network analysis, and studies that address sociological research questions. Students will learn to critically examine the impact of new media on society through in-depth seminars and independent research.

SM 413. The Role of Public Opinion in Leadership Decisions. (C) Hart.

This course endeavors to explore the myriad uses of public opinion in leadership and decision making. In it, we will examine what public opinion research is, how it is conducted, and how it is subsequently utilized in a wide range of

contexts, both public and private. We will use numerous actual case studies involving public opinion in political campaigns, constituency organizing, crisis management, and a variety of other contexts to provide an inside view of how opinion research is actually conducted and used. We will consider such questions as: How does an incumbent politician formulate strategy and successfully communicate message in the midst of a dirty politics/decidedly anti-incumbent Senatorial campaign? What would you do if you were Governor and your roads and highways needed improvements, but the public opposed a new gas tax? If you were a CEO of a large company and you had safety concerns about some of your products, how would you balance your corporate image and reputation against the independence from government influence?

SM 418. Nothing New Under the Heavens: The History of 'Old Media'. (A) PEARL.

In this course, we will explore the history of media innovations and revolutions in the Western world. Following a brief look at early cave writing and papyrus, we move to early modern developments in print-making. We will analyze different methods of image reproduction, focusing in particular on the printing press and its social and cultural impact. We will discuss the implications of the printing press for literacy, political life, democracy, the post, and visual culture. We track track changes in print culture through the nineteenth century, thinking about the relationship between the explosion in printed material and the development of the middle class. We will connect changes in print culture to early photography, film, and radio, thinking about how this history created the conditions of possibility for "new media." In this class, we search for continuities that will help us frame current debates and scholarship on new media and its implications.

SM 422. (ANTH423) Televised Redemption. (M) Jackson.

This course examines some of the ways in which religious groups mobilize media technologies and respond to the inescapable ubiquity of mass mediation. Students will try to determine how such mass mediation helps to to build/reconfigure transnational communities of spiritual belief and practice. The course focuses on various forms of Christianity, Judaism, and Islam (especially, but not exclusively, in their African-American incarnations) in an effort to assess how their practitioners deploy media technology to to disseminate (and as

part of) their religious/spiritual cosmologies. For example, we will look at (i) Christianity and televangelism, (ii) Muslim self-representations in film and broadcast radio/television, and (iii) Jewish (including "Black Hebrew") uses of cable access programs, self-produced DVDs/CDs, and the Internet. We will try to ascertain how new media technologies recalibrate traditional religious practices and potentially reconfigure theological and Diasporic communities.

SM 439. Media Criticism. (M) Zelizer.

Criticism has at its core an assumption of judgment about the target or performance being evaluated. Yet whose judgment is being articulated? On which basis and authority? To which ends? And with which effects? This course examines the shape of contemporary media criticism, focusing on its meaning function in different domains of popular culture (including music, television, news, and film) and the patterns by which it is produced. Students will become acquainted with theories and ongoing debates about contemporary media criticism themselves. The course aims to sensitize students to the nuances of their own consumption of criticism and patterns by which it is typically produced.

SM 462. (CINE462) Visual Communication and Social

Advocacy. (M) Messaris. Prerequisite(s): COMM 262.

"The course explores the use of video and other visual media for social causes. Students choose their own area of interest, conduct background research, design and produce videos, and post them on-line. The course uses a seminar format, and class size is limited to fifteen people."

SM 470. FREAKS AND GEEKS. (C)

SM 485. Globalization and the Music Video. Kraidy.

This seminar focuses on the music video genre to explore topical and conceptual the heart of the globalization of the media and cultural industries. After a formative period largely grounded in North America and Western Europe, the music video migrated to other parts of the world in the 1990s as a wave of privatization and liberalization engulfed national media systems worldwide. Based on a variety of scholarly and trade readings about the globalization of media and culture, the changing media and creative industries, and the music video genre itself, questions to be tackled include: What changes when a media form migrates from its original

context? What does the content of music videos reveal about socio-economic and cultural change worldwide? How do music videos rearticulate gender and sexuality, and nationalism? What transnational circuits of ideas, images and ideologies are enabled or constrained by music video?

495. COMPS Capstone Thesis. (D)

Staff. Prerequisite(s): Written proposal approved by both thesis supervisor and major chair.

Offered for credit in the senior year, the capstone thesis is the project goal for all Communication & Public Service Program participants. Students choose the topic of the capstone thesis from a range of public policy/public service issues. Research may involve funded travel to selected archives or fieldwork sites. For students graduating with a 3.5 cumulative GPA, the capstone project may be designated as a senior honors thesis in public service.

SM 496. (SOC430) Leisure, Communication and Culture. (C)

Katz.

Ever since God created the six-day work week, humans have been trying to decide how to use leisure. This course focuses on the allocation of time among different social functions, with particular reference to the idea that culture and communication may be considered the content of leisure. Readings range from empirical studies of "time budgets," to studies of the production and consumption of the arts, entertainment, holidays and tourism. "Culture policy," especially the role of government in the arts, will be considered comparatively and historically.

499. Senior Honors Thesis. (D) Staff.

Prerequisite(s): Written proposal approved by both thesis supervisor and major chair.

The senior honors thesis provides a capstone intellectual experience for students who have demonstrated academic achievement of a superior level. Students should consult with and arrange for a supervisor from the standing faculty no later than the middle of the term that precedes the honors thesis. Students must file a designated form, approved and signed by the supervising faculty member and the Associate Dean for Undergraduate Studies, which includes a topic proposal. This form must be received by the Undergraduate Office no later than the last day of classes in the semester that precedes the thesis.

SM 615. (PSCI635) Experimental Design and Issues in Causality. (C) MUTZ.

The main goal of this course is to familiarize students with experiments, quasi-experiments, survey experiments and field experiments as they are widely used in the social sciences. Some introductory level statistics background will be assumed, though this is a research design course, not a statistics course. By the end of the course, students will be expected to develop their own original experimental design that makes some original contribution to knowledge. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels to experimental research.

SM 721. Theory and History in Global Communication. (C) Kraidy. FULFILLS ASC INSTITUTIONS & CULTURE DISTRIBUTION.

For more than a half century, global communication theory has been shaped by interaction between worldwide geopolitical developments on the one hand, and theoretical trends in the social sciences and humanities on the other hand. This course is designed to give you a firm grasp of the historical trajectory of global communication theory and to develop knowledge of the central debates that have animated the field since the mid-20th century. We will discuss how these debates have changed, under what circumstances, and how contemporary scholarship wrestles with them; and how language and jargon in the field has shifted from "international" to "global." We will also explore why some key issues and media have received relatively scant attention in global communication research, while others have arguably been over-emphasized. We will read a mixture of primary sources by luminaries in the different paradigms that have dominated global communication, complemented with secondary texts that are carefully selected to give you a sense of the architecture of the field, an understanding of what sub-areas of global communication scholarship are published and the journals and presses that publish in those sub-areas.

Graduate Courses

500. Proseminar. (A) Staff.

Introduction to the field of communications study and to the graduate program in communications. Required of all degree candidates. Open only to graduate students in communication.

522. Introduction to Communication Research. (A) Hornik/Price, V.

The logic of scientific inquiry and the nature of research. Problem-oriented approach to research design, field and laboratory observation and experimentation, sampling, systematization of observation, instrument construction, interviewing and content analysis, and basic statistical analysis. Required of all degree candidates. Open only to graduate communication students.

SM 523. Field Methods in Communication Research. (M)

Sender.

This course is designed to introduce graduate students in the social sciences to ethnography as a formal research method, drawing on case studies, "how to" materials, and writings from a variety of disciplines. We will focus on the theory, logic, and practice of fieldwork, specific methodological and ethical issues associated with studying people at first-hand, and current debates about what constitutes the bounds and limits of the ethnographic enterprise more generally. This course presumes some introductory undergraduate training in qualitative methods.

524. Introduction to Statistical Analysis. (C) Hennessy.

This course is designed for students with no previous statistical experience or past courses. It starts with descriptive statistics, graphs, and plots, covers probability and confidence intervals, and ends up with bivariate regression and measures of association for tables. The course is "hands-on" using Stata, a personal computer program.

525. Politics and the Media. (M) Delli Carpini. Fulfills ASC Influence Distribution.

An examination of theory and research regarding the role of mass communication in the political process. Topics will include: the development of the field; the role of communication in campaigns and elections; the impact of communication on alternative forms of civic and political engagement; the role of communication in the policy-making process; new media and the political process; and issues of media regulation.

530. Advertising and Society. (M)

Turow. Fulfills ASC Institutions Distribution.

Advertising and Society will explore the development of the advertising industry in the U.S., the relationship between the

advertising industry and the U.S. mass media, and historical as well as contemporary discussions of advertising's social and cultural roles.

SM 539. Journalism and the Academy. (M) Zelizer. Fulfills ASC Culture Distribution.

Contemporary journalism remains one of the most studied yet unexplained agents of reality construction. This course tracks theories of journalism across academic disciplines, exploring what is common and disparate about the varied perspectives they invoke. Topics include the development of journalism as a field of academic inquiry, histories of news, organizational research on the newsroom, narrative and discourse analytic work on news-texts, and recent work in cultural studies.

SM 545. Children and Media. (C)

Linebarger. Fulfills ASC Influence Distribution.

This course will explore the nature of television and new technologies and investigate how these technologies influence children and families. Course content will be approached from both an industry perspective as well as a social scientific perspective. That is, we will explore the child audience as present consumers, as influencers of purchasing decisions, and as future consumers. We will examine how marketers target the child audience. From a researcher's perspective, we will examine the history of children's media use, the effects of television on children, children's cognitive and emotional interactions with television, and the design of educational TV programs and media products. Current social policy concerns will also be addressed.

SM 550. Mass Media Industries. (M)

Turow. Fulfills ASC Institutions Requirement.

Through theoretical readings and case studies, this course will provide an introduction to the study of media institutions from the standpoint of business processes, legal frameworks, and public policies. The first part of the course will sketch the history of major US media and present conceptual frameworks for understanding industrial, legal and policy approaches to US media institutions. Part 2 will explore key contemporary industrial, legal and policy issues relating to particular US media industries. Part 3 of the course will use case studies to apply and deepen understanding of the frameworks and issues.

SM 555. Social Networks. (M)

Hampton. Fulfills ASC Influence Distribution.

This course is a non-mathematical introduction to the social network perspective. The social network approach is the study of the relations linking persons, organizations, interest groups, states, etc. Network analysis examines how the structure of social relations allocates resources, constrains behavior, and channels social change. Participants in this course will discuss the application of classical and contemporary theories and methods of network analysis to sociological questions. Topics include community, social capital, the flow of information and resources, and computer networks as social networks.

562. (CINE504) Fundamentals of Visual Communication. (B) Messaris.

Fulfills ASC Culture or Influence Distribution.

Introduction to the study of picture-based media: film, television, web, print, and other images. Theory and research on visual culture, visual "literacy," and visual persuasion.

SM 566. New Media and Society. (M)

Hampton. Fulfills ASC Influence Distribution.

This seminar provides an overview of recent research on how "new media," such as the Internet and mobile phones, influence community, social relationships, and public and private spaces. This subject is heavily weighted towards the evaluation of empirical work, the study of social networks, and research that address sociological research questions. Examples of questions that will be explored in this course include: Will new media replace existing forms of communication, such as face-to-face and telephone contact? Does the use of mobile information and communication technologies (ICTs) increase privatism? Are people cut off from their social networks as a result of in-home computer and Internet use? Will public participation and civil society atrophy as a result of new media use?

575. Social Psychology of Communication. (A) Cappella. Fulfills ASC Influence Distribution.

Contributions of social psychology to understanding communication behavior: message systems; social cognition; persuasive communications; attitude formation and change; face-to-face interactions and small group situations; strategies of attributional and communicative interpretation; mass

communication effects; social influence and networks.

SM 576. (PSCI576) Communication & Public Opinion. (C) Price, V. Fulfills ASC Influence Distribution.

An exploration of enduring research questions concerning mass communication and American public opinion. The course introduces students to the literature on public opinion, with a focus on the role of communication in public opinion formation and change. Important normative, conceptual and theoretical issues are identified and examined by reviewing some early writings (ca. 1890-1930) in social philosophy and social science. These issues are then investigated further through a review and discussion of relevant research in sociology, political science, social psychology and mass communication.

SM 577. (PSYC774) Attitude and Behavioral Prediction. (C) Fishbein. Fulfills ASC Influence Distribution.

An introduction to the concept of attitude and its role in behavioral prediction. The course will cover standardized attitude measurement instruments (e.g., Thurstone, Likert, Guttman and Semantic Differential Scales), expectancy-value models, psychological or individual-level theories of behavior and behavior change, and will consider the implications of attitude theory and measurement for developing effective behavior change communications.

SM 602. Media Ritual. (M) Marvin. Fulfills ASC Culture Distribution.

Examines the relationship between ritual, a 'traditional' and essential mode of group communication and the pervasive media environment of post-traditional society. While societies seem eager to ritualize with all media at their disposal, the historical innovation of mass mediated ritual appears to offer a significant challenge to the body-based social connectedness that has long been regarded as definitive for ritual communication. Students will read from religious, anthropological and media traditions of ritual scholarship to consider what rituals do, how they do it, how they can be said to succeed or fail and how mediated ritual modifies or transforms older systems of ritual communication.

SM 608. Children & Media: Cognitive Development. (M) Linebarger. Fulfills ASC Influence Distribution.

This course is designed to investigate the relationships between children's cognitive development and their use of media (i.e., television, computers, the Internet, video

games, electronic toys, museums, and books). We will examine normal patterns of children's thinking and how these patterns are situated in children's lives (e.g., contextual factors that mediate cognitive functioning). Cognitive development will be examined via both basic functions (i.e., attention, comprehension, representation, memory, problem-solving) and applied functions (i.e., literacy, language, numeracy). Within each topical area, various contextual factors will be explored including gender, people (e.g., parents, peers, caregivers/teachers), and perceptions.

SM 619. (CINE619) The Politics and Practices of Representation. Sender. Fulfills ASC Culture Distribution.

This course engages with the following question from both theoretical and practical perspectives: Who says what about whom, under what circumstances, in which medium, with what effects? We will spend the first two thirds of the semester investigating different approaches to this question, looking at insider accounts, processes of othering, realism and other narrative conventions, the ethics of consent, "objective" and "biased" shooting techniques, the politics of editing, the role of the intended audience in the production of a work, and so on. We will simultaneously cover the technical aspects of production that will enable you to produce digital video projects: shooting (Canon GLIs), lighting, sound, editing (Final Cut Pro on Mac), graphics, music, and so on. During the final third of the semester all students will produce short (5-10 minute) documentary and/or experimental digital videos.

SM 622. (COML797) Communicating Memory. (M) Marvin/Zelizer. Fulfills ASC Culture Distribution.

This course considers the theoretical and empirical literature concerning the construction of social memory in relation to media products and processes. Students will undertake individual research projects investigating memory constructions in professional media routines and through ritual processes of group maintenance.

SM 623. Health Psychology Seminar. (M) Jemmott. Fulfills ASC Influence Distribution.

Seminar members shall critically review current applications of psychosocial theory and methodology to health-related issues with the goal of suggesting new directions that research might take. Preventive health behavior, HIV risk-associated behavior, psychosocial factors and physical health,

practitioner-patient interactions, patterns of utilization of health services, and compliance with medical regimens are among the topics that will be studied.

SM 624. Applied Regression Analysis. (M) Hennessy.

This course focuses on the use of regression analysis and other related statistical methods that are appropriate when experimental control is low or nonexistent. The main purposes of the course are: to convey complete familiarity with regression techniques to enable students to understand the application of regression in communication research literature, to be able to apply these procedures at the most advanced level properly in their own research, to be able to diagnose when violations of regression assumptions are present in data and correct for these conditions, and to lay the foundations for more advanced studies in categorical data analysis (e.g. binary and multinomial logit and probit) and structural equations modeling (SEM). The course assumes knowledge of introductory statistics through summary statistics, confidence intervals, t-tests, F tests, scatter diagrams, and the logic of statistical association. The course begins with a detailed review of bivariate regression. Students can use either STATA or SPSS to analyze artificial and actual data sets and we also use detailed examples from AMOS and Mplus.

SM 628. (SOC1629) Sociology of Mass Communications. (A) Wright. Fulfills ASC Influence Distribution.

Mass communications viewed from sociological perspective. An examination of the sociology of the communicator, audience, content, effects, communication as a social process, linkage between personal and mass communication.

SM 632. Conceptualizing Media Effects. (C) Katz. Fulfills ASC Influence Distribution.

The course is a critical review of the major theories of mass communication extracting from each its conception of the audience, the text, and especially the nature of effect. Conceptions of effect are shown to range from short-run change of opinion and attitudes ("what to think") to proposals that the media offer tools "with which to think" (gratifications research; cultural studies), "when to think" (diffusion research), "what to think about" (agenda setting), "how to think" (technological theories), "what not to think" (critical theories), "what to feel" (psychoanalytic theories), and "with whom to think" (sociological theories). Students

study the key texts of each theoretical approach, and reappraise the field in the light of new concepts and new evidence.

SM 633. Consumer Culture. (M)

Sender. Fulfills ASC Culture Distribution.

Why do we consume? What is consumption for? By exploring a range of theoretical and empirical approaches to consumer culture, this course investigates the contexts and effects of consumption on social participation, identities, and communities. In addition to looking at existing studies of consumer culture, students complete a modest, originally-conceived research project.

637. Public Health Communication.

(B) Hornik. Fulfills ASC Influence Distribution.

Theories of health behavior change and the potential role for public health communication; international experience with programs addressing behaviors related to cancer, AIDS, obesity, cardiovascular disease, child mortality, drug use and other problems, including evidence about their influence on health behavior; the design of public health communication programs; approaches to research and evaluation for these programs.

SM 639. (COML639, FOLK639)

Communication and Cultural Studies. (M) Zelizer. Fulfills ASC Culture Distribution.

This course tracks the different theoretical appropriations of "culture" and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication, and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as "cultural studies." The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues, and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.

640. Analysis of Data in Large-Sample Communication Research.

(I) Hornik. Prerequisite(s): COMM 522 and 524, or the equivalents.

Statement of measurement and substantive models, and strategies for examining the fit of data to those models. Examples and data are drawn from the media effects literature. Application of data reduction procedures, contingency table analysis, and

correlational approaches including regression and structural equation models.

SM 642. Diffusion of Innovation. (M)

Katz. Fulfills ASC Influence Distribution.

How things (and ideas) spread, with special reference to the linkages between media and interpersonal networks Classic writings (Tarde, Sorokin, Simmel) on diffusion processes will be reviewed in the light of contemporary research. A variety of case studies originating in different disciplines will be compared.

SM 644. Communication and Space.

(M) Marvin. Fulfills ASC Culture Distribution.

Physicalized space is said to be crucial to public life. Perhaps so. But it is also critical to urbanization, globalization, modernity, mobility, social hierarchy, flow, scale, imperialism (what Said called the geography of violence), revolution, intimacy, shopping malls, simulacra, and being-in-the-world. Space is not only mediated and dialectical; it is a privileged strategy of post-modernity, "the everywhere of modern thought." So far as media go, the analytic of space implies a shift away from narrative and toward process and practice as ways of structuring experience. What are the theories that get at this? How can we use theories of space to think about media and culture, to rediscover the richness of the world? And what about the explosive iteration of screen culture that logically ought to imperil lived space but seem to offer new modes for grounding it. We will explore these themes in the relevant literatures for the purpose of developing fabulously interesting research projects, including some in visual format. No spatial pre-requisites.

SM 645. Children & the Media: Evaluation Techniques. (M)

Linebarger. Fulfills ASC Influence Distribution.

We will explore a variety of evaluation methods used in children's media research including formative evaluation, summative evaluation, and usability/appeal studies. Time will also be spent discussing the special challenges associated with conducting research with children. Students will develop formative and summative research plans based on a media product of their choosing. We will also attempt some pilot data collection to solidify your research plans. As part of the course, students will help develop additional course materials for each topic.

SM 660. Content Analysis. (M)

Krippendorff. Fulfills ASC Influence or Culture Distribution.

An introduction to content analysis, the analysis of large bodies of textual matter, also called message systems analysis, quantitative semantics, propaganda analysis, and (computer-aided) text analysis. The course inquires into the theories, methods, and empirical problems common to these analytical efforts: sampling, text retrieval, coding, reliability, analytical constructs, computational techniques, and abductive inference. It illustrates these problems by studies of mass media content, interview or panel data, legal research, and efforts to draw inferences from personal documents typical in psychology and literature. Students design a content analysis and do the preparatory work for an academic or practical research project. They may also use the opportunity of forging available theories into a new analytical technique and test it with available texts, or solve a methodological problem in content analysis research.

SM 662. Research in Visual Communication. (M)

Messaris. Prerequisite(s): COMM 562 or permission of instructor. Fulfills ASC Culture Distribution.

Research on the structure and effects of visual media. Movies, video, the web, photography, etc., as objects of analysis and as research tools. Students design and carry out their own projects.

SM 666. Communication and Taboo. (C)

Marvin. Taboo considered as refusing various possibilities for cultural communication and practice. How the forbidden is conveyed, consented to, imposed or challenged by situated participants. Topics may include taboo aspects of identity, politics, speech, art, religion, food and bodily practice. Students may choose from a variety of topics for individual investigation.

SM 675. Message Effects. (M)

Cappella. Prerequisite(s): COMM 575. Fulfills ASC Influence Distribution.

Current research, theory and statistical methods for assessing the effects of messages. Specific focus on messages designed to have a persuasive effect on attitudes, beliefs, opinions, or behaviors. Experimental and non-experimental research from mass and interpersonal communication, health, social psychology, advertising, political science and journalism will be considered. Unintended

effects--such as the consequences of violent pornography--are not considered.

699. Advanced Project in a Medium. (C) Staff.

Proposal written in specified form and approved by both the student's project supervisor and academic advisor must be submitted with registration. Open only to graduate degree candidates in communication.

SM 703. (LAW 914, PSCI703) International Communication: Power and Flow. (C) Price, M./Katz. Fulfills ASC Institutions Distribution.

This course will address old and new patterns of communications flow across national and societal borders, taking account of media technologies, mutual perceptions, rhetorical forms, and the balance of power and influence in a globalizing world.

SM 704. Canonic Texts. (C) Katz. Fulfills ASC Influence or Culture Distribution.

Canonic Texts in Media Research: Are there any? Should there be? How about these? Reading for this course centers on 13 essays, each of which nominates a text for "canonization." This course will deal with (1) the original texts and their critiques, (2) the schools which the texts represent, and (3) the debate over canonizing texts in social science.

SM 709. (LAW 903) Media and Sovereignty: Comparative Approaches to Regulation of the Media. (M) Price, M. Fulfills ASC Institutions Distribution.

This course examines the idea of "models" of media regulation. We look at varying techniques and contexts for shaping media policy. One focus will be on transformations of public service broadcasting. Another will be on media in conflict zones. Another theme will be state responses to the permeability of the Internet (and other new technologies). Depending on various research activities, there may be a focus on media reform in the Arab Middle East. We'll use my book, *Media and Sovereignty*, published by MIT in 2003 and materials produced by BBC Monitoring World Media.

SM 726. (PSCI726) Seminar in Political Communication: The Internet and Civic Engagement. (M) Price, V. Fulfills ASC Influence Distribution.

This seminar explores debates over the potential of the Internet to affect

community and political engagement. The nature and contours of civic participation will be examined from normative, theoretical and empirical perspectives, with a focus on the functions of communication media generally and Internet-related technologies specifically. Students in the seminar will canvass available studies, experimental projects and online initiatives, and will undertake original research projects. Topics addressed include: ways in which Internet-related technologies might be used as tools for citizens to interact, organize, and participate in democratic life; possible psychological and social effects of Internet use, and their implications for civic engagement; connections between civic engagement, social capital, and the Internet; and implications of the Internet for public opinion.

SM 730. Public Space. (M) Katz/Marvin. Fulfills ASC Culture Distribution.

The object of this course is (1) to identify public spaces, physical and virtual-- past, present, and future; (2) to review the terms of admission and participation in the public sphere, (3) to consider the nature of interaction and influence within these spaces; (4) to relate such participation (and non- participation) to the media of communication; (5) to explore the policy implications of public spaces for participatory democracy.

SM 740. (AFRC640, ANTH640) Race, Diaspora & Critique. (E) Jackson. Prerequisite(s): COMM 522 or equivalent, or permission of instructor.

SM 750. Seminar in Media Industries. (M) Turow. Prerequisite(s): COMM 550 and/or COMM 530. Fulfills ASC Institutions Distribution.

This research seminar will center on the processes and social implications of out-of-home advertising and other forms of marketing communication. The course encourage students to tackle emerging issues related to any number of traditional or emerging media, including mobile handsets; billboards (digital and traditional); event marketing; event sponsorship; transit materials; and the panoply of in-store marketing vehicles including architecture, packaging, radio, television, computer-laden carts, signage, floor mats, and more. Social issues related to these issues are many; they include privacy, surveillance, industrial constructions of audiences, varieties of redlining, understandings of food and food-culture, and definitions of identity and

public-private space. Marketers say that out-of-home advertising is the fastest growing-form of advertising next to internet advertising. During the past couple of years, every major media conglomerate has joined the race to track and reach people as they move through the world. Oddly, communication researchers have virtually ignored this part of our world. So I think there is here an opportunity here to push a new research agenda.

SM 760. Social Constructions of Reality. (M) Krippendorff. Fulfills ASC Institutions or Culture Distribution.

This seminar inquires into the principles and processes by which realities come to be socially constructed and discursively maintained. It serves as an introduction to the emerging epistemology of communication, which is concerned less with what communication is than with what it does, constitutes, and actively maintains, including when being studied. The seminar develops analytical tools to understand how realities establish themselves in language and action, how individuals can become entrapped in their own reality constructions, how facts are created and institutions take advantage of denying their constructedness. After reading several exemplary studies, students explore the nature of a construction on their own. The seminar draws on the discourse of critical scholarship and emancipatory pursuits, which are allied with feminist writing, cultural studies, and reflexive sociology. It is committed to dialogical means of inquiry and takes conversation as an ethical premise.

SM 762. Visual Communication Seminar. Messaris.

SM 766. Symbolic Aspects of Communication. (M) Marvin. Fulfills ASC Culture Distribution.

Topics in symbolic communication at the macro-cultural level. Past topics have addressed nationalism, bodies and texts as distinctive but interacting symbolic modes within non-traditional cultures, ritual symbolism. These or other topics may be offered. Check with instructor.

799. Independent Research. (C) Staff.

Proposal written in specified form and approved by both the student's project supervisor and academic advisor or another member of the faculty must be submitted with registration.

995. Dissertation. (C) Staff.

Doctoral candidates, who have completed all course requirements and have an

UNIVERSITY COURSE REGISTER

approved dissertation proposal, work on
their dissertation under the guidance of

their dissertation supervisor and other
members of their dissertation committee.

**COMPARATIVE
LITERATURE AND
LITERARY THEORY
(AS) {COML}**

SM 003. (GRMN003) Censored! A History of Book Censorship. (M) Wiggins. Freshman Seminar. All readings and lectures in English. No knowledge of German is required.

Although its pages may appear innocuous enough, bound innocently between non-descript covers, the book has frequently become the locus of intense suspicion, legal legislation, and various cultural struggles. But what causes a book to blow its cover? In this course we will consider a range of specific censorship cases in the west since the invention of the printed book to the present day. We will consider the role of various censorship authorities (both religious and secular) and grapple with the timely question about whether censorship is ever justified in building a better society. Case studies will focus on many well-known figures (such as Martin Luther, John Milton, Voltaire, Benjamin Franklin, Goethe, Karl Marx, and Salman Rushdie) as well as lesser-known authors, particularly Anonymous (who may have chosen to conceal her identity to avoid pursuit by the Censor).

005. (SAST004) India's Literature: Love, War, Wisdom, Humor. (M) Arts & Letters Sector. All Classes. Patel.

This course introduces students to the extraordinary quality of literary production during the past four millennia of South Asian civilization. Selecting for discussion only a few representative works in translation from pre-modern India (ranging from the earliest Sanskrit and Tamil texts, through to the medieval literatures of South Asia's regional Languages (Kannada, Gujarati, Bengali, Marathi, Telegu, Panjabi, Malayalam, Oriya etc) and up to the Hindavi romance traditions of the 16th century, the course will also broadly investigate the processes of masterpiece-making in South Asia, both through the lens of indigenous aesthetic formulations as well as from diverse contemporary perspectives of literary analysis. In doing so, the goal will be to come to some understanding of the immensely rich and complicated networks of language, literary form and the cultural life that have historically informed and continues to inform the production of literature of South Asia. Our semester covers seminal genres that also serve as the organizing principles

for the course: the hymn, the lyric, the epic, the gnomic, the dramatic, the political, the prosaic, the tragic and the comedic. No background in South Asia studies or South Asian languages is required.

SM 016. (ENGL016) Topics in Literature. (M) Staff. Freshman seminar. Freshman Seminars under the title "Topics in Literature" will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare's period to the ethnic fiction of contemporary America. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be applied to a period, genre, or thematic requirement within the major.

021. (CLST321, ENGL021) Medieval Literature and Culture. (M) Staff.

This course introduces students to four hundred years of English literary culture, from approximately 1100 to 1500. This period was marked by major transformations, not only with respect to government, law, religious practice, intellectual life, England's relation to the Continent (during the 100 Years War), the organization of society (especially after the Black Death), the circulation of literary texts, and the status of authors. Topics may include medieval women writers, manuscript production, literatures of revolt, courtly culture, Crusades, cross-Channel influences, and religious controversy.

053. (AFST053, GSOC053, MUSC053, RELS115) Music of Africa. Muller.

African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwaito to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post-colonial era.

055. (ENGL055, GSOC055) 19th-Century Novel. (A) Staff.

During the nineteenth century the novel became the dominant literary form of its day, supplanting poetry and drama on both sides of the Atlantic. In this introduction to the novelists of the period, we will read the writers who secured the novel's cultural respectability and economic prominence. Likely authors will include Austen, the Brontes, Collins, Dickens, Eliot, Hardy, Hawthorne, Melville, Poe, Thackeray, Scott, and Stowe. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself.

SM 057. (JWST151, NELC156, RELS027) Great Books of Judaism. (A) Stern.

The study of four paradigmatic classic Jewish texts so as to introduce students to the literature of classic Judaism. Each text will be studied historically--"excavated" for its sources and roots--and holistically, as a canonical document in Jewish tradition. While each text will inevitably raise its own set of issues, we will deal throughout the semester with two basic questions: What makes a "Jewish" text? And how do these texts represent different aspects of Jewish identity? All readings will be in translation.

059. (ENGL059) Modernisms and Modernities. (M) Staff.

This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin.

SM 062. (ENGL062) 20th-Century Poetry. (M) Staff.

From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of

the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetries, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course.

065. (AFST065, ENGL065) The 20th-Century Novel. (M) Staff.

This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison.

069. (ENGL069) Poetry and Poetics. staff.

What is poetry and what place does it have among literary forms? What is its relation to culture, history, and our sense of speakers and audiences? This course will focus on various problems in poetic practice and theory, ranging from ancient theories of poetry in Plato and Aristotle to contemporary problems in poetics. In some semesters a particular school of poets may be the focus; in others a historical issue of literary transmission, or a problem of poetic genres, such as lyric, narrative, and dramatic poetry, may be emphasized. The course will provide a basic knowledge of scansion in English with some sense of the historical development of metrics. This course is a good foundation for those who want to continue to study poetry in literary history and for creative writers concentrating on poetry.

077. (ENGL077, SAST124) Literature and Empire. (M) Staff.

Since the sixteenth century English has been, among other things, an imperial language, and ideas about empire and imperialism have shaped not only many of English literature's central texts but also the development of English literary study as a

discipline. This course is an introduction to the way imperial contact and changing ideas about empire and decolonization have shaped literature in English from the sixteenth to the twentieth centuries. We will consider historical and cultural materials to offer contexts for literary production of texts from the sixteenth to the twentieth centuries. The course also will serve as a comprehensive introduction to the way literary and cultural representations of Europe have been influenced by changing ideas about empire and imperialism. Different versions of the course will vary in the historical and cultural material they cover as they offer a context for literary production.

SM 080. (ITAL080) Intro to Italian Cinema: From Neorealism to the Nineties. (A) Arts & Letters Sector. All Classes. Kirkham.

Italian national cinema from the Golden Age of silent film and classics of Neorealism to present, covering work of a dozen major directors. Films discussed in context of history from the Unification, national vs. regional identity, gender roles, contemporary politics. Readings in Italian history, Italian film history, and theory of cinema. Taught in English.

090. (AFRC090, ENGL090, GSOC090) Women and Literature. (C) Barnard. This is a topics course. If the topic is "Gender, Sexuality, and Literature," the following description applies.

This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherr_e Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg.

093. (ENGL093, GSOC093, LALS093) Introduction to Postcolonial Literature. (M) Staff. This is a topics course.

English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender.

094. (ENGL094) Introduction to Literary Theory. (M) Staff.

This course introduces students to major issues in the history of literary theory, and provides an excellent foundation for the English major or minor. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the "New" Criticism of the 1920s and 30s, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory.

096. (ENGL096, GSOC096) Theories of Gender and Sexuality. (M)

Humanities & Social Science Sector. Class of 2010 & beyond. Staff.

What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality -- a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherr_e Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker.

L/R 100. (ENGL100) Introduction to Literature and Literatures. (C) Arts & Letters Sector. All Classes. Todorov.

This course introduces students to the study of comparative literature as a rigorous intellectual discipline. There are no prerequisites, and this class has been designed for students who are considering majors in related fields and those who seek a broader, theoretically rooted understanding of reading and enjoying literature. Our readings will include both literary and theoretical texts; we will be reading novels, essays, poems, and plays that come from a range of periods and of literary traditions.

101. (FOLK101, NELC181, RELS108) Introduction to Folklore. (M)

Humanities & Social Science Sector. Class of 2010 & beyond. Ben-Amos.

The purpose of the course is to introduce you to the subjects of the discipline of Folklore, their occurrence in social life and the scholarly analysis of their use in culture. As a discipline folklore explores the manifestations of expressive forms in both traditional and modern societies, in small-scale groups where people interact with each face-to-face, and in large-scale, often industrial societies, in which the themes, symbols, and forms that permeate traditional life, occupy new positions, or occur in different occasions in everyday life. For some of you the distinction between low and high culture, or artistic and popular art will be helpful in placing folklore forms in modern societies. For others, these distinctions will not be helpful. In traditional societies, and within social groups that define themselves ethnically, professionally, or culturally, within modern heterogeneous societies, and traditional societies in the Americas, Africa, Asia, Europe and Australia, folklore plays a more prominent role in society, than it appears to plan in literate cultures on the same continents. Consequently the study of folklore and the analysis of its forms are appropriate in traditional as well as modern societies and any society that is in a transitional phase.

104. (CINE104, ENGL104) Study of a Period. (C) Arts & Letters Sector. All Classes. Staff.

This is an introduction to literary study through a survey of works from a specific historical period--often the 20th century, but some versions of this course will focus on other times. (For offerings in a given semester, please see the on-line course descriptions on the English Department website.) We will explore the period's important artistic movements, ideas, and

authors, focusing on interconnectedness of the arts to other aspects of culture. This course is designed for the General Requirement; it is also intended to serve as a first or second course for prospective English majors.

106. (ENGL105, GSOC105) Topics in Literature and Society. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Staff.

This course offers students an opportunity to explore the relation between social institutions and culture, particularly how such institutions structure contemporary human society. Specific versions of this course such as "Copyright and Culture," for example, teach students the specific concepts and principles of legal and literary analysis while exploring the history of how discrete interpretive systems have overlapped in their jurisdictional claims, have shared specific values while rejecting others, and have repeatedly come into conflict with one another over the definition, status, and function of art and intellectual property. In all its versions, this course will provide students with specific tools to understand and evaluate the behavior of human beings in contemporary cultures. At the same time, the subject matter of the course will render the conflict between different social institutions and between their different interpretive methods its centerpiece.

SM 107. (ITAL100) Topics: Freshman Seminars. (C) Staff.

This is a topics course. Topics vary each year.

110. (ENGL087, HIST246, THAR110, URBS212) Theatre, History, Culture I. (C) Arts & Letters Sector. All Classes.

Schlatter. Fulfills Arts and Letters Distributional Requirement.

This course will explore the forms of public performance, most specifically theatre, as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their anthropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on the development of theatre practice in both Western and non-Western cultures intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions and acting methods, this course will investigate, where appropriate, social and political

history, the arts, civic ceremonies and the dramaturgic structures of urban living.

111. (ENGL097, THAR111) Theatre, History, Culture II. (C) Staff.

This course examines theatre and performance in the context of the broader urban, artistic and political cultures housing them from the Renaissance to the mid-19th century. Encompassing multiple cultures and traditions, it will draw on a variety of readings and viewings designed to locate the play, playwright, trend or concept under discussion within a specific socio-historical context. The evolution of written and performed drama, theatre architecture, and scenography will be examined in tandem with the evolution of various nationalisms, population shifts, and other commercial and material forces on theatrical entertainments. Readings consequently will be drawn not only from plays and other contemporary documents, but also from selected works on the history, theory, design, technology, art, politics or society of the period under discussion.

114. (NELC115, RELS144) Persian Mystical Thought: Rumi. (M)

Minuchehr.

This course examines the works and ideas of the thirteenth century sufi and founder of the Mevlevi order, Mowlana Jalaluddin Rumi. Although Rumi composed his mystical poetry in Persian, numerous translations in a multitude of languages have made this poet an international personality. In this course, we will examine Rumi's original mystical vocabulary and allegorical style in English translations. We will also look at Rumi's reception in different parts of the world, especially in America, where he has been on the best-seller lists for a decade.

SM 115. (ENGL111) Experimental Writing Seminar. (C) Bernstein.

Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

This is a nontraditional "poetry immersion" workshop. It will be structured around a series of writing experiments, intensive readings, art gallery visits, and the production of individual chapbooks or web sites for each participant, and performance of participants' works. There will also be some visits from visiting poets. The emphasis in the workshop will be on new and innovative approaches to composition and form, including digital, sound, and performance, rather than on works emphasizing narrative or story telling. Permission of the instructor is required.

Send a brief email stating why you wish to attend the workshop (writing samples not required).

118. (CINE118, GSOC118, GSOC418, NELC118) Iranian Cinema: Gender, Politics, Religion. (M) Minuchehr.

Post-Revolutionary Iranian cinema has gained exceptional international reception in the past two decades. In most major national and international festivals, Iranian films have taken numerous prizes for their outstanding representation of life and society, and their courage in defying censorship barriers. In this course, we will examine the distinct characteristics of the post-revolutionary Iranian cinema. Discussion will revolve around themes such as gender politics, family relationships and women's social, economic and political roles, as well as the levels of representation and criticism of modern Iran's political and religious structure within the current boundaries. There will be a total of 12 films shown and will include works by Kiarostami, Makhmalbaf, Beizai, Milani, Bani-Etemad and Panahi, among others.

SM 119. (CINE119, NELC119) Middle Eastern Cinema: Law and Society. (M) Minuchehr.

In the past two decades, films from the Middle East have gained exceptional international reception. This course is designed to explore the reasons behind this reception through a study of the prevalent social, political, and historical themes and issues in Middle Eastern cinema. Questions such as women's laws, literature and its function, familial issues and gender roles, historical legacies and political tensions, and religion, will be discussed. This course assumes no previous knowledge of film studies or languages of the region. Films from Israel, the Arab World, Turkey, and Iran will be shown in subtitled versions.

125. (ENGL103, FOLK125, NELC180) Narrative Across Cultures. (C) Arts & Letters Sector. All Classes. Allen.

The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the

translation of cultural values in a comparative perspective.

126. (GRMN242) Fantastic & Uncanny in Literature. (A) Arts & Letters Sector. All Classes. Weissberg.

What is the "Fantastic"? And how can we describe the "Uncanny"? The course will examine these questions, and investigate the historical background of our understanding of "phantasy," as well as our concepts of the "fantastic" and "uncanny" in literature. Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, a choice of Friedrich Schlegel's and Novalis' aphorisms, and Romantic narratives by Ludwig Tieck, E.T.A. Hoffman, Edgar Allan Poe, Nathaniel Hawthorne, and others. All of the texts will be available in English/in English translation, and no knowledge of a foreign language is required.

127. (CINE125, GSOC125, RUSS125) The Adultery Novel In and Out of Russia. (C) Arts & Letters Sector. All Classes. Platt. All readings and discussions in English.

The object of the course is to analyze a series of 19C and 20C novels (and a few short stories) about adultery. Our reading will teach us about novelistic traditions of the period in question and about the relationship of Russian literature to the European models to which it responded. The course begins with a novel not about families falling apart, but about families coming together - Jane Austen's *Pride and Prejudice*. We then will turn to what is arguably the most well-known adultery novel ever written, Flaubert's *Madame Bovary*. Following this, we investigate a series of Russian revisions of the same thematic territory that range from "great literature" to pulp fiction, including Tolstoy's *Anna Karenina* and other works by Tolstoy, Chekhov, Leskov and Nagrodskaja. As something of an epilogue to the course, we will read Milan Kundera's backward glance at this same tradition in nineteenth-century writing, *The Unbearable Lightness of Being*. In our coursework we will apply various critical approaches in order to place adultery into its social and cultural context, including: sociological descriptions of modernity, Marxist examinations of family as a social and economic institution, Freudian/Psychoanalytic interpretations of family life and transgressive sexuality, Feminist work on the construction of gender.

150. (HIST149, RUSS193) War and Representation in Russia, Europe and the U.S. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Platt.

Representations of war are created for as many reasons as wars are fought: to legitimate armed conflict, to critique brutality, to vilify an enemy, to mobilize popular support, to generate national pride, etc. In this course we will examine a series of representations of war drawn from the literature, film, state propaganda, memoirs, visual art, etc. of Russia, Europe and the United States. We will pursue an investigation of these images of conflict and bloodshed in the larger context of the history of military technology, social life, and communications media over the last two centuries. Students will be expected to write two papers, take part in a group presentation on an assigned topic, and take a final exam. The goal of the course will be to gain knowledge of literary history in social and historical context, and to acquire critical skills for analysis of rhetoric and visual representations.

167. (CLST267, ENGL029) Ancient Novel. (C) Staff.

The ancient Greek and Roman novels include some of the most enjoyable and interliterary works from antiquity. Ignored by ancient critics, they were until fairly dismissed by classical scholars as mere popular entertainment. But these narratives have enormous influence on the later development of the novel, and in their sophisticated playfulness, they often seem peculiarly modern -- or even postmodern. They are important source for any understanding of ancient culture and society. In this will discuss the social, religious and philosophical contexts for the ancient novel will think about the relationship of the novel to other ancient genres, such as epic. Texts to be read will include Lucian's parodic science fiction story *about the moon*; Longus' touching pastoral romance about young love and sexual awakening *Heliodorus'* gripping and exotic thriller about pirates and long-lost children; *Golden Ass*, which contains the story of Cupid and Psyche; and Petronius' satirical evocation of an orgiastic Roman banquet.

186. (CINE221, EALC186) Screening Modern Korea: Korean Film and Culture. (M) Kim. All films with English subtitles.

Is Korean cinema experiencing a "renaissance" in the 21st century? We will take the recent surge of success behind Korean cinema as a way to explore our object of study: Korea and the cinema. We

situate Korean cinema in broader (and at times narrow) cultural, social, and aesthetic contexts to investigate transnational media production and circulation, globalization, consumer culture, commercialization, Hollywoodization, and construction of national, ethnic, gender identities, etc. The course focuses on the works of prominent filmmakers of Korea's past and present, such as Shin Sangok, Im Kwontaek, Kim Kiduk, and Lee Ch'angdong, as well as paying special attention to genres of Korean film such as the melodrama, slapstick comedy, and erotica. No prerequisites. All films with English subtitles.

187. (EALC017, GSOC187) Possessing Women. (M) Chance.

A man from Tennessee writes *Memoirs of a Geisha*. A Japanese novelist tells the story of the "comfort women" who served the Japanese army. A tenth-century courtier poses as a woman writing the first woman's diary. Poets from Byron to Robert Lowell, through Ezra Pound to Li Po, have written as though they were women, decrying their painful situations. Is something wrong with this picture, or is "woman" such a fascinating position from which to speak that writers can hardly help trying it on for size? In this course we will look at male literary impersonators of women as well as women writers. Our questions will include who speaks in literature for prostitutes--whose bodies are the property of men--and what happens when women inhabit the bodies of other women via spirit possession. Readings will draw on the Japanese traditions, which is especially rich in such cases, and will also include Western and Chinese literature, anthropological work on possession, legal treatments of prostitution, and film. Participants will keep a reading journal and write a paper of their own choosing.

SM 191. Classics of the Western World I. (C) Arts & Letters Sector. All Classes. Staff.

This course will approach selected classic works of Western culture up to the Middle Ages with two purposes in mind. First, we will try to see how our notions of authority, agency, will and history have been shaped by these texts, in particular by epic and tragedy; further, we will consider how such concepts in turn have been complicated by the author's recognition of the power of desire and shifting definitions of gender and identity. Second, we will look at how we identify a "classic" in our culture, and will try to understand what sort of work it does for us. Texts to be read will include: Homer's *ILIAD* and *ODYSSEY*; Euripides'

BACCHAE; Sophocles' *OEDIPUS THE KING*; Aeschylus' *PROMETHEUS BOUND*; Aristophanes' *FROGS*; Virgil's *AENEID*; THE *CONFESSIONS OF ST AUGUSTINE*, and Dante's *DIVINE COMEDY*. All works will be read in translation.

SM 192. Classics of the Western World II. (C) Staff.

This class provides a survey of works drawn from the Western literary canon from the Renaissance to the 20th century. Work may be drawn in part from the following authors: Montaigne, Shakespeare, Webster, Moliere, Milton, Behn, Laclous, Rousseau, Sterne, the Romantic poets, Austen, Dickens, Bronte, Wilde, Woolf and Joyce.

193. (ENGL099, FOLK241) Great Story Collections. (M) Arts & Letters Sector. All Classes. Staff.

The Great Story Collections moves backwards in time from Chaucer's *CANTERBURY TALES* and Boccaccio's *DECAMERON* through the 1001 NIGHTS and Persian mystical story collections to the Indian *PANCHATANTRA*, exploring the development of the literary story collection and its connections with oral narrative traditions of the present and the past.

197. (RUSS197) Madness and Madmen in Russian Culture. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Vinitzky.

This course will explore the theme of madness in Russian literature and arts from the medieval period through the October Revolution of 1917. The discussion will include formative masterpieces by Russian writers (Pushkin, Dostoevsky, Tolstoy, Chekhov, and Bulgakov), painters (Repin, Vrubel, Filonov), composers (Mussorgsky, Tchaikovsky, and Stravinsky), and film-directors (Protazanov, Eisenstein), as well as non-fictional documents such as Russian medical, judicial, political, and philosophical treatises and essays on madness.

L/R 200. (CLST200, FOLK200) Greek and Roman Mythology. (C) Arts & Letters Sector. All Classes. Staff.

An introduction to classical mythology through close analysis of selected texts. Topics include: the definition of myth; its social, political, and religious contexts; the variety of methodologies available for its study (e.g. comparative anthropology, structuralism, psychoanalysis); the literary development of myths, divine and heroic; the Roman adaptation of Greek myths; and the relationship of myth to historical,

philosophical, and scientific modes of thought. No prior background is required. Students come to the study of mythology from a variety of disciplines. This course should be particularly useful to those interested in literature, the fine arts, anthropology, folklore, and religion.

SM 203. (COLL228, ITAL203) Introduction to Italian Literature and Culture. (B) Staff.

Readings and reflections on significant texts of the Italian literary and artistic tradition exploring a wide range of genres, themes, cultural debates by analyzing texts in sociopolitical contexts. Readings and discussions in Italian.

204. (CINE204, CLST204) Hollywood "Classics". (M) Staff.

What do Bruce Willis and Homer have in common? Why do so many films seem so familiar? Is popular culture meaningless? If so, why all the controversy over *The Lion King*, *Braveheart*, or *Murphy Brown*? This course will answer all this and more. It will provide an introduction into both classical literature and the interpretation of popular culture; but it will not entail sitting through hours of *The Last Days of Pompeii*, *Spartacus*, *Helen of Troy*, or other films your parents remember fondly. Students will read a number of well-known texts from antiquity, one or two 20th-century works, and view 8-12 (mostly) recent popular films. By examining the texts and films first within their cultural contexts and then against one another, we will address a number of different themes and issues that will also expose students to different reading tactics. Topics include: the myth of the hero, the evolution of detective fiction, the politics of children's literature and film, narrative strategies, and the uses of tradition. Texts include: Homer's *Odyssey*, Sophocle Apuleius' *Golden Ass*, Ovid's *Metamorphoses*, Euripides' *Hipp* Chandler's *The Big Sleep*, short stories by Raymond Carver, critical essays. Probable films include: *Die Hard*, either *Terminator 2* or *Aliens*, *Angel Heart*, Disney's *Beauty and the Beast*, and *Mighty Aphrodite*.

212. (NELC201) Modern Middle Eastern Literature in Translation. (B) Arts & Letters Sector. All Classes. Allen, Gold.

This course is team-taught by four professors with specialties in Arabic, Hebrew, Persian and Turkish literatures; all four attend all the sessions of the course. The course deals with the modern literature within each tradition and focuses on poetry, the short story and the novel (among which

have been in recent year: Al-Tayyib Salih's SEASON OF MIGRATION TO THE NORTH, Yehoshua's THE LOVER, Hedyat's THE BLIND OWL, and Kemal's MEMET MY HAWK). The readings are all in English. The course is conducted in a seminar format. Students are expected to participate in classroom discussion of the materials assigned for each session, and evaluation is partially based on the quality of that participation. A short paper is assigned on the poetry and the short stories, and there is a final examination.

SM 213. (RELS218, RUSS213) Saints and Devils in Russian Literature. (M)

Arts & Letters Sector. All Classes. Verkholtantsev.

Despite the title, Russian 213 is not simply about saints and devils in Russian culture. Our primary goal is to trace cultural continuity and understand the dependence of the 19th and 20th century Russian literature and art on cultural paradigms and categories of pre-modern Russia. In Russia, where culture and conscience had been nourished by Eastern Orthodoxy and Indo-European paganism, the 19th-century search for spirituality was invariably connected with Orthodoxy and religious pursuits. The interest in Russian history kindled a fascination with medieval Russian literary and artistic productions. Writers and artists turned for inspiration to medieval themes and genres. In "Saints and Devils," we will examine the literary images of the holy and the demonic in works from various periods and we will learn about the historic trends that have filled Russia's national character with religious and supernatural spirit. All readings and films are in English and include such authors as Pushkin, Gogol, Dostoevsky, Tolstoy, Leskov, Bulgakov, and Nabokov, as well as films by Tarkovsky and Eisenstein.

SM 214. (CINE240, ITAL213) Contemporary Italy through Film. (M)

Benini.

This is a topics course; topics vary from year to year.

215. (NELC233) Arabic Literary History. (A)

Allen.
This course provides a survey of the genres and major figures in Arabic literary history from the 6th century up to the present day. Selected works are read in translation; poetry is discussed first, then belles-lettrist prose. Selected suras from the Qur'an are read as the centerpiece of the course. Each set of texts are accompanied by a collection of background readings which place the authors and works into a literary, political

and societal context. This course thus attempts to place the phenomenon of "literature" into the larger context of Islamic studies by illustrating the links between Arab litterateurs and other contributors to the development of an Islamic/Arab culture on the one hand and by establishing connections between the Arabic literary tradition and that of other (and particularly Western) traditions.

SM 216. (COLL225, GRMN216) Intro to Literature. (B) Arts & Letters Sector. All Classes. Staff. Prerequisite(s): GRMN 215 or the equivalent.

Develops students' basic skills of literary interpretation. Exposure to various reading techniques (e.g. close reading, reading for plot, etc.) and to literary terminology and its application. Readings will include selections from prose, drama and lyric poetry.

SM 218. (COLL221, FREN221) Perspectives in French Literature. (A)

Staff.

This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Students are expected to take an active part in class discussion in French. French 221 has as its theme the presentation of love and passion in French literature.

SM 219. (COLL221, FREN222) Perspectives in French Literature. (A)

Staff.

This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Special emphasis is placed on close reading of texts in order to familiarize students with major authors and their characteristics and with methods of interpretation. They are expected to take an active part in class discussion in French. French 222 has as its theme the Individual and Society. Students who have taken 221 may also take French 222 for credit.

SM 220. (HIST220, RUSS220) Russia and the West. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Verkholtantsev.

This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life - Revolutions, educational system, public executions, resorts, etc. - within the context of Russian

intellectual history. We will examine how images of the West reflect Russia's own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers' letters, diaries, and historiosophical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lecture, discussion, short writing assignments, and two in-class tests.

SM 221. (ENGL221) Topics in Medieval Literature. (M)

Staff.

This seminar explores an aspect of medieval literature intensively; specific course topics will vary from year to year. Topics in the past have included the medieval performance, medieval women, and medieval law and literature.

SM 222. (ENGL222, GSOC221) Topics In Romance. (M)

Staff.

This seminar explores an aspect of epic or romance intensively; specific course topics will vary from year to year.

SM 224. (PHIL225, STSC108)

Philosophy of Science. (M) Domotor, Akhundov.

A discussion of some philosophical questions that naturally arise in scientific research. Issues to be covered include: The nature of scientific explanation, the relation of theories of evidence, and the development of science (e.g., does science progress? Are earlier theories refuted or refined?).

SM 226. (CINE232, COLL223, LALS240, SPAN223) Russian Short Story in the 20th Century. (C)

staff.

Discover the fascinating world of twentieth-century Russian literature through the short but captivating texts by some of its greatest masters. Daring explorations of taboo topics, excellence of style, and, of course, reflections of life and death issues Russian literature is famous for--these are but few of the topics to be discussed in this course. From Anton Chekhov, Russia's greatest short story writer, through the Symbolists, Babel, Nabokov up to post-totalitarian writing, we will explore this unique literary tradition. No knowledge of Russian is required.

227. (DTCH231, GRMN231) World War I and After. (C)

Staff.

228. (HEBR250, JWST256, RELS220) Studies in Hebrew Bible. (C) Tigay. Prerequisite(s): HEBR 154 or the equivalent.

The aim of this course is to introduce students to the critical methods and reference works used in the modern study of the Bible. To the extent possible, these methods will be illustrated as they apply to a single book of the Hebrew Bible that will serve as the main focus of the course.

SM 230. (CLST330, ENGL231) Topics in Renaissance Studies. (M) Staff.

This course explores an aspect of renaissance literature intensively; specific topics will vary from year to year.

231. (GRMN245) Literature and Culture in Central Europe. (M) Staff.

It is difficult to imagine a current century without the remarkable contributions of Central European culture. Central Europe is the birthplace of Freud and psychoanalysis, Schoenberg and twelve-tone composition, Kafka, Kraus, and Musil. It is also a combustible world theater for raging conflicts among political ideologies, nationalisms, and world views. This course examines the many legacies of Central Europe to the present. Through literature, cinema, and other arts, it explores a unique history that extends from the Habsburg and Ottoman empires, through two world wars, to communism and beyond. Readings are in English and include representative works from Albanian, Austrian, Bosnian, Czech, Hungarian, and Polish fiction.

232. (GRMN234) Literature and Revolution. (L) Wiggin.

SM 234. (ITAL232) The World of Dante. (M) Kirkham. Freshman Seminar.

The masterpiece of Italian literature read in the context of Dante's cultural milieu (the Aristotelian cosmos, contemporary politics, medieval intellectual ideals, the esthetic of order, symbolism, allegory, numerology and his literary heritage from Virgil to the early Italian vernacular poets. Illustrated manuscripts and the visual tradition of the poem will be shown in slide presentations. Lecture/discussion format.

235. (HIST219, RUSS234, SLAV517) Medieval Russia: Origins of Russian Cultural Identity. (M) Verkholantsev.

COML 235 offers a cultural history of Medieval Rus' from its origins through the Late Middle Ages, a period which laid the foundation for the emergence of the Russian Empire. Three modern-day nation-states Russia, Ukraine and Belarus share

and dispute the cultural heritage of Medieval Rus', and their political relationships even today revolve around questions of national and cultural identity. The focus of the course will be on the Kievan and Muscovite traditions but we will also note the differences (and their causes) of the Ukrainian and Belarusian cultural histories. This course takes a comparative and interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodoxy viewed in a broader European context. Students will explore the worldview of medieval Orthodox Slavs by delving into such topics as religion, spirituality, art, literature, education, music, ritual and popular culture.

SM 239. (ASAM241, ENGL241, GSOC241) Topics in 18th Century Literature. (M) Staff.

This course explores an aspect of 18th-century literature intensively; specific course topics will vary from year to year.

240. (FOLK240) Fairy Tales: Forms and Interpretation. (M) Staff.

An examination of the history and forms of the fairy tale (Marchen) as an oral narrative genre and as a literary construction. Topics covered include the history of collecting folktales in Europe and the United States; the issue of "authenticity" of the tales; and the importance of studying context and artistic performance in storytelling events. Issues of gender and sexuality in fairy tales--and of religious and supernatural beliefs evidenced in the tales will be a focus of the class. We will also discuss fairy tales as children's literature; illustrators of fairy tales from Arthur Rackham to Wanda Gag and Maurice Sendak; and the uses of images and plots from fairy tales in popular culture (including Disney's films) and in tourism, advertising, and marketing.

L/R 241. (CINE352, GRMN256, RELS236) The Devil's Pact in Literature, Music and Film. (A) Arts & Letters Sector. All Classes. Richter. All readings and discussions in English.

For centuries the pact with the devil has signified humankind's to surpass the limits of human knowledge and power. From the reformation puppet play to the rock lyrics of Randy Newman's Faust, from Marlowe and Goethe to key Hollywood films, the legend of the devil's pact continues to be useful for exploring our fascination with forbidden powers.

L/R 242. (RELS003) Religion and Literature. (C) Arts & Letters Sector. All Classes. Matter.

A consideration of how great works of literature from different cultural traditions have reclaimed and reinterpreted compelling religious themes. One religious tradition will be emphasized each time the course is taught.

L/R 245. (CINE112, ENGL102, GSOC102) Study of a Theme. (M) Arts & Letters Sector. All Classes. Staff. This is a topics course.

This is an introduction to literary study through the works of a compelling literary theme. (For offerings in a given semester, please see the on-line course descriptions on the English Department website). The theme's function within specific historical contexts, within literary history generally, and within contemporary culture, are likely to be emphasized. This course is designed for the General Requirement.

SM 248. (AFRC385, ASAM202, ENGL259, GSOC285) Topics in Modernism. (C) Staff. This is a topics course.

An exploration of literary modernism which may include novel, poetry, criticism, drama and film. Topics may include "Culture of the 60's," "Race in American Literature and Film," "Madness and Modernism," or "Modernist Heroes."

SM 249. (CINE250, ENGL251, GSOC250) Topics in 19th Century Literature. (C) Staff.

This course explores an aspect of 19th-century literature intensively; specific course topics will vary from year to year.

SM 252. (LALS252, SPAN250) Spanish Literature in Translation. (B) Arts & Letters Sector. All Classes. Staff. This is a topics course. The topic may be "Latin American Travel Narratives or "Caribbean Writers in the U.S.".

L/R 253. (ENGL261, GRMN253, GSOC252, HSOC253, STSC253) Freud. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Weissberg.

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today.

L/R 254. (GRMN244, URBS244) Metropolis: Culture of the City. (C) Arts & Letters Sector. All Classes. MacLeod.

An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doebelin, Marx, Engels, Benjamin, Kracauer. Films include Fritz Lang's *Metropolis* and Tom Tykwer's *Run Lola Run*.

255. (GRMN255) Mann, Hesse, Kafka. (C) Arts & Letters Sector. All Classes. Jarosinski.

Based on considerations of the cultural tradition and the intellectual currents of the twentieth century, the course presents a survey of the achievements of Mann, Hesse, and Kafka. The extensive study of representative works focuses on the problems of the artist in the modern age.

SM 257. (JWST153, NELC158, NELC458, RELS223) Jewish Literature in the Middle Ages. (C) Stern.

Readings in medieval Hebrew literature, with special attention to poetry, narrative, and the interpretation of the Bible, and to the varieties of Jewish experience that these literary works touch upon. All reading in translation.

259. (FOLK296, NELC254) Jewish Humor. (C) Ben-Amos.

In modern American popular culture Jewish humor is considered by Jews and non-Jews as a recognizable and distinct form of humor. Focusing upon folk-humor, in this course we will examine the history of this perception, and study different manifestation of Jewish humor as a particular case study of ethnic in general. Specific topics for analysis will be: humor in the Hebrew Bible, Jewish humor in Europe and in America, JAP and JAM jokes, Jewish tricksters and pranksters, Jewish humor in the Holocaust and Jewish humor in Israel. The term paper will be collecting project of Jewish jokes.

SM 261. (ENGL255, GSOC255) Topics in 19th C. Novel. (C) Staff.

This course explores an aspect of the 19th-century novel intensively; specific course topics will vary from year to year.

SM 262. (GSOC260) Advanced Topics in Narrative. (M) Krishnan.

This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. Specific course topics will vary from year to year.

SM 263. (ENGL265, GSOC266) Topics in 20th C. Novel. (C) Staff.

This course explores an aspect of the 20th-century novel intensively; specific course topics will vary from year to year.

264. (CLST141, THAR141) Ancient Theatre. (C) Staff.

This course will introduce you to the "roots" of the western dramatic tradition by surveying a number of well-known tragedies and comedies from Greco-Roman antiquity. Although the syllabus varies slightly from year to year, students can expect to read such influential works as Sophocles' "Oedipus Rex" and Aristophanes' "Clouds." In addition to reading the plays themselves, students will gain insight into the reception of dramatic performances in the ancient world. Individual authors and works will be presented within their historical contexts and we will attend to matters such as staging of drama, the evolution of theatrical performance, and interpretation of ancient drama as social and/or political commentary.

SM 265. (ENGL276, THAR140) Topics In Theatre History. (B) Staff.

The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place.

SM 266. (COLL227, HEBR259, HEBR559, JWST259) Introduction to Modern Hebrew Literature. (M) Arts & Letters Sector. All Classes. Gold. The class will be conducted in Hebrew and the texts read in the original. There will be 3-4 short papers and a final exam.

"I Want to Die in My Bed", a young Yehuda Amichai's anti-war poem, led the rebellion of Israeli authors in the 1950s. Scholars would later call Amichai and his peers the "Generation of the State," because they were the first authors to publish in the State of Israel after it was established and forged its literary future. These rebels distanced themselves from the Zionist father-figures, rejecting their ideological focus. The short stories of A.B. Yehoshua and Amos Oz, for example, turned to anti-heroic and surrealist modes. While poets, like Nathan Zach, promoted the use of common language.

SM 267. (CLST315, ENGL256, THAR275) Topics In Modern Drama. (M) Staff.

This course explores an aspect of Modern drama intensively; specific course topics will vary from year to year.

269. (CINE250, GRMN257) Nazi Cinema. (M) Richter/MacLeod.

Cinema played a crucial role in the cultural life of Nazi Germany. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than a 1000 films during the Nazi era. This general requirement course explores the world of Nazi cinema ranging from infamous propaganda pieces such as *The Triumph of the Will* and *The Eternal Jew* to entertainments by important directors such as Pabst and Douglas Sirk. More than sixty years later, Nazi Cinema challenges us to grapple with issues of more subtle ideological insinuation than we might think. The course also includes film responses to developments in Germany by exiled German directors (Pabst, Wilder) and concludes with Mel Brooks' *The Producers*. All lectures and readings in English. Weekly screenings with subtitles.

270. (CINE250, GRMN258) German Cinema. (M) Arts & Letters Sector. All Classes. MacLeod.

An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political

context, the course will explore the "Golden Age" of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to "Papa's Kino" and the rise of New German Cinema in the late 1960's.

SM 271. (ENGL261) Topics in 20th Century Literature. (M) Staff.

The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year.

SM 273. (AFRC276, ENGL271) Topics in the Literature of Africa and the African Diaspora. (L) staff.

This course explores an aspect of the literature of Africa and the African Diaspora intensively; specific course topics will vary from year to year.

SM 274. (ENGL262) Topics: Twentieth Century Poetry. Staff.

The course explores an aspect of 20th-century poetry intensively; specific course topics will vary from year to year.

SM 280. (CINE240, HIST322, ITAL322) Italian Cinema. (M) Kirkham.

The course will consist of a broad and varied sampling of classic Italian films from WWII to the present. The curriculum will be divided into four units: (1) The Neorealist Revolution, (2) Metacinema, (3) Fascism and War Revisited, and (4) Postmodernism or the Death of the Cinema. One of the aims of the course will be to develop a sense of "cinematic literacy"--to develop critical techniques that will make us active interpreters of the cinematic image by challenging the expectations that Hollywood has implanted in us: that films be action-packed wish-fulfillment fantasies. Italian cinema will invite us to re-examine and revise the very narrow conception that we Americans have of the medium. We will also use the films as a means to explore the postwar Italian culture so powerfully reflected, and in turn, shaped, by its national cinema. Classes will include close visual analysis of films using video clips and slides. The films will be in Italian with English subtitles and will include works of Fellini, Antonioni, De Sica, Visconti, Pasolini, Wertuller, Rossellini, Rossellini, Bertolucci and Moretti.

282. (CINE329, ENGL279, JWST102, JWST279, NELC159) Modern Jewish Literature and Culture in Translation. (A) Arts & Letters Sector. All Classes.

Gold. The course is taught in English and the texts are in translation. The content of this course changes from year to year, and therefore, students may take it for credit more than once.

This course analyzes modern and post modern film fiction and poetry that highlight dreams, fantasy and madness in the Israeli context. The Zionist meta-narrative tells of an active, conscious, and rational enterprise of Israeli nation-building. Yet, its subversive shadow-side lurks in literary and cinematic nightmares, surrealist wanderings and stories packed with dreams. This tension exists in the Hebrew Literature of the twentieth century and persists in contemporary films and writings that question the sanity of protagonist and artist alike. Although S.Y. Agnon, the uncontested master of Hebrew literature, denied ever reading Freud, his works suggest otherwise. His literary heirs, A. Ox and A.B. Yehoshua, the pillars of the Israeli canon, often speak in the symbolic language of the subconscious. Israeli film classics like *The Summer of Avia*, as well as newly released works like *Sweet Mud*, also confront similar issues. English and German works by Kafka, Woolf and Plath play a comparative role.

283. (FOLK280, JWST260, NELC258, RELS221) Jewish Folklore in Literature. (M) Ben-Amos.

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migration of Jews into different countries and historical, social, and cultural changes that these countries underwent. The course attempts to capture their historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.

SM 288. (AFRC288, ENGL288) Topics in American Poetry. (M) Staff.

Sometimes limiting itself to the works of one or two authors, sometimes focusing on a particular theme such as "American Poetry and Democratic Culture," this course devotes itself to the study of twentieth-century American poetry.

SM 290. (ENGL290, GSOC290) Topics Women in Literature. (M) Staff.

The advanced women's studies course in the department, focusing on a particular aspect of literature by and about women. Topics might include: "Victorian Literary Women"; "Women, Politics, and Literature"; "Feminist Literary Theory"; and similar foci.

SM 291. (ENGL294) Topics Literary Theory. (M) Staff.

This course explores an aspect of literary theory intensively; specific course topics vary from year to year.

SM 292. (CINE202) Topics Film Theory and Criticism. (M) Katz, Corrigan, Decherney, Beckman.

This topic course explores aspects of Film Practice intensively. Specific course topics vary from year to year. See the Cinema Studies website at <http://cinemastudies.sas.upenn.edu/> for a description of the current offerings.

SM 294. (ANTH294, GSOC294) Reading Global Feminist Theory. (M) Staff.

Resistance to local and global patriarchies, imperialism and capitalism constitute the historical context of Third World feminisms. Women's struggles against these practices constitute their identity in such a way that the very category of women becomes determined in terms of the intersection of class, race, nation and culture specific politics and histories. In this course we shall focus on the historical development of women's liberation movements in South Asia, Middle-East and certain parts of Africa. We shall examine the ways in which women's movements in these parts of the world have led to a necessary convergence of anti-racist, anti-imperialist struggles along with oppositions to patriarchy and capitalism. We shall also examine the political and philosophical implications of Third World feminisms for some specific feminist trends developed by women of the First World.

SM 296. (CLST296, ENGL229) Classical Background. (M) Staff.

This advanced seminar will examine the classical backgrounds to English poetry, in particular the Biblical and Greco-Roman antecedents to Renaissance lyric verse and verse drama (such as, preeminently, Shakespeare). Different versions of this course will have different emphases on Biblical or Hellenist backgrounds.

SM 300. (CINE340, HIST322, ITAL300) Topics in Italian History, Literature, and Culture. (M) Staff. This is a topics course. Topics will vary from year to year.

302. (CLST302) Odyssey and its Afterlife. (B) Murnaghan.

As an epic account of wandering, survival, and homecoming, Homer's *Odyssey* has been a constant source of themes and images with which to define and redefine the nature of heroism, the sources of identity, and the challenge of finding a place in the world.

SM 310. (GSOC310, ITAL310) The Medieval Reader. (M) Kirkham.

Through a range of authors including Augustine, Dante, Petrarch, Galileo, and Umberto Eco, this course will explore the world of the book in the manuscript era and contrast it with our own assumptions about reading. Lectures/discussion in English.

SM 329. (CLST329, ENGL329) Topics in Classicism and Literature. (M) Staff. Benjamin Franklin Seminar.

This advanced seminar will examine the classical backgrounds to English poetry, in particular the Biblical and Greco-Roman antecedents to Renaissance lyric verse and verse drama (such as, preeminently, Shakespeare). Different versions of this course will have different emphases on Biblical or Hellenistic backgrounds.

SM 332. (ENGL356) Topics In Modern Drama. (A) Staff. Benjamin Franklin Seminar.

This course explores an aspect of Modern drama intensively; specific course topics will vary from year to year.

SM 333. (ENGL223, ENGL323, ITAL333) Dante's Divine Comedy. (C) Brownlee.

In this course we will read the *Inferno*, the *Purgatorio* and the *Paradiso*, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the *Commedia* presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's *Aeneid* and selections from Ovid's *Metamorphoses*. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in the original language and writing about their themes in Italian. This course may be taken for graduate credit, but

additional work and meetings with the instructor will be required.

343. (HIST343) Nineteenth Century European Intellectual History. (A) Breckman.

Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.

344. (HIST344) 20th Century European Intellectual History. (B) Breckman.

European intellectual and cultural history from 1870 to 1950. Themes to be considered include aesthetic modernism and the avant-garde, the rebellion against rationalism and positivism, Social Darwinism, Second International Socialism, the impact of World War One on European intellectuals, psychoanalysis, existentialism, and the ideological origins of fascism. Figures to be studied include Nietzsche, Freud, Woolf, Sartre, Camus, and Heidegger.

SM 350. (GSOC350) Introduction to Criticism. (M) Staff.

This course includes both a general survey of classic writings in Western aesthetics as well as readings on the major trends in literary criticism in the twentieth century. A recurring theme will be the literary canon and how it reflects or influences values and interpretative strategies. Among the topics covered are feminist literary criticism, structuralism and poststructuralism, Marxist criticism, and psychological criticism. Authors include Plato, Aristotle, Hume, Kant, Hegel, T.S. Eliot, Bakhtin, Sontag, Barthes, Foucault, Derrida, Virginia Woolf, de Beauvoir, Showalter, Cixous, Gilbert and Guber, Kolodny, Marx, Benjamin, and Freud.

353. (COML505, NELC434) Arabic Literature and Literary Theory. (A) Allen.

This course takes a number of different areas of Literary Theory and, on the basis of research completed and in progress in both Arabic and Western languages, applies some of the ideas to texts from the Arabic literary tradition. Among these areas are: Evaluation and Interpretation,

Structuralism, Metrics, Genre Theory, Narratology, and Orality.

354. (CLST360, ENGL221, GSOC223) The Epic Tradition. (C) Copeland. Benjamin Franklin Seminar.

This course looks at a number of strands in the broad epic tradition: narratives of warfare, quest narratives (both geographical and spiritual), and the combination of the two in narratives of chivalry and love. We will start with Homer, reading good portions of the *Iliad* and the *Odyssey*, and then see how Homeric themes are reprised in Virgil's narrative of travel, conquest, and empire, the *Aeneid*. We will then look at St. Augustine's *Confessions*, which has some claim to being considered an "epic" of spiritual discovery, and consider how Augustine reflects back upon his classical narrative sources. From there we will move to one medieval epic of warfare, conquest, and empire, the *Song of Roland*, which emerges from the same kind of oral poetic culture that produced the ancient Homeric epics. In the last part of the course we will read some Arthurian romances, which take up certain themes familiar from epic, but place them in a new context: the medieval institution of chivalry, where the ancient warrior is replaced by the medieval knight, where the collective battle is replaced by the individual quest, and where the psychology of sexual desire is now foregrounded as a motivation for heroic self-realization.

SM 355. (ENGL359) Topics in Modernism. (C) Staff.

This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts.

SM 356. (FREN356, GSOC356) Early Modern Women's Writing: Italy, England, France. (C) DeJean.

We will compare the three powerful traditions of women's writing that developed in the 16th and 17th centuries: in Italy, in England and in France. We will read works by, among others, Veronica Franc Fonte, Aphra Behn, Margaret Cavendish, Marie-Madeleine de Lafayette and Madeleine de Scudery. We will concentrate on works in prose and, in particular, on the two genres whose development was shaped by women writers: novels and treatises defending women's rights. We will think about what it meant to be a woman writer in these

countries and at this period. We will also try to understand the conditions that made it possible for these traditions to develop. French and Italian works will be read in translation.

357. (ANTH226, FOLK229) Myth in Ancient and Modern Society. (M) Ben-Amos.

In this course we will explore the mythologies of selected peoples in the Ancient Near East, Africa, Asia, and Native North and South America and examine how the gods function in the life and belief of each society. The study of mythological texts will be accompanied, as much as possible, by illustrative slides that will show the images of these deities in art and ritual.

SM 359. (CINE359, COLL227, HEBR359, JWST359, JWST556) Seminar Modern Hebrew Literature: The Holocaust in Israeli Literature & Film. (B) Arts & Letters Sector. All Classes. Gold. This is a topics course.

Israeli literature "waited" until the 1961 public indictment of a Nazi war-criminal to hesitantly begin to face the Holocaust. The Zionist wish to forge a "New Jew" was in part responsible for this suppression. Aharon Appelfeld's understated short stories were the first to enter the modernist literary scene in the 1960s, followed in 1970 by the cryptic verse of Dan Pagis, a fellow child survivor. Only in 1988 two Israeli-born pop singers--haunted children of survivors--broke the continuous practice of concealing the past and its emotional aftermath in the watershed documentary "Because of That War." The process of breaking the silence intensified in the last two decades; the "Second Generation" burst forth artistically with writers like Etgar Keret, Amir Gutfreund and Savyon Liebrecht who told what their parents were unable to utter. This course will analyze the transformation of Israeli literature and cinema from instruments of suppression into means for dealing with the national trauma.

360. (ROML390) Introduction to Literary Theory. (C) Staff.

In this course, we will examine a broad corpus of texts from a range of modern literary-theoretical schools, including formalism, structuralism, deconstruction, reader-response theory, Marxism, psychoanalysis, feminism, and post-colonialism. Through detailed readings of these works, we will address such issues as: the nature of language and its relationship to reality; the problems of identity and ideology; the notions of cultural authority

and difference; and the politics of literature and "theory." Secondary readings will be drawn from British, German, and French/Francophone literary traditions. Taught in English.

SM 361. (ENGL360) TOPICS IN THE NOVEL. (M) Staff.

This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. Specific course topics will vary from year to year.

362. (ANTH360, FOLK360, RELS316) Native American Folklore. (M) Staff.

A survey of the indigenous oral literatures of North America that will read Native American myths and other traditional narratives with the primary aim of exploring their meanings to Native people. Topics will include, among other things, moral and religious significance, performance, aesthetics, humor, and the relationship of myth to landscape and individual life experience. The course will also place the study of Native American folklore in the context of the history of scholarship, and current issues such as cultural renewal, language endangerment, cultural representation, and cultural property rights.

L/R 372. (CINE382, FREN382) Italian and Anglo-American Fiction. (M) Staff. This is a topics course. The titles may be "Italian and Anglo-American Criticism," "Horror Cinema," or "Arcades Project."

SM 378. (AFRC293, ENGL293, GSOC226) Topics in Literature and Society. (M) Staff.

This is a topics course. The titles may include "Vampires: The Undead," "Political Theatre," "Writing Down Under," "Diaspora Culture," or "Caribbean Literature."

SM 380. (JWST255, NELC250, NELC550, RELS224) The Bible in Translation. (C) Tigay.

Study of the Book of Genesis as a literary and religious work, in the light of modern scholarship, archaeology, and comparative literature of religion.

SM 381. (CINE345, FREN380) Literature of the Twentieth Century. (M) Staff.

This course, the theme of which changes from semester to semester, provides an introduction to important trends in twentieth century literature.

SM 382. (CINE340, ITAL380) Italian Literature of the 20th Century. (M) Staff.

Topics vary, covering a range of genres and authors.

The reading material and the bibliographical references will be provided in course reader. Further material will be presented in class. Requirements include class attendance, preparation, and participation, a series of oral responses, and a final oral presentation.

SM 383. (CLST396, ENGL394, ROML390) Literary Theory Ancient to Modern. (M) Copeland. Benjamin Franklin Seminar.

This is a course on the history of literary criticism, a survey of major theories of literature, poetics, and ideas about what literary texts should do from ancient Greece to examples of modern European and American thought. The course will give special attention to early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (where we will concentrate on English writers such as Philip Sidney and Ben Jonson). We'll move into modern and 20th century by looking at the literary (or "art") theories of some major philosophers, artists, and poets: Kant, Wordsworth, Marx and Engels, Matthew Arnold, and the painter William Morris, T.S. Eliot, and the philosopher Walter Benjamin. We'll end with a very few samples of current literary theory.

SM 385. (EALC255, FOLK485, THAR485) Japanese Theatre. (A) Kano.

Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theatre in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage, design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. Requirements include short writing assignments, presentations, and one research paper. Reading knowledge of Japanese and/or previous course-work in literature/theatre will be helpful, but not required. The class will be conducted in English, with all English materials.

SM 390. (LALS396, SPAN390) World Literature - Spanish-American Literature. (A) Staff. Prerequisite(s): SPAN 219.

Topics vary. See the Romance Languages Department's website at

<http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 392. (ENGL393, SAST323) Topics in Postcolonial Lit. (M) Loomba. Benjamin Franklin Seminar.

This course explores an aspect of Postcolonial literature intensively; specific course topics vary from year to year.

SM 395. (ENGL395) Topics in Cultural Studies. Staff.

This course explores an aspect of cultural studies intensively; specific course topics vary from year to year.

SM 396. (ENGL270, LALS393, ROML396) Latin American Literature. (M) Staff. This is a topics course.

417. (ARTH417) Islamic Art and Architecture. (M) Holod.

Istanbul, Samarkand, Isfahan, Cairo and Delhi as major centers of art production in the fourteenth to seventeenth centuries. Attention will be given to urban and architectural achievement as well as to the key monuments of painting and metalwork. The visual environment of the "gunpowder empires".

SM 418. (HIST418) Europe Intellect Since 1945. (B) Breckman.

This course concentrates on French intellectual history after 1945, with some excursions into Germany. We will explore changing conceptions of the intellectual, from Satre's concept of the 'engagement' to Foucault's idea of the 'specific intellectual'; the rise and fall of existentialism; structuralism and poststructuralism; and the debate over 'postmodernity.'

SM 432. (ARAB432, COLL226) Arabic Belle-Lettres. (A) Allen. Prerequisite(s): Proficiency in ARAB 035.

Readings in Arabic texts taken from a variety of literary genres from all periods. The course aims to improve reading skills and vocabulary by introducing students to extensive passages taken from Arabic literature.

SM 475. Senior Seminar. (C) Staff.

Advanced study of changing topics in comparative literature and literary theory.

498. Honors Thesis. (C)

499. Independent Study. (C)

Supervised study for Seniors.

Graduate Courses

SM 501. (CLST511, ENGL600, GRMN534, ROML512, SLAV500) Basic Issues in the History of Literary Theory. (A) Staff.

This course is an introduction to literary and cultural theory and to some of the key problems of questions that animate theoretical discussion among literary scholars today. These include questions about aesthetics and cultural value, about ideology and hegemony, about the patriarchal and colonial bases of Western culture, and about the status of the cultural object, the cultural critic, and cultural theory itself.

SM 503. (ITAL501) Italian Literary Theory. (M) Staff. This is a topics course. One topic may be "History and Language of Italy."

505. (COML353, NELC434) Arabic Literature and Literary Theory. (A) Allen.

This course takes a number of different areas of Literary Theory and, on the basis of research completed and in progress in both Arabic and Western languages, applies some of the ideas to texts from the Arabic literary tradition. Among these areas are: Evaluation and Interpretation, Structuralism, Metrics, Genre Theory, Narratology, and Orality.

SM 506. (CINE500, ENGL461) Topics in Twentieth-Century Literature. (M) Staff.

SM 507. (GSOC507) Feminist Theory. (M) Staff.

The course has four foci: I. the French intellectual background of the 1960's and how feminist theory in Europe and America has appropriated, criticized and reinterpreted the prevailing trends of the period. II. The contention that each gender possesses psychological characteristics traditionally considered as the prerogative of the opposite gender. III. The emphasis on a female specificity. IV. The emphasis on cultural determinism, an endeavor which usually involves a criticism of III, whose various manifestations are sometimes hastily lumped together under the term "neo-essentialism".

SM 508. (ITAL562) World Views in Collision: The Counter-Reformation and Scientific Revolution. (M) Kirkham.

The exploration of the radical conflicts that developed in 16th and 17th century Europe

when Protestant reformers and scientific discoveries challenged the authority of the Catholic Church. Freedom of thought, heresy, censorship, and Utopian ideals will be discussed with reference to such figures as Machiavelli, Luther, Rabelais, More, Copernicus, and Galileo, who will be studied through their own writings, those of their contemporaries (both enemies and advocates), and in recreations by 20th century playwrights.

SM 509. (RELS539) Kierkegaard. (C) Dunning.

Critical examination of selected texts by Kierkegaard. Discussion of such issues as the pseudonymous writings and indirect communication, the theory of stages of religious development, the attack upon establishment religion, the psychological dimension of Kierkegaard's thought, and his relations to his predecessors, particularly Hegel.

SM 512. (ANTH503, ENGL503, FOLK503) Issues Folklore Theory. (C) Staff.

An introduction to folklore for graduate students, concentrating upon certain key issues in the theory and history of the discipline.

SM 514. (CLST514, ENGL504) History of Language. (M) Copeland. This is a topics course. If the title is "Between Antiquity and Modernity: Literary Theory in the Middle Ages," the following description applies.

An introduction to the methods of historical linguistics through a study of English from its prehistoric origins to the present day.

SM 520. (ITAL520) Medieval "Autobiography": Augustine to Petrarch. (M) Brownlee.

The course will explore the development of a new authorial subject in 13th- and 14th-century first-person narrative, culminating in Petrarch's *Canzoniere* and *Secretum*. Our central focus will be on the changing status of "confessional" and "conversionary" discourse in terms of selfhood and power. Of particular importance will be radical shifts in the relation between confession and conversion among the various texts in our corpus. We will start with St. Augustine's *Confessions*-the privileged model for medieval confessional narratives, which also serves as the point of departure for the different "autobiographical" stances at issue in our various texts. These will include Abelard's *Historia calamitatum*, Brunetto Latini's *Tesoretto*, Dante's *Vita Nuova*, and Petrarch's *Canzoniere*, read in part as a dialectic between the fragmented and the

coherent self. The poetics of the collection will also be considered in this context. We will conclude with Petrarch's *Secretum*, a dramatic dialogue in which St. Augustine (as a character) confesses and attempts to convert (without success) the character Franciscus (Petrarch). Taught in English. Can also be taken by qualified undergraduates, with instructor's permission.

SM 521. (GSOC537, ITAL537) Boccaccio. (M) Kirkham.

Boccaccio's life and work in the context of Italian and European culture and society.

SM 524. (ITAL535) Petrarch. (M) Brownlee.

This course will study Petrarch's lyric poetry with reference to its Italian roots (Sicilian school, *dolce stil nuovo*) and European posterity: Renaissance and Baroque Petrarchism as well as impingement on the Romantics.

SM 525. (PHIL525) Topics in the Philosophy of Science. (M) Weisberg. This is a topics course. Topics may be "Feminist Theory and Philosophy in Science" or "Naturalism and Scientific Change."

SM 526. (ENGL705, HIST526, SLAV526) In Defiance of Babel: The Quest for a Universal Language. (M) Verkholantsev.

The course explores the historical trajectory of man's attempt to discover or create an ideal universal language as a medium for explaining the essence of human experience and a means for universal communication.

SM 527. (HEBR583, HIST523, JWST523, RELS523) Studies in Medieval Jewish Culture. (A) Fishman. Prerequisite(s): Unless otherwise noted, reading knowledge of Hebrew is required. Primary source readings from a broad array of medieval Jewish genres. Topic will vary from one semester to another, for example: custom, gender, dissent.

SM 529. (FOLK532, NELC682) Proverb, Riddle, Speech. (M) Ben-Amos.

Through readings and collaborative projects this working seminar will explore the place of metaphor in the genres of proverb and riddle and examine their position in oral communication in traditional and modern societies. Critical readings of former definitions and models of riddles and metaphors will enable students to obtain a comprehensive

perspective of these genres that will synthesize functional, structural, metaphoric, and rhetoric theories.

SM 533. (ITAL531) Dante's Divine Comedy I. (M) Brownlee, K.

A close reading of the first two parts of Dante's masterpiece, the *INFERNO* and the *PURGATORIE*, which focuses on a series of interrelated problems raised by the poem: authority, representation, history and language. Particular attention will be given to the *COMMEDIA'S* use of Classical and Christian model texts: Virgil's *AENEID*, Ovid's *METAMORPHOSES*, and the Bible.

SM 534. (GSOC534, ITAL534) Woman in Poetry. (M) Kirkham. Prerequisite(s): Reading knowledge of Italian. Conducted in English; undergraduates need permission. Poetry by women and about women.

SM 535. (RELS535) Varieties of Christianity before Irenaeus. (K) Kraft.

A survey of the known groups and perspectives that emerged in the first 150 years or so of the development of "Christianity" from its roots in Judaism and the hellenistic world(s), with special attention to the primary sources (especially literary) and to modern attempts at historical synthesis.

SM 536. (GRMN535) Goethe's Novels. (M) MacLeod.

With each of his major novels, Goethe intervened decisively and provocatively in the genre and wider culture. This seminar will analyze three of Goethe's novels spanning his career: the epistolary novel *The Sorrows of Young Werther*; the novel of adultery *Elective Affinities*, and the "archival" novel *Wilhelm Meisters Journeyman Years*. Particular attention will be paid to the ways in which these novels address questions of modernization - technology and secularization, to name only two - through the lens of individuals who understand themselves in relation to artistic media. We will also consider seminal scholarship on the novels (e.g. Benjamin, Lukacs) in addition to recent critical approaches.

SM 537. (ENGL537) Renaissance Epic. (M) Staff.

Focusing centrally on Spenser and Milton, the course will also take up continental Renaissance epics and epic theory: Ariosto, Tasso, Tonsard, D'Aubigny. The main emphasis of the course discussion will be on the process of canon-formation, using the privileged status of epic to investigate

the interconnections between the social and literary procedures by which an elite list of texts gets constructed.

SM 538. (ENGL531) Renaissance Poetry. (M) Staff.

The aim of this course is to provide opportunities for students to experience at first-hand some of the literary forms, themes and characteristic sensibilities of ancient poetry of Greece, Rome and Israel which provide meaningful contexts for a wide range of English poetry. The topics may be "Sonnets Cycles," or "Passages from Chaucer to Shakespeare."

SM 539. (GRMN540) Memory. (M) Weissberg.

In recent years, studies of memory (both individual and cultural) have rivaled those of history, and have produced alternative narratives of events. At the same time, research has also focused on the rupture of narrative, the inability to find appropriate forms of telling, and the experience of a loss of words. The notion of trauma (Greek for "wound") may stand for such a rupture. Many kinds of narratives, most prominently the recollections of Holocaust survivors, are instances in which memories are invoked not only to come to terms with traumatic events, but also to inscribe trauma in various ways. In this seminar, we will read theoretical work on memory and trauma, discuss their implication for the study of literature, art, and culture, read select examples from Holocaust survivors' autobiographies (i.e. Primo Levi, EliWiesel), and discuss visual art (i.e. Boltanski, Kiefer) and film (i.e. Resnais, Lanzmann, Spielberg).

SM 540. (ITAL540) Topics in Renaissance Culture. (M) Staff.

Renaissance Italian society, art, intellectual and political history.

SM 543. (ENGL535) Shakespeare and His Contemporaries. (M) Staff. This is a topics course. If the title for the semester is "Readings in Renaissance Romance: Incest, Agency, and Female Authority" the following description and crosslisting apply:

Readings in the work of Shakespeare and other writers of the period. Specific texts vary with instructor.

SM 544. (RELS538) Modern Christian Thinkers. (M) Dunning.

Close study of selected texts dealing with the relation between Christian ideas and modern thought.

SM 546. (ENGL538) Major Renaissance Writers. (M) Staff.

This is a monographic course, which may be on Spenser, Milton, or other major figures of the period.

SM 547. (ENGL545) Eighteenth Century Novel. (M) Staff.

A survey of the major novelists of the period, beginning with Defoe and a few of the writers of amatory fiction in the early decades of the century and then moving on to representative examples of the celebrated novels by Richardson, Fielding, and others of the mid-century and after.

SM 548. (ITAL539) Cracking the Code: Numerology and Literature. (B) Staff.

In English. This course reconstructs traditions of Western number symbolism from antiquity (Plato, the Pythagoreans) to the early modern period with readings both in encyclopedic treatises on Arithmetic (Macrobius, Martianus Capella, Rhabanus Maurus) and in literary texts that are numerical compositions (Augustine's Confessions, Petrarch's epistle on the ascent of Mt. Ventoux, Dante's Vita Nuova and Commedia, Boccaccio's Diana's Hunt, the Old French Vie de St. Alexis, and Umberto Eco's The Name of the Rose). Discussion will focus on numerology as it relates to the medieval esthetic of order, the literary text as microcosmic counterpart to God's macrocosm, veiled meaning, and "difficult" poetics. We shall also consider the end of the tradition and what changes in science and culture brought about the disappearance of number symbolism in literature, except for a few moderns (e. g. Thomas Mann).

SM 550. (ENGL550, GSOC550) Romantic Theory and Practice. (M) Staff.

This course will explore the cultural context in which the so-called Romantic Movement prospered, and will pay special attention to the relationship between the most notorious popular genres of the period (Gothic fiction and drama) and the poetic production of both canonical and emerging poets.

SM 551. (ENGL551) British Romanticism. (M) Staff.

This course attempts a concentrated survey of the early years -- primarily the 1790's -- of the English Romantic period. Specific texts vary with instructor, but usually include works from Blake, Coleridge, and Wordsworth.

SM 552. (ARTH550, CINE550, GRMN550) Topics in Film. (K) Richter.

From the early 20th century, German cinema has played a key role in the history of film. Seminar topics may include: Weimar cinema, film in the Nazi period, East German film, the New German cinema, and feminist film.

From the early 20th century, German cinema has played a key role in the history of film. Seminar topics may include: Weimar cinema, film in the Nazi period, East German film, the New German cinema, and feminist film.

SM 554. (ENGL553, GSOC553, RELS531) British Women Writers. (M) Wallace. This is a topics course. One topic may be "Premodern Women Writers."

A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825.

SM 556. (JWST356, JWST555, NELC356, RELS418) Ancient Interpretation of the Bible and Contemporary Literary Theory. (C) Stern.

The purpose of this course is two-fold: first, to study some of the more important ways in which the Bible was read and interpreted before the modern period; second, to consider the uses to which some contemporary literary theorists have put these ancient modes of interpretation as models and precursors for their own writing. The major portion of the course will be devoted to intensive readings of major ancient exegetes, Jewish and Christian with a view to considering their exegetical approaches historically as well as from the perspective of contemporary critical and hermeneutical theory. Readings of primary sources will be accompanied by secondary readings that will be both historically oriented as well as theoretical, with the latter including Hartman, Kermode, Todorov, and Bloom.

SM 557. (CINE556, ENGL556, GSOC556) Topics in 19th C. Literature. (M) Staff. This is a topics course. The titles may be "Nineteenth Century Fiction: England and Beyond" or "Nineteenth Century Realism and the Occult."

SM 559. (GRMN560) Topics in Philosophy and Literature. (B) Weissberg.

Topics vary from year to year.

SM 560. (FOLK531, NELC684) Prose Narrative. (A) Ben-Amos.

The topics of discussion in the course are the following: the nature of narrative, narrative taxonomy and terminology, performance in storytelling events, the transformation of historical experience into narrative, the construction of symbolic reality, the psycho-social interpretation of folktales, the search for the minimal units, the historic-geographic method in folktale studies, the folktale in history and the history of folktale research.

SM 564. (ENGL564) Modern British Literature. (M) Staff.

An introduction to British Literary Modernism. Specific emphasis will depend on instructor.

SM 569. (AFRC569, ENGL569, GSOC569) Topics in American Literature. (M) Staff. This is a topics course. The titles can be "African-American and Chicano Feminism," "Literatures of Jazz," or "Queer and 19th-century American Literature."

SM 570. (ARTH573, CINE515, ENGL573, FREN573, GRMN573) Topics in Criticism and Theory. (M) Staff.

This course covers topics in literary criticism and theory. It's specific emphasis varying with instructor.

SM 573. (AFRC570, ENGL570) Afro-American Literature. (M) Staff.

This is a topics course. The topics may be "Afro-American Literature," "Afro-American Women Writers," "Three Afro-American Writers: Ellison, Gaines and McPherson," or "Afro-American Autobiography." If the title is "Afro-American Literature: Black Music Among the Discourses," the following description applies.

SM 575. (AFRC572, AFST572, ENGL572) Topics in African Literature. (M) Barnard.

This course is concerned with the context, and as aspect of the content and form, of African Literature. It is based on a selection of representative texts written in English, as well as a few in English translation. It involves, first, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions established by the writers in their use of old forms and experiments with new.

SM 577. (ENGL589) 20th Century Poetry. (M) Bernstein.

A study of the major figures of American poetry of the early 20th-century. T.S. Eliot, Ezra Pound, William Carlos Williams, Wallace Stevens and Robert Frost are usually included.

SM 579. (ARTH584, GRMN579) Winckelmann. (M) MacLeod.

Celebrity-scholar, literary stylist, cultural monument, pagan hero, self-made man, homosexual codeword, murder victim: despite his humble origins in Prussia, Johann Joachim Winckelmann (1717-68) enjoyed a meteoric career as an archaeologist and art historian in Rome and came to define a century. His developmental view of culture and his celebration of Greek art challenged prevailing ideas and established new paradigms. The seminar will pay careful attention to Winckelmann's most important writings, including "Reflections on the Imitation of the Painting and Sculpture of the Greeks" (1755), the "History of Ancient Art" (1764), and his famous descriptions of statues such as the Belvedere Apollo and Laocoon group, while keeping in mind the context of mid eighteenth century Rome. The lasting impact of Winckelmann's Greek subject matter, his aesthetic theory, and his literary style will be traced, with readings ranging from Johann Wolfgang Goethe, Gotthold Ephraim Lessing, Walter Peter, Rainer Maria Rilke, and Thomas Mann, to the troubling reincarnation of Winckelmann's statues in Leni Riefenstahl's Fascist Olympic films. Finally, Winckelmann's central role in the field of queer studies will be explored, via a consideration of his representation of the male body

SM 580. (JWST525, RELS525) Judaism in the Hellenistic Era. (H) Staff.

An examination of the varieties of Jewish thought current from ca. 300 BCE to ca. 200 CE, and of the ways in which early Christians adapted and/or reacted to this Jewish heritage. Primary course materials include Philo and Josephus, the Dead Sea Scrolls, Paul and the Jewish "Apocrypha and Pseudepigrapha." Online course materials can be accessed through the instructor's homepage.

SM 581. (GRMN553, RELS508) Hermeneutics. (M) Dunning.

A seminar on such problems as subjectivity vs. objectivity in interpretation. Other topics include the nature of a "text," the role of the author's intention, and the relations between interpretation and both

history and language. Focus upon the hermeneutical theories of such thinkers as Gadamer, Hirsch, Ricoeur, Habermans, and Steiner.

SM 582. (GRMN580, PHIL480) Topics in Aesthetics. (A) Staff. This is a topics course.

The topics may be "Walter Benjamin" or "Aura and Reflection."

SM 584. (GRMN581, HIST490, JWST490, RELS429) Topics in Jewish-German Culture. (M) Weissberg.

SM 585. (ENGL592) 20th Century Literature and Theory. (M) Love. This is a topics course. One topic may be "Queer Theory and Histories."

This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor.

SM 586. (ARTH586) Twentieth Century Criticism & Theory. (C) Poggi.

This seminar will examine the ideas of a number of influential theorists in a variety of disciplines who have contributed to the ways in which we understand and evaluate art. A tentative and flexible list includes: Kant, Denis, Fry, Greenberg, Schapiro, de Bord, Derrida, Lacan, Kristeva, Baudrillard.

SM 587. (CINE548, ITAL588) Cinema and the Sister Arts. (M) Kirkham.

Cinema as a pan-generic system constructed of other art forms, including fiction, theater, painting, photography, music and dance.

SM 588. (GSOC591) Modernism. (B) Staff. This is a topics course. One topic may be "The Idea of the Model in Literature and Art."

This course examines shifts in the idea of beauty that came about through modernist movements in the arts. We will begin with Kant and Burke then observe the growing dominance of the sublime over the beautiful in the basic trends of 20-century modernism. In particular, will examine the symbols of woman, ornament, form, and fetish as they weave in and out of twentieth-century aesthetics. With woman the predominant nineteenth-century symbol of beauty, the "turn away from beauty" in modernism is inevitably connected to gender politics, as current, much-heralded "return to beauty." We will observe contemporary artists and theorists wrestling with the problem of how to reinstate the

value of beauty without at the same time regressing to a pre-feminist mind-set.

SM 589. (FREN582) Fantastic Literatures in 19th and 20th Centuries. (M) Met.

This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches -- thematic, psychoanalytic, cultural, narratological -- will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the "real," making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include "recits fantastiques" by Merime, Gautier, Nerval, Maupassant, Breton, Mandiargues, Jean Ray and others.

SM 590. (ENGL590) Recent Issues in Critical Theory. (M) Staff.

This is a topics course. The titles may be "Post-Modern Criticism," "Media and Cultural Theory," "Writing and Materiality," "Modern Social Imaginaries," or "Freud and His Commentators."

SM 591. (RELS436) Life & Letters of Paul. (J) Staff.

An attempt to understand Paul and his writings, although reference will be made to other canonical and on-canonical traditions about Paul.

SM 592. (ARTH593, CINE591, ENGL591, FREN591) Topics in Contemporary Theory. (M) Staff. This is a topics course. One topic may be "Reading Gilles Deleuze."

This course can take up any issue in modernism, but has usually focused on American modernists. One recent version of the course treated the work of William Carlos Williams; another dealt with the relations between modernism, mass culture, and such quintessentially "modern" experiences as assembly-line production and "urban shock".

SM 593. (ITAL581) Modern and Contemporary Italian Culture. (M) Staff.

This is a topics course. One topic may be "Futurism, Classicism, Fascism."

SM 594. (ENGL595, SAST620) Post-Colonial Discourse. (M) Staff. This is a topics course. The topic may be "Asian American Lit," or "Post-Coloniality and Cultural Value."

SM 595. (CINE680, FREN680) Studies in 20th Century French Lit. (M) Staff. This is a topics course. Topics may be "Representing the Social in Modern French Literature" or "Critical Thought from Proust to Tournier" or "Georges Bataille."

SM 597. (ENGL597) Modern Drama. (M) Staff.

This course will survey several basic approaches to analyzing dramatic literature and the theatre. The dramatic event will be broken into each of its Aristotelian components for separate attention and analysis: Action (plot), Character, Language, Thought, Music and Spectacle. Several approaches to analysing the dramatic text will be studied: phenomenological, social-psychological, semiotic, and others.

SM 598. (PHIL585) Aesthetics: Emotion in the Arts. (M) Guyer/Camp. Undergraduates need permission.

This course will investigate historical and contemporary philosophical views on the role of the emotions in the arts. Do we have genuine emotional responses to works of art - to fiction? paintings? music? If so, what are the conditions under which we do and don't have such emotional responses? When are such responses appropriate? In particular, does an appropriate aesthetic attitude require emotional distance from the object of the artwork? Is it inappropriate to respond emotionally to morally depraved artworks? How do formal devices induce, constrain, and otherwise alter our emotional responses to art? Readings will be drawn from philosophers including Jean-Baptiste Du Bos, David Hume, Edmund Burke, Moses Mendelssohn, Henry Home Lord Kames, Arthur Schopenhauer, Edward Bullough, R.G. Collingwood, Stanley Cavell, Tamar Szabo Gendler, Richard Moran, Kendall Walton, and others.

SM 600. (LATN602) Graduate Latin Poetry. (M) Staff.

Reading and discussion of authors and texts to be announced.

SM 601. (CLST618, ENGL524) Medieval Education. (C) Copeland.

An interdisciplinary course, it will utilize literary practices to "read" the ways specific texts produce sexuality at the same time as it will examine the relation between

discourses and the material and political worlds in which those discourses are spoken. We will examine the role sexuality plays in the languages of Imperialism and in the sexualization of political rhetoric. The course will explore theoretical approaches to sexuality (and its discursive construction) proposed by Freud, Foucault, Sander Gilman, Gayle Rubin, Teresa de Lauretis, Mary Douglas, and examine a broad range of "primary materials" from eighteenth-century novels and pornography to nineteenth-century sexology to current feminist and political debates.

SM 604. (FREN609) France and Its Others. (M) Richman.

The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The impressive innovations of "ethnosurrealism" in the twenties and thirties by Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of "anthropology as cultural critique" in the U.S. Key texts by Durkheim, Mauss and Levi-Strauss will be considered both in their own terms and in relation to their widespread influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the over-arching historical frame for the course, from the turn of the century to the most recent debates.

SM 605. (ANTH605, FOLK605, MUSC605) Anthropology of Music. (C) Staff.

Worlds of Music/Music Worlds This seminar will require in-depth reading, listening, and writing about a group of musical cultures often included in teaching about "World Music." In other words, this seminar will require students to read a monograph a week, listen closely to related music, and write responsively to this material. We begin with thinking about the musical "exotic" and move onto a series of musical cultures from a wide range of places. The seminar will end with a discussion of the larger music, intellectual, and methodological issues and challenges to thinking about worlds of music/music worlds as a comparative project. Those who imagine they will have to teach a

course on "World Music and Cultures" at the undergraduate or graduate level, either sooner or later, will benefit from this class.

SM 606. (ENGL705, GREK602) Ancient Literary Theory. (M)

Copeland/Rosen. This is a topics course. One topics may be "Ancient Texts and Post-classical Interpretation".

SM 607. (ENGL776) Contemporary Drama. (M) Staff. This is a topics course.

Sometimes taught as a survey of modern and contemporary drama, this course can also focus on a particular issue such as the politics of Western theatre, gender and performativity, or postmodernity in the dramatic arts.

SM 609. (GREK609, RELS609) Ancient Divination and Semiotics. (M) Struck.

This course will trace a history of signs, using Greek divination as the primary focus. We will explore ancient and contemporary sign theories and their usefulness in illuminating ancient practices of divination -- or the reading of signs thought to be imbedded in the world. Participants in the seminar will be expected to contribute an expertise in one (or more) of three general areas: Greek literature, Greek and Roman religions, and contemporary theory in the humanities. The course is open to graduate students without Greek as well as classicists -- though please register appropriately. The particular areas we cover will to some extent be determined by the interests of the participants, but will surely include: divination by dreams, entrails, and oracles as attested by literary and (to a lesser extent) archaeological evidence; Platonic, Aristotelian, Stoic and Neoplatonic theories of signs; and contemporary semiotics as articulated mainly by Saussure, Barthes, and Eco. Ancient authors will include: Homer, Xenophon, Sophocles, Plutarch, Cicero, Artemidorus, and Iamblichus.

SM 610. (SOCI602) Proseminar in Classical Sociology. (D) Collins.

An overview of the German, French and Anglophone traditions in sociological theory. The major focus will be on the works of Marx and Engels, Weber, Simmel, Durkheim, Mead, and DuBois. The works of Nietzsche and Freud will also be considered.

SM 619. (ARTH617) Islamic Civilization and Visual Culture. (M) Holod.

A one-semester survey of Islamic art and architecture which will examine visual

culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources will be available in English translation.

SM 620. (ENGL748, FREN660) Studies in the Eighteenth Century. (A) DeJean.

Topics of discussion will vary from semester to semester. One possible topic is "Masterpieces of the Enlightenment." We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment--for example, the meditations on freedom of religious expression that Voltaire contributed to "affaires" such as the "affaire Calas." We will also discuss different monuments of the spirit of the age--its corruption (*Les Liaisons dangereuses*), its libertine excesses and philosophy (*La Philosophie dans le boudoir*). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment? Another topic may be "The Enlightenment in Letters," or "Geography and the Novel."

SM 621. (HIST620) The Formula in Folklore and Literature. (M) Mills.

A review of the development of the Parry-Lord theory of oral formulaic composition in the epic verse narrative, and the debates which the theory sparked in folklore, medieval and classical studies concerning the composition and performance processes in oral and written literature. Issues both of style and structure are examined.

SM 622. (ENGL774) Postmodernism. (M) Staff.

This is a topics course. If the title is "Postmodernism," the following description applies: This course will consist of a series of genre-illuminating novels and major theories of the novel (by Sklovskij, Lukacs, Booth, Bakhtin, Watts, and Frye). The aim is to experience the variety of the genre and its criticism, and to discover the problems posed for the theorist by this anarchic literary type. The special focus will be on the postmodernist novel. Other topics could be "Literature and Mass Culture," "Post-modern Poetry," "Textual Conditions," or "Provincializing Europe."

SM 628. (SPAN630) Shakespeare and Company. (M) Rackin.

This is a topics course. The titles may include "Shakespeare's History Plays," "Mimesis and Metadrama in the Age of Shakespeare," or "Historical Difference/Gender Difference: Cross Dressing in the Plays of Shakespeare and His Contemporaries." If the title is "Historical/Sexual Difference: Cross-dressing in the Plays of Shakespeare and His Contemporaries" the following description applies.

Although the representations of cross-dressed characters in the plays of Shakespeare and his contemporaries have attracted considerable attention in recent criticism, there is very little consensus in regard to what they tell us about early modern understandings of sex and gender. This seminar is based on the premise that many of our attempts to read those texts are distorted by anachronistic current assumptions that gender difference is grounded in a mystified body and in the embodied experience of sexual desire. Focusing on the theatrical representations and cultural implications of cross-dressing in a series of plays by Shakespeare and his contemporaries, we will explore beliefs and practices that expressed conceptions of gender and sexual difference radically different from our own. In addition to Shakespearean plays that feature cross-dressed characters, readings will include Lyly's *Gallathea*, Heywood's *Wise Woman of Hogsdon*, Jonson's *Epicoene*, Dekker and Middleton's *Roaring Girl*, and Heywood's *Fair Maid of the West*. Course requirements: a review article on recent criticism and scholarship and a substantial paper (along with a class presentation) on one of the plays.

SM 630. (FREN630, ITAL630) Introduction to Medieval Literature. (C) Brownlee.

This is a topics course. The titles may be "Introduction to Medieval Literature" or "The Grail and the Rose."

An introduction to French literature by close reading of key representative works from hagiography, *chanson de geste*, romance, and lyric. The course will consider the creation and functioning of these new generic forms in the French vernacular. Particular attention will be given to questions of authority, truth, and language.

SM 631. (CLST630, ENGL715, FREN536) Medieval Allegory. (M) Brownlee/Copeland.

For the Middle Ages, allegory represents a nexus of literary history and textual theory, hermeneutics and theology, intellectual

history and education, and theories of history and the transmission of culture. Through medieval allegorical practices we see some of the deepest continuities with ancient hermeneutical thought and also some of the most radical ruptures with the ancient past. Allegory, in other words, was as crucial and charged a term for medieval culture as for contemporary thought. Allegory is at once a trope, that is, a specific and delimited form, and an all-encompassing interpretive system. It will be the purpose of this seminar to try to articulate the connections between that particular form and that general system by examining medieval allegory in its various literary and philosophical contexts. Our focus will be the 12th through the early 15th centuries in both the vernacular and Latin, with attention to late antique philosophical and theological foundations. We will also incorporate readings from various modern perspectives on the history and theory of allegory.

Readings will include theoretical perspectives from neoplatonist and early Christian writers, 12th-century poetry and mythography (Alain de Lille, Bernardus Silvestris, William of Conches), examples from later medieval theological writings, and substantial selections from the Roman de la Rose, Dante, Boccaccio, Gower, Langland, and Christine de Pizan.

SM 632. (ITAL631) Dante's Commedia. (C) Brownlee.

A close reading of the *Inferno*, *Purgatorio* and the *Paradiso* which focuses on a series of interrelated problems raised by the poem: authority, representation, history, politics, and language. Particular attention will be given to Dante's use of Classical and Christian model texts: Ovid's *Metamorphoses*, Virgil's *Aeneid*, and the Bible. Dante's rewritings of model authors will also be studied in the context of the medieval Italian and Provençal love lyric.

SM 634. (GRMN672) Reading Modernity. (J) Jarosinski.

A study of modernism and Avant-Garde as concepts in literature, theater, and criticism. It focuses on the crucial developments from Symbolism to Dadaism and Surrealism in their historical context. Readings of representative authors, including Baudelaire, Nietzsche, Joyce, Eliot, Mann, Benjamin, Adorno. The last part is devoted to the juxtaposition of Modernism and Postmodernism.

SM 637. (ENGL735, GSOC735) Shakespeare. (M) Staff. This is a topics course. The topic may be "Shakespeare's History Plays and Renaissance Historiography," "Hamlet in History," "Historical Difference/Sexual Difference."

SM 639. (COMM639, FOLK639) Issues in Cultural Studies. (M) Zelizer. This course tracks the different theoretical appropriations of "culture" and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as "cultural studies." The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.

SM 640. (SPAN640) Studies in the Spanish Renaissance. (M) Staff. Topics of discussion will vary from semester to semester. Selections from the works of Santillana, Mena, Rojas, Garcilaso, Juan and Alfonso del Valdes, Leon Hebreo, Juan de la Cruz, Luis de Leon, and the "preceptistas."

SM 641. (ITAL640) Studies in Italian Renaissance. (M) Staff. Renaissance Italian society, art, intellectual and political history. Advanced level course.

SM 642. (GRMN642) Drama of the Twentieth Century. (M) Jarosinski. Based on a discussion of the relationship of drama (text) and theater (performance), the course examines the development of realistic and antirealistic currents in modern German drama. From Wedekind and Expressionism to Piscator's political theater, Brecht's epic theater and beyond (Horvath, Fleisser, Frisch, Duerrenmatt, Handke).

SM 651. (FREN650, GRMN651, HIST651) Studies in 17th Century. (C) DeJean. Topics for discussion will vary from semester to semester.

"The Royal Machine: Louis XIV and the Versailles Era." We will examine certain key texts of what is known as the Golden Age of French literature in tandem with a number of recent theoretical texts that

could be described as historical. Our goal will be to explore the basis of "the new historicism," a term that is designed to cover a variety of critical systems that try to account for the historical specificity and referentiality of literary texts.

SM 652. (FREN652, GSOC652) Early Modern French Women Writers. (M) DeJean.

Topics of discussion will vary from semester to semester. One possible topic is: "The Female Tradition and the Development of the Modern Novel." We will discuss the most important women writers--from Scudery to Lafayette--of the golden age of French women writers. We will be particularly concerned with the ways in which they were responsible for generic innovations and in particular with the ways in which they shaped the development of the modern novel.

SM 653. (ASAM510, CINE793, ENGL797, SAST610) Melodrama and Modernity. (C) Majithia.

In this course we will focus on post colonial global modernity as they are imaged through cinema. Foregrounding the concept of affect, we will consider topics such as: the role of mass affect and mass culture; nationalism, community, sentimentality and nostalgia; film technology and film industry development as productive of a history of the senses; affect and the (gendered and racialized) subject and body, film genres and development of post colonial modernism; style; cinephilia and production of publics; representations of popular religiosity; and the relationship between feeling and ideology. We will examine films that suggest particular affective states. our study will be interdisciplinary and readings will draw on fields of cinema, area studies as well as anthropology, philosophy and history.

SM 654. (HIST656, SLAV655) History, Memory, Trauma. (M) Platt.

This course will be devoted to study of the theory and practice of representation of the past in major European traditions during the modern era, with special emphasis on three topics of broad concern: revolution, genocide, and national becoming. The object of inquiry will be construed broadly, to include all manner of historiographic, artistic, filmic, literary and rhetorical representation of the past. Each of the three segments of the course will begin with examination of important theoretical readings in conjunction with case studies in major European traditions that have been among the central foci of this theoretical

work French Revolutionary history, Holocaust, English nationalism). Next we will add analogous Russian cases to the picture (Russian Revolution, Gulag memory, Ivan the Terrible and Peter the Great as national myths). Finally, at the conclusion of each segment students will bring theoretical tools to bear on the national traditions and contexts relevant to their own work. Our readings in the theory and philosophy of historiography will include works by: Anderson, Caruth, Guha, Hegel, LaCapra, Putnam, Ricoeur, White and others.

SM 658. (FREN654, GRMN665) Early Modern Seminar. (M) Wignn/DeJean.

SM 662. (FOLK629, NELC683, RELS605) Theories of Myth. (M) Ben-Amos.

Theories of myth are the center of modern and post-modern, structural and post-structural thought. Myth has served as a vehicle and a metaphor for the formulation of a broad range of modern theories. In this course we will examine the theoretical foundations of these approaches to myth focusing on early thinkers such as Vico, and concluding with modern 20th century scholars in several disciplines that make myth the central idea of their studies.

SM 669. (FREN670) Nineteenth Century Studies. (M) Staff. This is a topics course.

"Modernity and Early Nineteenth-Century French Culture" may be one topic.

SM 670. (ARTH670, GRMN670) German Literary Criticism. (M) Weissberg.

Topics will vary. In the past, courses have concentrated on Walter Benjamin's work, and "The Frankfurt School and After."

SM 674. (ARTH674, GRMN674) Topics in Aesthetic Theory. (K) Weissberg, MacLeod.

This is a topics course. The topics may be "Benjamin and Arendt," "Walter Benjamin," "Kant to Frankfurt School," "Literature and Visuality," or "Imagination and Ideology," or "Modernity Style/Fashion."

SM 676. (GRMN676, GSOC676) Topics in Feminist Theory. (I) Weissberg.

The course will concentrate on a selection of essays offering diverse theories and practices of feminist criticism. The discussion will focus on the debate on "essentialism," the notion of the "masquerade" and psychoanalytical

criticism, as well as the political implications of feminist scholarship. The following anthologies will be used: Anne C. Herman and Abigail J. Steward (eds.), *THEORIZING FEMINISM*, Naomi Schor and Elizabeth Weed (eds.), *THE ESSENTIAL DIFFERENCE*, and Judith Butler and Joan W. Scott (eds.), *FEMINISTS THEORIZE THE POLITICAL*.

SM 681. (PHIL680) History of Aesthetics. (M) Guyer.

This course will examine the transformation of aesthetic theory in the post-Kantian period, with particular attention to changes in the concept of the aesthetic itself and in conceptions of the place of the discipline of aesthetics in philosophy as a whole.

SM 682. (ENGL571, SPAN682) Seminar on Literary Theory. (M) de la Campa.

This course begins with an overview of major statements on poetics and literary theory from Plato to the 20th century. We will then study in detail more contemporary theoretical statements with a view to acquiring a broad knowledge of modern literary criticism. Throughout the semester we will attempt to identify topics and issues that are of particular relevance to students working within the Hispanic literary and critical tradition. Among the authors studied will be Plato, Aristotle, Longinus, Dante, Castelvetro, Lessing, Arnold, Taine, Saussure, Barthes, Derrida, de Man, Althusser, Butler and Latour.

SM 685. (EALC755) Literary Criticism and Theory in Japanese Literature. (M) Kano.

While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.

This course will be taught in English and all texts will be read in English translation.

SM 687. (ENGL539, SPAN687) The Spanish Connection. (M) Staff.

This seminar will examine the place of Spain in early modern English culture.

L/R 688. (ARTH687) Twentieth Century Art: 1945-Now. (C) Poggi.

Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the "canon" of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.

SM 690. (GRMN689) Theory and Practice of the Novel. (M) Wiggin.

SM 691. (LALS690, SPAN690) Studies in Latin American Literature. (M) Staff. This is a topics course. One topic may be "Literature and the Arts in the Age of Globalization."

SM 692. (SPAN692) Colonial Literature of Spanish American. (M) Staff.

Study of the historical context of the colonial period in Spanish America and of major works in prose and poetry.

SM 697. (SPAN697) Studies in Latin American Culture. (M) Laddaga.

The course will be an investigation of the most influential styles of conceptualizing the relationship between artistic or literary productions and political practices in Latin America between the 1950s and the present. We will pay special attention to the genesis and structure of the notion of "liberation," and to its subsequent crisis. We will also try to determine the predicament of political art and literature in times of globalization. We will read texts

by, among others, Pablo Neruda, Julio Cortazar, Glauber Rocha Reinaldo Arenas, Osvaldo Lamborghini, and Diamela Eltit, and analyze images of several artists, from Antonio Berni and Helio Oiticica, to Doris Salcedo and Cildo Meireles.

SM 700. (ENGL775) African Literature and Society. (C) Barnard.

This team-taught course will introduce graduate students to issues in both Anglophone and Francophone African Literature. The course is organized under the following headings: Reclaiming the African Past, Colonial Relationships, National Consciousness, Gender and Power, Urban Perspectives, Elites and Dictatorships, and, finally, Immigration, Exile, and Metissage. We will discuss novels by both established and emerging writers, including Chinua Achebe, Ngugi Wa Thiong'O, Sembene Ousmane, Buchi Emecheta, Mariama Ba, Henri Lopes, Bessie Head, Amadou Kourouma, Nozipo Maraire, and Zakes Mda. Some films and works in other genres may also be included. Four or five lectures by visiting scholars and/or writers, representing the cutting edge of new research and writing, will be considered as part of the seminar.

SM 701. (FREN619) Poetics of Narrative. (M) Prince.

An investigation of such topics in the theory of narrative as plot, meta-narrative signs, narrative grammars, narrative legibility, the narratee. Topics vary from term to term.

706. (ANTH704, EDUC706, FOLK706, URBS706) Culture, Power, Identities. (A) Staff.

This course will introduce students to a conceptual language and the theoretical tools to analyze the complex dynamics of racial, ethnic, gender, sexual, and class differences. The students will critically examine the interrelationships between culture, power, and identities through the recent contributions in cultural studies, critical pedagogy and post-structuralist theory and will explore the usefulness of these ideas for improving their own work as researchers and as practitioners.

SM 714. (ENGL715) Medieval Literature. (M) Wallace.

This is a topics course. The topic may be "Women and Writing, 1220-1689," "Denationalizing the English Middle Ages," or "Anglo-French Literatures."

SM 715. (FOLK715, MUSC705, GSOC705) Seminar in Ethnomusicology. (A) Muller.

This semester we will explore by way of a series of journeys the historical and contemporary shapes of tourism within the Caribbean with specific reference to the ways that musicians and performance practices have travelled and continue to move through the economic, political, geographic, and cultural spaces of consumption. These journeys will be framed by matched sets of readings that illustrate not only the abiding issues that have confronted Caribbean societies throughout the years, but also the changing terrain upon which solutions to those issues have been sought and articulated. We will be traveling along routes that variously explore travel writing, literature, folklore, travel and mobility theory, and ethnographic monographs, all with a view toward helping us think through the issues at hand. Although we will be spending a good portion of our time thinking about the Bahamas, we will also take time to consider music and tourism in places like Carriacou, Puerto Rico, and Jamaica. Ultimately, these journeys will provide a framework within which to consider our own work, while the course readings will be centered on Caribbean contexts, your final papers should address tourism and travel in ways that inform your own interests and scholarly work.

SM 720. (MUSC720) Studies in Renaissance Music. (C) Staff.

Seminar on selected topics in the music of the Renaissance.

SM 721. (HIST720) Research Seminar: European History. (M) Staff.

SM 725. (ENGL725) Topics in Chaucer. (M) Wallace.

SM 730. (ENGL730) Sixteenth-Century Cultural Relations. (M) Staff.

This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor.

SM 736. (ENGL736) Renaissance Studies. (M) Staff. This is a topics course.

This is an advanced topics course treating some important issues in contemporary Renaissance studies.

SM 750. (ENGL750) Romanticism in Italy. (M) Staff.

This course is an advanced seminar on writings of the Romantic period, not restricted to English Romanticism.

SM 755. (ENGL754) Victorian Literature. (M) Auerbach.

This is a topics course. When the title is VICTORIAN LITERATURE the following description will apply: Our seminar will explore in detail the intertextual relations among a series of major nineteenth-century novels we should all have read and re-read, but perhaps haven't turned to recently. Through examining a series of British novels from a non-domestic perspective, we shall locate the power and limitations of imperial England. In a series of paired comparisons with non-British novels, we will explore the scope of the fictional world beyond England's borders. Works we shall read will include Jane Austen's EMMA (and perhaps PRIDE AND PREJUDICE) with Stendhal's THE RED AND THE BLACK (Theme: love, ambition, irony); Thackeray's VANITY FAIR with Tolstoy's WAR AND PEACE (Theme: war, peace, and Napoleon); Emily Bronte's WUTHERING HEIGHTS and Thomas Mann's BUDDENBROOKS (Theme: family sagas and evolution).

SM 760. (FOLK606) History of Folklore Studies. (A) Ben-Amos.

A survey of the theoretical basis and the historical development of research in international and American folkloristics.

SM 761. (ENGL761) British Modernism. (M) Staff.

This course treats one or more of the strains of British modernism in fiction, poetry, or the arts.

SM 766. (ENGL765) Topics in 20th Century English Literature. (M) Staff.

This is a topics course. If the title is "Modernism and the Philosophy of Egoism," the following description applies. "Modernism and the Philosophy of Egoism", will aim to link the specific historical moment known as "Modernism" to a longer debate hinged around the claims of the individual subject fighting against all repressive systems, claims that were often refused as being either "egoistic" or "anarchistic." From Pascal's critique of the "Ego's self-love" to Max Nordau's wholesale attack in the ideology of "egomania" (in Degeneration), we'll see how the negative space carved for the subject provides an a contrario definition of modernist re-evaluations of the self. Starting from Lacan's rereading of Cartesian subjectivity and Nietzsche's dramatization of the artist as creator of values, we'll focus on Max Stirner's The Ego and His Own, seen both as a text-book for later anarchism and as Marx's and Engels's most subtle enemy (in the German

Ideology). Stirner leads to Meredith's famous novel, The Egoist, whose ethos in its turn underpins the feminist project of a Dora Marsden who chose to rename the radical magazine the New Free Woman as The Egoist. We'll read Joyce, Pound and Eliot in the context of the philosophy set forward by The Egoist, and then launch into a discussion of "impersonality" (Rimbaud, Mallarme, Eliot) and of "masks" of poetic "heteronyms" (essoa, Pound Yeats), and conclude with Beckett's last texts, especially Not-I.

SM 767. (ENGL773) Modernism. (M) Staff.

An interdisciplinary and international examination of modernism, usually treating European as well as British and American modernists. The topics may be "The Hard and Soft in Modernism," "The Technical Sublime," "Global Literature and Theory," or "Effects of Modernity."

SM 768. (ENGL768) Ghosts of Modernity. (M) Rabate.

This is a topics course. If the title is "Ghosts of Modernity," the following description applies. The graduate seminar would like to explore the archeology of modernity in order to understand how, despite a desire to break up with the past and to launch the radically new, modernity appears as always haunted by specific ghosts. One of the central issues will turn around the question of the rationality of critical discourse when it is confronted with uncanny objects such as ghosts. From Freudian and Derridian theories to the history of postmodernity (Lyotard), we shall revisit a few monuments of modernish mourning. We shall attempt to apprehend how an experience of loss is as crucial for Surrealism as for Joyce, yet organizes different economies of libidinal investment. The very mourning of form as such will provide a concept with which we can start rethinking the dividing line between modernism proper and postmodernism which begins to assert itself with Beckett, Bernhard, and Michael Palmer. The strong link between mourning and modernity will be shown central to all the movements that have attempted an esthetic revolution.

SM 769. (ENGL769, GSOC769) Feminist Theory. (M) Staff. This is a topics course.

The titles may be "Feminist Theory: Queering the Literary: Theories and Fiction" or "Incest and the Problem of Narration." If the latter title, the following description applies.

This seminar will pursue the problems of narration in 20th century accounts of incest. We will be reading novels, testimonials,

memoirs, plays, and films that attempt to narrate what some theorists have regarded as the founding taboo of 'civilization' and hence the fundamentally un-narratable event. The course will focus largely on questions of genre.

SM 772. (ENGL771) Literary Value and Evaluation: Textual Production. (M) Stallybrass. This is a topics course. If the topic is "Writing and Materiality" the following description will apply.

This course is based on library work and is intended as a practical introduction to graduate research. It addresses questions of the history of the book, of print culture, and of such categories as "work", "character", and "author", as well as of gender and sexuality, through a detailed study of the (re)production of Shakespearean texts from the seventeenth to the twentieth century.

SM 773. (AFRC770, ENGL770) Afro-American Autobiography. (M) Staff.

An advanced seminar in African-American literature and culture.

776. (LARP770) Topics in Landscape Architecture. (B) Hunt.

This is a topics course. The topic could be "French Landscape Architecture: Case Studies," "Renaissance Garden Theory," "Picturesque as Modern," or "Lawrence Halprin: Theory, Practice, Context and The Archival Record."

SM 778. (ENGL778, GSOC778) Twentieth Century Aesthetics. (M) Steiner.

This course explores notions that have conditioned 20th century attitudes toward beauty: among them, ornament, form, fetish, the artifact "women", the moves to 20th century fiction, art manifestos, theory, and such phenomena as beauty contests and art adjudications.

SM 790. (ENGL790, GRMN690, GSOC790) Recent Issues in Critical Theory. (M) Staff. This is a topics course.

Course varies with instructor. Recent versions have been "Critical Theory: Legacies of the Frankfurt School;" "Auteurism and Artificiality in Film Studies;" "Hegel's Legacy;" "The Stigma Archive."

SM 791. (ENGL797) Topics in 20th Century Culture. (M) Staff.

Usually focusing on non-fictional texts, this course varies in its emphasis depending on the instructor.

SM 795. (ENGL795) Poetics. (M) Perelman.

Topics in poetics will vary in its emphasis depending on the instructor.

SM 797. (COMM622) Communicating Memory. (M) Marvin/Zelizer.

This course considers the theoretical and empirical literature concerning the construction of social memory in relation to media products and processes. Students will undertake individual research projects investigating memory constructions in professional media routines and through ritual processes of group maintenance.

998. Independent Study and Research. (C)

Designed to allow students to pursue a particular research topic under the close supervision of an instructor.

999. Independent Reading and Research. (C)

May be taken for multiple course credit to a maximum of two for the M.A. and four for the Ph.D. Designed to allow students to broaden and deepen their knowledge of literary theory, a national literature, and/or an area of special interest.

590. Programming Languages and Techniques. (C)

L/R 591. Programming Languages and Techniques I. (C)

Introduction to fundamental concepts of programming and computer science. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, and inheritance. Basic algorithmic techniques and informal complexity analysis. Substantial programming assignments in Java.

L/R 592. Mathematical Foundations of Computer Science. (C)

Foundations: Sets, Functions, Summations, and Sequences. Introduction to algorithms. Counting techniques: The pigeonhole principle, permutations and combinations. Discrete probability. Selected topics from Number theory and/or Graph theory.

L/R 593. Introduction to Computer Architecture. (C)

Introduction to fundamental concepts of computer architecture. Programming in C and at least one assembly language as a basis for understanding machine instructions and subroutine linkage

conventions. Representation of numbers, characters and other information at machine level, including on virtual machines. Features of current operating systems.

594. Programming Languages and Techniques II. (C) Prerequisite(s): CIT 591 or consent of the instructor.

Basic data structures, including lists, stacks, queues, hash tables, trees, priority queues, and Java Collections. Algorithms, algorithm types, and simple complexity analysis. Development and implementation of program specifications. Software architecture and design methods, including modular program development, correctness arguments, and testing techniques. Concepts illustrated through extensive programming assignments in Java.

L/R 595. Digital System Organization and Design. (C) Prerequisite(s): CIT 593 or equivalent.

Introduction to fundamental building blocks of digital computer hardware such as transistors, logic gates and components built from them, as a basis for understanding how a computer operates at the hardware level. Basic networking, security, and other "under the hood" topics. Use of virtual machines to simulate hardware.

L/R 596. Theory of Computation. (C) Prerequisite(s): CIT 592 or equivalent.

Relations. Finite automata, regular languages, regular grammars, and applications. Pushdown automata, trees, context-free grammars, and applications. Turing machines. Introduction to computability and complexity theory.

597. Programming Languages and Techniques III. (C) Prerequisite(s): CIT 591 or equivalent.

Advanced Java programming and programming tools, with emphasis on developing for the Internet. Java topics will include serialization, synchronization, reflection, advanced I/O, and servlets. This course will cover current Internet-related technologies such as XML and JavaScript, and may include JDBC, UML, PHP, SOAP, and others. Substantial programming assignments, many in Java. May be taken by MCIT and CIS graduate students.

COMPUTER AND INFORMATION SCIENCE (EG) {CIS}

099. Undergraduate

Research/Independent Study. (C) A maximum of 2 c.u. of CIS 099 may be applied toward the B.A.S. or B.S.E. degree requirements.

An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and techniques and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student must submit a detailed proposal, signed by the independent study supervisor, to the SEAS Office of Academic Programs (111 Towne) no later than the end of the "add" period.

L/L 101. Introduction to Computer Science. (A) Corequisite(s): Math 104 or Math 150.

This course is an introduction to the basic principles and great ideas of computer science intended for non-engineering students. It covers some of the essential topics of contemporary computer science from a mathematical perspective. No programming experience necessary. Open to all non-SEAS students. SEAS students may not take for credit toward their engineering degree.

106. (ANTH258) Visualizing the Past. (C)

Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of "ancient, mysterious, and lost" civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, critiques, and methods of how archaeology and the past are created, presented and used in

movies, museums, games, the internet, and art.

Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the sacred landscape of the Inca capital of Cuzco, Peru. Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class projects include fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum.

L/R 110. Introduction to Computer Programming (with Java, for beginners). (C)

How do you program computers to accomplish tasks? How do you break down a complex task into simpler ones? CIS 110 is a "Java lite" course that covers the fundamentals of object-oriented programming such as objects, classes, state, methods, loops, arrays, inheritance, and recursion using the Java programming language.

112. (PPE 112) Networked Life. (C)

How does Google find what you're looking for... and exactly how do they make money doing so? What properties might we expect any social network (such as the Penn Facebook) to reliably have, and are there "simple" explanations for them? How does your position in a social or economic network (dis)advantage you, and why? What might we mean by the economics of spam? What do game theory and the Paris subway have to do with Internet routing? Networked Life looks at how our world is connected -- socially, economically, strategically and technologically -- and why it matters.

L/R 120. Programming Languages and Techniques I. (C)

A fast-paced introduction to the fundamental concepts of programming and software design. This course assumes some previous programming experience, at the level of a high school computer science class or CIS110. (If you got at least 4 in the AP Computer Science A or AB exam, you will do great.) No specific programming language background is assumed: basic experience with any language (for instance Java, C, C++, VB, Python, Perl, or Scheme) is fine. If you have never

programmed before, you should take CIS 110 first.

L/R 121. Programming Languages and Techniques II: Data Structures in Java. (B) Prerequisite(s): CIS 120, CIS 160.

This is an introductory course about Basic Algorithms and Data Structures using the Java programming language. We introduce elementary concepts about the complexity of an algorithm and methods for analyzing the running time of software. We describe data structures like stacks, queues, lists, trees, priority queues, maps, hash tables and graphs, and we discuss how to implement them efficiently and how to use them in problems-solving software. A larger project introducing students to some of the challenges of software development concludes the course.

125. (EAS 125) Technology and Policy.

Have you ever wondered why sharing music and video generates such political and legal controversies? Is information on your PC safe and should law enforcement be able to access information you enter on the Web? Will new devices allow tracking of your every move and every purchase? CIS 125 is focused on developing an understanding of existing and emerging technologies, along with the political, societal and economic impacts of those technologies. The technologies are spread across a number of engineering areas and each of them raise issues that are of current concern or are likely to be a future issue.

140. (COGS001, LING105, PHIL044, PPE 140, PSYC107) Introduction to Cognitive Science. (A)

How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness.

L/R 160. Mathematical Foundations of Computer Science. (B)

What are the basic mathematical concepts and techniques needed in computer science? This course provides an introduction to proof principles and logics, functions and relations, induction principles, combinatorics and graph theory, as well as a rigorous grounding in writing and reading mathematical proofs.

190. C++ Programming. (C)

Prerequisite(s): CIS 240.

This course will provide an introduction to programming in C++ and is intended for students who already have some exposure to programming in another language such as Java. C++ provides the programmer with a greater level of control over machine resources and are commonly used in situations where low level access or performance are important. This course will illuminate the issues associated with programming at this level and will cover issues such as explicit memory management, pointers, the compilation process and debugging. The course will involve several programming projects which will provide students with the experience they need to program effectively in these languages. This course assumes programming experience equivalent to CIS 110, CIS 120 or ESE 112.

191. Using and Understanding Unix and Linux. (C) Prerequisite(s): CIS 110 or equivalent.

Unix, in its many forms, runs much of the world's computer infrastructure, from cable modems and cell phones to the giant clusters that power Google and Amazon. This half-credit course provides a thorough introduction to Unix and Linux. Topics will range from critical basic skills such as exam and editing files, compiling programs and writing shell scripts, to higher level topics such as the architecture of Unix and its programming model. The material learned is applicable to many classes, including CIS 240, CIS 331, CIS 341, CIS 371, and CIS 380.

192. Python Programming. (C)

Prerequisite(s): CIS 110, CIS 120 or ESE 112.

The Python programming is an amazing, concise, and powerful language that is useful for tasks large and small. As a scripting language, it has a clear and straight forward syntax allowing for easy code reuse, but it is also object-oriented with extensive libraries which make it surprisingly useful for large projects as well. Python's power and clear syntax has made it one of the most popular scripting languages in use today, "a must know language." This course will provide an introduction to this remarkable language using hands-on experience, revolving around programming assignments that are designed to give students a command of the language and exposure to a wide range of library modules.

193. C# Programming. (C)

Prerequisite(s): CIS 110.

C# is the premier programming language for the .NET framework. Over the last decade, the language has evolved to meet the needs of a variety of programming styles while supporting the ever-growing capabilities of the the .NET runtime and libraries. This course provides a thorough introduction to the C# language and the .NET framework, building on the skills gained in the introductory programming courses (CIS 110, CIS 120, or ESE 112). In addition to providing the student with a solid background in C#, this course also explores topics that the .NET platform exposes such as object oriented design, .NET runtime internals, and others based on class interest. A series of short, weekly homework assignments reinforces the concepts introduced in class and a group-based final project of the students' design allows them to apply their C# knowledge toward a substantial problem.

240. Introduction to Computer Architecture. (A) Prerequisite(s): CIS 110 or equivalent experience.

You know how to program, but do you know how computers really work? How do millions of transistors come together to form a complete computing system? This bottom-up course begins with transistors and simple computer hardware structures, continues with low-level programming using primitive machine instructions, and finishes with an introduction to all aspects of computer systems architecture and serves as the foundation for subsequent computer systems courses, such as Digital Systems Organization and Design (CIS 371), Computer Operating Systems (CIS 380), and Compilers and Interpreters (CIS 341).

The course will consider the SPARC architecture, boolean logic, number systems, and computer arithmetic; macro assembly language programming and subroutine linkages; the operating system interface and input/output; understanding the output of the C compiler; the use of the C programming language to generate specific assembly language instructions.

L/R 261. Discrete Probability, Stochastic Processes, and Statistical Inference. (B)

Prerequisite(s): CIS 160 or equivalent.

This course tightly integrates the theory and applications of discrete probability, discrete stochastic processes, and discrete statistical inference in the study of computer science. The course will introduce the Minimum Description Length Paradigm to unite basic ideas about randomness, inference and

computation. Students will be expected to use the Maple programming environment in homework exercises which will include numerical and symbolic computations, simulations, and graphical displays.

L/R 262. Automata, Computability, and Complexity. (A) Prerequisite(s): CIS 160.

This course explores questions fundamental to computer science such as which problems cannot be solved by computers, can we formalize computing as a mathematical concept without relying upon the specifics of programming languages and computing platforms, and which problems can be solved efficiently. The topics include finite automata and regular languages, context-free grammars and pushdown automata, Turing machines and undecidability, tractability and NP-completeness. The course emphasizes rigorous mathematical reasoning as well as connections to practical computing problems such as test processing, parsing, XML query languages, and program verification.

277. Introduction to Computer Graphics Techniques. (C)

Prerequisite(s): CIS 120.

This course is focused on programming the essential geometric and mathematical concepts underlying modern computer graphics. Using 2D and 3D implementations, it covers fundamental topics on scene graphs, computational geometry, graphics algorithms, and user interface design. Programming languages introduced include C++, OpenGL, FLTK and Python.

320. Introduction to Algorithms. (B)

Prerequisite(s): CIS 120, 121, 160, 262.

How do you optimally encode a text file? How do you find shortest paths in a map? How do you design a communication network? How do you route data in a network? What are the limits of efficient computation? This course gives a comprehensive introduction to design and analysis of algorithms, and answers along the way to these and many other interesting computational questions. You will learn about problem-solving; advanced data structures such as universal hashing and red-black trees; advanced design and analysis techniques such as dynamic programming and amortized analysis; graph algorithms such as minimum spanning trees and network flows; NP-completeness theory; and approximation algorithms.

330. Design Principles of Information Systems. (A) Prerequisite(s): CIS 121 and 160.

Introduction to database management systems and principles of design. The Entity-Relationship model as a modeling tool. The relational model: formal languages, the industry standard SQL, relational design theory, query optimization. Storing and querying XML data. Recursive queries, Views and data integration. Overview of system level issues: physical data organization, indexing techniques, and transactions. Connecting databases to the Web. Course work requires programming in several different query languages, several written homeworks and a team project.

334. Advanced Topics in Algorithms. (M) Prerequisite(s): CIS 320.

Can you check if two large documents are identical by examining a small number of bits? Can you verify that a program has correctly computed a function without ever computing the function? Can students compute the average score on an exam without ever revealing their scores to each other? Can you be convinced of the correctness of an assertion without ever seeing the proof? The answer to all these questions is in the affirmative provided we allow the use of randomization. Over the past few decades, randomization has emerged as a powerful resource in algorithm design. This course would focus on powerful general techniques for designing randomized algorithms as well as specific representative applications in various domains, including approximation algorithms, cryptography and number theory, data structure design, online algorithms, and parallel and distributed computation.

341. Compilers and Interpreters. (M)

Prerequisite(s): Two semesters of programming courses, e.g., CIS 120-121, and CIS 240.

You know how to program, but do you know how to implement a programming language? In CIS341 you'll learn how to build a compiler. Topics covered include: lexical analysis, grammars and parsing, intermediate representations, syntax-directed translation, code generation, type checking, simple dataflow and control-flow analyses, and optimizations. Along the way, we study objects and inheritance, first-class functions (closures), data representation and runtime-support issues such as garbage collection. This is a challenging, implementation-oriented course in which students build a full compiler from a simple, typed object-

oriented language to fully operational x86 assembly. The course projects are implemented using OCaml, but no knowledge of OCaml is assumed.

350. Software Design/Engineering. (M) Prerequisite(s): CIS 240.

Large systems versus small programs. Problems of scale. Software life-cycle: design phase, implementation phase, testing, maintenance. Software re-use. Tools/Toolkits/Libraries. Programming as a group activity. Support tools, e.g., SCCS and RCS. Standards. Software readability and structure. Reading code. Style sheets. Software Testing: role in process, test cases, testers. Documentation. Embedded documentation and external documentation.

368. User Interfaces and the Web. (C) Prerequisite(s): CIS 110, CIS 120, CIS 121, CIS 277.

This course will teach the fundamentals of Human-Computer Interaction (theory, design, implementation, experimentation, evaluation) in the context of current web interaction mechanisms, technologies, and applications. The course content will emphasize and leverage open source technologies to design, prototype, implement, and test user-interfaces and functionality in the context of today's most intriguing web trend, social networking.

371. Computer Organization and Design. (B) Prerequisite(s): CIS 240.

This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipelining, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization.

380. Computer Operating Systems. (A) Prerequisite(s): CIS 240.

This course surveys methods and algorithms used in modern operating systems. Concurrent distributed operation is emphasized. The main topics covered are as follows: process synchronization; interprocess communication; concurrent/distributed programming

languages; resource allocation and deadlock; virtual memory; protection and security; distributed operation; distributed data; performance evaluation.

390. (MEAM420, MEAM520) Machine Perception. (M) Prerequisite(s): MATH 240, PHYS 150 or MEAM 110/147.

The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include planetary rovers, robotic pets, medical surgical-assistive devices, and semi-autonomous search-and-rescue vehicles. This introductory-level course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: coordinate transformations, manipulator kinematics, mobile-robot kinematics, actuation and sensing, feedback control, vision, motion planning, and learning. The material is reinforced with hands-on lab exercises including basic robot-arm control and the programming of vision-guided mobile robots.

391. Introduction to Artificial Intelligence. (M) Prerequisite(s): CIS 121 and CIS 262.

Artificial Intelligence is considered from the point of view of a resource-limited knowledge-based agent who must reason and act in the world. Topics include logic, automatic theorem proving, search, knowledge representation and reasoning, natural language processing, probabilistic reasoning, and machine learning. Programming assignments in Python.

398. Quantum Computer and Information Science. (C)

Prerequisite(s): CIS 260, 262 and Math 240.

The purpose of this course is to introduce undergraduate students in computer science and engineering to quantum computers (QC) and quantum information science (QIS). This course is meant primarily for juniors and seniors in CSE. No prior knowledge of quantum mechanics (QM) is assumed. Enrollment is by permission of the instructor.

400. Senior Project. (A) Prerequisite(s): Senior standing or permission of instructor.

The goal of the senior design course is to provide students with an opportunity to define, design and execute a significant project. Project subjects may revolve around software, hardware or computational theory. Students must have an abstract of their Senior Project, which is

approved and signed by a Project Advisor early in the Fall semester. The project is expected to span two semesters; students must enroll in CIS 401 during the second semester. At the end of the first semester, students are required to submit an intermediate report and give a presentation describing their project and progress. Grades are based on technical writing skills (as per submitted report) presentation skills and progress on the project. These are evaluated by the Project Adviser and the Course Instructor.

401. Senior Project. (B) Prerequisite(s): CIS 400, senior standing or permission of instructor.

Continuation of CIS 400. Design and implementation of a significant piece of work: software, hardware or theory. Students are required to submit a final written report and give a final presentation and demonstration of their project. Grades are based on the report, the presentation and the satisfactory completion of the project. These are evaluated by the Project Adviser and the Course Instructor.

430. Introduction to Human Language Technology. (A) Prerequisite(s): CIS 121.

This course is an automatic summarization that can help alleviate the information overload problem caused by the unprecedented amount of online textual information. The building of a summarization system requires good understanding of the properties of human language and the use of various natural language tools. In this course we will build several summarization systems of increasing complexity and sophistication. In the process we will learn about various natural language processing tools and resources such as part of speech tagging, chunking, parsing, Wordnet, and machine learning toolkits. We will also cover probability and statistics concepts used in summarization, but also applicable to a wide range of other language-related tasks.

455. (CIS 555) Internet and Web Systems. (C) Prerequisite(s): CIS 121 and CIS 380 recommended.

This course focuses on Internet and Web technologies and the underlying principles of distributed systems, information retrieval, and data management. The material covered will include web and applications server architectures, XML and semistructured data, schema mediation, document indexing and retrieval peer-to-peer systems, distributed transactions and remote procedure calls. The course has a substantial group implementation project.

462. (CIS 562) Computer Animation. (C) Prerequisite(s): Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.

This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer game virtual reality simulations and high-end animation applications. The course balances theory with practice by "looking under the hood" of current animation systems and authoring tools and exams the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents.

477. (LING549) Mathematical Methods/Techniques for Linguistics and Natural Language Processing. (M) Prerequisite(s): PHIL 006 or instructor's permission.

Basic concepts of set theory, relations and functions, properties of relations. Basic concepts of algebra. Grammars, languages, and automata- finite state grammars, regular expressions, context-free and context-sensitive grammars, unrestricted grammars, finite automata, pushdown automata and other related automata, Turing machines, Syntax and semantics of grammar formalisms. Strong generative capacity of grammars, Grammars as deductive systems, parsing as deduction. Relevance of formal grammars to modeling biological sequences. The course will deal with these topics in a very basic and introductory manner--ideas of proofs and not detailed proofs, and more importantly with plenty of linguistic examples to bring out the linguistic relevance of these topics.

The course will deal with these topics in a very basic and introductory manner--ideas of proofs and not detailed proofs, and more importantly with plenty of linguistic examples to bring out the linguistic relevance of these topics.

480. Real-Time and Embedded Systems. (M) Prerequisite(s): CIS 380, some network programming experience is desirable.

Ever increasing availability of inexpensive processors connected by a communication network has motivated the development of numerous concepts and paradigms for distributed real-time embedded systems. The primary objectives of this course are to study the principles and concepts of real-time embedded computing and to provide students hands-on experience in developing embedded applications. This course covers the concepts and theory necessary to understand and program embedded real-time systems. This includes concepts and theory for real-time system design, analysis, and certification; programming and operating systems for embedded systems; and concepts, technologies, and protocols for distributed embedded real-time systems.

The course will cover a variety of existing systems and technologies, e.g., real-time machines, architectural description language, formal meth and logical-time programming paradigms, and certification. The course requires active student participation in-group projects. Each group will be responsible for the design and implementation of a life-critical embedded system such as a pacemaker. The group projects are intended to complement the learning of principles and concepts through the application of theory in practice and the development of experimental skills in building embedded applications.

482. (CIS 582) Logic In Computer Science. (C) Prerequisite(s): CIS 160.

Logic has been called the calculus of computer science as it plays a fundamental role in computer science, similar to that played by calculus in the physical sciences and traditional engineering disciplines. Indeed, logic is useful in areas of computer science as disparate as architecture (logic gates), software engineering (specification and verification), programming languages (semantics, logic programming), databases (relational algebra and SQL), artificial intelligence (automatic theorem proving), algorithms (complexity and expressiveness), and theory of computation (general notions of computability). CSE 482 provides the students with a thorough introduction to mathematical logic, covering in depth the topics of syntax, semantics, decision procedures, formal proof systems, and soundness and completeness for both propositional and first-order logic. The material is taught from a computer science perspective, with an emphasis on algorithms, computational

complexity, and tools. Projects will focus on problems in circuit design, specification and analysis and protocols, and query evaluation in databases.

497. DMD Senior Project. (C)

Prerequisite(s): Senior Standing or Permission of the Instructor.

The goal of this course is to provide an opportunity for seniors to define, and execute a project of your own choosing that demonstrates the technical skills and abilities that you have acquired during your 4 years as undergraduates. Evaluation is based on selecting an interesting topic, completing appropriate research on the state of the art in that area, communicating your objectives in writing and in presentations, accurately estimating what resources will be required to complete your chosen task, coding necessary functionality, and executing your plan.

500. Software Foundations. (C)

Prerequisite(s): Undergraduate-level course in programming languages or compilers; significant programming experience.

This course introduces basic concepts and techniques in the foundational study of programming languages. The central theme is the view of individual programs and whole languages as mathematical objects about which precise claims may be made and proved. Particular topics include operational techniques for formal definition of language features, type systems and type safety properties, polymorphism and subtyping, foundations of object-oriented programming, and mechanisms supporting information hiding and programming in the large.

L/R 501. Computer Architecture. (C)

Prerequisite(s): Knowledge of computer organization and basic programming skills.

This course is an introductory graduate course on computer architecture with an emphasis on a quantitative approach to cost/performance design tradeoffs. The course covers the fundamentals of classical and modern uniprocessor design: performance and cost issues, instruction sets, pipelining, superscalar, out-of-order, and speculative execution mechanisms, caches, physical memory, virtual memory, and I/O. Other topics include: static scheduling, VLIW and EPIC, software speculation, long (SIMD) and short (multimedia) vector execution, multithreading, and an introduction to shared memory multiprocessors.

502. Analysis of Algorithms. (C)

Prerequisite(s): CIT 594 or equivalent.

An investigation of several major algorithms and their uses in areas including list manipulation, sorting, searching, selection and graph manipulation. Efficiency and complexity of algorithms. Complexity Classes.

505. Software Systems. (C)

Prerequisite(s): Undergraduate-level knowledge of Operating Systems and Networking, programming experience (CIT 594 or equivalent).

This course provides an introduction to fundamental concepts of distributed systems. Topics covered include communication, concurrency, programming paradigms, naming, managing shared state, caching, synchronization, reaching agreement, fault tolerance, security, middleware, and distributed applications.

510. (CIS 410) Curves and Surfaces: Theory and Applications. (M)

Prerequisite(s): Basic knowledge of linear algebra, calculus, and elementary geometry. CIS 560 is not required.

The course is about mathematical and algorithmic techniques used for geometric modeling and geometric design, using curves and surfaces. There are many applications in computer graphics as well as in robotics, vision, and computational geometry. Such techniques are used in 2D and 3D drawing and plot, object silhouettes, animating positions, product design (cars, planes, buildings), topographic data, medical imagery, active surfaces of proteins, attribute maps (color, texture, roughness), weather data, art, etc. Three broad classes of problems will be considered: approximating curved shapes, using smooth curves or surfaces. Interpolating curved shapes, using smooth curves or surfaces. Rendering smooth curves or surfaces.

511. Theory of Computation. (C)

Prerequisite(s): Basic notions of discrete algebra.

Finite automata (deterministic and nondeterministic) regular graphs, regular expressions, regular grammars, (Nerode congruence), the "pumping lemma", closure properties. Context-free languages. Standard forms: removal of ϵ -rules, chain rules, reduced grammars. Chomsky Normal Form. Context-free languages as fixed points (Ginsburg and Rose's Theorem). Greibach Normal Form (using Rosenkrantz's matrix method). Ogden's Lemma and the "pumping lemma". Pushdown automata (PDA's). Equivalence of PDA's and context-free grammars. Brief

sketch of top-down and bottom-up (nondeterministic) parsing. Deterministic PDA's. Closure properties. Partial recursive functions, Turing machines and RAM programs. Primitive recursion. Minimization. Equivalence of the models. Church/Turing's thesis. Acceptable Codings. A Universal RAM program. Undecidability of the halting problem. Recursively enumerable sets (RE sets).

SM 518. (PHIL412) Topics in Logic; Finite Model Theory and Descriptive Complexity. (C)

This course will examine the expressive power of various logical languages over the class of finite structures. The course begins with an exposition of some of the fundamental theorems about the behavior of first-order logic in the context of finite structures, in particular, the Ehrenfeucht-Fraïssé Theorem and the Trakhtenbrot Theorem. The first of these results is used to show limitations on the expressive power of first-order logic over finite structures while the second result demonstrates that the problem of reasoning about finite structures using first-order logic is surprisingly complex. The course then proceeds to consider various extensions of first-order logic including fixed-point operators, generalized quantifiers, infinitary languages, and higher-order languages. The expressive power of these extensions will be studied in detail and will be connected to various problems in the theory of computational complexity. This last motif, namely the relation between descriptive and computational complexity, will be one of the main themes of the course.

520. Machine Learning. (A)

Prerequisite(s): Elementary probability, calculus, and linear algebra. Basic programming experience.

This course covers the foundations of statistical machine learning. The focus is on probabilistic and statistical methods for prediction and clustering in high dimensions. Other topics covered include graphical models, dimensionality reduction, neural networks, and reinforcement learning.

L/R 521. Fundamentals of AI. (C)

Prerequisite(s): Students are expected to have the following background: Basic algorithms, data structures and complexity (dynamic programming, queues, stacks, graphs, big-O, P/NP; Basic probability and statistics (random variables, standard distributions, simple regression); Basic linear algebra (matrices, vectors, norms, inverses); Reasonable programming skills.

Modern AI uses a collection of techniques from a number of fields in the design intelligent systems: probability, statistics, logic, operations research, optim and economics, to name a few. This course covers basic modeling and algorithmi from these fields underlying current research and highlights their application computer vision, robotics, and natural language processing.

530. Computational Linguistics. (A)

Computational approaches to the problem of understanding and producing written and spoken natural language, including speech processing, syntactic parsing, statistical and corpus-based techniques, semantic interpretation, discourse meaning, and the role of pragmatics and world knowledge. It is recommended that students have some knowledge of logic, basic linguistics, and programming.

534. (CIS 434) Multicore Programming and Architecture. (C)

Prerequisite(s): CIS 371 or CIS 501, and significant programming experience.

This course is a pragmatic examination of multicore programming and the hardware architecture of modern multicore processors. Unlike the sequential single-core processors of the past, utilizing a multicore processor requires programmers to identify parallelism and write explicitly parallel code. Topics covered include: the relevant architectural trends and aspects of multicores, approaches for writing multicore software by extracting data parallelism (vectors and SIMD), thread-level parallelism, and task-based parallelism, efficient synchronization, and program profiling and performance tuning. The course focuses primarily on mainstream shared-memory multicores with some coverage of graphics processing units (GPUs). Cluster-based supercomputing is not a focus of this course. Several programming assignments and a course project will provide students first-hand experience with programming, experimentally analyzing, and tuning multicore software. Students are expected to have a solid understanding of computer architecture and strong programming skills (including experience with C/C++).

L/L 535. (BIOL535, GCB 535) Introduction to Bioinformatics. (A)

The course covers methods used in computational biology, including the statistical models and algorithms used and the biological problems which they address. Students will learn how tools such as BLAST work, and will use them to address real problems. The course will focus on sequence analysis problems such as exon, motif and gene finding, and on comparative methods but will also cover gene expression and proteomics.

536. (BIOL536, GCB 536) Computational Biology. (A)

Prerequisite(s): Math 104/114 or equivalent, BIOL 221 or equivalent, or permission of the instructor.

Computational problems in molecular biology, including sequence search and analysis, informatics, phylogenetic reconstruction, genetic mapping and optimization.

537. (BE 537) Biomedical Image Analysis. (C) Faculty. Prerequisite(s): Math through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.

This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods.

541. Embedded and Cyber-Phys Systems. (C)

550. Database and Information Systems. (A) Prerequisite(s): CIT 591 or equivalent.

Introduction to the theory and practice of database management systems. The Entity-Relationship approach as a modeling tool. The relational model, algebra and calculus. Commercial systems: SQL, Quel and Ingres. Database design and relational normalization. Physical data organization and indexing structures. Updates and integrity: transaction management, concurrency control and recovery techniques. Logic as a data model: Datalog

and evaluation techniques. The network model and object oriented approaches.

551. (TCOM551) Computer and Network Security. (B) Prerequisite(s): TCOM 512 or equivalent required; CIS 500 recommended.

This is an introduction to topics in the security of computer systems and communication on networks of computers. The course covers four major areas: fundamentals of cryptography, security for communication protocols, security for operating systems and mobile programs, and security for electronic commerce. Sample specific topics include: passwords and offline attacks, DES, RSA, DSA, SHA, SSL, CBC, IPSec, SET, DDoS attacks, biometric authentication, PKI, smart cards, S/MIME, privacy on the Web, viruses, security models, wireless security, and sandboxing. Students will be expected to display knowledge of both theory and practice through written examinations and programming assignments.

553. (TCOM512) Networked Systems. (C) Prerequisite(s): CIS 121 (Programming Languages and Techniques II) or equivalent, or permission of the instructor.

This course provides an introduction to fundamental concepts in the design and implementation of networked systems, their protocols, and applications. Topics to be covered include: Internet architecture, network applications, addressing, routing, quality of service, transport protocols, data link protocols, network security, and application level protocols such as peer-to-peer networks and overlay networks. The course will involve written assignments, examinations, and programming assignments.

555. (CIS 455) Internet and Web Systems. (C) Prerequisite(s): At least one year of Java programming. Database and operating systems familiarity recommended.

This course focuses on the issues encountered in building Internet and web systems: scalability, interoperability (of data and code), atomicity and consistency models, replication, and location of resources, services, and data. Topics include other remote procedure calls, caching, replication, and hierarchical structures; distributed consensus and transactions. Of particular focus will be techniques for locating machines, resources, and data (including ranked web search, publish/subscribe systems, directories, and peer-to-peer protocols). This course has a significant project-based component, in order to provide hands-

onexperience with the ideas and algorithms discussed. Students will construct and validate a large-scale distributed system, with some components developed individually and some in teams.

558. (LING525) Computer Analysis and Modeling of Biological Signals and Systems. (B) Prerequisite(s):

Undergraduate-level knowledge of linear algebra.

A graduate course intended to introduce the use of signal and image processing tools for analyzing and modeling biological systems. We present a series of fundamental examples drawn from areas of speech analysis/synthesis, computer vision, and modeling of biological perceptual systems. Students learn the material through lectures and via a set of computer exercises developed in MATLAB.

560. (CSE 460) Computer Graphics. (A) Prerequisite(s):

One year programming experience (C, JAVA, C++).

A thorough introduction to computer graphics techniques, including 3D modeling, rendering, and animation. Topics cover: geometric transformations, geometric algorithms, software systems (OpenGL), 3D object models (surface and volume), visible surface algorithms, image synthesis, shading and mapping, ray tracing, radiosity, global illumination, photon mapping, anti-aliasing, animation techniques, and virtual environments.

562. (CIS 462) Computer Animation. (C) Prerequisite(s):

Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.

This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer game virtual reality simulations and high-end animation applications. The course balances theory with practice by "looking under the hood" of current animationsystems and authoring tools and exams the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion

capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents.

563. Physically Based Animation. (C)

Prerequisite(s): Students should have a good knowledge of object-oriented programming (C++) and basic familiarity with linear algebra and physics. Some background in computer graphics is helpful.

This course introduces students to common physically based simulation techniques for animation of fluids and gases, rigid and deformable solids, cloth, explosions, fire, smoke, virtual characters, and other systems. Physicalbased simulation techniques allow for creation of extremely realistic special effects for movies, video games and surgical simulation systems. We will learn state-of-the-art techniques that are commonly used in current special effects and animation studios and in video games community. To gain hands-on experience, students will implement basic simulators for several systems. The topics will include: Particle Systems, Mass spring systems, Deformable Solids & Fracture, Cloth, Explosions & Fire, Smoke, Fluids, Deformable active characters, Simulation and control of rigid bodies, Rigid body dynamics, Collision detection and handling, Simulation of articulated characters, Simulated characters in games. The course is appropriate for both upper level undergraduate and graduate students.

564. Game Design and Development. (C)

Basic understanding of 3D graphics and animation principles, prior exposure to scripting and programming languages such as Python, C and C++.

The intent of the course is to provide students with a solid theoretical understanding of the core creative principles, concepts, and game play structures/schemas underlying most game designs. The course also will examine game development from an engineering point of view, including: game play mechanics, game engine software and hardware architectures, user interfaces, design documents, playtesting and production methods.

565. GPU Programming and Architectur. (C)

Prerequisite(s): CIS 460 or CIS 560, and familiarity with computer hardware/systems. The hardware/systems requirement may be met by CIS 501; or CIT 593 and 595; or CIS 240 (with CIS 371 recommended); or equivalent coursework.

This course examines the architecture and capabilities of modern GPUs. The graphics processing unit (GPU) has grown in power over recent years, to the point where many computations can be performed faster on the GPU than on a traditional CPU. GPUs have also become programmable, allowing them to be used for a diverse set of applications far removed from traditional graphics settings. Topics covered include architectural aspects of modern GPUs, with a special focus on their streaming parallel nature, writing programs on the GPU using high level languages like Cg and BrookGPU, and using the GPU for graphicsand general purpose applications in the area of geometry modelling, physical simulation, scientific computing and games. Students are expected to have a basic understanding of computer architecture and graphics, and should be proficient in OpenGL and C/C++.

570. Modern Programming Language Implementation. (M)

Prerequisite(s): CIS 500. An undergraduate course in compiler construction (CSE 341 or equivalent) is helpful but not required.

This course is a broad introduction to advanced issues in compilers and run-time systems for several classes of programming languages, including imperative, object-oriented, and functional. Particular attention is paid to the structures, analyses, and transformations used in program optimization.

571. (PHIL411) Recursion Theory. (A)

The course covers the basic theory of recursive and recursively enumerable sets and the connection between this theory and a variety of decision problems of interest in a computational setting. The course will then proceed to an exposition of recursion theoretic reducibilities. Elementary results about degrees of unsolvability are established. The theory of arithmetical, analytical, and projective hierarchies will be presented. The study of functionals at this point will provide an entry into the computationally important subject of recursion at higher types. Basic parts of the theory of inductive definitions and monotone operators will be presented. If time and interest permit, this theory will be applied to the analysis of the semantical paradoxes. The course will conclude with

an investigation of the lower levels of the analytical and projective hierarchies. Applications to the degrees of unsolvability of various logical systems will be presented, connections between the hierarchies and predicative formal systems will be established, and the relation between the theory of the projective hierarchy and topics in classical descriptive set theory will be indicated.

SM 572. (PHIL413) Set Theory. (C)

This course is an introduction to set theory. It will begin with a study of Zermelo-Fraenkel set theory (ZF) as a partial description of the cumulative hierarchy of sets. Elementary properties of cardinal and ordinal numbers will be developed in ZF. The inner model of constructible sets will be used to establish the relative consistency of the axiom of choice and the generalized continuum hypothesis with ZF. The method of forcing will be introduced to establish the independence of the continuum hypothesis from ZF and other independence results. Large cardinals and their bearing on the resolution of questions about the continuum will be considered.

573. Software Engineering. (A)

Prerequisite(s): CIT 591 and 593, or CIS 120, 121, and 240, or equivalent coursework; prior knowledge of Java required.

BUILDING LARGE INFORMATION SYSTEMS: This course will be a practicum in specifying, designing and documenting, building, testing and administering corporate-sized software projects that invariably have a database component, security and firewall issues, a web-based user interface, and special client programs running as applications elsewhere on a network. The course will examine one or more existing, commercial systems (such as the Blackboard system in use at Penn) and will address conceptual issues surrounding large software systems, such as ways to estimate project size, and ways to integrate different technologies into a maintainable system design. There will be substantial programming assignments using Microsoft Visual Studio .NET languages such as C# to create components of a larger system. Possible projects include a web interface, a client (and possibly server-side programming) for a SOAP/XML based web service, a Windows-based client with graphical interface, and rudimentary SQL database table and view design. The idea of using UML for code generation, and writing "built-in" unit tests for objects to automate future retesting will be examined.

580. Machine Perception. (A)

Prerequisite(s): A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab.

An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems.

582. (CIS 482) Logic in Computer Science. (C) Prerequisite(s): CIS 260 or CIT 592 or equivalent.

Logic has been called the calculus of computer science as it plays a fundamental role in computer science, similar to that played by calculus in the physical sciences and traditional engineering disciplines. Indeed, logic is useful in areas of computer science as disparate as architecture (logic gates), software engineering (specification and verification), programming languages (semantics, logic programming), databases (relational algebra and SQL), artificial intelligence (automatic theorem proving), algorithms (complexity and expressiveness), and theory of computation (general notions of computability). CIS 582 provides the students with a thorough introduction to mathematical logic, covering in depth the topics of syntax, semantics, decision procedures, formal proof systems, and soundness and completeness for both propositional and first-order logic. The material is taught from a computer science perspective, with an emphasis on algorithms, computational complexity, and tools. Projects will focus on problems in circuit design, specification and analysis and protocols, and query evaluation in databases.

610. (MATH676) Advanced Geometric Methods in Computer Science. (B) Prerequisite(s): CIS 510 or coverage of equivalent material.

The purpose of this course is to present some of the advanced geometric methods used in geometric modeling, computer graphics, computer vision, etc. The topics may vary from year to year, and will be selected among the following subjects (nonexhaustive list): Introduction to projective geometry with applications to rational curves and surfaces, control points for rational curves, rectangular and triangular rational patches, drawing closed rational curves and surfaces; Differential geometry of curves (curvature, torsion, osculating planes, the Frenet frame, osculating circles, osculating spheres); Differential geometry of surfaces (first fundamental form, normal curvature, second fundamental form, geodesic curvature, Christoffel symbols, principal curvatures, Gaussian curvature, mean curvature, the Gauss map and its derivative dN , the Dupin indicatrix, the Theorema Egregium equations of Codazzi-Mainardi, Bonnet's theorem, lines of curvatures, geodesic torsion, asymptotic lines, geodesic lines, local Gauss-Bonnet theorem).

613. (ESE 617, MEAM613) Nonlinear Control Theory. (M) Prerequisite(s): A sufficient background to linear algebra (ENM 510/511 or equivalent) and a course in linear control theory (MEAM 513 or equivalent), or written permission of the instructor.

The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, and observability for nonlinear systems; Forbenius' theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations.

SM 620. Advanced Topics in Artificial Intelligence. (B) Prerequisite(s): CIS 520 or equivalent.

Discussion of problems and techniques in Artificial Intelligence (AI): Knowledge Representation, Natural Language Processing, Constraint Systems, Machine Learning; Applications of AI.

SM 630. Advanced Topics in Natural Language Processing. (C)

Prerequisite(s): CIS 530 or equivalent or permission of instructor.

Different topics selected each offering; e.g., NL generation, question-answering, information extraction, machine translation, restricted grammar formalisms, computational lexical semantics, etc.

SM 635. (BIOL537, GCB 537) Advanced Computational Biology. (A)

Prerequisite(s): Biol 536 or permission of the instructor.

Discussion of special research topics.

SM 639. Statistical approaches to Natural Language Understanding. (C)

This course examines the recent development of corpus-based techniques in natural language processing, focussing on both statistical and primarily symbolic learning techniques. Particular topics vary from year to year.

SM 640. Advanced Topics in Software Systems. (B) Prerequisite(s): CIS 505 or equivalent.

Different topics selected for each course offering.

SM 650. Advanced Topics in Databases. (B) Prerequisite(s): CIS 550.

Advanced topics in databases: distributed databases, integrity constraints, failure, concurrency control, relevant relational theory, semantics of data models, the interface between programming of languages and databases. Object-oriented databases. New topics are discussed each year.

SM 660. Advanced Topics in Computer Graphics and Animation. (B) Prerequisite(s): CIS 560 or permission of the instructor.

This course emphasizes the review and understanding of current computer graphics, interaction, and virtual environment research techniques and problems. Research-level topics are based on recent ACM SIGGRAPH papers and special effects techniques, through student-led discussions and both oral and visual presentations. A software project is required.

SM 670. Advanced Topics in Programming Languages. (C)

Prerequisite(s): CIS 500, or equivalent.

The details of this course change from year to year, but its purpose is to cover

theoretical topics related to programming languages. Some central topics include: denotational vs operational semantics, domain theory and category theory, the lambda calculus, type theory (including recursive types, generics, type inference and modules), logics of programs and associated completeness and decidability problems, specification languages, and models of concurrency. The course requires a degree of mathematical sophistication.

673. Computer-Aided Verification. (C)

Prerequisite(s): Basic knowledge of algorithms, data structures, automata theory, propositional logic, operating systems, communication protocols, and hardware (CSE 262, CSE 380, or permission of the instructor).

This course introduces the theory and practice of formal methods for the design and analysis of concurrent and embedded systems. The emphasis is on the underlying logical and automata-theoretic concepts, the algorithmic solutions, and heuristics to cope with the high computational complexity. Topics: Models and semantics of reactive systems; Verification algorithms; Verification techniques. Topics may vary depending on instructor.

677. Advanced Topics in Algorithms and Complexity. (A) Prerequisite(s):

Consent of the instructor.

This course covers various aspects of discrete algorithms. Graph-theoretic algorithms in computational biology, and randomization and computation; literature in dynamic graph algorithms, approximation algorithms, and other areas according to student interests.

SM 680. Advanced Topics in Machine Perception. (B)

A previous course in machine perception or knowledge of image processing, experience with an operating system and language such as Unix and C, and aptitude for mathematics.

Graduate seminar in advanced work on machine perception as it applies to robots as well as to the modelling of human perception. Topics vary with each offering.

682. Friendly Logics. (C)

The use of logical formalisms in Computer Science is dominated by a fundamental conflict: expressiveness vs. algorithmic tractability. For example, database constraint logics, temporal logics, description logics, certain fragments of first and second-order logics, certain equational logics, and certain logics related to lambda

calculi are successful compromise in this conflict: (1) they are expressive enough for practical specifications certain areas, and (2) there exist interesting algorithms for the automated use of these specifications. Interesting connections can be made between these formalisms and this in turn benefits research in databases, programming languages, computer-aided verification and AI. Specific topics change from one offering to another, leading to the possibility of repeated credit if allowed by the instructor.

700. Computer and Information Science Topics. (M)

One time course offerings of special interest.

899. Independent Study. (C)

For students studying a specific advanced subject area in computer and information science. Involves coursework and class presentations. A CIS 899 course unit will invariably include formally gradable work comparable to that in a normal 500 or 600 level course. This designation should not be used for ongoing research towards a thesis, for which the CIS 999 designation should be used.

990. Masters Thesis.

For master's students who have taken ten course units and need only to complete the writing of a thesis or finish work for incompletes in order to graduate. CIS 990 carries full time status with zero course units and may be taken only once.

995. Dissertation.

For Ph.D. candidates working exclusively on their dissertation research, having completed 40 course units of credit.

996. Resesarch Seminar. (C)

Introduction to research being conducted in the department. Mandatory for firstyear doctoral students. Taken as fifth course for no credit at no cost.

999. Thesis/Dissertation Research. (C)

For students working on an advanced research program leading to the completion of master's thesis or PhD dissertation requirements.

**CRIMINOLOGY
(AS) {CRIM}**

SM 401. Research Practicum on Crime and Justice. Berk.

Students will learn about how to formulate a research question, develop a review of the literature, and how to apply necessary empirical methods. The final paper for this course will be a research proposal that can serve as the basis for the student's thesis.

Undergraduate Courses

100. (SOC1233) Criminology. (C)

Society Sector. All classes. Adler, Laufer, Sherman.

This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories and data predicting where, when, by whom and against whom crimes happen. It also addresses the prevention of different offense types by different kinds of offenders against different kinds of people. Police, courts, prisons, and other institutions are critically examined as both preventing and causing crime. This course meets the general distribution requirement.

150. Evidence-Based Crime and Justice Policy. (M) Berk.

Statistical techniques and quantitative reasoning are essential tools for properly examining crime and justice policy. Using case studies of highly controversial issues, appropriate statistical techniques and sound quantitative reasoning are addressed. Case studies can include the death penalty, racial profiling, human trafficking, DNA identification, sentencing guidelines, drug testing, war crimes, ballistic analyses from the JFK assassination, and others. The statistical procedures discussed overlap significantly with those covered in an introductory statistics course. Criminology 150 has been approved for the quantitative data analysis requirement (QDA).

200. (SOC1200) Criminal Justice. (C) Society Sector. All classes. Sherman, MacDonald.

This course examines the social sciences research evidence on the causes and consequences of criminal justice decisions for different kinds of people, including race, class, gender and age: searches, arrests and shootings by police, prosecutions and plea-bargaining in court, sentencing by judges and by legislative guidelines, probation and parole supervision, and daily regulation of

life in prison. Central to the course is the understanding of how we know what we know about criminal justice: observational methods used to describe and predict these decisions, and experimental methods used to compare the effects of different courses of action.

SM 280. (SOC1380) Neighborhood Dynamics of Crime. (B) MacDonald.

Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.

SM 300. Law and Criminal Justice. (C) Laufer.

This course explores constitutional criminal procedure or the law of the the Fourth, Fifth, and Sixth Amendments to the United States Constitution. Topics included the laws and rules associated with search and seizure, arrest, interrogation, the exclusionary rule, and deprivation of counsel. Social science evidence that supports or raises questions about legal doctrine will be examined. No prerequisites are required.

SM 410. (CRIM610, SOC1410) Research Seminar in Experiments in Restorative Justice. (C) Strang.

Prerequisite(s): Any statistics or research methods courses leading to knowledge of SPSS.

This seminar focuses on examining data from Penn's Jerry Lee Program of Randomized Controlled Trials in Restorative Justice, the largest program of field experiments in the history of criminology. Key questions to be answered by the research program include the effects of restorative conferences on the future crime rates of offenders and victims, on the mental health and medical condition of both, and on the changes over time in these

dimensions of the life course of both victims and offenders.

SM 411. (CRIM611, SOC1411) Field Observations in Criminal Courts. (A) Staff.

The course will serve as an introduction both to qualitative research and to understanding of the routine workings of the courts in Philadelphia. After a brief discussion of the theoretical underpinnings and practical techniques of ethnography, students will undertake supervised field projects leading to the writing of 5000 words long research report about different aspects of the social organization of the courthouse and court room.

Graduate Courses

SM 600. (SOC1680) Pro-Seminar in Criminology. (A) Staff.

This course explores the basic scope, mission and methods of the science of criminology. The course proceeds to cover the current state of theory, research, and accomplishments in both knowledge and policy about criminality and criminal events. Students will read widely and report to the seminar on their readings, as well as assessing key readings and central ideas for their potential guidance of future research. The course focuses primarily on criminology of criminal events, including law-making and law-braking. The criminology of reactions to crime is covered in the second semester pro-seminar in criminal justice, CRIM 601.

SM 601. (SOC1681) Pro-Seminar in Criminal Justice. (B) Staff.

Prerequisite(s): CRIM 600.

A wide-ranging introduction to theory and research on responses to crime under the rubric of criminal law. Theories of deterrence, procedural justice, reintegrative shaming, defiance and other interactions between legal sanctions and legal conduct will be examined in light of the most recent research. Issues of discrimination, disparity, and fairness in the operation of criminal law will be considered with evidence from around the world. Patterns, causes, and consequences of legal sanctioning patterns will be systematically documented, and major gaps in knowledge will be identified.

602. Evidence-Based Sentencing. (A) Strang.

This course examines the application of social science research to the process of sentencing convicted criminals. The course begins by reviewing the varieties of

sentencing systems, emphasizing the range of sentencing guidelines frameworks within the US and Common Law nations. It then describes how these principles work in practice, in the actions and perspectives of prosecution, defense counsel, pre-sentence investigations by probation services, and judicial rulings. The course then considers the research evidence for the relative effectiveness of different kinds of sentencing and rehabilitation programs, with emphasis on direct comparisons of prison versus community-based corrections. The concept of an "evidence-based sentence plan" is then developed, and each student is assigned the task of writing such a plan based on a particular combination of prior criminal record and current offense. Each student will present the plan in a mock courtroom, with direct examination by a defense counsel and cross-examination by a prosecutor.

SM 603. Research Methods/Crime Analysis Project. (B) Staff.

This course provides an overview of social science research methods employed by criminologists in public agencies, with an emphasis on diagnostic and analytic tools, experimental design and quasi-experimental evaluation methods. In lieu of a Masters thesis, M.S. students pursue a semester-long project, using crime analysis and research skills (along with tools such as crime mapping) to address a specific crime problem. Student projects culminate with an oral presentation before the class, as well as submission of a written product.

SM 604. Criminology in Practice. (E) Robinson.

This weekly seminar explores how criminal justice professionals can bring research-based approaches into crime-related policy and practice. Current and former government policymakers and criminal justice system practitioners regularly visit the class as guest lecturers and to engage in discussions with students. This is a "capstone" course spread across both semesters and taught by the M.S. Program Director.

615. (CRIM400, CRIM415, PUBH534) Fatal Violence in the United States. (B) Sorenson.

The purpose of this course is to provide students with an understanding of patterns of fatal violence in the United States and population approaches to violence and violence prevention. The course will focus on policies and regulations related to the manufacture and use of the primary mechanism by which the fatalities occur, that is, firearms, as well as the central aspects of the social context in which firearms exist and within which firearm policy is made.

634. Evidence-Based Crime Prevention. (A) Sherman.

This course examines the use of evidence in the practice of crime prevention. Uses include the diagnosis of crime patterns and problems, research on how to reduce crime, implementation of crime prevention policies, value-added estimates of policy effects, evaluation of cost-effectiveness, and revision of policies, all integrated into the DRIVER model of evidence-based practice. Primary emphasis is placed on scientific methods and results to date of field tests of the effects of policies intended to prevent crime. Policies are examined in nine field settings: communities, families, schools, labor markets, places, police departments, courts, incarceration, and community supervision. Central methodological issues include research designs and their execution, systematic reviews and meta-analysis, and internal and external validity of program effects.

SM 650. Inductive Statistical Methods from Exploratory Data Analysis to Statistical Learning. (B) Berk.

Data analysis has always had a significant exploratory component. Often exploratory work is undertaken as a clandestine activity not to be discussed in polite company. But beginning with the work of John Tukey, Frederick Mosteller, and others, exploratory data analysis was explicitly recognized and given more structure. Recent theoretical advances in statistics and computer science coupled with dramatic increases in computer power have led to

"muscle car" versions of exploratory data analysis carrying such labels as statistical learning or machine learning. In this course, a number of these new procedures will be considered: bagging, boosting, support vector machines, random forests and others. Some theory will be discussed, but much of the emphasis will be on practical applications with real data.

SM 700. (SOCL700) Advanced Pro-Seminar in Criminology. (A) Staff.

This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the unifying perspectives of criminology. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the causes and prevention of crime will report on their developing research ideas.

SM 701. Advanced Pro-Seminar in Criminal Justice. (B) Staff.

This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the behavior and operation of criminal law systems. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published and unpublished research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the behavior of criminal law will report on their developing research ideas.

800. Thesis Research Project. (C) Staff.

999. Independent Study and Research. (C) Both terms.

Primarily for advanced students who work with individual faculty upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.

DEMOGRAPHY (AS) {DEMG}

SM 524. (SOCI524) Advanced Topics in the Sociology of the Family. (M) Furstenberg.

The course will review a series of theoretical issues in the sociology of the family and examine major empirical studies in which theoretical advances have been made. Special attention will be given to work that has a historical and comparative perspective. Opportunities will be provided for original research on the family.

L/R 535. (SOCI535) Quantitative Methods in Sociology I. (A) Allison, Smith. Prerequisite(s): Basic algebra.

This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and--with the permission of the instructor--advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. Some data manipulation will require the use of a statistical computer "package," STATA; but the greater emphasis of the course will be on conceptualization and the ability to manipulate these new ideas both with and without access to statistical software. There is a lecture twice weekly and a mandatory "lab."

L/R 536. (SOCI536) Quantitative Methods in Sociology II. (B) Allison, Kohler. Prerequisite(s): SOCI 535 or permission of instructor.

A course in applied linear modeling. Emphasis on the theory and practice of multiple regression and analysis of variance, with extensions to path analysis and other simultaneous equation methods. Some data manipulation will require the use of a statistical computer "package," "STATA" but the greater emphasis of the course will be on conceptualization and the ability to manipulate these new ideas both with and without access to statistical software.

SM 541. (SOCI541, GSOC532) Gender, the Labor Force, and Markets. (M) Madden.

Drawing from sociology, economics and demography, this course examines the

causes and effects of gender differences in labor force participation, earnings and occupation in the United States and in the rest of the developed and developing world. Differences by race and ethnicity are also considered. Theories of labor supply, marriage, human capital and discrimination are explored as explanations for the observed trends. Finally, the course reviews current labor market policies and uses the theories of labor supply, marriage, human capital and discrimination to evaluate their effects on women and men.

SM 550. (SOCI550) Social Inequality. (M) Jacobs.

This course will study social stratification primarily in contemporary societies. We will examine both the distribution of social rewards as well as process for the allocation of these rewards. Stratification theory and research on social mobility will be considered. Topics include the influence of education, race and gender, and structural and organizational factors on individual success. Acquaintance with stratification theory and quantitative methods would be helpful but not required.

SM 583. (SOCI583) Sociology of Medicine. (C) Bosk.

Health and illness, and medical care, education, and research are examined in a social, cultural and cross-cultural perspective, with special attention to present-day American society. The course is developed around lectures and class discussion.

SM 594. (SOCI594) History of Population. (M) Staff.

The aim of the course is to present a view of how western populations in the past were coping with demographic issues of survival, reproduction, and social organization. The focus of the course will be on demographic mechanisms rather than on methodology; on the transmission of ideas on disease and reproduction rather than on quantitative estimates of mortality and fertility. 1.How do we know: A discussion of sources 2.Mortality: Homeostatic mechanisms 3.Epidemiology, then and now 4.The Mortality transition 5.Family and marriage 6.Pre-industrial fertility control 7.Ideology and technology in family limitation 8.Marital, pre- and extra- 9.The fertility transition

604. (SOCI604) Methodology of Social Research. (B) Staff.

This is a class on methodology used in social research. We shall study the history, logic and design of social research. Several classes will include presentations by other

members of the standing faculty. Discussions will be based in part on student responses to weekly assignments and critiques of published research. Students will discuss their assignments in class. Attendance is mandatory. There will be no grades of Incomplete.

609. (SOCI609) Basic Methods of Demography. (A) Elo, Smith, Preston.

The course is designed to introduce students to basic concepts of demographic measurement and modeling used to study changes in population size and composition. The course covers basic measures of mortality, fertility and migration; life table construction; multiple decrement life tables; stable populations; population projections; and age patterns of vital events. Students will learn to apply demographic methods through a series of weekly problem sets.

SM 630. (SOCI630) Advanced Special Topics. (C)

SM 633. (SOCI633) Population Processes I. (A) Elo, Ewbank, Kohler, Preston, Soldo.

Population Processes (PP) I is part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, migration, and population aging) and recent developments in the field. PP I is designed as a survey course to introduce students to a broad set of issues in health and mortality, and individual and population aging. The course covers topics in demographic and social perspectives on health and mortality in developed and developing countries and topics in population aging, such as global trends in disease, disability, and aging, biologic and social aspects of aging, and health inequalities at older ages. The course format consists of lectures and class discussions. The two course sequence is required of Ph.D. students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.

SM 634. (SOCI634) Population Processes II. (B) Kohler, Smith.

Population Processes (PP) II is a part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, migration, and population aging) and recent developments in the field. PP II focuses on biological, social, and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility

transition in developed and developing countries. In addition the course covers topics in family demography. The course format consists of lectures and class discussions. The two course sequence is required of Ph.D. students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.

SM 670. (SOCI670) Family Data. (C)
Harknett.

This two semester course will engage each graduate student in an analysis project with qualitative and quantitative components, using a linked qualitative longitudinal data set. Students will use survey data from the baseline and 12 month wave of the Fragile Families study (described at <http://crcw.princeton.edu/fragilefamilies/>), a national survey of unwed and married parents who have just had a child (with unmarried parents over sampled) They will also use transcripts and coded data from the TLC3 study, which involved qualitative couple and individual interviews conducted with a subset of 75 of the couples in the FF survey in 3 waves: about 3 months after the birth and then again 12 and 24 months after the birth. Most of these are low-income, unmarried, cohabiting parents. The goal of the course is for each student to use these two data sets, and the analytic techniques and literature covered in the course, to write a paper that can be submitted for publication. The spring will also include lots of tips on how to construct a publishable paper. Students should only enroll in this course if they plan to take the spring sequel course as well.

SM 707. (SOCI603, SOCI707) Seminar in Demographic Research. (B) Staff.

This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers and second year research papers are written. This is a required course for second year graduate students in Sociology and Demography.

SM 708. (SOCI708) Seminar: Demographic Research II. (B) Staff.

A second semester of an intensive course in preparing a major independent research paper. This is a required course for second year demography students.

SM 731. (SOCI731) Advanced Demographic Methods. (M) Staff.

This course considers a variety of procedures for measuring and modeling demographic processes. These include increment/decrement tables, generalizations of stable population relations, two-sex models, and indirect estimation procedures.

796. (SOCI796) Demographic, Economic, and Social Interrelations. (C) Kohler, Madden.

The course investigates economic and social determinants of fertility, mortality,

and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women's participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development in Third World countries? In addition to these topics, the course also covers selected methods not included in Dem/Soc 535/536 and 609.

990. Masters Thesis. (C)

999. Independent Study. (C) Staff.

Primarily for advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.

DEPARTMENT OF MEDICAL ETHICS (MD) {MEDE}

Information about the Center for Bioethics and the Master's in Bioethics degree offered by the School of Medicine is available at <http://www.med.upenn.edu/mbe>. Courses are currently offered under the subject code BIOE.

200. Winning Arguments in Bioethics.

Fiester, Autumn.

Prerequisite(s): None.

In this course, we will learn how the most persuasive arguments in the field of bioethics are made. We will read some of the most influential papers in the field, analyzing them for their argumentative strength (or weaknesses). We will focus on how these arguments are constructed, what types of objections to them are compelling, and how these arguments can be defended against an opponent's serious objections. We will focus on the classic papers in bioethics, looking at both the content of the arguments and their form. The goals of the course are to become familiar with papers in the "cannon" of bioethics, to learn how to analyze and critique the arguments of others, and also to learn the skill of creating powerful arguments about bioethical issues.

209. Mortal Bioethics: Issues in Death and Dying.

Fiester.

Prerequisite(s): None. This course is not open to graduate students.

Because mortality is part of the human condition and dying is fraught with ethical controversies, one of the main areas of study in bioethics is the philosophical and legal issues surrounding the end-of-life. In this introductory course, we will examine the most significant legal cases of the last few decades, from Quinlan to Schiavo. We will then look at the contemporary bioethical controversies involving the process of dying, including the permissibility of physician-assisted suicide, involuntary euthanasia, the doctrine of double effect, and the distinction between withholding and withdrawing life support. Finally, we will explore both the classical and contemporary literature on the deeper questions that underlie these controversies, such as: What makes a death "tragic"? Is dying well related to living well?; and, Is there such a thing as a "good death"?

210. Chimeras and Frankenpets: Ethical Issues in Animal Biotechnology.

Fiester. Prerequisite(s): None. This course is not open to graduate students.

What in 1997 was considered a remarkable feat the cloning Dolly the sheep -- is today commonplace. To date, scientists have successfully cloned many other species including cats, rabbits, cows, mice, goats, pigs, mules, horses, and most recently, a dog. Scientists have also made extensive progress in transgenic science, in which genetic material from one species is introduced into a different species. This technique has long been used in rodents, but has in recent years been used to genetically alter rabbits, fish, pigs, and, most worrisome, non-human primates. Despite all of this scientific research, there has been very little reflection on the profound ethical issues raised by animal biotechnology. In this course, we will examine the ethical issues that arise in various projects in animal biotechnology such as xenotransplantation, biopharming, pet cloning, cloning for conservation, recreational transgenesis (like Alba the bunny or the Glofish), disease modeling, and agricultural cloning and transgenesis.

540. Challenging Clinical Ethics: Managing patient/caregiver conflicts through mediation.

(M) Bergman.

Prerequisite(s): None.

The contemporary healthcare system in which patients, families, institutions and a multiplicity of caregivers interact over matters of life and death with legal, ethical, emotional and scientific complexities inherently gives rise to a variety of disputes. Such disputes are frequently highly charged and are often emergent in nature. In recent years, mediation has grown exponentially as a dispute resolution mechanism of choice. Not surprisingly, the success of mediation and a wider understanding of the process, has led to its application in the realm of healthcare disputes with encouraging results.

This course will initially provide an overview of classical mediation theory and practice. Students will be introduced to negotiation fundamentals critical to the practice of mediation. Similarities and differences between mediation in the healthcare field, as distinct from other contexts, will be examined. All class members will participate in mediation role-plays designed to simulate disputes of the kind prevalent in healthcare landscape

550. Bioethics and Society. (M) This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: <http://www.med.upenn.edu/mbe>.

This set of courses will deal with bioethical issues in popular culture addressed from a social science perspective. Courses to be offered include: "Sociology of Bioethics," and "Media and the Doctor-Patient Relationship."

551. Sociological Topics in Bioethics. (M)

This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website:

<http://www.med.upenn.edu/mbe>.

This set of courses provides a rigorous introduction to the use of sociological methods and perspective to address bioethical topics and issues. Past courses have included the "Sociology of Medicine," "Medical Errors," and "Sociology of Jewish Bioethics."

552. Anthropological Topics in Bioethics. (M)

This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website:

<http://www.med.upenn.edu/mbe>.

This set of courses provides an introduction to the use of anthropological methods and approaches to address bioethical issues. Courses might include cross-cultural studies of medicine and doctoring, diversity and the culture of medicine, cross-cultural bioethics.

SM 553. Historical Topics in Bioethics. (M)

This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website:

<http://www.med.upenn.edu/mbe>.

This set of courses provides a historical perspective on the field of bioethics and/or key issues or areas within the field. Courses that might be offered include the history of medicine and the history of science.

554. Religious Topics in Bioethics.

(M) This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: <http://www.med.upenn.edu/mbe>.

This set of courses examine the role of spirituality in the field of bioethics. Courses might be taught from a single religious perspective or provide an overview of many different perspectives. Past courses have included "Spirituality and Bioethics."

560. Clinical Approaches to Bioethics. (M)

This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website:

<http://www.med.upenn.edu/mbe>.

This set of courses examines issues in bioethics from the perspective of the practicing clinician, physician, nurse, or other health care professional. These courses will often use case studies or clinical experience to analyze or understand contemporary problems in bioethics. An example of such a course is "Clinical Dilemmas Through the Life Cycle."

570. Bioethics and Policy. (M)

This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: <http://www.med.upenn.edu/mbe>.

This set of courses will look at bioethical topics from either a legal or public policy perspective. Past courses have included: Ethics of Managed Care, Law, Medicine and Policy, and Legal Aspects of Healthcare in America.

580. Research Ethics. (M) Merz.

This class is intended to give students a broad overview of research ethics and regulation. The students will come out of the class with an understanding of the moral bases of scientific ethics and the historical evolution of biomedical research ethics. Students will be fully conversant with the development, implementation, and limitation of US human subjects regulation. The course will include reading assignments and lectures addressing the following topics: ethics and morality in science, science in society; scientific integrity; misconduct: from FFP to MIM; conflicts of interest; collegiality, publication, and authorship; ethics codes and regulation; research with human subjects; historical review of human experimentation; human subjects regulation (HHS, FDA), Institutional Review Boards; informed consent, waivers, vulnerable populations, privacy and the confidentiality of records; and research on animals.

581. Clinical Research Ethics.

Prerequisite(s): Prior course work or evidence of competency in epidemiology, statistics, and health measurement are essential.

The purposes of this course are to examine the spectrum of bioethical issues encountered in the conduct of clinical epidemiology and biostatistics research and demonstrate both conceptual and empirical approaches to studying these issues.

The goal of medicine is to improve the health and well-being of persons, many of whom are called patients. To achieve this goal, medicine uses scientific methods to test the efficacy of interventions. As important and essential as these methods are, this goal health reveals medicine as fundamentally an ethical enterprise and the clinical trial as an instrument of social control. Hence, while most physician scientists do not think of themselves as engaging in bioethics research, their work has inherent ethical elements.

The goal of this course is to help students identify ethical issues in the design and conduct of clinical research, formulate ways to think about and plan empirical and conceptual investigations of these issues. The course examines a set of core issues in the design, conduct and translation of research results into practice. Course materials include papers or book selections that address conceptual and theoretical issues and empirical investigation of issues.

As a result of taking this class, students will recognize the moral and ethical aspects of their clinical research focus. This in turn will expand their vision of the implications and value of their research and the questions they pursue.

585. Developing World Research Ethics.

Prerequisite(s): Either BIOE 580: Research Ethics or a short set of supplemental background reading.

This is an advanced seminar focused on human subjects research in resource-constrained regions of the world. Students are expected to have a grounding in US regulations and policies. The students will come out of the class with an appreciation for issues raised by research involving populations vulnerable to manipulation and exploitation, a sensitivity to cultural issues, and an awareness of methods for appropriately engaging communities and performing ethically sound research. The course includes reading assignments, lectures, case-based and discussions addressing topics ranging from social and anthropological research, vulnerability and exploitation, biomedical research, pharmaceutical sponsorship, traditional knowledge and biopiracy, and equity and access.

Grade will be based on 3 written case evaluations (70%) and class discussion and participation (30%).

590. Philosophical Topics in Bioethics. (M)

This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website:

<http://www.med.upenn.edu/mbe>.

This set of courses provides a philosophical perspective on bioethical topics and issues. This can include courses that integrate ethical theory with concern for particular applications of theory or conceptual issues in medicine, health care, and the life sciences. Past courses have included Philosophy of Death and Dying, Genetics and Ethics, Philosophy of Medicine, Pragmatic Bioethics, and Feminism and Bioethics.

SM 601. Introduction to Bioethics. (A)

Fiester.

This course is intended to serve as a broad introduction to the field of bioethics. The course will focus on three of the most important areas in bioethics: Genetics & Reproduction, Human Experimentation, and End-of-Life. Each module of the course will cover essential bioethics concepts, relevant legal cases, and classical readings of that theme. Each module will include one guest lecture from our distinguished bioethics faculty.

602. Conceptual Foundations in Bioethics. (B)

This course examines the various theoretical approaches to bioethics and critically assesses their underpinnings. Topics to be covered include an examination of various versions of deontological theories, utilitarianism, virtue ethics, principlism, casuistry, feminist ethics, narrative theory, and pragmatism.

604. (BIOE504) Empirical Methods in Bioethics. (M)

This course provides an introduction to social science research design and methods for students interested in conducting research on issues in bioethics. The course is appropriate for students who, rather than conducting research themselves, will use research findings to make or challenge arguments in policy statements or other writings. Emphasis is placed on the logic of research design as the way to relate topic of inquiry with method so that evidence produced is pertinent and useful. Students will design research projects and explore a variety of methods available to conduct research. Students will also learn to integrate research ethics into the formulation and design of their inquiries.

UNIVERSITY COURSE REGISTER

996. Research Topics. (C) This course is only open to students in the Master of Bioethics program.

This course serves the final MBE project. This course requires students to work with

faculty to produce original research that is of publishable quality. Past students have published in Nature, Science, and other prominent journals.

999. Independent Study. (C) This course is only open to students in the Master of Bioethics program.

EARTH AND ENVIRONMENTAL SCIENCE (AS) {EESC}

ENVIRONMENTAL STUDIES (ENVS)-----Note: Listings for GEOL follow ENVS 999

SM 073. (EDUC545, PHIL073) Topics in Ethics. (M) Meyer, M.

Topics vary each semester.

SM 095. Risk Communication and the Environment. (M) Osterhoudt.

Throughout nature it is evident that life is not risk free. Humans are particularly adept at modifying and shaping our environment, but with each advance in science, technology, and medicine comes an element of risk. Toxicants in our environment such as heavy metals, plastics, pesticides, pharmaceuticals, and air pollutants pose an exposure risk and are hot topics of concern, but the magnitude of their threat is often difficult to understand and communicate. How should these risks be translated from the academic laboratory to the public? What filters shape the way that we perceive risks? This seminar will promote an analysis of the risks we face on a daily basis, and the determinants which shape our willingness to accept some risks while rejecting others. Students will be asked to identify real environmental hazards, and to study how those exposures affect the public. A goal of this seminar is to nurture skills in critical appraisal, and spoken and written communication, which will be important in lifelong advocacy pursuits.

SM 098. The Next Millenium: Would Technology Help Us Resolve the Environmental Dilemma?. (C) Bokreta / Santiago-Aviles.

Over the last century we have witnessed the dominance of man over nature. Technology, our understanding of our environment and our consumption habits have been the principal weapons used in this conquest. Now, at the beginning of a new millenium, questions and concerns about our actions and perceptions are being raised. Can today's technology and new knowledge about our environment and human nature assure our survival? How can we use the next hundred years to reconstruct and restore our future? These are the fundamental questions that the class

will investigate. This course will rely on evidence, the use of hypotheses, theories, and logic as well as students' scientific inquiry and creativity. We will discuss systems, models, simulations, constancy, patterns of change, evolution, and scale.

L/R 200. Introduction to Environmental Analysis. (C) Physical World Sector. All classes. Plante.

Introduction to Environmental Analysis will expose students to the principles that underlie our understanding of how the Earth works. The goal of Earth Systems Science is to obtain a scientific understanding of the entire Earth system by describing its component parts (lithosphere, hydrosphere, atmosphere, biosphere) and their interactions, and describe how they have evolved, how they function, and how they may be expected to respond to human activity. The challenge to Earth Systems Science is to develop the capability to predict those changes that will occur in the next decade to century, both naturally and in response to human activity. Energy, both natural and human-generated, will be used as a unifying principle. Knowledge gained through this course will help students make informed decisions in all spheres of human activity: science, policy, economics, etc.

295. Maritime Science and Technology: Woods Hole Sea Semester. (C) Dmochowski.

Prerequisite(s): Laboratory course in physical or biological science or its equivalent; college algebra or its equivalent. This set of courses requires special application procedures. Contact Dr. Dmochowski for information and an application. Only the "SEA semester: Ocean Exploration" and "SEA Semester: Oceans and Climates" can be taken for Penn credit without taking a leave, and all students must have permission from Dr. Dmochowski before registering at SEA.

A rigorous semester-length academic and practical experience leading to an understanding of the oceans. The Sea Semester is composed of two intensive six-week components taken off-campus. The Shore Component is six weeks at Woods Hole, Massachusetts, with formal study in: Oceanography, Maritime Studies, and Nautical Science. This is followed by six weeks aboard a sailing research vessel, during which students conduct oceanographic research projects as part of the courses, Practical Oceanography I and II.

Maritime Studies. A multidisciplinary study of the history, literature, and art of our maritime heritage, and the political and

economic problems of contemporary maritime affairs.

Nautical Science. The technologies of operation at sea. Concepts of navigation, naval architecture, ship construction, marine engineering systems, and ship management are taught from their bases in physics, mathematics, and astronomy.

Practical Oceanography I. Taken aboard SSV Westward or SSV Corwith Cramer. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During two lectures daily and while standing watch, students learn the operation of basic oceanographic equipment, the methodologies involved in the collection, reduction, and analysis of oceanographic data, and the attendant operations of a sailing oceanographic research vessel. Practical Oceanography II. Taken aboard SSV Westward or SSV Corwith Cramer. Students assume increasing responsibility for conducting oceanographic research and the attendant operations of the vessel. The individual student is responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operation of the vessel. Each student completes an individual oceanographic research project designed during the shore component.

299. Independent Study. (C) Staff. Prerequisite(s): Permission of department. May be repeated for credit.

Directed study for individuals or small groups under supervision of a faculty member.

301. Environmental Case Studies. (C) Doheny. Prerequisite(s): ENVS 200.

A detailed, comprehensive investigation of selected environmental problems. Guest speakers from the government and industry will give their accounts of various environmental cases. Students will then present information on a case study of their choosing.

SM 399. (GEOL399) Environmental Studies Research Seminar for Juniors. (B) Dmochowski.

Prerequisite(s): ENVS 200.

This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.

SM 400. Environmental Studies

Seminar. (C) Scatena. May be repeated for credit.

Application of student and faculty expertise to a specific environmental problem, chosen expressly for the seminar.

SM 404. (HSOC404) Urban Environments: Speaking About Lead in West Philadelphia. (B) Natural Science & Mathematics Sector. Class of 2010 and beyond. Pepino. ABCS Course. Requires community service in addition to class time.

Lead poisoning can cause learning disabilities, impaired hearing, behavioral problems, and at very high levels, seizures, coma and even death. Children up to the age of six are especially at risk because of their developing systems; they often ingest lead chips and dust while playing in their home and yards.

In ENVS 404, Penn undergraduates learn about the epidemiology of lead poisoning, the pathways of exposure, and methods for community outreach and education. Penn students collaborate with middle school and high school teachers in West Philadelphia to engage middle school children in exercises that apply environmental research relating to lead poisoning to their homes and neighborhoods.

SM 405. (HSOC405) Urban Environment II. (A) Pepino.

Prerequisite(s): ENVS 404 or permission of instructor. Requires community service.

An independent study where Penn undergraduates can explore the health, environmental, and natural resource issues of Philadelphia, with a focus on the specific needs of West Philadelphia. Current public health concerns impacting vulnerable populations such as children, especially lead poisoning and asthma, are potential topics. Environmental issues such as water supply, air quality, radon, brownfields, and sprawl would also be good areas of study. Community service can be a component of the study. Permission from the instructor is required.

SM 406. (HSOC406) Community Based Environmental Health. (A)

Pepino. ABCS Course. Requires community service in addition to class time.

From the fall of the Roman Empire to Love Canal to the epidemics of asthma, childhood obesity and lead poisoning in West Philadelphia, the impact of the environment on health has been a continuous challenge to society. The environment can affect people's health

more strongly than biological factors, medical care and lifestyle. The water we drink, the food we eat, the air we breathe, and the neighborhood we live in are all components of the environment that impact our health. Some estimates, based on morbidity and mortality statistics, indicate that the impact of the environment on health is as high as 80%. These impacts are particularly significant in urban areas like West Philadelphia. Over the last 20 years, the field of environmental health has matured and expanded to become one of the most comprehensive and humanly relevant disciplines in science.

This course will examine not only the toxicity of physical agents, but also the effects on human health of lifestyle, social and economic factors, and the built environment. Topics include cancer clusters, water borne diseases, radon and lung cancer, lead poisoning, environmental tobacco smoke, respiratory diseases and obesity. Students will research the health impacts of classic industrial pollution case studies in the US. Class discussions will also include risk communication, community outreach and education, access to health care and impact on vulnerable populations. Each student will have the opportunity to focus on Public Health, Environmental Protection, Public Policy, and Environmental Education issues as they discuss approaches to mitigating environmental health risks.

This honors seminar will consist of lectures, guest speakers, readings, student presentations, discussions, research, and community service. The students will have two small research assignments including an Environmental and Health Policy Analysis and an Industrial Pollution Case Study Analysis. Both assignments will include class presentations. The major research assignment for the course will be a problem-oriented research paper and presentation on a topic related to community-based environmental health selected by the student. In this paper, the student must also devise practical recommendations for the problem based on their research.

SM 407. (HSOC407) Urban Environments: Prevention of Tobacco Smoking in Adolescents. (B)

Pepino. ABCS Course. Requires community service in addition to class time.

Cigarette smoking is a major public health problem. The Centers for Disease Control and Prevention Control reports that more than 80% of current adult tobacco users started smoking before age 18. The National Youth Tobacco Survey indicated

that 12.8% of middle school students and 34.8% of high school students in their study used some form of tobacco products.

In ENVS 407, Penn undergraduates learn about the short and long term physiological consequences of smoking, social influences and peer norms regarding tobacco use, the effectiveness of cessation programs, tobacco advocacy and the impact of the tobacco settlement. Penn students will collaborate with teachers in West Philadelphia to prepare and deliver lessons to middle school students. The undergraduates will survey and evaluate middle school and Penn student smoking. One of the course goals is to raise awareness of the middle school children to prevent addiction to tobacco smoke during adolescence. Collaboration with the middle schools gives Penn students the opportunity to apply their study of the prevention of tobacco smoking to real world situations.

SM 408. (HSOC408) Urban Environments: The Urban Asthma Epidemic. (B)

Pepino. ABCS Course. Requires community service in addition to class time.

Asthma as a pediatric chronic disease is undergoing a dramatic and unexplained increase. It has become the number one cause of public school absenteeism and now accounts for a significant number of childhood deaths each year in the USA. The Surgeon General of the United States has characterized childhood asthma as an epidemic. In ENVS 408, Penn undergraduates learn about the epidemiology of urban asthma, the debate about the probable causes of the current asthma crisis, and the nature and distribution of environmental factors that modern medicine describes as potential triggers of asthma episodes.

Penn students will collaborate with the Childrens Hospital of Philadelphia (CHOP) on a clinical research study entitled the Community Asthma Prevention Program. The Penn undergraduates will co-teach with CHOP parent educators asthma classes offered at community centers in Southwest, West, and North Philadelphia. The CHOP study gives the Penn students the opportunity to apply their study of the urban asthma epidemic to real world situations.

416. (BIOL415) Freshwater Ecology. (M)

Bott. Prerequisite(s): BIOL 101 or 121 and one semester of college chemistry. Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted.

450. Techniques in environmental accounting and system analysis. (C)

Scatena. Prerequisite(s): One year of introductory calculus and statistics, working knowledge of spreadsheet software.

This course covers the development and analysis of environmental budgets and input-output models that are commonly used in earth and environmental science. The first part of the semester will concentrate on the physical laws, systems principles, and analytical tools used in developing and evaluating input-output models and environmental budgets. In the remainder of the semester, we will develop and analyze hydrologic, energy and nutrient budgets for a variety of systems.

452. Disturbances and Disasters. (A)

Scatena.

This course covers the earth and environmental science of natural disturbances and disasters. Floods, tsunamis, snow and ice storms, hurricanes, earthquakes, fires, droughts, and meteor impacts will be discussed and covered with case studies and readings. The distribution and frequency, geologic and ecosystem level impacts, and risk management of each disturbance will be discussed.

SM 463. (ENVS643, URBS463, URBS663) Brownfield Remediation.

(M) Keene. Offered through CGS - See current timetable.

This course gives an overview of the genesis of the so-called "Brownfield" problem and of the various efforts that our society is taking to try to solve, or at least ameliorate it. The course will place the "Brownfield" problem in the broader context of the growth and decline of industrial base cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by federal and state governments to address remediation and redevelopment of abandoned industrial sites. In addition, the course will explore environmental equity issues.

499. Senior Thesis. (F) Giegengack.

Prerequisite(s): ENVS 400-level course (may be taken concurrently). The Environmental Studies major requires 2 semesters of ENVS 499.

The culmination of the Environmental Studies Major. Students write a thesis on a topic which combines their concentration

with Environmental Studies. Students work with an advisor in their discipline.

501. (MUSA501) GIS, ArcGIS & NeoGeography. (L)

This distance learning course introduces students to the fundamental techniques for using Geographic Information Systems (GIS) to analyze neighborhood markets. GIS is a computer-based data processing tool used to manage, visualize and analyze spatial information. Using Arc GIS 9.2, this course provides a hands-on experience to create maps, integrate demographic and economic data to conduct analysis within students' field of interest, including geography, history, archaeology, engineering, real estate, sociology, architecture, and political science/ policy studies. Students will also be introduced to advanced geospatial analysis tools and integrated online mapping environments using NeoGeography. The class will enable students to learn how to address research questions and problems specific to their fields through GIS; the focus throughout will be on professional and research applications of this technology. Students will have virtual lectures and GIS lab support throughout online meetings at least two times per week. One-on-One and small group work sessions will be scheduled as needed. Prior experience with GIS is not required. This is a PC-based program, only.

SM 502. Environmental Chemistry.

(M) Doheny and Andrews. Offered through CGS - See current timetable.

The chemistry of water, air, and soil will be studied from an environmental perspective. The nature, composition, structure, and properties of pollutants, their means of detection and methods of purification and remediation will also be studied.

504. Biogeochemical Cycles. (L) Gill.

Offered through CGS - See current timetable.

The presence of life on Earth has had a profound effect on the chemistry of the planet. This course examines the major elemental cycles of the globe, studying how these cycles link the atmosphere, oceans, and land. We will analyze how life influences these cycles, particularly how human activity affects them. We will study nutrient cycles in soil, wetlands, lakes, rivers, estuaries, the sea and the atmosphere, integrating these interactions to global-scale processes. One semester of chemistry recommended as background.

SM 505. Delaware River Research Seminar. (M) Mead and Bedison.

Prerequisite(s): ENVS627 is recommended.

The Delaware River extends through 5 states and is the longest un-dammed river east of the Mississippi. As a result, the river and the surrounding watershed are confronted with serious and complex environmental issues. This is a seminar course aimed at providing students who are broadly interested in environmental issues in the Delaware River Basin, such as soil and water pollution, land-use, sustainability, and policy, with the opportunity to pursue individual projects in their field of interest. Through discussions and meetings with the instructor(s), students will identify relevant topics, develop project ideas, and critically analyze issues using literature and available data. Interested students should be self-motivated, organized, and have the ability to work independently.

507. Wetlands. (M) Willig. Offered through CGS - See current timetable.

The course focuses on the natural history of different wetland types including climate, geology, and hydrology factors that influence wetland development. Associated soil, vegetation, and wildlife characteristics and key ecological processes will be covered as well. Lectures will be supplemented with weekend wetland types, ranging from tidal salt marshes to non-tidal marshes, swamps, and glacial bogs in order to provide field experience in wetland identification, characterization, and functional assessment. Outside speakers will discuss issues in wetland seed bank ecology, federal regulation, and mitigation. Students will present a short paper on the ecology of a wetland animal and a longer term paper on a selected wetland topic. Readings from the text, assorted journal papers, government technical documents, and book excerpts will provide a broad overview of the multifaceted field of wetland study.

530. Rocky Mountain Field Geology and Ecology. (L) Giegengack/Bordeaux.

Field work is done in and around Red Lodge, Montana. An additional fee for Room and Board applies. Permission of the Instructor is required for non-MES students. Offered through CGS - See current timetable.

Designed for the MES program (open to non-MES students by permission of the instructor). This is a two-week intensive field course in the geology, natural history, and ecology of the Greater Yellowstone Ecosystem, which comprises a range of environments from the mile-high semi-

deserts of intermontane basins to the alpine tundra of the Beartooth Plateau above 12,000 feet. The program is based at the Yellowstone-Bighorn Research Association (YBRA) field station on the northeast flank of the Beartooth Mountains near Red Lodge, Montana. The course includes day trips from the field station as well as overnight visits to sites within Yellowstone National Park. Pre-trip classes will be held online before the trip to ensure that all students are adequately familiar with basic principles of field-based natural science.

SM 533. Research Methods in Environmental Studies. (M) Bordeaux.

This course is designed to prepare Master of Environmental Studies students to undertake their Capstone exercises. In this course, we discuss how to identify an appropriate research project, how to design a research plan, and how to prepare a detailed proposal. Each student should enter the course with a preliminary research plan and should have identified an advisor. By the end of the course, each student is expected to have a completed Capstone proposal that has been reviewed and approved by his/her advisor.

541. Modeling Geographical Objects. (M) Tomlin.

This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with both image and drawing based geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Its major objectives are to provide the training necessary to make productive use of at least two well known software packages, and to establish the conceptual foundation on which to build further skills and knowledge in late practice.

SM 575. (ENGL584, FOLK575, HSSC575) Environmental Imaginaries. (M) Hufford.

Behind struggles over resource use and patterns of development are collective fictions that relate people to their material surroundings. "Environmental imaginaries" refers to the contending discourses that arrange society around processes of development and change. What are the Cartesian fictions that enable the chronic separation of culture from environment? How are these fictions produced, enacted, and materialized in such diverse sites as Appalachian strip mines, Sea World, nature talks, and permit hearings? How might alternative ways of knowing and being be conjured through

naming practices, narratives, and other speech genres, as well as yardscapes, protest rallies and other forms of public display? Drawing on theories of worldmaking and ethnographic works on culture and environment, this seminar examines the production of Cartesian-based environmental imaginaries and their alternatives across a range of such genres and practices.

580. Ecology of Health. (A) Sheehan.

Movements of people and populations in various historic periods have led to the introduction of diseases new to a population. The colonial period, for example, witnessed the introduction of smallpox to the Americas by European colonizers, resulting in the decimation of indigenous populations. Accompanying changes in agricultural practices, ecological destruction, and changes introduced by war, development, and trade often led to altered habitat, diet, and disease patterns that threatened both colonizers and the colonized. Today, rapid and easy movement of individuals and goods around the globe, as well as new technologies, continued status inequality between rich and poor nations, and sociopolitical conflicts, have created a condition of new, emergent, and reemerging diseases. In addition, the ability of microbes to alter in response to changed environments make identification and control of disease-causing agents a challenge to medical science.

This course will focus on the social, political, and economic sources and ramifications of world-wide disease patterns. Infectious diseases such as malaria, dengue fever, tuberculosis, and AIDS will be examined. Ecological changes and new technologies, often alter food resources, productive activities, and the environment resulting in new disease patterns; one example is arsenic poisoning in Bangladesh brought about by deeply bored wells. The activities of national and international organizations to cope with disease outbreaks, to formulate strategies for disease surveillance and notification, and to create solutions are important to understanding the state of global health. Selected case studies will be used, placing them within a framework of sociological analysis of health and disease, medical research, poverty and disease, as well as national and international organizational and policy responses.

SM 601. Proseminar: Contemporary Issues in Environmental Studies. (M) Pfefferkorn & Gill. Offered through CGS - See current timetable.

A detailed, comprehensive investigation of selected environmental problems. This is the first course taken by students entering the Master of Environmental Studies Program.

604. (ENVS414) Conservation and Land Management. (M) Harper. Some Saturday field trips will be required.

Using protected lands in the Delaware Valley, this field-based course will explore various strategies for open-space conservation and protection. In addition, students will be introduced to land management techniques used on such sites to restore or preserve land trust properties in accordance with goals set for their use or protection. Sustainable land uses such as community supported agriculture, ecovillages, and permaculture design will be covered. Emphasis will be placed on developing skills in "Reading the Landscape" to determine conservation and restoration priorities. Students will produce a site assessment report on sites that they visit.

608. Geology & Ecology of the Isle of Arran, Scotland. (L) Giegengack and Bordeaux. Prerequisite(s): An introductory Geology or Ecology course would be helpful. MES Summer Course.

The Isle of Arran, off the west coast of Scotland, might very well be called the birthplace of modern Geology. James Hutton, Scottish Physician and gentleman farmer, conceived of the concept of Uniformitarianism, while wandering about the Isle of Arran. Hutton's Theory of the Earth laid down this concept, which later became one of the foundation principles of modern geology and earned him the appellation "Father of Modern Geology". The island offers a wide variety of rock types and geological events that has drawn geologists and students from around the globe to this tiny island.

The position of the Isle of Arran off the west coast of Scotland, places it close to the warm waters of the Gulf Stream, allowing for a much milder and wetter climate than might be expected from the island's latitude. The distribution and types of plants and animals found on the island are a direct consequence of this milder and wetter climate. The proximity to ocean waters also gives the class a chance to examine near shore marine environments.

ENVS 688 is a two-week intensive field course in the geology, natural history, ecology, and culture of the Isle of Arran,

Scotland. Pre-trip classes will be held online before the trip to ensure that all students are adequately familiar with basic principles of field-based natural science. Students will then meet in Glasgow and travel together to the Isle of Arran where they will be based for the duration of the two weeks. Students will participate in a number of field exercises that include: mapping of dikes, examination of raised beaches (causes and consequences), cave formation, and modern landscape formation based on underlying geology. The types of plants and animals found on the island will be examined in light of their position on the island and the underlying geology. Students will map floral distributions as part of a multi-day exercise, examine the red deer population and the effects of interbreeding with an introduced Japanese Sika deer, and the possible consequences of reintroducing the wolf. Students will also examine ancient standing stones, stone circles, runrig agricultural practice's effects on modern landscapes, and tour Brodick Castle as part of the cultural aspect of the course. Guest lectures from local historians are also planned.

610. Regional Field Ecology. (L)

Willig. Offered through CGS - See current timetable. Some Saturday field trips required.

Over the course of six Saturday field trips, we will travel from the barrier islands along the Atlantic Ocean in southern New Jersey to the Pocono Mountains in northeastern Pennsylvania, visiting representative sites of the diverse landscapes in the region along the way. At each site we will study and consider interactions between geology, topography, hydrology, soils, vegetation, wildlife, and disturbance. Students will summarize field trip data in a weekly site report. Evening class meetings will provide the opportunity to review field trips and reports and preview upcoming trips. Six all-day Saturday field trips are required.

SM 611. Environmental Law. (B)

Keene.

This course will provide an introduction to environmental law and the legal process by which environmental laws are implemented and enforced. The course will examine the common law roots of environmental regulation in tort principles such as nuisance, negligence and trespass. We will examine important Constitutional principles in substantive and procedural law as well as significant environmental laws and approaches. Finally, we will examine emerging theories of citizen's rights and the government's role in environmental law and regulation.

Students will learn how to read and analyze course decisions and apply some of the elements of legal thinking to actual cases and current problems.

612. (ENVS412) Economics and the Environment. (M)

Handy.

This course provides a comprehensive introduction to basic economic tools and methods, as they are applied to environmental issues -- including pollution control, resource depletion, the global commons, intergenerational equity, and policy decision-making. The course is designed for those with little or no prior economics background; disciplined sceptics are welcome.

SM 613. (ENVS413) Business and the Natural Environment. (B)

Heller. Offered through CGS - See current timetable.

This course explores dramatic changes taking place at the interface of business, society, and the natural environment. Previously, business and environmental interests were believed to be adversarial. Now, some contemporary thinkers are suggesting that environmental capabilities can be a source of competitive advantage for corporations. A recent Harvard Business Review article refers to the sum of these changes as "The Next Industrial Revolution." In this course we will study examples on the cutting edge of these developments. We will look at corporations that are creating a "double bottom line" by strategizing about the ecological impact of their decisions, as well as the economic impact. We will learn about industrial designers who are rethinking everything from tennis shoes to corporate headquarters' buildings with the environment in mind. We will consider new alliances among business, environmental activists and government regulators -- all stakeholders in a sustainable society.

615. Professional Case Studies in Environmental Analysis and Management. (M)

Laskowski. This course is designed for students nearing the end of their MES program. It will provide students with hands-on experience working with local environmental professionals on projects in the Delaware Valley region. Each student will select a project made available by a local public or private agency. Among the tasks that students will perform are data collection and analysis, project planning, and documentation. Each student will prepare a detailed report under the direction of the agency representative that can be the basis

for a Capstone project. Those interested in continuing on to the Capstone phase will use the report as the basis for a publishable document to be prepared in conjunction with the participating agency.

SM 617. Innovative Environmental Management Strategies. (M)

Laskowski. Offered through CGS - See current timetable.

This course will evaluate innovative environmental management strategies used by corporations, governments, the public, and NGOs including approaches such as the concept of pollution prevention, environmental management systems, green buildings, green product design, product labeling, environmental education, the power of information, market-based techniques, and industrial ecology. Some professionals believe that these innovative approaches have the potential to result in more environmental improvement than will be realized by additional regulatory requirements. This course will address which approaches work best and identify critical elements needed to ensure the best approaches to specific problems. Students will be exposed to real-life situations through expert guest lecturers, case studies, and "hands on" projects.

621. Public Voices, Private Rights: Perspectives on American Environmentalism. (A)

Minott. Offered through CGS - See current timetable.

This course will address various aspects of American environmentalism. We will look at structural issues such as the foundations of environmental protection in common law, the constitutional limits on environmental protection, and the creation of bureaucratic environmental policy making. We will also look at philosophical issues such as American Conservationism and Preservationism, the anti-environmental backlash, and environmental justice. Finally, we will discuss scientific and legal issues such as the economics of risk, the question of who can speak for Nature, and voluntary actions/command and control.

SM 623. Crossing Borders: Policy, Regulatory and Management Issues in Transboundary Environmental Protection. (B)

Feldman. Offered through CGS - See Current Timetable.

Transboundary issues arise at the local, regional, supra-national, and global levels. Pollution does not respect political boundaries; habitats are defined by ecosystems, not by regulation. This course will introduce the difficulties posed by cross-border issues and, using case studies,

explore a range of policy, regulatory and management mechanisms employed to address these challenges. Among the topics to be covered include: interstate compacts (e.g. Chesapeake Bay), NAFTA Commission on Environmental Cooperation (e.g. biodiversity in North America), Regional Cooperation (e.g. Baltic Sea, international watercourses), European Union regulation (e.g. Hazardous Waste directives and the Basel Convention), and international conventions (e.g. The Kyoto Protocol on greenhouse gas emissions).

625. Overview of Environmental Justice: Issues, Actions and Visions for the Future. (B) Harris and Thompson. Offered through CGS-See current Timetable.

Many people refer to the Environmental Justice Movement as the most significant social rights movement to occur in this country since the Civil Rights Movement. Communities around the United States have expressed concerns related to the siting, permitting and clean up of hazardous waste sites in minority and low-income areas. Beginning with the protests in Warren County, North Carolina, Environmental Justice has become a most critical and controversial issue in this country. This course will provide an overview of the history, guiding principles, and issues of concern regarding Environmental Justice and will examine the approaches taken by communities, EPA, state and local government over the years to address these concerns. Students will be expected to evaluate and assess the various issues and case studies presented to them in a critical fashion, discuss these case studies, and make recommendations for appropriate action.

SM 627. The Delaware River: An Environmental Case Study. (B) Laskowski and Collier. Offered through CGS - See current timetable.

The Delaware River and Estuary offer an opportunity to examine efforts to protect the environment in a multi-state, economically and ecologically complex area. This case study will review environmental protection efforts in and around the River, the stressors on the environment, and attempts to balance environmental protection with economic, employment, and other needs. It will address scientific issues, relationships between air and water quality transportation and sprawl issues, the balancing of water quality and water quantity. Students will learn about the institutions responsible for managing this

complex system, and what goals and indicators of progress are used by these organizations. Students will be asked to research, in detail, one or more aspects of the environmental management systems. They will identify the key drivers in determining environmental quality, recommend improvements to the system, and propose a vision for the future.

629. Global Environmental Politics. (A) Hunold. Offered through CGS - See current timetable.

Nation-states and multinational corporations are the most powerful actors in the global political economy. What does this mean for efforts to protect the global environment? Do environmental activists stand a chance? Drawing on insights from green political theory, international relations, and political economy, the field of global environmental politics may have the answer. Following a survey of relevant state and non-state actors in global environmental politics, and a review of major international environmental agreements, we will examine diverse theories of global environmental politics. Regime theory, global governance, green critiques of globalization, green theories of state sovereignty, and social movement theory offer competing accounts of the role of state, society, and economy in creating and managing global environmental change. Our goal will be to assess these competing explanations and strategies for promoting global ecological sustainability.

SM 631. (ENVS431) Current EPA Regulatory Practices and Future Directions. (A) Laskowski.

The regulatory approach continues to be the foundation of environmental protection in the US. This course provides an overview of key environmental laws and regulations, and the processes used to write permits, conduct inspections and take enforcement actions. It is taught mainly from the perspective of the federal government and will also include perspectives from the states, NGOs, and the regulated community. Techniques used to set priorities, ensure fairness, and encourage compliance are included. Current issues in major regulatory programs will be reviewed and future directions will be discussed.

632. Energy and the Environment in the U.S. (M) Huemmler.

This is a survey course that will examine the current U.S. energy industry, from production to consumption, and its impacts on local, regional, and the global environment. The course will seek to

provide a fuller understanding of existing energy systems, ranging from technical overviews of each, to an exploration of the well-established policy framework each operates within. Near-term demands upon each energy supply system will be discussed, with particular focus on environmental constraints. Policy options facing each energy industry will be reviewed. By semester's end, successful students will have developed an intellectual framework to understand the challenges facing the U.S. energy system.

SM 633. Community Involvement in Environmental Analysis and Management. (A) Pomponio and Esher. Offered through CGS - See current timetable.

This course will investigate the various community involvement and communication tools, venues, and practices used during the analysis and management of decisions affecting the environment. Students will be exposed to real-life situations through expert guest lecturers, case studies, and hands on projects. The course will investigate communication practices for project specific issues relative to the National Environmental Policy Act (NEPA), Superfund, and other local, state, and federal vehicles. Students can expect to learn, experience, and apply communication tools to ongoing proposals for major highway, impoundment, and other infrastructure proposals as well as for environmental clean up initiatives launched under various authorities. Students will also examine and contribute to citizen advisory and stakeholder forums for major watershed and estuary programs. Specific communication challenges to achieve environmental justice and the conveyance of technical information will be explored.

SM 635. Major Global Environmental Problems of Today and how we must deal with them tomorrow. (B) Laskowski. Offered through CGS - See current timetable.

Global environmental problems of today are some of the greatest challenges of the new millennium. Almost everyone is in some way part of the problem and increasingly will be asked to be a part of the solution. The problems that we face today often differ from those of the past because it is sometimes difficult for the international community to agree on the extent, causes, and impacts of the problem and how to allocate responsibility for the resolution of the problem. Governments, businesses and NGOs around the world have recognized the need to take the initiative and address these issues through

regulation, voluntary approaches, and cooperation on an international level. How best to manage these problems is the constant challenge. This course will provide an overview of several of the major global environmental problems facing the world today, and how they are connected by common causes, underlying themes and concepts critical to the understanding and management of these issues. It will examine the over-arching concepts of sustainability and globalization as well as frameworks for assessing and managing the issues.

The course will also consider the role of the major players/stakeholders in the situation, including governments, non-government organizations, and private sector individuals/participants, and where appropriate, touch on such issues as intergenerational aspects and the potential long-term irreversibility. With the assistance of regional and national experts, we will address specific problems, such as: human populations and their environmental impact; issues surrounding resources such as food, water, habitats, and energy; global climate change; the ozone layer; and problems of international/environmental terrorism, catastrophes, and disease. Each student will prepare a report and presentation on some aspect of a topic discussed during the term.

637. (ENVS437) Global Water Issues. (A) Laskowski. Offered through CGS - See current timetable.

Water-related illnesses are estimated by some to kill up to 5000 people per day worldwide and many of these casualties are children. This course will explore the causes of this global crisis and what is being done to address the issue. It will provide an overview of international agreements, wastewater and water supply issues, technological advances, political/financial/cultural and other barriers to success, and what students can do to become involved in resolving the issues. Guest lecturers and case studies will provide insights to problems in problem areas around the world. Students will be asked to evaluate specific problems and suggest improved approaches to improving access to clean water.

SM 638. Global Water Policy and Governance. (A) Laskowski.

At the turn of the 21st century the United Nations established a series of goals to assist developing countries. These Millennium Development Goals [MDG] include targets for water and sanitation: "by the year 2015 to reduce by one half the percent of the world's population that does

not have access to safe water and adequate sanitation". This course explores the policies and actions being taken by the world community, the United States, and NGOs to meet these targets. It will also address water governance issues such as financing, community leadership, and capacity building for water/sanitation in developing countries. Two mandatory full-day field trips are included [one to the United Nations in New York City; another to US Government leaders in Washington, DC].

641. Water in Environmental Planning. (M) Curley.

This course will present a combination of technical and non-technical material. Its purpose is to introduce the people who are not engineers or scientists to the practices that engineers and scientists use to study water and watersheds. It will present the following concepts: Hydrology, Water Treatment, and Waste Water.

SM 643. (ENVS463, URBS463, URBS663) Brownfield Remediation. (M) Keene. Offered through CGS - See current timetable.

This course is intended to give students an overview of the genesis of the so-called "Brownfield" problem and of the various efforts our society is taking to solve or, at least, ameliorate it. The course will place the "Brownfield" problem in the broader context of the growth and decline of the industrial base of cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by Federal and state government to address remediation and redevelopment of abandoned industrial sites. The course will also explore environmental equity issues.

The students will collaborate with high school students at the West Philadelphia High School to identify sites in their neighborhoods and to learn how to determine the sites ownership and land use history. The students will study ways of determining environmental risk and the various options that are available for remediation in light of community ideas about re-use. Students will be expected to participate actively in the seminar and the sessions with high school students. Students in the course are required to prepare and present a term paper on a topic in the general area of "Brownfield" analysis and remediation.

645. (CPLN631) Planning for Land Preservation. (B) Daniels. Offered through CGS - See current timetable.

An introduction to the tools and methods for preserving private lands by government agencies and private non-profit organizations. Topics include purchase and donation of development rights (also known as conservation easements), land acquisition, limited development, land swaps, and the preservation of urban greenways, trails, and parks. Preservation examples include: open space and scenic areas, farmland, forestland, battlefields, and natural areas.

646. A Primer on Stream and River Ecology. (M) Blain.

This class explores streams and rivers from the perspectives of both the natural and social sciences. Students will get a solid grounding in the hydrology, geology, physics, chemistry, and biology of streams and rivers, and they will learn how all these fit together in a watersheds ecosystem. They will also examine the impacts that human development has had on such ecosystems over time -- how rivers have become polluted, what mechanisms they have to fight pollution, and what we need to do to protect, maintain and restore them now and in the future.

In addition to considering such questions within a theoretical framework, the class will look at issues in the real world. Students will set up an actual monitoring system, in which they will process samples taken from above and below a sewage treatment plant in a local stream, and then analyze and interpret the sample data. They will also learn about ongoing research projects in the watersheds that supply New York City its drinking water and in the streams and rivers of developing nations. In both cases, they will not only study the science but also the politics of streams, rivers, and the water that they convey.

652. God, Gold & Green: Themes and Classics in American Environmental Thought. (C) Blaine. Offered through CGS - See current Timetable.

Through an exploration of enduring themes and classics, this course traces environmental thought in America from the first European settlements to the present. We begin by considering the preconceptions that Europeans brought to the New World and the realities they found when they arrived. We look at the issues raised by the unprecedented industrial and urban expansion of the 19th century and the accompanying westward migration that

filled the continent. We examine how the conflict between economic growth and environmental limits created competing models of prosperity, equality and justice. And finally, we look at ways to transcend those divides and build a sustainable and equitable future. The primary vehicles for understanding the evolution of environmental thinking across several centuries are some of the classic texts of environmental thought - from The Book of Genesis to Henry Thoreau's Walden to Rachel Carson's Silent Spring to Al Gore's An Inconvenient Truth. The course seeks to provide a theoretical and historical framework that will help students understand current issues and address real problems.

SM 656. Environmental Sociology. (B) Sheehan.

The context in which debates take place and decisions and laws about the environment are made, leads to a focus on the community, defined here as workers and residents. Members of urban and rural communities, situated near polluting factories, hazardous sites or landfills, are affected by these contaminants. Using a sociological framework, this course will study the community and its relationship to environmental issues. Community members often first identify local hazards; they form organizations, map polluted sites, and enumerate residents with diseases that may originate from contaminants. Sociologists identify these grassroots initiatives as community epidemiology. Social justice concepts highlight the intersection of race, poverty, and environmental hazards. Major social institutions corporations, government agencies, health care providers have played a role in covering over occupational and environmental hazards. Worker and community action has forced these institutions to take a role in identification and remediation of hazardous sites, and of continuous monitoring of neighborhoods and residents. In terms of health effects, among citizens, experts, and major institutions, and debates about both the local and global consequences of environmental hazards, will be among the topics covered.

The emergence of institutional structures at the local, state, national, and international levels, to deal with environmental protection, identification and testing of hazards, and establishing limits for exposure, will be examined. The course will include readings on significant contemporary and historical occupational and environmental events in the United States. In addition, selected, international

case studies of occupational and environmental issues will be undertaken.

SM 658. Violence and the Environment. (B) Minott. Offered through CGS - See Current Timetable.

Governments, corporations, environmental organizations, anti-environmental organizations, and individuals have resorted to violence as a means to achieving an environmental end. Although some defend such violence as the only way to achieve specific goals, do the ends ever really justify the means? Does violence have a place in the environmental movement? How should environmentalists respond to pro- or anti-environmental violence? This course will study instances of such violence, and explore why violence has been seen as an acceptable or sometimes the only way to achieve a desirable end.

662. Green Design and the City. (B) Berman. Offered through CGS - See current timetable.

Can our cities become examples of sustainable design? Does inner city revitalization tie into sustainability? Are there successful examples to learn from? This seminar will focus on how existing cities attempt to integrate green design principles within them. It will look at case studies, both in the US and abroad.

Urban design and transportation will be examined within this context, including how to create pedestrian friendly spaces. Infill construction and the adaptive use of existing buildings will be discussed, as well as the reuse of brownfield sites. We will also look at what types of construction actually constitute green buildings.

We will take advantage of our local resources within Philadelphia, and include visits to nearby sites, along with talks by local experts. There will be a series of short projects given throughout the term. They will usually include both a written component and a presentation to the class. The energetic execution of these projects, their presentations and the subsequent discussions, will be a key part of this seminar.

SM 664. Sustainable Design. (C) Berman. Offered through CGS - See current timetable.

This seminar will focus on how physical design can improve sustainability. It will be broken down into 3 parts: Green Buildings, Green Urbanism, and Smart Growth Planning. Starting small, we will begin by looking at which types of construction actually constitute Green Buildings and which of these are the most

effective. Our look at Green Urbanism will focus on existing cities and towns. They will be examined in terms of how urban design and transportation can promote sustainability. Finally, Smart Growth planning concepts for new developments will be discussed. This will include a survey of New Urbanism. Both these closely allied approaches are recent attempts to guide new growth in a more sensitive manner. We will also take advantage of local resources within our region, and include visits to nearby sites, along with talks by local experts.

668. Selected Topics in Environmental Health. (C) Pepino.

From the fall of the Roman Empire to Love Canal to today's epidemics of asthma and childhood obesity, the impact of the environment on health has been a continuous challenge to society. This course will examine how environmental factors have contributed to chronic disorders and diseases. Selected topics will include cancer clusters, COPD, radon and lung cancer, lead poisoning, environmental tobacco smoke and the aforementioned obesity and asthma, epidemics. Students will be contrasting priority environmental health issues internationally with those in their local communities. Class discussions will also focus on risk communication, community outreach and education, access to health care and vulnerable populations. Students will be asked to research one environmental health topic in detail, to present their findings to the class, and to propose recommendations for future action.

674. Assessment and Remediation of the Environment Using Biological Organisms. (M) Vann.

This course is an introduction to current and emerging techniques for analyzing environmental contamination and remediation of damaged environments. Knowledge of these options will be important for both students interested in policy/law options, as well as providing a starting point for those pursuing a more science-oriented understanding of environmental issues. The first portion of the course will address bioindicators--the use of living systems to assess environmental contamination. Many new methods of rapidly-analyzing environmental samples are becoming available. These include systems ranging from biochemical assays to monitoring of whole organisms or ecosystems, as well as techniques ranging from laboratory to field and satellite surveys. The course will survey these approaches to familiarize the student with this rapidly developing field.

The second portion of the course will introduce techniques for bioremediation--the use of living organisms to restore contaminated environments. Several case studies will be provided (perhaps with external speakers). Students will be expected to prepare a final paper examining a particular technique in detail.

678. Advanced Biogeochemistry. (B) Vann. A soils course would be helpful, but not required.

The course will cover nature of the field of biogeo chemistry and its application. Topics include, elemental cycling at various scales, from global to watershed level, the interaction between geology and biology in controlling how these relationships have changed over the Earth's history and man's influence on these cycles.

The course will include an examination of the CENTURY computer model, a popular model for examining nutrient cycling in terrestrial ecosystems. Students will submit a term paper on a related subject, such as comparing the functioning of two watersheds or summarizing current understanding of a particular cycle, etc.

680. Advanced Environmental Chemistry. (M) Nemeroff. Offered through CGS - See current timetable.

This course will examine the environmental contamination of water, air, and soil. Students will continue the evaluation of composition, structure and properties of pollutants, their means of detection and methods of purification and remediation. Successful completion of Envs 502 or a thorough knowledge of general and organic chemistry is recommended.

681. Modeling Geographical Space. (M) Tomlin. Offered through CGS - See current timetable.

This course explores the nature and use of digital geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes through 'cartographic modeling'. Cartographic modeling is a general but well defined methodology that can be used to address a wide variety of analytical mapping applications in a clear and consistent manner. It does so by decomposing both data and data-processing tasks into elemental components that can then be recomposed with relative ease and with great flexibility.

SM 699. (GEOL699) Masters of Environmental Studies Capstone Seminar. (C) Riebling. Permission of instructor required. Offered through CGS - See current timetable.

999. Independent Study. (C) Staff. Permission of instructor required.

Directed study for individuals or small groups under supervision of a faculty member.

GEOLOGY (GEOL)

L/R 003. (PHYS003) Evolution of the Physical World. (A) Physical World Sector. All classes. Pfefferkorn/Segre.

The big bang, origin of elements, stars, Earth, continents and mountains.

SM 096. Field Approaches to Understanding the Earth & Environmental Science. (A) Scatena. Corequisite(s): GEOL 100 or GEOL 109 highly recommended. This is a field based course. Weekend fieldtrips are required.

Understanding landscapes and the relationships between the natural world and society is fundamental to the natural sciences, architecture, medicine and public health, real estate and finance, urban studies and a range of other disciplines. The primary goal of this course is to expose students to the science of reading landscapes and disciplines that are founded in observation and hypothesis testing in the field. In addition, the course will orient incoming students to the physical environment in which they will be living while they are at Penn.

The course will be centered around lectures and discussions that are based on ten or more field trips that will take place on weekends and afternoons throughout the semester. The trips will be led by faculty members and will cover topics of plate tectonics, bedrock and surficial geology, geomorphology, hydrology, environmental geology, pollution and field ecology.

L/R 100. Introduction to Geology. (A) Physical World Sector. All classes. Omar. Field trips required.

An introduction to processes and forces that form the surface and the interior of the Earth. Topics include, changes in climate, the history of life, as well as earth resources and their uses.

103. Natural Disturbances and Human Disasters. (B) Physical World Sector. All classes. Scatena.

Natural disturbances play a fundamental role in sculpting landscapes and

structuring natural and human-based ecosystems. This course explores the natural and social science of disturbances by analyzing their geologic causes, their ecological and social consequences, and the role of human behavior in disaster reduction and mitigation. Volcanoes, earthquakes, floods, droughts, fires, and extraterrestrial impacts are analyzed and compared.

L/L 109. Introduction to Geotechnical Science. (A) Physical World Sector. All classes. Omar.

Open to architectural and engineering majors as well as Ben Franklin Scholars. Field trips. Relations of rocks, rock structures, soils, ground water, and geologic agents to architectural, engineering, and land-use problems.

111. Geology Laboratory. (C) Omar. Prerequisite(s): GEOL 001 or 100, preferably taken concurrently. Field trips required.

Hands-on study of earth materials and processes. Identification and interpretation of rocks, minerals and fossils. Topographic and geologic maps. Evolution of landscapes. Field trips lead to a synthesis of the geologic history of southeastern Pennsylvania.

L/R 125. Earth and Life Through Time. (C) Physical World Sector. All classes. Pfefferkorn.

Origin of Earth, continents, and life. Continental movements, changing climates, and evolving life.

L/R 130. Oceanography. (B) Physical World Sector. All classes. Horton.

The oceans cover over 2/3 of the Earth's surface. This course introduces basic oceanographic concepts such as plate tectonics, marine sediments, physical and chemical properties of seawater, ocean circulation, air-sea interactions, waves, tides, nutrient cycles in the ocean, biology of the oceans, and environmental issues related to the marine environment.

L/L 201. (GEOL521, GEOL531) Mineralogy. (A) Omar. Prerequisite(s): GEOL 100 and CHEM 001 or 101.

Crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.

L/L 205. (GEOL406) Paleontology. (B)

Living World Sector. All classes.

Bordeaux. Prerequisite(s): GEOL 100 or permission of instructor. Two field trips required.

Geologic history of invertebrates and their inferred life habits, paleoecology, and evolution. Introduction to paleobotany and vertebrate paleontology.

L/L 206. (GEOL506) Stratigraphy. (A)

Horton. Prerequisite(s): GEOL 100 or permission of instructor. Two field trips, field project.

Introductory sedimentary concepts, stratigraphic principles, depositional environments, and interpretation of the rock record in a paleoecological setting.

L/L 208. (GEOL630) Structural

Geology. (B) Phipps. Prerequisite(s): GEOL 100 and 111; PHYS 150 strongly recommended. Three field trips required.

Introduction to deformation as a fundamental geologic process. Stress and strain; rock mechanics. Definition, measurement, geometrical and statistical analysis, and interpretation of structural features. Structural problems in the field. Maps, cross-sections, and three-dimensional visualization; regional structural geology.

299. Independent Study. (C) Staff.

Prerequisite(s): Permission of department. May be repeated for credit.

Directed study for individuals or small groups under close supervision of a faculty member.

305. (GEOL545) Earth Surface

Processes. (B) Physical World Sector. All classes. Jerolmack. Prerequisite(s): ENVS 200, GEOL 100, or permission of the instructor. This course includes two required weekend field trips, and a hands-on laboratory.

Patterns on the Earth's surface arise due to the transport of sediment by water and wind, with energy that is supplied by climate and tectonic deformation of the solid Earth. This course presents a treatment of the processes of erosion and deposition that shape landscapes. Emphasis will be placed on using simple physical principles as a tool for (a) understanding landscape patterns including drainage networks, river channels and deltas, desert dunes, and submarine channels, (b) reconstructing past environmental conditions using the sedimentary record, and (c) the management of rivers and landscapes under present and future climate scenarios. The course will conclude with a critical

assessment of landscape evolution on other planets, including Mars.

L/L 317. Petrology and Petrography. (B) Omar. Prerequisite(s): GEOL 201. Two field trips.

Occurrences and origins of igneous and metamorphic rocks; phase equilibria in heterogeneous systems. Laboratory study of rocks and thin sections as a tool in interpretation of petrogenesis.

SM 390. Geology Field Work. (C)

Giegengack. 4-8 weeks, usually during the summer.

401. Environmental Geology. (M)

Willig.

The purpose of this course is to better understand the interactions of humans and the environment through an examination of geologic processes and features as they influence, and are influenced, by human activities. The ultimate goal of such study is to make better land use decisions. Following a review of some basic geologic concepts, we will study hazardous geologic processes including; volcanic eruptions, earthquakes, river flooding, coastal flooding and erosion, landslides, and subsidence. Next, we will discuss environmental impacts associated with the use of fossil fuels, water, and soils. The course will conclude with student presentations of selected topics in environmental geology.

SM 405. Paleocology. (M) Bordeaux.

Prerequisite(s): GEOL 205 or permission of instructor.

Relationship of fossil assemblages to life assemblages; structure of ancient communities, and interaction of organisms with each other and with the physical environment; evolution of communities.

L/L 415. Paleobotany. (M) Pfefferkorn.

Prerequisite(s): Basic course in Geology or Biology or permission of instructor. Two field trips.

Fossil record and evolution of plants. Methods and application of paleobotanical research.

L/L 417. Advanced Petrology. (A)

Omar. Prerequisite(s): GEOL 317.

Chemistry, physics, phase equilibria, microscope study in igneous and metamorphic petrology.

418. Geochemistry. (M) Omar.

Prerequisite(s): GEOL 201. May be taken concurrently.

This course provides a comprehensive introduction to theory and applications of

chemistry in the earth and environmental sciences. Theory covered will include nucleosynthesis, atomic structure, acid-base equilibrium, thermodynamics, oxidation-reduction reactions. Applications will emphasize oceanography, atmospheric sciences and environmental chemistry, as well as other topics depending on the interests of the class. Although we will review the basics, this course is intended to supplement, rather than to replace, courses offered in the department of Chemistry. It is appropriate for advanced undergraduate as well as graduate students in Geology, Environmental Science, Chemistry and other sciences, who wish to have a better understanding of these important chemical processes

420. Introduction to Geophysics. (M)

Doheny. Prerequisite(s): GEOL 100 or 109, two semesters Math and Physics, and/or instructor's permission.

This course will cover the application of geophysical investigation techniques to problems of the earth's planetary structure, local subsurface structure and mineral prospecting. The topics will include principles of geophysical measurements and interpretation with emphasis on gravity measurement, isostasy, geomagnetism, seismic refraction and reflection, electrical prospecting, electromagnetics and ground radar.

L/L 421. Elemental Cycling in Global Systems. (B) Plante. Prerequisite(s): ENVS 200, GEOL 100, or permission of the instructor.

Humans have an enormous impact on the global movement of chemical materials. Biogeochemistry has grown to be the principal scientific discipline to examine the flow of elements through the global earth systems and to examine human impacts on the global environment. This course will introduce and investigate processes and factor controlling the biogeochemical cycles of elements with and between the hydrosphere, lithosphere, atmosphere and biosphere. Students will apply principles learned in lectures by building simple computer-based biogeochemical models.

428. Introduction to Isotope Geochemistry. (A) Omar.

This course is for advanced undergraduate students interested in learning about or pursuing applications of isotope geochemistry, with an emphasis on biological and climatic processes (e.g. plant physiology, soils, nutrient cycling, and atmospheric chemistry).

477. Introduction to Vertebrate Paleontology. (M) Dodson.

Prerequisite(s): GEOL 100 and 205 or by permission of Instructor.

499. Senior Thesis. (F) Giegengack.

Students write a thesis on a geologic topic. Students work with an advisor in their discipline.

501. Pleistocene Geology. (M)

Giegengack. Prerequisite(s): GEOL 100 or equivalent.

Origin, extent in space and time, and effect on geologic processes of Late Cenozoic climatic change; Pleistocene stratigraphy in different parts of the world.

L/L 502. Data Analysis and Computer Modeling in Geology. (M) Phipps.

Prerequisite(s): GEOL 100 or 109 and the instructor's permission.

Data analysis from simple parametric statistics to multivariate statistics, including cluster and factor analysis. Additional topics include: Bootstrapping, Markov chains, runs tests, spectral analysis, and other general techniques to analyze data sequences and time-series. Map studies include: analysis of distributions of points and lines, directional data, spherical distributions, shape and trends surfaces.

503. Earth Systems and Earth Hazards. (B) Phipps. Prerequisite(s):

Geology 100 (introductory physical geology,) or permission of the instructor. The course is intended for Masters' students in Environmental Studies and Applied Geology, as well as upperclass geology majors.

This course will examine the hazards that arise from living on an active planet from a large-scale systems standpoint. We will briefly survey the Earth's major systems, emphasizing energy generation, storage, and flow within the Earth, and then proceed to an examination of the hazards that result. This will include earthquakes and tsunamis, volcanic eruptions, river and coastal flooding, and hurricanes, tornadoes, and other major storms. We will touch briefly on global warming and other current topics.

511. Geology of Soils. (A) Johnson.

Prerequisite(s): GEOL 100 or equivalent. Field trips.

Nature, properties, genesis, and classification of soils; soils of the United States.

515. Evolution/Revolution of Land Ecosystems. (M) Dimichele/Wing.

Permission of instructor needed.

Origin and diversification of land ecosystems. Interaction between plants and animals. Effects of past climatic change and other external factors. The importance of past changes in land ecosystems to our understanding of current global change.

517. Igneous and Metamorphic Petrology. (M) Omar.**L/L 521. (GEOL201, GEOL531) Mineralogy of Rock Preservation. (A)**

Omar. Graduate School of Fine Arts students only.

Advanced crystallography, representative minerals, their chemical and physical properties, with emphasis on building stone preservation. Use of petrographic microscope in identifying common rock-forming minerals in thin section.

525. Plant Paleoecology. (M)

Pfefferkorn.

Deciphering the ecology of fossil plants, ecosystems, and landscapes through quantitative and qualitative methods.

528. Aqueous Geochemistry. (M)

Johnson. Prerequisite(s): GEOL 100 and 511 and permission of instructor.

Chemical composition and interactions of soils and soil water with applications to current problems.

530. Hydrogeology. (B) Mastropaolo.

Flow of water (and associated contaminants) in natural porous media.

L/L 531. (GEOL201, GEOL521) Advanced Mineralogy. (A) Omar.

Advanced crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.

540. Geotectonics. (M) Phipps.

Prerequisite(s): GEOL 205, 206, 208, 317 and 420, or permission of instructor. Field trip.

Bulk structure of the Earth. Plate tectonics and plate boundaries. Plumes, rifting, and intraplate tectonics. Geotectonics and seismicity.

SM 546. Basin Analysis. (M)

Phipps/Scatena. Undergrads need permission of instructor.

An in-depth study of selected depositional basins using petrologic, stratigraphic, sedimentologic, and seismic techniques.

Aspects of the depositional processes and basin architecture will be considered in light of the tectonic regime associated with basin formation.

SM 555. Problems in the Early Evolution of Vertebrates. (M) Staff.

Prerequisite(s): GEOL 100, GEOL 205. Short paper based on fossil vertebrate materials.

An analysis of key problems in the paleontology and evolutionary biology of early vertebrates, including: origins of chordates, origins of bone and other hard tissues, organization of the vertebrate head, origins of the major vertebrate classes, environmental contexts of key vertebrate transitions, diversifications of Paleozoic fishes, origin and diversifications of tetrapods, extinctions.

599. Independent Study. (C) Staff.

Directed study for individuals or small groups under supervision of a faculty member.

602. Geotechnics: Introduction to Geotechnical Engineering. (B)

Doheny. Prerequisite(s): Permission of Instructor.

The course begins with a study of the Earth's composition, the formation of soil materials by the weathering process (Physical and Chemical), and a discussion of soil mineralogy, with particular emphasis on the clay minerals. Following this introduction, soil classification systems and physical properties of soils will be presented, as well as the State of Stress in a Soil Mass together with Seepage Theory and Groundwater Flow. The technical portion of the course will conclude with the development of Consolidation Theory and Analyses, Shear Strength Theory, Lateral Earth Pressure Theory and Application, and Slope Stability Analysis.

The course will conclude with the presentation of two Case History Sessions, presenting applications of Geotechnical Engineering Practice and the influence of the Geologic setting.

604. Geostatistical Analysis. (A)

Vann. Prerequisite(s): STAT 101 or equivalent statistics course; BioL 556 suggested or other Inferential Statistics courses, covering uni- and multi-variate techniques.

Univariate and multivariate approaches to the analysis of spatial correlation and variability. Many disciplines, including geology, ecology and the environmental sciences regularly need to analyze and make predictions from data that is spatially autocorrelated. Mine reserve estimation,

pollutant dispersal and the use of randomization tests in ecology are examples of where spatial statistics may be applied.

SM 606. Topics in Sedimentary Petrology and Stratigraphy. (M)

Pfefferkorn. Prerequisite(s): GEOL 205, 206, 706 or permission of instructor.

Analysis of selected paleoenvironmental, stratigraphic, and sedimentological problems in the field and laboratory.

ADVANCED STRATIGRAPHY: In-depth study of sedimentology, stratigraphic principles, and paleoecological interpretation based on the rock record.

SEDIMENTARY PETROLOGY: Interpretation of rocks using microscopic techniques. Students will make thin-sections of various sedimentary rock types collected from regional depositional basins (Geol 706). Diagenetic, syn- and post-depositional processes will be investigated.

SM 611. Field Study of Soils. (B)

Johnson. Prerequisite(s): GEOL 511 or permission of instructor. All day field trips.

Processes of soil development in a variety of temperate environments. Effects of lithology and climate on soil properties.

613. (LARP513) Hydrology. (M)

Johnson.

Emphasis on basic concepts and principles of hydrology. Framework will be the concept of the continuous natural movement of water in the hydrological cycle.

SM 615. Advanced Vertebrate Paleontology Seminar. (C)

Dodson. May be repeated for credit.

Topics in vertebrate paleontology and paleoecology.

616. Geology of the Carboniferous Period. (M)

Pfefferkorn.

Paleogeography, biogeography, stratigraphy, paleoclimatology, flora, and fauna of the Carboniferous Period.

SM 617. Topics in Sedimentology. (M)

Prerequisite(s): GEOL 206 or permission of instructor.

CLIMATE CHANGES THRU TIME: Issues of anthropogenically-induced climate changes are hotly debated.

However, it is not possible to make meaningful predictions of future climates without understanding the forces that have controlled past climates. This course will review the geologic evidence for past climate changes and discuss processes that affect global climate changes. It will involve analysis and modeling of various

sedimentary environments, systems, and processes.

ANCIENT TERRESTRIAL ENVIRONMENTS: Multi-disciplinary approaches and techniques that enable the extraction of comprehensive information (weathering, deposition, diagenesis, tectonics) from ancient continental deposits. The goal is the reconstruction of integrated environmental, geographic, and climatic conditions for selected time slices.

SM 618. Geochemistry Seminar. (C)

Staff.

Topics in geochemistry.

SM 620. Geophysics Seminar. (M)

Staff.

Topics in solid Earth geophysics.

SM 621. Advanced Biogeochemistry. (M)

Plante. Prerequisite(s): Geol421 or permission from instructor.

Through close readings from the primary literature, students will undertake an in-depth study of biogeochemical cycling and human disturbance of biogeochemical cycles. Special emphasis will be on carbon and nitrogen cycling in terrestrial ecosystems, but may include other topics based on the interests of enrolled students.

SM 625. Advanced Paleobotany Seminar. (M)

Pfefferkorn. May be repeated for credit.

Topics in paleobotany, paleoecology and evolution.

SM 628. Seminar in Isotope

Geochemistry. (M) Staff. Prerequisite(s): Intermediate background in chemistry, physics, biology, or geology.

This course is for advanced undergraduates and graduate students interested in learning about or pursuing applications of isotope geochemistry, with an emphasis on biological and climatic processes (e.g. plant physiology, soils, nutrient cycling, and atmospheric chemistry). We will meet to discuss readings both from the literature and textbook chapters where necessary for background. Grading will be on the basis of class participation and short weekly writing assignments. The latter will be completed prior to the class by both students and professor to ensure thorough discussion of each topic.

SM 630. (GEOL208) Advanced Structural Geology Seminar. (M)

Phipps. May be repeated for credit. Four-day field trip.

Topics in tectonophysics and/or regional structural geology.

636. Quantitative Paleoclimatology. (M)

Staff.

This course provides a comprehensive, rigorous survey of our knowledge of the Earth's climate system from ancient to modern. Topics to be covered will include geological evidence for past climate changes, with an emphasis on quantitative methods using geochemistry and geophysics; the basis of earth system modeling; statistical climatology; climate change detection; time-series analysis in climatology.

SM 637. Recent Climate Change. (A)

Staff.

Increases in "greenhouse gases" produced through human activity appear to be affecting the Earth's climate. This course will examine climate change over the last 500 years. We will examine the available instrumental records over this time period as well as proxy climate records such as ice core, tree ring, sediment cores, coral cores and others. Students will research individual topics and present them regularly, review published articles, and attend some seminars.

SM 639. Isotopes in

Paleoclimatology. (A) Staff .

Isotope records in tree rings, ice cores, corals, and sediments can be used to reconstruct past climate variables such as temperature, salinity, atmospheric CO₂, El Nino events, cloud cover and precipitation. This course focuses on isotope techniques and applications in paleoclimatology. Special emphasis will be placed on stable carbon, stable oxygen and radiocarbon. This course is suitable for upper level undergraduates and graduate students.

SM 640. Digital Mapping. (M)

Scatena. Global positioning systems (GPS) and geographic information systems (GIS) have greatly changed the way cartographic data is collected and analyzed. This course will discuss design strategies for mapping projects involving GPS, differential GPS, and GIS, and provide a hands-on introduction to the use of these technologies. The principal emphasis of the course will be on learning to choose appropriate and efficient data acquisition techniques and to develop data collection protocols suited to the aims of any given project. Though the mechanics of importing digital data into GIS will be discussed, and the analytical capabilities of GIS will be an important factor in project design, actual data analysis through GIS will not be taught.

SM 646. First Billion Years: The Early History of Earth and Life. (A) Phipps.

The course will cover the origin of the Earth. Topics will range from constituent atoms to planetesimals; the formation of the Earth including its accretion and differentiation; the early bombardment history of the earth and the formation of the Moon; the cooling of the Earth and the origins of continents and oceans. Additionally, various theories for origin of life will be covered including the Archean world, tectonics, the evolution of the atmosphere and oceans, and early life.

651. (GEOL451) Geocomputations I. (M) Mastropaola. Offered through CGS - See current timetable.

Review and applications of selected methods from differential equations, advanced engineering mathematics and geostatistics to problems encountered in geology, engineering geology, geophysics and hydrology.

652. Physical Geology for Environmental Professionals. (A)

Doheny. Offered through CGS - See current timetable.

Study of the genesis and properties of earth materials (minerals, rocks, soil, water); consideration of volcanic, erosional, glacial, and earthquake processes along with the characterization of the earth's deep interior crustal and near-surface structure. Classroom study of minerals, crystals, fossils, and rocks as time permits.

653. (GEOL453) Introduction to Hydrology. (A) Conaboy. Offered through CGS - See current timetable.

Introduction to the basic principles of the hydrologic cycle and water budgets, precipitation and infiltration, evaporation and transpiration, stream flow, hydrograph analysis (floods), subsurface and groundwater flow, well hydraulics, water quality, and frequency analysis.

SM 654. Geomechanics I: Solids. (A) Duda. Offered through CGS - See current timetable.

Mechanical properties of solid and fluid earth materials, stress and strain, earth pressures in soil and rock, tunnels, piles, and piers; flow through gates, weirs, spillways and culverts, hydraulics, seepage and Darcy's law as applied to the hydrologic sciences.

655. Engineering Geology. (B)

Calabria. Offered through LPS - See current timetable.

Engineering properties of earth materials; engineering testing, classification and use

of earth materials; geologic and geophysical investigations and monitoring; geologic hazards; planning and use of the geologic environment.

656. Fate and Transport of Pollutants. (A) Ruga.

This course covers basic groundwater flow and solute transport modeling in one-, two- and three-dimensions. After first reviewing the principles of modeling, the student will gain hands-on experience by conducting simulations on the computer. The modeling programs used in the course are MODFLOW (USGS), MT3D, and the US Army Corps of Engineers GMS (Groundwater Modeling System).

657. Field Geophysics. (B) Doheny.

Prerequisite(s): GEOL 420: Introduction to Geophysics.

Use of geophysics field equipment (gravity, magnetic, seismic, electrical, electromagnetic, and radar) to collect geologic site investigation data. Theoretical analysis of collected geophysical and geological data to interpret subsurface conditions.

SM 658. (GEOL458) Geostatistics. (C) Mastropaola.

Statistical analysis of data from geological, geotechnical, and geohydrologic sources.

659. Surface Water Hydrology. (B) Conaboy.

This course will focus on various aspects of surface water hydrology. Topics covered include: study of all aspects of precipitation and runoff; study of the natural occurrences of floods and droughts; the establishment of design floods; methods of preventing or alleviating damages due to floods; water losses through evaporation, transpiration, and infiltration; storm water management; and hydrologic considerations in environmental issues.

661. Environmental Groundwater Hydrology. (B) Mastropaola.

This course is designed to introduce the major definitions and concepts regarding groundwater flow and contaminant transport. The theory underlying concepts, including mathematical derivations of governing equations used to model groundwater flow and contaminant transport, will be discussed and applications to environmental problems addressed.

663. Groundwater Modeling. (B)

Doheny / Freed. Offered through CGS - See current timetable.

665. Engineering Geology & Geotechnics. (A) Hunt. Engineering Geology I is NOT a prerequisite for this course.

Based on numerous case histories, the theme of this course is characterization of the geologic environment for engineering and environmental investigations. Covered are the various exploration tools and methods, including interpretation of remotely sensed imagery; field and laboratory measurements of material properties; and instrumentation monitoring. Rock masses and the significance of discontinuities are discussed as are soil formations in terms of occurrence and mode of deposition, and their typical physical properties. The latter half of the course is dedicated to the geologic hazards; i.e. ground subsidence and collapse, landslides and earthquakes, with emphasis on prediction, prevention and damage control.

666. Geology Field Work. (C)

Giegengack. 4-8 weeks during the summer.

SM 677. Seminar in Environmental Geology. (M) Giegengack.**706. Topics in Regional Geology. (M)**

Phipps. Prerequisite(s): GEOL 208 &/or 206, preferably both; GEOL 390. Field Trips required.

Topics in sedimentology, stratigraphy, petrology, and/or structural geology of selected regions. Regional geologic synthesis and tectonics.

FORELAND BASINS: Structure, sedimentology, and biology/paleobiology of foreland basins, based on the study of modern and ancient examples. These will include the modern Persian Gulf region, and the ancient Carboniferous Appalachian basin. There will be at least one field trip.

DEPOSITIONAL BASINS:

Investigation and interpretation of a number of different tectonically-controlled basins throughout the region. Field work essential. All-day and weekend field trips required. Students will integrate stratigraphic, sedimentological, structural, and tectonic principles within various basin settings.

SM 715. Paleobiology Seminar. (M) Staff.**SM 777. Seminar in Quaternary Environments. (M)** Giegengack.

Interdisciplinary approach to selected environmental problems of the Pleistocene.

UNIVERSITY COURSE REGISTER

999. Independent Study and Research. (C) Staff. Prerequisite(s): Permission of departmental committee. Hours and credits to be arranged.

Directed study for individuals or small groups under supervision of a faculty member.

EAST ASIAN LANGUAGES AND CIVILIZATIONS (AS) {EALC}

GENERAL

L/R 011. (COLL004, NELC085) Life and Death in Ancient China and Ancient Egypt. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Steinhardt/Silverman/Wegner.

Using materials excavated in tombs, this course investigates funerary cults, death rituals, beliefs about the afterlife, and the preparations for death during life in China from 1500 BCE to AD 1000 and in Egypt from 3000-1000 BCE.

EAST ASIAN NON-LANGUAGE COURSES IN LITERATURE, HISTORY AND CULTURE

L/R 001. Introduction to Chinese Civilization. (A) History & Tradition Sector. All classes. Goldin.

Survey of the civilization of China from prehistoric times to the present

L/R 002. Introduction to Japanese Civilization. (B) History & Tradition Sector. All classes. Staff.

Survey of the civilization of Japan from prehistoric times to the present.

005. (ANCH195, CLST195) Worlds Apart: Cultural Constructions of "East" and "West". (A) Humanities & Social Science Sector. Class of 2010 & beyond. McInerney/LaFleur.

Multiculturalism increasingly characterizes our political, economic, and personal lives. This course will focus on real and perceived differences between the so-called "East" and "West." Taking a case study approach, we shall read and compare literary materials from classical Greece and Rome, a major source of "Western" culture, and Japan, an "Eastern" society. Through analysis of these texts, we shall explore some of the concepts, values, and myths in terms of which "East" and "West" define themselves and each other: e.g., gender, sexuality, rationality, religion, society, justice, nature, cultural diffusion, work, leisure, life, and death. Readings will include selections from Greco-Roman and Japanese myths, poetry, drama, essays, history, and philosophy. Class format will be lecture with opportunity for questions and discussion. Grading will be based on

midterm and final examinations, a short paper, and class participation. No prerequisites.

L/R 013. (ARTH103) Art and Civilization in East Asia. (D) Arts & Letters Sector. All Classes. Davis,Steinhardt.

Survey of the major artistic traditions of East Asia from Neolithic times through the 18th century. Will serve as an introduction to upper level lecture courses that deal with the arts and civilizations of China, Korea, and Japan. Students study and handle objects during weekly session in the Museum.

SM 016. Gender and Sexuality in East Asia. (M) Kano.

The course aims to provide an overview of some of the most pressing issues concerning gender and sexuality in East Asia. The region has in common the legacies of Buddhism and Confucianism, as well as a process of rapid modernization and industrialization in the last couple of centuries. They are also bound to each other through cultural ties, colonial experiences, and international trade. The course assumes that when talking about gender and sexuality, confining our perspective to one nation-state often makes little sense. Many issues cannot be considered outside the contexts of historical, cultural, political, and economic exchange. We must also take account of our own location in a classroom in the United States, and question the ways in which our knowledge about the lives of women and men in East Asia is constructed and constrained. To this end, the course will encourage students to be critical readers of various sources of information: historical materials, scholarly essays, contemporary journalism, fiction, and film. The course does not presume any background in East Asian studies or gender studies.

017. (COML187, GSOC187) Possessing Women. (M) Chance.

A man from Tennessee writes "Memoirs of a Geisha". A Japanese novelist tells the story of the "comfort women" who served the Japanese army. A tenth-century courtier poses as a woman writing the first woman's diary. Poets from Byron to Robert Lowell, through Ezra Pound to Li Po, have written as though they were women, decrying their painful situations. Is something wrong with this picture, or is "woman" such a fascinating position from which to speak that writers can hardly help trying it on for size? In this course we will look at male literary impersonators of

women as well as women writers. Our questions will include who speaks in literature for prostitutes--whose bodies are the property of men--and what happens when women inhabit the bodies of other women via spirit possession. Readings will draw on the Japanese traditions, which is especially rich in such cases, and will also include Western and Chinese literature, anthropological work on possession, legal treatments of prostitution, and film. Participants will keep a reading journal and write a paper of their own choosing.

SM 029. Seminar on Chinese Archaeology. (M) Steinhardt. Freshman Seminar.

How has archaeology rewritten the history of ancient China and early Chinese art? That is the question we will answer in this seminar. Each week we will examine artifacts excavated in Chinese tombs to try to understand what they tell us about daily life and philosophical attitudes in ancient China. We will explore famous tombs such as the Tomb of the First Emperor and less well-known artifacts of peoples such as the Scythians and Qidan. We will compare the excavated material with what we can find out about ancient China from other sources, especially literature and standard historical accounts, to find out whether the ideas put forth in history and literature are accurate. Finally, we will study Chinese art in the Museum of Archaeology and Anthropology and the Philadelphia Museum of Art in comparison to the excavated objects.

L/R 034. (RELS184) What is Taoism?. (A) Goldin.

In this course, we will attempt to answer the question, "What is Daoism?" The bulk of the readings will consist of English translations of primary texts that have at one time or another been labeled as "Daoist," in order to sort out the different senses of the term, and consider what common features, if any, are shared by these influential texts. The course begins with the Laozi, the one text affirmed by virtually all "Daoist" traditions as foundational. The readings include several other "Daoist" texts, covering a period of roughly one thousand years, and will conclude with a survey of meditation and longevity techniques, practices which sometimes have no textual basis whatsoever. Drawing on various kinds of "Daoist" sources, we hope to answer the question that serves as the title of this course. No knowledge of Chinese is presumed. Graduate students may not enroll in this course.

041. (HIST096) Late Imperial China. (C) History & Tradition Sector. All classes. Fei.

From an Eurasian empire ruled by Mongols to an ethnically defined Han Chinese Ming dynasty, then again to a multi-ethnic empire ruled by a minority group of Manchus, the disruptions and transformations in the very idea of "China" in the past seven centuries defies our modern notion of China as a unitary nation with the world's longest continuous cultural tradition. How to understand the continuities and discontinuities of the last three imperial dynasties of China will be the central focus of our survey. How did these different ethnic groups adjust to each other's way of life? Did complicated cultural interaction prompt different visions of empires? How did the meaning of "Chinese change over this time period? How did international politics shape the fate of Chinese empires?

With no assumption of prior knowledge, lectures open with an overview of Chinese society before the eve of the Mongolian invasion, and then trace the changing visions of ethnic and social orders in the subsequent regimes ruled by three different ethnic groups (Mongolian, Han Chinese, and Manchurian). We will examine and compare bureaucratic operations, cultural ideals, domestic and international policies from above as well as the daily life experiences from below. The course will conclude with an analysis of the collapse of the imperial order at the beginning of the twentieth century, after it was severely challenged by a semi-Christian Utopian movement from within and global drug trade imperialist attacks from without.

L/R 047. (HIST097) China in the 20th Century. (C) History & Tradition Sector. All classes. Fei.

From an empire to a republic, from a communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and

revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally 3) the development and transformation of Chinese modernity.

Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao's China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of "Greater China" that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

SM 055. (CINE055) Monsters of Japan. (B) Chance, F.

Godzilla! Mothra! Rodan! Totoro! Pikachu! If you know who they are, join us to discover the deeper meanings of monstrosity in Japan. If you don't know who they are, learn the literal, metaphorical, and cinematic implications of these giant (and not so giant) beasts. Watch Tokyo go down in flames, and discuss what that means for New York and Philadelphia! Explore the history, literature, and films of Japanese monsters in this undergraduate seminar.

SM 063. Medicine, Literature, and Culture in Japan. (M) LaFleur.

This seminar is in many ways an exercise in comparison-by looking at how the practice of medicine in Japan differs from that in America. Japan, where people enjoy good health and live very long lives, not only combines "Western" with "Eastern" medical practices but also is a place where questions of medical ethics and biotechnology are often faced differently than they are in America. The fact that in modern times many Japanese writers had medical educations makes Japanese literature, studied here in translation, a rich context for exploring a wide range of such questions. Film too will be a tool for our studies. A comparative look at what we might think about the body, the mind, and healing or dying processes will be the central focus of this seminar.

SM 065. The Japanese Tea Ceremony - Principles and Practice. (M) Staff. Permission of the instructor.

An introduction to Japanese cultural history and perspectives through a course that

combines lectures, readings, and weekly practice of cha-no-yu. This traditional ceremony, one involving a certain amount of bodily discipline, is widely regarded as a uniquely useful tool for understanding the dynamic interactions of traditional Japanese aesthetics, architecture, Zen, and social relationships.

069. (SOCI389) Japanese Popular Culture. (M) Harrington. Offered through the College of General Studies--See the CGS course guide.

This course is based upon the premise that popular culture is a legitimate object of study in today's universities, and that through the careful study of objects of Japanese popular culture such as anime (animated films), manga (comic books), films, short stories and popular music, each one of us will be able to write short histories of various aspects of contemporary Japan. In order to further our individual historiographical projects, we will learn some theoretical methods for studying and writing about the relation between our everyday lives, the processes of globalization, and the pleasure or displeasure that we derive from the objects of popular culture. Through the study of Japanese popular culture, we will learn to analyze critically some of the functions of these objects as sources of meaning, escape, and identity formation in our everyday lives.

The topics we will study include the fiction of Banana Yoshimoto, such anime and manga as Akira, Barefoot Gen, Grave of the Fireflies and Miyazaki's Nausicaa, popular music, TV dramas, and the Pop Art of Yoshitomo Nara.

070. (HIST090) Pre-modern Japanese History. (A) History & Tradition Sector. All classes. Hurst.

This course will survey the major political, economic, social and intellectual trends in Japan from the earliest epoch through the 16th century. Interfaces with EALC 071, Modern Japanese History, in the spring semester.

071. (HIST091) Modern Japanese History. (B) History & Tradition Sector. All classes. Dickinson.

This course will survey the major political, economic, social and intellectual trends in the making of modern Japan. Special emphasis will be given to the turbulent relationship between state and society from 1800 to the present.

SM 072. Warring States Japan. (M) Hurst.

Japan's 16th century was a time of widespread destruction. It was "a world without a center." Both Emperor and Shogun were challenged by regional warlords. Warfare was endemic; social upheaval was rampant: farmers sought to become samurai, and samurai aspired to be warlords. Yet amidst the turbulence, new political institutions were forged that would bring unprecedented peace to the subsequent Tokugawa era.

074. History of Kyoto. (M) Hurst.

For over a thousand years, the city of Kyoto served as the capital of Japan. For most of this time it was the primary urban settlement of the country, the residence of the nation's political and social elite, and the site of most cultural activity. This course is a survey of the establishment and development of the city of Kyoto, cast within the broader context of Japanese history, and will proceed chronologically. Topics include: Founding a New Capital; the City of Prince Genji; Kyoto under Warrior Rule; the Rise of Kyoto Merchants; Kyoto under Seige; Entertainers, Priests, and Poets; Kyoto and the Meiji Restoration; Modernizing Kyoto; etc.

080. Korean Civilization. (A) Hurst.

Survey of the civilization of Korea from pre-historic times to the present.

081. (HIST120) Korean History Before 1860. (A) History & Tradition Sector. All classes. Staff.

This course is a survey of the history of Korea from its origins to the late Chosen period. Major interpretive issues in the social, political, and economic history of Korea are introduced. Relations between Korea and the various Chinese and Japanese states form an important theme.

082. (HIST121) Korean History after 1860. (C) History & Tradition Sector. All classes. Staff.

This course traces the history of Korea from the late Chos dynasty down to the 1990s. It examines major social, political, and economic developments during this period, including early contacts with the west, colonial seizure by Japan, national division after World War II, the Korean War, ideological confrontation between North and South Korea, state-led economic development, military dictatorship, student protest and the democracy movement.

091. (HIST391) Korea: Remembering the Forgotten War. (M) Hurst.

Will involve Korean history, diplomatic history, and certainly some military history, in which we consider the major thrust of the military action: the North Korean attack, MacArthur's landing at Inch'on, battling the Chinese in the north, the UN retreat, and stalemate along the DMZ. It will also involve a study of Korean politics, US politics--e.g., the MacArthur vs. Truman-MacArthur controversy; and international politics--the roles of Stalin and Mao, the role of the war on US servicemen, and on the Korean civilian populace. We will look at the war in retrospect--the shaping of an America-Korean relationship, the Korean Diaspora in America. And of course we will examine it as a war America didn't win.

So "Korea: The Forgotten War Remembered" is a war course insofar as we conceive war as a totally engulfing social experience that effects the participating nations and societies in ways far deeper than simply statistics of how many casualties were suffered, how much territory was seized, and the like. It will address larger issues than simply military strategy and tactics, great generals and poor leadership. It will seek to capture more broadly the historical significance of the Korean War: its impact on Koreans and Americans and the Korean-American relationship, its role in determining US-China relations for a generation, and its place in Cold War history.

103. (EALC503, HIST003, HIST403, SOCI230) Asia in a Wider World. (A) Waldron.

Integrated introduction to the history of Asia from the middle ages to early modern times (roughly 1100-1800), including China, Japan, Korea, and Southeast Asia, and the great empires of Genghis Khan, Tamerlane, and the Turks, during the period of transition from cosmopolitan empires to nation-states. Presumes no prior knowledge. Emphasis is on Asia's place in world history, with basic narrative, consideration of connections through trade, navigation, and migration; examination of warfare and military technology, and comparisons of social, religious, cultural and identity structures. Substantial attention is also paid to Russia, India, and the Middle East, and to relations with Europe. Readings include translated primary sources.

L/R 104. (EALC504, PSCI214, PSCI514) Political Economy of East Asia. (M) Amyx.

This course examines the interplay between politics and economics in East Asia. A major course objective is to reconcile the regions past success with the difficulties experienced in many of these countries more recently. Another primary objective is to consider in what ways and to what degree the growth experiences of the high-performing economies in East Asia shed light on the prospects for long-term success of reforms currently underway in China.

L/R 105. (EALC505, HIST395) East Asian Diplomacy. (A) Dickinson.

This course will survey the history of relations among the great powers in East Asia from 1600 to the present. Special emphasis will be placed upon the peculiarities of cross-national exchange in Asia (as compared to Europe), particularly the difficulties of relations among states possessing fundamentally different cultural traditions. We will explore the many informal, as well as formal, means of diplomacy in Asia over the past 400 years.

SM 114. (EALC514) Literati Arts of East Asia. (M) Chance, F.

What does it mean to be a poet and a painter? How does being a visual artist link to being a literary person? Americans know the cultures of Asia through such romantic images as *The Last Samurai*, but few are familiar with the history of calligraphy, painting, prose and poetry which have dominated the cultural history of Asia. Using primary texts in translation, this course explores the complex relationship between poets and painters, intellectual creators and visual artists, over the history of China, Japan, and Korea, from the beginnings of the civil bureaucracy in China in the first century through the rise of women as literati artists in Japan. Students will develop analytic skills through discussion of written texts and painted representations; they will become familiar with a variety of visual artists and forms as well as with the broad sweep of East Asian history. Background in Asian language and culture is not required.

115. (EALC515, RELS175) Buddhist Arts of East Asia: Sources, Iconography and Styles. (M) Chance, F.

Survey of art and architecture created for Buddhist religious purposes in China, Japan, and to a lesser extent Korea, Tibet, and Central Asia. The course will include a brief overview of Buddhist monuments in

South Asia, study of the iconography of Buddhist images in graphic and sculptural media, and analysis of a variety of Buddhist styles in painting, sculpture, and architecture.

116. (EALC516) East Asian Gardens. (M)

Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

118. (EALC518) Gender and Sexuality in Asia. (M) Kano. Graduate students may take this course as EALC 518 and should see the instructor to discuss additional requirements for graduate credit. This introductory course will deal with issues such as stereotypes of Asian women and men, cultural construction of femininity and masculinity, international and sexual division of labor, traffic in women in the sex industries, representation of gender and sexuality in academic scholarship as well as literary texts and popular culture, local and global activism for the rights of women and sexual minorities.

SM 119. (EALC519) East Asian Ceramics. (M) Chance, F.

History of ceramic forms, techniques, and aesthetic principles in China, Korea, and Japan from neolithic times to the present century, illustrated by slides and examples, augmented by readings, field trips, and student presentations. Aimed at students with general interest in Japan and/or ceramics history; particularly but not exclusively those majoring in Asian and Middle Eastern Studies, East Asian Area Studies or History of Art; also art majors interested in ceramics.

121. (EALC521) Chinese Poetry & Prose: In translation. (A) Mair. Prerequisite(s): None.

A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in

Chinese characters with romanized transcriptions. There are no prerequisites for this course.

122. (EALC522) Chinese Fiction and Drama in Translation. (B) Arts & Letters Sector. All Classes. Mair.

This course introduces students to some of the great classics of Chinese literature, from the fourth to the nineteenth centuries. This period saw the blossoming of many new literary forms, and the writing of some of the most creative and important works of the Chinese tradition (including the novels *Journey to the West*, *Dream of the Red Chamber*, and *The Plum in the Golden Vase*). We will read tales of anomalies, transformation texts, adventure stories, historical dramas, romances, and erotic fiction. There are no prerequisites for this course.

L/R 125. (CINE220, EALC525) Cultural Chinas: 20th Century Chinese Literature and Film. (B) Wang, X.

This course serves as a thematic introduction to modern Chinese literature and cinema in mainland China, Taiwan, Hong Kong, and transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China's century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.

L/R 127. (ARTH214, ARTH614, EALC527) The Arts of China. (C) Staff. Graduate students may take this course as EALC 527 and should see the instructor to discuss additional requirements for graduate credit.

A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's bronze age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting.

131. (EALC531) Introduction to Classical Chinese Thought. (K) History & Tradition Sector. All classes. Goldin.

This course is intended as an introduction to the foundational thinkers of Chinese civilization, who flourished from the fifth

to the second centuries B.C. No knowledge of Chinese is presumed, and there are no prerequisites, although EALC 001 (Introduction to Chinese Civilization) is recommended. Graduate students may take this course as EALC 531 and should see the instructor to discuss requirements for graduate credit. (Undergraduates must enroll in the courses as EALC 131.)

L/R 152. (EALC552) Love and Loss in Japanese Literary Traditions: In Translation. (A) Arts & Letters Sector. All Classes. Chance.

How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. By the end of the course, you should be able to appreciate texts that differ significantly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. All material is in English translation.

153. (EALC553) Loyal Warriors in Japanese Literature. (M) Chance.

From the earliest literature to the latest think piece on Japanese society, the roles of the "warrior" and of "loyalty" in Japanese culture have fascinated those both inside and outside of Japan. In this course we will trace the development of paragons of loyalty and warrior prowess from the earliest literary works, through the epic *Tales of the Heike*, and on to the "Treasury of Loyal Retainers," theater, and film. We will read in the philosophy of fidelity and samurai codes to track the growing dedication to ideals of loyalty, exploring evidence of behavior less than loyal as we seek the real influence of these notions. Related topics include the extremes of vengeance and fanaticism.

155. (EALC555) Modern Japanese Literature: From Meiji to World War II. (M) Kano.

This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts

of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English.

156. (EALC556) Post World War II and Contemporary Japanese Fiction. (C) Kano.

Who are the most interesting and important writers in today's Japan? What was literature's role in post-war reconstruction and in Japan's rise as economic super-power? Where can we find the most complex depiction of shifting ideas about gender and sexuality in modern Japan? Why did novelists Kawabata Yasunari (1968) and Oe Kenzaburo (1994) win Nobel Prizes in literature? How have Japanese writers responded to the horrors of war and to the memories of Japan's imperial past? We explore these and other questions by reading literature of various genres, such as novels, short stories, plays, film scripts, poetry, manga, as well as academic essays. Class sessions combine lectures, discussion, use of audio-visual materials and creative as well as analytical writing exercises. The course is taught in English, with all readings in English-translation.

157. (ARTH213) The Arts of Japan. (M) Staff. Graduate students may take this course as EALC 557 and should see the instructor to discuss additional requirements for graduate credit.

A general survey of Japanese architecture, sculpture, and painting from Jomon pottery through Japanese woodblock prints. Topics covered include art of the tumulus era, Buddhist art of the Nara and Heian periods, medieval scroll painting, the Japanese castle, screen painting, and later Japanese painting.

L/R 159. (EALC559, PSCI212, PSCI512) Japanese Politics. (M) Amyx.

This course examines the politics and policies of contemporary Japan, applying a range of theoretical perspectives to analyze both recent history and current events. We will survey the core political institutions of the postwar era, exam patterns of political interaction, and investigate current debates over policy. The 1990s have been marked by political change at many different levels in Japa and the course will investigate the significance of these changes, as well as enduring continuities. Recent changes have included the introduction of a new electoral system, shift from one party rule to coalition government rule, breakin the bureaucracy, a financial crisis and

prolonged economic stagnation. In thlatter part of the course, we will focus in particular on the puzzle of how Jappolitical economic structures and policies could have proven so successful for long and yet so disastrous of late. Throughout the course, students will be encto think about Japanese politics in a comparative context and to consider the functioning of the Japanese political system in the context of more theoreticaldebates in political science.

160. (EALC560) Introduction to Japanese Thought. (A) History & Tradition Sector. All classes. Harrington.

This course introduces the major intellectual developments and problems within Japan's history. Special attention will be given to explaining why and how Japanese thinkers only selectively absorbed Chinese thinking during Japan's first "opening" to outside influence and then later tried again to be selective when engaged with the West. Japanese thinkers' differing way of understanding and utilizing Buddhism, Confucianism, Daoism, Christianity, and European philosophy will be considered. So too, however, will be what are usually taken to be "native" patterns of thought--viz. Shinto, The National Learning School, and what came to be called "the Code of the Warrior." Surfacing at various points in this course will be questions that could be addressed to any nation or people and their intellectual history--viz. What does it mean for anyone to claim there might be "indigenous" modes of thought and appreciation? Can thought and philosophy get free of being suspect as ways for the expression of nationalism in its various forms? What are some of the practical consequences in and for a society, especially in our "globalized" world, when its intellectual trajectory differs from that of the "West" and important contemporary thinkers within wish to retain that divergence? Because of its double and deep interaction with two "alien" thought modes--that of China and that of the modern West--Japan provides an especially fine venue for the exploration of such topics.

166. (EALC566, GSOC186, GSOC586) Gender and Sexuality in Japan. (M) Kano.

This seminar deals with issues which such as the cultural and historical constructions of femininity and masculinity; gendered division of education and labor; representation of gender and sexuality in literature, theater, and popular culture; and forms of activism for the rights of women and sexual minorities. This course will use

films, videos, and manga, as well as readings from anthropological, historical, literary, and theoretical texts. All readings will be in English, but Japanese materials will be available to those interested.

176. (EALC576, HIST276) Japan: Age of the Samurai. (C) History & Tradition Sector. All classes. Hurst. Offered through the College of General Studies - See the CGS Course Guide. Graduate students may take this course as EALC 576 and should see the instructor to discuss additional requirements for graduate credit.

This course deals with the samurai in Japanese history and culture and will focus on the period of samurai political dominance from 1185 to 1868, but it will in fact range over the whole of Japanese history from the development of early forms of warfare to the disappearance of the samurai after the Meiji Restoration of the 19th century. The course will conclude with a discussion of the legacy of the samurai in modern Japanese culture and the image of the samurai in foreign perceptions of Japan.

180. Pre-Modern Korean Literature. (M) Staff.

This course surveys the history of Korean literature from the warring periods when the three kingdoms were each vying for dominance on the peninsula to the end of the long Choson dynasty in the 19th century. Students will be introduced to the major authors, works and genres, as well as important historical figures and events in order to examine the development of Korean literature and culture during these periods of turbulence and peace. Some of the topics we will explore are: literati versus folk culture; identity and language; gender and class relations; and the intersection between history and literature. We will explore these issues through various texts and other media representations, such as film and historical television dramas.

186. (CINE221, COML186, EALC586) Screening Modern Korea: Korean Film and Culture. (M) Staff.

Is Korean cinema experiencing a "renaissance" in the 21st century? We will take the recent surge of success behind Korean cinema as a way to explore our object of study: Korea and the cinema. We situate Korean cinema in broader (and at times narrow) cultural, social, and aesthetic contexts to investigate transnational media production and circulation, globalization, consumer culture, commercialization, Hollywoodization, and construction of national, ethnic, gender identities, etc. The

course focuses on the works of prominent filmmakers of Korea's past and present, such as Shin Sangok, Im Kwontaek, Kim Kiduk, and Lee Ch'angdong, as well as paying special attention to genres of Korean film such as the melodrama, slapstick comedy, and erotica. No prerequisites. All films with English subtitles.

192. (EALC592) Arts of Korea. (B)
Chance, F.

The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century.

SM 211. (EALC611) Life and Death in Han China. (C) Steinhardt.

Using wall painting, sculpture, and minor arts as evidence, the course will examine the attitudes toward life and death beliefs in Han (206 BCE-AD 220) China.

216. (EALC616) Chinese Art Under Mongols. (M) Steinhardt.

The Yuan Dynasty (1257-1368), the period of Mongolian rule, was the only time in Chinese history when China was part of a larger empire that spanned the Asian continent. Using architecture, sculpture, painting, and excavated evidence, this course examines the unique results of an international Asian world centered in China.

221. (CHIN491, EALC621) First Year Classical Chinese. (A) Mair.

Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.

222. (CHIN492, EALC622) 1st Year Classical Chin II. (B) Mair.

Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick,

readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.

SM 223. (EALC623) Language, Script and Society in China. (M) Mair.

The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumero-Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.

SM 224. (EALC624) Cities in Modern Chinese Literature. (M) Wang X.

The course examines evolving conceptions of the city in modern Chinese literature from late Qing to the present. Main issues considered include space, urban sensibilities and configurations, historical consciousness, tourism and consumption, coloniality, cosmopolitanism, globalization, etc. We will deal with urban narratives regarding major cities through different historical contexts including Beijing, Shanghai, Nanjing, Xi'an, Hong Kong, and Taipei.

SM 225. (CINE224, EALC625) Topics in Chinese Cinema. (C) Wang, X.

This course is an introduction to Chinese cinema in mainland China, Taiwan, and Hong Kong, with emphasis on the way it represents or negotiates notions of China and Chineseness, as well as national and cultural identity. We will examine Chinese cinematic traditions in light of significant topics such as: the foundation of Chinese cinema and the rise of nationalism; film's relationship to literary and popular cultural discourses; the pursuit of modernization; aesthetic responses to political and historical upheavals and transformations; the aesthetics of revolution, diaspora and transnationalism; visualized sexualities, violence, and youth subculture; collective desires to imagine and reinvent the cultural past; the politics

of memory, mourning and amnesia, among others.

SM 226. (EALC626) East Asian Funerary Arts. (A) Steinhardt.

Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-buddhist era through the 19th century.

L/R 227. (ARTH216, EALC627) Chinese Painting. (C) Steinhardt.

Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present. Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.

228. (EALC628) Chinese Wall Painting. (M) Steinhardt.

Survey of mural painting in temples and tombs from the earliest examples in the last BCE centuries through the Ming dynasty. The course examines paintings that have been uncovered in the last few years, as well as famous examples in China and in North American museums.

L/R 229. (ARCH716, EALC629) Chinese Architecture. (C) Steinhardt.

Graduate-level option requires a 20-page paper and permission of the instructor. Survey of Chinese buildings and building technology from the formative period in the second millennium B.C. through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang'an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction.

SM 239. (EALC639) Sex and Society in Ancient China. (M) Goldin.

Ancient Chinese writers considered sexual activity to be an essential component of humanity, and the study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no

prerequisites, and no knowledge of Chinese is presumed.

SM 240. (EALC640) Early Chinese History. (B) Goldin.

This seminar covers the span of Chinese history from the Bronze Age to the establishment of the empire in 221 B.C. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.

SM 241. (EALC641, HIST460) Law in Pre-Modern China. (M) Goldin.

This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty--an interval of over two millennia--and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.

SM 245. (EALC645) Popular Culture in Modern China. (B) Wang, X.

What constitutes Chinese popular culture in the modern age? How does popular culture contest and collaborate with modern Chinese literature in the formation of Chinese modernity? This course provides a comprehensive examination of modern Chinese popular culture in mainland China, Taiwan, Hong Kong, and other transnational Chinese communities in the past century. From film to literature, from opera to theatre, from music, vintage photographs, to comic books, this course will probe popular culture as it has manifested itself in the dynamic dialogue between high art and mass culture, and trace its sociopolitical, cultural, and aesthetic impact on modern China.

Topics will include the sentimental education through reading popular romance as a new form of national pastime; the rise of Chinese pictorial journalism; the gender politics of cross-dressing in Beijing opera as a form of popular entertainment; neo-sensationalism and urban culture in modern Shanghai; the 1930-40s debate over popular and populist culture; the acoustic

modernity of Chinese popular music; Maoist model operal and revolutionary melodrama; the cult of masculinity in Hong Kong martial arts fiction and cinema; cultural articulations in post-Maoist Chinese rock music; and the discourse of violence and body in Chinese youth subculture.

251. (EALC651, JPAN491) Readings in Classical Japanese I. (A) Chance. Prerequisite(s): JPAN 212 or equivalent.

Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

252. (EALC652, JPAN492) Readings in Classical Japanese II. (B) Chance, L. Prerequisite(s): JPAN 212.

Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

253. (EALC653, RELS279, RELS679) Buddhist Poets of Japan. (M) LaFleur.

Among the many poets of Japan some have over time gained attention both in Asia and the West for being especially concerned with Buddhist themes and perhaps with having an aesthetic informed by that tradition as well. This course will involve reading at least the following in translation: Saigyō, Ikkyū, Ryōkan, and Miyazawa Kenji. There will, in addition, be selections from other poets as well as attention to some critical essays.

SM 254. (EALC654) War and Literature in Japan: Tales of the Heike. (C) Chance, L.

Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan's first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites.

SM 255. (COML385, EALC655, FOLK485, THAR485) Japanese Theater. (C) Kano. Prerequisite(s): Reading knowledge of Japanese and/or previous coursework in literature/theater will be helpful, but not required.

Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

SM 256. (EALC656) The Tale of Genji. (C) Chance, L.

"Crowning masterpiece of Japanese literature," "the world's first novel," "fountainhead of Japanese literary and aesthetic culture," "a great soap opera in the vein of Jacqueline Susann." Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu's work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji's loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author's portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale's many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

258. (ARCH718, EALC658) Japanese Architecture. (M) Steinhardt.

An introduction to the visual, aesthetic, historical, religious, philosophical, and symbolic aspects of Japanese structures from earliest times to the mid-19th century. Through a discussion of shrines, temples, palaces, tombs, cities, and gardens the student will explore what makes Japanese architecture distinctive and how the traditions of Japanese architecture evolve over time.

SM 263. (EALC663) Topics in Japanese Thought. (M) LaFleur.

Prerequisite(s): EALC 002 is recommended.

Course focuses on a few selected topics for close attention. Past topics have included the examination of certain current social and ethnical questions-- for instance those having to do with organ transplantation, abortion, suicide, euthanasia, political corruption, and "openness" as a society. Readings will be on contemporary questions but include some pre-modern materials that influence the discussion.

265. (RELS276) Zen Buddhism. (B) LaFleur. Lectures and discussion. Mid-term, paper, and final.

This course examines the history, doctrines, and practices of Zen Buddhism in China, Japan and the West. Topics include the monastic life, notable Zen masters, Zen's cultural impact, and enlightenment.

SM 269. (EALC669, RELS489) Japanese Buddhism. (C) LaFleur.

An introduction to the history and cultural role of Buddhism in Japan. Emphasis is on Buddhism as a component in the religious, intellectual, and cultural life of the Japanese, especially in poetry and the visual arts. Includes a short review of prior Buddhism in India and China.

279. (EALC679) Contemporary Japanese Society. (M) Hurst. No background is necessary, although EALC 002 is desirable. Graduate students may take this course as EALC 679 and should see the instructor to discuss additional requirements for graduate credit.

The course will cover a number of social issues in Japan today. Since so much of postwar Japanese development has been based upon the nature of the relationship between the United States and Japan, we will begin with a consideration of the occupation of Japan as the crucible in which the partnership was formed and basic agreements reached. We will examine the nature of the Japanese political economy, both the extraordinary growth of the economy until the late 1980s and its post-cold war stagnation. Among the social issues we will examine are ethnic consciousness, marriage and the family, work and gender roles, school and education. We will conclude with a consideration of Japan's imperialist role in the prewar and wartime era.

SM 291. (EALC691) Archaeology of Central Asia. (C) Steinhardt.

A site by site investigation of Buddhist and non-Buddhist ruins in Central Asia.

Included are Nisa, Khwarezm, Pyandzhikent, Khalchayan, Ay-Khanum, Bamiyan, Miran, Tumshuk, Kizil, Kucha, Khotan, Adzhina-Tepe, Khocho, Khara-Khoto, and Bezeklik.

SM 301. Major Seminar on China. (C) Steinhardt. Prerequisite(s): EALC001, no language required for undergraduates.

Topic varies year to year. Topic for spring 2009 is Archaeology of Northeast Asia

SM 302. Major Seminar on Japan. (A) Staff. Prerequisite(s): EALC 002. No language required for undergraduates.

A number of the phenomena that gave birth to the name "Cool Japan" involve role-playing and virtual worlds: games, electronic pets, cosplay. In this course we will consider the cultures and sub-cultures of play and parody in Japan. We will ask: Why does Japanese fantasy seem to have a special appeal? How can we distinguish reality from fantasy? Are there historical roots for what we see today? What are some transnational sources and issues, including North American and other East Asian comparisons? How have scholars viewed these aspects of Japan? We will pay particular attention to theories of Japanese identity, with their suggestions that Japan has a crisis of identity or that Japanese seek virtual identities because they have no real ones. Class sessions will emphasize common readings and discussion at first, then you will shape the paths we explore as each person works on an individual research project. Topics for research may include any aspect of the reality or fantasy of Japan. All readings are in English.

SM 501. Chinese History and Civilization. (M) Goldin.

This seminar focuses on the political, social and cultural history of the Chinese region from the Stone Age to the 20th century. Readings will consist of primary and secondary sources, including influential modern studies of Chinese history and civilization. All course materials are in English and no knowledge of Chinese is presumed.

503. (EALC103, HIST003, HIST403) Asia in a Wider World. (A) Waldron.

Integrated introduction to the history of Asia from the middle ages to early modern times (roughly 1100-1800), including China, Japan, Korea, and Southeast Asia, and the great empires of Genghis Khan, Tamerlane, and the Turks, during the period of transition from cosmopolitan empires to nation-states. Presumes no prior knowledge. Emphasis is on Asia's place in

world history, with basic narrative, consideration of connections through trade, navigation, and migration; examination of warfare and military technology, and comparisons of social, religious, cultural and identity structures. Substantial attention is also paid to Russia, India, and the Middle East, and to relations with Europe. Readings include translated primary sources.

L/R 504. (EALC104, PSCI214, PSCI514) Political Economy of East Asia. (M) Amyx.

This course examines the interplay between politics and economics in East Asia. A major course objective is to reconcile the regions past success with the difficulties experience in many of these countries more recently. Another primary objective is to consider in what ways and to what degree the growth experiences of the high-performing economies in East Asia shed light on the prospects for long-term success of reforms currently underway in China.

L/R 505. (EALC105, HIST395) East Asian Diplomacy. (A) Dickinson.

This course will survey the history of relations among the great powers in East Asia from 1600 to the present. Special emphasis will be placed upon the peculiarities of cross-national exchange in Asia (as compared to Europe), particularly the difficulties of relations among states possessing fundamentally different cultural traditions. We will explore the many informal, as well as formal, means of diplomacy in Asia over the past 400 years.

515. (EALC115, RELS175) Buddhist Arts of East Asia: Sources, Iconography and Styles. (M) Chance,

F. Prerequisite(s): Research in an East Asian language required for graduate credit.

Survey of art and architecture created for Buddhist religious purposes in China, Japan, and to a lesser extent Korea, Tibet, and Central Asia. The course will include a brief overview of Buddhist monuments in South Asia, study of the iconography of Buddhist images in graphic and sculptural media, and analysis of a variety of Buddhist styles in painting, sculpture, and architecture.

516. (EALC116) East Asian Gardens. (M)

Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden

in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

518. (EALC118) Gender and Sexuality in Asia. (M) Kano.

This introductory course will deal with issues such as stereotypes of Asian women and men, cultural construction of femininity and masculinity, international and sexual division of labor, traffic in women in the sex industries, representation of gender and sexuality in academic scholarship as well as literary texts and popular culture, local and global activism for the rights of women and sexual minorities.

SM 519. (EALC119) East Asian Ceramics. (M) Chance, F.

History of ceramic forms, techniques, and aesthetic principles in China, Korea, and Japan from neolithic times to the present century, illustrated by slides and examples, augmented by readings, field trips, and student presentations. Aimed at students with general interest in Japan and/or ceramics history; particularly but not exclusively those majoring in East Asian Languages & Civs, East Asian Area Studies or History of Art; also art majors interested in ceramics.

521. (EALC121) Chinese Poetry & Prose: In translation. (A) Mair.

A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in Chinese characters with romanized transcriptions. There are no prerequisites for this course.

522. (EALC122) Chinese Fiction and Drama in Translation. (B) Mair.

This course introduces students to some of the great classics of Chinese literature, from the fourth to the nineteenth centuries. This period saw the blossoming of many new literary forms, and the writing of some of the most creative and important works of the Chinese tradition (including the novels *Journey to the West*, *Dream of the Red Chamber*, and *The Plum in the Golden Vase*). We will read tales of anomalies, transformation texts, adventure stories, historical dramas, romances, and erotic

fiction. There are no prerequisites for this course.

L/R 525. (EALC125) Cultural Chinas: 20th Century Chinese Literature and Film. (B) Wang, X.

This course serves as a thematic introduction to modern Chinese literature and cinema in mainland China, Taiwan, Hong Kong, and transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China's century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.

L/R 527. (ARTH214, ARTH614, EALC127) The Arts of China. (C) Staff.

A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's bronze age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting.

531. (EALC131) Introduction to Classical Chinese Thought. (K) Goldin.

This course is intended as an introduction to the foundational thinkers of Chinese civilization, who flourished from the fifth to the second centuries B.C. No knowledge of Chinese is presumed, and there are no prerequisites, although EALC 001 (Introduction to Chinese Civilization) is recommended. Graduate students may take this course as EALC 531 and should see the instructor to discuss requirements for graduate credit. (Undergraduates must enroll in the course as EALC 131.)

L/R 552. (EALC152) Love and Loss in Japanese Literary Traditions: In Translation. (A) Chance.

How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from

earliest times to the early modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. By the end of the course, you should be able to appreciate texts that differ significantly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. All material is in English translation.

553. (EALC153) Loyal Warriors in Japanese Literature. (M) Chance.

From the earliest literature to the latest think piece on Japanese society, the roles of the "warrior" and of "loyalty" in Japanese culture have fascinated those both inside and outside of Japan. In this course we will trace the development of paragons of loyalty and warrior prowess from the earliest literary works, through the epic *Tales of the Heike*, and on to the "Treasury of Loyal Retainers." We will read in the philosophy of fidelity and samurai codes to track the growing dedication to ideals of loyalty, exploring evidence of behavior less than loyal as we seek the real influence of these notions. Related topics will include the extremes of vengeance and fanaticism.

555. (EALC155) Modern Japanese Literature: From Meiji to World War II. (A) Kano.

This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English.

556. (EALC156) Post World War II and Contemporary Japanese Fiction. (C) Kano.

Who are the most interesting and important writers in today's Japan? What was literature's role in post-war reconstruction and in Japan's rise as economic super-power? Where can we find the most complex depiction of shifting ideas about gender and sexuality in modern Japan? Why did novelists Kawabata Yasunari (1968) and Oe Kenzaburo (1994) win Nobel Prizes in literature? How have Japanese writers responded to the horrors of war and to the memories of Japan's imperial past? We explore these and other questions by reading literature of various genres, such as novels, short stories, plays, film scripts, poetry, manga, as well as academic essays. Class sessions combine

lectures, discussion, use of audio-visual materials and creative as well as analytical writing exercises. The course is taught in English, with all readings in English-translation.

557. (ARTH213, ARTH613) The Arts of Japan. (C) Staff.

A general survey of Japanese architecture, sculpture, and painting from Jomon pottery through Japanese woodblock prints. Topics covered include art of the tumulus era, Buddhist art of the Nara and Heian periods, medieval scroll.

L/R 559. (EALC159, PSCI212, PSCI512) Japanese Politics. (M)

Amyx.

This course examines the politics and policies of contemporary Japan, applying a range of theoretical perspectives to analyze both recent history and current events. We will survey the core political institutions of the postwar era, exam patterns of political interaction, and investigate current debates over policy. The 1990s have been marked by political change at many different levels in Japa and the course will investigate the significance of these changes, as well as enduring continuities. Recent changes have included the introduction of a new electoral system, shift from one party rule to coalition government rule, breakin the bureaucracy, a financial crisis and prolonged economic stagnation. In th latter part of the course, we will focus in particular on the puzzle of how Jappolitical economic structures and policies could have proven so successful for long and yet so disastrous of late. Throughout the course, students will be encto think about Japanese politics in a comparative context and to consider the functioning of the Japanese political system in the context of more theoretical debates in political science.

560. (EALC160) Introduction to Japanese Thought. (A) Harrington.

This course introduces the major intellectual developments and problems within Japan's history. Special attention will be given to explaining why and how Japanese thinkers only selectively absorbed Chinese thinking during Japan's first "opening" to outside influence and then later tried again to be selective when engaged with the West. Japanese thinkers' differing way of understanding and utilizing Buddhism, Confucianism, Daoism, Christianity, and European philosophy will be considered. So too, however, will be what are usually taken to be "native" patterns of thought--viz. Shinto, The National Learning School, and what came to be called "the Code of the

Warrior." Surfacing at various points in this course will be questions that could be addressed to any nation or people and their intellectual history--viz. What does it mean for anyone to claim there might be "indigenous" modes of thought and appreciation? Can thought and philosophy get free of being suspect as ways for the expression of nationalism in its various forms? What are some of the practical consequences in and for a society, especially in our "globalized" world, when its intellectual trajectory differs from that of the "West" and important contemporary thinkers within wish to retain that

divergence? Because of its double and deep interaction with two "alien" thought modes--that of China and that of the modern West--Japan provides an especially fine venue for the exploration of such topics.

566. (EALC166, GSOC186, GSOC586) Gender and Sexuality in Japan. (M) Kano.

This seminar deals with issues such as the cultural and historical constructions of femininity and masculinity; gendered division of education and labor; representation of gender and sexuality in literature, theater, and popular culture; and forms of activism for the rights of women and sexual minorities. This course will use films, videos, and manga, as well as readings from anthropological, historical, literary, and theoretical texts. All readings will be in English, but Japanese materials will be available to those interested.

576. (EALC176, HIST276) Japan: Age of the Samurai. (C) Hurst. Offered through the College of General Studies - See the CGS Course Guide.

This course deals with the samurai in Japanese history and culture and will focus on the period of samurai political dominance from 1185 to 1868, but it will in fact range over the whole of Japanese history from the development of early forms of warfare to the disappearance of the samurai after the Meiji Restoration of the 19th century. The course will conclude with a discussion of the legacy of the samurai in modern Japanese culture and the image of the samurai in foreign perceptions of Japan.

586. (CINE221, EALC186) Screening Modern Korea: Korean Film and Culture. (M) Kim.

Is Korean cinema experiencing a "renaissance" in the 21st century? We will take the recent surge of success behind Korean cinema as a way to explore our object of study: Korea and the cinema. We

situate Korean cinema in broader (and at times narrow) cultural, social, and aesthetic contexts to investigate transnational media production and circulation, globalization, consumer culture, commercialization, Hollywoodization, and construction of national, ethnic, gender identities, etc. The course focuses on the works of prominent filmmakers of Korea's past and present, such as Shin Sangok, Im Kwontak, Kim Kiduk, and Lee Ch'angdong, as well as paying special attention to genres of Korean film such as the melodrama, slapstick comedy, and erotica. No prerequisites. All films with English subtitles.

Special attention to genres of Korean film such as the melodrama, slapstick comedy, and erotica. No prerequisites. All films with English subtitles.

592. (EALC192) Arts of Korea. (B) Chance, F.

The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century. Students enrolled in this graduate number are expected to do research in an east asian language.

SM 611. (EALC211) Life and Death in Han China. (C) Steinhardt.

Using wall painting, sculpture, and minor arts as evidence, the course will examine the attitudes toward life and beliefs and death in Han (206 B.C.-A.D.220) China.

616. (EALC216) Chinese Arts Under Mongols. (M) Steinhardt.

The Yuan Dynasty (1257-1368), the period of Mongolil rule, was the only time in Chinese history when China was part of a larger empire that spanned the Asian continent. Using architecture, sculpture, painting, and excavated evidence, this course examines the unique results of an international Asian world centered in China.

622. (CHIN492, EALC222) 1st Year Classical Chin II. (B) Mair.

Prerequisite(s): None.

Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up.

These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.

SM 623. (EALC223) Language, Script and Society in China. (M) Mair.

The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumerian-Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.

SM 624. (EALC224) Cities in Modern Chinese Literature. (M) Wang X.

The course examines evolving conceptions of the city in modern Chinese literature from late Qing to the present. Main issues considered include space, urban sensibilities and configurations, historical consciousness, tourism and consumption, coloniality, cosmopolitanism, globalization, etc. We will deal with urban narratives regarding major cities through different historical contexts including Beijing, Shanghai, Nanjing, Xi'an, Hong Kong, and Taipei.

SM 626. (EALC226) East Asian Funerary Arts. (A) Steinhardt.

Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-Buddhist era through the 19th century.

L/R 627. (ARTH216, EALC227) Chinese Painting. (C) Steinhardt.

Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present. Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.

628. (EALC228) Chinese Wall Painting. (M) Steinhardt.

Survey of mural painting in temples and tombs from the earliest examples in the last BCE centuries through the Ming dynasty. The course examines paintings that have been uncovered in the last few years, as well as famous examples in China and in North American museums.

L/R 629. (ARCH716, EALC229) Chinese Architecture. (C) Steinhardt.

Survey of Chinese buildings and building technology from the formative period in the second millennium B.C. through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang'an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction.

SM 632. (EALC232) Cultural Memory in Contemporary China. (M) Wang.

How is memory constructed and represented? What does society remember and/or forget? How and under what circumstances? How is it possible and/or impossible to bear witness? This course will examine notions of individual and collective memories, trauma, catastrophe, historical violence, post-socialist nostalgia, and amnesia, and explore the possibilities and impossibilities of remembering and forgetting in various forms of representation and cultural production in contemporary Chinese-speaking communities.

SM 639. (EALC239) Sex and Society in Ancient China. (M) Goldin.

Ancient Chinese writers considered sexual activity to be an essential component of humanity, and that study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no pre-requisites, and no knowledge of Chinese is presumed.

SM 640. (EALC240) Early Chinese History. (B) Goldin.

This seminar covers the span of Chinese history from the Bronze Age to the establishment of the empire in 221 B.C. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate

students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.

SM 641. (EALC241) Law in Pre-Modern China. (M) Goldin.

This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty--an interval of over two millennia--and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.

SM 645. (EALC245) Popular Culture in Modern China. (B) Wang, X.

What constitutes Chinese popular culture in the modern age? How does popular culture contest and collaborate with modern Chinese literature in the formation of Chinese modernity? This course provides a comprehensive examination of modern Chinese popular culture in mainland China, Taiwan, Hong Kong, and other transnational Chinese communities in the past century. From film to literature, from opera to theatre, from music, vintage photographs, to comic books, this course will probe popular culture as it has manifested itself in the dynamic dialogue between high art and mass culture, and trace its sociopolitical, cultural, and aesthetic impact on modern China.

Topics will include the sentimental education through reading popular romance as a new form of national pastime; the rise of Chinese pictorial journalism; the gender politics of cross-dressing in Beijing opera as a form of popular entertainment; neo-sensationalism and urban culture in modern Shanghai; the 1930-40s debate over popular and populist culture; the acoustic modernity of Chinese popular music; Maoist model opera and revolutionary melodrama; the cult of masculinity in Hong Kong martial arts fiction and cinema; cultural articulations in post-Maoist Chinese rock music; and the discourse of violence and body in Chinese youth subculture.

651. (EALC251, JPAN491) Readings in Classical Japanese I. (A) Chance. Prerequisite(s): JPAN 212 or equivalent.

Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

652. (EALC252, JPAN492) Readings in Classical Japanese II. (B) Chance. Prerequisite(s): JPAN 212.

Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

653. (EALC253, RELS279, RELS679) Buddhist Poets of Japan. (M) LaFleur.

Among the many poets of Japan some have over time gained attention both in Asia and the West for being especially concerned with Buddhist themes and perhaps with having an aesthetic informed by that tradition as well. This course will involve reading at least the following in translation: Saigyō, Ikkyū, Ryōkan, and Miyazawa Kenji. There will, in addition, be selections from other poets as well as attention to some critical essays.

SM 654. (EALC254) Tales of the Heike. (C) Chance, L.

Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan's first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites.

SM 655. (EALC255) Japanese Theater. (C) Kano. Prerequisite(s): Reading knowledge of Japanese and/or previous coursework in literature/theater will be helpful, but not required.

Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material

will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

SM 656. (EALC256) The Tale of Genji. (C) Chance, L.

"Crowning masterpiece of Japanese literature," "the world's first novel," "fountainhead of Japanese literary and aesthetic culture," "a great soap opera in the vein of Jacqueline Susann." Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu's work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji's loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author's portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adapters. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale's many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

658. (EALC258) Japanese Architecture. (M) Steinhardt.

An introduction to the visual, aesthetic, historical, religious, philosophical, and symbolic aspects of Japanese structures from earliest times to the mid-19th century. Through a discussion of shrines, temples, palaces, tombs, cities, and gardens the student will explore what makes Japanese architecture distinctive and how the traditions of Japanese architecture evolve over time.

SM 663. (EALC263) Topics in Japanese Thought. (M) LaFleur.

Course focuses on a few selected topics for close attention. Topic for 1995-96 will be examination of certain current social and ethical questions--for instance those having to do with organ transplantation, abortion, suicide, euthanasia, political corruption, and "openness" as a society. Readings will be on contemporary questions but include some pre-modern materials that influence the discussion.

SM 669. (EALC269, RELS489) Japanese Buddhism. (C) LaFleur.

An introduction to the history and cultural role of Buddhism in Japan. Emphasis is on Buddhism as a component in the religious, intellectual, and cultural life of the Japanese, especially in poetry and the visual arts. Includes a short review of prior Buddhism in India and China.

679. (EALC279) Contemporary Japanese Society. (M) Hurst.

The course will cover a number of social issues in Japan today. Since so much of postwar Japanese development has been based upon the nature of the relationship between the United States and Japan, we will begin with a consideration of the occupation of Japan as the crucible in which the partnership was formed and basic agreements reached. We will examine the nature of the Japanese political economy, both the extraordinary growth of the economy until the late 1980s and its post-cold war stagnation. Among the social issues we will examine are ethnic consciousness, marriage and the family, work and gender roles, school and education. We will conclude with a consideration of Japan's relations with her Asian neighbors and the lingering problem of Japan's imperialist role in the prewar and wartime era.

SM 701. Chinese Buddhist Texts. (M) Mair. Prerequisite(s): Knowledge of Classical Chinese required.

Seminar for graduate students focusing on the medieval period.

SM 710. Proseminar East Asia. (M) Staff.

SM 719. The East Asian Monastery. (M) Steinhardt.

SM 720. Topics in Chinese Studies. (M) Staff.

SM 721. Advanced Classical Chinese I. (M) Staff.

SM 722. Advanced Classical Chinese II. (M) Staff.

SM 723. Early Vernacular Sinitic. (M) Mair.

Selected reading in mostly medieval Chinese texts.

SM 725. Topics in East Asian Art. (M) Staff.

SM 727. Seminar in East Asian Architecture. (C) Steinhardt.

Prerequisite(s): Reading knowledge of Chinese.

Topic varies. Subjects have included The Chinese Monastery, Chinese Architecture in Shanxi Province, and Architecture in East Asian Painting.

SM 740. Sinological Methods. (M) Goldin.

This seminar is designed to acquaint graduate students with the basic methods and resources of Sinological research. The course will begin with an overview of essential reference works and aids to study, such as dictionaries and concordances, and continue with a survey of the major primary sources for the study of traditional Chinese history. Students are required to demonstrate the use of the methods learned in the course in a research paper, to be presented to the class in the form of a brief lecture at the end of the semester. Only graduate students may enroll in this course. The prerequisites are reading knowledge of modern Chinese and two years of the classical language. Familiarity with Japanese, though not required, would prove helpful.

SM 749. Japanese for Sinologists. (M) Chance, L.

Prerequisite(s): Completion of JPAN 112 or the equivalent. Knowledge of Chinese characters.

An accelerated course in scholarly Japanese for Sinologists and others with a knowledge of Chinese characters.

SM 750. Japanese Literature: Research Methods in the Classical Tradition. (M) Chance. Requires Japanese Language.

Introduction to bibliographic tools for research in pre-modern literature. Emphasis on hands-on library work, including how to use libraries in Japan. Covers history and terminology of bibliography. Students may attend lectures in EALC 152/552 simultaneously, when offered. Final project will use reference tools for substantive research in individual student's area of interest.

SM 752. Modern Japanese Literature and Culture. (M) Kano.

This seminar will focus on selected topics in modern Japanese literature and culture (Meiji to present day) varying from year to year. For advanced graduate students. Permission of instructor required.

SM 754. No and Kyogen: Text and Context. (M) LaFleur. Prerequisite(s): EALC 552 or equivalent.

Japan's classical theater will be closely read and investigated in terms of certain select literary, intellectual, and social issues of medieval Japan.

SM 755. (COML685) Literary Criticism and Theory in Japanese Literature. (M) Kano.

While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.

SM 756. Readings in Pre-Modern Japanese Literature. (M) Chance.

Prerequisite(s): EALC 252 Readings in Classical Japanese II, or equivalent.

Continued reading of texts chosen to accord with student interests. Materials may include calligraphed manuscripts and Edo period woodblock texts.

SM 758. Teaching Methods in Japanese. (M) Chance. Requires Japanese Language.

A practicum for Teaching Fellows and others engaged in teaching Japanese language for the first time. It introduces various approaches to teaching foreign language and surveys current issues in second language acquisition, particularly with respect to the less commonly taught languages. Students write a paper based on their experiences in the classroom.

SM 761. Readings in Japanese Religion. (M) LaFleur.**SM 762. Ethics and Aesthetics in East Asian Buddhism. (M)** LaFleur.

Prerequisite(s): Knowledge of the Japanese or Chinese language.

SM 770. Japanese Bibliography and Problems of Research. (M) Kojima.

Prerequisite(s): JPAN 312 or equivalent.

Weekly sessions on the works of reference necessary for scholarly work in Japanese sources. Introduction to all main Japanese reference works in religion (Buddhism and Shintism), government, literature, economics, etc. There are weekly assignments to be prepared in the library reference room. For advanced graduate students.

771. Current Japanology. (M) LaFleur.

Prerequisite(s): Knowledge of reading Japanese.

Major trends in scholarship as reflected in important recent publications, especially formative books and periodical literatures. The trajectory within certain disciplines as well as the interaction among them will be critically evaluated in terms of gains and losses. Implications of these theses in the planning of graduate and postgraduate research.

SM 772. Medieval Japan: Texts and Issues. (M) Staff. Prerequisite(s): Knowledge of classical Japanese required.

Close readings of selected texts (poetry, drama, historical and religious texts) combined with discussions of major questions in current scholarship on medieval Japan. Guest scholars.

SM 773. Proseminar: Early Modern Japan. (M) Hurst/Chance, F. Offered through the College of General Studies MLA Program.

This course will examine in detail the Tokugawa, or Edo, period (1600-1868). In weekly class sessions, equal attention will be devoted to institutional (political, economic and social) issues on the one hand, and cultural (art, literature, theater and philosophy/religion) developments on the other. A period in which Japan enjoyed protracted peace and relative isolation from the outside world, Tokugawa Japan experienced tremendous changes across all sectors of society. While the changes were unsettling to Japan's military rulers, they provided important preconditions for the subsequent modernization of Japan.

**CHINESE LANGUAGE COURSES
(CHIN)****001. First Year Spoken Chinese I. (A)**

Dietrich. See CGS Course Guide. ** This course does not fulfill the language requirement in the College. This course fulfills CGS language requirement only.

This course is designed for students who have little or no previous exposure to Chinese. The main objective of the course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. To achieve this goal, the class is to be conducted in Chinese as much as possible. Chinese characters will also be introduced, but will not be the focus of the class.

002. First Year Spoken Chinese II.

(B) Dietrich. Prerequisite(s): CHIN001 or permission of the instructor. See CGS Course Guide. ** This course does not fulfill the language requirement in the College. This course fulfills CGS language requirement only.

A continuation of CHIN001, This course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. To achieve this goal, the class is to be conducted in Chinese as much as possible. Chinese characters will also be introduced, but will not be the focus of the class.

003. Second Year Spoken Chinese I.

(A) Dietrich. Prerequisite(s): CHIN002 or permission of the instructor. See CGS Course Guide. **This course does not fulfill the language requirement in the College. This course fulfills the CGS language requirement only.

This course is designed for students who have completed one year of college level Chinese classes or equivalent. The main objective of the course is to improve students' conversational ability in Chinese. By the end of the second semester, students

will reach the survival level, namely, they can accomplish the basic day to day tasks encountered by visitors as well as the local people. These tasks include relating one's personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking for directions, reserving hotel rooms, visiting a doctor, attending a social function and so forth. To achieve this goal, the class is to be conducted in Chinese as much as possible. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese character reading and writing will also be introduced, but will not be the focus of the class.

004. 2nd Year Spoken Chinese II. (B)

Dietrich. Prerequisite(s): CHIN003 or permission of the instructor. See CGS Course Guide. **This course does not fulfill the language requirement in the College. This course fulfills CGS language requirement only.

A continuation of CHIN003, this course is to improve students' conversational ability in Chinese. By the end of the semester, students will reach the survival level, namely, they can accomplish the basic day to day tasks encountered by visitors as well as the local people. These tasks include relating one's personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking for directions, reserving hotel rooms, visiting a doctor, attending a social function and so forth. To achieve this goal, the class is to be conducted in Chinese as much as possible. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese character reading and writing will also be introduced, but will not be the focus of the class.

011. Beginning Modern Chinese I.

(A) Dietrich.

Along with CHIN012, CHIN111 and CHIN112, this is the first course of a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The sequence starts each fall. Students cannot begin their study in the spring.

This course is designed primarily for students who have little or no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills--listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have

immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods and asking for directions. In order to achieve these goals, students are expected to thoroughly preview and review the materials according to the weekly lesson plan (on course website) prior to attending class. Regular attendance is mandatory and strictly monitored.

012. Beginning Modern Chinese II.

(B) Dietrich. Prerequisite(s): CHIN011 or permission of the instructor.

Along with CHIN011, CHIN111 and CHIN112, this is the second course in a four-semester sequence. By completing all four semesters, students fulfill the College language requirement.

A continuation of CHIN 011, the objective of the course is to help students build a solid foundation of the four basic skills--listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods and asking for directions. In order to achieve these goals, students are expected to thoroughly preview and review the materials according to the weekly lesson plan (on course website) prior to attending class. Regular attendance is mandatory and strictly monitored.

021. Intensive Beginning Modern

Chinese I & II. (A) Staff. Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.

This is a two-semester course covering the same material as CHIN011, CHIN012, CHIN111 and CHIN112. The main objective of the course is to help students build a solid foundation of the four basic skills--listening, speaking, reading, and writing Chinese. By the end of this course and CHIN022, students should achieve the following goals: 1) pronounce all the sounds in Mandarin Chinese accurately and comfortably with a good command of the 4 tones; 2) carry out basic conversations in daily activities; 3) recognize and reproduce approximately 600-650 characters; and 4) read edited simple stories and write short notes or letters. Grammatical and cultural

related issues are discussed during lecture hours. Oral communication tasks are given every week.

022. Intensive Beginning Modern Chinese III & IV. (B) Staff.

Prerequisite(s): CHIN021 or permission of the instructor. Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.

Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.

031. Beginning Reading and Writing in Chinese I (for Fluent Speakers).

(A) Wu. Prerequisite(s): Restricted to students who can speak Chinese but cannot read or write the language.

Students focus on reading and writing skills. The objective of the course is to lay a solid foundation in both Pinyin romanization and Chinese characters, learning to produce and recognize approximately 600-650 characters. The class provides preparation for Intermediate Modern Chinese.

032. Beginning Reading and Writing in Chinese II (for Fluent Speakers).

(B) Wu. Prerequisite(s): CHIN 031 or permission of the instructor.

041. Beginning Cantonese I. (A)

Xuan. Offered through the Penn Language Center. This course does not fulfill the College of Arts & Sciences' language requirement.

Beginning Cantonese is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc. The course will be completed in two semesters.

042. Beginning Cantonese II. (B)

Xuan. Prerequisite(s): CHIN041 or permission of the instructor. Offered through the Penn Language Center. This course does not count toward the language requirement in the College of Arts and Sciences.

Beginning Cantonese is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect

as experienced in daily life situations and will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc. The course will be completed in two semesters.

051. Beginning Taiwanese I. (A) Wu. Offered through the Penn Language Center.

An introduction to the spoken and written Taiwanese language.

052. Beginning Taiwanese II. (B) Wu. Prerequisite(s): CHIN 051 or permission of the instructor.

081. Beginning Business Chinese I. (M) Staff. Prerequisite(s): This course does not fulfill the language requirement in the College.

The course is designed for students and working professionals who have no prior exposure to Chinese, and are interested in conducting business in China. The objective of this course is to build a solid foundation of basic Chinese in the business context, with a main focus on speaking and listening. Upon Completion students are expected to be able to converse and interact with people in a variety of business settings. Topics in the course units include meeting people, talking about family, introducing companies, making inquiries and appointments, visiting company, introducing products, initiating dining invitations and practicing dining etiquette.

111. Beginning Chinese III (Non-Intensive). (A) Staff. Prerequisite(s): Completion of CHIN012 or the equivalent or permission of the instructor.

Along with CHIN011, CHIN012 and CHIN112, this is the third course in a four-semester sequence. The objective of the course is to continue building a solid foundation of the four basic skills--listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 450-500 characters; and 4) read short textbook stories and write simple notes In order to develop students' listening and speaking ability, oral communication tasks are given every other week.

112. Beginning Chinese IV. (B) Staff.

Along with CHIN011, CHIN012 and CHIN111, this is the fourth course in a four-semester sequence. The objective of the course is to continue building a solid foundation of the four basic skills--listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 600-650 characters; and 4) read short textbook stories and write simple notes In order to develop students' listening and speaking ability, oral communication tasks are given every other week.

141. Intermediate Cantonese I. (A)

Xuan. Prerequisite(s): CHIN042 or equivalent or permission of the instructor. Offered through the Penn Language Center.

Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students' own dialogues so that in time they may express more complex ideas and feelings. The course will be completed in two semesters.

142. Intermediate Cantonese II. (B)

Xuan. Prerequisite(s): CHIN 141 or permission of instructor. Offered through the Penn Language Center.

Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students' own dialogues so that in time they may express more complex ideas and feelings. The course will be completed in two semesters.

151. Intermediate Taiwanese I. (A)

Wu. Prerequisite(s): CHIN052 or equivalent or permission of the instructor. Offered through Penn Language Center.

A continuation of CHIN052, the spoken and written Taiwanese language.

152. Intermediate Taiwanese II. (B)

Staff. Prerequisite(s): Completion of the second semester of CHIN 151 or permission of the instructor. Offered through the Penn Language Center.

211. Intermediate Modern Chinese I. (A)

Staff. Prerequisite(s): CHIN112 or permission of the instructor.

This is an intermediate language course. It aims to develop students' overall linguistic skills in listening, speaking, reading, and writing Chinese. The specially designed textbook gives introduction to various topics on Chinese culture. Students can expect to gain knowledge about China while they are learning the language. By completion of the course, students are expected to be able to master 1200 most frequently used characters in common reading materials, and to communicate with Chinese on

212. Intermediate Modern Chinese II. (B)

Staff. Prerequisite(s): CHIN 211 or permission of the instructor.

231. Intermediate Reading and Writing Chinese I (for Fluent Speakers). (A)

Wu. Prerequisite(s): CHIN 032 or the equivalent or permission of the instructor. Restricted to fluent speakers who have only limited reading and writing abilities.

This is an intermediate language class presuming basic fluency in speaking and listening and focusing on reading and writing abilities. By the end of the class students are expected to have mastered 500-600 most commonly used characters and to have the ability to read basic Chinese texts. Students will be prepared for Advanced Modern Chinese or the commercial track.

232. Intermediate Reading and Writing Chinese II (for Fluent Speakers). (B)

Wu. Prerequisite(s): CHIN 231 or permission of the instructor.

This is an intermediate language class presuming basic fluency in speaking and listening and focusing on reading and writing abilities. By the end of the semester students are expected to have mastered the 1200 most commonly used characters and to have the ability to read basic Chinese texts. Students will be prepared for Advanced Modern Chinese or the commercial track.

311. Advanced Modern Chinese I. (A)

Staff. Prerequisite(s): CHIN 212 or permission of the instructor.

Students learn to work on materials which were written or produced for native speakers, instead of the classroom materials that were written for the non-native speakers. The reading materials include a larger vocabulary with more idioms. Students will also learn how to understand and use certain oral expressions in conversation. They will learn ways to narrate, to describe, and to comment in native Chinese ways. Reading and audio materials are provided and discussed in the classes. Writing and oral presentations in Chinese are required in classroom under instruction. Students will be encouraged to practice oral communication with each other.

312. Advanced Modern Chinese II. (B)

Jiao. Prerequisite(s): CHIN 311 or permission of the instructor.

A continuation of CHIN 311 with more reading and discussions on social and cultural topics.

331. Advanced Chinese Reading and Writing. (C)

Chiang. Prerequisite(s): CHIN 312 or permission of the instructor.

Designed for students with advanced level Chinese language training but who need some further refinements on pronunciation, grammar, and vocabulary usage, this course stresses oral discussion, composition, and accuracy of language performance. By reading texts written by contemporary writers, students will also gain knowledge of China from an analytical and comparative perspective.

361. Newspaper Chinese I. (A)

Jiao. Prerequisite(s): Completion of CHIN 232, 311, 331 or permission of the instructor.

This course will help students improve their language skills, and enlarge vocabulary through reading newspapers published in China in the target language. The students will learn formal and high-level vocabulary and enhance their grammatical accuracy. The class will be conducted in Chinese, and students will be encouraged to speak Chinese in class using the acquired vocabulary and grammatical patterns.

362. Newspaper Chinese II. (B)

Yuan. Prerequisite(s): CHIN 631 or permission of the instructor.

A continuation of CHIN 361.

371. Advanced Spoken Mandarin I. (A)

Staff. Prerequisite(s): CHIN 212 or permission of the instructor.

This course is designed for students who have completed at least the intermediate level Chinese language course, or have studied the language for at least three years. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, and to gather information necessary for conducting oral presentations and speeches.

372. Advanced Spoken Mandarin II. (B)

Staff. Prerequisite(s): CHIN 371 or permission of the instructor.

Following the format of Advanced Spoken Mandarin I with more discussions on current issues in China, including topics about education, society, politics, culture, and history. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, and to gather information necessary for conducting oral presentations and speeches.

381. Business Chinese I. (A)

Wang. Prerequisite(s): CHIN 232, 312 or permission of the instructor.

This course is aimed to enhance students' language skills in a business context and to promote their understanding about business environment and culture in contemporary China. The text is developed from real business cases from real multinational companies that have successfully embarked on the Chinese market. The forms of classes include lectures, drills on vocabulary and sentence patterns, and discussions. Class will be conducted in Chinese. In addition to the course textbook, students will learn to read business news in Chinese selected from Wall Street Journal.

382. Business Chinese II. (B)

Wang. Prerequisite(s): CHIN 381 or permission of the instructor.

This course is the second half of a one-year course for business oriented subjects. This course will provide an overview of China's changing macro-environment, while real business cases let us look into individual Chinese companies and their development

in the new millennium. By the end of the semester, students are expected to 1) enhance the cultural awareness of contemporary China and the Chinese business world; 2) gain vocabulary and fluency in Chinese to function more confidently and comfortably in real business settings; 3) access business news and information in Chinese; 4) give business presentation in Chinese.

411. Readings in Modern Chinese: Literature. (A) Dietrich. Prerequisite(s): CHIN 312 or permission of the instructor.

This course is designed for students who have completed three years of college level Mandarin classes or equivalent. This course may be used to fulfill language or elective requirement for Chinese major or minor. The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of Chinese people, Chinese society and Chinese culture; 2) to facilitate the development of students' advanced reading and writing proficiency; and 3) to develop students' analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.

412. Readings Modern Chinese II: Literature. (B) Dietrich. Prerequisite(s): CHIN 312 or permission of the instructor.

This course is designed for students who have completed three years of college level Mandarin classes or equivalent. This course may be used to fulfill language or elective requirement for Chinese major or minor. The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of Chinese people, Chinese society and Chinese culture; 2) to facilitate the development of students' advanced reading and writing proficiency; and 3) to develop students' analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.

415. Readings Modern Chinese Documents. (M) Chiang. Prerequisite(s): CHIN 361, 381, 411 or permission of the instructor.

The main purpose of this content-based course is to promote advance-level language proficiency in reading, writing, speaking and listening. Through the use of modern Chinese documents, the secondary purpose of this course is to facilitate your understanding of the changes of Chinese society in the 20th century. Topics will include the Constitution of China, China's legal system, speeches by Mao Zedong, Deng Xiaoping, Sun Yet-san and Qiu Jin.

471. Advanced Spoken Mandarin III. (C) Staff. Prerequisite(s): CHIN 312 or the equivalent, or permission of the instructor.

This course aims to extend students' competence in the spoke language through introduction of more complex conversation topics, authentic audio materials, readings and movies. Emphasis is placed on development of oral skills through discussions on a wide range of current cultural, political and economic agendas.

481. Advanced Business Chinese I. (A) Chiang. Prerequisite(s): CHIN382 or equivalent or permission of the instructor.

May be offered through Penn Language Center.

This course builds on skills developed in CHIN382 but draws extensively on original sources. The topics of the reading range from China's foreign trade strategies after entering the World Trade Organization, the impact of China's economic reform on people and society, to controversial topics such as lay-offs, corruptions, and globalization. Special terminology in international trade, management, finance, and economic laws is thus introduced. Most readings are expository essays written in formal or colloquial Chinese. Active participation is expected in class. Students will be assigned to write journals and responding papers.

482. Advanced Business Chinese II. (B) Chiang. Prerequisite(s): CHIN 481 or permission of the instructor.

Follow the format of Advanced Business Chinese I with more readings on business culture in China, Chinese reforms in its financial market, and mergers and acquisitions in China.

491. (EALC221, EALC621) First Year Classical Chinese I. (A) Mair.

Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean,

Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.

492. (EALC222, EALC622) First Year Classical Chinese II. (B) Mair.

Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.

510. Topics in Chinese Culture. (B) Chiang. Prerequisite(s): CHIN 411, 481 or permission of the instructor.

The objective of this superior level content course is to extend and refine students' language and analytical skills while enhancing the appreciation of Chinese culture. The course is for students with native-like competence in Mandarin. Each class will proceed from reading, reflection, and interpretation, to the exchange of ideas. All reading materials are in Chinese with no glossary and all are written by scholars whose expertise are wither in contemporary and traditional culture of China, or in comparative study of Chinese and Western thoughts. Topics include: (1) the shared beliefs and behaviors of Chinese people; (2) traditional values and new values in the technological and business society; (3) how affection and love are manifested in Chinese culture; (4) what influenced the surge of popularity of Chinese wuxia fiction; (5) what it meant to be descendants of Chinese (huayi) living outside China. The class is conducted exclusively in Mandarin Chinese.

515. Topics in Chinese Literature. (M) Dietrich. Prerequisite(s): CHIN 411,

CHIN 412, CHIN 415, or permission of the instructor. Formerly AMES 575.

This is a survey course exploring the literary movements and schools appeared during the last two decades of the 20th century in the People's Republic of China. The reading consists of fictional works representative of each literary movement or school. Through the readings we will address a fundamental question "what motivates writers to write?" Students will write four short (1-2 pages, double space)

"responding" papers and two longer critical essays (5-7 pages double spaced). Each student will also give one oral presentation to the class on an assigned story. This course is designed for students who have achieved native or near native level of reading and writing proficiency in Chinese. The class is conducted exclusively in Chinese.

621. (CHIN491, EALC221) First Year Classical Chinese I. (A) Mair.

Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.

JAPANESE LANGUAGE COURSES (JPAN)**001. Introduction to Japanese I. (A)**

Staff. See LPS Course Guide. **This course does not fulfill the language requirement in the College.

Intended for students who have no background. The major emphasis is on oral communication skill.

002. Introduction to Japanese II. (B)

Staff. Prerequisite(s): Completion of JPAN 001 or the equivalent. See LPS Course Guide. **This course does not fulfill the language requirement in the College.

Although some reading/writing instruction is given, the major emphasis is on oral communication skill.

003. Introduction to Japanese III. (A)

Staff. Prerequisite(s): Completion of JPAN 002 or the equivalent. See the LPS Course Guide. ** This course does not fulfill the language requirement in the College.

Although some reading/writing instruction is given, the major emphasis is on oral communication skill.

004. Introduction to Japanese IV. (B)

Staff. Prerequisite(s): Completion of JPAN 003 or the equivalent. See the LPS Course Guide. ** This course does not fulfill the language requirement in the College.

Although some reading/writing instruction is given, the major emphasis is on oral communication skill.

011. Beginning Japanese I. (A) Staff.

Prerequisite(s): None.

Intended for students who have no Japanese background. All four skills, speaking/listening/writing/reading, are equally emphasized. Hiragana/Katakana (Two sets of Japanese syllabic letters) and some Chinese characters (Kanji) are introduced. Textbooks: Yookoso I (Getting Started - Chapt. 2) and basic Kanji Book I (L.1-L.4) Kanji: reproduction-approx.50/recognition-approx.80

012. Beginning Japanese II. (B) Staff.

Prerequisite(s): Completion of JPAN 011 or the equivalent.

Textbooks: Yookoso I (Chapt. 4 - Chapt. 7) and Basic Kanji Book I (L.5 - L.10) Kanji: reproduction-approx.110/recognition-approx.200

021. Intensive Beginning Japanese I. (A) Staff.

Prerequisite(s): For the second semester: completion of the first semester or permission of the instructor.

Intended for students with little or no background in Japanese who wish to finish the language requirement in one year. (Equivalent to JPAN 011 + JPAN 012) Textbooks: Yookoso I and Basic Kanji Book I (L.1-L,10) Kanji: reproduction-approx.110/recognition-approx.200

022. Intensive Beginning Japanese II. (B) Staff.

Prerequisite(s): completion of JPAN 021 or the equivalent.

This course is the equivalent to JPAN 111 + JPAN 112, and completes the College language requirement. Textbooks: Yookoso II and Basic kanji book I (L.11 - L.22) Kanji: reproduction-approx.250/recognition-approx 350

111. Beginning Japanese III. (A) Staff.

Prerequisite(s): Completion of JPAN 012 or the equivalent.

Continuation of JPAN 012. Textbooks: Yookoso II (Do You Remember-Chapt. 3) and Basic Kanji Book I (L.11 - L.16) Kanji: reproduction-approx.170/recognition-approx.250

112. Beginning Japanese IV. (B) Staff.

Prerequisite(s): Completion of JPAN 111 or the equivalent.

This course completes the College language requirement. Textbooks: Yookoso II (Chapt. 4 - Chapt. 7) & Basic Kanji Book I (L.17-L.22) Kanji: reproduction-approx250/recognition-approx.350

211. Intermediate Japanese I. (A)

Staff. Prerequisite(s): Completion of JPAN 112 or JPAN 022 or the equivalent.

A continuation of Japanese language beyond the language requirement. Textbooks: Integrated Approach to Intermediate Japanese (L.1 - L.8), and Basic Kanji Book II (L.23 - L.28) Kanji: reproduction-approx.310/recognition-approx.400

212. Intermediate Japanese II. (B)

Staff. Prerequisite(s): Completion of JPAN 211 or the equivalent.

A continuation of Japanese language at the intermediate level Text books: Integrated Approach to the Intermediate Japanese (L.9 - L.15) and Basic Kanji Book I (L.29 - L.34) Kanji: reproduction-approx.370/recognition-approx.450

311. Intermediate Japanese III. (A)

Sherry. Prerequisite(s): Completion of JPAN 212 or the equivalent.

This course is a continuation of Japanese language at the upper intermediate level, and authentic reading/listening materials are introduced besides the textbooks. Textbooks: Integrated Approach to Intermediate Japanese (L.11 - L.14), Basic Kanji Book II (L.34 - L.36), and selected newspaper and video materials. Kanji: reproduction-approx400/recognition-approx.450

312. Intermediate Japanese IV. (B)

Sherry. Prerequisite(s): Completion of JPAN 311 or the equivalent.

Textbooks: Integrated Approach to Intermediate Japanese (L.15, Basic Kanji Book II (L.37 - L.45), Rapid Reading Japanese, and selected video materials. Kanji: reproduction-approx.500/recognition-approx.600

381. Japanese for the Professions.

(A) Takami. Prerequisite(s): Completion of JPAN 212 or the equivalent. Offered through Penn Language Center.

An intermediate level course of Japanese language focusing on workplace-related topics. Intended for students who will use Japanese in the professions. Pragmatics are emphasized.

382. Japanese for the Professions II.

(B) Takami. Prerequisite(s): Completion of JPAN 381 or the equivalent.

411. Advanced Japanese I. (A) Staff. Prerequisite(s): Completion of JPAN 312 or the equivalent.

Minimum 500 - 600 kanji knowledge is expected. A continuation of Japanese language beyond the intermediate level.

412. Advanced Japanese II. (B) Staff. Prerequisite(s): Completion of JPAN 411 or the equivalent.

481. Advanced Japanese for Proficiency I. (A) Sherry. Prerequisite(s): Completion of the JPAN 312 or 382 or the equivalent. Offered through Penn Language Center.

This course is for students with an advanced background in Japanese, who are interested in taking at least the Level 2 Japanese Proficiency Test. Solid grammar, an extensive vocabulary, and the knowledge of at least 800-900 Chinese characters is required. This course is not continuous with any existing 300-level Japanese course; therefore, your grade from a 300-level course does not qualify you to take this course. Eligibility will be determined through an interview and placement test taken in the first meeting. All students who take this course are required to take the Japanese Proficiency Test in December.

Since the JLPT is administered in December every year, if you wish to fully prepare for the test, the instructor strongly recommends that you take JPAN 482 first in the spring of the same year. For example, if you plan to take the test in December, 2010, start taking 482 in the spring 2010 and take 481 in the fall 2010. Different from other courses, this full-year course begins in the spring and ends in the fall, because the test is given in December. However, participation in 482 is optional.

482. Advanced Japanese for Proficiency II. (B) Staff. Prerequisite(s): Completion of the JPAN 481 and the Japanese Proficiency Test and permission of the instructor. Offered through the Penn Language Center.

This course is for students with an advanced background in Japanese, who are interested in taking at least the Level 2 Japanese Proficiency Test. Since the Japanese Language Proficiency Test is administered in December every year, if you wish to fully prepare for the test, the instructor recommends that you take JPAN 482 first in the spring of the same year. For example, if you plan to take the test in December, 2011, start taking 482 in the spring 2011 and take 481 in the fall 2011. Different from other courses, this full-year course begins in the spring and ends in the

fall, because the test is given in December. However, participation in 482 is optional.

491. (EALC251, EALC651) Readings in Classical Japanese I. (A) Chance, L. Prerequisite(s): Completion of JPAN 212 or equivalent.

Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

492. (EALC252, EALC652) Readings in Classical Japanese II. (B) Chance. Prerequisite(s): JPAN 212.

Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

511. Readings in Advanced Japanese. (G) Staff. Prerequisite(s): Completion of JPAN 412 or the equivalent.

Readings in advanced literary and journalistic texts written in modern Japanese.

512. Readings Advanced Japanese II. (D) Staff. Prerequisite(s): Completion of JPAN 511 or the equivalent.

Readings in advanced literary and journalistic texts written in modern Japanese.

KOREAN LANGUAGE COURSES (KORN)

011. Elementary Korean I. (A) Staff.

This course is designed for students who have not previously studied Korean or who have little knowledge of Korean. This course emphasizes the development of foundational reading, writing, listening, and speaking skills based on daily activities such as greetings, daily routine, weekend activities, asking directions, etc. Students will participate in pair, small-group and whole-class activities that focus on meaningful and accurate communication skills in Korean.

012. Elementary Korean II. (B) Staff. Prerequisite(s): Completion of KORN 011 or equivalent knowledge and permission of the instructor.

This is a continuation of KORN 011. This course aims at developing both fluency and accuracy in the extended context of daily lives covering the topics such as student life, transactions, making reservations for flight tickets, hotel rooms, and leisure time activities. Throughout this course, students

will also learn some necessary knowledge for the intermediate level Korean so that students have a smooth transition and enjoy continuous Korean learning.

111. Intermediate Korean I. (A) Staff. Prerequisite(s): Completion of KORN 012 or equivalent knowledge and permission of the instructor.

The primary objective of the first intermediate course aims at building up students' communicative competence and assisting them in using Korean in their real-life situations. This goal will be achieved not only by the use of authentic materials, but also various student-centered activities that are highly contextualized in every day interactions. Students will be able to present information and exchange opinions on a variety of topics such as weather, fashion, travel, mailing, housing, public transportation, and shopping.

112. Intermediate Korean II. (B) Staff. Prerequisite(s): Completion of KORN 111 or equivalent knowledge and permission of the instructor.

This is a continuation of KORN 111. The second course expands student's competence by dealing with more functions in various contexts that students can frequently encounter in every day interactions. In order to prepare students for social contexts, students are encouraged to engage in conversations by personalizing the topics, functions or contexts. Students will perform in an interpersonal way by providing and obtaining information, expressing feelings and emotions, and exchanging opinions on a variety of topics such as birthday parties, recreation and hobbies, Korean holidays, marriage, cultural differences, education and jobs.

211. Advanced Korean I. (A) Staff. Prerequisite(s): Completion of KORN 112 or equivalent knowledge and permission of the instructor.

This course aims to develop functional proficiency in Korean at the intermediate-high level. Students will develop competence in fluency, grammatical accuracy and socio-linguistic/cultural appropriateness through a variety of activities and assignments. In addition, students will communicate on various topics with more sophisticated grammatical structures and advanced vocabulary. The development of communication through the four language skills (speaking, listening, reading and writing) is equally emphasized.

212. Advanced Korean II. (B) Staff.
Prerequisite(s): Completion of KORN 211 or equivalent knowledge and permission of the instructor.

This is a continuation of 211. Students continue to develop functional proficiency in Korean at the intermediate-high level. The topics include literature, culture, Korean customs, and social issues in contemporary Korea.

311. Current Korean Media I. (C) Staff.
Prerequisite(s): Completion of KORN 212 or equivalent knowledge and permission of the instructor.

This course is designed for advanced level students focusing on developing knowledge about Korean society in areas such as education, politics, economy, environment, health, and mass communication. Both audio and visual materials are used for this course. Students are expected to actively participate in discussions, research, and presentations.

312. Current Korean Media Part II. (M) Staff. Prerequisite(s): Completion of KORN 311 or equivalent knowledge and permission of the instructor.

While KORN 311 is covering more general and broader topics, 312, emphasizes developing in-depth knowledge of Korean society through research, discussion, and presentations.

381. Business Korean I. (A) Staff.
Prerequisite(s): Completion of KORN 212 or equivalent knowledge and permission of the instructor.

This course is offered through the Penn Language Center. Business Korean I is designed for students who have finished the advanced level of Korean and who wants to further improve their Korean language skills to the advanced-high level by studying Korean business. Various reading materials such as Korean newspaper/magazine articles about Korean business will be used.

382. Business Korean II. (B) Staff.
Prerequisite(s): Completion of KORN 381 or equivalent knowledge and permission of the instructor.

This course is offered through the Penn Language Center. A continuation of the material offered in KORN 381. Advanced Business Korean I. Students further develop their Korean language proficiency at the advance-high level through case

studies, discussions, and presentations in the area of business.

431. Advanced Readings Modern Korean I. (A) Staff. Prerequisite(s): Completion of KORN 212 or equivalent knowledge and permission of the instructor.

Unlike 311, 312, this reading course is based on literary pieces in the form of short stories, essays, and novels. The emphasis is on developing creative, analytical thinking through various readings so that students understand how differently the reading can be interpreted according to the reader. This course will provide students with many opportunities to use their imagination to present a different viewpoint.

432. Advanced Modern Korean II. (B) Staff. Prerequisite(s): Completion of KORN 431 or equivalent knowledge and permission of the instructor.

This course is seeking creative and analytical thinking through more organized thematic topics such as family, human relationships, and the reflection of self-images and individual's mental status while the society changes in time.

481. Business Korean I. (A) Staff.
Prerequisite(s): Completion of 382 or equivalent knowledge and permission of the instructor.

This course is offered through the Penn Language Center. The goal of this course is for students to understand Korean business environment as well as to enhance their skills of advanced Korean when they do business in Korea. The first part of this course focuses on studying basic knowledge and terminology of business in Korea. The second part, which is designed to be the application of what they have learned in the first half, consists of reading newspapers, watching news and presenting topics of business interest.

482. Advanced Business Korean II. Staff. Prerequisite(s): Completion of KORN 481 or equivalent knowledge and permission of the instructor.

This course is offered through the Penn Language Center. A continuation of the material offered in KORN 481: Advanced Business Korean I. This course introduces the vocabulary and speech style characteristic in the business community.

OTHER ASIAN LANGUAGE COURSES (ALAN)

110. Elementary Vietnamese I & II. (C) Nguyen. Prerequisite(s): For the second semester, completion of the first semester or permission of the instructor. Offered through the Penn Language Center.

An introduction to the language of North and South Vietnam. Instruction includes reading, writing, speaking and listening.

120. Beginning Tagalog I & II. (E) Juliano. Prerequisite(s): For the second semester, completion of the first semester of ALAN 120 or permission of the instructor. Offered through the Penn Language Center.

An introduction to the spoken and written Tagalog (Filipino) language.

130. Beginning Thai I & II. (E) Sternstein. Prerequisite(s): For the second semester, completion of the first semester or permission of the instructor. Offered through the Penn Language Center.

An introduction to the spoken and written Thai language.

210. Intermediate Vietnamese I & II. (C) Nguyen. Prerequisite(s): ALAN 110 or equivalent. For the second semester, completion of the first semester or permission of the instructor. Offered through the Penn Language Center.

A continuation of ALAN 110, the written and spoken language of Vietnam.

220. Intermediate Tagalog I & II. (E) Juliano. Prerequisite(s): For the second second semester, completion of the first semester of ALAN 220 or permission of the instructor. Offered through the Penn Language Center.

A continuation of ALAN 120, the spoken and written Tagalog (Filipino) language.

230. Intermediate Thai I & II. (E) Staff. Prerequisite(s): The second semester of ALAN130 or permission of the instructor. For the second semester, completion of the first semester or permission of the instructor. Offered through the Penn Language Center.

A continuation of ALAN 130, the spoken and written Thai language.

ECONOMICS (AS) {ECON}

L/R 001. Introduction to Micro Economics. (C) Society Sector. All classes.

Introduction to economic analysis and its application. Theory of supply and demand, costs and revenues of the firm under perfect competition, monopoly and oligopoly, pricing of factors of production, income distribution, and theory of international trade. Econ 1 deals primarily with microeconomics.

L/R 002. Introductory Economics: Macro. (C) Society Sector. All classes. Prerequisite(s): ECON 001.

Introduction to economic analysis and its application. An examination of a market economy to provide an understanding of how the size and composition of national output are determined. Elements of monetary and fiscal policy, international trade, economic development, and comparative economic systems.

L/R 010. Introduction to Economics for Business. (A) Staff.

The first part of the course covers basic microeconomic concepts such as opportunity cost, comparative advantage, supply and demand, importance of costs and revenues under perfect competition vs. monopoly, externalities and public goods.

The second part of the course introduces macroeconomic data, two models of the labor market, a model of the aggregate household, and the standard AD-AS model. The course concludes with an introduction to fiscal policy, banking, and the role of the Central Bank.

013. (PPE 201) Strategic Reasoning. (C) Prerequisite(s): ECON 001, some high school algebra. This course may NOT be taken concurrently or after Econ 212.

This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and

movies. Some interactive games will be played in class. There will be little formal theory, and the only pre-requisite is some high-school algebra. This course will also be accepted by the Economics department as and Econcourse, to be counted toward the minor in Economics (or as an Econ elective).

024. Development Economics. (C) Prerequisite(s): ECON 001 or ECON 010.

This course presents an overview of the field of development economics. The general aim is to show how economic analysis has been applied to issues related to developing countries. Among the topics covered are: income distribution, poverty, health, population growth, migration, growth, and the rural economy.

026. Economic Development: Middle East II. (C) Staff. The course can be taken independently of or after ECON 025.

The course begins by studying labor surplus models as a prelude to examining employment, structural change, land tenure and land reform. It then looks at land and agricultural policies in Israel, Egypt, Iran and Turkey. The second part studies the oil sectors, energy markets and impact on the Middle East economies.

030. (PPE 030) Public Policy Analysis. (C) Staff. Prerequisite(s): ECON 001 and 002 or ECON 010. Credit cannot be received for both ECON 030 and 231.

This course provides an introduction to the economic method for analyzing public policy questions. It develops the implications of this method for the role of government in a market economy and for the analysis of specific public projects.

033. (PPE 033) Labor Economics. (B) Prerequisite(s): ECON 001 or ECON 010. Credit cannot be received for both ECON 033 and 233.

The course begins with an extensive discussion of models of labor market demand and supply. The rest of the course addresses a variety of related topics including the school-to-work transition, job training, employee benefits, the role of labor unions, discrimination, workforce diversity, poverty, and public policy.

034. (PPE 034) Economics of Family & Gender. (A) Prerequisite(s): ECON 001, 002, or 010 and ECON 103.

The course will use economic theory and econometric analysis to explore issues regarding decision making and allocation of resources within the family. The impact of gender roles and differences on

economic outcomes will be discussed. We will study some feminist criticism of the economic tools for understanding household allocations and gender differences. The US economy will serve as the reference point though developing countries will also be discussed.

035. (PPE 035) Industrial Organization. (C) Prerequisite(s): ECON 001 or ECON 010. Credit cannot be received for both ECON 035 and 235.

Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, moral hazard and adverse selection. These theories are then applied to the study of various industries, antitrust cases, and regulatory issues.

036. (PPE 036) Law and Economics. (C) Prerequisite(s): ECON 001 or ECON 010. Credit cannot be received for both ECON 036 and 234.

The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making.

039. (HCMG202) Economics and Financing of Health Care Delivery. (A) Prerequisite(s): ECON 001 or ECON 010 or permission of instructor. For non-Econ Majors only. Students may not receive credit for HCMG 202, HCMG 302, or Econ 236.

Systematic and critical review of the present economic literature on the health care "industry". Topics include the demography and determinants of illness, the demand for curative and preventive care and determinants of recent health cost inflation, the efficacy of markets, and the role of government.

050. International Economics. (C) Prerequisite(s): ECON 001 and 002 or ECON 010. ECON 050 is a one-semester course in international economics. Students wishing to study the subject in greater depth should take instead the two-semester sequence ECON 251 and 252. A student may not receive credit for both ECON 050 and ECON 251 or ECON 252.

Introduction to the theory of international trade and international monetary economics. The theoretical background is used as a basis for discussion of policy issues. Patterns of international trade and production; gains from trade; tariffs, and impediments to trade; foreign exchange markets, balance of payments, capital flows, financial crises, coordination of

monetary and fiscal policy in a global economy.

062. The Soviet and Post-Soviet Economy. (C) Prerequisite(s): ECON 001 and 002 or ECON 010. ECON 103 and ECON 262 helpful.

The development and operation of the Soviet centrally planned economy. Its strengths and weaknesses, and causes of its collapse. The transition from central planning to a market economy.

L/R 101. Intermediate Microeconomics. (C) Prerequisite(s): ECON 001 and 002; MATH 104 and either MATH 114 or MATH 115. Note: Incoming freshmen with AP or transfer credit for Econ 1 and Econ 2, MUST complete Math 104 and Math 114 or Math 115 before enrolling in Econ 101. Upper classmen must have at least a B+ in Math 104 to take Econ 101 and Math 114 or Math 115 concurrently.

Theories of consumer behavior, demand, production, costs, the firm in various market contexts, factor employment, factor incomes, elementary general equilibrium, and welfare.

L/R 102. Intermediate Macroeconomics. (C) Prerequisite(s): ECON 001, ECON 002, ECON 101, MATH 104 and MATH 114 or MATH 115. Finance 101 does not satisfy any of the Economics department requirements. Therefore, students are required to take Econ 102.

Facts and theories about the determination of per capita income and its differences across countries and across time. The study of economic fluctuations in output and employment. The role of government in influencing these aggregate variables: monetary and fiscal policy.

L/R 103. Statistics for Economists. (C) Prerequisite(s): MATH 104 and MATH 114 or MATH 115 and ECON 001 and ECON 002. Intended primarily for economics majors. ECON 103 cannot be taken by any student who has already completed Statistics at least at the level of STAT 430 (including the sequence STAT 430/431). Such students must take an additional 200-level course to satisfy course requirements of the major.

The course focuses on elementary probability and inferential statistical techniques. The course begins with a survey of basic descriptive statistics and data sources and then covers elementary probability theory, sampling, estimation, hypothesis testing, correlation, and regression. The course focuses on practical

issues involved in the substantive interpretation of economic data using the techniques of statistical inference. For this reason empirical case studies that apply the techniques to real-life data are stressed and discussed throughout the course, and students are required to perform several statistical analyses of their own.

L/R 104. Econometrics. (B) Prerequisite(s): ECON 101, 103, MATH 104 and MATH 114 or MATH 115 or permission from instructor.

This course is designed to introduce students to econometric techniques and their applications in economic analysis and decision-making. The main objective of the course is to train the student in (i) handling economic data; (ii) quantitative analyses of economic models with probabilistic tools; (iii) econometric techniques, their application as well as their statistical and practical interpretation; (iv) implementing these techniques on a computer. Estimation and inference procedures are formally analyzed for simple econometric models and illustrated by empirical case studies using real-life data. The course covers linear regression models, simultaneous-equations models, discrete choice models and univariate time series models. Estimation and Inference is conducted using least squares and likelihood based techniques. Students are required to perform several econometric analyses of their own.

199. Independent Study. (C) Staff. Prerequisite(s): ECON 101, 102, 103 and written permission from the Director of Independent Research. Please see the Undergraduate Coordinator in Economics (160 McNeil) for the appropriate sequence number.

Individual study and research under the direction of a member of the Economics Department faculty. At a minimum, the student must write a major paper summarizing, unifying, and interpreting the results of the study. This is a one semester, one c.u. course.

210. Economics of Family. (M) Prerequisite(s): ECON 101, MATH 104 and MATH 114 or MATH 115. Students may not receive credit for ECON 034 and ECON 210. In addition, any 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course will use economic tools to explore decision making and allocation of resources within the family. The course will use both economic theory and

econometric evidence to investigate these issues. The impact of gender roles and differences will be examined and the effect of these differences on economic decisions and outcomes both within and outside the family will be discussed.

Student participation will be an integral part of the course. During class, students will be required to evaluate data and relate it to the theoretic model covered. Student participation will also include two in-class oral presentations. Students will be working with CWiC (Communication Within the Curriculum) as they work on these presentations.

211. Social Choice Theory. (M) Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. (ECON 211 was formerly ECON 116). In addition, any 200-level CGS course (Section 601), when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.

This course investigates a topic which lies at the heart of economic, social and political sciences, namely the aggregation of individual preferences. Can a society as a whole exhibit preferences as individuals do? Can these preferences be based on individual ones, and show the same level of coherence? Which process can lead from individual preferences to the preferences of the society? At the end of the 18th century, the pioneers in the field already realized that mathematics is the only language powerful enough to make deep progress in the understanding of these questions. The formalization involves pure logic as well as geometry and combinatorics.

212. Game Theory. (C) Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. Any 200-level LPS course when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

An introduction to game theory and its applications to economic analysis. The course will provide a theoretical overview of modern game theory, emphasizing common themes in the analysis of strategic behavior in different social science contexts. The economic applications will be drawn from different areas including trade, corporate strategy and public policy.

221. Econometric Forecasting. (C)

Prerequisite(s): ECON 101, 102, 103; MATH 104 and MATH 114 or MATH 115. ECON 104 highly desirable but not strictly required. In addition, any 200-level CGS course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course provides a comprehensive introduction to forecasting in economics and business. Topics covered include statistical graphics, trends, seasonality, cycles, forecast construction, forecast evaluation and forecast combination.

222. Advanced Econometric Techniques and Applications. (B)

Prerequisite(s): ECON 101, 104; MATH 104 and MATH 114 or MATH 115. In addition, any 200-level LPS course, when offered WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course introduces students to advanced study in econometrics, with an emphasis on methods used in microeconomic applications and in evaluating the effects of social interventions. The methods covered include methods for handling limited dependent variables (useful, for example, in forecasting the demand for a new good), maximum likelihood estimators, and flexible semiparametric and non parametric estimation methods, and randomized and nonexperimental methods of estimating treatment effects. Applications of econometrics to the field of program evaluation will also be studied.

231. Public Finance. (C) Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. Credit cannot be received for both ECON 030 and 231. In addition, any 200-level LPS course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course has two parts. The first looks at market and government failures and discusses the need for public policies as well as limits to their effectiveness including the evaluation of public projects using cost benefit analysis. The second part focuses on the economic analysis of taxation, including the economic incidence and efficiency of taxes.

232. (PPE 232) Political Economy. (B)

Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. The LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course examines the political and economic determinants of government policies. The course presents economic arguments for government action in the private economy. How government decides policies via simple majority voting, representative legislatures, and executive veto and agenda-setting politics will be studied. Applications include government spending and redistributive policies.

233. Labor Economics. (C)

Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. Credit cannot be received for both ECON 033 and 233. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

Labor supply and labor demand, income distribution, labor market contracts and work incentives, human capital, labor market discrimination, job training and unemployment.

234. Law and Economics. (B)

Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. Credit cannot be received for both ECON 036 and 234. In addition, the LPS course, when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.

This course will use basic microeconomic tools to understand how the law often, but not always, promotes economic efficiency. Among the areas to be discussed will be tort law, property law, intellectual property, antitrust regulation. The distinction between common law and legislative law will be drawn.

235. Industrial Organization. (C)

Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. Credit cannot be received for both ECON 035 and 235. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, nonlinear pricing and price discrimination. These theories are used to model various

industries, antitrust cases, and regulatory issues.

236. (HCMG302) Economics and Financing of Health Care Delivery. (B)

Prerequisite(s): ECON101, MATH 104, and either MATH 114 or MATH 115. For ECON majors only. Intermediate Micro is a prerequisite and this course will use advanced quantitative methods. Students may not take Econ 039, HCMG 202. Cross-listed with HCMG 302. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course provides an application of economic principles to the health care sector. By recognizing the importance of scarcity and incentives this course will focus on the critical economic issues in producing, delivering and financing health care. In particular, the course will analyze determinants of demand for medical care, such as health status, insurance coverage and income; the unique role of physicians in guiding and shaping the allocation of resources in medical care markets; and competition in medical care markets, especially among hospitals. Special emphasis will be placed on the evaluation of policy instruments such as government regulation, antitrust laws, 'sin taxes' on cigarettes and alcohol, and public health programs. The course will use more advanced quantitative methods and formal economic theory; knowledge of calculus and basic microeconomics are recommended.

237. (BPUB230, FNCE230, REAL230) Urban Fiscal Policy. (M) Inman.

Prerequisite(s): ECON 101, ECON 102, MATH 104 and MATH 114 or 115.

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

241. Topics in Macroeconomics - Growth, Development, and Business Cycles. (C)

Prerequisite(s): ECON 101, 102, 103; MATH 104 and MATH 114 or MATH 115. ECON 220 and/or ECON 221 are highly desirable but not strictly required. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course provides a comprehensive introduction to international financial markets and macroeconomic fundamentals, and the links between them, as relevant for exchange rate forecasting, portfolio allocation, hedging, risk management, and asset pricing in global contexts. The course is demanding and very highly quantitative.

242. Topics in Macroeconomics. (C)

Prerequisite(s): ECON 101 and 102; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. A student may not receive credit for ECON 072 and ECON 242. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course covers topics of interest in macroeconomics. It studies how household decision making and government policies and interventions determine macroeconomic aggregates. There will be an emphasis on developing and applying economic models. Students are expected to have completed intermediate macroeconomics Econ 102.

243. Monetary and Fiscal Policies. (C)

Prerequisite(s): ECON 101 and 102; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This is an advanced course in macroeconomics. A relatively simple, but well defined and internally consistent model of the U.S. economy is set up and used to study how output is generated given the initial resources, how output is divided between consumption and addition to capital stock, and how this process accumulates over time. The role of prices including the rate of interest in this process is also reviewed, and monetary and fiscal policies needed to improve the performance of the economy under such circumstances are discussed.

244. Macro-Modeling. (M)

Prerequisite(s): ECON 101 and 102; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

Fundamentals of modern macroeconomic modeling and applications for forecasting and policy analysis. Attention will focus on representing such macroeconomic phenomena as inflation, unemployment, the business cycle, productivity, and secular growth. Students will build a macro model. Topics will include how to simulate a range of fiscal and monetary policies and how to measure their effectiveness for stabilization and growth.

245. Math for Economists. (C)

Prerequisite(s): ECON 101, ECON 102, MATH 104 and MATH 114 or 115. The LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course will introduce students to mathematical tools that are commonly used in modern economics and give students experience using these tools to answer economic questions. Topics covered may include constrained optimization, duality, dynamic fixed point theorems and optimal control theory.

251. International Trade. (A)

Prerequisite(s): ECON 101 and 102; MATH 104 and MATH 114 or MATH 115. A student may not receive credit for both ECON 050 and ECON 251. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

Structure of the world economy; theory of international trade; economic growth and international trade; international trade policy: developed countries; developing countries. Direct investment, technology transfers, and the multinational firm.

252. International Finance. (B)

Prerequisite(s): ECON 101 and 102; MATH 104 and MATH 114 or MATH 115. A student may not receive credit for ECON 050 and ECON 252. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

International monetary economics with emphasis on economic policy in an open economy. Topics covered in the course include: balance-of-payments adjustment,

theories of exchange rate determination, the effects of exchange rate devaluation, macroeconomic policy under fixed and floating exchange rates, the Euro-dollar market, currency and balance of payments crises.

260. Decision Making Under Uncertainty. (C)

Prerequisite(s): ECON 101, ECON 103, MATH 104 and MATH 114 or 115. All prerequisites MUST be taken prior to enrolling in this course.

This course will show how individuals make decisions in a world full of uncertainties, both normatively and descriptively. This theory will help us build skills in understanding and analyzing a choice problem with uncertainty in a systematic fashion, as well as deepening our understanding of the fundamental concept of a utility function, which plays a critical role in economic modeling. The course requires a substantial ability of abstract thinking. Homework is intended to be thought-provoking rather than skill-sharpening.

261. Topics in Development. (M)

Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. Student may not receive credit for Econ 033 and Econ 261. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

This course studies institutions in developing economies. The first section of the course will cover the organization of production in traditional agrarian societies. Topics will include land, labor and credit markets. The second section of the course will focus on the role of the community in facilitating the transition to the modern market economy. Here we will study how the community spreads information, permits the formation of informal networks and organizes collective institutions, allowing individuals to take advantage of new economic opportunities.

263. Transition From Social To Market Economy. (A)

Prerequisite(s): ECON 101 and 102; MATH 104 and MATH 114 or MATH 115. (ECON 263 was formerly ECON 164). In addition, the CGS 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as a CGS student.

This course is in the format of a seminar. It will begin with a brief description of the socialist system of central planning, its strengths and weaknesses, early attempts at

reform, and the reasons for abandoning planning and moving to a market system. This will be followed by an investigation of the theoretical aspects of the transition from the institutional arrangements of socialism to those of a capitalist market system. In the final part of the course, the transition experience of socialist economies will be analyzed with major attention to such issues as price liberalization, macro stabilization, privatization, banking and finance, growth, employment and income, role of foreign sector, legal structure, organized crime, and shock therapy vs. gradualism.

SM 300. Honors Seminar. (E) Staff. Prerequisite(s): ECON 101, 102, 103, and 220 and two 200 level courses; MATH 104 and MATH 114 or MATH 115. GPA of at least 3.5 in Economics and permission of the instructor. Course meets weekly. Required of all honors majors.

Students prepare an honors thesis in economics over the academic year, supervised by a faculty member of their choice. In both semesters students present their work in progress to the class. Any student intending to do empirical work in the thesis should have COMPLETED ECON 103 and 220.

Regularly Offered Ph.D. Courses

680. Microeconomics. (A) Prerequisite(s): Equivalent of ECON 003 or permission of instructor.

Basic tools of microeconomic analysis: consumer choice, firm behavior; partial and general equilibrium theory. Econ 681 is a more theoretical course covering the same material.

681. Microeconomic Theory. (A) Prerequisite(s): Equivalent of ECON 003; meeting the department's minimal mathematical requirements; or permission of instructor.

Basic tools of microeconomic theory: consumer choice, firm behavior, partial and general equilibrium theory. This is a more theoretical treatment of the basic tools of microeconomic analysis than Econ 680.

682. Game Theory and Applications. (B) Prerequisite(s): ECON 680 or 681.

A graduate level introduction to decision making under uncertainty, applied game theory, and information economics.

701. Microeconomic Theory I. (A) Prerequisite(s): Meeting the Department's minimal mathematical requirements.

Nonlinear programming, theory of the consumer and producer, general equilibrium.

702. Macroeconomic Theory I. (B) Prerequisite(s): Meeting the Department's minimal mathematical requirements; ECON 701, 703 and 898, or equivalents.

Dynamic programming, search theory, neoclassical growth theory, asset pricing, business cycles.

703. Microeconomic Theory II. (A) Prerequisite(s): Meeting the department's minimal mathematical requirements.

Game theory, decision making under uncertainty, information economics.

704. Macroeconomic Theory II. (B) Prerequisite(s): Meeting the Department's minimal mathematical requirements; ECON 701, 703 and 898, or equivalents.

Equilibrium notions in the growth model. Economies with distortions. Incomplete markets. Overlapping generations.

705. Econometrics I: Fundamentals. (A) Prerequisite(s): Meeting the Department's minimal mathematical requirements.

Violations of classical linear regression assumptions, nonlinear regression models (including logit, probit, etc.), diagnostic testing, distributed lag models, panel data models, identification, linear simultaneous-equations model.

706. Econometrics II: Methods & Models. (B) Prerequisite(s): Meeting the department's minimal mathematical requirements; ECON 705 and 898, or equivalents.

Analysis in time and frequency domains, state space representations, Kalman filtering, conditional heteroskedasticity, nonlinear and nonparametric methods for time series, integration, co-integration, numerical and simulation techniques.

708. The Economics of Agency, Information, and Incentives. (C) Prerequisite(s): Meeting the Department's minimal mathematical requirements; ECON 898 or equivalents.

This course studies the economics of adverse selection and moral hazard in strategic settings. The primary focus is on the agency relationship and the structure of agency contracts. Other settings include auctions, bilateral trading, and the internal organization of the firm.

712. Topics in Advanced Economic Theory and Mathematical Economics. (C)

Topics and prerequisites announced each year.

713. Game Theory. (C) Prerequisite(s): ECON 701 and 703.

A rigorous introduction to the concepts, tools, and techniques of the theory of games, with emphasis on those parts of the theory that are of particular importance in economics. Topics include games in normal and extensive form, Nash equilibrium, games of incomplete information and Bayesian equilibrium, signaling games, and repeated games.

714. Quantitative Macroeconomic Theory. (C) Prerequisite(s): ECON 702 and 704.

Computation of Equilibria. Calibration of models. Heterogenous agents, macroeconomic models.

716. Equilibrium Theory. (C) The course relies heavily on material covered in Microeconomic Theory I (ECON 701).

This course covers various topics in equilibrium theory (broadly conceived as the analysis of any model in which the collective outcome of individual actions in an economic -- or, even more generally, social setting is described by a system of equations). In recent years the focus has been on the theory of equilibrium in a competitive setting when financial markets are "imperfect," for example, when there are an incomplete set of financial markets, or when households' transactions on financial markets are restricted by various conventions or institutions.

721. Econometrics III: Advanced Techniques of Cross-Section Econometrics. (C) Prerequisite(s): ECON 705 and 706.

Qualitative response models, panel data, censoring, truncation, selection bias, errors in variables, latent variable models, survey design, advanced techniques of semiparametric estimation and inference in cross-sectional environments. Disequilibrium models. Methods of simulated moments.

722. Econometrics IV: Advanced Techniques of Time-Series Econometrics. (C) Prerequisite(s): ECON 705 and 706.

Consistency and asymptotic normality for m-estimator and for generalized moment estimators. Asymptotics for integrated and cointegrated time-series. Inference in

presence of nuisance parameters identified only under the alternative: consistent moment tests, testing for threshold effects, testing for structural breaks. Estimation of stochastic differential equations from discrete observations: simulated method of moments, indirect inference. Discrete time GARCH models and their continuous limits.

730. International Trade Theory and Policy. (C) Prerequisite(s): ECON 701 and 702.

Pure theory of international trade, commercial policy, and trade.

731. International Monetary Theory and Policy. (C) Prerequisite(s): ECON 701 and 702.

Balance of payments, international capital movements, and foreign exchange examined against a background of current theories and policies.

740. Monetary Economics. (C) Prerequisite(s): ECON 703, 704, 705, and 706.

The role of money as a medium of exchange and as an asset. Models of the demand for money.

741. Economic Growth. (C) Prerequisite(s): ECON 701 and 702.

Theories of economic growth and their quantitative implications.

750. Public Economics. (C) Prerequisite(s): ECON 701 and 703.

Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and political models affecting economic variables.

751. Public Economics II. (C) Prerequisite(s): ECON 701 and 703.

Expenditures: Alternative theories of public choice; transfers to the poor; transfers to special interests and rent seeking; social insurance; publicly provided private goods; public production and bureaucracy. Taxation: Tax incidence in partial and general equilibrium; excess burden analysis. Topics on tax incidence and efficiency: lifetime incidence and excess burden, dynamic incidence, the open economy. Normative theories of taxation: Optimal commodity and income taxation. The political economy of income taxation.

753. Macroeconomic Policy. (C) Prerequisite(s): ECON 702.

A review of alternative theories of growth and business cycles, and their relevance for recent history of selected industrialized countries. Fiscal and monetary policy in a dynamic setting and their application to current policy issues.

760. Development Economics: Basic Micro Topics. (C) Prerequisite(s): ECON 701 and 705, or permission of instructor.

Analysis of selected topics in economic development related to household/firm (farm) behavior, including determinants of and the impact of human resources, contractual arrangements in land, labor and credit markets, investment and savings. Emphasis on tractable modeling that leads to integrated analysis given available data.

780. Industrial Organization. (C) Prerequisite(s): ECON 701.

Development of microeconomic models to explain the structure and performance of markets. Among other topics: the conditions under which monopoly power can be exercised, the relationship between profit rates and concentration or size, the persistence of profits over time, industry turnover and interindustry comparisons.

781. Empirical Methods for Industrial Organization. (C) Prerequisite(s): ECON 780.

The goal of the course is to explore links between theory and data in order to identify and test implications of economic models. Reduced form and structural approaches will be used to study a variety of topics that include: Estimation of multiproduct cost functions; detection of collusion, multimarket contact, and network externalities; asymmetric information: auctions and nonlinear pricing; price competition and product differentiation; and complementarities: innovation and organizational design.

785. Selected Topics in Industrial Organization. (C) Prerequisite(s): ECON 701.

The course will cover topics in oligopolistic competition, product selection, the operation of markets under imperfect information and related subjects.

791. (DEMG796, SOCI796) Economic and Demographic Interrelations. (M)

Prerequisite(s): Microeconomic theory and econometrics at the graduate or advanced undergraduate level, or permission of instructor.

Application of economics to the analysis of demographic behaviors and processes including fertility, mortality, health, marriage and migration. Focus is on the development and testing of models of household behavior using econometric tools. Consideration is also given to the economic consequences of population growth.

792. Economics of Labor I. (C) Prerequisite(s): ECON 701, 703, 705, and 706.

Topics include: Theories of the supply and demand for labor, wage determination, wage differentials, labor market discrimination, unemployment, occupational choice and dynamics of specific labor markets, theory of matching, trade unions. The theory and empirics of human capital accumulation, intertemporal labor supply, search, intergenerational mobility of income and wealth, contracts and bargaining, efficiency wage models, principal/agent models, and signaling models.

793. Economics of Labor II. (C) Prerequisite(s): ECON 792 or permission of instructor.

A continuation of ECON 792.

898. Elementary Mathematics for Economists. (A)

Vector spaces, linear transformations and matrices, quadratic forms definite matrices, eigenvalues and similarity transformations, linear difference and differential equations, point set topology, and fixed point theorems.

980. Topics in Economics. (M)

Topics and prerequisites announced when course is offered.

982. Topics in Econometrics. (C)

Topics and prerequisites announced when course is offered.

983. Topics in Microeconomics. (C)

Topics and prerequisites announced when course is offered.

984. Topics in Macroeconomics. (C)

Topics and prerequisites announced when course is offered.

998. Individual Readings and Research. (C)

999. Independent Study. (C)

**EDUCATION
(ED) {EDUC}**

Undergraduate Courses

Undergraduate students may not take intersession courses for credit.

General Education Courses

200. (JWST200) Teaching Jewish Texts. (M) Staff.

SM 202. (URBS202) Urban Education. (B) Staff.

This course focuses on various perspectives on urban education, conditions for teaching and learning in urban public schools, current theories of pedagogy in urban classrooms along with a close examination of a few representative and critical issues. While our focus is on schools in the United States, we will broaden our discussion at times to examine the same issues from an international perspective. The course is designed around the following themes (1) perspectives on urban education, (2) the broader urban context of K-12 schooling, (3) teaching and learning in urban settings, and (4) responses to the persistent challenges in urban schools. These themes should provide multiple lenses with which to explore the complexities of urban education. Major theoretical perspectives on schooling and various proposals by researchers and policymakers that address particular challenges in urban education will also be addressed.

235. (GSOC235) Psychology of Women. (C) Staff.

Critical analyses of the psychological theories of female development, and introduction to feminist scholarship on gender development and sexuality.

240. (AMCV240, URBS240) Education in American Culture. (C) Staff.

This course explores the relationships between forms of cultural production and transmission (schooling, family and community socialization, peer group subcultures and media representations) and relations of inequality in American society. Working with a broad definition of "education" as varied forms of social learning, we will concentrate particularly on the cultural processes that produce as well as potentially transform class, race, ethnic and gender differences and

identities. From this vantage point, we will then consider the role that schools can and/or should play in challenging inequalities in America.

241. Educational Psychology. (C) Staff. Prerequisite(s): Introduction to Psych or equivalent.

Current issues and research, stressing implications for educational practice. Topics include: behavioral analysis, methods, curriculum objectives, intelligence tests, headstart programs, etc. Field experience in schools is often included.

250. Learning from Children. (C) Staff.

This course is about looking at elementary school classrooms and understanding children's experiences of school from a variety of perspectives, and from a variety of theoretical and methodological lenses from which the student can interpret children's educational experiences. This course is about developing the skills of observation, reflection, and analysis and to begin to examine some implications for curriculum, teaching and schooling. This course requires you to spend time in an elementary school classroom.

SM 323. (URBS323) Tutoring School: Theory and Practice. (A) Staff.

This course represents an opportunity for students to participate in academically-based community service involving tutoring in a West Phila. public school. This course will serve a need for those students who are already tutoring through the West Phila. Tutoring Project or other campus tutoring. It will also be available to individuals who are interested in tutoring for the first time.

345. (GSOC344) Psychology of Personal Growth. (C) Staff.

Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master's Degree program.

360. Human Development. (C) Staff.

A life-span (infancy to adulthood) approach to development. Topics include: biological, physical, social and cognitive basis of development. Films and guest speakers are often included.

414. Children's Literature. (A) Staff.

Theoretical and practical aspects of the study of literature for children. Students develop both wide familiarity with children's books, and understanding of how children's literature fits into the elementary school curriculum.

417. Reading/Language Arts in the Elementary School. (A) Prerequisite(s): EDUC 316, 317. Corequisite(s): EDUC 419, 420. This course is open only to students officially admitted to the program for preparation of elementary school teachers.

Second of a two-part course (see EDUC 317). The course focuses on the reading process, using literature in the reading curriculum, language and cultural difference in the classroom, and evaluating reading/language arts programs and progress. Students design and carry out reading lessons and units, conduct informal reading assessments, and participate in in-class seminars.

418. Teaching and Learning Mathematics in Elementary Schools. (A) Staff.

Students participating in this course will explore definitions of mathematics, theories of children's mathematical learning, and issues of reform in mathematics education through consideration of relevant content areas such as numeration, rational number operations, geometry, and probability and statistics.

421. (ENVS421) Science in Elementary and Middle Schools. (B) Staff.

An intensive approach to current methods, curricula, and trends in teaching science as basic learning, K-8. "Hands-on" activities based on cogent, current philosophical and psychological theories including: S/T/S and gender issues. Focus on skill development in critical thinking. Content areas: living things, the physical universe, and interacting ecosystems.

FPE-Foundations and Practices of Education

463. (HIST463) The History of American Education. (B) Katz.

This course is a survey of the relationships between education and the history of American society. The emphasis will be on social history: the interrelations between education and social structure, demography, economic development, family patterns, reform movements, and other institutions.

SM 501. Community Partnerships in Visual Arts & Education. Epstein.

This course will connect students with artists from the 40th Street Artist-in-Residence (AIR) program, which provides free studio space and in exchange asks residents to share their talents with the local community. This course is designated as an Academic-based Service Learning (ABCS) class, meaning that students will be evaluated partly on their work in the community outreach situation.

SM 503. (URBS546) Global Citizenship. (B) Hall.

This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.

508. Managing People. (C) Dwyer.

Professionals in organizations spend much, and often all of their time, attempting to influence others--subordinates, peers, superiors, clients, boards, owners, regulators, pressure groups, media and others. This course presents an approach to human influence, based on the relationships among values, perceptions, and behaviors.

SM 509. Liberalism & Multiculturalism -- Theory & Policy. (C) Ben-Porath.

This course is aimed at positioning education at the heart of the political-philosophical question of justice. The aim to gain an understanding of the core issues we face when constructing policies to advance equity, choice, and access and other just causes.

510. Managing People in Education. (B) Dwyer.

This course is similar in content to 508, Managing People, but it emphasizes educational organizations.

SM 511. Equality. (C) Ben-Porath.

'All men (or all humans) are created equal': What does this statement mean? What are we all equal in? What should we be equal in? Do we have equal potential, equal dignity, equal worth? Must we have equal resources, equal opportunities, equal status? In this class we will consider philosophical and political approaches to the idea of equality. The education system's ability and commitment to respond to claims of equality will be discussed. Must we treat all children the same? Or each child differently? And if the latter, how does that constitute equality? Moreover, must we treat individuals or groups equally? Educational and philosophical answers to these questions will be the focus of this seminar.

513. Development of the Young Child. (D) Goodman.

This course will blend an explanatory and descriptive account of behavioral evolution over the yearly years of life. After a review of "grand" developmental theory and the major themes of child change (from images to representation; from dependence to independence; from instinctual to social beings), this course will survey the child's passage from infancy through the early school years. While the emphasis will be on the nature of the child--what she/he sees, feels, thinks, fantasizes, wants and loves--these realities will be understood in terms of developmental theory. At each stage, the course will review the development of cognition, personal identity, socialization, and morality in pluralistic contexts.

515. Field Seminar (Elementary & Secondary Education). Staff.

This seminar is designed to integrate student teaching fieldwork and university course work through reading, discussion, and reflection. Central to this course will be teacher research, an inquiry stance toward learning how to teach, and a social justice approach to education. Throughout the semester, we will be examining a range of issues through theoretical and practice-oriented lenses that will deepen our understanding of teaching and learning.

518. Authority, Freedom, and Disciplinary Policies. (B) Goodman.

The course concentrates on the nature and justification of discipline. In particular, we focus on how discipline becomes the expression of twin but conflicting premises of education: that children should be encouraged to develop their critical intellectual capacities and autonomous decision-making -- read freedom; that these ends cannot be achieved without the

direction and control of teachers -- read authority.

Students read classical works on freedom and authority (John Stuart Mill, Isaiah Berlin, Emile Durkheim, John Dewey, C.S.Lewis) as well as more contemporary ones. In class we look at video clips of different practices and discuss readings. Every student selects one type of disciplinary approach to study in detail, inclusive of on-site visits. The seminar paper covers the source and nature of the school's commitments, its theory of authority and freedom (implicit and explicit), illustrations of how commitments are expressed (including discipline practices), and the student's reflections.

520. Literacy in Elementary/Middle Schools. Schultz.

In this course, the interconnections of language, literacy and culture are explored in order to build a knowledge base and understanding of how children learn to read and write. Emphasis will be on how to teach and develop literacy curriculum in the elementary grades, and on how close listening and observation of children in their classroom contexts, combined with a critical reading of research and theory, can inform teaching practices. A central tenet of this course is that the best teachers of reading and writing are themselves active and engaged readers and writers. An important goal is to combine an inquiry approach to teaching and learning with an inquiry approach to thinking about how we teach.

521. Science in Elementary/Middle Schools. Bergey.

The goal of this course is to prepare teachers to facilitate science learning in the elementary and middle school. Special emphasis is placed on striving for a balance between curricular goals; individual needs and interests; and the nature of science.

523. Social Studies in the Elementary and Middle Schools. Staff.

This course will focus on teaching and learning in the content area of social studies. Curricular and pedagogical theories and practices will be examined for their educational significance, meaningful integration of content areas, respect for students' cultures (past and present), and contribution to social justice issues.

SM 524. Philosophical Aspects of Education Policy. (C) Ben-Porath.

This course, which is unofficially titled 'Justice goes to School' explores the philosophical or normative foundations of

educational policy decisions. School choice, standards-based reform, civic education, children's and parents' rights, school finance reform - how do different arguments for these policies view the role of schools in society? What are their concept of the person, and their view of the educated person? We will consider arguments for and against a variety of contemporary educational policies. Students are encouraged, if they are interested, to bring to class educational policy decision that perplex or intrigue them.

529. Organizational Learning and Education. (B) Supovitz.

This course is an exploration of the theory, research, and practice of how individuals learn within organizational contexts and how organizations themselves may learn, as well as the social, cultural, and organizational forces that influence this process.

531. Mathematics in the Elementary and Middle Schools. Remillard.

Learning to teach mathematics in ways that foster mathematical understanding and enjoyment for every student requires that teachers draw on different kinds of knowledge, skills, and dispositions. In addition to developing an understanding of central mathematical ideas, learning to teach math involves learning about learners, the understandings and conceptions they hold, and the processes through which they learn. It also involves developing skill in constructing tasks that engage students in mathematical exploration, creating an environment that facilitates reasoning, and finding ways to analyze and learn from one's own teaching.

532. School Law. (L) staff.

This course examines federal and state court cases, statues and regulations which affect students, teachers, administrators and other community members involved with schools. There is a special emphasis on developing conflict resolution techniques, including negotiation and mediation, so that legally based disputes are resolved by building relationships rather than adversarial methods, such as litigation.

L/R 536. The Teaching & Learning of Chemistry. (E) Staff. Prerequisite(s): Undergrad major or minor in Science.

This course will examine issues associated with curriculum planning and enactment. In addition, the teachers will learn how to undertake action research in their own classrooms so that they can learn from their professional practices. The key topics to be

addressed in this introductory course will include: national, state and local standards; curricular resources; models for learning chemistry; social constructivism and communities of practice; safety, equipment and storage; equity and culturally relevant pedagogy; building canonical ideas from laboratories and demonstrations; understanding chemistry at macroscopic, microscopic and symbolic levels; social interaction; analogues, models and concepts maps; uses of interactive technologies to promote understanding of chemistry; connecting chemistry to science and technology; alternative assessment of learning; involving the home and community in the learning of chemistry; international perspectives on the teaching and learning of chemistry in urban areas.

544. School and Society in America. (C) Staff.

This course reviews the major empirical and theoretical research from the social history, and social theory on the development, organization and governance of American education, and the relationship between schooling and the principal institutions and social structures of American society.

547. (AFRC547, ANTH547, FOLK527, URBS547) Anthropology and Education. (C) Staff.

An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.

550. Educational and Social Entrepreneurship. Staff.

This course provides an understanding of the nature of entrepreneurship related to public/private/for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations.

552. Intellectual Foundations. Staff.

This course examines the fundamental normative assumptions and commitments that have shaped American education since the 18th century. While the content will change from semester to semester, in general, the course will focus on two issues: the nature of a democratic society and its institutional arrangements; and the demands of justice.

554. Teaching & Learning in Urban Contexts. Staff.

This course marks the beginnings of your year-long inquiry as preservice teachers, and hopefully your career-long inquiry as committed educational professionals, into the challenges of and opportunities for teaching and learning in urban settings. The theories and practices explored in this course are offered as foundations for instructional approaches that are intentional, reflective, inquiry-based, and learner-centered. As we investigate multiple dimensions of teaching and learning (curriculum design, learning theories, instructional techniques, etc.), you will have opportunities to both clarify and challenge the assumptions, beliefs, hopes, fears, and goals that you bring to your preparation to teach in urban secondary schools.

555. Advanced Field Seminar (Elementary & Secondary Education).

This course focuses on praxis--the mutually supporting roles of theory and practice that bring rigor and relevance to the work of educational professionals. This course is designed to give student teachers opportunities to develop pedagogical orientations, to learn from "problems of practice" at placement sites, and to enrich student teachers' theoretical and practical knowledge. All of these experiences will inform the master's portfolio and will prepare teachers to continue to see themselves and their practice as continuing sites for research.

564. Moral Values and the Schools. (B) Goodman.

This course explores whether, and if so, how "values" should be taught in the schools by addressing the following questions: What is unique about the domain of values? Is there, or should there be, a corpus of shared personal and social values? What are the sources of values and how are they transmitted across generations? If schools teach values, how do they address the problems associated with specific codes? The problems of the absence of codes? The tensions between fidelity to personal beliefs and to values of compromise, tolerance and cultural pluralism?

576. (PHIL249, GSOC249) The Social & Political Philosophy of Education. (A) Detlefsen, K.

Is the purpose of education to allow individuals to better themselves by pursuing personal tastes and interests, or should education be primarily aimed at

creating good citizens or good members of a group? Is there a way of reconciling these two aims? Assuming that adult relations with children are inherently paternalistic, is it possible for children to be educated for future autonomy to pursue major life goals free from such paternalistic control; and if so, how? How much, if any control over education can be allocated to the state, even when this conflicts with the educational goals parents have for their children? Such questions are especially relevant in multicultural or pluralistic societies in which some groups within a liberal state are non-liberal. Should a liberal democratic state intervene in education to ensure the development of children's personal autonomy, or must toleration of non-liberal groups prevail even at the expense of children's autonomy?

590. (GSOC590) Gender & Education (ELD). (B) Kuriloff.

This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.

602. (ANTH606) Youth Cultural Formations. (B) Staff.

This course explores anthropological perspectives on peer-based youth cultures. It explores how educational institutions, media (fashion, music, magazines), and states shape youth cultures in cross-cultural contexts through social processes such as capitalism, nationalism, and increasing globalization. The course emphasizes ethnographies and histories which explore the relationship of these wider social processes to the lived realities of young people, situated in class, gender, national and race-specific contexts.

SM 603. Methods of Teaching Talmud & Rabbinics. (L) Staff.

This course is designed to provide opportunities to develop critical thinking skills and pedagogic approaches to teaching Jewish texts, and in particular to teaching Talmud, through investigation of practice, inquiry and research in the teaching and learning of Talmud.

SM 605. Sustainability in Schools. (B) Ball. Prerequisite(s): Admission to School Leadership Program.

This course looks at the issue of sustainability across three dimensions: financial, environmental and programmatic. 1. The issue of financial sustainability focuses on the need of schools to carefully manage funding sources and expenditures and raise supplemental dollars to underwrite aspects of the mission of the school. Included in this focus will be the topics of marketing, communications, and development. 2. Environmental sustainability is increasingly emphasized by schools as an educational goal and an operating principal. This topic will include incorporating sustainability practices into school wide decision making to build campuses which are increasingly green and less wasteful. 3. The third and final focus of the course, programmatic sustainability, brings together many of the themes of the entire leadership program as it reviews the ways schools must think about new models of educating children including the implications of such issues as emerging research on learning, environmental sustainability, globalization, and equity and access. The course utilizes the conceptual framework for sustainability developed by the National Association of Independent Schools.

609. Counseling for Educators. (B) Kuriloff.

The purpose of this course is to help professional educators develop an understanding of the major issues involved in trying to help others. To accomplish this, it examines various counseling theories and explores their relevance for working with students and parents as they confront normal issues of learning and development. Through observation, skill building, and practice in natural settings, students will have the opportunity to develop their own grounded theory of helping.

611. Education, Development, and Globalization. (B) Staff.

This course will explore contemporary issues in international education. The emphasis will be on exploring an emergent body of literature on contemporary processes of globalization in the field of education. The course has a double goal: 1) to provide theoretical frameworks and historical perspectives in order to develop an adequate understanding of 'globalization', and 2) to explore the relevance and impact of globalization as a framework for understanding educational

processes in comparative and international contexts.

616. Master's Foundations of Teaching and Learning. (A) Staff.

Prerequisite(s): Permission of instructor.

The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international.

618. Leadership in Educational Institutions. (B) Lytle, J.

In this course class members will simultaneously engage in an academic study of educational leadership focusing on Pre-K-12 schools and school districts, and in a continuing leadership development laboratory experience designed to increase one's personal efficacy as leader. A basic assumption for the course is that leadership is a central component of schooling; teaching is considered as foremost a leadership activity, whether with five year olds or high school seniors, and successful schools and districts are assumed to have capable leaders. The course will give particular attention to the recent shift in role expectations for school leaders - from competent manager to accountable instructional leader - and what this shift means in relation to the day-to-day work of educational leaders.

619. (URBS619) Critical Perspectives in Contemporary Urban Education. Schultz.

The focus of this course is the conditions for teaching and learning in urban public schools, current theories of pedagogy in urban education, and perspectives on urban reform efforts.

620. Research on Teacher Education & Learning to Teach. (A) Schultz.

In this course, we examine issues of research and practice in teacher education from several different subject locations including the perspectives of teachers, researchers, teacher educators, and policymakers.

621. Proseminar in Professional Education. (C) Staff.

An integrative seminar that will provide an opportunity to reflect, orally and in writing, on the issues of quality, stability, and change in teaching, curriculum and school organization, toward the aim of fundamental reform in educational practice.

627. Teaching in the Middle and Secondary Schools. Staff.

Content-specific sections of this course will examine approaches in planning, implementing and evaluating methods for teaching science, mathematics and social studies in middle and secondary schools. This course is grounded in the belief that teaching and learning require educators to question our teaching purposes and practices through a process of self-reflection, self-evaluation, collegial and student-teacher interactions as well as personal and professional growth. Using a variety of learning theories and perspectives as the foundation for interactive teaching strategies, the stories, questions and contradictions of each content area are examined from a variety of perspectives.

630. Curriculum Theory & Foundations. Staff.

Helps students understand the ways that theory can inform and guide practice. It explores how curriculum theories can lead to the development of richer, more effective curricular models. Placing emerging, as well as extant theories within their social/political contexts, this course enables educators to apply multiple lenses for examining, choosing and constructing theories and frameworks suitable to their fields.

SM 632. Leadership in Independent, Public and Parochial Schools. Ball, E.

Prerequisite(s): Admission to School Leadership Program.

The challenges of leadership in both independent and parochial schools are important to consider as part of the broader discussion of educational leadership in elementary and secondary education. The course will identify themes that have implications for both private and public schools and will seek to establish interconnections. This course will examine the history and social foundations of independent and parochial education, and will consider issues of leadership that involve working with the various constituencies within schools including board members, faculty, parents, alumni and students. This course will conclude with a consideration of the relationship of

independent and parochial schools to public purpose and the overall goals of education within the contemporary society.

L/R 636. Advanced Topics in the Teaching & Learning of Chemistry. (E) Staff.

Prerequisite(s): Major or minor in Science.

The course will feature research undertaken in the classes of participants. The initial course was designed to examine what was happening and to build understandings about why the teaching and learning of chemistry occurred as it did within the participants' schools, clusters and school districts. This course is intended to develop a cadre of teacher leaders in chemistry. The curriculum will address the particular needs of the students and the standards of the school district. The goal is to implement a curriculum that will lead to substantial improvement in the achievement of high school students. The students will identify from the literature the best practices that are likely to be salient in the conditions in which they teach and adopt these in an effort to attain rigorous standards. They will explore their roles within the school and district as agents of systemic reform and will endeavor to build a local community to sustain high quality teaching and learning.

638. The American High School. (B) Puckett.

This course looks at the role, organization and development of the American high school throughout the twentieth century. The contemporary structure and function of the high school is a continuous focus for analysis and comparison.

639. Design of Learning Environments. Staff.

This course examines different theoretical frames and strategies related to the study and design of learning environments in school, community and online contexts. Physical, social and cognitive aspects of learning situations are considered as students critique and later design a learning environment for a real-world context.

643. Instructional Leadership to Promote Learning. (A) Brody, Dawson, Mata and Ball. Prerequisite(s): Admission to School Leadership Program.

This first course of the School Leadership Program for Aspiring Principals and the Independent School Leadership Program begins with an exploration of values and beliefs underlying leadership in schools. Students examine the knowledge, dispositions and performances needed for the continuous improvement of K-12

instruction indicated in the Pennsylvania Standards for School Leaders, ISLLC, as well as those identified in *Balanced Leadership* (2003), and other research. Participants study current research in learning, teaching and assessment by focusing on student achievement in K-12 literacy and social studies. Students explore how effective school leaders connect theory to practice and provide leadership for school reform in these two curricular areas. Coursework includes interactive case studies, team projects, panel presentations and guest speakers.

644. Technology-Mediated Teaching & Learning. (B) Staff.

Students in this course will critically evaluate the role of technology in education. Through a range of inquiry projects, research analysis and hands-on experience, students will examine the potential risks and benefits, as well as strategies of use for technology-mediated teaching and learning. Technologies considered will include: skill-building software, microworld software, visualization and modeling tools, internet search tools, media production tools, and collaboration technologies.

645. Methods of Discourse Analysis. (L) Wortham.

This course introduces several methodological approaches that have been developed to do discourse analysis. The course intends primarily to provide students with various methodological tools for studying naturally-occurring speech. Assignments include both reading and weekly data analysis exercises.

647. Linguistic Anthropology of Education. (B) Wortham.

This course introduces theoretical insights and empirical approaches from contemporary linguistic anthropology and explores how these could be used to study topics of concern to educational researchers -- focusing on how discourse partly constitutes culture, identity and learning.

SM 648. Practitioner Research. Ball, Dawson and Mata. Prerequisite(s): Admission to School Leadership Program.

Developing school leaders who are skilled practitioner researchers is an important goal of the School Leadership Program. The steps of problem identification, determining vital questions, identifying data to be collected, developing a plan for collecting, analyzing the data, and developing a plan for implementation, and evaluation based on the findings form the focus of this course. There are two aspects of this

course. The first is an introduction to practitioner research through a lecture series conducted by Sharon Ravitch. The second is the development and carrying out of a practitioner research project. The project will be completed to be submitted during the summer session. Supervision and evaluation of that project will be conducted by Warren Mata, Priscilla Dawson, and Earl Ball.

SM 649. Applying Teaming and Moral Decision Making Concepts in Schools.

Ball and Mata. Prerequisite(s): Admission to School Leadership Program.

This course leads students to utilize two conceptual models to examine organizational practice in schools: working in groups and applying moral/ethical decision-making in schools. These two unifying concepts are studied in modules led by GSE faculty. In addition, ethical decision-making in schools will be expanded by two sessions led by independent school leaders. Students are provided opportunities to make connections between these two areas, which impact school leadership, as they engage in whole-day Focused Observations in five schools in a variety of K-12 settings. To provide reflection on these topics, a monthly discussion integrating ideas into practice is held.

651. Field Internship Seminar: Inquiring into Principal Leadership for School Improvement. (A)

Ball, Brody, Dawson, and Mata. Prerequisite(s): Admission to School Leadership Program.

This second course of the School Leadership Program supports each student in becoming a reflective practitioner. Students develop the inquiry, communication, and interpersonal skills needed to build a purposeful, collaborative learning community for adults and students. Through inquiry projects students explore how effective school leaders can use data to inform their decisions. Focused observations provide opportunities to visit area schools committed to school reform. Students engage in a 360 hour on-site internship across the year with a current principal/school leader observing, participating, collaborating and leading school based activities during the school year. A university-assigned mentor supervises the work of each student.

652. Developing Instructional Leadership in Practice. (B)

Ball, Brody, Dawson, and Mata. Prerequisite(s): Admission to School Leadership Program.

This course emphasizes how to connect organizational systems with the school's

instructional mission. Students investigate how distributive leadership is a key factor in consistent implementation of the instructional mission. The significance of building a community of learners for both adults and children is explored. Participants study the importance of aligning, managing, and evaluating curriculum, instruction, assessment, professional development and instructional support systems with a focus on K-12 student achievement in mathematics and science. Inquiry into effective uses of technology, begun in the fall term, is intensified in this term. Coursework includes interactive case studies, debates, inquiry projects and field investigations.

653. Field Internship Seminar: Inquiring into Organizational and Legal Dimensions to Principal Leadership. (B)

Ball, Brody, Dawson, and Mata. Prerequisite(s): Admission to School Leadership Program.

The course emphasizes that effective schools commit to the ongoing learning of children and adults. Systems thinking provides the lens through which students inquire into how the principal's organizational leadership can support continuous school improvement through attention to school climate, program coherence, and effectiveness of instruction. Students deepen their understanding of law and policy, affecting three significant areas: special education, teacher evaluation, and students' rights. Three focused observations provide opportunities to visit schools engaged in continuous school improvement in mathematics, science and the arts. A University-assigned mentor supervises the work of each student, as the 360 hour on-site internship continues.

654. Aligning Fiscal, Human and Community Resources in Support of the School's Instructional Mission. (L)

Brody, Dawson and Mata. Prerequisite(s): Admission to School Leadership Program.

This course focuses on the effective utilization of resources to serve the mission of improving student achievement. Connecting the daily decision-making of the school, including managing budgets and funding streams, utilization of space, use of time, and scheduling and assignments of staff and students in accordance with the school's mission are emphasized. Students pursue an understanding of how a school leader has a public role as an advocate, catalyst, and broker, in spanning the boundaries between schools and the communities they serve. Students develop inquiry projects to further their knowledge

of community resources, budgeting, legal principles, school law and school district policies. The Cumulative Portfolio is presented at the end of this course.

655. Fieldwork & Mentoring. (C)

Ravitch.

This course is for practitioners and researchers engaging in and thinking about mentoring, supervision, and fieldwork in teacher education and counseling as well as in social work and other applied development fields.

657. Advanced Methods in Middle & Secondary Education.

Staff. Formal teaching and learning are on-going processes that require an examination of our practice and purpose through self-reflection, self-evaluation, collegial and student/teacher interaction, and personal and professional growth. This course is the second half of a content-specific secondary methods sequence that is geared toward teaching middle and high school English, math, science and social studies in an urban setting. Special focus will be on content, pedagogical strategies as well as specific skills and Pennsylvania and national standards. We will work together as teacher-researchers to combine theory with practice to increase our understanding and utilization of an inquiry based, multiple perspective, constructivist approach to teaching.

SM 659. Critical Issues in Education.

Brody. Prerequisite(s): Admission to School Leadership Program.

This course is designed to engage students in analysis of three important issues of relevance to contemporary school leadership: technology, globalization and equity and access. As they explore these topics students will be asked to define ways in which their leadership will provide guidance to their schools. The course consists of three modules taught by GSE faculty members. The instruction will be supplemented by current practitioners who will share how their schools address these issues in practice.

660. Qualitative Approaches to Program Evaluation in Urban Schools.

Simon & Christman. Prerequisite(s): An ethnography course is recommended.

Students will gain a historical overview of qualitative evaluation and an understanding of the variety of approaches within the field. Students will learn about evaluation techniques, research design and data analysis through a real case example in K-12 public education. Students will prepare

journal entries and propose a research design for evaluating a program using qualitative approaches.

664. Doctoral Foundations of Teaching and Learning. (A)

665. Research on Teaching. (A)
Remillard.

This course is designed to explore the research literature on classroom teaching processes as well as the contrasting conceptual and methodological approaches upon which this literature is based. The course is intended to help students become aware of the major substantive areas in the field, develop a critical perspective on contrasting paradigms, and raise questions about the implication of research on teaching for curriculum, instruction, evaluation, and teacher education.

668. Master's Paper Seminar (FPE). (B) Staff.

The master's paper is a 30-40 page research paper that is required for completion of the M.S.Ed. degree in the Foundations & Practices of Education division. The paper will be either an original research project or an original synthesis of previous research and argumentation. This course is set up to provide workshops and regular consultation and feedback on three drafts of the paper.

672. (FOLK672, URBS672) Introduction to Ethnographic and Qualitative Research in Education. (C) Hall & Wortham.

A course in ethnographic participant observational research; its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course.

SM 678. Critical Issues in Religious Education in a Diverse Society. (A) Staff.

This course will explore the role of the teacher-leader as religious educator, in both public and private educational settings in the U.S. Participants will be asked to examine beliefs and understandings of religions and of the historical roles that religion and religious beliefs play and have played in the diverse public square in U.S. Since this is also a course that has a significant clinical component, a flexible cu amount is requested; students will earn

between 1 and 3 cu's depending upon the amount of fieldwork activities undertaken.

700. (ANTH707) Craft of Ethnography. (B) Hall. Prerequisite(s): Must have completed EDUC 672 or equivalent introductory qualitative methods course.

This course is designed to follow after Introduction to Qualitative and Ethnographic Methods (EDUC 672). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project.

702. Conceptual Models in Educational Administration. (C) Lytle (J).

The goal for the course is to help each of us develop new ways of understanding the schools and organizations in which we work. Using Gareth Morgan's *Images of Organizations* as our primary text, and a set of related readings, we will use metaphor as an interpretive tool. Morgan's premise, and the premise of this course, is that one's ability to act in or on organizations is facilitated by one's capacity to "read" them from different perspectives. Since most of us have spent most of our lives going to and working in schools, the challenge of "seeing" schools from new perspectives is therefore held to be particularly difficult.

706. (ANTH704, COML706, FOLK706, URBS706) Culture/Power/Identities. (A) Hall. Prerequisite(s): EDUC 547.

This course will introduce students to a conceptual language and the theoretical tools to analyze the complex dynamics of racial, ethnic, gender, sexual, and class differences. The students will critically examine the interrelationships between culture, power, and identities through the recent contributions in cultural studies, critical pedagogy and post-structuralist theory and will explore the usefulness of these ideas for improving their own work as researchers and as practitioners.

806. Narrating the Self. (B) Wortham.

This seminar explores, in some linguistic detail, how narrators can partly construct their selves while telling autobiographical stories. The seminar addresses three questions: What is the structure of narrative discourse? How might we construct ourselves by telling stories about

ourselves? If narrative is central to self-constructions, what is "the self"?

PME-Policy, Measurement, and Evaluation Division

519. The Evolution of Assessment: Classroom and Policy Uses. Supovitz.

This course explores the evolution and diverse uses of assessment in four major areas: the historical roots of testing industry; the rising interest and exploration of alternative forms of assessment; how teachers employ a variety of assessments in their classrooms; and how policymakers use assessment for decision-making and accountability purposes.

548. American Education Reform: History, Policy and Practice. (B) Puckett.

An examination of major themes in twentieth century American education. Topics include school reform, ethnicity and race, higher education, work and education, the war on poverty, teaching and teachers, the development of secondary education, and the curriculum.

559. Sociology of Education. (B) Staff.

This course provides an overview of key theoretical perspectives and topics in the sociology of education, including expansion of formal educational systems; the extent to which educational systems contribute to or inhibit social mobility; inequality of educational inputs and outcomes by race, social class, and gender; and the social organization of educational institutions, including sources of authority, community, and alienation. The course includes both K-12 and higher education topics.

586. Sociology of Families and Schools. Staff.

This course draws on literature in the sociology of the family and sociology of education to consider the relationships between the sometimes-partnering, sometimes-competing institutions of family and school.

591. Program Evaluation and Policy Analysis. Maynard.

The class is designed to provide students with the knowledge and tools to define relevant research questions to guide program design and operations, as well as to guide policy development; to map questions to appropriate methods of research; to judge the quality of research evidence; and to design strong analysis and

evaluation strategies for various purposes. The primary, but not exclusive, focus of the course is on education policy concerns.

601. Economic Aspects of Educational Policy. (A) Maynard.

This course has two main goals. One is to teach students to apply economic principals to analyze a wide range of educational policy issues. The other is to provide students with a foundation in contemporary education policy issues. The course is designed to address analytic issues relevant to a wide range of educational professionals, including managers, policy makers, and evaluators. The course will be divided into five units: (1) principles of economic analysis in the context of education policy; (2) the economics of early care and education; (3) cost-effectiveness analysis; (4) human capital investment; and (5) education finance.

604. (AFRC604) Foundations of Urban Education. (A) Slaughter-Defoe.

Introduction to urban education through reading of selected "classic" and foundational texts. Designed for prospective researchers, scholars, and school personnel.

614. Child Development and Social Policy. Slaughter-Defoe. Prerequisite(s): Introduction to Child or Adolescent Development preferred.

This course focuses on the interrelationships among social scientists, their research, and public policy of children and families. A major objective is to offer students sufficient historical research-related background for understanding the framing of policy issues relevant to the education and development of children impacted by poverty and ethnic minority social status. The class format is a graduate seminar with emphasis on the exchange of views between students.

624. Schools as Organizations. (C) Ingersoll, R.

This course examines schools as workplaces, teachers as employees and teaching as a job. It is concerned with the character of the teaching occupation and the organization of elementary and secondary schooling. It draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations, occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy. This is a doctoral-level course.

625. Data Processing and Analysis.

(A) Turner. Prerequisite(s): Educ 667 or equivalent.

Use of Statistical Software including Statistical Analysis (SAS) to effectively build a wide variety of datasets for use to address a range of empirical research questions. Evaluate conventional methods for dealing with missing data and apply contemporary methods using SAS.

628. Education Finance Policy. (A) Goertz.

This course examines the legal, political and economic issues surrounding how public schools are funded, including equity and the interaction of finance and school reform.

667. Introductory Statistics for Educational Research. (C) Boe.

Scales of measurement; indices of central tendency and variability; product-movement correlation; introduction to the chi-squared; Z, T, and F distributions.

680. Evaluation of Policies, Programs and Projects. (A) Boruch.

Prerequisite(s): EDUC 667 or equivalent.

Basic evaluation policy and methods for determining nature and severity of problems, implementation of programs relative effects and cost-effectiveness of interventions to reduce problems, design and conduct of evaluation studies in education, social services, crime and delinquency, in the U.S. and other countries.

683. (STAT502) Survey Methods & Design. (B) Boruch. Prerequisite(s): Educ 667 or equivalent. Undergraduate statistics or tests and measurement.

This course covers the methods and design of field surveys in the U.S. and other countries in education, the social sciences, criminal justice research, and other areas. It covers methods of eliciting information through household, mail, telephone surveys, methods of assuring privacy, enhancing cooperation rates and related matters. Finally, the fundamentals of statistical sampling and sample design are handled. Much of the course is based on contemporary surveys sponsored by the National Center for Education Statistics and other federal, state and local agencies.

684. Measurement & Assessment. (A) McDermott.

Analysis of primary assessment concepts including basic theoretical principles, types and purposes of assessment devices, levels of measurement, standardization and

norming, and methods to support reliability and validity; special focus on appropriate test interpretation, fairness, measurement of change, and incremental validity; application of standards for test development, usage, and critique in education, health care, public policy, and scientific inquiry.

712. Policy Making in Education: Theory and Practice. (C) Staff.

This course examines how K-12 education policy is designed and implemented in the United States. It uses a systems analysis as the framework for looking at who makes what kinds of demands on the education policy system, how these demands are placed on the policy agenda, the decision making process, and resulting education policies and policy outcomes. The course pays particular attention to the roles of federal, state and local governments in education policy, and the impact of our intergovernmental system on the design and implementation of policy. Students will also examine major education policies and debate key education policy issues that arise at each level of government.

767. Regression and Analysis of Variance. (C) Boruch. Prerequisite(s): EDUC 667 or equivalent.

This course covers design of controlled randomized experiments, analysis of survey data and controlled field experiments, including statistical models, regression, hypothesis testing, relevant data analysis and reporting.

768. Measurement Theory and Test Construction. (M) McDermott.

Prerequisite(s): EDUC 684 or equivalent.

Design of ability, achievement, and performance measures such as those applied for high-stakes decision making in large-scale assessment and for diagnosis and classification of individuals; advanced true-score and item response theory; item formatting, analysis, selection, calibration, linking, and scaling; analysis of reliability for continuous, ordinal, nominal, and composite scales; analysis of differential item functioning; unidimensionality, and local independence; model contrasting, test equating, and scaling for longitudinal assessment; standards and cut-point setting.

771. Factor Analysis and Scale Development. (A) McDermott.

Prerequisite(s): EDUC 684 or equivalent.

Advanced measurement theory; exploratory and confirmatory item factoring and clustering for self-report, observational, rating, performance, and personality instruments; factoring of dichotomous and

ordered categorical data, full-information factoring; scaling procedures, hierarchical structure, full-information bifactor structure, invariance, generality, reliability, validity, interpretation, and scientific reporting.

805. Current ISS Tchr/Tch Pol. (B)**829. Policy Research Seminar. (C)**

Boe. Prerequisite(s): EDUC 667 or equivalent.

A systematic introduction to general issues and methods of research relevant to contemporary education policy or to social policy. Reading, discussion, and analysis of research on a variety of policy topics that illustrate various research methods, issues, and problems.

838. Applied Research & Reporting.

(C) Maynard. Prerequisite(s): Competence in basic statistics and computer literacy.

Hands-on experience conducting applied research. Students will be guided through a research project of relevance to education or social policy chosen by the student, with assistance from the instructor. The research entails analysis of one or more public or quasi-public use data sets, such as the National Longitudinal Survey of Youth; the National Longitudinal Survey of Youth Child Supplement; The Teenage Parent Demonstration Data Base; the National Profile of Child Care Settings Data Base; or the National Post Secondary Student Aid Survey. The students will prepare journal-length papers based on their research and respond to the reviews of classmates and the instructor.

871. (CRIM871) Randomized Trials and Experiments. (A)

Boruch.

This course will cover three alternatives to conventional modeling in the social sciences: (1) design and execution of field trials in education and other social sectors including criminology, (2) quasi-experiments especially contemporary research comparing results of randomized and non-randomized trials, and (3) analysis for descriptive and exploratory purposes. The course themes include causal inference, vulnerability of models applied to observational data, recent developments computer-intensive inductive approaches to data, and related matters.

Although some methodological background papers will be discussed, the seminar is case study oriented with readings from contemporary research on the topics from peer reviewed journals and well-vetted reports issued by governmental and nongovernment agencies. Cases will include work supported by IES on effects

of Odyssey Math, for example, and work in the crime and justice arena. We will study the work of scholars affiliated with Penn who are actively involved in randomized and non-randomized trials, for instance, and the work of colleagues at other universities (Berkeley, Northwestern, Wisconsin, Princeton, others) and colleagues in non-profit and for profit research organizations such as Analytica, AIR, Mathematica and others that contribute to learning in this arena.

Colleagues who have contributed notably to contemporary trials and related topics, and whose work we study, will be invited to present guest lectures. Seminar participants are required to read relevant papers prior to the presentations. The course is open to graduate students who have had basic statistics courses at the graduate level, and have a strong interest in evidence based policy and in studies that transcend discipline boundaries.

880. Complex, Multilevel, and Longitudinal Research Models. (A)

McDermott. EDUC 767 or equivalent.

Design construction, sampling, internal and external validity principles; univariate and multivariate statistical treatment of experimental and quasi-experimental data; computer processing, interpretation, and reporting for simple and complex factorial, repeated measures, time series, growth trajectory, unbalanced, and multiple consistent and inconsistent covariates designs; error covariance structure modeling, hierarchical linear (and nonlinear) modeling, and multilevel individual growth-curve modeling.

881. Applied Multivariate Statistics.

(B) McDermott. Prerequisite(s): EDUC 767 or equivalent and permission of instructor.

Multivariate strategies for hypothesis testing, prediction, and classification including multiple regression, multivariate multiple regression, canonical regression, multiple logistic regression, multiple discriminant functions, factor analysis of scaled variables, hierarchical cluster analysis, and multivariate classification analysis; computer processing, interpretation, and reporting.

SM 900. Research Seminar in Education. (C)

Staff.

Issues in research design, development of a literature review, and dissertation proposal.

LLE-Language and Literacy in Education**507. (EDUC465) Sociology of Language. (L)**

Pomerantz.

This course examines the intersection of language and society, asking how language ideologies might be implicated in the construction and maintenance of such constructs as national identity, 'standard' language variety, race, and ethnicity. Through theoretical readings and case studies, participants will question how particular linguistic situations give rise to certain institutional practices and probe how these practices might foster inequitable relations of power.

516. Teaching Writing to English as a Second Language Students. (A)

Howard.

An introduction to current research and theories on second language writing and composition pedagogy. Students analyze writing samples by second language learners, observe and critique writing lessons, design and present mini-lessons, compose a teaching philosophy, and design curricula for second language writing courses.

517. Classroom Discourse and Interaction. (B)

Rymes.

An examination of research on language use in the classroom and its impact on the academic, linguistic, and social development of students. This course is designed for teachers interested in studying their own classrooms, as well as teacher trainers and education researchers.

525. Fieldwork in Language in Education. (C)

Staff. TESOL fieldwork may be also offered in the summer.

Supervised fieldwork for individuals preparing to work in TESOL or with reading specialist/teachers in school settings.

527. Approaches to Teaching English and Other Modern Languages. (A)

Pica.

This course provides an introduction to theory and practice in language teaching and opportunities for guided research. Readings cover major issues in the field from the disciplinary perspectives of linguistics, psychology, anthropology, and education. Class meetings provide opportunities for students to raise questions, react to readings, offer formal presentations, create materials, and gain practice in teaching.

533. Forming and Reforming the Elementary Reading/Writing/Literacy Curriculum. (A) Staff.

Students explore the theory and practice of constructivist approaches to teaching reading/writing/talking across the curriculum. They read widely and discuss issues that are informed by theory and research in many fields of inquiry including children's and adolescent literature, educational linguistics, cognitive psychology, curriculum, and anthropology and assessment. They write and share integrative journals; develop, teach and reflect upon holistic lessons; and complete an individual or group project of their own choosing.

535. Literature for Children and Adolescents. (C) Sipe.

Theoretical and practical aspects of the study of literature for children and adolescents. Students develop both wide familiarity with children's/adolescents' books and understanding of how literature can be used in elementary/middle/secondary school curricula. Students complete individualized course projects that focus on literature in specific classroom, research, home, or professional contexts.

537. Educational Linguistics. (A) Butler, Y. and Howard, K.

For students with little or no linguistics background. An introduction to the basic levels of language (phonetics and phonology, morphology and semantics, syntax, pragmatics) with special emphasis on the relevance of linguistic concepts to education.

539. (THAR439) Teaching Performance Art for Cross-Cultural Education. (B) Furman.

This class examines issues related to cultural communities and the arts, specifically performance, writing and storytelling as an educational tool for generating cross cultural and intercultural understanding, dialogue and exchange. Assignments will focus on, cross-cultural research and dialogue, and skill building in teaching, writing and performance. Students will also develop an understanding of how performance can be used to enhance classroom activities in elementary/middle/secondary/post secondary classroom curricula.

546. Sociolinguistics in Education. (B) Hornberger/Howard.

The educational consequences of linguistic and cultural diversity. A broad overview of sociolinguistics, introducing both early

foundational work and current issues in the field. Topics include language contact and language prestige, multilingualism and language ecology, regional and stylistic variation, verbal repertoire and communicative competence, language and social identity, codeswitching and diglossia, language socialization and language ideology, as they relate to educational policy and practice in the United States and around the world.

549. (FOLK552) Writing and Culture. (L) Camitta.

In this class we will look at writing as an expressive and instrumental part of culture and society. We see writing as cultural artifact and cultural behavior, shaped by and shaping the context of its use. This approach to writing is the foundation for the new literacy studies, which understands writing as several variable, multiple, diverse and changing practices contingent upon specific cultural and social contexts. Readings for the course are drawn primarily from the New Literacy Studies, but also from philosophy, anthropology, folklore, literary theory, literature and linguistics. We will consider ways these approaches to understanding and describing writing can inform classroom practice.

SM 563. Internship & Seminar: TESOL. (C) Advisor.

A weekly seminar will cover topics in the field of TESOL which relate to the students' final reflective or action research papers. All students in the MEd/TESOL program must submit a proposal for the internship in the semester before they take EDUC 563. They must complete a thirty-hour fieldwork project during the semester in which they are enrolled in 563.

All students in the MEd/TESOL program must complete a supervised 30 hour service project. The supervised project is individually designed and is subject to the advisor's approval.

566. (URBS566) Cross Cultural Awareness. (C) Staff.

This course provides students experiential and cognitive awareness through affective exercises and readings. It explores issues of living in a diverse society through a variety of educational strategies including workshops, small group process, guest lectures, etc. It represents the seminar portion of P.A.C.E. (Programs for Awareness in Cultural Education): An "Educating the Peer Educator" Program.

SM 567. Internship: ICC. (C) Advisor. Prerequisite(s): Eight or more courses toward M.S.Ed. degree in Intercultural Communication. Corequisite(s): Permission required.

All students in the MS/ICC program must complete a supervised internship. The supervised internship is individually designed and is subject to the advisor's approval.

571. History of the English Language. (M) Staff.

A survey of the major historical trends in the development of the English language.

572. (GSOC572) Language and Gender. (B) Pomerantz.

This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, paying close attention to the role of power in the examination of this relationship.

578. Teaching Reading and Study in Colleges and Universities. (L) Cohen.

Explores the content, materials, methods, and organization of programs to teach reading, writing, and study skills to students in a variety of college and university settings. Prerequisite for staff membership in Penn's Department of Academic Support Programs: Tutoring and Learning Resources.

579. Intercultural Communication and Miscommunication. (L) Smith.

An introduction to basic issues in intercultural communication, reviewing various perspectives on the nature of culture, communication, "miscommunication" and inter-cultural relations. The course criticizes two commonly held assumptions: 1) that "cultures" are unitary and unchanging and 2) that inter-cultural contact and communication is inherently more troublesome than intra-cultural communication. The course considers ways in which intercultural communication has important consequences in education, medicine, social services, business settings, and international contact situations.

583. Content-Based Instruction. (B) Staff.

Students investigate, observe, practice, and critically evaluate the integration of content and language--content-based instruction--for a variety of purposes and in a variety of

settings, including: thematic, content-oriented ESL/EFL teaching; co-teaching and peer coaching by ESL and content teacher teams; and sheltered content instruction, using the SIOP (Sheltered Instruction Observation Protocol). Standards, typical tasks, and special language requirements in the content areas of science, mathematics, social studies, and language arts are reviewed. In addition, theory and research on "academic language" are applied in the analysis of content-area tasks and standards and in the design of content-oriented language lessons, materials, tasks, and assessments.

622. Responding to Literature: An Interdisciplinary Perspective. (A) Sipe.

This course deals with the ways in which readers respond to and transact with literary texts, and aims at helping students understand the nature of the variety of ways in which literature interfaces with our lives. Three different types of discourse are read: literary criticism; empirical research on response to literature; and literary texts themselves. Various types of literary criticism are considered, including (but certainly not limited to) what is commonly called "reader response criticism"; text-based criticism; and criticism that contextualizes literature socially and historically. The empirical research on response deals with ways in which readers of various ages interact with literature, mostly in school settings; some attention is given to instructional design and critique of methodology. The literary texts range from picturebooks to literature for young adults.

626. The Discourses of Teaching Reading. (B) Staff.

This course draws on varying pedagogical and personal perspectives to explore conceptions of reading comprehension and how it can be taught to children and adolescents. Focus will be given to how certain ways of structuring dialogue about a text profoundly change how readers think about and do reading.

629. Teaching English/Language and Literacy in Middle and Secondary Schools. (A) Lytle.

This course is a collaborative inquiry into the dynamic concept of adolescent literacy and its potential as an organizing construct for improving teaching and learning. It provides opportunities to investigate a variety of resources including our own histories as well as a range of print, digital and visual texts and to conduct fieldwork in various middle and secondary school classrooms where youth are being

positioned (and positioning themselves) as literacy learners and literacy is being defined, performed, practiced, interrogated, and interpreted, within and beyond the school curricula. By engaging with youth, in various texts and contexts and for a range of purposes, participants will try to make sense of how adolescents negotiate their worlds, in school and out. The approach to literacy is interdisciplinary, drawing from the domains of literature, composition, linguistics, curriculum theory, anthropology and psychology and from theory, research and practice of both university-based and school-based teachers, writers and researchers. The intent is to pose and refine questions about what it means to teach literacy in ways that take seriously what youth bring to school as their own knowledge and passions, cultural and linguistic resources.

633. Selected Topics in Reading/Writing. (M) Staff.

Examines a topic of current interest to theory, research, and practice in writing.

634. Language Assessment. (B) Butler.

This course concerns a basic theoretical and practical foundation in language assessment, with particular emphasis on assessments used in second and foreign language education. This course covers various kinds of testing (both formal testing and performance-based assessment), theoretical and technical issues associated with test development administration, the social influences of testing, and future directions in language assessment.

Student work will culminate with a final paper.

635. Assessing Language and Learning Differences. (B) Gadsden. Prerequisite(s): EDUC 533. Auditors not permitted.

This course exposes students to a wide variety of assessments used to look closely at growth in reading/writing/literacy. Students critique both formal and informal approaches to assessment as well as complete structured observations of learners within diverse instructional contents. Emphases include contextual and affective components of reading/language difficulties, innovative assessment procedures, observational strategies and collaborative inquiry.

637. Advanced Methods in TESOL. (L) Micheau.

Students employ action research techniques and case studies to investigate challenges in teaching second languages in a variety of

classroom settings. Fieldwork in teaching ESL forms the basis for a course paper. Based on student self-evaluation, class members also review and deepen knowledge of such L2 teaching issues as form focus within task-based and content-based instruction, learning strategies in second language teaching, and materials adaptation. Readings on research and theory in second language pedagogy lead to a critical consideration of the construct of "methodology" within the diverse sociocultural contexts in which they plan to teach.

641. Language and the Professions. (L) Pica.

This course provides a critical perspective on language use in medical, legal, business, and educational settings. Topics include: challenge and control in the courtroom; doctor-patient interaction in diagnosis and treatment; roles and relationships in school contexts. Attention is given to analyzing communication breakdowns in the workplace and identifying practical solutions to them. Issues involving language and power are explored in relation to differential treatment based on sex, age, social class, ethnicity and educational background. Students are given opportunities to write a research proposal and engage in guided research.

650. Cross-Cultural Variation in Language Use. (B) Staff. Prerequisite(s): EDUC 546, Sociolinguistics of Education, or equivalent.

An examination of the literature concerning rules and patterns of language behavior across various cultures. Attention will be paid to both research methodology and to the educational implications of findings to the field of Teaching English to Students of Other Languages and to language pedagogy in general.

661. (LALS661) Language Diversity and Education. (C) Hornberger.

Exploration of issues affecting educational policy and classroom practice in multilingual, multicultural settings, with an emphasis on ethnographic research. Selected U.S. and international cases illustrate concerns relating to learners' bilingual/bicultural/biliterate development in formal educational settings. Topics include policy contexts, program structures, teaching and learning in the multilingual classroom, discourses and identities in multilingual education policy and practice, and the role of teachers, researchers, and communities in implementing change in schools.

662. Picturebooks and the Practice of Literacy. (B) Sipe.

This course examines the formal properties of picturebooks and their use in enabling literacy development. The course uses aesthetic theory, theories of text-picture relationships, theories of literacy and theories of literary understanding, and also exposes students to empirical research on children's responses to this literary form.

666. Young Adult Fiction: Issues and Practices. (B) Sipe.

This course acquaints students with the ever-expanding body of literature written for young adults, considering the theoretical and pedagogical issues it raises. Readings include many young adult novels; empirical research on adolescent response to literature; and literary theory.

669. Seminar in Practitioner Inquiry. (B) Lytle, S. and Hartley, M.

This course is designed as a collaborative investigation into practitioner inquiry and the work of inquiry communities in K-16 and graduate/professional school settings, professional networks and community-based organizations. The focus is on conceptual and methodological frameworks and methods of practitioner inquiry and the contexts, purposes and practices of differently situated inquiry communities. Participants will explore a range of practitioner inquiry traditions and texts that go by terms such as action, collaborative, critical, community-based, participatory, autobiographical, emancipatory, narrative and pedagogical. They will also conduct an inquiry based on their particular interests and contexts. The course will emphasize practitioner inquiry that intentionally engages issues of equity, access and culture in educational settings.

670. Second Language Acquisition. (A) Pica.

This course provides an introduction to theory and research on second language acquisition. Linguistic, cognitive, social and pedagogical perspectives are considered through readings, lectures, activities, and assignments. Students gain an understanding of research design, methodology, and documentation through guided analysis of published studies and an opportunity to design and implement research projects.

671. Adult Literacy. (A) Finn-Miller.

Teaching reading/writing/literacy to adults for whom English is a first or second language. Topics include contrasting conceptions of literacy and learning; participatory literacy programs; instruction

and curriculum for adults with diverse cultural and linguistic backgrounds and nationalities; alternative/performance-based assessment; and practitioner research in adult literacy education.

SM 673. Selected Topics in Educational Linguistics. (C) Staff.

The focus for each semester will vary to reflect those issues most relevant to current concerns in educational linguistics.

674. ESL/FL Curriculum and Materials Development. (L) Micheau.

Students employ national, state and local standards in the design of a semester-long ESL/EFL course to fit their current or future teaching context. Participants apply theoretical and research knowledge from course readings and class discussion to: analyze the sociocultural context in which their course will be offered and draw implications for course design; conduct needs assessments; set objectives and experiment with performance assessments to measure students' progress towards those objectives; create the course content outline; select appropriate textbooks and adapt supplementary materials; and design original tasks and activities. Some language teaching experience and previous language teaching methodology course desirable; EDUC 527 & EDUC 537 provide essential background for this advanced course.

675. Structure of English. (B) Adams.

The goal of this course is to increase students' explicit knowledge of selected isolatable parts of the English language and to identify their pedagogical applications with respect to the needs of learners of English as a foreign/second language. This goal is realized through an investigation of: 1) frequently occurring linguistic forms and the rules and principles that govern the way that these forms can be combined and ordered; 2) the meanings that can attach to these forms; and 3) the social functions associated with these forms.

676. Discursive Approaches in Intercultural Communication. (A) Rymes.

This course offers a discourse-based approach to the study of intercultural communication, from the micro-level of interpersonal interaction to the macro-level of institutional practice. Through a series of readings and field-based projects, participants will engage with different forms of discourse analysis and consider their application to a variety of multilingual/multicultural settings.

679. Language for Specific Purposes. (A) Pomerantz.

This course offers international students a hands-on introduction to the practices which constitute academic language use in the fields of TESOL/ICC. Participants will focus on developing skills and strategies that will strengthen their existing expertise in the following areas: locating, reading and critiquing academic articles; producing graduate-level written work across a variety of genres; and participating in oral activities.

691. First Language Acquisition. (M) Staff.

This course is an introduction to first language acquisition covering the milestones in normal language development from infancy into early childhood. Topics include prelinguistic communication, early phonological development, word learning, emergence of syntax, early literacy and development of discourse skills. The major theoretical issues in the field will be used to frame the discussions of language development such as the contribution of biological and environmental factors in language acquisition, the mental structure of linguistic knowledge, individual differences and cross-cultural differences in language acquisition.

723. Multicultural Issues in Education. (A) Gadsden.

This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences.

724. Literacy: Social and Historical Perspectives. (M) Street.

A review of the cross-cultural and historical literature on writing and reading with emphasis on the identification of norms and practices which affect the teaching and learning of reading and literacy today. Special attention to the social functions of literacy in work, home, and school settings

and to myths regarding the consequences of literacy for cognition, socio-economic mobility, and predictability, and the predictability of citizen behaviors.

735. Tutorial Work in**Reading/Writing/Literacy. (B) Gross.**

Prerequisite(s): Permission of instructor.

Students further their understanding of dynamic relationships among affect, curriculum and instructional context by teaching individuals and small groups throughout the semester. Students' teaching is supervised in weekly seminars and reflected upon through writing, descriptive reviews, and focused discussions. Emphases include child study, observation, and affective and social dimensions of language.

737. Research in Teaching Writing. (M) Lytle.

This course is designed as a collaborative inquiry into the literatures on writing and the teaching of writing from a variety of disciplinary and interdisciplinary perspectives. Its purpose is to provide a context in which participants construct interpretive frameworks for critical readings of these literatures from their multiple perspectives as students, teachers, writers and researchers. It addresses different discourse communities and explores how teaching and researching writing can be acts for social justice and change. Readings include conceptual and empirical research, essays, poetry and fiction. The course draws on participants' experiences as writers and readers, in and out of school, and pays particular attention to the generation and uses of autobiographical texts and narrative inquiry in teaching and research.

834. Theories of Reading. (M) Lytle.

This course is designed as a collaborative inquiry toward constructing and elaborating theories of practice as teachers and/or researchers of reading. Using a seminar or working group format, participants explore the relationships among theory, reading, practice, pedagogy and research. The course's conceptualization is informed primarily by (1) frameworks from critical, feminist and culturally-centered literatures which foreground issues of equity, representation, and ethics; and (2) current conversations in the field of literacy where the definitions, purposes, and practices of reading have been made problematic. It also invites participants to engage the notion that knowledge for teaching and research comes from inquiry into the questions, issues, and contradictions that arise from everyday life. The course

provides historical lenses for comparative analyses of theoretical frameworks and research paradigms as well as opportunities to investigate participants' individual histories as well as teaching and research interests.

SM 835. Seminar in Reading and Writing. (M) Staff.

Participants in the course examine landmark studies in the field of reading, writing, and literacy; explore different approaches to composing critical reviews of the literature for academic journals, dissertations and other research projects; and select, search, and review the theoretical and empirical literature related to a topic of their own interest in the domains of reading, writing and literacy.

836. Issues in Instructional Leadership in Reading and Writing. (B) Staff.

Participants will consider current critical issues in Reading, Writing, and Literacy, such as: improving accountability and assessment; approaches to professional development and curriculum development; and the use of scientifically "valid" research to advance literacy learning.

SM 845. Seminar in Microethnography. (B) Howard.

This course provides an introduction to theory and method in the unified analysis of verbal and nonverbal behavior as it is culturally patterned, socially organized, and socially organizing in face-to-face interaction, in an approach that integrates participant observation with the detailed analysis of audiovisual records. Students read relevant literature in linguistic anthropology, interactional sociolinguistics, conversation analysis, and embodiment in social interaction. Class requirements include in-class reading presentations, a small microethnographic research project, and several short data analysis reports drawing on differing levels of analysis and differing theoretical orientations. Students review and apply methods of audiovisual data collection, transcription, processing, archiving, and presentation.

911. Issues in Second Language Acquisition. (L) Pica. Prerequisite(s): EDUC 670.

This course is designed for students to be able to analyze, synthesize and discuss second language acquisition theory and research on the basis of intensive reading of work that reflects perennial and current issues in the field. Comparisons and connections are drawn from theoretical and empirical literature on second language

acquisition processes, constraints, and interventions. Relevant research methods are also addressed. Topics, issues, and readings are updated each time the course is offered.

917. Research Seminar: Language and Power. (M) Street.

The investigation of language use in everyday interaction as a reflection of the structure and value system of society.

SM 920. Research Seminar in Reading and Writing. (B) Staff.

For doctoral candidates and others engaged in research and advanced professional study in the field of literacy.

SM 927. (LALS927) Research Seminar: Language Policy and Education. (B) Hornberger.

Prerequisite(s): Permission of instructor.

Seminar participants are introduced to concepts, theories, and methods in the field of language planning and policy, which they then apply in developing their own library-based research on specific language planning cases from around the world. Cases may include: official language decisions, instructional medium choices, literacy initiatives, gender-neutral language reforms, foreign/heritage/second language pedagogy and policy, indigenous language revitalization efforts, or other language-related decisions and policies at international, national or local levels.

APHD-Applied Psychology and Human Development Division**514. Education in Developing Countries. (C) Wagner. Prerequisite(s): Prior graduate work in related areas recommended.**

This seminar will cover a number of topics in human development (e.g., fertility, health, sex-roles) and education (e.g., pre-school interventions, literacy campaigns, non-formal education, technology innovations) in developing countries that have received attention from researchers and policy planners, and in the work of international agencies such as UNICEF, UNESCO, World Bank and USAID.

522. (AFRC522) Psychology of the African-American. (B) Stevenson.

Using an Afro-centric philosophical understanding of the world, this course will focus on psychological issues related to African Americans, including the history of African American psychology, its application across the life span, and contemporary community issues.

SM 534. School-Community Mental Health Partnerships: Theory & Practice. (B) Watts.

This course gives students an orientation to the field of school-community partnerships for the delivery of mental health prevention and intervention services to children. Using a unique theoretical framework for developing cross-institutional collaborations that is grounded in social-cognitive development risk resilience research, we examine several programs translating that theory into practices for parents, children, and school staff. Strategies for conducting needs assessments and gaining entry into schools as an outside community member, and developing documentation and evaluation measures are presented. At all times, the course will hold the multiple perspectives of the individual child and the systems around the child, with the goal of having students understand individual interventions in the context of institutional relationships and systemic change.

553. Foundations of Special Education. (L) Staff.

An introduction to Special Education including the history, the legal regulation of Special Education, and an examination of critical issues.

557. Interactional Processes with Adolescents. (C) Nakkula.

Focuses on theories of adolescent development and the nature of transactions among adolescents, peers, teachers, specialists, and significant others. Also covers methods of intervening to promote psychological growth.

558. Interactional Processes with Young Adults. (M) Burnes.

This course is designed as a collaborative inquiry toward constructing and elaborating upon theories of young adult development and interactions with young adults as counselors, teachers, family members, and higher education administrators. Using a seminar or working group format, participants explore the relationships among developmental theory, sociocultural contexts of young adults, practice (e.g., interventions, relationships), and research. Using literature from empirical and popular, mainstream sources, participants will engage in learning of how young adults navigate the transition from adolescence to adulthood. Specific topics to be addressed include, "the quarterlife crisis," financial needs of young adults, relationships, family, and career exploration and crystallization.

560. Human Development. (C) Staff.

Provides an introduction to physical, social, cognitive, emotional and linguistic development from infancy to adulthood. Major theories related to human development will be discussed along with methods of intervention for individuals in various life stages.

561. Adolescent Development. (A) Dupree.

An interdisciplinary view will be used to frame biological, psychological, and social development among adolescents. Special emphasis will be placed on how contextual factors influence developmental outcomes. Theories of adolescent development and methods of intervention will also be discussed.

562. Personality & Social Development. (B) Frye.

The effects of social processes on human development in the interlocking contexts of parents, family, peers, school, communities and culture are considered during the major developmental periods of infancy, childhood, adolescence and adulthood. The course examines what is unique about social developments, how social relationships can be defined, and what are the social precursors and consequences of specific developmental changes.

565. Contemporary Issues in Community Psychology. (M) Staff.

Prerequisite(s): EDUC 686.

This course focuses on three related issues. The history and evolution of community psychology within the political, economic and scientific contexts is the first issue. Second, students examine the discipline's distinction between community mental health and community psychology. Third, students examine the implications of disease prevention and health promotion for the discipline's current status and future development.

568. Cognitive Development. (A) Frye.

Prerequisite(s): EDUC 560 or equivalent.

This course examines the cognitive development of the child from infancy to adolescence with an emphasis on cultural context. Topics include: origins of thinking, Piaget, Vygotsky, intelligence, development of learning and memory, language development, and moral development.

574. (AFRC574) Race/Ethnicity in Human Development. (M) Staff.

This interdisciplinary course will employ a critical perspective on minority youth

development, analyze the existing literature, and propose alternative explanations for observed phenomena. It will consider pertinent issues and theories of middle childhood, adolescent and young adult development.

SM 575. (AFRC575) Selected Topics in the Psychology of Education. (M) Staff.

Consideration of research, practice, and theory on selected introductory topics in learning development, measurement, evaluation, or psychological services.

580. Interactional Processes with Children. (B) Fantuzzo.

An introduction to the rudiments of designing effective school-based strategies for preschool and elementary school children. Students are introduced to a child-centered approach to the development of school-based intervention that includes three core elements: (a) a theory of the whole child, (b) methods of obtaining high quality information, and (c) the utilization of quality information to establish and strengthen beneficial connections that promote learning and development.

581. (GSOC581) Advanced Psychology of Women. (L) Stanley.

Prerequisite(s): Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor.

The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women's mental health, issues of diversity, sexuality and relationships for women will be addressed

582. Social Psychology. (M) Staff.

A course covering basic issues in social theory and applications to social problems.

585. Psychology of Group and Family Systems Intervention. (L) Lappin.

This course focuses on the basics of systems intervention with a specific focus on families and groups. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to advanced group therapy strategies with children, youth, and adults, with family interventions across various mental health

diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes.

Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some advanced and demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. This course will satisfy the Group work II requirement of the MPE program in Professional Counseling and Psychology. The course also fits within the APHD theme of Applied Psychology: Intervention and Certification.

610. Cultural Perspectives on Human Development. (B) Wagner.

This course focuses on comparing/contrasting psychological and anthropological accounts of child and human development which utilize cross-cultural and cross-national research. Topics may cover such issues as childhood socialization, literacy and culture, Vygotsky and Piaget in cultural context.

612. (GSOC612) Interactinoal Processes with LGBT Individuals. (M) Burnes. Prerequisite(s): EDUC 663 Socio-Cultural Foundations/Applied Psychology.

In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding the interactional processes facing LGBT individuals.

613. Group Counseling. (B) Staff. Prerequisite(s): EDUC 686 Psychological Interventions.

Through didactic and experimental learning activities, students will explore various theoretical approaches to groups, learn and apply principles of group dynamics, develop familiarity with ethical, legal and professional standards relative to group leadership, learn member roles and functions in group, examine group counseling in a multicultural context, and relate these issues to the leader's interpersonal style and behavior. Applications to specific developmental stages and contexts will be explored.

615. Parenting and Children's Educational Development. (A) Slaughter-Defoe.

Theory and research on family influences on achievement development, models of the home-learning environment; parental involvement in schools.

617. Psychology of School-to-Career Transitions. (B) Staff. Prerequisite(s): EDUC 685 Career Development.

This psychology course will focus on the developmental and emotional changes that coincide with adolescents' conceptions of work and work-related activities. As a course in career psychology, students will be exposed to readings from multiple disciplinary perspectives and will be expected to learn how to work with youth as they struggle through decisions on career and moving beyond the safety of childhood and adolescence. In addition, students will learn about the family-youth and school-student relational dynamics and that occur simultaneous to the adolescent's development of a work ethic.

623. Childhood Interventions. (B) Slaughter-Defoe. Prerequisite(s): EDUC 560 Human Development.

The course addresses the following key questions: what is early childhood intervention? What was it, and what has it become? What are its historical roots in child development research, early childhood education, special education, and maternal and child health? However, while addressing earlier conceptual issues, this survey course also links these conceptualizations to contemporary developments in the field that are of special significance to educators.

658. Developmental Psychopathology. (M) Staff.

Investigation of etiology, course, prevalence, and implications of functional and physiologic psychopathology, and learning and behavior disorders, among children and adolescents. Special focus on developmental theory and major clinical and empirical classification systems.

663. Sociocultural Foundations of Applied Psychology. (B) Staff. Prerequisite(s): EDUC 686 Psychological Interventions.

Cultural and individual differences and diversity are essential to the work of school and clinical counselors and psychologists. This course provides a contextual knowledge base and applied understanding for working with socioculturally diverse and underserved populations. Both

intervention and prevention strategies will be addressed.

677. Information and Communications Technologies for Education and Development in Global Perspective. (B) Wagner.

The importance of the relationship between education, technology, and social-economic development is increasing in the U.S. and around the world. What are new information and communications technologies (ICTs), how are they being deployed, and for what reasons? Are new ICTs a means for delivering skill-based or distance education information, and in what ways are they becoming a part of societies today? What constitute, then, ICTs for Development (ICT4D), and what role do they play in societies that are 'industrialized' and 'developing'.

681. History & Systems of Psychology. (M) Staff.

Focuses on the emergence of psychology as a discipline of study by examining the major currents of thought and the dynamic 'time and place' events that have shaped psychology. A major objective of this course is to provide students with a "big-picture" view of psychology (particularly applied psychology) that will sensitize them to major issues and questions that challenge current beliefs and assumptions in psychology today.

685. Career Development. (L) Staff. Prerequisite(s): Permission of instructor.

Career development is studied as an aspect of general development theories of educational and vocational choice and adjustment; psychological aspects of occupations.

686. Psychological Intervention. (A) Staff. Prerequisite(s): Admission to the master's program in Psychological Services.

Review of major counseling theories; introduction to counseling skills, their application in interpersonal communication and the process of change.

687. Ethics & Professional Principles in Counseling Psychology. (A) Thomas.

This course will focus on the professional role of the counselor across settings and across time with discussion of the history of the field and future trends. In this process we will explore professional identity, role, and relationships. Ethics and their application across situations and professional settings are foundational to our roles as counselors and will be addressed in

depth throughout the course. The goal is to develop an awareness of the boundaries, ethics, and practice roles of the counselor across professional settings.

688. Psychological Practicum. (E) Burnes. Prerequisite(s): EDUC 687 AND admission to master's program in Psychological Services. May be repeated for credit.

Seminar and lab to accompany supervised practicum or apprenticeship experiences in schools, colleges, or community agencies. Placement to be arranged by instructor.

697. Post-Master's Internship in School Counseling. (A) Staff. Prerequisite(s): Successful completion of the master's program in Psychological Services.

Seminar to accompany post-master's internship. Meets requirements for certification in school counseling and special education. Instructor must approve placement.

717. Internship in Professional Counseling & Psychology I. (A) Stanley. Prerequisite(s): Formal admission into Professional Counseling and Psychology M.Phil.Program. Must be taken concurrently with Professional Counseling and Psychology Lab.

The course will consist of experiential and small group learning, with a focus on practicing and refining skills related to advanced work in psychological services, including the application of various techniques of counseling, ethical considerations, and critiques of live and simulated counseling sessions through role-playing, audio and visual taping.

718. Internship in Professional Counseling & Psychology II. (B) Stanley. Prerequisite(s): Formal admission into Professional Counseling and Psychology M.Phil.Program.

Lab seminar group of approximately 7-8 master's students with a seminar group Lab leader is the second component of the PCAP Internship course. Lab will provide students with exposure to others' experiences in different types of internships, working with a variety of different client populations.

A primary goal of this course is to help each student refine his/her evolving knowledge of self as a provider of psychological services to others. Students will also evaluate contexts of practice and the professional skills, ethics and practices inherent in effective provision of counseling and psychological services. This course consists of two components:

CLASS MEETINGS, during which the full group will meet to address issues related to work in various internships, as well as discuss the development of advanced counseling skills and issues; and, LAB SEMINAR GROUP, which consists of 7-8 master's students with a seminar group lab leader.

725. Advanced Professional Development in Counseling Psychology. (B) Thomas. Prerequisite(s): EDUC 687, formal admission into Professional Counseling and Psychology M.Phil.Program.

This course will address issues regarding the expectations, role, and identity of the professional counselor. Topics include the relationships of counselors to other professionals, ethics and legal issues, consultation, credentials, and current trends in the field. The goal is to develop an advanced understanding of the role of counselors across settings and to begin to prepare for work in the field.

747. Biological Psychology. (M) Staff. The biological bases of behavior, including genetics, physiology, endocrinology and bioethology.

764. Cognitive Processes. (A) Frye. Prerequisite(s): EDUC 568 or equivalent. Basic concepts, theory, and research in cognitive science, problem-solving, psycholinguistics, memory, perception and social cognition. Special topics may include reading, bilingualism, computer modeling, and cognitive theory applied to education and non-education settings.

765. Developmental Deviations. (M) Staff. Prerequisite(s): EDUC 560 or equivalent. Theoretical orientations toward handicapping conditions in children; controversial issues in description and categorization; the relationship of disabilities to developmental (cognitive, social, emotional) processes.

766. Advanced Professional Psychology Intervention. (A) Nakkula. Prerequisite(s): EDUC 686 Psychological Interventions. This course will focus on advanced issues in the clinical practice of professional psychology with children, adolescents and adults where students will practice clinical skills in role-played therapeutic situations. Students will be using this class as preparation for the formal clinical examination required by all Master of Philosophy in Education students prior to

graduation from the Professional Psychology and Counseling program.

782. Advanced Psychological Assessment I. (A) Staff. Prerequisite(s): Admission to Psychological Services or Professional Counseling and Psychology M.Phil.Program.

A critical analysis of tests and clinical methods in assessment as related to theories of intelligence, and includes: 1) factors influencing assessments; 2) assessment theory; 3) assessment practices; 4) interpretations of assessments.

783. Advanced Psychological Assessment II. (B) Thomas. Prerequisite(s): Admission to Psychological Services or Professional Counseling and Psychology M.Phil.Program.

Review and administration of assessment instruments in the areas of adaptive behavior, perceptual abilities, neurological functioning, diagnostic and achievement measures, vocational interests, and objective personality measures. Integration and interpretation of results and intervention.

784. Psychological Consultation. (M) Stevenson. Prerequisite(s): Admission to Psychological Services or Professional Counseling and Psychology M.Phil.Program.

Study of theories of consultation and their applications at the professional level. Methods and procedures in applied behavior analysis are introduced as skills for successful consultation.

785. Selected Topics in Professional Psychology. (M) Staff. Prerequisite(s): Admission to Psychological Services or Professional Counseling and Psychology M.Phil.Program.

Consideration of research and theory, on selected advanced topics.

SM 860. Proseminar in Interdisciplinary Studies in Human Development (ISHD). (A) Spencer. Corequisite(s): May be repeated for credit.

Review of literature on representative developmental topics. The course also incorporates guest lecturers to present research and theorizing covering different aspects of human learning and development. The experience represents an important opportunity for ongoing professional development. May be repeated for credit. Nonetheless, doctoral students are expected to attend the presentations throughout their doctoral training career even if not enrolled in the course for credit.

960. Advanced Research in Human Learning and Development. (M) Staff.

Selected topics from human learning, human development, cognitive processes, social psychology, and personality.

SM 980. Research Seminar in Psychology in Education. (L) Turner.

This course is designed to position students to acquire a more sophisticated understanding of research methods in order to conduct and critically evaluate empirical research in applied and clinical settings.

EDCE-Continuing Education*PLN-Penn Literacy Program***646. PIIC: Crit Rding/Writ.****HED-Higher Education Divison****504. Contemporary Issues in Higher Education. (B) Staff.**

An introduction to the central issues and management problems in contemporary American higher education.

SM 505. Globalization & The University. (B) Ruby.

This course examines some of the interactions between globalization and the university including increased student mobility and the rise of higher education as a trade good.

512. University-Community Partnerships. (B) Grossman.

Ranging from civic engagement to economic development, institutions of higher education in the United States have long been involved in a variety of relationships with their local communities; in recent years, there has been increasing attention paid to the opportunities and challenges implicit in those relationships. In this course, students will study and discuss the history, rationales, and manifestations of the partnerships that have developed. Through readings, faculty-and student-led discussions, guest lecturers, and policy-oriented projects, students will develop better understandings of the many topics surrounding university-community partnership activities. Among other themes we will consider institutional roles and relationships, service learning, community perspectives, policy issues, and evaluation.

541. Access & Choice in American Higher Education. (M) Perna.

College enrollment is a complex process that is shaped by the economic, social and policy context, higher education institutions, K-12 schools, families, and students. The course will examine the theoretical perspectives that are used to understand college access and choice processes. The implications of various policies and practices for college access and choice will also be explored, with particular attention to the effects of these policies for underrepresented groups. As an Academically Based Community Service (ABCS) course, this course is also designed to generate tangible recommendations that program administrators and institutional leaders may be used to improve college access and choice.

542. Management in Higher Education. (B) Staff.

This course is an introduction to management issues and practices in higher education. It is designed to provide students with working understanding of both the role of administration within the culture of higher education and the contemporary issues related to management of fiscal, personnel, facilities, and information resources. The interface between administrative and academic decision-making will be explored within these contexts and case studies will be used to highlight the concepts.

SM 543. (AFRC545) Historically Black Colleges and Universities: Current and Historical Issues. (A) Gasman.

Students taking this course will learn about the historical context of HBCUs in educating African Americans, and how their role has changed since the mid-1800's. Specific contemporary challenges and successes related to HBCUs will be covered and relate to control, and enrollment, accreditation, funding, degree completion, and outreach/retention programming. Students will become familiar with MBCUs in their own right, as well as in comparison to other postsecondary institutions.

556. Higher Education Finance. (B) Perna.

Designed for non-financial managers, this course provides students with an introduction to basic concepts related to the finance of higher education. It examines the forces that influence the financing of higher education at both the state and federal levels. It addresses both the macro-economic and micro-economic issues

related to higher education finance. In addition, students will be introduced to issues related to institutional finance.

569. Administration of Student Life. (A) Staff.

This course covers a variety of issues in the management of student services on campus. After examining the historical context of student affairs and the theoretical frameworks of student development, students explore ways to most effectively administer the numerous activities that comprise student affairs programs.

SM 573. Reforming Higher Education: What Can We Learn from Other Countries?. (A) Ruby.

This course examines the proposition that policy makers, educational leaders and practitioners can learn from what has worked and failed in higher education policy and practice in other nations.

589. Budgeting and Resource Allocation. (M) Staff.

A computer-based introduction to the management of resources (money, people, space, etc.) at colleges and universities. Does not require accounting or financial skills. Emphasis is on learning how to use the budget to link educational purposes and financial outcomes.

592. Professional Development in Higher Education. (B) Boverini.

To prepare for a career in higher education, students are engaged in a 20-hour a week assistantship in the field. This course complements and enhances the graduate assistantship. Emphasizing practical application of theory and skill development, the course does the following: provides students with tools to embark on a successful job search; offers networking opportunities with administrators in higher education; and introduces students to relevant and timely literature and resources in higher education professional development.

594. Diversity in Higher Education. (B) Gasman.

This course explores issues of diversity as they pertain to higher education, including race, ethnicity, gender, class, religion, sexual orientation, ideology, etc. Rather than focusing on specific populations of people, the course will tackle issues of diversity within the context of concrete higher education functions and problems.

606. Development in Higher Education. (B) Gasman.

This course is designed for current aspiring professions in the area of fundraising and institutional advancement. Topics will include: a history and overview of philanthropy, motivations for giving, ethics, fundraising courses, leadership, annual giving, public relations, and volunteer management. Special emphasis will be placed on fundraising in communities of color.

607. Faculty and Academic Governance. (A) Hartley.

Introduction to selected issues pertaining to faculty and academic governance, such as: Who governs American colleges and universities? What are the respective roles of the president, the board of trustees, the faculty, and students in institutional decision making? The course will also explore key contemporary governance issues. The course will emphasize student involvement in learning through small group work, case study discussions, and role playing.

608. Organizational Change in Higher Education. (M) Hartley.

Colleges and universities today face tremendous challenges--calls by external constituents for greater accountability, scarcity of resources, greater competition, and pedagogical innovations. The need for change, and for change agents, in our institutions of higher learning has never been greater. This course examines organizational change both theoretically and practically in college and university settings. Students will be introduced to many of the most current, influential, and promising theories about how change occurs at the departmental, institutional and system level. Using case studies, we will apply these frameworks in order to diagnose and develop constructive strategies for meaningful change. Students will be evaluated on the basis of class participation and three written assignments.

631. Research Topics. (B) Gasman. Prerequisite(s): Permission needed from department.

This seminar offers students a collaborative setting in which to explore a topical area, craft a literature review and refine their research questions. The course will be of special interest to doctoral candidates who are drawn to an area of inquiry (e.g., presidential leadership, diversity, access,

organizational change) but now wish to elicit from it a discrete "researchable" question.

640. History of American Higher Education. (A) Gasman.

This interactive course focuses on the history of American higher education from the Colonial period through the current day. An emphasis is placed on underrepresented institutions and individuals. Students will have the opportunity to make connections between historical trends and movements and current issues.

642. Higher Education in American Society. (A) Perna.

Our nation's colleges and universities are affected by social, economic, and political forces. Societal forces impose a variety of demand on higher education institutions, as reflected by calls for greater accountability, improved access, cost containment, and incorporation of new technologies. This course considers the ways that colleges and universities are challenged to respond to demands for increased accountability while maintaining their commitment to such core values as academic freedom and institutional autonomy.

656. College and University Teaching. (C) Gasman. Prerequisite(s): Doctoral students only.

In this class, students will learn how to systematically plan for a university course, develop a teaching philosophy, create a course syllabus relevant to their discipline and expertise, design and implement evaluation instruments to assess teaching and learning, experiment with a range of technologies to advance teaching, and participate in a teaching simulation. This course also incorporates issues of diversity with regard to teaching.

704. Economics of Higher Education. (M) Staff.

Covers selected topics in the economics of higher education, including investment and consumption theories, cost functions, university investment practices and principles, and academic labor markets.

705. Proseminar in Research & Analysis. (A) Hartley. Prerequisite(s): Permission needed from department.

This course is designed to provide students with the skills, information, and resources that are necessary to develop a research proposal. This course will also examine

strategies for completing proposals and dissertations. A variety of research designs and approaches to educational research will be explored. Through this course, students will become both informed consumers of research and effective designers of research.

714. Law and Higher Education. (B) Roth.

An examination of the most important state and federal laws governing U.S. colleges and universities, with an emphasis on current legal problems.

715. Case Studies in Higher Education Administration. (M) Staff.

This course is designed to enhance understanding of decision making in higher education administration. Based on case studies, students will analyze, propose policies, generate action plans and implementation procedures, and assess the potential consequences of their administrative decisions.

716. Public Policy Issues in Higher Education. (M) Staff.

A study of the most influential federal and state policies, legislation and practices affecting colleges and universities.

751. Quantitative Research Methods in Education. (M) Staff.

An introduction to the interpretation and use of data about higher education through the use of computer-assisted methods of statistical analysis. Emphasis is on the implications for educational policy and research design.

803. Readings in Higher Education. (A) Staff. Prerequisite(s): Permission needed from department.

Students will study four distinct approaches to the study of higher education in the United States. Students will examine a major work that exemplifies this approach and study how this work has been critiqued by other scholars within that approach. In addition, students will be introduced to the strengths and weaknesses of the logic by which each approach's interpretations are verified. Finally, students will apply the critical skills developed to a series of additional studies of higher education in the United States.

ELECTRICAL & SYSTEMS ENGINEERING (EG) {ESE}

099. Undergraduate Research and/or Independent Study. (C) A maximum of 2 c.u. of ESE 099 may be applied toward the B.A.S. or B.S.E. degree requirements.

An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term.

L/L 112. Introduction to Electrical and Systems Engineering - Devices. (C)

Provides an integrated introduction to selected fundamental concepts and principles in electrical and systems engineering: circuits, electronics, communication, control and computing. The course involves using the Boe-Bot, a robot based on the Parallax Javelin Stamp microprocessor. Team projects will include programming of the robot, controlling devices, and sensors, and navigation. Critical thinking, creativity, writing, communication, and leadership skills are also emphasized through a series of unique labs. Note: There are no prerequisites required for this course.

116. Introduction to C Programming. (C) Prerequisite(s): Knowledge of algorithms and at least one high-level programming language, e.g. ESE 112 or CIS 110.

Intended as a connector course between computer programming on high-level platforms and more detailed knowledge of processor organization, reading sensors, affecting actuators and understanding how software is used to control hardware. The final programming project is to control Lego robots.

Details of the C language are covered, including functions, loops, types, characters, operators, strings, arrays, storage classes, structs, and pointers. Differences between C and Java are reviewed.

170. Principles of Digital Design. (B)

The course provides an introduction to modern logic design and digital systems. It starts with an overview of the major building blocks of a computer. It covers combinational logic including logic gates, minimization techniques, arithmetic circuits and modern logic devices such as programmable logic arrays. The next part deals with sequential circuits: flip-flops, regist memories, and state machines. Case studies of real-world applications are used to illustrate the design of sequential circuits. The use of hardware description language will be introduced. There is a companion lab-based course, ESE 171, required for EE/CMPE majors.

171. Principles of Digital Design Lab. (B)

This is the companion course for ESE 170 and provides hands-on experience in modern digital circuit design. It makes use of state-of-the-art computer-aided design software including schematic capture, behavioral description, logic-simulation, minimization and implementation tools. The students will get familiar with programmable logic devices and hardware description languages (VHDL). The lab experiments make use of Xilinx FPGAs which allow rapid implementation and testing of the designed circuits. The course consists of weekly 3-hour laboratory sessions.

204. Systems Methodology. (B)

Prerequisite(s): MATH 114.

This course introduces the integrative methodology that engineers use to solve complex problems. We emphasize the process of problem conception, engineering design, project implementation, and long-term operation as essential components of what we as engineers do. The course also focuses on the life-cycle approach to large-scale complex systems design, and will incorporate case studies, group projects, and technical communications.

205. Electrical Circuits and Systems I Lab. (A)

This course is the companion lab for ESE 215 and provides an introduction to electrical measurements and measuring equipment; electrical sources; resistive, RL, RC, & RLC circuits and their non-electrical analogs; op-amp circuits; transient response and sinusoidal steady state for linear and nonlinear, e.g. neural/biological circuits and systems. LabVIEW and the use of data acquisition boards will be introduced.

206. Electrical Circuits and Systems II Lab. (B)

This course is the companion lab for ESE 216. It covers experiments involving transformers, diodes, and transistors. DC and small signal model amplifiers, rectification, and non-linear op amp circuits.

210. Introduction to Dynamic Systems. (A)

Prerequisite(s): Math 240.

This first course in systems modeling focuses on linear discrete-time systems. We draw on a set of examples used throughout the course as the necessary mathematical tools are developed. The examples demonstrate the breadth of systems models and are drawn from engineering, the biological sciences, and economics. MATLAB will be used extensively.

215. Electrical Circuits and Systems I. (A)

Prerequisite(s): PHYS 151.

Corequisite(s): MATH 240.

Common principles of Circuits, Systems and flows of electron, photons, and other entities as applied to electrical, and non-electrical systems such as optical (plasmonic), fluidic, traffic, neural, electrochemical, and biological circuits. Class demonstration and computer simulations will be given where applicable to help in rapid understanding of concepts and applications.

216. Electrical Circuits and Systems II. (B)

Prerequisite(s): ESE 215.

The course provides an introduction to electric circuits that form the basis of modern microelectronic systems. After a brief discussion of power dissipation, the course will review passive and active filters. Laplace transforms will be used to analyze circuits and to represent network functions. The second half of the course will focus on modern solid-state devices and electronic circuits including diodes, the metal-oxide-semiconductor (MOSFET) transistor and their applications such as single stage MOS amplifiers. Use of state-of-the-art CAD packages such as SPICE will be introduced. The associated lab, ESE 206, is required for EE majors.

218. Physics and Models of Semiconductor Devices. (B)

Prerequisite(s): ESE 215.

Physical electronics of semiconductor devices. Energy bands in solids. Statistics governing the charge carriers in semiconductors. Equilibrium and nonequilibrium transport phenomena in semiconductors. Operation and equivalent circuits for the pn junction, bipolar and field effect transistor, and other

semiconductor devices. Scaling issues in transistors and introduction to next-generation nanotechnologies.

250. Logistics Manufacturing and Transportation. (C) Prerequisite(s): One Intro Programming course (e.g. CIS 110, ESE 112, ESE 116, CIS 120).

Primer on digital audio. Overview of signal processing, sampling, compression, human psychoacoustics, MP3, intellectual property, hardware and software platform components, and networking (i.e., the basic technical underpinnings of modern MP3 players and cell phones).

252. Transportation Systems Engineering. (B)

Development of transportation and its impact on society and the economy. Geometric characteristics of vehicles. Theory of traction and vehicle dynamic performance. Travel time computations. Transportation networks. Street design and traffic engineering. Railroad technology and operations. High-speed railroads. Air transportation system components and operations. Air traffic control and navigation. Transportation system performance and scheduling. Field trip to major transportation facilities.

297. Engineering Management.

301. Engineering Probability. (C)

Prerequisite(s): MATH 114.

Basic ideas of probability theory. Combinatorics. Random variables and functions of random variables. Means, moments and generating functions. Order statistics and special distributions. Inequalities and the central limit theorem.

302. Engineering Applications of Statistics. (C) Prerequisite(s): ESE 301.

Principles and engineering applications of statistical inference. The basic topics covered are parameter estimation, confidence intervals, and hypothesis testing. Additional topics may include analysis of variance (ANOVA) and/or linear regression. Each method is treated both from theoretical and applied viewpoints, including software analysis of selected data sets.

303. Stochastic Systems Analysis and Simulation. (A) Prerequisite(s): ESE 301 or equivalent and one computer language.

Stochastic systems analysis and simulation (ESE 303) is a class that explores stochastic systems which we could loosely define as anything random that changes in time. Stochastic systems are at the core of a

number of disciplines in engineering, for example communication systems and machine learning. They also find application elsewhere, including social systems, markets, molecular biology and epidemiology. The goal of the class is to learn how to model, analyze and simulate stochastic systems. With respect to analysis we distinguish between what we could call theoretical and experimental analysis. By theoretical analysis we refer to a set of tools which let us discover and understand properties of the system. These analysis can only take us so far and is usually complemented with numerical analysis of experimental outcomes. Although we use the word experiment more often than not we simulate the stochastic system in a computer and analyze the outcomes of these virtual experiments.

The class's material is divided in four blocks respectively dealing with Markov chains, continuous time Markov chains, Gaussian processes and stationary processes. Emphasis is placed in the development of toolboxes to analyze these different classes of processes and on describing their applications to complex stochastic systems in different disciplines. Particular examples include: (i) the problem of ranking web pages by a search engine; (ii) the study of reputation and trust in social networks; (iii) modeling and analysis of communication networks; (iv) the use of queues in the modeling of transportation networks; (v) stochastic modeling and simulation of biochemical reactions and gene networks; (vi) arbitrages, pricing of stocks, and pricing of options through Black-Scholes formula; and (vii) linear filtering of stochastic processes to separate signals of interest from background noise. For more information visit the class's web page at <http://alliance.seas.upenn.edu/~ese303/wiki/>.

304. Optimization of Systems. (C)

Prerequisite(s): MATH 240.

Model Building and Linear Programming: Graphical Methods and The Simplex Method, the LINDO and LINGO Computer Packages, Degeneracies, Minimization and the BigM and the Two-Phase Methods, and Goal Programming. Sensitivity Analysis: Geometric and Algebraic Approaches, The Computer and Sensitivity Analysis, The Dual of An LP Problem, The Dual Theorem, Shadow Prices, Complementary Slackness, The Dual Simplex Method, and The Revised Simplex Method. Integer Programming: The Branch and Bound Method, Enumeration Methods, and the Cutting Plane Method. Nonlinear Programming: Review of Differential

Calculus, Convex and Concave Functions, Solving NLP Problems with One Variable, Unconstrained Nonlinear Optimization with Several Variables, Lagrange Multipliers and Constraint Nonlinear Optimization with Several Variables, The Kuhn-Tucker Conditions and Quadratic Programming.

308. Agent Based Modeling and Simulation. (A) Prerequisite(s):

Probability, Java or C programming, or equivalent.

Agents are a new technique for trying to model, simulate, and understand systems that are ill-structured and whose mathematics is initially unknown and possibly unknowable. This approach allows the analyst to assemble models of agents and components where micro-decision rules may be understood; to bring the agents and components together as a system where macro-behavior then emerges; and to use that to empirically probe and improve understanding of the whole, the interrelations of the components, and synergies. This approach helps one explore parametrics, causality, and what-ifs about socio-technical systems (technologies that must support people, groups, crowds, organizations, and societies). It is applicable when trying to model and understand human behavior -- consumers, investors, passengers, plant operators, patients, voters, political leaders, terrorists, and so on. This course will allow students to investigate and compare increasingly complex agent based paradigms along three lines - math foundations, heuristic algorithms/knowledge representations, and empirical science. The student will gain a toolbox and methodology for attempting to represent and study complex socio-technical systems.

310. Electric and Magnetic Fields I.

(A) Prerequisite(s): PHYS 151 and MATH 240.

This course examines concepts of electromagnetism, vector analysis, electrostatic fields, Coulomb's Law, Gauss's Law, magnetostatic fields, Biot-Savart Law, Ampere's Law, electromagnetic induction, Faraday's Law, transformers, Maxwell equations and time-varying fields, wave equations, wave propagation, dipole antenna, polarization, energy flow, and applications.

313. Robotics and Bioinspired

Systems. (B) Prerequisite(s): ESE 116 (or equivalent) and MATH 240 or by instructor permission.

This is a 1.0 cu research-patterned, open-ended, laboratory-focused course addressing the interface between robotics

and integrative biology. The goal is to identify and then explore and possibly add to a specific corner of the scientific literature wherein it is possible to reach the horizons of knowledge quickly because the relevant empirical tools have only recently become available for broad use. We will focus attention on the development of complex adaptive behavior in a legged robotic system with emphasis on such modalities as locomotion, manipulation, situational awareness, localization and mapping and so on.

L/L 319. Fundamentals of Solid-State Circuits. (A) Prerequisite(s): ESE 216.

Analysis and design of basic active circuits involving semiconductor devices including diodes, bipolar and field effect transistors. Single stage, differential, multi-stage, and operational amplifiers will be discussed including their high frequency response. Oscillators, wave shaping circuits, filters, feedback, stability, and power amplifiers will also be covered. A weekly three-hour laboratory will illustrate concepts and circuits discussed in the class.

325. Fourier Analysis and Applications in Engineering, Mathematics, and the Sciences. (B) Prerequisite(s): Math 240, Junior or Senior Standing.

This course focuses on the mathematics behind Fourier theory and a wide variety of its applications in diverse problems in mathematics, engineering, and the sciences. The course is very mathematical in content and students signing up for it should have junior or senior standing. The topics covered are chosen from: functions and signals; systems of differential equations; superposition, memory, and non-linearity; resonance, eigenfunctions; the Fourier series and transform, spectra; convergence theorems; inner product spaces; mean-square approximation; interpolation and prediction, sampling; random processes, stationarity; wavelets, Brownian motion; stability and control, Laplace transforms.

The applications of the mathematical theory that will be presented vary from year to year but a representative sample include: polynomial approximation, Weierstrass's theorem; efficient computation via Monte Carlo; linear and non-linear oscillators; the isoperimetric problem; the heat equation, underwater communication; the wave equation, tides; testing for randomness, fraud; nowhere differentiable continuous functions; does Brownian motion exist?; error-correction; phase conjugate optics and four-wave mixing; cryptography and secure communications; how fast can we compute?; X-ray crystallography;

cosmology; and what the diffusion equation has to say about mathematical finance and arbitrage opportunities.

L/L 350. Embedded Systems/Microcontroller Laboratory. (B) Prerequisite(s): Knowledge of C programming or permission of the instructor.

An introduction to interfacing real-world sensors and actuators to embedded microprocessor systems. Concepts needed for building electronic systems for real-time operation and user interaction, such as digital input/outputs, interrupt service routines, serial communications, and analog-to-digital conversion will be covered. The course will conclude with a final project where student-designed projects are featured in presentations and demonstrations.

351. Logistics, Manufacturing and Transportation. (B) Prerequisite(s): ESE 304, Freshmen and Sophmores require instructor permission.

Introduction to supply chains -- the production, distribution, and transportation of goods -- and the role of engineers and managers in the design and operation of that system. Supply chain as a physical process. Transportation service options and design. Impact of Information Technology (IT) and Intelligent Transportation Systems (ITS). Basic routing and distribution strategies. Future trends in transportation and supply chains in light of sustainability concerns.

360. (CBE 375) Introduction to Environmental Systems. (B)

The principles of green design, life cycle analysis, industrial ecology, pollution prevention and waste minimization, and sustainable development are introduced to engineers of all disciplines as a means to identify and solve a variety of emerging environmental problems. Case studies are used to assess the problems and devise rational solutions to minimize environmental consequences.

370. Circuit-Level Modeling, Design, and Optimization for Digital Systems. (A) Prerequisite(s): ESE 170/171, ESE 215/205.

Circuit-level design and modeling of gates, storage, and interconnect. Emphasis on understanding physical aspects which drive energy, delay, area, and noise in digital circuits. Impact of physical effects on design and achievable performance.

400. (ESE 540) Engineering Economics. (C) Prerequisite(s): Knowledge of Calculus and Probability.

This course investigates methods of economic analysis for decision making among alternative courses of action in engineering applications. Topics include: cost-driven design economics, break-even analysis, money-time relationships, rates of return, cost estimation, depreciation and taxes, foreign exchange rates, life cycle analysis, benefit-cost ratios, risk analysis, capital financing and allocation, and financial statement analysis. Case studies apply these topics to actual engineering problems.

403. Applications of Operations Research in Systems Engineering. (B) Prerequisite(s): ESE 304 or some equivalent Linear Optimization Course.

This course will present a survey of various areas from Operations Research and the methods used to solve problems in these areas. Some of these topics include: Transportation and Transshipment Problems, Introduction to Graphs and Trees, The LINGO Computer Package, The Transportation Simplex Method, Sensitivity Analysis, and Assignment Problems. The course also will discuss: Network Models, Shortest-Path Problems, Maximum-Flow Problems, and Minimum-Cost Network Flow. Integer Programming as applied to Knapsack Problems, Machine Scheduling Problems, and the Traveling Salesperson Problems is also discussed. Other topics include: Decision Making under Uncertainty, Utility Theory, Decision Trees, Decision Making with Multiple Objectives and Analytic Hierarchy Analysis. Some Game Theory involving Two-Person and n-Person Games is also included in the course. Other topics include: Deterministic and Probabilistic Inventory Models, Holding Cost and Lead Times, the Economic Order Quantity (EOQ), The Continuous Rate EOQ Model and Backorders, The News Vendor Problem, The Economic Order Quantity (EOQ) Model with Uncertain Demands. Other possible topics may include: Finite Regular and Finite Absorbing Markov Chains, Random Walks, and Queuing Models.

404. Introduction to Networks and Protocols. (A) Prerequisite(s): Undergraduate probability and analysis. Course open to Seniors in SEAS and Wharton. All others require instructor permission. Students who take ESE 404 may not take TCOM 500.

This is an introductory course on packet networks and associated protocols that

form the basis of today's communication infrastructure, with a particular emphasis on IP based networks such as the Internet. The course introduces the various design and implementation choices that are behind the development of modern networks, and emphasizes basic analytical understanding in motivating those choices. Topics are covered in a mostly "bottom-up" approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is then followed by a discussion of link layer aspects, including multiple access control (MAC) strategies, local area networks (Ethernet, token rings, and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control solutions such as TCP. Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.

406. (ESE 505, MEAM513) Control of Systems. (B)

Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.

408. Data Communications. (B)

Prerequisite(s): ESE 325 or permission of the instructor.

Overview of the communication process. Review of Fourier transforms, frequency response of linear channels. Analog modulation (AM, FM). Random processes and power spectral densities. Effects of noise in analog demodulation. Pulse amplitude modulation, inter-symbol interference, and equalization. Digital band-pass modulation (PSK, QAM, FSK, probability of error).

411. Electromagnetic Waves and Applications. (M) Prerequisite(s): ESE 310 or permission of instructor.

Key concepts of electromagnetic and optical fields and waves, and their implications in modern communication systems. Selected topics from areas such as plane waves in lossy media, reflection and refraction, transmission lines, optical fibers, microwave and photonic waveguides, and antennas and sensors and their applications in communication systems are discussed.

412. Chaotic Dynamics in Electrical and Biological Systems. (A)

Prerequisite(s): MATH 240, PHYS 150 or permission of the instructor.

Introduction to non-linear dynamics, chaos, bifurcation, and qualitative analysis of continuous and discrete dynamical systems and their use in understanding complex behavior of systems. Emphasis will be placed on understanding qualitative features of models of electrical, mechanical, and biological systems.

419. (ESE 572) Analog Integrated Circuits. (A) Prerequisite(s): ESE 319, ESE 570, or permission of the instructor.

Design of analog circuits and subsystems using bipolar and MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor arrays, and class AB output stages. The course will include a design project of an analog circuit. The course will use the Cadence Design System for schematic capture and simulation with Spectre circuit simulator. This course is similar to ESE 570, except that it will not require the use of the physical layout tools associated with VLSI design and implementation. Students who take ESE 419 will not be eligible to take ESE 572 for credit.

441. Senior Design Project I - EE/CTE. (A) Prerequisite(s): Senior standing or permission of the instructor.

This is the first of a two-semester sequence in electrical engineering senior design. Student work will focus on project/team definition, systems analysis, identification alternative design strategies and determination (experimental or by simulation) of specifications necessary for a detailed design. Students will receive guidance on preparing professional written and oral presentations. Each project team will submit a project proposal and two written project reports that include coherent technical presentations, block diagrams and other illustrations appropriate to the project, a budget and team schedule with sufficient detail and granularity to enable close management of the project. Each student will deliver two formal Powerpoint presentations to an audience comprised of peers, instructors and project advisors. During the semester there will be periodic individual-team project reviews.

442. Senior Design Project II - EE/CTE. (B) Prerequisite(s): ESE 441.

This is the second of a two-term sequence in electrical engineering senior design.

Student work will focus on completing the design undertaken in ESE 441 and successfully implementing the project. Success will be verified using experimental and/or simulation methods appropriate to the project that test the degree to which project objectives are achieved. Each project team will prepare a poster to support a final project presentation and demonstration to peers, faculty and external judges. The course will conclude with the submission of a final project written team report. During the semester there will be periodic project reviews with individual teams.

444. (ESE 544) Project Management. (A) Prerequisite(s): ESE 304 or equivalent.

The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics.

450. SR DESIGN PROJ I-EE/SSE. (A)

L/L 460. (ESE 574, MEAM564) Principles of Microfabrication Technology. (A) Prerequisite(s): Any of the following: ESE 218, MSE 321, MEAM 333, CBE 351, CHEM 321/322, PHYS 250 or permission of the instructor.

A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies.

Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).

490. Senior Design Project I - SSE. (A) Prerequisite(s): Junior Standing.

This is the first of a two-semester sequence in systems engineering senior design. Student work will focus on project/team definition, systems analysis, identification alternative design strategies and

determination (experimental or by simulation) of specifications necessary for a detailed design. Students will receive guidance on preparing professional written and oral presentations. Each project team will submit a project proposal and two written project reports that include coherent technical presentations, block diagrams and other illustrations appropriate to the project, a budget and team schedule with sufficient detail and granularity to enable close management of the project. Each student will deliver two formal Powerpoint presentations to an audience comprised of peers, instructors and project advisors. During the semester there will be periodic individual-team project reviews.

491. Senior Design Project II - SSE. (B) Prerequisite(s): ESE 490.

This is the second of a two-term sequence in systems engineering senior design. Student work will focus on completing the design undertaken in ESE 490 and successfully implementing the project. Success will be verified using experimental and/or simulation methods appropriate to the project that test the degree to which project objectives are achieved. Each project team will prepare a poster to support a final project presentation and demonstration to peers, faculty and external judges. The course will conclude with the submission of a final project written team report. During the semester there will be periodic project reviews with individual teams.

500. Linear Systems Theory. (A)

Prerequisite(s): Open to graduates and undergraduates who have taken undergraduate courses in linear algebra and differential equations.

This graduate level course focuses on linear system theory in time domain based on linear operators. The course introduces the fundamental mathematics of linear spaces, linear operator theory, and then proceeds with existence and uniqueness of solutions of differential equations, the fundamental matrix solution and state transition matrix for time-varying linear systems. It then focuses on the fundamental concepts of stability, controllability, and observability, feedback, pole placement, observers, output feedback, kalman filtering, linear quadratic regulator. Special topics such as optimal control, robust, geometric linear control will be considered as time permits.

501. (TCOM501) Networking - Theory and Fundamentals. (C) Prerequisite(s): ESE 530 or STAT 530 or equivalent.

Networks constitute an important component of modern technology and

society. Networks have traditionally dominated communication technology in form of communication networks, distribution of energy in form of power grid networks, and have more recently emerged as a tool for social connectivity in form of social networks. In this course, we will study mathematical techniques that are key to the design and analysis of different kinds of networks. First, we will investigate techniques for modeling evolution of networks. Specifically, we will consider random graphs (all or none connectivity, size of components, diameters under random connectivity), small world problem, network formation and the role of topology in the evolution of networks. Next, we will investigate different kinds of stochastic processes that model the flow of information in networks. Specifically, we will develop the theory of markov processes, renewal processes, and basic queueing, diffusion models, epidemics and rumor spreading in networks.

502. Introduction to Spatial Analysis. (B) Prerequisite(s): ESE 302 or equivalent.

The course is designed to introduce students to modern statistical methods for analyzing spatial data. These methods include nearest-neighbor analyses of spatial point patterns, variogram and kriging analyses of continuous spatial data, and autoregression analyses of area data. The underlying statistical theory of each method is developed and illustrated in terms of selected GIS applications. Students are also given some experience with ARCMAP, JMPIN, and MATLAB software.

504. (OPIM910) Introduction to Optimization Theory. (A)

Prerequisite(s): Linear Algebra.

The course provides a detailed introduction to linear and nonlinear optimization analysis as well as integer optimization analysis. It discusses methods for the mathematical formulation of linear programming (LP) integer programming (IP) and nonlinear programming (NLP) problems, as well as methods of computational tools used for their solutions. In discussions surrounding the solutions to LP problems, the Simplex method and the Revised Simplex methods are covered in a fairly rigorous fashion along with the LINDO computational computer package. Sensitivity analysis associated with the optimal solutions to LP problems is also discussed in detail using both geometric and algebraic methods. In discussions surrounding the solutions to IP problems, the course covers: (a) branch and bound, (b) enumeration and (c) cutting-plane

methods, and these are applied to numerous classic problems in IP. In discussions surrounding the solutions to NLP problems, the course covers methods involving: (a) differential Calculus, (b) steepest ascent and decent and (c) Lagrange Multipliers. The Kuhn-Tucker Conditions are also presented and applied to problems in Quadratic Programming. Many examples are selected from a broad range of engineering and business problems.

505. (ESE 406, MEAM513) Control of Systems. (B)

Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.

508. (OPIM660) Info Systems for E-Commerce. (M) Prerequisite(s): A

computer programming language course such as CSE 120 (C++), plus ESE 301 (Probability) and ESE 302 (Statistics) or equivalent.

This course looks at the information systems phenomena that are revolutionizing organizations (e.g., clicks & mortar shopping, net-centric value chains, telemedicine, emergent communities, online democracy, etc). To be effective in this milieu, organizations must do more than just push new information technology. They need to determine how to harness the new technology to manage complexity and to maximize stakeholder value. Processes need to be systematically analyzed and redesigned all along the value chain from supplies and procurement to electronic storefronts and customer support, from campaign headquarters to voter booth, etc. This course examines design principles task and information process modeling and analysis methodologies, and a range of underlying information technologies (e.g., webserver design, transaction processing, warehousing, datamining/knowledge management, bots and agents, XML, security, information theory/complexity, and more) that will help the modern organization or community to maximize its strategic objectives. We also examine failure case studies and derive lessons learned.

509. (TCOM503) Waves, Fibers and Antennas for Telecommunications. (A)

This course is designed to provide an understanding of the physical aspects of telecommunications systems. This includes an understanding of waves and wave propagation, basic optics, the operation of

optical fibers and fiber communication systems, an introduction to optical networks, free-space optical communications, and an understanding of simple antennas and arrays and their use in wireless communication.

510. Electromagnetic and Optical Theory. (A)

This course reviews electrostatics, magnetostatics, electric and magnetic materials, induction, Maxwell's equations, potentials and boundary-value problems. Topics selected from the areas of wave propagation, wave guidance, antennas, and diffraction will be explored with the goal of equipping students to read current research literature in electromagnetics, microwaves, and optics.

511. Modern Optics and Image Understanding. (B) Prerequisite(s): ESE 310, graduate standing, or permission of the instructor.

The goal of this course is to provide a unified approach to modern optics, image formation, analysis, and understanding that form the theoretical basis for advanced imaging systems in use today in science, medicine and technology. The emphasis is on imaging systems that employ electromagnetic energy but the principles covered can be extended to systems employing other forms of radiant energy such as acoustical.

514. (MSE 570) Physics of Materials I. (A) Prerequisite(s): Undergraduate Physics and Math through modern physics and differential equations.

Failures of classical physics and the historical basis for quantum theory. Postulates of wave mechanics; uncertainty principle, wave packets and wave-particle duality. Shrodinger equation and operators; eigenvalue problems in 1 and 3 dimensions (barriers, wells, hydrogen atom). Mathematical equivalence to problems in optics. Perturbation theory; scattering of particles and light. Free electron theory of metals; Drude and Sommerfeld models, dispersion relations and optical properties of solids. Extensive use of computer-aided self-study will be made.

515. (MSE 571) Physics of Materials - II. (B) Prerequisite(s): MSE 570/ESE 514 or equivalent.

Failures of free electron theory. Crystals and the reciprocal lattice; wave propagation in periodic media; Bloch's theorem. One-electron band structure models: nearly free electrons, tight binding. Semiclassical dynamics and transport. Cohesive energy, lattice dynamics and phonons. Dielectric

properties of insulators. Homogeneous semiconductors and p-n junctions. Experimental probes of solid state phenomena: photo emission, energy loss spectroscopy, neutron scattering. As time permits, special topics selected from the following: correlation effects, semiconductor alloys and heterostructures, amorphous semiconductors, electroactive polymers.

517. (BE 517) Optical Imaging. (A)

Prerequisite(s): ESE 310 and 325 or equivalent.

A modern introduction to the physical principles of optical imaging with biomedical applications. Propagation and interference of electromagnetic waves. Geometrical optics and the eikonal. Plane-wave expansions, diffraction and the Rayleigh criterion. Scattering theory and the Born approximation. Introduction to inverse problems. Multiple scattering and radiative transport. Diffusion approximation and physical optics of diffusing waves. Imaging in turbid media. Introduction to coherence theory and coherence imaging. Applications will be chosen from the recent literature in biomedical optics.

519. Real-Time Embedded Systems. (C) Prerequisite(s): Programming in C/C++. ESE 350 or equivalent, one course in computer networks and Senior or Graduate standing.

The use of distributed wireless sensor networks has surged in popularity in recent years with applications ranging from environmental monitoring, to people- and object-tracking in both cooperative and hostile environments. This course is targeted at understanding and obtaining hands-on experience with the state-of-the-art in such wireless sensor networks which are often composed using relatively inexpensive sensor nodes that have low power consumption, low processing power and bandwidth. The course will span a variety of topics ranging from radio communications, network stack, systems infrastructure including QoS support and energy management, programming paradigms, distributed algorithms and example applications. Some guest lectures may be given.

521. The Physics of Solid State Energy Devices. (M) Prerequisite(s): ESE 218 or PHYS 240 or MSE 222 or equivalent, or by permission of the instructor.

An advanced undergraduate course or graduate level course on the fundamental physical principles underlying the operation

of traditional semiconducting electronic and optoelectronic devices and extends these concepts to novel nanoscale electronic and optoelectronic devices. The course assumes an undergraduate level understanding of semiconductors physics, as found in ESE 218, MSE 221 or PHYS 240. The course builds on the physics of solid state semiconductor devices to develop the operation and application of semiconductors and their devices in energy conversion devices such as solar photovoltaics, thermophotovoltaics, and thermoelectrics, to supply energy. The course also considers the importance of the design of modern semiconductor transistor technology to operate at low-power in CMOS.

522. (OPIM221, OPIM656) Process Management in Manufacturing. (C) Prerequisite(s): OPIM 621, OPIM 631, and OPIM 632 or equivalent.

This course builds on OPIM 631 and OPIM 632 in developing the foundations of process management, with applications to manufacturing and supply chain coordination and integration. This course begins with a treatment of the foundations of process management, including quality (e.g. 6-sigma systems) and time (e.g., cycle time) as building blocks for the successful integration of plant operations with vertical and horizontal market structures. On the e-manufacturing side, the course considers recent advances in enterprise-wide planning (ERP) systems, supplier management and contract manufacturing. Industry case studies highlight contrasting approaches to the integration of manufacturing operations and risk management with e-Logistics and e-Procurement providers and exchanges. The course is recommended for those interested in consulting or operations careers, and those wishing to understand the role of manufacturing as a general foundation for economics value creation.

525. (MSE 525) Nanoscale Science and Engineering. (A) Prerequisite(s): ESE 218 or PHYS 240 or MSE 222 or equivalent, or by permission.

Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustention of current approaches, and for the development of revolutionary designs and applications.

529. (MEAM529) Introduction to MEMS and NEMS. (A)

Introduction to MEMS and NEMS technologies: MEMS/NEMS applications and key commercial success stories (accelerometers, gyroscopes, digital light projectors, resonators). Review of micromachining techniques and MEMS/NEMS fabrication approaches. Actuation methods in MEMS and NEMS, MEMS/NEMS design and modeling. Examples of MEMS/NEMS components from industry and academia. Case studies: MEMS inertial sensors, microscale mirrors, micro and nano resonators, micro and nano switches, MEMS/NEMS chem/bio sensors, MEMS gyroscopes, MEMS microphones.

530. Elements of Probability Theory and Random Processes. (A)

Prerequisite(s): A solid foundation in undergraduate probability. Students are expected to have a sound calculus background as covered in the first two years of a typical undergraduate engineering or mathematics curriculum. Undergraduates are warned that the course is very mathematical in nature with an emphasis on rigor; upperclassmen who wish to take the course will need to see the instructor for permission to register.

This rapidly moving course provides a rigorous development of fundamental ideas in probability theory. This course is suitable for students from engineering, mathematics, or the natural sciences seeking a rigorous graduate-level exposure to probabilistic ideas and principles with applications in diverse settings.

The topics covered are drawn from: abstract probability spaces; conditional probability; Bayes's rule and the theorem of total probability; independence; rare events, Poisson laws, and the Lovász local lemma; connections with the theory of numbers, Borel's normal numbers, and the normal law; arithmetic and lattice distributions arising from the Bernoulli scheme; continuous distributions in one and more dimensions; the uniform, exponential, normal, and related distributions and their characterizations and applications; random variables, distribution functions, and Borel measures; random number generation and statistical tests of randomness; mathematical expectation and the Lebesgue theory; expectations of functions, moments, convolutions; operator methods and distributional convergence, the central limit theorem, selection principles; Poisson approximation, Janson's inequality, the Stein-Chen method; tail inequalities, concentration; convergence in probability and almost surely, the law of large numbers, the law of the iterated logarithm,

and uniform laws; moment generating functions, renewal theory; characteristic functions; conditional expectation and martingales.

531. Digital Signal Processing. (A)

This course covers the fundamentals of real-time processing of discrete-time signals and digital systems. Specific topics covered are: review of signals and linear system representations; convolution and discrete Fourier transforms; Z-transforms; frequency response of linear discrete-time systems; sampling and analog/digital conversion; finite and infinite impulse response filters; digital filter design; fast Fourier transforms and applications; adaptive filtering algorithms. Projects requiring implementation of specific digital signal processing algorithms will also be assigned.

534. Computer Organization. (M)

Prerequisite(s): Basic computability and basic digital circuits, VLSI exposure helpful but not required. CSE 371 adequate.

Organization and design of physical computational systems, basic building block for computations, understanding and exploiting structure in computational problem design space, costs, and tradeoffs in computer organization, common machine abstractions, and implementation/optimization techniques. The course will develop fundamental issues and tradeoffs which define computer organizational and architectural styles including RISC, VLIW, Super Scalar, EPIC, SIMD, Vector, MIMD, reconfigurable FPGA, PIM, and SoC. Basic topics in the design of computational units, instruction organization, memory systems, control and data flow, and interconnect will also be covered.

535. Electronic Design Automation. (M)

Prerequisite(s): Digital logic, Programming (need to be comfortable writing ~1-3K lines of code and working with a large, existing base code).

Formulation, automation, and analysis of design mapping problems with emphasis on VLSI and computational realizations. Major themes include: formulating and abstracting problems, figures of merit (e.g. Energy, Delay, Throughput, Area, Mapping Time), representation, traditional decomposition of flow (logic optimization, covering, scheduling, retiming, assignment, partitioning, placement, routing), and techniques for solving problems (e.g., greedy, dynamic programming, search, (integer) linear programming, graph algorithms, randomization, satisfiability).

539. (BE 539) Neural Networks, Chaos, and Dynamics: Theory and Application. (B)

Physiology and anatomy of living neurons and neural networks; Brain organization; Elements of nonlinear dynamics, the driven pendulum as paradigm for complexity, synchronicity, bifurcation, self-organization and chaos; Iterative maps on the interval, period-doubling route to chaos, universality and the Feigenbaum constant, Lyapunov exponents, entropy and information; Geometric characterization of attractors; Fractals and the Mandelbrot set; Neuron dynamics: from Hodgkin-Huxley to integrate and fire, bifurcation neuron; Artificial neural networks and connectionist models, Hopfield (attractor-type) networks, energy functions, convergence theorems, storage capacity, associative memory, pattern classification, pattern completion and error correction, the Morita network; Stochastic networks, simulated annealing and the Boltzmann machine, solution of optimization problems, hardware implementations of neural networks; the problem of learning, algorithmic approaches: Perception learning, back-propagation, Kohonen's self-organizing maps and other networks; Coupled-map lattices; Selected applications including financial markets.

540. (ESE 400) Engineering Economics. (C)

This course is cross-listed with an advanced-level undergraduate course (ESE 400). Compared to the undergraduate course, students will be required to do additional work and will be graded by a more rigorous performance standard. Topics include: money-time relationships, discrete and continuous compounding, equivalence of cash flows, internal and external rate of return, design and production economics, life cycle cost analysis, depreciation, after-tax cash flow analysis, cost of capital, capital financing and allocation, parametric cost estimating models, pricing, foreign exchange rates, stochastic risk analysis, replacement analysis, benefit-cost analysis, and analysis of financial statements. Case studies apply these topics to engineering systems.

544. (ESE 444) Project Management. (A)

Prerequisite(s): ESE 304 or equivalent. The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large

infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics.

552. Transportation Systems Engineering. (B)

Development of transportation and its impact on society and the economy. Geometric characteristics of vehicles. Theory of traction and vehicle dynamic performance. Travel time computations. Transportation networks. Street design and traffic engineering. Railroad technology and operations. High-speed railroads. Air transportation system components and operations. Air traffic control and navigation. Transportation system performance and scheduling. Field trip to major transportation facilities.

554. Urban Transit Systems and Technology. (A)

Role of transportation in founding and growth of cities. Classification, definitions, theory, and characteristics of urban transportation modes, their components and performance. Vehicle propulsion and travel time computations; energy consumption and its possible reduction. Bus, trolleybus, light rail, rapid transit, AGT and specialized modes - vehicles, ways, terminals, operations and costs. Paratransit modes, and their role in urban transportation. Theoretical and practical capacities of modes. Present and potential innovations in vehicle design, propulsion, automation, including fully automated rapid transit systems. Visit to a transit system.

555. Cities and Transportation Systems. (B)

Transportation systems operations; concepts, scheduling and analyses. Applications of operations research methods. Rail and bus networks, lines, branches and feeders. Timed transfer system. Fares, other revenues and costs. Organization and management. Transit planning methodology; comparison of modes. Transit financing and policy. Urban transportation problems in developed and developing countries: their origins, causes and solutions. Definition and implementation of optimal role of cars, transit, bicycles and pedestrians in cities. Balanced transportation and livable cities. Field trip.

560. Sustainable Development of Water Resource Systems. (B)

The application of systems methodology to the design of water supply and sanitation projects. The focus is on the designing for sustainability by emphasizing how technical solutions fit within the appropriate social context. A case study approach is used to demonstrate these principles across a range of examples from developed and developing countries.

567. (OPIM261, OPIM761) Risk Analysis and Environmental Management. (C)

This course is designed to introduce students to the complexities of making decisions about threats to human health and the environment when people's perceptions of risks and their decision-making processes differ from expert views. Recognizing the limitations of individuals in processing information the course explores the role of techniques such as decision analysis, cost-benefit analysis, risk assessment and risk perception in structuring risk-management decisions. We will also examine policy tools such as risk communication, incentive systems, third party inspection, insurance and regulation in different problem contexts.

The problem contexts for studying the interactions between analysis, perceptions, and communication will include risk-induced stigmatization of products (e.g. alar, British beef), places (e.g. Love Canal), and technologies (e.g. nuclear power); the siting of noxious facilities, radon, managing catastrophic risks including those from terrorism. A course project will enable students to apply the concepts discussed in the course to a concrete problem.

570. Digital Integrated Circuits and VLSI-Fundamentals. (B)

Prerequisite(s): ESE 319 (for undergraduates) or permission of the instructor.

Explores the design aspects involved in the realization of an integrated circuit from device up to the register/subsystem level. It addresses major design methodologies with emphasis placed on the structured design. The course includes the study of MOS device characteristics, the critical interconnect and gate characteristics which determine the performance of VLSI circuits, and NMOS and CMOS logic design. Students will use state-of-the-art CAD tools to verify designs and develop efficient circuit layouts.

572. (ESE 419) Analog Integrated Circuits. (A) Prerequisite(s): ESE 570 and ESE 319 (for undergraduates) or permission of the instructor.

Design of analog circuits and subsystems using bipolar and MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor arrays, and class AB output stages. The course will include a design project of an analog circuit. The course will use the Cadence Design System for schematic capture and simulation with Spectre circuit simulator. This course is similar to ESE 570, except that it will not require the use of the physical layout tools associated with VLSI design and implementation.

573. (BE 526) Building Brains in Silicon. (M) Prerequisite(s): Students with advanced knowledge in neurobiology but rudimentary knowledge in electrical engineering or vice versa are welcome. Biology students should have a course in Cellular Neurobiology and BIOL 451, Systems Neuroscience. Engineering students should have ESE 218, Physics and Models of Semiconductor Devices and ESE 319, Fundamentals of Solid-State Circuits.

We model the structure and function of neural systems in silicon using very large scale integration (VLSI) complimentary metal-oxide-semiconductor (CMOS) technology. To build these neuromorphic systems, we proceed from the device level, through the circuit level, to the system level. At the device level, we mimic electrodiffusion of ions through membrane channels with electrodiffusion of electrons through transistor channels. At the circuit level, we derive minimal implementation of synaptic interaction, dendritic integration, and active membrane behavior. At the system level, we synthesize the spatiotemporal dynamics of the cochlea, the retina, and early stages of cortical processing.

L/L 574. (ESE 460, MEAM564) The Principles and Practice of Microfabrication Technology. (A)

Prerequisite(s): Any of the following courses: ESE 218, MSE 321, MEAM 333, CBE 351, CHEM 321/322, PHYS 250 or permission of the instructor.

A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion,

oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).

575. (TCOM511) Introduction to Wireless Systems. (A) Prerequisite(s): Undergraduate linear systems and elementary probability theory.

System/Network Design, cellular concepts, resource management, radio management, radio channel propagation fundamentals, modulation, fading countermeasure, diversity, coding, spread spectrum, multiple access techniques.

576. Digital Communication Systems. (B) Prerequisite(s): Undergraduate linear systems, probability, random processes.

Sampling, source coding, and capacity. Quantization and coding of speech and video. Baseband data transmission: line coding, intersymbol interference, equalization, digital modulation schemes, spectral efficiency. Error control coding; block and convolutional codes, Viterbi Algorithm.

601. Hybrid Systems. (M)

Hybrid systems combine discrete state-machines and continuous differential equations, and have been used as models of a large number of applications in areas such as real-time software, embedded systems, robotics, mechatronics, aeronautics, process control, and biological systems. The course will cover state-of-the-art modeling, design, and analysis of hybrid systems. The course is interdisciplinary, and is aimed at bringing together concepts in control theory and computer science. Specific topics include modeling, simulation, stability, reachability, and controller design for hybrid systems. Computational tools for the simulation and verification of hybrid systems will be emphasized with applications to robotics, avionics, air traffic management systems, and biological systems. The course consists of lectures, homeworks, and a final project.

603. Simulation Modeling and Analysis. (B) Prerequisite(s): Probability (undergraduate level) and one computer language.

This course provides a study of discrete-event systems simulation. Some areas of application include: queuing systems, inventory systems, reliability systems

Markov Chains, Random-Walks and Monte-Carlo systems. The course examines many of the discrete and continuous probability distributions used in simulation studies as well as the Poisson process. Long-run measurements of performances of queuing systems, steady-state behavior of infinite and finite-population queuing systems and network of queues are also examined. Fundamental to most simulation studies is the ability to generate reliable random numbers. The course investigates the basic properties of random numbers and techniques used for the generation of pseudo-random numbers. In addition, the course examines techniques used to test pseudo-random numbers for uniformity and independence. These include the Kolmogorov-Smirnov and chi-squared tests, runs tests, gap tests, and poker tests. Random numbers are used to generate random samples and the course examines the inverse-transform, convolution, composition and acceptance/rejection methods for the generation of random samples for many different types of probability distributions.

Finally, since most inputs to simulation are probabilistic instead of deterministic in nature, the course examines some techniques used for identifying the probabilistic nature of input data. These include identifying distributional families with sample data, then using maximum-likelihood methods for parameter estimating within a given family and then testing the final choice of distribution using chi-squared goodness-of-fit tests.

605. Modern Convex Optimization.

(B) Prerequisite(s): Knowledge of linear algebra and willingness to do programming. Exposure to numerical computing, optimization, and application fields is helpful but not required.

This course concentrates on recognizing and solving convex optimization problems that arise in engineering. Topics include: convex sets, functions, and optimization problems. Basis of convex analysis. Linear, quadratic, geometric, and semidefinite programming. Optimality conditions, duality theory, theorems of alternative, and applications. Interior-point methods, ellipsoid algorithm and barrier methods, self-concordance. Applications to signal processing, control, digital and analog circuit design, computation geometry, statistics, and mechanical engineering.

608. Intelligent and Animated

Software Agents. (M) Prerequisite(s): Undergraduate courses in probability (ESE 301 or equivalent), optimization (ESE 304 or equivalent), knowledge of one computer programming language (Fortran, Pascal, or C), or permission of the instructor.

This course will begin with an introduction to virtual reality personas and web-based agents, including their usage to assist, train, and entertain people wherever digital interfaces exist (on the Web, in e-commerce, in games, in kitchen appliances, on your dashboard, etc.). What makes an agent rational? Emotionally appealing? Entertaining? We will explore mathematical theories of rationality and behavior, including those from cognitive, behavioral and decision science. We will then progress into human behavior, literature, personality and individual differences studies, and intelligent and emotive agent designs. We will examine various types of agents such as web shopping agents, emotive agents, personal support agents, chatterbots, mobile agents, virtual reality personas, game-based adversaries, pedagogical agent coaches, and multi-agent societies. Finally, students will learn principles about animation, simulated social interaction and speech generation, knowledge representation, agent planning and reasoning, agent communication languages, testing of the use of agent based systems, and methodologies/toolbenches for engineering of systems of intelligent and emotive agents.

610. Electromagnetic and Optical Theory II. (M)

This course covers exact, approximate and numerical methods of wave propagation, radiation, diffraction and scattering with an emphasis on bringing students to a point of contributing to the current research literature. Topics are chosen from a list including analytical and numerical techniques, waves in complex media and metamaterials, photonic bandgap structures, imaging, miniaturized antennas, high-impedance ground plans, and fractal electrodynamics.

617. (CBE 617, CIS 613, MEAM613) Non-Linear Control Theory. (M)

Prerequisite(s): Undergraduate Control course.

This course focuses on nonlinear systems, planar dynamical systems, Poincaré Bendixson Theory, index theory, bifurcations, Lyapunov stability, small-gain theorems, passivity, the Poincaré map, the center manifold theorem, geometric control theory, and feedback linearization.

630. Elements of Neural Computation, Complexity, and Learning. (M)

Prerequisite(s): A semester course in probability or equivalent exposure to probability (e.g. ESE 530).

Non-linear elements and networks: linear and polynomial threshold elements, sigmoidal units, radial basis functions. Finite (Boolean) problems: acyclic networks; Fourier analysis and efficient computation; projection pursuit; low frequency functions. Network capacity: Feedforward networks; Vapnik-Chervnenkis dimension. Learning theory: Valiant's learning model; the sample complexity of learning. Learning algorithms: Perception training, gradient descent algorithms, stochastic approximation. Learning complexity: the intractability of learning; model selection.

632. Random Process Models and Optimum Filtering. (M)

Prerequisite(s): ESE 530 or equivalent.

Convergence, continuity, stationarity and second order properties of random processes. Spectral representation. Markov processes, Wiener and Poisson processes. Karhunen-Loeve expansion. Optimum filtering: matched and Wiener filtering, finite observations, spectral factorization. Kalman filtering. Basic concepts of parameter estimation and hypothesis testing.

635. Distributed Systems. (M)

Prerequisite(s): Basic knowledge of linear systems (ESE 500), linear algebra (MATH 312 or equivalent), and optimization (ESE 504 or equivalent) and some familiarity with basics of nonlinear systems (ESE 617 or equivalent). Students without this background should consult with the instructor before registering.

This research seminar deals with tools, methods, and algorithms for analysis and design of distributed dynamical systems. These are large collections of dynamical systems that are spatially interconnected to form a collective task or achieve a global behavior using local interactions. Over the past decade such systems have been studied in disciplines as diverse as statistical physics, computer graphics, robotics, and control theory. The purpose of this course is to build a mathematical foundation for study of such systems by exploring the interplay of control theory, distributed optimization, dynamical systems, graph theory, and algebraic topology. Assignments will consist of reading and researching the recent literature in this area. Topics covered in distributed coordination and consensus algorithms over networks, coverage problems, effects of

delay in large scale networks. Power law graphs, gossip and consensus algorithms, synchronization phenomena in natural and engineered systems, etc.

650. Learning in Robotics. (A)

Prerequisite(s): Students will need permission from the instructor. They will be expected to have a good mathematical background with knowledge of machine learning techniques at the level of CIS 520, signal processing techniques at the level of ESE 531, as well as have some robotics experience.

This course will cover the mathematical fundamentals and applications of machine learning algorithms to mobile robotics. Possible topics that will be discussed include probabilistic generative models for sensory feature learning. Bayesian filtering for localization and mapping, dimensionality reduction techniques for motor control, and reinforcement learning of behaviors. Students are expected to have a solid mathematical background in machine learning and signal processing, and will be expected to implement algorithms on a mobile robot platform for their course projects. Grading will be based upon course project assignments as well as class participation.

674. Information Theory. (M)

Prerequisite(s): ESE 530 or equivalent exposure to probability theory.

Deterministic and probabilistic information. The pigeon-hole principle. Entropy, relative entropy, and mutual information. Random processes and entropy rate. The asymptotic equipartition property. Optimal codes and data compression. Channel capacity. Source channel coding. The ubiquitous nature of the theory will be illustrated with a selection of applications drawn from among: universal source coding, vector quantization, network communication, the stock market, hypothesis testing, algorithmic computation and Kolmogorov complexity, and thermodynamics.

680. Special Topics in Electrical and Systems Engineering. (M)

Advanced and specialized topics in both theory and application areas. Students should check Graduate Group office for offerings during each registration period.

895. Teaching Practicum. (C)

Participation of graduate students in the teaching mission of the department will help to develop teaching, presentation, leadership, and interpersonal skills while assisting the department in discharging its teaching responsibilities. All doctoral

students are required to participate under faculty guidance in the teaching mission of the department. This requirement will be satisfied by completing two 0.5 course units of teaching practicum (ESE 895). Each 0.5 course unit of teaching practicum will consist of the equivalent of 10 hours of effort per week for one semester. As a part of the preparation for and fulfillment of the teaching practicum requirement, the student will attend seminars emphasizing teaching and communication skills, lead recitations, lead tutorials, supervise laboratory experiments, develop instructional laboratories, develop instructional material and grade homeworks, laboratory reports, and exams. A teacher training seminar will be conducted the day before the first day of classes of the Fall semester. Attendance is mandatory for all second-year students.

As much as possible, the grading aspect of the teaching practicum course will be such as not to exceed 50% of the usual teaching assistant commitment time. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of every 0.5 course unit of teach, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation by the faculty member responsible for the course. The evaluation will be on comments of the students taking the course and the impressions of the faculty.

899. Independent Study. (C)

For students who are studying a specific advanced subject area in electrical engineering. Students must submit a proposal outlining and detailing the study area, along with the faculty supervisor's consent, to the graduate group chair for approval. A maximum of 1 c.u. of ESE 899 may be applied toward the MSE degree requirements. A maximum of 2 c.u.'s of ESE 899 may be applied toward the Ph.D. degree requirements.

990. Masters Thesis. (C)

Register for this only once after all 10 course units are completed. This carries full time status with no credit.

995. Dissertation. (C)

Register for this after completing four years of full-time study including two course units each Summer Session (and usually equal to 40 course units).

999. Thesis/Dissertation Research. (C)

For students working on an advanced research program leading to the completion

UNIVERSITY COURSE REGISTER

of master's thesis or Ph.D. dissertation requirements.

ENGINEERING AND APPLIED SCIENCE (EG) {EAS}

SM 001. Engineering Ethics Seminar.

The increasing scale, complexity, and social impact of technology have forced the engineering community to re-examine issues of professional ethics and responsibility. In these seminars students will participate in discussions oriented around a series of real-world case studies involving a wide range of contemporary controversies, including the Challenger disaster, software liability, and intellectual property issues. The goal is to provide students with tools for thinking about the complex ethical issues that they were likely to encounter in their own academic and professional careers.

SM 009. Writing About Science and Engineering. (A)

Using the approaches of such computer scientists as Donald A Norman (*The Design of Everyday Things*) and Alan Cooper, the father of Visual Basic, this writing seminar will explore issues and ideas related to the creative process and end results of how everyday objects are designed and used, from light switches and telephones to computer software. This seminar is intended for anyone who is interested in thinking about everyday life and its objects and learning about what goes into the design process. We will explore design failures and successes, and learn how attention to the objects in our everyday lives and how these were designed changes our perspective toward not only the objects that surround us, but our very lives and culture. Along with readings from Norman and Cooper, readings will also likely be drawn from journals, magazines, newspapers. Students will be expected to write and revise 3 four-to-six page papers, one-page responses, in-class writings and a reading and idea journal.

This is a writing seminar--and as such fulfills the entire Writing Requirement for students in all four undergraduate schools. The seminar contents vary from semester to semester; for a current description, please see the Writing Program web site: www.english.upenn.edu/Writing.

099. Independent Study. (C)

Prerequisite(s): Permission via application process.

An opportunity for the student to apply the theoretical ideas and tools learned from other courses through self study of a

particular topic supervised by a sponsoring faculty member. To request approval for an independent study course, the student must submit a detailed proposal, signed by the supervising professor, the student's assigned Faculty Advisor, and departmental Undergraduate Chair, to the Office of Academic Programs two weeks prior to the start of the term.

101. Introduction to Engineering. (C)

This course is intended to introduce students to the field of engineering. It will expose students to the engineering disciplines through hands-on laboratory experiences. In addition, the course will provide tutorials on how to use important software packages as well as a "Professional Preparation" module through studies of communication (writing and speaking skills), ethics, leadership and teamwork. This course is ideal for any freshman interested in exploring the possibility of studying engineering at Penn. The course counts as as a engineering requirement in SEAS.

L/L 105. Introduction to Scientific Computing. (A)

This course will provide an introduction to computation and data analysis using MATLAB - an industry standard programming and visualization environment. The course will cover the fundamentals of computing including: variables, functions, flow control, iteration and recursion. These concepts will be illustrated through examples and assignments which show how computing is applied to various scientific and engineering problems. Examples will be drawn from the simulation of physical and chemical systems, the analysis of experimental data, Monte Carlo numerical experiments, image and audio processing, and control of sensors and actuators. This course does not assume any prior programming experience but will make use of basic concepts from calculus and Newtonian physics.

125. (CIS 125) Technology and Policy. (C)

Have you ever wondered why sharing music and video generates such political and legal controversies? Is information on your PC safe and should law enforcement be able to access information you enter on the Web? Will new devices allow tracking of your every move and every purchase? CIS 125 is focused on developing an understanding of existing and emerging technologies, along with the political, societal and economic impacts of those technologies. The technologies are spread

across a number of engineering areas and each of them raise issues that are of current concern or are likely to be a future issue.

L/R 205. Applications of Scientific Computing. (C) Prerequisite(s): Prior exposure to computing via courses such as EAS 105, CIS 110, or ESE 112. Math 114, Sophomore standing.

This course will discuss a number of canonical problems and show how numerical methods are used to solve them. Lectures will introduce the underlying theory and the relevant numerical methods. Students will be expected to implement solutions to the problems using MATLAB. The course will use the visualization capabilities of MATLAB to provide students with a geometric interpretation of the key ideas underlying the numerical methods. Topics to be covered will include: The solution of systems of linear systems equations with application to problems such as force balance analysis and global illumination computation. Representing and computing coordinate transformations with applications to problems in graphics, vision and robotics. Transform Coding with applications to the analysis of audio signals and image compression. Analysis of variance and the search for low dimensional representations for high dimensional data sets egs. Google's PageRank algorithm. Least Squares model fitting with applications to data analysis. Analysis of linear dynamical systems with applications to understanding the modes of vibration of mechanical systems. The analysis of stochastic systems governed by state transition matrices.

210. Introduction to Nanotechnology. (A)

280. (BE 280) Bioengineering in the World. (C)

Open to all majors at Penn, this course explores the wide-range of bioengineering applications 'in the world' and then takes these concepts 'into the world' by teaching them to a small group of students at the high school level. Students will learn fundamental concepts behind bioengineering applications such as Gene Therapy, Stem Cells, Neuroengineering, Tissue Engineering, Biomechanics, Imaging, and Medical Devices. They will also develop effective methods for teaching technical concepts. At the high school, the Penn students will perform hands-on activities with the high school students, discuss ethical questions related to each topic, and explore career options.

281. Multimedia Tools and Technology. (C)

285. Teaching Computer Science Basics. (C) Faculty.

299. Eng Rsch-Prep/App/Meth. (C)

L/R 303. (BE 303) Ethics, Social, and Professional Responsibility for Engineers. (A)

Provides an overview of the ethical, social, and professional responsibilities of engineers, as engineering professionals, as members of engineering organizations and as investigators in research. The course will make extensive use of student group presentations and in the analysis of cases based on real-world problems with ethical dimensions, many drawn from current news. The case studies will vary from year to year, but will be chosen to be relevant to students interested in different careers in engineering, including research.

349. Ideas to Assets. (M)

Prerequisite(s): Sophomore or higher standing.

Not every idea leads to a great product. The process of "crystallizing" a clever idea into a saleable asset demands a mix of creativity, systems thinking, sound business instincts, and the courage to do things differently. Students in this project-centered course will gain the necessary skills and experience from concentrated work on early-stage inventions drawn from Penn's technology portfolio. Is the invention feasible? Patentable? How should it be designed and produced? What will it cost? Is there a market? Does the payoff justify the investment? These and similar questions will be answered through a multifaceted process including analysis, experimentation, design, and/or market research. The projects are not "case studies", but rather involve real, current intellectual property of potential value to the University. Inventors and specialists from the Center for Technology Transfer will be available to collaborate with the student teams. Project work will be complemented by lectures and exercises dealing with the patent process, cost and market estimation, project planning, economic analysis, and the systems approach to new product design.

400. (EAS 500) Technical Communication in Engineering Practice. (C)

Prerequisite(s): SEAS undergraduates must have already fulfilled their SEAS Writing Requirement.

Students will learn methods and approaches for written technical communication within the engineering environment. These include strategies for maximum effectiveness in writing technical documentation, reports, instructions, and proposals. Assignments will include self-editing and peer editing techniques, as well as strategies to effectively mentor other writers.

401. (EAS 501) Energy and Its Impacts. (A)

Any university student interested in energy and its impacts, preferably at the upper level undergraduate and non-engineering graduate level of maturity. Students taking the course as EAS 501 will be given assignments commensurate with graduate standing.

The objective is to introduce students to one of the most dominating and compelling areas of human existence and endeavor: energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field. The course spans from basic principles to applications. A review of energy consumption, use, and resources; ecological impacts, sustainability and design of sustainable energy systems; methods of energy analysis; forecasting; electricity generation systems (steam and gas turbine based power plants, fuel cells), energy for transportation (cars, aircraft, and ships); nuclear energy and wastes; renewable energy use: solar, wind, hydroelectric, geothermal, biomass; prospects for future energy systems: fusion power, power generation in space.

402. (EAS 502) Renewable Energy and Its Impact. (B)

Prerequisite(s): Any undergraduate and graduate university student interested in renewable energy and its impacts, preferably at the upper level undergraduate and non-engineering graduate level of maturity.

The objective is to introduce students to the major aspects of renewable energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field. The course spans from basic principles to applications. A review of solar, wind, biomass, hydroelectric, geothermal energy, and prospects for future

energy systems such as renewable power generation in space.

499. Senior Capstone Project. (C)

The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, exercise, and should focus on a real world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor, and the student's faculty advisor, to the Office of Academic Programs two weeks prior to the start of the term.

500. (EAS 400) Technical Communication in Engineering Practice. (C)

This course is not intended for non-native speakers of English and will not address their specific language needs. Students whose native language is not English should register for EAS 510.

Students will learn methods and approaches for written technical communication within the engineering environment. These include strategies for maximum effectiveness in writing technical documentation, reports, instructions, and proposals. Assignments will include self-editing and peer editing techniques, as well as strategies to effectively mentor other writers.

501. (EAS 401) Energy and its Impacts. (A)

Any university student interested in energy and its impacts, preferably at the upper level undergraduate and non-engineering graduate level of maturity. Students taking the course as EAS 501 will be given assignments commensurate with graduate standing.

The objective is to introduce students to one of the most dominating and compelling areas of human existence and endeavor: energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field. The course spans from basic principles to applications. A review of energy consumption, use, and resources; ecological impacts, sustainability and design of sustainable energy systems; methods of energy analysis; forecasting; electricity generation systems (steam and

gas turbine based power plants, fuel cells), energy for transportation (cars, aircraft, and ships); nuclear energy and wastes; renewable energy use: solar, wind, hydroelectric, geothermal, biomass; prospects for future energy systems: fusion power, power generation in space.

502. (EAS 402) Renewable Energy and It's Impact. (B) Prerequisite(s): Any undergraduate and graduate university student interested in renewable energy and its impacts, preferably at the upper level undergraduate and non-engineering graduate level of maturity.

The objective is to introduce students to the major aspects of renewable energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field. The course spans from basic principles to applications. A review of solar, wind, biomass, hydroelectric, geothermal energy, and prospects for future energy systems such as renewable power generation in space.

510. Technical Communication and Academic Writing for Non-native Speakers of English. (B) Graduate students whose native language is English, but who would benefit from a course in Technical Communication, should take EAS 500.

Students will improve the grammar, word choice and organization of their professional writing by completing weekly writing assignments and a full-length research paper. Students will also give short oral presentations and receive feedback on pronunciation, wording, grammar and organization.

545. Engineering Entrepreneurship I. (C) Prerequisite(s): Third or Fourth year or Graduate standing.

Engineers and scientists create and lead great companies, hiring managers when and where needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service - and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology

driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder's leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education.

546. Engineering Entrepreneurship II. (C) Prerequisite(s): EAS 545.

This course is the sequel to EAS 545 and focuses on the planning process for a new technology venture. Like its prerequisite, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Whereas EAS 545 investigates the sequential stages of engineering entrepreneurship from the initial idea through the early growth phase of a startup company, EAS 546 provides hands-on experience in developing a business plan for such a venture. Working in teams, students prepare and present a comprehensive business plan for a high-tech opportunity. The course expands on topics from EAS 545 with more in-depth attention to: industry and marketplace analysis; competitive strategies related to high-tech product/service positioning, marketing, development and operations; and preparation of sound financial plans. Effective written and verbal presentation skills are emphasized throughout the course. Ultimately, each team presents its plan to a distinguished panel of recognized entrepreneurs, investors and advisors from the high-tech industry.

898. CPT Research Practicum. (C)

251. Analytical Methods for Engineering. (C)

ENGINEERING MATHEMATICS (ENM)

220. Discrete Dynamical Systems and Chaos. (C) Prerequisite(s): MATH 103, MATH 104 and MATH 114 (Calculus of a Single Variable and some knowledge of Complex Numbers).

This course will cover the mathematics behind the dynamics of discrete systems and difference equations. Topics include: Real function iteration, Converging and Diverging sequences, Periodic and chaotic

sequences, Fixed-point, periodic-point and critical-point theories, Bifurcations and period-doubling transitions to chaos, Symbolic dynamics, Sarkovskii's theorem, Fractals, Complex function iterations, Julia and Mandelbrot sets. In the past, mathematics was learned only through theoretical means. In today's computer age, students are now able to enjoy mathematics through experimental means. Using numerous computer projects, the student will discover many properties of discrete dynamical systems. In addition, the student will also get to understand the mathematics behind the beautiful images created by fractals. Throughout the course, applications to: Finance, Population Growth, Finding roots, Differential Equations, Controls, Game and Graph Problems, Networks, Counting Problems and other real-world systems will be addressed.

321. Engineering Statistics. (C)

This course covers the topics in probability and statistics with an emphasize on the application of probability theories and statistical techniques to practical engineering problems. Mathematical derivations of theorems will be presented whenever it is necessary to illustrate the concepts involved, however.

427. (MEAM527) Finite Elements and Applications. (A) Prerequisite(s): MATH 241 and PHYS 151.

The objective of this course is to equip students with the background needed to carry out finite elements-based simulations of various engineering problems. The first part of the course will outline the theory of finite elements. The second part of the course will address the solution of classical equations of mathematical physics such as Laplace, Poisson, Helmholtz, the wave and the Heat equations. The third part of the course will consist of case studies taken from various areas of engineering and the sciences on topics that require or can benefit from finite element modeling. The students will gain hand-on experience with the multi-physics, finite element package FemLab.

L/R 502. Numerical Methods and Modeling. (B) Sinno. Prerequisite(s): Knowledge of a computer language, Math 240 and 241; ENM 510 is highly recommended; or their equivalents.

Numerical modeling using effective algorithms with applications to problems in engineering, science, and mathematics, and is intended for graduate and advanced undergraduate students in these areas. Interpolation and curve fitting, numerical

integration, solution of ordinary and partial differential equations by finite difference, and finite element methods. Includes use of representative numerical software packages such as MATLAB PDE Toolbox.

503. Introduction to Probability and Statistics. (A) Prerequisite(s): MATH 240 or equivalent.

Introduction to probability. Expectation. Variance. Covariance. Joint probability. Moment generating functions. Stochastic models and applications. Markov chains. Renewal processes. Queuing models. Statistical inference. Linear regression. Computational probability. Discrete-event simulation.

510. Foundations of Engineering Mathematics - I. (A) Prerequisite(s): MATH 240, MATH 241 or equivalent.

This is the first course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green's Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The fall course emphasizes the study of Hilbert spaces, ordinary and partial differential equations, the initial-value, boundary-value problem, and related topics.

511. Foundations of Engineering Mathematics - II. (B) Prerequisite(s): ENM 510 or equivalent.

Vector Analysis: space curves, Frenet - Serret formulae, vector theorems, reciprocal systems, co and contra variant components, orthogonal curvilinear systems. Matrix theory: Gauss-Jordan elimination, eigen values and eigen vectors, quadratic and canonical forms, vector spaces, linear independence, Triangle and Schwarz inequalities, n-tuple space. Variational calculus: Euler-Lagrange equation, Finite elements, Weak formulation, Galerkin technique, FEMLAB. Tensors: Einstein summation, tensors of arbitrary order, dyads and polyads, outer and inner products, quotient

law, metric tensor, Euclidean and Riemannian spaces, physical components, covariant differentiation, detailed evaluation of Christoffel symbols, Ricci's theorem, intrinsic differentiation, generalized acceleration, Geodesics.

520. Theory and Computation for ODE/PED-constrained optimization. (M) Prerequisite(s): Basic theory of ordinary and partial differential equations.

This course introduces the basic theory and algorithms for nonlinear optimization for continuum systems. Emphasis will be given in numerical algorithms that are applicable to problems in which the constraints are ordinary or partial differential equations. Such problems have numerous applications in science and engineering. Lectures and homeworks will examine examples related to control, design, and inverse problems in vision, robotics, computer graphics, bioengineering, fluid and solid mechanics, molecular dynamics, and geophysics.

540. Topics In Computational Science and Engineering. (M)

Prerequisite(s): Background in ordinary and partial differential equations; proficiency in a programming language such as MATLAB, C, or Fortran.

This course is focused on techniques for numerical solutions of ordinary and partial differential equations. The content will include: algorithms and their analysis for ODEs; finite element analysis for elliptic, parabolic and hyperbolic PDEs; approximation theory and error estimates for FEM.

600. Functional Analysis. (C)

Prerequisite(s): ENM 500, ENM 501 or ENM 510, ENM 511 or equivalent.

This course teaches the fundamental concepts underlying metric spaces, normed spaces, vector spaces, and inner-product spaces. It begins with a discussion of the ideals of convergence and completeness in metric spaces and then uses these ideas to develop the Banach fixed-point theorem and its applications to linear equations, differential equations and integral equations. The course moves on to a study of normed spaces, vector spaces, and Banach spaces and operators defined on vector spaces, as well as functional defined between vector spaces and fields. The course then moves to the study of inner product spaces, Hilbert spaces, orthogonal

complements, direct sums, and orthonormal sets. Applications include the study of Legendre, Hermite, Laguerre, and Chebyshev polynomials, and approximation methods in normed spaces. The course then concludes with a study of eigenvalues and eigenspaces of linear operators and spectral theory in finite-dimensional vector spaces.

601. Special Topics in Engineering Mathematics - Nonlinear Dynamics and Chaos. (B) Prerequisite(s):

Permission of Instructor.

Continuous Dynamical Systems: Nonlinear Equations versus Linear Equations, One-Dimensional Flows: Flows on a Line, Fixed Points and Stability, Linear Stability Analysis, Potentials, Bifurcations, and Flows on the Circle. Two-Dimensional Flows: Linear Systems, Eigenvalues and Eigenvectors, Classification of Fixed Points, Phase Portraits, Conservative Systems, Reversible Systems, Index Theory, Limit Cycles, Gradient Systems, Liapunov Functions, Poincare-Bendixon Theorem, Lienard Systems, Relaxation Oscillations, Weakly Nonlinear Oscillators, Perturbation Theory, Saddle-Node, Transcritical and Pitchfork Bifurcations, Hopf Bifurcations, Global Bifurcations of Cycles, Hysteresis, and Poincare Maps. Three-Dimensional Flows: The Lorenz Equations, Strange Attractors and Chaos, The Lorenz Map.

Discrete Dynamical Systems: One-Dimensional Maps, Chaos, Fixed Points and Cobwebs, The Liapunov Exponent, Universality and Feigenbaum's Number, Renormalization Theory, Fractals, Countable and Uncountable Sets, The Cantor Middle-Thirds Set, Self-Similar Fractals and Their Dimensions, The von Koch Curve, Box Dimension and Multifractals.

BIOTECHNOLOGY (BIOT)

700. Biotechnology Seminar. (C)

This is a seminar course where students hear different perspectives in the biotechnology and pharmaceutical industry. Speakers will discuss their experiences in business startups, technology transfer, bioinformatics, pharmaceutical houses, and academics.

899. Independent Study. (C)

ENGLISH (AS) {ENGL}

See English Department website for current descriptions: www.english.upenn.edu

Freshman Seminar 016

See English Department website for current descriptions: www.english.upenn.edu

SM 016. (CINE100, COML016, GSOC016, SAST016) Topics in Literature. (C) Freshman Seminar.

Freshman Seminars under the title "Topics in Literature" will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare's period to the ethnic fiction of contemporary America. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be applied to a period, genre, or thematic requirement within the major.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Intermediate-Level Courses 017-097

See English Department website for current descriptions: www.english.upenn.edu

017. Age of Beowulf. (M)

This course introduces students to the great Old English epic Beowulf within the larger context of Anglo-Saxon culture. We will read the poem in its entirety (after a crash course on Old English grammar); as we do so, we will use our experience of the poem to branch out into such topics as Anglo-Saxon poetics, mythologies and genealogies, manuscript culture, monastic life, archeology, legal codes, slavery, and gender relations. Finally, we will use the poem to think through the place of Old English in modern American and British culture, as for example, the way we conceive of the English language, national identity, and our medieval-saturated popular culture (romances, films, videogames, etc.).

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

018. Old English. (M)

This course introduces students to the powerful and influential corpus of Old English literature. We will read a wide variety of texts: short poems such as *The Wonderer*, *The Seafarer*, *The Wife's Lament* and the passionate religious poem *The Dream of The Rood*; chronicles such as *The Battle Of Maldon Against The Vikings*, *The Old Testament*, *Exodus* and *Bede's Conversion Of The English*; and selections from the greatest of all English epics, *Beowulf*. Readings will be in Old English, and the first few weeks of the course will be devoted to mastering Old English prosody, vocabulary, and grammar (as well as a crash course on the early history of the English language). During the last few weeks we may read modern criticism of Old English poetry, or we will consider the modern poetic reception of Old English literature and explore theories and problems of translation, reading translations of Old English poems by Yeats, Auden, Tolkien, and Heaney.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

019. History of the English Language. (M)

This course traces the history of the English language through English literary history, from Anglo-Saxon England to 21st-century America. We will consider the relationship between different language systems (e.g., syntax, morphology, orthography, grammar) and the relation of those systems to the literature of different historical periods. We will also consider the social and political events influencing language change, such as the introduction of Christianity, the Norman Conquest, the printing press, colonialism, educational policies, and mass media.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 020. Literature Before 1660. (C)

This course will introduce students to key works of English literature written before 1660. It will explore the major literary genres of this period, as well as the social and cultural contexts in which they were produced. The course will examine how literature texts articulate changes in language and form, as well as in concepts of family, nation, and community during the medieval and early modern periods.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

021. (CLST321, COML021) Medieval Literature and Culture. (M)

This course introduces students to four hundred years of English literary culture, from approximately 1100 to 1500. This period was marked by major transformations, not only with respect to government, law, religious practice, intellectual life, England's relation to the Continent (during the 100 Years War), the organization of society (especially after the Black Death), the circulation of literary texts, and the status of authors. Topics may include medieval women writers, manuscript production, literatures of revolt, courtly culture, Crusades, cross-Channel influences, and religious controversy.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

022. Romance. (M)

This course will focus on what is arguably the most extravagant, adventuresome, and fantastical of the literary genres: the Romance. We will read a number of medieval and renaissance romance narratives, in verse and prose, beginning with the Arthurian romances (*Malory's Morte D'Arthur*, *Sir Gawain And The Green Knight*) and continuing with as many (and as much) of the great renaissance romances as time will allow: *Sir Philip Sidney's Arcadia*, *Edmund Spenser's The Faerie Queen*, and *Lady Mary Wroth's Urania*.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

023. History and Theory of Genre. (M)

This course will offer students the opportunity to understand what makes one genre or kind of literature different from another. Where do their definitions originate? How does genre affect how a literary work is written, how it is reproduced, and how it is interpreted? To what degree have the various genres mutated through time? Under what circumstances do new genres emerge? The syllabus will consist of representative works of a number of literary genres (drama, romance, lyric, satire, epic) as well as some readings, both ancient and modern, in the theory of genre.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

025. The Age of Chaucer. (M)

In this class we come to speak as people spoke in England some six centuries ago: in medieval or 'Middle' English. We do this by reading the poetry of Geoffrey Chaucer, a great poet who has influenced everyone from William Shakespeare to Sylvia Plath. Since Middle English takes some getting use to, class assignments are not heavy: usually about 800 lines per class. A typical class might begin by looking at a few of the easier passages in the *Canterbury Tales*, proceed to reading the greatest poem of love in the English language (Chaucer's *Troilus And Criseyde*), before moving on to other contemporary writers in medieval culture. We will likely compare representations of medieval Christianity, Judaism, and Islam, as well as aspects of film adaptation by Italian filmmaker Pasolini (and perhaps by Chaucer scholar Terry Jones). We will consider what it might have been like to live secure in an age of faith; yet to live insecure, as a dizzying new profusion of trades and occupations sprang up in unprecedented "divisions of labor." We will imagine being a medieval woman, and may visit and handle medieval manuscripts. Above all, we will enjoy the poetry.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

026. Drama to 1660. (M)

Early drama in English had its roots as much in Christianity as in Classical antiquity. What grew into the theater of Shakespeare began as networks of strolling players and church authorities in market towns sponsoring cycles of "miracle" and "mystery" plays. This course will introduce students to major dramatic works of the medieval and early modern periods, including plays written for the public stage, closet dramas, masques, mayoral pageants and other kinds of performances. The course will also pay attention to the development of different dramatic genres during these periods, as well as the social and cultural contexts in which they were produced. Students thus will explore the history of drama in English through the renaissance to the closing of the theaters in 1641 and their eventual reopening in 1660.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

029. (CLST167, CLST321, COML167) Classical Antiquity and English Literature. (M) [Formerly ENGL 096].

This course will examine the relationship between early English literature and that of ancient Greece and Rome. At times we

will discuss how classical theories of genre and aesthetics were appropriate and reinvented in medieval, renaissance, and seventeenth-century texts. What does it mean to call Hamlet and Oedipus The King tragedies, or *The Frogs* and *The Way Of The World* comedies? Should we consider the development of English drama and poetry as an extension of an imposing classical tradition or as a sustained and resistant response to it?

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

031. Introduction to Renaissance Literature and Culture. (M) [Formerly ENGL 030].

This course will survey the cultural history of sixteenth and seventeenth century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, social traditions, impacted literature at this vital and turbulent time of English history.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

032. Renaissance Poetics. (M)

An introduction to the theory and practice of verse in England from approximately 1500 to 1700. Primary concerned with poems by Skelton, Wyatt, Surrey, Gascoigne, Sidney, Shakespeare, Spenser, Jonson, Donne, Herbert, Herrick, Marvel, and Milton, this course places special emphasis on the influence of classical and continental poetry in Renaissance England, reading English texts comparatively with texts by Horace, Ovid, Virgil, Petrarch, and du Bellay. The course also examines contemporary critical writing about poetics; debates about the fitness of English to sustain a literature; early efforts to invent a canon of English poets; the issue of translation; and the organization and status of pre-modern genres, like pastoral, epigram and elegy.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

033. (RELS015) The Bible As Literature. (M) [Formerly ENGL 073].

Successive generations have found the Bible to be a text which requires - even demands - extensive interpretation. This course explores the Bible as literature, considering such matters as the artistic arrangement and stylistic qualities of individual episodes as well as the larger thematic patterns of both the Old and New Testaments and the Apocrypha. A good

part of the course is spent looking at the place of the Bible in cultural and literary history and the influence of such biblical figures as Adam and Eve, David, and Susanna on writers of poetry, drama, and fiction in the English and American literary traditions.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

034. (CINE138, FNAR034, HIST034) Cultures of The Book. (M) Humanities & Social Science Sector. Class of 2010 & beyond. [Formerly ENGL 071].

The impact of various technologies (from writing to various forms of manuscript to print to electronics) on the way the written word gives shape to a culture. Emphasis on western cultures from Plato to the present, but participation by students with interest or expertise in non-western cultures will be of great value to the group as a whole. The course offers an ideal perspective from which students can consider meta-issues surrounding their own special interests in a wide variety of fields, as well as learn to think about the way in which traditional fields of study are linked by common inherited cultural practices and constructions.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

038. The Age of Milton. (M)

The seventeenth century was a time of revolution and upheaval, of excesses both puritanical and cavalier. It saw the execution of one kind and the restoration of another, and survived the English Civil War and the great Fire and Great Plague of London. This course explores the literature of this century through the works of John Milton Milton's major works (selected sonnets, *Comus*, *Areopagitica*, *Paradise Lost*, *Paradise Regained*, and *Samson Agonistes*), and his contemporaries. We will concentrate on a number of issues that governed writing in the period, particularly the tension between individual interiority and historical, social and political activity.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 040. British Poetry 1660 - 1914. (C)

This course provides students with a survey of British poetry and poetics from the Restoration to the Modern period, and usually will include writers ranging from Aphra Behn and Alexander Pope to Thomas Hardy. The course may be offered in various forms, some covering less, and

some more historical ground. Most will provide a sampling of eighteenth-century, Romantic, and Victorian poets.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

041. 18th-Century British Literature. (M)

An introduction to British literary and cultural history in the eighteenth century. Typically, this course will contain materials from the later seventeenth to the early nineteenth centuries--from the Restoration and Glorious Revolution through the Enlightenment, the American and French Revolutions, and the Napoleonic Wars--though it need not cover the entire period. We will read plays, poetry and prose in order to understand the aesthetic, intellectual, social and political issues to literary production and achievement in this period.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

042. 18th-Century Poetry. (M)

An introduction to poetic practices as they developed in England, and in English-speaking Britain and its colonies, between the late seventeenth and early nineteenth centuries. Typically, this course will survey poetry on both sides of the Atlantic, though its geographic focus will vary with the instructor. Students will focus on a variety of poetic forms including, through not restricted to: satire, the ode, panegyric, pastoral and topographical poetry, lyric poetry. We will seek to understand poetry as crucial to, and constitutive of, eighteenth-century aesthetic and cultural practice.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

043. Early American Literature. (M) [Formerly ENGL 082].

An introduction to the English-language literatures of North America and the Caribbean from the late 16th to the early 19th centuries. Works in various genres by Thomas Hariot, John Smith, William Bradford, Mary Rowlandson, Anne Bradstreet, Jonathan Edwards, Sarah Knight, Franklin, Jefferson, Wheatley, Freneau, Bryant, Poe, and many others.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

045. (GSOC045) 18th-Century Novel. (M)

This survey of the novel addresses key questions about the novel's "rise" in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent "rise" of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did the institutions like literary reviews, libraries, and the church play in the novel's early reception? While reading will vary from course to course, students should expect to read such authors as Austen, Behn, Brockden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

046. Drama from 1660 - 1840. (M)

This course surveys drama from the Restoration through the Romantic period, and in so doing explores arguably the most tumultuous period of British and American Theater history. These years saw the reopening of the theaters in London in 1660 after their having been closed through two decades of Civil War and Puritan rule. They witness the introduction of actresses to the stage, the development of scenery and the modern drop-apron stage, the establishment of theatrical monopolies in 1660 and stringent censorship in 1737, and the gradual introduction, acceptance, and eventual celebration of the stage in America. Perhaps most important, they oversaw some of the best comedies and farces in the English language, the introduction of pantomime and the two-show evening, sustained experimentation with music and spectacle on stage, and the transformation of tragedy into a star vehicle of actors and actresses like David Garrick, Sarah Siddons, John Philip Kemble, and Edmund Kean.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

048. Transatlantic Literature. (M)

A survey of the literatures of the English-speaking Atlantic world, from the earliest colonial ventures in North America to the cosmopolitan cultures of the 19th-century empire. In prose, poetry, and drama by a diverse range of writers, the course will trace numerous transatlantic dialogues--on colonialism, aesthetics, revolution, slavery, imagination, nationalism, and religion--from the British Isles to the Americas to Western Africa.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

049. Enlightenment and Romanticism. (M)

A survey of literature from the Enlightenment to Romanticism, focusing on the interdisciplinary nature of literary and social change between 1745 and 1848. Students will read the aesthetic, philosophical, and literary writings from this century of American, European, and Caribbean revolutions. While readings will vary from course to course, students should expect to read such authors as Anna Barbauld, William Blake, Edmund Burke, Olaudah Equiano, Henry Fielding, Benjamin Franklin, Philip Freneau, Margaret Fuller, David Hume, Thomas Jefferson, Hannah More, Thomas Paine, Walter Scott, Percy Shelley, Adam Smith, Horace Walpole, Phillis Wheatley, Helen Maria Williams, and Mary Wollstonecraft.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

050. The Romantic Period. (M)

This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brockden Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

051. (GSOC051) 19th-Century British Literature. (M)

In 1815 in the wake of the battle of Waterloo, Great Britain controlled a staggering quarter of the world's landmass and half of its gross national product. This course will begin with the Napoleonic Wars and this Regency aftermath to survey a century of British literature -- from Romanticism through the revolutions of 1848 and the Victorian and Edwardian periods to the beginning of the first World War. Most versions of this course will read both novels and poetry, often focusing on the relation between the two and their function within nineteenth century culture. Others may incorporate drama and non-fiction prose.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

052. 19th-Century Poetry. (M)

[Formerly ENGL 051].

An introduction to British and American poetry and poetics from the early Romantics to the early Modernists. Authors may include Blake, Coleridge, Wordsworth, Hemans, Shelley, Keats, Byron, Bryant, Tennyson, Poe, Longfellow, the Brownings, Whitman, Dickinson, the Brontës, Swinburne, the Rossetts, Hopkins, Arnold, Dunbar, Hardy, and Robinson.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

053. 19th-Century American Literature. (M) [Formerly ENGL 083].

A consideration of outstanding literary treatments of American culture from the early Federalist period to the beginnings of the First World War. We will traverse literary genres, reading autobiographies and travel accounts as well as fiction and poetry.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

055. (COML055, GSOC055) 19th-Century Novel. (M)

During the nineteenth century the novel became the dominant literary form of its day, supplanting poetry and drama on both sides of the Atlantic. In this introduction to the novelists of the period, we will read the writers who secured the novel's cultural respectability and economic prominence. Likely authors will include Austen, the Brontës, Collins, Dickens, Eliot, Hardy, Hawthorne, Melville, Poe, Thackeray, Scott, and Stowe. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

056. Modern Drama. (M)

Selected writings for the stage from the mid-nineteenth century to the present, encompassing such radical movements as realism and naturalism, symbolism and surrealism, metatheatre, expressionism, epic theatre, the theatre of the absurd, and post-modernism. Major playwrights include Ibsen, Strindberg, Chekhov, Shaw, Pirandello, Brecht, Beckett, Kushner, and Parks.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

057. (AFRC057, LALS057) Literature of the Americas to 1900. (M) [Formerly ENGL 080].

This course examines U.S. literature and culture in the context of the global history of the Americas. Historical moments informing the course will range from the origins of the Caribbean slave-and-sugar trade at the beginning of the nineteenth century, to the Monroe Doctrine of 1823 and the U.S. Mexico and Spanish-American wars. Readings will include works by authors such as Frances Calderón de la Barca, Frederick Douglass, Helen Hunt Jackson, Henry Wadsworth Longfellow, José Martí, Herman Melville, John Rollin Ridge, María Amparo Ruiz de Burton, and Félix Varela.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

058. Irish Literature. (M) [Formerly ENGL 063].

This course will provide an introduction to modern Irish literature, focusing on the tension between Ireland's violent history and its heroic mythology. This tension leaves its mark not only on the ravaged landscape, but also on the English language, which displays its "foreignness" most strongly in the hands of Irish writers. Readings will span the genres of poetry, drama, fiction, and history, and will include works by Somerville and Ross, Yeats, George Moore, Joyce, Synge, O'Casey, Beckett, Edna O'Brien, and Brian Friel.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

059. (COML059) Modernisms and Modernities. (M)

This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

060. Rise of the Novel. (M)

This course explores the history of the British novel and the diverse strategies of style, structure, characterization, and narrative techniques it has deployed since the late seventeenth century. While works from the eighteenth and nineteenth centuries will form the core of the reading, some versions of this course will include twentieth-century works. All will provide students with the opportunity to test the advantages and limitations of a variety of critical approaches to the novel as a genre. Readings may include works by Behn, Swift, Defoe, Richardson, Fielding, Lennox, Smollett, Burney, Scott, Austen, the Brontës, Dickens, Eliot, Hardy, Conrad, Joyce, Lawrence, Woolf, Rhys, Greene, Naipaul, Carter, Rushdie, and Coetzee.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

061. (CINE160) 20th-Century British Literature. (M)

This course introduces major works in twentieth-century British literature. We will read across a range of fiction, poetry, plays, and essays, and will consider aesthetic movements such as modernism as well as historical contexts including the two World Wars, the decline of empire, and racial and sexual conflict. Authors treated might include: Conrad, Yeats, Joyce, Eliot, Lawrence, Forster, Shaw, Woolf, Auden, Orwell, Beckett, Achebe, Rhys, Synge, Naipaul, Rushdie, Heaney, and Walcott.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 062. (COML062) 20th-Century Poetry. (M)

From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetics, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of

translation, will be an essential component of the course.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

063. (AFRC063) 20th-Century American Literature. (M) [Formerly ENGL 058].

This course surveys American literature across the twentieth-century, considering its formal innovations in the wake of modernism, the two World Wars, the Cold War and postmodernity. Authors treated might include: James, Wharton, Eliot, Pound, Faulkner, Hemingway, Rhys, Baldwin, Ginsberg, Plath, Pynchon, Walcott, and Morrison.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

064. Modern America. (M) [Formerly ENGL 084].

This course is concerned with American literature and cultural life from the turn of the century until about 1950. The course emphasizes the period between the two World Wars and emphasizes as well the intellectual and cultural milieu in which the writers found themselves. Works by the following writers are usually included: James, Eliot, Frost, Fitzgerald, Faulkner, West, Stevens, DuBois, Williams, Wharton, Stein, West, Moore, and Hemingway.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

065. (AFST065, COML065) 20th-Century British Novel. (M)

This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

066. (ASAM066) Literature and Law. (M) Humanities & Social Science Sector. Class of 2010 & beyond.

An introduction not only to representations of the law and legal processes in literary texts, but also to the theories of reading, representation, and interpretation that form

the foundation of both legal and literary analysis.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

067. 20th-Century Literature of the Americas. (M)

This course situates major U.S. literary movements of the twentieth century within the political and cultural histories of the Americas. With this more global context we will survey writing about revolution, imperialism, social protest, feminism and sexuality, and the influence of the "boom" writers and magical realism on U.S. culture. Writers might include Willa Cather, Michelle Cliff, Coco Fusco, Langston Hughes, Jack Kerouac, Leslie Marmon Silko, Gabriel Garc_a Marquez, Katherine Anne Porter, and William Carlos Williams.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

069. (COML069) Poetry and Poetics. (M)

What is poetry and what place does it have among literary forms? What is its relation to culture, history, and our sense of speakers and audiences? This course will focus on various problems in poetic practice and theory, ranging from ancient theories of poetry in Plato and Aristotle to contemporary problems in poetics. In some semesters a particular school of poets may be the focus; in others a historical issue of literary transmission, or a problem of poetic genres, such as lyric, narrative, and dramatic poetry, may be emphasized. The course will provide a basic knowledge of scansion in English with some sense of the historical development of metrics. This course is a good foundation for those who want to continue to study poetry in literary history and for creative writers concentrating on poetry.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

070. (GSOC060, LALS060) Latina/o Literature and Culture. (M)

A survey of cultural productions by Latinas/os (i.e. people of Latin American descent who have been raised in the U.S.) that usually will focus on the twentieth century, but might at times examine earlier periods instead. The course will take a culturally and historically informed approach to a wide range of novels, poems, plays, and films, and will sometimes include visual art and music. Writers and artists might include Am_rico Paredes, Piri

Thomas, Cherr_e Moraga, Sandra Cisneros, Julia Alvarez, Junot D_az, Cristina Garc_a, El Teatro Campesino, John Leguizamo, Carmen Lomas Garza, the Hernandez Brothers, and Los Tigres del Norte.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

071. (AFRC001, AFRC071, AFST071) Literatures of Africa and the African Diaspora. (M)

This course will serve as an introduction to a particularly rich arena of literature in English. It will also help students to begin to understand many other racial subtexts underlying the culture wars in America, where too often, in the full glare of cameras, an anguished voice informs the audience that 'as an African, I cannot expect justice in this America.'

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

072. (ASAM002) Asian American Literature. (M)

An overview of Asian American literature from its beginnings at the turn of the twentieth century to the present. This course covers a wide range of Asian American novels, plays, and poems, situating them in the contexts of American history and minority communities and considering the variety of formal strategies these different texts take.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

073. 19th-Century Literatures in Dialogue. (M)

What dialogues have defined and constituted American and other literatures? This course examines critical intersections between different literatures of the 19th century, addressing questions of race, ethnicity, and culture. Previous versions of this course have included such titles as "Postbellum/Pre-Harlem" and "Victorian Literature and Ireland." Our readings will consider a range of literary interactions, and will take a self-consciously comparative and intertextual approach.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

074. (AFRC085) Contemporary American Literature. (M) [Formerly ENGL 085].

The readings for this course expose the student to a wide range of American fiction and poetry since World War II, giving considerable attention to recent work.

Works may include *All The King's Men* by Robert Penn Warren, *Herzog* by Saul Bellow, *On The Road* by Jack Kerouac, *V* by Thomas Pynchon, *Of Love and Dust* by Ernest J. Gaines, *A Flag For Sunrise* by Robert Stone, *The Killing Ground* by Mary Lee Settle, and selected poems by Ginsberg, Plath, and Walcott. Readings vary from term to term.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

075. (HIST117, HSOC110, STSC110) Science and Literature. (M) Arts & Letters Sector. All Classes.

This course will explore the emergence of modern science fiction as a genre, the ways it has reflected our evolving conceptions of ourselves and the universe, and its role as the mythology of modern technological civilization. We will discuss such characteristic themes as utopias, the exploration of space and time, biological engineering, superman, robots, aliens, and other worlds--and the differences between European and American treatment of these themes.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

077. (COML077, SAST124) Literature and Empire. (M)

Since the sixteenth century English has been, among other things, an imperial language, and ideas about empire and imperialism have shaped not only many of English literature's central texts but also the development of English literary study as a discipline. This course is an introduction to the way imperial contact and changing ideas about empire and decolonization have shaped literature in English from the sixteenth to the twentieth centuries. We will consider historical and cultural materials to offer contexts for literary production of texts from the sixteenth to the twentieth centuries. The course also will serve as a comprehensive introduction to the way literary and cultural representations of Europe have been influenced by changing ideas about empire and imperialism. Different versions of the course will vary in the historical and cultural material they cover as they offer a context for literary production.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

079. (CINE059, GRMN261, GRMN263, JWST179, JWST261) Jewish-American Literature. (M) Arts & Letters Sector. All Classes.

From vaudeville comedy to modernist poetry, from Tin Pan Alley to the postwar novel, from Yiddish theater to midrashic approaches to literary interpretation, Jewish American literature and thought have been central to, and on the cutting edge of, the fabric of American culture -- high, low, and, especially, in between. This course will examine the many facets of Jewish American literature, both secular and observant, assimilationist and particularist - - from films such as *The Jazz Singer* (1927) to the fiction of Roth and Bellow to the poetry of Bob Dylan and Adrienne Rich. While we will focus on significant works of fiction and poetry, we also will read within the wider world of philosophy, criticism, radio, film, theater, and television that surround them.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

080. (AFRC079) Literatures of Jazz. (M)

That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We'll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphia's most vibrant jazz venues.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

081. (AFRC081, CINE081) African-American Literature. (M)

An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some

versions of the course will concentrate only on the modern period.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

082. (ANTH082) Native-American Literature. (M)

From oral traditions to modern forms, this course surveys the diverse body of Native American literature through its many transformations and contexts, from examples of oral literature to film, poetry, fiction, essays, and drama. Possible authors include Leslie Marmon Silko, Sarah Winnemucca, Sherman Alexie, James Welch, N. Scott Momaday, and Louise Erdrich.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

083. (AFRC083, JWST083) 20th-Century Literatures in Dialogue. (M)

What dialogues have defined and constituted American and other literatures? This course examines critical intersections between different literatures, addressing questions of race, ethnicity, and culture. Previous versions of this course have included such titles as "African-American and Jewish-American Literature." Our readings will consider a range of literary interactions, and will take a self-consciously comparative and intertextual approach.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

084. (AFRC084) Theories of Race and Ethnicity. (M)

The idea of 'race' broadly defined as the signification of biological and sociocultural differences as an index of human superiority or inferiority has played a crucial role in the literary imagination and is fundamental to studying most literatures in English

This course will examine representations of race in literary practices and in particular the centrality of such representations to the historical unfolding of communities and nations.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

086. American Drama. (M) [Formerly ENGL 076].

Selected writings for the American stage from the nineteenth century to the present, in relation to American history, culture, other forms of literary expression, and major movements in theatre aesthetics.

Major playwrights include O'Neill, Odets, Hellman, Miller, Williams, Albee, Shepherd, Mamet, Baraka, Wilson, Kushner, and Parks.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

087. (COML110, THAR110) Theatre, History and Cultural I, Classical Athens to Elizabethan London. (C)
Arts & Letters Sector. All Classes. Fulfills Arts & Letters Distribution Requirement.

This course will explore the forms of public performance, most specifically theatre, as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their anthropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on development of theatre practice in both Western and non-Western cultures intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions and acting methods, this course will investigate, where appropriate, social and political history, the arts, civic ceremonies and the dramaturgic structures of urban living.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

088. American Poetry. (M)

Some versions of this course survey American poetry from the colonial period to the present, while others begin with Whitman and Dickinson and move directly into the 20th century and beyond. Typically students read and discuss the poetry of Williams, Stein, Niedecker, H.D., Pound, Stevens, Fearing, Rakoksi, McKay, Cullen, Wilbur, Plath, Rich, Ginsberg, Kerouac, Waldman, Creeley, Ashberry, O'Hara, Corman, Bernstein, Howe, Perelman, Silliman, and Retallack.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

089. American Fiction. (M)

Some versions of this course survey the American novel from its beginnings to the present, focusing on the development of the form, while others concentrate on the development of American fiction in one or two periods. Readings may include novels by writers such as Brown, Cooper, Hawthorne, Melville, Wharton, Morrison, Twain, James, Adams, Chopin, Howells, Norris, Whitman, Dreiser, Fitzgerald,

Hemingway, Faulkner, Dos Passos, Ellison, and Nabokov.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

090. (AFRC090, COML090, GSOC090) Gender, Sexuality, and Literature. (M)

This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherr_e Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

093. (COML093, GSOC093, LALS093) Introduction to Postcolonial Literature. (M)

English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

094. (COML094) Introduction to Literary Theory. (M)

This course introduces students to major issues in the history of literary theory, and provides an excellent foundation for the English major or minor. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning,

appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the "New" Criticism of the 1920's and 30's, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

L/R 095. (ARTH107, CINE103) Introduction to Film Theory. (C)

This course introduces students to literature's fundamental institutions and practices, and provides an excellent foundation for the English major or minor. This means that we will examine the historical and theoretical origins of both literature and literary studies, and survey some of the debates that have defined them. We will also examine the place of the literary within specific ideas of "culture" -- including the terms "high," "polite," "mass," and "popular" culture -- and with the critical methods useful to the study of mass media like television and film.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

096. (COML096, GSOC096) Theories of Gender and Sexuality. (M)

Humanities & Social Science Sector. Class of 2010 & beyond.

What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality -- a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in *Platos Symposium* to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherr_e Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

097. (COML111, THAR111) Theatre, History and Cultural II. (M)

The idea of "race" -- broadly defined as the signification of biological and socio-cultural differences as an index of human superiority or inferiority -- has played a crucial role in the literary imagination and is fundamental to studying most literatures in English. This course will examine representations of race in literary practices, and in particular the centrality of such representations to the historical unfolding of communities and nations. How do ideas of race inform and engage with literary forms and genres in a given historical moment, and how does literature in turn address the histories and legacies of racist practices? We will also analyze the connections between questions of race and questions of "ethnicity": what, for instance, is the history of this concept, and what does it mean to designate a body of imaginative writing as an "ethnic literature?"

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Sector Requirement Courses 100-105

See English Department website for current descriptions: www.english.upenn.edu

L/R 100. (AFRC105, COML100) Introduction to Literary Study. (C)
Arts & Letters Sector. All Classes.

This course is ideal for students consider the English major or minor, since it serves as an introduction to the study of literature. We will begin by raising fundamental and exciting questions central to literary study: What is literature? What has been and is its function? What is the nature of literary value? We will read a variety of literary genres and critical texts and survey a range of interpretive approaches and methods. The course combines lecture and discussion; students will write a series of short interpretive papers. Some versions of this course will also serve as an introduction to other members of the English faculty, who will visit the class as guest lecturers. This course is intended to serve as a foundation for students interested in going on to become English majors.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

L/R 101. (AFRC101, GSOC101) Study of an Author. (C) Arts & Letters Sector. All Classes.

This is an introduction to literary study through the works of a single author--often Shakespeare, but some versions of this

course will feature other writers. (For offerings in a given semester, please see the on-line course descriptions on the English Department website.) We will read several works and approach them--both in discussion and in writing--from a range of critical perspectives. The author's relation to his or her time, to literary history generally, and to the problems of performance, are likely to be emphasized. Some versions of this course will also serve as an introduction to other members of the English faculty, who will visit the class as guest lecturers. This course is designed for the General Requirement and is ideal for the student wishing to take an English course but not necessarily intending to major.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

102. (CINE112, COML245, HSOC149) Study of a Literary Theme. (C) Arts & Letters Sector. All Classes.

This is an introduction to literary study through the works of a compelling literary theme. (For offerings in a given semester, please see the on-line course descriptions on the English Department website). The theme's function within specific historical contexts, within literary history generally, and within contemporary culture, are likely to be emphasized. Some versions of this course will also serve as an introduction to other members of the English faculty, who will visit the class as guest lecturers. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

103. (CLST141, COML125, NELC180) Study of a Literary Genre. (C) Arts & Letters Sector. All Classes.

An introduction to literary study through a genre, either the short story or poetry. Versions of this course will vary widely in the selection of texts assigned. Some versions will begin with traditional stories or poems, including a sampling of works in translation. Others will focus exclusively on modern and contemporary American short fiction or poetry. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

104. (AFRC106, CINE104, COML104) Study of a Literary Period. (C) Arts & Letters Sector. All Classes.

This is an introduction to literary study through a survey of works from a specific historical period. (For offerings in a given semester, please see the on-line course descriptions on the English Department website.) Some versions will begin with traditional stories or poems, including a sampling of works in translation. Others will focus exclusively on modern and contemporary American short fiction or poetry. This course is designed for the General Requirement, and is ideal for student wishing to take an English course but not necessarily intending to major.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

105. (CINE110, COML106, GSOC105) Topics in Literature and Society. (C) Humanities & Social Science Sector. Class of 2010 & beyond.

This course offers students an opportunity to explore the relation between social institutions and culture, particularly how such institutions structure contemporary human society. Specific versions of this course such as "Copyright and Culture," for example, teach students the specific concepts and principles of legal and literary analysis while exploring the history of how discrete interpretive systems have overlapped in their jurisdictional claims, have shared specific values while rejecting others, and have repeatedly come into conflict with one another over the definition, status, and function of art and intellectual property. In all its versions, this course will provide students with specific tools to understand and evaluate the behavior of human beings in contemporary cultures. At the same time, the subject matter of the course will render the conflict between different social institutions and between their different interpretive methods its centerpiece.

See the English Department's website at www.english.upenn.edu for a description of our current offerings.

Creative Writing Courses 010, 111-119, 121, 130, 135, 145, 155-159, 161, 162,

165

See English Department website for current descriptions: www.english.upenn.edu

SM 010. Creative Writing. (C) This course does not satisfy the writing requirement.

A course designed to allow the students to discover their own talents in several forms of fiction and poetry. Though emphasis is on practice, classroom work includes discussion of theory as well as readings in British and American works. Frequent writing assignments. Reading lists vary with each section.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 111. (COML115) Experimental Writing Seminar. (C) Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

This is a nontraditional "poetry immersion" workshop. It will be structured around a series of writing experiments, intensive readings, art gallery visits, and the production of individual chapbooks or web sites for each participant, and performance of participants' works. There will also be some visits from visiting poets. The emphasis in the workshop will be on new and innovative approaches to composition and form, including digital, sound, and performance, rather than on works emphasizing narrative or story telling. Permission of the instructor is required. Send a brief email stating why you wish to attend the workshop (writing samples not required).

See English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 112. Workshop for Fiction Writers. (C) May be repeated for credit with a different instructor. Students wishing to take this course must submit a writing sample as part of the selection process.

This course emphasizes the study and practice of basic techniques of short fiction, with assignments divided between readings and discussion of student-written material.

See English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 113. (AFRC114) Poetry Writing Workshop. (C) Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with different instructor.

A workshop course in the writing of verse, with seminar and individual discussion of student work. There will be reading of

traditional and contemporary poetry and analysis of the formal elements of verse.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 114. (THAR114) Playwriting Workshop. (C) Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with different instructor. The expressive possibilities and limitations of the stage medium through close reading of plays of various styles and period, study of the various resources of various types of theater, and original exercise in dramatic writing.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 115. Workshop for Advanced Fiction Writers. (C) Prerequisite(s): ENGL 112 or the equivalent. This course is not open to freshmen. Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

The writing of individually selected projects (a novel, a group of short stories) with reading assignments and discussion of student works-in-progress.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 116. (CINE116) Screenwriting Workshop. (C) Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

This course will look at the screenplay as both a literary text and a blue print for production. Several classic screenplay texts will be critically analyzed (REBEL WITHOUT A CAUSE, DOCTOR STRANGELOVE, PSYCHO, etc.) Students will then embark on writing their own scripts. We will intensively focus on: character enhancement, creating "believable" cinematic dialogue, plot development and story structure, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext and visual story-telling. Class attendance is mandatory. Students will submit their works-in-progress to the workshop for discussion.

See English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 117. The Arts and Popular Culture. (C) Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

This is a workshop-oriented that will concentrate on all aspects of writing about artistic endeavor, including criticism, reviews, profiles, interviews and essays. For the purposes of this class, the arts will be interpreted broadly, and students will be able -- and, in fact, encouraged -- to write about both the fine arts and popular culture. Students will be doing a great deal of writing throughout the course, but the main focus will be a 3000-word piece about an artist or arts organization in Philadelphia (or another location approved by the instructor) that will involve extensive reporting, interviews and research. Potential subjects can range from a local band to a museum, from a theater group to a comedian.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 118. Advanced Poetry Writing Workshop. (C) This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

This workshop is especially valuable for creative writing concentrators in poetry within the English Major, for those who are working on longer works, or for those who wish to work on a series of poems connected by style and subject matter.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 130. (CINE130) Advanced Screenwriting. (C) This course is not open to freshman. Students wishing to take this course must submit a writing sample as part of the selection process.

This is a workshop-style course for students who have completed a screenwriting class, or have a draft of a screenplay they wish to improve. Classes will consist of discussing student's work, as well as discussing relevant themes of the movie business and examining classic films and why they work as well as they do.

See English Department website at www.english.upenn.edu for a description of current offerings.

SM 135. (ENGL435, WRIT135) Creative Non-Fiction Writing. (C) May be repeated for credit with a different instructor.

A workshop course in the writing of expository prose. Assignments include informal as well as formal essays, covering such topics as autobiography, family history, review, interview, analysis of advertising and popular culture, travel, work, and satire.

See the English Department's website at www.english.upenn.edu for a description of the current offerings

SM 145. (AFRC145, URBS273) Advanced Non-Fiction Workshop. (C) This course is not open to freshmen. Students wishing to take this course must submit a writing sample a part of the selection process. May be repeated for credit with a different instructor.

Writing with a view to publication in the freelance sections of newspapers such as THE PHILADELPHIA INQUIRER and THE NEW YORK TIMES, in magazines such as THE ATLANTIC and THE NEW YORKER, and in the literary quarterlies and the journals of opinion. Among the areas likely to be considered are writing as a public act, issues of taste and of privacy, questions of ethics and of policy, methods of research and of checking, excerpting, marketing, and the realistic understanding of assignments and of the publishing world. Student papers will be the basis of weekly editorial sessions, with concentration on the language: how to render material literate, how to recognize and dispose of padding and self-indulgence, how to tighten structure and amplify substance.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 155. Writing in the Documentary Tradition. (C) Candidates for this course are required to submit as soon as possible their best example of nonfiction prose. A brief interview with the instructor is required before a permission to enroll can be granted. This course is not open to freshmen.

This course will function as a workshop, with a select group of students. It's a course that will honor the spirit and tradition of "documentary" writing. The word "documentary" has meant many things over time. Here, it means a kind of nose-close observation and reportage. It means a level of being with one's subject matter in a way that other creative writing courses do not allow because of their format and structure. In English 155, a student writer at Penn will dare to "hang" with his topic--a girl's

high-school basketball team; a medical intern in a HUP emergency room; a cleaning lady doing the graveyard shift in a classroom building; a food-truck operator crowding the noontime avenues; a client-patient in the Ronald McDonald House near campus; a parish priest making his solitary and dreary and yet redemptive rounds of the sick and the dying in the hospital--for the entire term. At the term's end, each writer in the course will have produced one extended prose work: a documentary piece of high creative caliber. This is our goal and inspiration. The piece will be 35 to 40 pages long, at minimum.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 156. Photographs and Stories. (C) Candidates for the course are asked to submit as soon as possible one or two samples of their best creative nonfiction prose. Paper copies only, no electronic submissions. Be sure to include name, phone number, email address, the last four digits of your social security number.

A new creative writing course built entirely around the use of photographs, and the crafting of compelling nonfiction narratives from them. The essential concept will be to employ photographs as storytelling vehicles. So we will be using curling, drugstore printed Kodak shots from our own family albums. We will be using searing and famous images from history books. We will be taking things from yesterday's newspaper. We will even be using pictures that were just made by the workshop participants outside the campus gates with a disposable camera from CVS or with their own sophisticated digital Nikon. In all of this, there will be one overriding aim to achieve memorable, full-bodied stories. To locate the strange, evocative, storytelling universes that are sealed inside the four rectangular walls of photograph. They are always there, if you know how to look. It's about the quality of your noticing, the intensity of your seeing.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 157. Introduction to Journalistic Writing. (C)

A course in journalistic writing, introducing the student to the nuts and bolts of reporting, of finding the story, tracking down the facts, interviewing sources, using quotes and dialogue skillfully, editing.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 158. Advanced Journalistic Writing. (C) Nonfiction writing sample a documentary piece, a feature story, profile, etc. will be required.

Advanced Journalistic Writing. How to write profiles personal pieces, and third-person observational pieces, in ways that hook the average reader with strong emphasis on the best journalistic fact-gathering methods, including the cultivation of sources, interviewing techniques, and the proper use of secondary material in the Internet age.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 161. The Art of the Profile. (C) This course is not open to freshman.

Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

One of the toughest challenges for any journalist is to master the art of the profile-writing. In this new course, students will read and critique some of the classic profile articles of the past 40 years, and, most importantly, write profile articles of their own. Writing about people is often very rewarding, but rarely easy. In this course, students will debate the questions that have plagued and energized journalists for generations: How do you persuade somebody that he or she is a worthy topic for a profile? How do you ask sensitive questions? If the person is a celebrity, how do you avoid being manipulated into writing a "puff piece"? Do you tape the interviews or just take notes? How do you structure a profile in order to keep the reader's attention? Is it even possible to capture the essence of a person on the written page? Are you a friend to the profile subject--or a manipulator? A journalist at The New Yorker recently said that a writer's relationship with the profile subject is "a kind of love affair." On the other hand, a famous author once said that a profile writer is typically "gaining their trust and betraying without remorse." Which is closer to the truth?

Students, in addition to writing their own profiles, will kick around these questions while reading some of the best contemporary profile writers, including Susan Orlean, Gay Talese, David Remnick, Mark Bowden, and Judy Bachrach. The instructor will also offer several of his own.

See English Department website at www.english.upenn.edu for a description of current offerings.

SM 162. Covering Political Elections.

(C) This course is not open to freshman. Students wishing to take this course must submit a writing sample as part of the selection process.

In this new course, students with a passion for both writing and politics will have the unique opportunity to track the news as it unfolds week by week, to critique it in class, and, most importantly, to write about it in a variety of formats, ranging from "straight" news to informed opinion. Students can expect spirited class debate about the elusive nature of "objectivity," the often thin line between truth and rumor, the challenges of fact-checking a candidate's "spin," the challenges of writing responsibly in an era when even facts seem to be polarized, the challenges of analyzing primary results and writing about it effectively, the growing pressure on journalists to reveal their political beliefs, and much more. Some of the writing will happen in class; students will view excerpts from debates and Sunday shows, and file their reports "on deadline." Some of the class sessions will focus on the hottest news of the moment. And students will also have a chance, in class, to critique some of the nation's best political writers--reporters, feature writers, columnists, bloggers.

See English Department website at www.english.upenn.edu for a description of current offerings.

199. Independent Study in Writing.

(C) Interested students must receive permission by the professor and the English Department.

Supervised study in writing.

English Research Seminars

See English Department website for current descriptions: www.english.upenn.edu

SM 218. Topics In Old English. (M)

Spaces will be reserved for English majors.

This seminar explores an aspect of Anglo-Saxon culture intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 219. Topics In The History of The English Language. (M) [Formerly ENGL 279]

Spaces will be reserved for English majors.

This seminar explores an aspect of the History of the English Language; specific topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 220. Topics in Medieval Literature. (M) Spaces will be reserved for English Majors.

An in-depth examination of some specialized aspect of medieval literature. Topics in the past have included the medieval romance, the education of princes, the "mirror of mirrors" in Trojan and Arthurian romances, and medieval narrative.

SM 221. (COML221, COML354, GSOC223) Topics In Medieval Literature. (M) [Formerly ENGL 220].

Spaces will be reserved for English majors. This seminar explores an aspect of medieval literature intensively; specific course topics will vary from year to year. Topics in the past have included the medieval performance, medieval women, and medieval law and literature.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 222. (COML222, GSOC221) Topics In Romance. (M) Spaces will be reserved for English majors.

This seminar explores an aspect of epic or romance intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 223. (COML333, ITAL333) Topics In Medieval Poetry. (M) Spaces will be reserved for English majors.

This course explores an aspect of Medieval poetry intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 225. Topics In Chaucer. (M) Spaces will be reserved for English Majors.

This course explores an aspect of Chaucer's writings intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 226. (CLST227) Topics In Drama to 1660. (M) Spaces will be reserved for English majors.

This course explores an aspect of drama before 1660 intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 229. (CLST296, CLST315, CLST325, CLST360, COML296) Topics In Classicism and Literature. (M) [Formerly ENGL 296]. Spaces will be reserved for English majors.

This advanced seminar will examine the classical backgrounds to English poetry, in particular the Biblical and Greco-Roman antecedents to Renaissance lyric verse and verse drama (such as, preeminently, Shakespeare). Different versions of this course will have different emphases on Biblical or Hellenist backgrounds.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 231. (COML230) Topics In Renaissance Literature. (M) [Formerly ENGL 230]. Spaces will be reserved for English majors.

This course explores an aspect of renaissance literature intensively; specific topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 232. Topics In 17th-Century Poetry. (M) [Formerly ENGL 231]. Spaces will be reserved for English majors.

The works of poets of the sixteenth and seventeenth centuries, such as John Donne, George Herbert, Henry Vaughan and other, approached through a variety of topics; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 234. (HIST411) Topics In The History of the Book. (M) [Formerly ENGL 297 or 298]. Spaces will be reserved for English majors.

This course explores an aspect of the History of the Book intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 236. (GSOC233, THAR236) Topics In Renaissance Drama. (M)

Prerequisite(s): Pre-requisites THAR 120 or 121 (or their equivalent). Spaces will be reserved for English Majors.

Through specialized readings, writing assignments, and in-class acting exercises, the class will develop methods of interpreting Shakespeare's plays through

theatrical practice. Topics include Shakespeare's use of soliloquy, two and three person scenes, the dramatic presentation of narrative source material, modes of defining and presenting the "worlds" of the plays, and the use of theatrical practice to establish authoritative text.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 238. Topics In 17th-Century Literature. (M) Spaces will be reserved for English Majors.

This course explores an aspect of 17th-century literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 241. (ASAM241, COML239, GSOC241) Topics In 18th-Century Literature. (M) Spaces will be reserved for English Majors.

This course explores an aspect of 18th-century literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 242. Topics In 18th-Century Poetry. (M) Spaces will be reserved for English majors.

This course explores an aspect of 18th-century poetry intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 243. Topics In Early American Literature. (M) Spaces will be reserved for English Majors.

This course explores an aspect of early American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 245. (GSOC245) Topics In The 18th-Century Novel. (M) Spaces will be reserved for English Majors.

This course explores an aspect of 18th-century novel intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 246. Topics In Drama 1660 - 1840. (M) Spaces will be reserved for English majors.

This course explores an aspect of drama from 1660 to 1840 intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 248. Topics In Transatlantic Literature. (M) Spaces will be reserved for English majors.

This course explores an aspect of transatlantic literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 250. (HIST491) Topics In Romanticism. (M) Spaces will be reserved for English Majors.

This course explores an aspect of Romantic literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 251. (CINE251, COML249, GSOC250) Topics In 19th-Century Literature. (M) Spaces will be reserved for English Majors.

This course explores an aspect of 19th-century literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 252. Topics In 19th-Century Poetry. (M) [Formerly ENGL 251] Spaces will be reserved for English majors.

This course explores an aspect of 19th-century poetry intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 253. (AFRC263, GSOC284) Topics In 19th-Century American Literature. (M) [Formerly ENGL 283] Spaces will be reserved for English majors.

This course explores an aspect of 19th-century American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 255. (COML261, GSOC255) Topics In The 19th-Century Novel. (C) Spaces will be reserved for English Majors.

This course explores an aspect of the 19th-century novel intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 256. (AFRC275, COML267, THAR270, THAR274, THAR275) Topics In Modern Drama. (M) [Formerly ENGL 271]. Spaces will be reserved for English majors.

This course explores an aspect of Modern drama intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 257. Topics In Irish Literature. (M) Spaces will be reserved for English majors.

This course explores an aspect of Irish literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 258. (CLST365) Topics in Irish Literature. (C) Spaces will be reserved for English Majors.

This course explores an aspect of modern Irish literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 259. (COML248) Topics In Modernism. (M) Prerequisite(s): Pre-requisites some knowledge of 20th-century poetry. [Formerly ENGL 210] Spaces will be reserved for English majors.

This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 260. (AFRC262, AFST260, GSOC226, GSOC260, LALS260) Topics In The Novel. (M) Spaces will be reserved for English Majors.

This course explores an aspect of the novel intensively, asking how novels work and

what they do to us and for us. Specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 261. (COML271, GRMN253, GSOC266, JWST262) Topics In 20th-Century Literature. (M) Spaces will be reserved for English Majors.

The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 262. (COML274) Topics In 20th-Century Poetry. (M) Spaces will be reserved for English majors.

The course explores an aspect of 20th-century poetry intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 263. Topics In 20th-Century American Literature. (M) Spaces will be reserved for English majors.

The course explores an aspect of 20th-century American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 264. (AFRC266, GSOC274) Topics In Modern American Literature. (M) [Formerly ENGL 284]. Spaces will be reserved for English majors.

This course explores an aspect of Modern American literature intensively; specific course topics will vary, and have included "American Expatriotism," "The 1930's," and "Intimacy and Distance: William Faulkner, Zora Neale Hurston, Eudora Welty, and Richard Wright."

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 265. (COML263, GSOC293) Topics In The 20th-Century Novel. (M) Spaces will be reserved for English Majors.

This course explores an aspect of the 20th-century novel intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 266. (CINE295) Topics In Law and Literature. (M) Spaces will be reserved for English majors.

This course explores an aspect of law and literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 269. (AFRC273) Topics In Poetry and Poetics. (M) [Formerly ENGL 270]. Spaces will be reserved for English majors.

This course explores an aspect of poetry and poetics intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

270. (COML396, LALS290, ROML396) Topics In Latina/o Literature. (M)

Spaces will be reserved for English Majors.

This course explores an aspect of Latina/o literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 271. (AFRC276, COML273) Topics In the Literature of Africa and the African Diaspora. (M) Spaces will be reserved for English Majors.

This course explores an aspect of the literature of Africa and the African Diaspora intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 272. (ASAM202, CINE272) Topics In Asian American Literature. (M)

Spaces will be reserved for English Majors.

This seminar is an advanced-level topics-based version of ENGL 072, Introduction to Asian American Literature. The intended audience is junior and senior English majors and advanced students in Asian studies, Asian American studies, contemporary U.S. and world history, ethnic studies, urban studies, etc. Typical versions of this seminar will include representations and images of Asians in contemporary U.S. novels and films; Asian American literature by women; Asian American film narrative and film aesthetics; studies in Asian American literature and visual art; Asian American literature and immigration; Asian American literature in the context of the literature of exile and journey; Asian American literature 1929-1945; Asian American literature, 1945 to the present;

Anglophone/South Asian literature in England, 1970 to the present; Southeast Asia, Vietnam, and American literature, 1970-1990; etc. Students will typically present research projects and write several long essays.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 274. (AFRC385, CINE271, GSOC285, THAR271) Topics In Contemporary American Literature. (M) [Formerly ENGL 285]. Spaces will be reserved for English majors.

This course explores an aspect of contemporary American literature intensively; specific course topics will vary from year to year but have included "The Literary History of The Cold War, 1947-1957" and the "Kelly House Fellows Seminar."

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 276. (COML265, THAR240) Topics In Theatre History. (M) Spaces will be reserved for English Majors.

The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 279. (CINE159, GRMN261, JWST279, NELC159) Topics In Jewish and Jewish-American Literature. (M) Arts & Letters Sector. All Classes. [Formerly ENGL 287] Spaces will be reserved for English Majors.

This course explores an aspect of Jewish and/or Jewish-American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 281. (AFRC281, ANTH281, CINE281, COMM281, LALS280) Topics In African-American Literature. (M) Spaces will be reserved for English Majors.

In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included "African American Autobiography," "Backgrounds of African American Literature," "The Black Narrative" (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 282. (ANTH282, CINE282) Topics In Native American Literature. (M) Spaces will be reserved for English Majors.

This course explores an aspect of Native-American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 284. (AFRC286) Topics In Race and Ethnicity. (M) Spaces will be reserved for English Majors.

This course explores an aspect of race and ethnicity intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 286. (AFRC289, CINE280, ENGL593, LALS286) Topics In American Literature. (M) Spaces will be reserved for English Majors.

This course explores an aspect of American literature intensively; specific course topics will vary, and have included "American Authors and the Imagined Past" and "American Gothic."

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 288. (AFRC288, COML288) Topics In American Poetry. (M) Spaces will be reserved for English Majors.

Sometimes limiting itself to the works of one or two authors, sometimes focusing on a particular theme such as "American Poetry and Democratic Culture," this course devotes itself to the study of twentieth-century American poetry.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 290. (AFRC290, COML290, FOLK240, GSOC290, GSOC293) Topics In Gender, Sexuality, and Literature. (M) Spaces will be reserved for English Majors.

The advanced women's studies course in the department, focusing on a particular aspect of literature by and about women. Topics might include: "Victorian Literary Women"; "Women, Politics, and Literature"; "Feminist Literary Theory"; and similar foci.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 291. (ARTH290, CINE201, COMM291, GRMN259) Topics In Film History. (M) Spaces will be reserved for English Majors.

This course explores an aspect of Film History intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 292. (ARTH290, CINE202, CINE292, CINE392, THAR273) Topics In Film Studies. (M) Spaces will be reserved for English Majors.

This course explores an aspect of Film Studies intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 293. (AFRC293, COML378, LALS293, SAST224) Topics In Postcolonial Literature. (M) Spaces will be reserved for English Majors.

This course explores an aspect of Postcolonial literature intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 294. (ARTH301, COML291) Topics In Literary Theory. (M) [Formerly ENGL 204] Spaces will be reserved for English majors.

This course explores an aspect of literary theory intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 295. (CINE260, CINE290, CINE296, CINE393, COMM392) Topics In Cultural Studies. (M) Spaces will be reserved for English majors.

This course explores an aspect of cultural studies intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

299. Independent Study in Language and Literature. (C) Interested students must receive permission by the professor and the English Department.

Supervised reading and research.

SM 401. (URBS406) Teaching American Studies. (M) Permission given by the professor.

A double-credit course that combines the study of American cultural with High School teaching. Each student in the course will complete a standard list of readings and writing assignments, including several brief written reports and a fifteen-page final essay. In addition, each student will be assigned to an English or Social Studies teacher at University City High School and will assist that teacher at least three hours each week in class. The second half of English 401 also comprises a list of readings mainly in urban education, and a number of writing assignments, including another fifteen-page final paper.

See the English Department's website at www.english.upenn.edu for a description of current offerings.

The English Honors Program, 311

See English Department website for current descriptions: www.english.upenn.edu

SM 311. The Honors Program. (C) Students must receive permission from the Director of English Honors Program.

An essay of substantial length on a literary or linguistic topic, written under the supervision of a faculty adviser.

See the English Department's website at www.english.upenn.edu for a description of current offerings.

Benjamin Franklin Seminars:

See English Department website for current descriptions: www.english.upenn.edu

SM 305. Literary Research and Methods. (M) Benjamin Franklin Seminar.

The literary research seminar will introduce English Majors to the variety of modes of conducting literary research and dealing with literary texts. It is conceived as a seminar that will enhance the critical and textual skills of any student, as well as acquainting students with electronic research methods.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 318. Topics In Old English. (M) Benjamin Franklin Seminar.

This seminar explores an aspect of Anglo-Saxon culture intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 319. Topics In The History of The English Language. (M) Benjamin Franklin Seminar.

This course focuses on some clearly defined aspects of language history, for example, "The Behavior of Language and Language of Behavior." which examines language taboos, the language of sexuality and sexism, mutations of meaning, and other subtleties of language.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 321. Topics In Medieval Literature. (M) Benjamin Franklin Seminar.

This seminar explores an aspect of medieval literature intensively; specific course topics will vary from year to year. Topics in the past have included the medieval performance, medieval women, and medieval law and literature.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 322. Topics In Romance. (M) Benjamin Franklin Seminar.

This seminar explores an aspect of epic or romance intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 323. (ITAL333) Topics In Medieval Poetry. (M) Benjamin Franklin Seminar.

This course explores an aspect of Medieval poetry intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 325. Topics In Chaucer. (M) Benjamin Franklin Seminar.

This course explores an aspect of Chaucer's writings intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 326. Topics In Drama to 1660. (M) Benjamin Franklin Seminar.

This course explores an aspect of drama before 1660 intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 329. (CLST329, COML329) Topics In Classicism and Literature. (M) Benjamin Franklin Seminar.

This advanced seminar will examine the classical backgrounds to English poetry, in particular the Biblical and Greco-Roman antecedents to Renaissance lyric verse and verse drama (such as, preeminently, Shakespeare). Different versions of this course will have different emphases on Biblical or Hellenist backgrounds.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 331. Topics In Renaissance Literature. (M) [Formerly ENGL 330]. Benjamin Franklin Seminar.

This course explores an aspect of renaissance literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 332. Topics In Renaissance Poetry. (M) [Formerly ENGL 331]. Benjamin Franklin Seminar.

The works of poets of the sixteenth and seventeenth centuries, such as John Donne, George Herbert, Henry Vaughan and others, approached through a variety of topics; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 333. Religion in the Modern World. (M)**SM 334. Topics In The History of The Book. (M)** Benjamin Franklin Seminar.

This course explores an aspect of the History of the Book intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 336. Topics In Renaissance Drama. (M) Benjamin Franklin Seminar.

Through specialized readings, writing assignments, and in-class acting exercises, the class will develop methods of interpreting Shakespeare's plays through theatrical practice. Topics include Shakespeare's use of soliloquy, two and three person scenes, the dramatic presentation of narrative source material, modes of defining and presenting the "worlds" of the plays, and the use of theatrical practice to establish authoritative text.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 338. Topics In 17th-Century Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of 17th-Century literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 341. (GSOC341) Topics In 18th-Century Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of 18th-Century British literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 342. Topics In 18th-Century Poetry. (M) Benjamin Franklin Seminar.

This course explores an aspect of 18th-Century poetry intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 343. Topics In Early American Literature. (M) [Formerly ENGL 382]. Benjamin Franklin Seminar.

This course explores an aspect of early American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 345. (GSOC335) Topics In The 18th Century Novel. (M) Benjamin Franklin Seminar.

This course explores an aspect of 18th-Century novel intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 346. (THAR240) Topics In Drama, 1660 to 1840. (M) Benjamin Franklin Seminar.

This course explores an aspect of drama from 1660 to 1840 intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 348. Topics In Transatlantic Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of transatlantic literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 350. Topics In Romanticism. (M) Benjamin Franklin Seminar.

This course explores an aspect of Romantic literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 351. Topics In 19th-Century Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of 19th-Century literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 352. Topics In 19th-Century Poetry. (M) Benjamin Franklin Seminar.

This course explores an aspect of 19th-Century poetry intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 353. Topics In 19th-Century American Literature. (M) [Formerly ENGL 383]. Benjamin Franklin Seminar.

This course explores an aspect of 19th-Century American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 355. Topics In The 19th-Century Novel. (M) Benjamin Franklin Seminar.

This course explores an aspect of the 19th-Century novel intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 356. (COML332, GSOC371) Topics In Modern Drama. (M)

Benjamin Franklin Seminar.

This course explores an aspect of Modern drama intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 358. Topics In Irish Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of Irish literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 359. (COML355) Topics In Modernism. (M) [Formerly ENGL 310]. Benjamin Franklin Seminar.

This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 360. (COML361) Topics In The Novel. (M) [Formerly ENGL 375] Benjamin Franklin Seminar.

This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. Specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 361. Topics In 20th-Century Literature. (M) Benjamin Franklin Seminar.

The course explores an aspect of 20th-Century literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 362. Topics In 20th-Century Poetry. (M) Benjamin Franklin Seminar.

The course explores an aspect of 20th-Century poetry intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 363. Topics In 20th-Century American Literature. (M) Benjamin Franklin Seminar.

The course explores an aspect of 20th-Century American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 364. Topics In Modern American Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of Modern American literature intensively; specific course topics will vary, and have included "American Expatriotism," "The 1930's," and "Intimacy and Distance: William Faulkner, Zora Neale Hurston, Eudora Welty, and Richard Wright."

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 365. Topics In The 20th-Century Novel. (M) Benjamin Franklin Seminar.

This course explores an aspect of the 20th-century novel intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 366. Topics In Law and Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of law and literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 369. Topics In Poetry and Poetics. (M) [Formerly ENGL 370]. Benjamin Franklin Seminar.

This course explores an aspect of poetry and poetics intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 370. (LALS370) Topics In Latina/o Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of Latina/o literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 371. (AFRC371) Topics In the Literature of Africa and The African Diaspora. (M) Benjamin Franklin Seminar.

This course explores an aspect of the literature of Africa and the African Diaspora intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 372. Topics In Asian American Literature. (M) Benjamin Franklin Seminar.

This seminar is an advanced-level topics-based version of ENGL 072, Introduction to Asian American Literature. The intended audience is junior and senior English majors and advanced students in Asian studies, Asian American studies, contemporary U.S. and world history, ethnic studies, urban studies, etc. Typical versions of this seminar will include representations and images of Asians in contemporary U.S. novels and films; Asian American literature by women; Asian American film narrative and film aesthetics; studies in Asian American literature and visual art; Asian American literature and immigration; Asian American literature in the context of the literature of exile and journey; Asian American literature 1929-1945; Asian American literature, 1945 to the present; Anglophone/South Asian literature in England, 1970 to the present; Southeast Asia, Vietnam, and American literature, 1970-1990; etc. Students will typically present research projects and write several long essays.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 374. Topics In Contemporary American Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of contemporary American literature intensively; specific course topics will vary from year to year but have included "The Literary History of The Cold War, 1947-1957" and the "Kelly House Fellows Seminar."

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 376. (THAR240) Topics In Theatre History. (M) Benjamin Franklin Seminar.

The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 379. Topics In Jewish and Jewish-American Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of Jewish and/or Jewish-American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 381. (AFRC381) Topics In Africican-American Literature. (M) Benjamin Franklin Seminar.

In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the

Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included "African American Autobiography," "Backgrounds of African American Literature," "The Black Narrative" (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 382. Topics In Native-American Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of Native-American literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 384. Topics In Race and Ethnicity. (M) Benjamin Franklin Seminar.

This course explores an aspect of race and ethnicity intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 386. (ARTH386) Topics In American Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of American literature intensively; specific course topics will vary, and have included "American Authors and the Imagined Past" and "American Gothic."

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 388. Topics In American Poetry. (M) Benjamin Franklin Seminar.

Sometimes limiting itself to the works of one or two authors, sometimes focusing on a particular theme such as "American Poetry and Democratic Culture," this course devotes itself to the study of twentieth-century American poetry.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 390. (CINE308, GSOC390) Topics In Gender, Sexuality, and Literature. (M) Benjamin Franklin Seminar.

The advanced women's studies course in the department, focusing on a particular aspect of literature by and about women. Topics might include: "Victorian Literary Women"; "Women, Politics, and Literature"; "Feminist Literary Theory"; and similar foci.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 391. Topics In Film History. (M) Benjamin Franklin Seminar.

This course explores an aspect of Film History intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 392. (ARTH301, ARTH489, CINE392) Topics In Film Studies. (M) Benjamin Franklin Seminar.

This course explores an aspect of Film Studies intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 393. (AFST393, COML392, GSOC393, SAST323) Topics In Postcolonial Literature. (M) Benjamin Franklin Seminar.

This course explores an aspect of Postcolonial literature intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 394. (CLST396, COML383, ROML390) Topics In Literary Theory. (M) [Formerly ENGL 304] Benjamin Franklin Seminar.

This course explores an aspect of literary theory intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 395. (COML395) Topics In Cultural Studies. (M) Benjamin Franklin Seminar.

This course explores an aspect of cultural studies intensively; specific course topics vary from year to year.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Graduate-Level Courses 500-598

See English Department website for current descriptions: www.english.upenn.edu

SM 500. Paleography. (M)

A survey of the major medieval scripts, from Roman Capitals to Elizabethan Secretary Hands, with special focus on the study of Latin and vernacular manuscripts from the 12th-15th centuries and the aids needed to recover, evaluate, transcribe, and edit them. Requirements: weekly transcription, a midterm exam, and a formal description of a manuscript book in one of the Philadelphia-area libraries.

SM 501. Introduction to Old English Language and Literature. (M)

This is an accelerated study of the basic language of Anglo-Saxon England, together with a critical reading of a variety of texts, both prose and poetry.

SM 504. (CLST514, COML514) History of the English Language. (M)

An introduction to the methods of historical linguistics through a study of English from its prehistoric origins to the present day.

SM 505. (CINE505) Electronic Literary Studies Proseminar. (C)

This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by recent technological innovation.

SM 506. Beowulf. (M) Prerequisite(s): ENGL 501 or its equivalent.

The primary focus of this course is a thorough reading of BEOWULF in the original; we will use the edition by F. Klaeber. In addition to the close textual and critical study of the text, we will attempt to reconstruct, through reference to related Anglo Saxon history, literature and learning, the world of ideas and beliefs which gave rise to the poem.

SM 507. Introduction to Middle English. (M)

The course aims at giving the student a wide reading experience in Middle English literature (1100-1400, exclusive of Chaucer). It will consider the main literary genres, such as romance, debate, saint's legend, allegory, lyric prose, among others.

SM 523. (COML523, GSOC523) Medieval Drama. (M)

A study of the development of medieval drama from its beginnings to the late fifteenth century. The course begins with the Latin liturgical drama, considers

important early plays in French and German, and then concentrates on the English Corpus Christi cycles and morality plays.

SM 524. (CLST618, COML601) Topics Medieval Studies. (M)

This course covers topics in Medieval literature. Its emphasis varies with instructor.

SM 525. (CLST610) Chaucer. (M)

An advanced introduction to Chaucer's poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer's development as a narrative artist.

SM 531. (COML538) Renaissance Poetry. (M)

An advanced introduction to Renaissance poetry, offering varying emphases, but usually involving some consideration of Shakespeare's sonnets and of the poetry of Ben Jonson, John Donne, and Andrew Marvell.

SM 534. Jacobean Drama. (M)

An introductory survey of Jacobean drama, usually including some plays by Jonson, Chapman, Webster, and Beaumont and Fletcher.

SM 535. (COML543) Shakespeare. (M)

Readings in the work of Shakespeare and other writers of the period. Specific texts vary with instructor.

SM 537. (COML537) Renaissance Epic. (M)

An introduction to the practice and theory of epic in the early modern period. Specific texts vary with instructor.

SM 538. (COML546, GSOC538) Major Renaissance Writers. (M)

This is a monographic course, which may be on Spenser, Milton, or other major figures of the period.

SM 539. (COML687, SPAN687) Spenser. (M)

A reading of THE FAERIE QUEENE with special reference to the irreducibility of its allegory to modern critical methodology, and to its political siting within Spenser's career, as well as within late Elizabethan culture.

SM 540. (COML542) Topics in 18th Century British Literature. (M)

This course covers topics in 18th Century British literature. Its emphasis varies with instructor.

SM 541. Eighteenth-Century Poetry. (M)

An introductory seminar in 18th-Century poetry. Specific texts vary with instructor.

SM 543. Introduction to Eighteenth-Century Literature. (M)

Usually offered as a survey of philosophic and political ideas, artistic conventions, and texts from 1690 to 1800. Typical readings might be in Swift, Pope, Gay, Boswell, Johnson, Burke, Gibbon, Chatterton, and Blake. The course has also been offered in recent years as a close study of a particular theme or problem in the 18th Century, such as taht of seduction.

SM 544. Richardson.

Careful examination of the work of the most influential European novelist of the eighteenth century. Our primary focus will be on Richardson's three novels, PAMELA (parts one and two), CLARISSA, and primary materials (especially letters), evidence of Richardson's collaborative relationships with his readers (especially Aaron Hill and Lady Bradshaigh), the significant revisions he made to his novels over the years, and the important cultural criticism that has emerged around his work over the past fifteen years.

SM 545. (COML547) Eighteenth-Century Novel. (M) Staff.

A survey of the major novelists of the period, often beginning with Defoe and a few of the writers of amatory fiction in the early decades of the century and then moving on to representative examples of the celebrated novels by Richardson, Fielding, and others of the mid-century and after.

SM 548. (COML545, FOLK545) English Literature and Culture, 1650-1725. (M)

English 548, with its companion, English 549, studies the literature of this period in the context of the artistic and cultural milieu of the later seventeenth and early eighteenth centuries. Texts usually include works by Dryden, Rochester, Swift, Pope, and Defoe.

SM 550. (COML550, GSOC550) Topics in Romanticism. (M)

This class explores the cultural context in which the so-called Romantic Movement

prospered, paying special attention to the relationship between the most notorious popular genres of the period (gothic fiction and drama) and the poetic production of both canonical and emerging poets.

SM 551. (COML551) British Romanticism: The First Generation. (M)

This course attempts a concentrated survey of the early years -- primarily the 1790's -- of the English Romantic period. Specific texts vary with instructor, but usually include works from Blake, Coleridge, and Wordsworth.

SM 552. Later British Romanticism. (M)

This is a companion course to English 551, and treats English Romanticism of the early 19th-century. Specific texts vary with instructor, but generally include works by Wordsworth, Byron, and the Shelleys.

SM 553. (COML554, GSOC553, RELS531) British Women Writers. (M)

A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825.

SM 555. Victorian Poetry. (M)

A study of Victorian Poetry, usually including poems by Tennyson, Browning, Arnold, Fitzgerald, Rossetti, Swinburne, and Morris.

SM 556. (CINE556, COML557, GSOC556) Topics in 19th-Century British Literature. (M)

This course covers topics in nineteenth-century British Literature, its specific emphasis varying with the instructor.

SM 558. Topics in 19th-Century American Literature. (M)

This course covers topics in 19th-Century American literature, its specific emphasis varying with the instructor.

SM 563. Topics in 20th-Century British Literature. (M)

This course focuses on British modernism and/or postmodernism, with specific emphases determined by the instructor.

SM 564. (COML564) British Modernism. (M)

An introduction to British Literary Modernism. Specific emphasis will depend on instructor.

SM 567. Postmodern British Fiction. (M)

Either a survey of recent British writers (usually novelists) or a more focused exploration of a particular moment or issue within British postmodernism, for example that of the emergence of Black British writing.

SM 568. (ENGL768) Yeats & Joyce. (M)

This course counterpoints the artistic careers of William Butler Yeats and James Joyce. The central texts will be Yeats's *Collected Poems* and Joyce's *Dubliners*, and *Portrait of the Artist as a Young Man*.

SM 569. (AFRC569, ARTH590, CINE501, COML569, GSOC569) Topics in 20th-Century American Literature. (M)

This course covers topics in 20th-century literature, its emphasis varying with instructor.

SM 570. (AFRC570, COML573) African-American Literature. (M)

This course treats some important aspect of African-American literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literature and cultural studies, and on the Harlem Renaissance.

SM 571. (COML682, SPAN682) Literary Theory. (M)

This course is usually offered in the fall as a general introduction to literary and cultural theory, covering a wide range of thinkers and approaches. It is also sometimes offered in the spring as a concentrated exploration of a particular problem or school of thought.

SM 572. (AFRC532, AFRC572, COML575, LALS702, SOCI702) Topics in African Literature. (M) Wong, Edlie.

This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions established writers in their use of old forms and experiments with new.

SM 573. (ARTH573, CINE515, COML570, FREN573, GRMN573) Topics in Criticism and Theory. (M)

This course covers topics in literary criticism and theory.

SM 581. Oscar Wilde. (M)

This course focuses on the life and works of Oscar Wilde. An attempt will be made to recapture the 1890s context of his work by examining the history of criminal laws against homosexuality, film, the work of Wilde's contemporaries, and most centrally the works of Wilde himself.

SM 582. American Literature to 1810. (M)

In this course we shall examine the ways various voices--Puritan, Indian, Black, Female, Enlightened, Democratic--intersect with each other and with the landscape of America to produce the early literature(s) of America.

SM 583. Topics in 19th-Century American Literature. (M)

A survey of 19th-century American literature that usually focuses on a particular issue or problem, such as: gender and manhood; the politics of humor; representing the nation.

SM 584. (FOLK575, HSSC575) Environmental Imaginaries. (M)

Drawing on theories of worldmaking and ethnographic works on culture and environment, this seminar will examine the production of Cartesian-based environmental imaginaries and their alternatives across a range of genres and practices.

SM 585. Modern American Fiction. (M)

This course is a survey of major 20th-century American novels. The course may also ask how modernism differs from postmodernism and examine the revision of the American literary canon currently underway.

SM 587. Major American Modernist. (M)

This course generally focuses on a single American modernist author, such as James, Faulkner, or Williams.

SM 588. (GRMN540) American Literature, 1920-50. (M)

An intensive introduction to American literature in the Depression decade. Readings will include canonical and non-canonical texts.

SM 589. (COML577) Twentieth-Century American Poetry. (M)

SM 590. (COML590) Recent issues in Critical Theory. (M)

This course is a critical exploration of recent literary and cultural theory, usually focusing on one particular movement or school, such as phenomenology, psychoanalysis, the Frankfurt School, or deconstruction.

SM 591. (ARTH593, CINE591, COML592, FREN591) Modernism. (M)

This course can take up any issue in modernism, but has usually focused on American modernists. One recent version of the course treated the work of William Carlos Williams; another dealt with the relations between modernism, mass culture, and such quintessentially "modern" experiences as assembly-line production and "urban shock".

SM 592. (COML592, GRMN580, LALS592) 20th-Century Literature and Theory. (M)

This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor.

SM 595. (COML594, SAST526) Post-Colonial Literature. (M)

This course covers topics in Post-Colonial literature with emphasis determined by the instructor. The primary focus will be on novels that have been adapted to film.

SM 597. (COML597) Modern Drama. (M)

This course will survey several basic approaches to analyzing dramatic literature and the theatre. The dramatic event will be broken into each of its Aristotelian components for separate attention and analysis: Action (plot), Character, Language, Thought, Music and Spectacle. Several approaches to analysing the dramatic text will be studied: phenomenological, social-psychological, semiotic, and others.

700-Level Seminars Open Only to Graduate Students

SM 701. (CLST701) Piers Plowman. (M)

This course takes the great kaleidoscopic poem Piers Plowman as its ostensible subject and point of departure for thinking about the literary cultures in the late fourteenth and early fifteenth century, as well as their continuity with older and

indeed later literary and intellectual discourses.

SM 702. Beowulf. (M)

A seminar on the Anglo-Saxon poem Beowulf in the original, with special attention to its poetic style and the oral tradition to which it belongs.

SM 705. (COML526, COML606, GREK602, SLAV526) Interdisciplinary Approaches to Literature. (M)

This course will explore one or more interdisciplinary approaches to literature. Literary relationships to science, art, or music may provide the focus.

SM 706. Old English. (M)

Prerequisite(s): At least one semester of Old English or the equivalent.

Readings selected from the following areas: Wisdom literature, riddles, Solomon and Saturn; the nature of the transition from late Old English to Early Middle English Poetry; religious poetry.

SM 707. (CLST530, COML530) Orality and Literacy. (M)

Major lines of study of the subject of literacy are traceable in at least three disciplines: history of Western literature (especially classical and medieval studies), anthropology, and ethnography of education, including education development in the Third World and psychological and developmental education theory and practice. The linkages between oral and literary communicative modes in different cultures are understudied, from a folklorist's viewpoint. The overall task of the course is not to isolate topics of narrowly defined folkloric interest in the broad field of literacy, but to integrate and critique the diverse approaches to literacy as a communicative mode or modes, from the point of view of folklore as a discipline.

SM 715. (CLST630, COML714) Middle English Literature. (M)

This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary conventions (for example, "courtly love"), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require.

SM 725. (COML725) Topics in Chaucer. (M)

SM 729. English Humanism. (M)

An examination of the politics and poetics of English humanism in the sixteenth and early seventeenth centuries. In particular, we will be measuring the political versatility of humanist discourse, which could construct a stance of resistance, underwrite unseemly ambition, or bolster a traditional vision of order.

SM 730. (COML730, FREN654, GRMN665) Topics in 16th-Century History and Culture. (M)

This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor.

SM 731. Renaissance Poetry. (M)

An advanced seminar in English poetry of the early modern period.

SM 734. Renaissance Drama. (M)

This is an advanced course in Renaissance drama which will include plays by non-Shakespearean dramatists such as Marlowe, Jonson, and Middleton.

SM 735. (COML637, GSOC735) The Age of Shakespeare. (M)

An advanced seminar, usually focused on Shakespeare, treating the literature and culture of the late 16th- and early 17th-centuries.

SM 736. (COML736) Renaissance Studies. (M)

This is an advanced topics course treating some important issues in contemporary Renaissance studies.

SM 739. Milton. (M)

An examination of Milton's major poetry and prose with some emphasis on the social and political context of his work.

SM 741. Early 18th-Century Poetry and Poetics. (M)

This is an advanced course in British poetry and poetics of the first half of the 18th-Century.

SM 742. Late 18th-Century Poetry and Poetics. (M)

This is an advanced course in British poetry and poetics of the second half of the 18th-Century.

SM 745. Restoration and 18th-Century Fiction. (M)

This is an advanced course in the fiction of the Restoration and the 18th-Century, the period of "The rise of the novel".

SM 748. (COML620) Semester in 18th Century Literature. (M)

This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology.

SM 750. (COML750, GSOC750) Romanticism. (M)

This course is an advanced seminar on writings of the Romantic period, not restricted to English Romanticism.

SM 751. (GSOC751) British Women Poets. (M)

An advanced seminar in British poetry by women. This course has generally focused on the period from 1770-1830 when more than 300 women published at least one volume of poetry.

SM 752. English Romanticism. (M)

An advanced seminar on English Romanticism, usually but not always focusing on poetry.

SM 753. Victorian British Literature. (M)

An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry.

SM 754. (COML755) Victorian Fiction. (M)

An advanced seminar in Victorian fiction.

SM 755. Literature of the Fin de Siecle. (M)

This course treats pre-Raphaelitism, Aestheticism, Decadence, New Woman novels, or some combination of these late-Victorian cultural developments.

SM 756. Victorian Poetry and Poetics. (M)

Close readings in both the poetry and the critical statements of the period, in an attempt to define the "inter-period" between Romantic and High Victorian poetry. Emphasis on the early careers of Tennyson, Browning, Arnold, and Clough. Attention will be given to the nature and role of the poet, the changing functions of poetry, Aestheticism, Symbolism, and Modernism.

SM 758. Victorian Culture. (M)

An advanced seminar treating 19th-Century British culture from an interdisciplinary perspective.

SM 760. (CINE600) Topics in the Novel. (M)

A study of the literary and cultural self-presentations of a decade obsessed by its own momentousness as the end of a century and even, perhaps, the end of Time. The class examines writers' new pride in decadence, the primacy of termination and death, and the impact of the women's movement on fictions, art, poetry, and theater of the 1890's.

SM 761. (COML761) British Modernism. (M)

This course treats one or more of the strains of British modernism in fiction, poetry, or the arts.

SM 765. (COML766, COMM847, SAST644) Topics in 20th-Century Literature. (M)

An advanced seminar treating a specific topic or issue in 20th-Century Literature and Culture.

SM 768. (COML768, ENGL568) Joyce. (M)

The specific focus within Joyce's oeuvre varies from year to year, but generally this course covers much of his writing up to *Finnegans Wake*.

SM 769. (COML769, GSOC769, PSCI683) Feminist Theory. (M)

Specific topic varies. One recent version was subtitled "Queering the Literary", and focused on the rise of queer studies in the academy, and on the shift from an ontologically based understanding of the field to a performative one.

SM 770. (AFRC770, AFRC834, ANTH834, COML773, COMM834) Afro-American Literature. (M)

An advanced seminar in African-American literature and culture.

SM 771. (COML772, LAW 913) Textual Production. (M)

This course is based on library work and is intended as a practical introduction to graduate research. It addresses questions of the history of the book, of print culture, and of such categories as "work", "character", and "author", as well as of gender and sexuality, through a detailed study of the (re)production of Shakespearean texts from the seventeenth to the twentieth century.

SM 773. (AFRC773, COML767, GSOC773) Modernism. (M)

An interdisciplinary and international examination of modernism, usually treating

UNIVERSITY COURSE REGISTER

European as well as British and American modernists.

SM 774. (COML622, SAST774) Postmodernism. (M)

An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, marxist, and postcolonial theory and in poets of the Black Mountain and Language groups.

SM 775. (AFST775, COML700) African Literature. (M)

An advanced seminar in anglophone African literature, possibly including a few works in translation.

SM 776. (COML607) Topics in 20th-Century Drama. (M)

Sometimes taught as a survey of modern and contemporary drama, this course can also focus on a particular issue such as the politics of Western theatre, gender and performativity, or postmodernity in the dramatic arts.

SM 777. Media Studies. (M)

SM 778. (COML778, GRMN580, GSOC778) 20th-Century Aesthetics. (M)

This course explores notions that have conditioned 20th century attitudes toward beauty: among them, ornament, form, fetish, the artifact "women", the moves to 20th century fiction, art manifestos, theory, and such phenomena as beauty contests and art adjudications.

SM 781. (COML771) Earliest American Literature. (M)

The earliest American literature predates America and rather than the unfolding of the new world, its major interest is the expanding of the old. In such texts as those compiled by Hakluyt and Purchas, in Thomas Harriot's Briefe and True Report of the New Found Land of Virginia, and others, we will trace an emerging American culture that is not yet "American."

SM 783. Major American Author. (M)

A seminar treating any one of the major American Writers. Past versions have focused on Melville, Whitman, Twain, James, Pound, Eliot, and others.

SM 785. American Women Writers. (M)

This course is sometimes taught as an advanced survey of American women writers, but may also focus on a particular writer or group of writers, or on gender issues in American Literature and culture.

SM 788. Topics in American Poetry. (M)

An advanced seminar in American poetry. Specific emphasis varies with instructor.

SM 790. (COML790, GSOC790) Recent Issues in Critical Theory. (M)

Course varies with instructor. Recent versions have been "Critical Theory: Legacies of the Frankfurt School" and "Auteurism and Artificiality in Film Studies".

SM 795. (COML795) Topics in Poetics. (M)

Topics in poetics will vary in its emphasis depending on the instructor.

SM 797. (ARTH793, COML653, COML791, SAST651) Topics in 20th-Century Culture. (M)

Usually focusing on non-fictional texts, this course varies in its emphasis depending on the instructor.

SM 799. (AFRC799, COML798) Topics in American Literature. (M)

An advanced topics course in American literature, with the curriculum fixed by the instructor. Recently offered with a focus on American Literature of Social Action and Social Vision.

800-Level For the Preparation of the Ph.D Field Exam and Dissertation Proposal

SM 850. Field List. (C)

Students work with an adviser to focus the area of their dissertation research. They take an examination on the field in the Spring and develop a dissertation proposal.

Independent Study 998-999

998. Independent Study. (C) Limited to 1 c.u.

Open to students who apply to the graduate chair with a written study proposal approved by the advisor. The minimum requirement is a long paper. Limited to 1 CU.

999. Independent Reading. (C)

Open only to candidates who have completed two semesters of graduate work.

BIostatistics and Epidemiology (MD) {EPID}

BIostatistics (BSTA)

509. Introduction to Epidemiology.

510. Introduction to Anatomy and Physiology. (A) Probert.

The purpose of this course is to introduce students without a background in medicine and biology to the basic vocabulary and principles of human anatomy and physiology in preparation for collaborative research in biostatistics. The course will begin with an overview of basic human biochemistry, cell biology, and genetics. Later topics will focus on the major organ systems including circulation, digestion and excretion, neurophysiology, and reproduction. Major disease areas of research such as cancer and drug research will also be covered.

620. (STAT430, STAT510) Probability I. (A) Morrison. Prerequisite(s): Two semesters of calculus (through multivariable calculus), linear algebra. This course is also offered in the Summer I session.

This course covers Elements of matrix algebra. Discrete and continuous random variables and their distributions. Moments and moment generating functions. Joint distributions. Functions and transformations of random variables. Law of large numbers and the central limit theorem. Point estimation: sufficiency, maximum likelihood, minimum variance, confidence intervals.

621. (STAT432, STAT512) Statistical Inference I. (B) Faculty. Prerequisite(s): BSTA 620.

Statistical inference including estimation, confidence intervals, hypothesis tests and non-parametric methods.

622. (STAT550) Statistical Inference II. (A) Brown. Prerequisite(s): BSTA 621.

Statistical inference including estimation, confidence intervals, hypothesis tests and non-parametric methods.

630. Statistical Methods for Data Analysis I. (A) Shults and Putt.

Prerequisite(s): Multivariable calculus and linear algebra, BSTA 620 (may be taken concurrently).

This first course in statistical methods for data analysis is aimed at first year Biostatistics degree candidates. It focuses on the analysis of continuous data, and includes descriptive statistics, such as central tendencies, dispersion measures, shapes of a distribution, graphical representations of distributions, transformations, and testing for goodness of fit for a distribution. Populations, samples, hypotheses of differences and equivalence, and errors will be defined. One and two sample t-tests, analysis of variance, correlation, as well as non-parametric tests and correlations will be covered.

Estimation, including confidence intervals, and robust methods will be discussed. The relationship between outcome variables and explanatory variables will be examined via regression analysis, including single linear regression, multiple regression, model fitting and testing, partial correlation, residuals, multicollinearity. Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated.

631. Statistical Methods and Data Analysis II. (B) Gimotty. Prerequisite(s): linear algebra, calculus, BSTA 630, BSTA 620, BSTA 621 (may be taken concurrently).

This is the second half of the methods sequence and focuses on categorical data and survival data. Topics in categorical data to be covered include defining rates, incidence and prevalence, the chi-squared test, Fisher's exact test and its extension, relative risk and odds-ratio, sensitivity, specificity, predictive values, logistic regression with goodness of fit tests, ROC curves, Mantel-Haenszel test, McNemar's test, the Poisson model, and the Kappa statistic. Survival analysis will include defining the survival curve, censoring, and the hazard function, the Kaplan-Meier estimate, Greenwood's formula and confidence bands, the log rank test, and Cox's proportional hazards regression models. Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated.

651. Introduction to Linear Models and Generalized Linear Models. (B)

Tu. Prerequisite(s): linear algebra, calculus, BSTA 630, BSTA 620, BSTA 621 (may be taken concurrently).

This course extends the content on linear models in BSTA 630 and BSTA 631 to more advanced concepts and applications of linear models. Topics include the matrix approach to linear models including regression and analysis of variance, general linear hypothesis, estimability, polynomial, piecewise, ridge, and weighted regression, regression and collinearity diagnostics, multiple comparisons, fitting strategies, simple experimental designs (block designs, split plot), random effects models, Best Linear Unbiased Prediction. In addition, generalized linear models will be introduced with emphasis on the binomial, logit and Poisson log-linear models. Applications of methods to example data sets will be emphasized.

690. Consulting Laboratory I. (C)

Faculty. Prerequisite(s): BSTA 630.

Participation in the consulting laboratory is a requirement for both the Master's and Ph.D. degrees. This course covers general principles of statistical consulting and statistical consulting experience. There is training on statistical programming, preparation of reports, presentations, and the communication aspects of consulting. Each student will be expected to join one of several project teams consisting of faculty, research staff, and graduate student consultants; attend meetings along with the project team and associated investigators; participate in all or part of the design, management, analysis and reporting stages of a project; and gain valuable experience in working with actual research projects.

752. Categorical Data Analysis II.

774. Statistical Methods for Evaluating Diagnostic Tests. (A)

Gimotty. Prerequisite(s): BSTA 510, BSTA 630, BSTA 631 or equivalent; permission of instructor.

This course will cover statistical methodology for evaluating diagnostic tests. The topics will include: estimation of ROC curves, comparing multiple diagnostic tests, developing diagnostic tests using predictive models, measurement error effects on diagnostic tests, random effects models for multi-reader studies, verification bias in disease classification, methods for time-dependent disease classifications, study design issues, related software, and meta-analyses for diagnostic test data.

820. (STAT552) Statistical Inference III. (B) Faculty. Prerequisite(s): To be advised.

Statistical inference including estimation, confidence intervals, hypothesis tests and non-parametric methods.

EPIDEMIOLOGY (EPID)

Contact the department for information on courses offered in Epidemiology.

L/L 522. Probability and Estimation. Shults. Prerequisite(s): Permission of Instructor.

This course is the first of a four quarter sequence in Biostatistics at the introductory level. Topics covered include graphical methods, probability, discrete and continuous distributions, estimation, confidence intervals, and one sample hypothesis testing. Emphasis is placed on understanding the proper application and interpretation of the methods.

L/L 523. Inference and Linear Regression. (A) Cucchiara. Prerequisite(s): EPID 522 or Permission of Instructor.

This course is the second of a four quarter sequence in Biostatistics at the introductory level. Topics covered include two sample hypothesis testing, nonparametric techniques, sample size determination, correlation, regression, analysis of variance, and analysis of covariance. Emphasis is placed on understanding the proper application and underlying assumption of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data.

L/L 524. Biostatistics III. (A) Bilker. Prerequisite(s): EPID 522 and 523 or Permission of Instructor.

This course is the third of a four quarter sequence in Biostatistics at the introductory level. This quarter covers concepts in biostatistics as applied to epidemiology, primarily categorical data analysis, analysis of case-control, cross-sectional cohort studies, and clinical trials. Topics include simple analysis of epidemiologic measures of effect; stratified analysis; confounding; interaction, the use of matching and sample size determination. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of STATA and other statistical packages and applications for clinical data

L/L 526. Biostatistics for Epidemiologic Methods I. Justine Shults and Andrew Cucchiara.

Note: This course runs from mid summer to mid Fall term. The first half of this course (7/1-8/14) will cover graphical methods, probability, discrete and continuous distributions, estimation, and confidence intervals and one sample hypothesis testing. The second half of the course (9/10-10/22) will cover two sample hypothesis testing, nonparametric techniques, sample size determination, correlation, regression, analysis of variance and analysis of covariance.

L/L 527. Biostatistics for EPI II.

SM 532. Dbase Mgmt for Clin EPI.

545. Found Comm Oriented Research.

SM 560. Issues Rsrch Protocol DV. (B)

SM 565. Crit appr EPI Methods. (B)

610. Tutorial in EPI Research.

L/L 621. Longitudinal and Clustered Data in Epidemiologic Research. Localio. Prerequisite(s): Completion of EPID 522-525 (formerly EPID 520-521) or equivalent preparation in biostatistics, including generalized linear models. Completion of semester course in principles of epidemiology or equivalent. Good working knowledge of Stata and access to Stata v10 license (intercooled or SE or MP). Knowledge of SAS and access to SAS v9.2 license an acceptable alternative. Familiarity with principles of first-year calculus and matrix algebra. Permission of course director.

An introduction to the principles of and methods for longitudinal and clustered data analysis with special emphasis on clinical, epidemiologic, and public health applications. Designed for advanced MS and PhD-level students in epidemiology and related fields. Marginal and conditional methods for continuous and binary outcomes. Mixed effects and hierarchical models. Simulations for power calculations. Each student will be required to participate in 8 labs and complete associated problem sets. They may also use their own data to fulfill these requirements in part. Software will include Stata and R.

623. Applied Survival Analysis.

SM 633. Advanced Database Management for Clinical Research. Holmes.

This course is intended to provide in-depth, practical exposure to the design, implementation, and use of secondary data resources in clinical research. This course is intended to provide students with the skills needed to design and conduct a research project using secondary data, with a focus on data management. We will focus on analysis only to the extent that one needs to be aware of the demands that particular analytic strategies put on the structure and management of data.

636. Epidemiological Methods in Acute Care. Jesse Pines, MD and Jeremy Kahn, MD. Prerequisite(s): EP 510 and EP 520 and permission from either Dr. Kahn or Dr. Pines.

This is an advanced course addressing epidemiological issues as they apply to important clinical topics in acute care, including emergency, hospital, and critical care medicine. Lectures and discussions will have two primary goals: 1) to explore epidemiologic methods specific to acute care settings (i.e., choice of outcomes, risk adjustment); and 2) to explore the epidemiology of particular diseases (e.g., sepsis, acute lung injury, hospital acquired infections) and research questions of current importance in these areas. This course will acquaint students with the classic literature in the field adult and pediatric urgent care, emergency medicine, and critical care epidemiology, teach advanced epidemiological principles using a problem-based approach, and demonstrate the strengths and weaknesses of epidemiological research methodologies as they have been applied to acute care.

656. Research Methods in ID Epidemiology.

658. Gastroenterology EPI.

690. Empirical Bioethics. Halpern, Karlawish. Prerequisite(s): Permission of Instructor.

Solutions to many of the most pressing problems in modern bioethics require empirically testing assumptions and theories about human behaviors and attitudes. This course will use papers from the primary literature to teach students to understand and use the many methods that have been or could be employed to address questions lying at the intersection of ethics and clinical research. In addition to participating in weekly discussions of these topical and methodological papers, students will be expected to develop and present a

protocol for research designed to explore ethical dilemmas within their own disciplines.

SM 700. Doctoral Seminar in Epidemiology. Holmes. Prerequisite(s): Permission of Instructor.

The course is intended to meet the needs of PhD students over the entire program from the coursework phase through the dissertation defense, and is intended to optimize cross-fertilization between the students at all phases of their program. An overarching theme of the seminar is the development of professionalism.

SM 714. Grant Writing/Review. Farrar. Prerequisite(s): EPID510, EPID520, EPID 560, and EPID 570.

This course is designed to provide background, and guidance on writing and submitting NIH grants. Students will submit a mini proposal at the beginning of the term. Each proposal will be reviewed by a group of 3 students from the class and scores will be given. The final project will

be a full NIH proposal ready for submission.

L/L 721. Longitudinal and Clustered Data in Epidemiologic Research-Advanced Topics. Localio.

Prerequisite(s): EPID621 or a class in longitudinal data at the graduate level, Familiarity with principles of first-year calculus and matrix algebra, Good working knowledge of Stata (or SAS) and access to Stata v10 license (intercooled or SE or MP), or to SAS v9.2 license, Permission of instructor.

Advanced methods for longitudinal and clustered data analysis with special emphasis on formal principles of causal inference, analysis of complex samples from surveys, use of Monte Carlo methods of estimation, and methods for adjusting for missing data and dropout, with applications in epidemiology, social sciences, and public health. Designed for advanced MS and PhD-level students in epidemiology and related fields. Each student will be required to participate in 6 labs and to

complete the associated problem sets and exercises. Students must satisfy part of this requirement by working on their own datasets.

799. Cardiopulmonary Epidemiology.

805. Practicum In Applied Clinical Research Methods.

813. Biostatistics in Practice Lab. Faculty.

SM 816. Economic Evaluation of Medical Therapies. Faculty.

817. Fund of Pharmacoepi.

848. Topics in Pharmacoepi I.

866. Pharmacoepidemiology Res.

900. Master's Thesis. (C)

FINANCE (WH) {FNCE}

100. (FNCE601) Corporate Finance.

(C) Prerequisite(s): ECON 10 [or ECON 001, ECON 002], MATH 104, ACCT 101 and STAT 101. Acct 101 and Stat 101 may be taken concurrently.

This course provides an introduction to the theory, the methods, and the concerns of corporate finance. The concepts developed in FNCE 100 form the foundation for all elective finance courses. The main topics include: 1) the time value of money and capital budgeting techniques; 2) uncertainty and the trade-off between risk and return; 3) security market efficiency; 4) optimal capital structure, and 5) dividend policy decisions.

101. (FNCE602) Monetary Economics and the Global Economy. (C)

Prerequisite(s): ECON 010 [or ECON 001, ECON 002] and MATH 104. Students cannot receive credit for both FNCE 101 and ECON 102 [ECON 4] WHARTON STUDENTS ARE REQUIRED TO TAKE FNCE 101.

This is an intermediate-level course in macroeconomics and the global economy, including topics in monetary and international economics. The goal is to provide a unified framework for understanding macroeconomic events and policy, which govern the global economic environment of business. The course analyzes the determinants and behavior of employment, production, demand and profits; inflation, interest rates, asset prices, and wages; exchange rates and international flows of goods and assets; including the interaction of the real economy with monetary policy and the financial system. The analysis is applied to current events, both in the US and abroad.

103. Business Economics. (A)

FRESHMAN JOSEPH WHARTON HONORS SCHOLAR STUDENTS ONLY, Non-Honors students need permission.

The course covers introductory microeconomics and macroeconomics with particular attention given to global and long-run growth issues. The microeconomic portion introduces the discipline and fundamental tools of economics. It proceeds to study the workings of a price system and theories of consumer and firm decision-making. It further analyzes particular market structures characterized by perfect and

imperfect competition, reviews the strengths and weaknesses of a market economy, and considers the government's role in correcting market failures and promoting competition. The macroeconomic portion studies the domestic and international forces that govern the determination of the aggregate level of economic activity, and pays particular attention to the determinants of long-run economic growth and stabilization policies used to dampen business cycles. The course concludes with global issues including the determinants of trade, trade policy, capital mobility, international financial instability, and international economic integration and the extent of globalization.

203. (FNCE726) Advanced Corporate Finance. (C)

Prerequisite(s): FNCE 100, FNCE 101, STAT 101, and STAT 102.

The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as a complement and supplement to FNCE 100. Some areas of financial management not covered in FNCE 100 are covered in FNCE 203. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning and working capital management, and some other selected topics. Other areas that are covered in FNCE 100 are covered more in depth and more rigorously in FNCE 203. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy.

205. (FNCE720) Investment

Management. (C) Prerequisite(s): FNCE 100-101 and STAT 101-102.

This course is designed to acquaint the student with the concepts of portfolio analysis in the general area of institutional investment management. The course discusses principles for managing financial assets. These principles apply, for example, to managing corporate pension funds, bank-administered trusts, and other institutional funds. Students will learn how to establish appropriate investment objectives, develop optimal portfolio strategies, estimate risk-return tradeoffs, and evaluate investment performance. Many of the latest quantitative approaches are discussed.

206. (FNCE717) Financial

Derivatives. (C) Prerequisite(s): FNCE 100, STAT 101 - prerequisites cannot be taken concurrently. FNCE 101 and STAT 102 are recommended and can be taken concurrently.

The purpose of this course is to provide the student with the necessary skills to value and to employ options, futures, and related financial contracts. In order to provide a useful treatment of these topics in an environment that is changing rather rapidly, it is necessary to stress the fundamentals and to explore the topics at a technical level. The topics that will be covered include the valuation of futures contracts on stock indices, on commodities and Treasury instruments; the valuation of options; empirical evidence; strategies with respect to these assets; dynamic asset allocation strategies, of which portfolio insurance is an example; swaps; and the use (and misuse) of derivatives in the context of corporate applications. One-third of the course will be devoted to futures, a third to options, and a third to their applications. Many of the applications will be sprinkled along with the coverage of futures and options.

207. (FNCE728) Corporate Valuation.

(C) Prerequisite(s): FNCE 100, FNCE 101, and STAT 101-102 (Financial accounting, ACCT 201, recommended).

The focus of this course is on the valuation of companies. Topics discussed include discounted cash flow techniques and valuation using alternative valuation techniques such as price multiples. Emphasis is on developing the required information for valuation from financial statements and other information sources.

208. (FNCE731) International

Corporate Finance. (A) Prerequisite(s): FNCE 100, FNCE 101.

Analyzes financial problems corporations face that result from operating in an international environment. Major topics covered are corporate strategy and the decision to invest abroad, forecasting exchange rates, international portfolio diversification, managing exchange risk, taxation issues, cost of capital and financial structure in the multinational firm, and sources of financing.

209. (REAL209) Real Estate Investment: Analysis and Financing.

(C) Prerequisite(s): FNCE 100.

This course provides a broad introduction to real estate with a focus on financing issues. Basic project evaluation, financing strategies, and capital markets issues related to real estate are covered. No prior

knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets.

215. (FNCE724, REAL724, REAL945) Urban Real Estate Economics. (C)

Prerequisite(s): FNCE 100-101.

Applies microeconomic theory to the real estate demand and supply and location decisions of households and firms and to related policy areas, including urban renewal, zoning, property taxation, and racial segregation.

219. (FNCE719) International Financial Markets. (C) Prerequisite(s): FNCE 100, FNCE 101, STAT 101.

This course focuses on international financial markets and exchange rates. Topics include pricing in the foreign currency and Eurocurrency markets, use of forward exchange for hedging, short-term returns and market efficiency in the international money markets, foreign currency options, international capital asset pricing, pricing of foreign currency bonds, currency swaps, Eurocurrency syndicated loans, foreign currency financing and exposure management.

220. (FNCE732) International Banking. (A) Prerequisite(s): FNCE 100, FNCE 101.

This course focuses on international financial institutions and international banking activities. We will examine how current and historical events are reshaping the industry. We will focus on the basic analytics of managing a bank's exposure to liquidity, credit, market and country risk. In addition, we will consider how to evaluate and compare the risk exposures and performance of individual banks. Throughout the semester we will discuss public policy issues such as international debt crises and regulation.

230. (BPUB230, BPUB773, FNCE730, REAL230, REAL730) Urban Fiscal Policy. (A) Prerequisite(s): FNCE 101.

A detailed examination of the financing of local governments, suburbs, and center cities within the metropolitan economy.

235. (FNCE725) Fixed Income Securities. (C) Prerequisite(s): FNCE 100, FNCE 101.

FNCE 235 is a rigorous study of fixed income securities, including default-free bonds, floating rate notes, and corporate bonds. Closely related financial instruments such as forwards and futures on fixed income securities, bond options, and interest rate swaps are also examined. In addition to analyzing specific types of fixed

income securities, there will be an examination of the tools used in bond portfolio management.

238. (FNCE738) Funding Investments. (C) Prerequisite(s): FNCE 100, FNCE 101.

This course examines the available corporate securities that firms can use to finance investment. The course will focus on: (1) the design of these securities (Why do bonds have embedded options? What is the role of preferred stock?); (2) the issuing process for these securities (What do investment banks do? Is the underwriting process important for the cost of capital?); (3) the pricing of these securities (How are credit risk in bonds and loans priced?) The securities covered include corporate and junk bonds, bank loans, common and preferred equity, commercial paper, securitization, as well as some recent innovations. Other topics include: the role of embedded options in corporate bonds; the role of bank and loan covenants; the function of bond rating agencies; exchange offers; prepackaged bankruptcies; bankruptcy in Chapter 11; workouts; debtor-in-possession financing; and pricing credit risk. The course is designed to be complementary to Advanced Corporate Finance and Fixed Income Securities.

239. Behavioral Finance. (C) Prerequisite(s): FNCE 100, FNCE 101. Recommended: FNCE 203.

There is an abundance of evidence suggesting that the standard economic paradigm - rational agents in an efficient market - does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use psychology to guide alternative theories of financial markets. Along the way, we will address the standard argument that smart, profit-seeking agents can correct any distortions caused by irrational investors. Further, we will examine more closely the preferences and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies. The second half of the course extends the analysis to corporate decision making. We then explore the evidence for both views in the context of capital structure, investment, dividend, and merger decisions.

250. (FNCE750) Venture Capital and the Finance of Innovation. (C) Prerequisite(s): FNCE 100, FNCE 101.

This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the

"venture capital method," comparables analysis, discounted cash flow analysis, Monte Carlo simulation, contingent-claims analysis, decision trees, and real options. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.

251. (FNCE751) The Finance of Buyouts and Acquisitions. Prerequisite(s): FNCE 100, FNCE 101.

The focus of this course is on buying (or acquiring controlling stakes in) firms. The main topics to be covered are mergers and friendly acquisitions, hostile takeovers and buyouts. Using case studies, the course surveys the drivers of success in the transactions. While issues regarding motive and strategy will be discussed, financial theory would be the main lens used to view these control acquiring transactions. The objective is two fold: (1) Develop a concept and translate that idea into a proposal through deal design; and (2) analyze to form opinions about proposed deals. The course should be of interest to students interested in pursuing careers as private equity investors, advisors in investment banking and corporate managers that deal with these issues. This course will be demanding and assumes familiarity with valuation analysis.

399. Supervised Study in Finance. Prerequisite(s): Senior standing, 3.4 grade point average, and permission of a Finance Department standing faculty member.

Integrates the work of the various courses and familiarizes the student with the tools and techniques of research.

411. (FNCE011) Monetary Economics. (C) Faculty.

895. (FNCE395) Private Equity. Prerequisite(s): FNCE 726-Advanced Corporate Finance and FNCE 751-Finance of Buyouts and Acquisitions or permission from the professor.

The course will be a survey of the private equity asset class. Its objective is to provide an understanding of the concepts, agents, and institutions involved in the late stage corporate private equity market in the U.S. and around the globe. It will examine the buyout market and the activities of buyout funds from the differing perspectives of private equity investors, private equity fund sponsors, and managers of the portfolio companies.

911. Financial Economics. (A)

Prerequisite(s): ECON 681 or ECON 701, Matrix Algebra, and Calculus.

The objective of this course is to undertake a rigorous study of the theoretical foundations of modern financial economics. The course will cover the central themes of modern finance including individual investment decisions under uncertainty, stochastic dominance, mean variance theory, capital market equilibrium and asset valuation, arbitrage pricing theory, option pricing, and incomplete markets, and the potential application of these themes. Upon completion of this course, students should acquire a clear understanding of the major theoretical results concerning individuals' consumption and portfolio decisions under uncertainty and their implications for the valuation of securities.

912. Financial Institutions. (B)

Prerequisite(s): ECON 898, STAT 510 or FNCE 911.

This course provides students with an overview of the basic contributions in the modern theory of corporate finance and financial institutions. The course is methodology oriented in that students are required to master necessary technical tools for each topic. The topics covered may include capital structure, distribution policy, financial intermediation, incomplete financial contracting, initial and seasoned public offerings, market for corporate control, product market corporate finance interactions, corporate reorganization and bankruptcy, financing in imperfect markets, security design under adverse selection and moral hazard, and some selected topics.

921. Introduction to Empirical Methods in Finance. (B)

Prerequisite(s): FNCE 911 (can be taken concurrently), STAT 510 and 511 or equivalent.

This course is an introduction to empirical methods commonly employed in finance. It provides the background for FNCE 934, Empirical Research in Finance. The course is organized around empirical papers with an emphasis on econometric methods. A heavy reliance will be placed on analysis of financial data.

922. Continuous-Time Financial Economics. (A)

Prerequisite(s): FNCE 911, ECON 701, ECON 703. (Graduate level knowledge of analysis and statistics is highly recommended but not required).

This course covers some advanced material on the theory of financial markets developed over the last two decades. The emphasis is on dynamic asset pricing and

consumption choices in a continuous time setting. The articles discussed include many classical papers in the field as well as some of the most recent developments. The lectures will emphasize the concepts and technical tools needed to understand the articles.

923. Financial Economics Under Imperfect Information. (M)

Prerequisite(s): FNCE 922.

General equilibrium and rational expectations. Foundations of the theory of information. Learning from prices in rational expectations equilibrium models. Moral hazard, adverse selection and signalling. Bidding theories.

924. Intertemporal Macroeconomics and Finance. (B)

Prerequisite(s): FNCE 911.

This is a doctoral level course on macroeconomics, with special emphasis on intertemporal choice under uncertainty and topics related to finance. Topics include: optimal consumption and saving, the stochastic growth model, q-theory of investment, (incomplete) risk sharing and asset pricing. The course will cover and apply techniques, including dynamic programming, to solve dynamic optimization problems under uncertainty. Numerical solution methods are also discussed.

925. Topics In Asset Pricing. (C)

This course will analyze several aspects of liquidity. Mostly, it will concentrate on liquidity as an asset's property of being traded quickly and at low cost, but the notion of availability of cash will also be studied. Particular attention will be devoted to exogenous transaction costs, asymmetric information and search frictions as determinants of asset liquidity and, consequently, price. We will also look at liquidity risk, institutional features arising as response to liquidity problems, and financing constraints. The course will concentrate on theoretical models, but the empirical literature will be referred to throughout.

926. Empirical Methods in Corporate Finance. (A)

Prerequisite(s): STAT 521 - Students are required to have taken a graduate sequence in Econometrics, you should be comfortable with econometrics at the level of William Green's "Econometric Analysis of Cross-Section and Panel Data".

The course will cover a variety of microeconomic models and methods including panel data models, program evaluation methods [e.g. difference in

differences, matching techniques, regression discontinuity design] instrumental variables, duration models, structural estimation [e.g. simulated methods of moments]. The structure of the course consists of lectures, student presentations, and empirical exercises. I will utilize published studies in a variety of fields such as corporate finance, labor economics and industrial organization to illustrate the various techniques. The goal of the course is to provide students with a working knowledge of various econometric techniques that they can apply in their own research. As such, the emphasis of the course is on applications, not theory.

932. Corporate Finance. (A)

Prerequisite(s): FNCE 911, FNCE 921, or permission of instructor.

Advanced theory and empirical investigations: financial decisions of the firm, dividends, capital structure, mergers and takeovers.

933. International Finance. (M)

Prerequisite(s): FNCE 911 (FNCE 922 recommended).

This course provides an understanding of current academic research in the areas of international finance and international macroeconomics. Students will learn the tools for conducting research in this field.

934. Empirical Research in Finance. (A)

Prerequisite(s): FNCE 911 and FNCE 921.

Rigorous treatment of current empirical research in finance. Applications of multivariate and nonlinear methods. Intertemporal and multifactor pricing models. Conditional distributions. Temporal dependence in asset returns.

937. Applied Quantitative Methods in Finance. (A)

Prerequisite(s): FNCE 911. Finance 937 uses numerical tools to address a variety of issues in finance. The course has two main objectives. First, it seeks to provide the students with useful quantitative tools to understand and produce frontier research in finance. Second, it applies these tools to advanced topics in both corporate finance and asset pricing. A special emphasis is placed on new and recent research.

939. Behavioral Finance. (C)

Prerequisite(s): FNCE 911.

There is an abundance of evidence suggesting that the standard economic paradigm-rational agents in an efficient market-does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use

psychology to guide alternative theories of financial markets with an eye towards identifying frontiers and opportunities for new research. Along the way, we will address the standard argument that arbitrage will eliminate any distortions caused by irrational investors. Further, we will examine more closely the preferences

and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies. The second half of the course extends the analysis to corporate decision making. We present the two themes of behavioral corporate finance: rational managers exploiting financial

market inefficiencies and managerial decision-making biases. We then explore the evidence for both view in the context of capital structure, investment, dividend, and merger decisions. We emphasize the importance of differentiating the behavioral approach from information models and other more traditional methodology.

**FINE ARTS
(FA) {FNAR}**

SM 007. Freshman Seminar: Feat of Clay & the Arcanum. (M)

Courtney/Maeshima. Lab Fee \$40. May not be taken as an elective studio by Fine Arts Majors or Minors.

An introduction to three-dimensional art through clay, this course introduces students to the fundamental language of object making through hands-on experience with clay materials. Students develop their visual skills by creating sculptural forms as well as pottery forms such as cups, bowls and jars. Each project is presented with clear demonstrations and individual instructions. The first half of the semester will focus on hand-building methods which include pinching, coiling, and slab-building. The students will learn how to throw at a potter's wheel during the latter half of the semester. Reading assignments, slide presentations and a field trip broaden the understanding of object making. \$40 Studio Fee.

034. (ENGL034, HIST034) Cultures of the Book. (A) Stallybrass/Comberg.

This course focuses upon the making, remaking, dissemination, and reading of texts in early modern Europe and America. Topics will include: practices of reading; learning to write; the constitution of authorship; the interaction of printing and manuscript; the economics of printing and publishing; the transatlantic book trade. Texts for the course will include: Shakespeare, Venus and Adonis and 1 and 2 Henry IV; Mary Rowlandson, The Sovereignty and Goodness of God; Alexander Pope, The Dunciad; Samuel Richardson, Pamela; Benjamin Franklin, Autobiography; the Constitution of the United States.

035. Common Press Workshop.

Comberg.

The workshop is an introduction to letterpress printing and its environment - tools, materials, design and technical support - for those students who choose to complete research and/or a final printed project for the Cultures of the Book course (FNAR 034/ENGL 034/HIST 034). The workshop will include composing type manually or digitally, setting up the press with handset type or polymer plates, operating the letterpress, and printing a small edition. Additionally, the workshop will enable students to use the print studio for cutting and simple binding if needed.

Paper will need to be purchased separately for those enrolled in the workshop.

SM 061. (CINE061, FNAR661, VLST061) Video I. (C) Buck/Van Cleve/Reynolds.

This course provides students with the introductory skills and concepts needed to create short works using digital video technologies. Students will learn the basics of cinematography and editing through a series of assignments designed to facilitate the use of the medium for artistic inquiry, cultural expression and narrative storytelling.

SM 062. (CINE062, FNAR662) Video II. (C) Buck/Reynolds. Prerequisite(s): FNAR 061.

Video II offers opportunities to further explore the role of sound, editing and screen aesthetics. Through a series of three video projects and a variety of technical exercises, students will refine their ability to articulate more complex and creative projects in digital cinema. In addition, advanced level production and post-production equipment is introduced in this course.

SM 063. (CINE063, FNAR663) Documentary Video. (A) Heriza. Prerequisite(s): FNAR 061.

A digital video course stressing concept development and the exploration of contemporary aesthetics of the digital realm, specifically in relation to the documentary form. Building on camera, sound and editing skills acquired in Film/Video I and II, students will produce a portfolio of short videos and one longer project over the course of the semester. Set assignments continue to investigate the formal qualities of image-making, the grammar of the moving image and advanced sound production issues within the documentary context.

SM 064. (CINE064, FNAR664) Interactive Video. (B) Reynolds.

Prerequisite(s): FNAR 061, FNAR 062.

This course explores the concepts and technologies behind non-linear storytelling through mediums like DVD's and the world wide web. Students will learn to make interactive DVD videos as a form of expression and explore the possibilities of streaming videomaking.

SM 065. (CINE065, FNAR665) Cinema Production. (A) Van Cleve.

Prerequisite(s): FNAR-061.

This course focuses on the practices and theory of producing narrative based cinema. Members of the course will

become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.

SM 066. (CINE066, FNAR666) Sound Seminar: Sonic Measures. (B) Adkins. Prerequisite(s): FNAR062.

Sonic Measures is a comprehensive introduction to the theory and practice of digital audio design, including sound for video, sound installation, composition, and sound art. Projects and demonstrations will familiarize students with all aspects of recording and synthesis of sound using Apple's Logic Pro software. Assignments will combine technical issues alongside an ongoing conceptual development individual to each student's interests. No musical knowledge needed.

SM 067. (CINE067, FNAR667) Advanced Video Projects. (M)

Reynolds. Prerequisite(s): FNAR 062.

This course presents students with an advanced level investigation into various forms of digital video projects as well as non-traditional presentation formats. Structured to create a more focused environment for individual projects, students will present and discuss their work in a series of group critiques. Lecture topics, screenings, and technical demonstrations will vary depending on students' past history as well as aesthetic and theoretical interests.

SM 068. (CINE068, FNAR668) Cinematography. (B) Van Cleve.

Prerequisite(s): FNAR 061.

This course will be a technical, practical and aesthetic exploration of the art of cinematography as it pertains to film and digital video. Through screenings, in-class exercises and assignments, students will increase their Video I skills in lighting and cinematography as a form of visual expression. Topics covered include shot composition, camera movement, lenses, filtration and color, exposure, lighting techniques, location shooting and how to use grip equipment. Discussions, demos and lectures will include relevant and illustrative historical motion picture photography, current digital video technology, and examples that explore interactions between film and video.

123. (FNAR523, VLST123) Drawing I. (C)

Edgerton/Curran/Talevski/Weiss/Matthews/Hudson/Staff.

This course integrates formal issues, technical skill and content in basic drawing. Investigative work is from observation. Drawing from ideas and the imagination will also be explored using a wide variety of materials (such as graphite, charcoal, conte, ink) and methods (continuous tone, subtraction, etc.) It is appropriate for beginners and those with modest experience.

124. (FNAR524) Drawing II. (C)

Schneider/Curran. Prerequisite(s): FNAR 123.

A continuation of FNAR 123. Drawing II expands upon drawing fundamentals and leads the student into a facility with materials and methods, and into drawing as an objective not solely a means.

140. (FNAR540) Furniture Design. (A)

Schmidt-Ullrich.

The intent of this course is to amplify and maintain creativity, to expand on the tools of design. From hands-on modeling to large scale prototyping, students will delve into furniture design through the process of sketch, modeling in three-dimension, wordplay (haiku, oxymoron, hybridization and the conundrum). A "real" museum quality furniture object will be produced.

142. (FNAR542) 3-D Design. (C)

Vidnovic.

Students will make work that draws from and interacts with the three-dimensional world we live in. Formal strategies will explore principles of organization. Planar construction, modeling and assemblage methods will be used for investigations spanning from bas-relief to environmental art. This is a "learn by doing" process with no prerequisites.

145. (FNAR545) Sculpture I: Materials and Techniques. (C)

White. Students will develop facility with conceptual and visual 3-dimensional forms by applying plastic media and subtraction, addition and fabrication techniques with hand and power tools.

146. (FNAR546) Sculpture II. (C)

White. Prerequisite(s): FNAR 145.

Sculpture II builds on the skills and concepts acquired in Sculpture I and challenges the student with concept directed projects.

SM 210. In Pursuit of Originality. (M)

Fierlinger. This course may not be counted as an elective studio towards the Fine Arts Major or Minor.

The purpose of this seminar is to familiarize freshmen with the intellectual pursuit of creativity. Through lectures, followed by a period of class discussions on the topic of the day and a visual diary, the student's mind will begin to understand art's serious place in society and how the pursuit of creating original art is an inherited, natural desire, programmed within our genes. The need to become keen observers of nature will be stressed, from the brain down to the molecular level, back to the mind's own will power and out to the vast, surrounding universe permeated with infinite mysteries, which we can begin to comprehend once we maintain an open mind and allow ourselves to experience awe and humanity. The ancient role of the artist is to hold witness, each in her and his way, to nature's meaning. Each student will be required to take notes of the impressions and imaginations and these should be recorded in both written and pictorial form. An effort to pursue originality is key. By the end of the semester, each student should have a unique "book" comprised of their interpretation of ideas, freshly received from the entire class.

211. (FNAR511, VLST311) Color. (C)

Lachman.

The color class is a one semester exploration of color action and interaction, its history and its contemporary paradigms and applications. Studio work includes both "laboratory" studies and improvisatory exercises and uses colored papers, gouache, light and related materials.

222. (FNAR622, URBS322) The Big Picture: Mural Arts in Philadelphia. (C)

Golden/Walinsky/Gensler.

The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The instructor Jane Golden is the founder and Director of the Philadelphia Mural Arts Program.

SM 226. (FNAR626, URBS226) The Photography of Urban Place. (M)

Prerequisite(s): FNAR-271 or Permission of the Instructor. This course may not be used as an elective studio for the Fine Arts Major or Minor.

This is a non-studio course in the photography of buildings, streetscapes, and cities. It is designed for photographers interested in the built environment as subject matter, as well as for architecture and planning students. We will hone practical skills in perspective control, lighting, and photographic interpretation of space, so that photographers, architects and planners can better photograph precedents and their own projects, and better evaluate the use of professional architectural photography for promotion and education. \$50 Studio Fee.

Anyone who owns a digital or film camera (including point-and-shoot) is qualified; no darkroom or Photoshop experience needed. Professional view camera techniques will be covered at a basic level.

The course will consist equally of slide lectures, discussions, and location shooting at Philadelphia residential, commercial, and industrial sites. Student images (digital or traditional) will be transferred to PowerPoint for class critique. Readings and discussions may range into issues of architectural and urban planning theory and philosophy that affect the interpretation of the built environment and how its image is perceived. Both documentary and fine art approaches will be covered.

231. (FNAR531) Painting I. (C)

Curran/Murphy/Edgerton. Prerequisite(s): FNAR 123.

Painting I is an introduction to oil painting. The course will provide an integrated approach to formal issues, content and technical means. Students work from direct observation with still life, landscape and the figure. Students will leave the class with a basic knowledge of materials, and with a repertoire of techniques and methods. This course is appropriate for beginners and individuals with some painting background.

232. (FNAR532) Painting II. (C)

Tileston/Curran. Prerequisite(s): FNAR 231.

This course focuses on the further development of techniques in painting and the refinement of individual style. Students will work from still life, landscape and the nude model as well as personal resources. Emphasis is placed on the process of painting.

234. (FNAR634) Web Design. (C)

Cooper. Prerequisite(s): FNAR 264.

A course designed to introduce the student to web presentation, theory, techniques and current software applications, including Adobe Photoshop, Macromedia Dreamweaver and Macromedia Flash. Instruction will include web terminology, appropriate file protocolling, information architecture planning, menu-linking organization, communication strategies and www identity design. Upon completion of this course, students will possess a working knowledge of how to organize and design full web page content for interactive on-line user interfacing or control-group presentation.

235. (FNAR635) 3-D Computer Modeling/Digital Sculpture. (C)

White. Prerequisite(s): FNAR 123 and FNAR 264.

Students will develop a facility with fundamental 3-dimensional design concepts through the application of both computer graphics visualization and physical construction. The course will offer students a technical understanding of Polygonal and Spline based modeling, alternative and standard methods of 3-D input/output, and will cover regulations for creating models that will function properly for animation, video games and CMC/laser output.

236. (FNAR536) Digital Figure Modeling I. (B)

White. Prerequisite(s): FNAR 235. Recommended FNAR 243 or FNAR 280.

3D computer figure modeling is a course which will emphasize the modeling of the human figure on the computer. Students will be studying anatomy as it relates to an understanding of the human bone and muscle structure. This understanding will be implemented in constructing models which could be used for still images, medical illustrations, animation, computer games, 3D output and motion capture.

SM 238. (FNAR538) Open Book. (A)

Hyland.

"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book. (Benjamin Franklin Scholar Seminar)

241. (FNAR541) Hand-Drawn

Computer Animation. (M) Fierlinger.

Prerequisite(s): FNAR-123 and FNAR-264 or Permission of Instructor.

The student will learn to conceptualize and produce animation design ideas with an eye on the possibility of making the art of animation a future career. The student will be introduced to the workings of hand-drawn digital 2d animation design using a Wacom tablet and software Mirage, specializing in this type of production. Emphasis will be placed on: 1) the development of drawing skills particularly related to the creation of paperless animation in a quick and effortless style; 2) the finesse of representing a sense of drama and motion within a single frame; 3) storytelling skills fulfilling a mission of urgency and purposefulness; 4) the pursuit of originality in a world where almost everything has already been done- or so it seems; and 5) passion!- for the sense of responsibility to serve others; to follow direction and honor deadlines without compromising one's drive for creative independence. Students are required to buy their own Wacom Intuos2 pens.

243. (FNAR543) Figure Sculpture I. (C)

Vidnovic.

An introduction of modeling the human figure in clay. Students will work from the live model, acquainting themselves with issues of basic anatomy, form and function, and clay modeling. No previous experience is required; drawing experience a plus; attendance and effort are mandatory.

244. (FNAR544) Figure Sculpture II. (C)

Vidnovic. Prerequisite(s): FNAR 243.

A focused study of the human figure for students who have already taken Figure Sculpture I. Figure Sculpture II offers students students a chance to refine their modeling skills, to appropriately enhance their use of anatomy, and to experiment with scale. Full fluency in basic human functional anatomy is expected upon enrollment.

250. Introduction to Printmaking. (B)

Lee. Lab fee: \$40.00.

This course will concentrate on creating images in a variety of print media. This course encourages both technical exploration as well as an emphasis on image making. With an emphasis on intaglio, a wide variety of print techniques will be covered. In addition to intaglio techniques, the class will also cover screen printing, relief techniques and monoprinting. Through in-class demonstrations and the application of ideas surrounding drawing and mark making, two

dimensional design, and conceptual process, students will enhance their capacity for developing images. Students will also produce a portfolio of prints displaying a thorough knowledge of a variety of print techniques. Lab fee: \$40.00.

251. (FNAR551) Printmaking: Intaglio. (C)

Neff/Talevski. Lab Fee \$40.

Students will have the opportunity to explore the idea of reproducibility, process and experimentation. Zinc and Copper etching, as well as non-acid processes will be covered. Demonstrations involve processes as basic as drypoint and line etching to more advanced skills such as spit bite and multiple plate color printing. A good introduction to the arts for students with little or no experience; this course will provide a foundation on which to build, combining direct skills like drawing and painting with conceptualization, visualization, planning and professionalism. Though offering much technical information, the focus of the class will be image making and idea development. Students will be challenged to pursue themes personally important while completing smaller projects designed to master techniques. \$40 Studio Fee

252. (FNAR552) Printmaking, Relief/Screen Printing. (C)

Neff/Staff. Lab Fee \$40.

This course will explore the possibilities of the more direct and graphic printmaking methods: relief and screen printing. Demonstrations will be offered in linoleum and wood block printing, monotypes, collagraphs, multi-block color printing, stencil and photo silkscreen. Experimentation with materials, techniques and the definition of "printing" is strongly encouraged. Students will have the opportunity to explore the idea of reproducibility, process and play. \$40 Studio fee.

253. (FNAR553) Advanced Projects in Printmaking. (B)

Neff/Marti. Prerequisite(s): FNAR 251 and FNAR 252, or FNAR 257. Lab Fee \$40.

This course will concentrate on expanding imagery in print media. A wide variety of print techniques will be covered. Techniques will be addressed as they serve the needs of ideas rather than a set technical procedure. Through individual consultation, scheduled class critiques, field trips, guest artists, and collaborative projects, attention will be given to studio work in and out of printmaking so that the technical and conceptual strengths of print media can

serve as a worthwhile adjunct to an overall studio practice. The course requires the proposal of a directed project to be explored in this seminar. \$40 Studio Fee.

255. (FNAR555) Book Arts and Letterpress. Treacy. Lab Fee \$40.

Book Arts and Letterpress is an introduction to the structure, form and craft of books as aesthetic and utilitarian objects. The letterpress will be used to set type for the books and much of the text will be based on the students' own writings. Students can expect to produce a variety of bindings, objects, chapbooks, etc. Lab fee of \$40.00 required.

SM 256. (ENGL122, FNAR556) Grotesque Forms. (A) Treacy/Gautsch.

An introduction to letterpress printing and bookmaking and writing for the artist book, focusing on the history of the artist book, competence in letterpress technique, print composition and design skills, and alternative book binding. Course readings will focus on the work Johanna Drucker and Jerome Rothenberg, and the examination of multi-media works. Field trips to local artist book collections will supplement course reading, projects, and the final project. The entire class will be taught, and practiced, through the lens of "the grotesque" in art and literature. As a final project, each student will make their own limited-edition artist book that considers the course theme of "the grotesque" through writing, image, printing and binding. \$40 Studio Fee.

257. (FNAR557) Printmaking: Mixed Media. (C) Neff. Lab fee of \$40.

This course will concentrate on expanding your imagery in print media. A wide variety of print techniques will be covered such as monoprinting, multi-plate color printing, photo-based intaglio, lithography and screenprinting. Techniques will be addressed as they serve the needs of your ideas rather than as a set technical procedure. Through individual consultation, scheduled class critiques, field trips, guest artists, and collaborative projects, attention will be given to your work in and out of printmaking so that the technical and conceptual strengths of print media can serve as a worthwhile adjunct to your overall work. Independent work outside of class is expected and printmaking experience is highly recommended. \$40 Studio fee.

260. (FNAR560) Ceramics: Handbuilding. (C) Maeshima/Courtney. Lab Fee \$80.

This class is designed to give students a foundation of basic skills needed to express ideas creatively in clay. Assignments will combine learning different approaches to art/sculpture making with clay forming and finishing techniques. Coil building, slab construction, pinching and tile making will be learned. Students will become familiar with basic glaze and slip surface treatments. The firing process will also be covered. Issues in historical and contemporary ceramics will be discussed. Instruction will center around demonstration, slide presentations, individual and group critiques.

261. (FNAR561) Clay Wheel Throwing I. (C)

Courtney/Maeshima/Greenheck. Lab Fee \$80.

The purpose of this beginning level ceramics class is to learn the skills needed to use the potter's wheel as a tool for object making. Traditional ceramic techniques such as centering the clay, pulling walls and trimming pots will be a focus. A variety of glazing and slip decoration methods will be covered. Slide discussions, field trips and readings will supplement the studio work. \$80 Studio fee.

262. (FNAR548) Mosaics and Tiles. (B) Warnock. Lab Fee \$80.

This class will introduce students to a variety of techniques and approaches used in creating mosaics. Students will learn the history of this ancient method of pictorial rendering and will gain appreciation for contemporary applications of mosaic in both utilitarian and fine art contexts. Various methods of making, glazing and firing tiles will be taught, enabling students to design and produce their own series of works. Readings, slide presentations and field trips will complement hands-on experience. \$80 Studio Fee.

263. (FNAR563) Clay Wheel Throwing II. (C)

Courtney/Maeshima/Greenheck. Prerequisite(s): FNAR 261. Lab Fee \$80.

Students will continue to develop the technical skills involved in the wheel throwing process. Using the wheel as a tool to make sculptural as well as functional objects will also be explored. Focus will be placed on students' creative and technical development. \$80 Studio Fee.

264. (FNAR636, VLST264) Digital Design Foundations. (C)

Fledderman/Gallagher/Holmes/Comberg/Hylland.

This course explores the elements and principles of design and composition. It is an introduction to the intentional organization of traditional and digital image-making. Emphasis will be placed on understanding compositional relationships through experimentation, iteration and critique. Students will create imagery using hand skills and the software programs Adobe Illustrator, Photoshop, and InDesign.

266. (FNAR566) Graphic Design. (C) Cooper/Hylland/Comberg. Prerequisite(s): FNAR 264.

Graphic Design encompasses many forms of visual communication that are disseminated in print, on screen and in the environment. In every design, the meaningful use of text and/or image is what communicates a message to an intended audience. Through a series of different projects, students will gain an understanding of visual problem-solving concepts. Professional design software will be used.

267. (CINE267, FNAR567) Computer Animation. (C) Burke/Hagerty.

Prerequisite(s): FNAR 123 and FNAR 264.

Through a series of studio projects, this course will focus on 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling by developing new sensitivities to movement, cinematography, editing, sound, color, and lighting. Compositing software covered in the course will be used to combine 2D graphics, 3D animation, and sound. Recommended materials: Wacom Pen

268. (CINE262, FNAR568) Interactive Multimedia. (M) Mosley. Prerequisite(s): FNAR 264.

Interactive multimedia design in art, education, entertainment, and business has extended from the primitive state of CD-ROMS, and Laserdiscs, to the web, public interactive installations, and applications for hand-held computers. Through a series of studio projects, this course will focus on sound design, animation and graphic interface design for interactivity. Authoring and editing applications will be introduced including Flash and Pro Tools. Recommended materials: Wacom Pen

269. (FNAR569) Typography. (B)

Hyland/Comberg/Gallagher.

Prerequisite(s): FNAR 264.

The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.

270. (FNAR570) Graphic Design**Practicum. (B)** Comberg. Prerequisite(s): FNAR 266.

Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.

SM 271. (FNAR571, VLST271) Introduction to Photography. (C)

Rodewald/Martinez/Diamond/Pfister. Lab Fee \$50.

This course will introduce students to the basic concepts, processes and techniques used in black and white photography, including camera operation, exposure, darkroom procedures, basic lighting, and their controlled applications. Introduction to Photography is designed to provide beginners with an introduction into the proper methods for creating black and white photographic images. Students will learn how to fully use and understand their SLR 35mm camera in order to successfully expose black and white film. Students will then learn how to professionally process their film and print their negatives onto photographic paper. This course begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of the medium. A brief introduction into the realm of digital imaging is also incorporated into this course; this includes scanning black and white negatives and the basics of Photoshop image adjustments. No previous

experience necessary. Although it is recommended that students purchase their own 35mm SLR cameras for this course, cameras will be available throughout the semester for reservation and checkout from the photography equipment room. Lab fee: \$50.00

SM 272. (FNAR572) Intermediate Photography. (C) Rodewald.

Prerequisite(s): FNAR 271 or Permission of Instructor. Lab Fee \$50.

This intermediate photography course will expand on traditional black and white techniques by using various types of films, fiber printing papers and advanced darkroom procedures. The basics of the Zone System, advanced metering, studio lighting and 4x5 view camera will be introduced as well as medium format Hasselblad camera systems. A wide array of traditional (and non) photographic techniques will be covered to provide a "toolbox" of processes that will expand the students' vocabulary as image-makers. Emphasis will be on exploring and mastering these different approaches as we begin to identify how these different processes - and how they look - can contribute to meaning in a work of art. Throughout the course students will be guided toward the creation of work that is both technically and conceptually realized. Correlations between digital and analog photographic practices are also incorporated into this course, providing an introduction into the possibilities of hybrid platforms. The examination of both historic and contemporary photographs will supplement this research. The final project will be a developed portfolio of prints based on one idea or theme. Lab fee: \$50.00.

SM 274. (FNAR574) Portrait Photography. (B) Wahl. Prerequisite(s):

FNAR 271 or Permission of Instructor. Lab Fee \$50.

The objective of this class is to explore the many ways of interpretive photographic portraiture. An awareness of historical perspective, technical developments, physiognomy and proxemics will be discussed in order to gain a better understanding of the context of photographic portraiture. Natural and artificial lighting demonstrations will be presented to illustrate the importance of their relationship to the interpretive portrait. Any photographic medium (film - black and white or color - or digital) will be accepted, providing the skill and quality are apparent. There will be an assignment given each week at the beginning of each class and prints/CD's will be due the

following week. The final project will be an extended portrait project of your choice. \$50 Studio Fee.

275. (FNAR583) Introduction to Color Photography. (C) Rodewald.

Prerequisite(s): FNAR 271 or Permission of Instructor. Lab Fee \$50.

In this course students will begin to incorporate color into their technical and aesthetic photography arsenal. How film reacts to light and records color, how color influences the meaning of an image, and the development of a personal color sense will be explored through a series of assignments ranging from portrait to documentary to constructed photography. Topics covered will include: color theory, color temperatures, film and paper characteristics, push and pull processing, filters, advanced metering techniques, a brief introduction to the 4x5 View Camera, medium format Hasselblad systems, basic flash and studio lighting, print spotting, presentation, content and context. Emphasis will be placed on the photograph as a means of visual expression and the class is designed to treat color photography as both a technical and artistic medium. Correlations between digital and analog photographic practices are also incorporated into this course in order to illustrate and explore the full range of potential within color photography's trajectory and range. The examination of both historic and contemporary photographs will supplement our visual explorations. Lab fee: \$50.00.

SM 278. (FNAR578) Photojournalism. (C) Bryant. Prerequisite(s): FNAR 271 or Permission of Instructor. Lab Fee \$50.

This is an introductory course in photojournalism with a major emphasis on developing a thoughtful approach toward seeing and making of meaningful photographs that communicate with readers. We will look critically at documentary and news photographs from the past and present. Through weekly shooting assignments, students will be exposed to the demands placed on working journalists. \$50 Studio Fee.

SM 279. (FNAR679) Large Format Photography & Studio Lighting. (B)

Wahl. Prerequisite(s): FNAR 271 or Permission of Instructor. Lab Fee \$50.

The large format camera is the most versatile and widely used camera for fine art, architectural and commercial photography. This course will introduce the student to the basic and advanced operations of the camera. The class will also explore the use of artificial lighting in

a studio environment. Recommended for Fine Arts and Architecture students. \$50 Studio Fee.

280. (FNAR580) Figure Drawing I. (C) Martenson.

Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in composition and as a contextualized element.

281. (FNAR581) Figure Drawing II. (C) Martenson. Prerequisite(s): FNAR 280.

Figure Drawing II is an advanced class designed to further develop the student's skill and facility. Content issues will be explored through individualized projects concentrating on the human form and expanded media applications.

SM 282. (FNAR582) Advanced Topics In Photography: Photo-based Installations Work. (A) Martinez.

Prerequisite(s): FNAR 271 or Permission of Instructor. Lab Fee \$50.

The course will stimulate students to create photography-based works of art that break from traditional practices to venture into exploring the various methods and materials of installation, public works, and/or assemblage. The class will be working on a group effort, various collaborative projects, and on individual installations. In creating these installation works students will not only be encouraged to cross disciplines (for example, to incorporate aspects of drawing or sculpture into their projects), but to also make work for specific sites in and around campus. Technical demonstrations for this course include: mural printing, various transfer processes, alternative darkroom techniques, use of hand-applied light sensitive liquid emulsions, etc. \$50 Studio Fee.

287. (FNAR587) Advanced Color Photography: Multiples and the Narrative. (B) Rodewald. Prerequisite(s): FNAR 275 or Permission of Instructor. Lab Fee \$50.

This course will expand upon and refine the technical information learned in Introduction to Color Photography. While based in analog practice, all available technologies will be considered as viable components toward the creation of three larger bodies of works. Both documentary and still life approaches will be explored with an emphasis on solid conceptual research as our starting point. Projects are self-defined and negotiated with the

instructor. The course is designed to treat color photography as both a technical and artistic medium. The final project will include a limited edition class portfolio. The examination of both historic and contemporary photography will supplement our visual explorations. The emphasis for this Advanced Color Photography course will shift throughout academic semesters. For example, the following descriptions adds specificity to this upper level photography course offering.

"Advanced Color Projects: Multiples and the Narrative" will focus on the creation of photographic based works of art that use more than one image to explore issues of content, context, sequencing and the abstract narrative. This is a cross-platform, hybrid technologies class and while based on analog/film practice - both black and white and color - all digital processes are considered possible viable components toward the completion of three larger bodies of works. Both documentary and still life approaches will be explored with an emphasis on solid conceptual research as our starting point. Project content is self-defined and negotiated with the instructor. The course is designed to treat color photography as both a technical and artistic medium. The final project will include a limited edition portfolio. The examination of both historic and contemporary photographs will supplement our visual explorations. Lab fee: \$50.00

289. (CINE289, FNAR589) Mixed Media Animation. (B)

Burke/Hagerty/Mosley. Prerequisite(s): FNAR 123 and FNAR 264.

This animation course fuses hands-on studio drawing, modeling, and cinematic processes with digital tools. Real world techniques such as stop-motion, claymation, hand-drawn and multi-plane animation will be practiced in the studio. Other techniques, such as keyframe animation, editing and blue-screen composition compositing will be practiced in the digital labs. Both production teams and individuals will create short mixed-media animations in form, material and time.

333. (FNAR533) Painting III. (C)

Tileston/. Prerequisite(s): FNAR 232. Advanced Painting, open media.

334. (FNAR534) Painting IV. (C)

Tileston. Prerequisite(s): FNAR 333. Advanced painting, open media.

335. (FNAR535) Web Design II. (B)

Cooper. Prerequisite(s): FNAR 234.

This course will explore the design processes and techniques for creating an effective interactive experience. Students will apply both analytical and creative thinking at different points in the semester. This class will be a furtherance in learning to think and work as a designer. Students will begin to discern between everyday visual clutter and strongly developed design rooted in conceptual, aesthetic and technical achievement. Students will learn to distinguish the good from the bad and know the difference between design and decoration. We will explore how animation and sound can enhance the content and tell a story in a compelling way. The class will use Adobe Flash and Adobe Dreamweaver (HTML and CSS) programming.

337. (FNAR637) Information Design and Visualization. Comberg.

Prerequisite(s): FNAR 264.

Information Design and Visualization is an introductory course that explores the structures of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.

SM 340. (FNAR640) Digital Photography. (C) Wahl/Diamond/Stolfa.

Understanding the tools of digital photography and how to use them is a necessity for visual artists. Using new technologies for personal expression is an important objective of this course. Equally important is to train and prepare students with the basic practical digital skills needed in the various aspects of today's world, including career development and support, avocation, and visual communication. The course will cover the basics of camera use and composition, as well as the critical techniques of digital capture, image processing, color management and color correction. A digital camera with a minimum of a seven-megapixels resolution will be needed for this course.

SM 341. (FNAR641) Architecture, Landscape and Cities: Large Format Photography. (M) Staff. Prerequisite(s): FNAR 271. Lab Fee \$50.

The emphasis of this course is on the usage and practical applications of the large format camera and how it records and interprets architecture and landscapes. The course is directed to photographers,

architects, landscape artists and historic preservationists. The skills acquired will give students a practical application to ideas learned in conceptual classes. Topics covered will include: using the camera outdoors; framing; perspective and vantage point; filters and lighting sources. Lectures and presentations on architectural photographers as well as field trips to noted local sites will also be included. \$50 Studio fee.

349. (FNAR649) Advanced Digital Photography. (C) Wahl. Prerequisite(s): FNAR 340 or Permission of Instructor.

This course further explores the conceptual, philosophical and technical relationship between the camera, computer and the contemporary artist. With a heavy emphasis on project-oriented work, students will further their knowledge of manipulation, retouching and collage, as well as embarking on advanced color management and the use of digital photography in the studio environment. In addition to exploring these advanced imaging practices in their own work, students will also be required to critically examine the profound effects that new imaging technologies are having on art, journalism and the commercial realms.

353. (CINE353, FNAR653) Advanced Projects in Animation. (B) Mosley. Prerequisite(s): FNAR 267.

Through a series of studio projects, this course will focus on advanced concepts in 3D computer animation and 2D compositing. The course will cover advanced techniques for rigging animated characters or structures, shading 3D forms, working with dynamic simulations, rendering projects, and compositing complex shots. Topics discussed will include production pipelines, motion-capture, and methods of developing ideas for animation. The schedule of the course will lend itself to allowing members to complete ambitious self-conceived animation projects.

362. (FNAR564) Clay: II. (M) Courtney. Prerequisite(s): FNAR 260 OR FNAR 261. Lab Fee \$80.

The purpose of this class is to expand the student's knowledge of ceramic processes. Handbuilding techniques such as coil building and slab construction will be reviewed as well as the potter's wheel. A greater emphasis will be placed on glaze chemistry, surface, and the firing process. Students will gain a broader knowledge of both electric and gas kiln firing processes. Exploring local clay institutions, such as the Clay Studio in Old City Philadelphia

and the Moravian Tile Works in Doylestown will introduce students to the local ceramic resources that have played a significant role in the history of American ceramics. Raku firing, how to make two and three part slip cast molds, printmaking and ceramics and the introduction of the computer into the art making process can be expected.

370. (FNAR670) Advanced Graphic Design and Typography. (A)

Gallagher. Prerequisite(s): FNAR 266 and FNAR 269 or Permission of Instructor.

This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.

399. Independent Study. (C)

Prerequisite(s): See Department for section number. A minimum three-page proposal must be submitted and approved by both the Instructor and the Undergraduate Director.

SM 488. Senior Seminar and Project. (A) Martinez/Neff. Fine Arts Majors only.

Using the skills and education thus far acquired at Penn, the student will design and present a project reflecting a personal investigation in the visual arts. The instructor will guide students in readings on contemporary critical issues relevant to the student's research. The resulting work will be presented in an exhibition during the spring semester that will be evaluated by the seminar participants and the instructor. Media is open.

SM 489. Senior Seminar and Project. (B) Martinez/Neff. Continuation of FNAR488 culminating in an exhibition.

501. Graduate Studio I. (A)

Gispert/Ritchie/Tileston.

First year studio for MFA students exploring advanced discipline in painting, sculpture, printmaking, photography and new media.

502. Graduate Studio II. (B)

Faculty/Gispert/Ritchie/Tileston.

Second year studio for MFA students exploring advanced discipline in painting, sculpture, printmaking, photography, and new media.

511. (FNAR211, VLST311) Color. (C) Lachman.

The color class is a one semester exploration of color action and interaction, its history and its contemporary paradigms and applications. Studio work includes both "laboratory" studies and improvisatory exercises and uses colored papers, gouache, light and related materials.

515. Photography Studio Abroad.

Martinez. Prerequisite(s): Permission of Instructor Required. Corequisite(s): The Howard A. Silverstein and Patricia Bleznak Silverstein Photography Studio Abroad will explore the contradictions and significance of China's radically shifting contemporary cultural climate. It will also offer our students the venue for the implementation of technical challenges and resolutions in pursuit of an image. Assignments will include specific technical strategies, presentations, conceptually driven units and a two-week shooting on site in Beijing.

Through photography, this travel abroad opportunity will explore the contradictions and significance of China's radically shifting contemporary cultural climate. It will also offer our students the venue for the implementation of technical challenges and resolutions in pursuit of an image. Assignments will include specific technical strategies, presentations, conceptually driven units, and two week shooting on site in Beijing.

523. (FNAR123, VLST123) Drawing I. (C)

Edgerton/Curran/Talevski/Weiss/Matthews/Hudson/Staff.

This course integrates formal issues, technical skill and content in basic drawing. Investigative work is from observation. Drawing from ideas and the imagination will also be explored using a wide variety of materials (such as graphite, charcoal, conte, ink) and methods (continuous tone, subtraction, etc.) It is appropriate for beginners and those with modest experience.

524. (FNAR124) Drawing II. (C)

Schneider/Curran. Prerequisite(s): FNAR 523. A continuation of FNAR 523.

Drawing II expands upon drawing fundamentals and leads the student into a facility with materials and methods, and into drawing as an objective not solely a means.

531. (FNAR231) Painting I. (C)

Curran/Murphy/Edgerton. Prerequisite(s): FNAR 523.

Painting I is an introduction to oil painting. The course will provide an integrated approach to formal issues, content and technical means. Students work from direct observation with still life, landscape and the figure. Students will leave the class with a basic knowledge of materials and with a repertoire of techniques and methods. This course is appropriate for beginners and individuals with some painting background.

532. (FNAR232) Painting II. (C)

Tileston/Curran J. Prerequisite(s): FNAR 531.

This course focuses on the further development of techniques in painting and the refinement of individual style. Students will work from still life, landscape and the nude model as well as personal resources. Emphasis is placed on the process of painting.

533. (FNAR333) Painting III. (C)

Tileston. Prerequisite(s): FNAR 532.

Advanced Painting, open media.

534. (FNAR334) Painting IV. (C)

Tileston. Prerequisite(s): FNAR 533.

Advanced painting, open media.

535. (FNAR335) Web Design II. (B)

Cooper. Prerequisite(s): FNAR 634.

This course will explore the design processes and techniques for creating an effective interactive experience. Students will apply both analytical and creative thinking at different points in the semester. This class will be a furtherance in learning to think and work as a designer. Students will begin to discern between everyday visual clutter and strongly developed design rooted in conceptual, aesthetic and technical achievement. Students will learn to distinguish the good from the bad and know the difference between design and decoration. We will explore how animation and sound can enhance the content and tell a story in a compelling way. The class will use Adobe Flash and Adobe Dreamweaver (HTML and CSS) programming.

536. (FNAR236) Digital Figure Modeling I. (B)

White. Prerequisite(s): FNAR-635. Recommended FNAR-543 or FNAR-580.

3D computer figure modeling is a course which will emphasize the modeling of the human figure on the computer. Students will be studying anatomy as it relates to an understanding of the human bone and

muscle structure. This understanding will be implemented in constructing models which could be used for still images, medical illustrations, animation, computer games, 3D output and motion capture.

SM 538. (FNAR238) Open Book. (A)

Hyland.

"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.

SM 539. Visual Communications and Presentation. (B)

Gallagher.

This seminar will introduce the concept of visual communication and the elements of graphic design along with methods for preparing professional portfolios and presentations. Students will develop sensitivity to visual communication through studying content choices, typeface selection, image quality, text and image integration, visual hierarchies and structural systems. The seminar will also address important aspects of professional presentation for students preparing to enter the marketplace. Photoshop, Illustrator and InDesign will be the tools used to construct presentation packages, and each student using their own work, will develop a message for targeting their work to a specific audience. The emphasis of the course will be to understand the basic tenets of graphic design and to learn to implement them in the context of the students' own work.

Visual communication represents the way we see, process, and respond to information. At its best it is engaging and thought provoking, and at its worst it is misrepresentational or banal. We use visual communication to deliver content, promote awareness, encourage action, represent statistical information, sell products, assist wayfinding, and create novel experiences. The ability to deliver a message visually that will be understood in an intended manner is at the core of designing for communication.

This seminar will develop sensitivity to visual communication through studying content choices, typeface selection, image quality, text and image integration, visual hierarchies and structural systems. It will also address important aspects of professional presentation for students

preparing to enter the marketplace.

Photoshop, Illustrator and InDesign will be the tools used to construct presentation packages, and each student using their own work, will develop a message for targeting their work to a specific audience. The emphasis of the course will be to understand the basic tenets of graphic design and to learn to implement them in the context of the students' own work.

540. (FNAR140) Furniture Design. (A)

Allison.

The intent of this course is to amplify and maintain creativity, expanding on the tools of design. From modeling to large scale prototyping, students will delve into design through the process of sketch, modeling in three-dimension, and wordplay (haiku, oxymoron, hybridization and the conundrum).

541. (FNAR241) Hand-Drawn Computer Animation. (M)

Fierlinger. Prerequisite(s): FNAR-523 and FNAR-636 or Permission of Instructor.

The student will learn to conceptualize and produce animation design ideas with an eye on the possibility of making the art of animation a future career. The student will be introduced to the workings of hand-drawn digital 2d animation design using a Wacom tablet and software Mirage, specializing in this type of production. Emphasis will be placed on: 1) the development of drawing skills particularly related to the creation of paperless animation in a quick and effortless style; 2) the finesse of representing a sense of drama and motion within a single frame; 3) storytelling skills fulfilling a mission of urgency and purposefulness; 4) the pursuit of originality in a world where almost everything has already been done- or so it seems; and 5) passion!- for the sense of responsibility to serve others; to follow direction and honor deadlines without compromising one's drive for creative independence. Students are required to buy their own Wacom Intuos2 pens.

542. (FNAR142) 3-D Design. (C)

Vidnovic.

Students will make work that draws from and interacts with the three-dimensional world we live in. Formal strategies will explore principles of organization. Planar construction, modeling and assemblage methods will be used for investigations spanning from bas-relief to environmental art. This is a "learn by doing" process with no prerequisites.

543. (FNAR243) Figure Sculpture I. (C) Vidnovic.

An introduction of modeling the human figure in clay. Students will work from the live model, acquainting themselves with issues of basic anatomy, form and function, and clay modeling. No previous experience is required; drawing experience a plus; attendance and effort are mandatory.

544. (FNAR244) Figure Sculpture II. (C) Vidnovic. Prerequisite(s): FNAR 543.

A focused study of the human figure for students who have already taken Figure Sculpture I. Figure Sculpture II offers students a chance to refine their modeling skills, to appropriately enhance their use of anatomy, and to experiment with scale. Full fluency in basic human functional anatomy is expected upon enrollment.

545. (FNAR145) Sculpture I: Materials and Techniques. (C) White.

Students will develop facility with conceptual and visual 3-dimensional forms by applying plastic media and subtraction, addition and fabrication techniques with hand tools, power tools and welding equipment.

546. (FNAR146) Sculpture II. (C) White. Prerequisite(s): FNAR 545.

Sculpture II builds on the skills and concepts acquired in Sculpture I and challenges the student with concept directed projects.

548. (FNAR262) Mosaic and Tiles. (B) Warnock. Lab Fee- \$80.

This class will introduce students to a variety of techniques and approaches used in creating mosaics. Students will learn the history of this ancient method of pictorial rendering and will gain appreciation for contemporary applications of mosaic in both utilitarian and fine art contexts. Various methods of making, glazing and firing tiles will be taught, enabling students to design and produce their own series of works. Readings, slide presentations and field trips will complement hands-on experience. \$80 Studio Fee.

551. (FNAR251) Printmaking: Intaglio. (C) Neff/Talevski. Lab Fee \$40.

Students will have the opportunity to explore the idea of reproducibility, process and experimentation. Zinc and Copper etching, as well as non-acid processes will be covered. Demonstrations involve processes as basic as drypoint and line etching to more advanced skills such as spit bite and multiple plate color printing. A

good introduction to the arts for students with little or no experience; this course will provide a foundation on which to build, combining direct skills like drawing and painting with conceptualization, visualization, planning and professionalism. Though offering much technical information, the focus of the class will be image making and idea development. Students will be challenged to pursue themes personally important while completing smaller projects designed to master techniques. \$40 Studio Fee.

552. (FNAR252) Printmaking: Relief/Screen Printing. (C) Neff/Staff. Lab Fee \$40.

This course will explore the possibilities of the more direct and graphic printmaking methods: relief and screen printing. Demonstrations will be offered in linoleum and wood block printing, monotypes, collagraphs, multi-block color printing, stencil and photo silkscreen. Experimentation with materials, techniques and the definition of "printing" is strongly encouraged. Students will have the opportunity to explore the idea of reproducibility, process and play. \$40 Studio Fee.

554. Graduate Printmaking I. (G) Adkins. Lab Fee \$25.

This course will cover the traditional print processes while offering a chance to develop visual skills. The processes covered in class will include monoprinting (one of a kind prints), relief printing and a variety of etching techniques. Demonstrations will be offered to introduce more advanced processes like lithography and silkscreening. This class is an excellent introduction to the visual arts because the thought process as well as the development of the image can be recorded. \$40 Studio Fee.

555. (FNAR255) Graduate Printmaking II. (C) Adkins. Lab Fee \$40.

Book arts and Letterpress is an introduction to the structure, form and craft of books as aesthetic and utilitarian objects. The letterpress will be used to set type for the books and much of the text will be based on the students' own writings. Students can expect to produce a variety of bindings, objects, chapbooks, etc. Lab fee of \$40.00 required.

SM 556. (ENGL122, FNAR256) Grotesque Forms. (A) Neff/Gautsch. Prerequisite(s): FNAR 5231 or FNAR 542 or ARCH 302.

An introduction to letterpress printing and bookmaking and writing for the artist book,

focusing on the history of the artist book, competence in letterpress technique, print composition and design skills, and alternative book binding. Course readings will focus on the work Johanna Drucker and Jerome Rothenberg, and the examination of multi-media works. Field trips to local artist book collections will supplement course reading, projects, and the final project. The entire class will be taught, and practiced, through the lens of "the grotesque" in art and literature. As a final project, each student will make their own limited-edition artist book that considers the course theme of "the grotesque" through writing, image, printing and binding. \$40 Studio Fee.

557. (FNAR257) Printmaking: Mixed Media. (C) Neff. Lab fee of \$25.

This course will concentrate on expanding your imagery in print media. A wide variety of print techniques will be covered such as monoprinting, multi-plate color printing, photo-based intaglio, lithography and screenprinting. Techniques will be addressed as they serve the needs of your ideas rather than as a set technical procedure. Through individual consultation, scheduled class critiques, field trips, guest artists, and collaborative projects, attention will be given to your work in and out of printmaking so that the technical and conceptual strengths of print media can serve as a worthwhile adjunct to your overall work. Independent work outside of class is expected and printmaking experience is highly recommended. \$40 Studio fee.

560. (FNAR260) Ceramics: Handbuilding. (C) Maeshima/Courtney. Lab Fee \$80.

This class is designed to give students a foundation of basic skills needed to express ideas creatively in clay. Assignments will combine learning different approaches to art/sculpture making with clay forming and finishing techniques. Coil building, slab construction, pinching and tile making will be learned. Students will become familiar with basic glaze and slip surface treatments. The firing process will also be covered. Issues in historical and contemporary ceramics will be discussed. Instruction will center around demonstration, slide presentations, individual and group critiques.

561. (FNAR261) Clay Wheel Throwing I. (C) Courtney/Maeshima/Greenheck. Lab Fee \$80.

The purpose of this beginning level ceramics class is to learn the skills needed

to use the potters wheel as a tool for object making. Traditional ceramic techniques such as centering the clay, pulling walls and trimming pots will be a focus. A variety of glazing and slip decoration methods will be covered. Slide discussions, field trips and readings will supplement the studio work. \$80 Studio Fee.

563. (FNAR263) Clay Wheel

Throwing II. (C) Maeshima/Courtney. Prerequisite(s): FNAR 561. Lab Fee \$80.

Students will continue to develop the technical skills involved in the wheel throwing process. Using the wheel as a tool to make sculptural as well as functional objects will also be explored. Focus will be placed on the students creative and technical development. \$80 Studio Fee.

564. (FNAR362) Clay II. (M) Courtney. Prerequisite(s): FNAR 560 or 561. Lab Fee \$80.

The purpose of this class is to expand students knowledge of ceramic processes. Hand building techniques such as coil building and slab construction will be reviewed as well as the potter's wheel. A greater emphasis will be placed on glaze chemistry, surface, and the firing process. Students will gain a broader knowledge of both electric and gas kiln firing processes. Exploring local clay institutions, such as the Clay Studio in Old City Philadelphia and the Moravian Tile Works in Doylestown will introduce students to the local ceramic resources that have played a significant role in the history of American ceramics. Raku firing, how to make two and three part slip cast molds, printmaking and ceramics and the introduction of the computer into the art making process can be expected.

566. (FNAR266) Graphic Design. (C) Cooper/Hyland/Comberg. Prerequisite(s): FNAR 636.

Graphic Design encompasses many forms of visual communication that are disseminated in print, on screen and in the environment. In every design, the meaningful use of text and/or image is what communicates a message to an intended audience. Through a series of different projects, students will gain an understanding of visual problem-solving concepts. Professional design software will be used.

567. (CINE267, FNAR267) Computer Animation. (C) Burke/Hagerty.

Prerequisite(s): FNAR 523 and FNAR 636.

Through a series of studio projects, this course will focus on 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling by developing new sensitivities to movement, cinematography, editing, sound, color, and lighting. Compositing software covered in the course will be used to combine 2D graphics, 3D animation, and sound. Recommended materials: Wacom Pen

568. (CINE262, FNAR268) Interactive Multimedia. (M) Mosley. Prerequisite(s): FNAR 636.

Interactive multimedia design in art, education, entertainment, and business has extended from the primitive state of CD-ROMS, and Laserdiscs, to the web, public interactive installations, and applications for hand-held computers. Through a series of studio projects, this course will focus on sound design, animation and graphic interface design for interactivity. Authoring and editing applications will be introduced including Flash and Pro Tools. Recommended materials: Wacom Pen

569. (FNAR269) Typography. (B)

Hyland/Comberg/Gallagher.

Prerequisite(s): FNAR 636.

The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.

570. (FNAR270) Graphic Design Practicum. (B) Comberg. Prerequisite(s): FNAR 566 or FNAR 636.

Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.

SM 571. (FNAR271, VLST271) Introduction to Photography. (C)

Rodewald/Martinez/Diamond/Pfister. Lab Fee \$50.

This course will introduce students to the basic concepts, processes and techniques used in black and white photography, including camera operation, exposure, darkroom procedures, basic lighting, and their controlled applications. Introduction to Photography is designed to provide beginners with an introduction into the proper methods for creating black and white photographic images. Students will learn how to fully use and understand their SLR 35mm camera in order to successfully expose black and white film. Students will then learn how to professionally process their film and print their negatives onto photographic paper. This course begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of the medium. A brief introduction into the realm of digital imaging is also incorporated into this course; this includes scanning black and white negatives and the basics of Photoshop image adjustments. No previous experience necessary. Although it is recommended that students purchase their own 35mm SLR cameras for this course, cameras will be available throughout the semester for reservation and checkout from the photography equipment room. Lab fee: \$50.00

SM 572. (FNAR272) Intermediate Photography. (C) Rodewald.

Prerequisite(s): FNAR 571 or Permission of Instructor. Lab Fee \$50.

The intermediate class addresses the aesthetics of picture making and a higher level of technical development. Assignments are given that enable the students to experience as many different ideas and methods as possible. \$50 Studio Fee.

SM 574. (FNAR274) Portrait Photography. (B) Wahl. Prerequisite(s): FNAR 571. Lab Fee \$50.

This class focuses on the human and its specific history. The emphasis will be on individual aesthetics dealing with the elements of formal and informal portraiture on location and in the studio with both artificial and natural light. We will explore many different technical aspects. A variety of assignments will include photographing the nude in a studio setting. \$50 Studio Fee.

SM 575. Graduate Drawing Seminar. (B) Tileston/Faculty.

This seminar examines the essential nature drawing has in an artist's process. Direct visual perception, self-referential mark making, the viability of space and understanding it, and drawing from one's own work are some of the drawing experiences encountered in the course. There are regular critiques and discussions based on the work and readings.

SM 576. Critical Issues Seminar. (C) Tileston.

An investigation of the issues concerning visual artists by establishing the basis in Modernism and exploring the questions which concern artists today, such as abstraction and representation, post-modernism, appropriation, context, art and politics, race and gender and the student's relationship to these subjects. Phase two of the course will include current writings about the contemporary art world, the current dialogue/s, and issues specific to our time and place as artists. An exploration of contemporary issues in a spirit of curiosity and critique, and relate them to our studio practice.

SM 577. Significant Matters: Form Language in Visual Art. (C) Faculty.

Focusing on each student's independent studio pursuits, group critiques of works-in-progress will examine their development and the nature of their form-language. Relationships between image and idea, structure and concept as well as subject and meaning will be examined through discussion and two papers: a written preliminary "thesis" statement for their own work and a critique of other students' work including a record and summary of revisions in point of view over the course of the semester. All media areas welcome; weekly attendance required.

SM 578. (FNAR278) Photojournalism. (C) Bryant. Prerequisite(s): FNAR 571 or Permission of Instructor. Lab Fee \$50.

This is an introductory course in photjournalism with a major emphasis on developing a thoughtful approach toward seeing and making of meaningful photographs that communicate with readers. We will look critically at documentary and news photographs from the past and present. Through weekly shooting assignments, students will be exposed to the demands placed on working journalists. \$50 Studio Fee.

579. Graduate Computer Seminar. (M) Mosley.

The computer has become an indispensable tool for artists as they propose, create and document works. This seminar examines the integration of digital technologies within the tradition of fine art production and distribution, and also embraces theoretical issues instigated by emerging technologies. Class members will use the computer to draw, paint, manipulate images, edit video, and publish text for print or web.

580. (FNAR280) Figure Drawing I. (C) Martenson.

Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in composition and as a contextualized element.

581. (FNAR281) Figure Drawing II. (C) Martenson. Prerequisite(s): FNAR 580.

Figure Drawing II is an advanced class designed to further develop the student's skill and facility. Content issues will be explored through individualized projects concentrating on the human form and expanded media applications.

SM 582. (FNAR282) Advanced Topics in Photography: Photo-based Installation Works. (A) Martinez.

Prerequisite(s): FNAR 571 or Permission of Instructor. Lab Fee \$50.

The course will stimulate students to create photography-based works of art that break from traditional practices to venture into exploring the various methods and materials of installation, public works, and/or assemblage. The class will be working on a group effort, various collaborative projects, and on individual installations. In creating these installation works students will not only be encouraged to cross disciplines (for example, to incorporate aspects of drawing or sculpture into their projects), but to also make work for specific sites in and around campus. Technical demonstrations for this course include: mural printing, various transfer processes, alternative darkroom techniques, use of hand-applied light sensitive liquid emulsions, etc. \$50 Studio Fee.

583. (FNAR275) Introduction to Color Photography. (C) Rodewald.

Prerequisite(s): FNAR 571 or Permission of Instructor. Lab Fee \$50.

In this course students will begin to incorporate color into their technical and

aesthetic photography arsenal. How film reacts to light and records color, how color influences the meaning of an image, and the development of a personal color sense will be explored through a series of assignments ranging from portrait to documentary to constructed photography. Topics covered will include: color theory, color temperatures, film and paper characteristics, push and pull processing, filters, advanced metering techniques, a brief introduction to the 4x5 View Camera, medium format Hasselblad systems, basic flash and studio lighting, print spotting, presentation, content and context. Emphasis will be placed on the photograph as a means of visual expression and the class is designed to treat color photography as both a technical and artistic medium. Correlations between digital and analog photographic practices are also incorporated into this course in order to illustrate and explore the full range of potential within color photography's trajectory and range. The examination of both historic and contemporary photographs will supplement our visual explorations. Lab fee: \$50.00.

587. (FNAR287) Advanced Color Photography: Multiples and the Narrative. (B) Rodewald. Prerequisite(s): FNAR 583 or Permission of Instructor. Lab Fee \$50.

This course will focus on the creation of photographic-based works of art that use more than one image to explore issues of content, context, sequencing and the abstract narrative. This is a cross platform, hybrid technologies class and while based on analog/film practice, both black and white and color, all digital processes are considered possible viable components toward the completion of three larger bodies of work. Both documentary and still life approaches will be explored with an emphasis on solid conceptual research as our starting point. Project content is self-defined and negotiated with the instructor. The course is designed to treat color photography as both a technical and artistic medium. The final project will include a limited edition class portfolio. The examination of both historic and contemporary photographs will supplement our visual explorations.

"Advanced Color Projects: Multiples and the Narrative" will focus on the creation of photographic based works of art that use more than one image to explore issues of content, context, sequencing and the abstract narrative. This is a cross-platform, hybrid technologies class and while based on analog/film practice - both black and white and color - all digital

processes are considered possible viable components toward the completion of three larger bodies of works. Both documentary and still life approaches will be explored with an emphasis on solid conceptual research as our starting point. Project content is self-defined and negotiated with the instructor. The course is designed to treat color photography as both a technical and artistic medium. The final project will include a limited edition portfolio. The examination of both historic and contemporary photographs will supplement our visual explorations. Lab fee: \$50.00

589. (CINE289, FNAR289) Mixed Media Animation. (B)

Burke/Hagerty/Mosley. Prerequisite(s): FNAR 523 and FNAR 636.

This animation course fuses hands-on studio drawing, modeling, and cinematic processes with digital tools. Real world techniques such as stop-motion, claymation, hand-drawn and multi-plane animation will be practiced in the studio. Other techniques, such as keyframe animation, editing and blue-screen composition compositing will be practiced in the digital labs. Both production teams and individuals will create short mixed-media animations in form, material and time.

591. The Body and Photography. (B)

Martinez. Prerequisite(s): FNAR-571 or Permission of Instructor.

This course is designed for students who are ardently interested in exploring the body- photographically. Through various situations and settings-- demonstrations, presentations, and lectures by artists/possible guest lecturers, readings, class discussions, slide presentations, brainstorming session, work-in-progress critiques, field trips to galleries and museums as well as other possible pertinent locations (such as nudist colonies and burlesque clubs) -- this course will stimulate students to think about and create studio/seminar course will investigate various topics related to The Body and Photography. In-class discussions on gender, and political and social issues related to the body (from the grotesque to the classical), will be important topics of discussions and exploration throughout the semester and an integral aspect of this course. Themes addressed throughout the semester include: the history of the nude in fine art photography with a special emphasis on new trends in contemporary depictions of the body, and techniques used in photographing the nude (demonstrations on specific traditional and special lighting techniques; large format and medium

format cameras; different film choices; metering; proper traditional, and experimental darkroom techniques; black and white vs. color). \$50 Studio fee.

SM 594. Graduate Photography Seminar. Gispert.

This seminar will examine contemporary issues in photography from the point of view of the practicing artist. Students will meet with visiting critics during the semester, the course will also include student presentations, weekly discussions and group critiques, visits to artists' studios and gallery and museum exhibitions. Texts for the seminar will be drawn from contemporary critical theory in art, philosophy, history and popular culture. Required for all graduate photographers.

SM 596. Graduate Sculpture Seminar. (C) Adkins/Fleming.

This seminar will examine contemporary issues in sculpture from the point of view of the practicing artist. The course includes student presentations in weekly discussions and group critiques, visits to artists' studios and gallery and museum exhibitions, and meetings with visiting artists. Texts for the seminar will be drawn from contemporary critical theory in art, philosophy, history and popular culture. Required for all graduate sculptors. Highly recommended for multimedia students. Others admitted by permission of the instructor.

601. Graduate Studio III. (A)

Gispert/Ritchie/Tileston.

First year studio for MFA students exploring advanced discipline in painting, sculpture, printmaking, photography, and new media.

602. Graduate Studio IV. (B)

Gispert/Ritchie/Tileston.

Second-year studio for MFA students exploring advanced discipline in painting, sculpture, printmaking, photography, and new media.

622. (FNAR222, URBS322) The Big Picture: Mural Arts in Philadelphia. (C) Golden/Walinsky/Gensler.

The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The instructor Jane

Golden is the founder and Director of the Philadelphia Mural Arts Program.

SM 626. (FNAR226, URBS226) The Photography of Urban Place. (M)

Staff. Prerequisite(s): FNAR 571 or Permission of the Instructor. This course may not be used as an elective studio for the Fine Arts Major or Minor.

This is a non-studio course in the photography of buildings, streetscapes, and cities. It is designed for photographers interested in the built environment as subject matter, as well as for architecture and planning students. We will hone practical skills in perspective control, lighting, and photographic interpretation of space, so that photographers, architects and planners can better photograph precedents and their own projects, and better evaluate the use of professional architectural photography for promotion and education. \$50 Studio fee.

Anyone who owns a digital or film camera (including point-and-shoot) is qualified; no darkroom or Photoshop experience needed. Professional view camera techniques will be covered at a basic level.

The course will consist equally of slide lectures, discussions, and location shooting at Philadelphia residential, commercial, and industrial sites. Student images (digital or traditional) will be transferred to PowerPoint for class critique. Readings and discussions may range into issues of architectural and urban planning theory and philosophy that affect the interpretation of the built environment and how its image is perceived. Both documentary and fine art approaches will be covered.

634. (FNAR234) Web Design. (C)

Cooper. Prerequisite(s): FNAR 636.

A course designed to introduce the student to web presentation, theory, techniques and current software applications, including Adobe Photoshop, Macromedia Dreamweaver and Macromedia Flash. Instruction will include web terminology, appropriate file protocolling, information architecture planning, menu-linking organization, communication strategies and www identity design. Upon completion of this course, students will possess a working knowledge of how to organize and design full web page content for interactive on-line user interfacing or control-group presentation.

635. (FNAR235) 3-D Computer Modeling/Digital Sculpture. (C)

White/Frazure. Prerequisite(s): FNAR 636.

Students will develop a facility with fundamental 3-dimensional design concepts through the application of both computer graphics visualization and physical construction. The course will offer students a technical understanding of Polygonal and Spline based modeling, alternative and standard methods of 3-D input/output, and will cover regulations for creating models that will function properly for animation, video games and CMC/laser output.

636. (FNAR264, VLST264) Digital Design Foundations. (C)

Fledderman/Gallagher/Holmes/Comberg/Hylland.

This course explores the elements and principles of design and composition. It is an introduction to the intentional organization of traditional and digital image-making. Emphasis will be placed on understanding compositional relationships through experimentation, iteration and critique. Students will create imagery using hand skills and the software programs Adobe Illustrator, Photoshop, and InDesign.

637. (FNAR337) Information Design and Visualization. (C)

Comberg. Prerequisite(s): FNAR 636.

Information design and visualization is an introductory course that explores the structure of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.

SM 640. (FNAR340) Digital

Photography. (C) Wahl/Diamond/Stolfa.

Understanding the tools of digital photography and how to use them is a necessity for visual artists. Using new technologies for personal expression is an important objective of this course. Equally important is to train and prepare students with the basic practical digital skills needed in the various aspects of today's world, including career development and support, advocacy and visual communication. The course will cover the basics of camera use and composition, as well as the critical techniques of digital capture, image processing, color management and color correction. A digital camera with a minimum of a seven-megapixels resolution will be needed for this course.

SM 641. (FNAR341) Architecture, Landscape and Cities: Large Format Photography. (M)

Staff. Prerequisite(s): FNAR 571. Lab Fee \$50.

The emphasis of this course is on the usage and practical applications of the large format camera and how it records and interprets architecture and landscapes. The course is directed to photographers, architects, landscape artists and historic preservationists. The skills acquired will give students a practical application to ideas learned in conceptual classes. Topics covered will include: using the camera outdoors; framing; perspective and vantage point; filters and lighting sources. Lectures and presentations on architectural photographers as well as field trips to noted local sites will also be included. \$50 Studio fee.

649. (FNAR349) Advanced Digital Photography. (C)

Wahl. Prerequisite(s): FNAR 640 or Permission of Instructor.

This course further explores the conceptual, philosophical and technical relationship between the camera, computer and the contemporary artist. With a heavy emphasis on project-oriented work, students will further their knowledge of manipulation, retouching and collage, as well as embarking on advanced color management and the use of digital photography in the studio environment. In addition to exploring these advanced imaging practices in their own work, students will also be required to critically examine the profound effects that new imaging technologies are having on art, journalism and the commercial realms.

SM 661. (FNAR061, VLST061) Video I. (C)

Buck/Reynolds/Van Cleve.

This course provides students with the introductory skills and concepts needed to create short works using digital video technologies. Students will learn the basics of cinematography and editing through a series of assignments designed to facilitate the use of the medium for artistic inquiry, cultural expression and narrative storytelling.

SM 662. (CINE062, FNAR062) Video II. (C)

Buck/Reynolds. Prerequisite(s): FNAR 661.

Video II offers opportunities to further explore the role of sound, editing and screen aesthetics. Through a series of three video projects and a variety of technical exercises, students will refine their ability to articulate more complex and creative projects in digital cinema. In addition, advanced level production and post-

production equipment is introduced in this course.

SM 663. (CINE063, FNAR063) Documentary Video. (A)

Heriza. Prerequisite(s): FNAR 661.

A digital video course stressing concept development and the exploration of contemporary aesthetics of the digital realm, specifically in relation to the documentary form. Building on camera, sound and editing skills acquired in Film/Video I and II, students will produce a portfolio of short videos and one longer project over the course of the semester. Set assignments continue to investigate the formal qualities of image-making, the grammar of the moving image and advanced sound production issues within the documentary context.

SM 664. (CINE064, FNAR064) Interactive Video. (B)

Reynolds. Prerequisite(s): FNAR 662, FNAR 061.

This course explores the concepts and technologies behind non-linear storytelling through mediums like DVD's and the world wide web. Students will learn to make interactive DVD videos as a form of expression and explore the possibilities of streaming videomaking.

SM 665. (CINE065, FNAR065) Cinema Production. (A)

Van Cleve.

This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.

SM 666. (CINE066, FNAR066) Sound Seminar: Sonic Measures. (B)

Adkins. Prerequisite(s): FNAR662.

Sonic Measures is a comprehensive introduction to the theory and practice of digital audio design, including sound for video, sound installation, composition, and sound art. Projects and demonstrations will familiarize students with all aspects of recording and synthesis of sound using Apple's Logic Pro software. Assignments will combine technical issues alongside an ongoing conceptual development individual to each student's interests. No musical knowledge needed.

**SM 667. (CINE067, FNAR067)
Advanced Video Projects. (M)**

Reynolds. Prerequisite(s): FNAR 662.

This course presents students with an advanced level investigation into various forms of digital video projects as well as non-traditional presentation formats. Structured to create a more focused environment for individual projects, students will present and discuss their work in a series of group critiques. Lecture topics, screenings, and technical demonstrations will vary depending on students' past history as well as aesthetic and theoretical interests.

**SM 668. (CINE068, FNAR068)
Cinematography. (B)**

Van Cleve.

Prerequisite(s): FNAR 661.

This course will be a technical, practical and aesthetic exploration of the art of cinematography as it pertains to film and digital video. Through screenings, in-class exercises and assignments, students will increase their Video I skills in lighting and cinematography as a form of visual expression. Topics covered include shot composition, camera movement, lenses,

filtration and color, exposure, lighting techniques, location shooting and how to use grip equipment. Discussions, demos and lectures will include relevant and illustrative historical motion picture photography, current digital video technology, and examples that explore interactions between film and video.

669. Graduate Video Studio. (A)

Mosley.

Through a series of studio projects, this course will focus on the conceptualization and production of time-based media works. The course will cover techniques including lighting, cinematography, audio, editing, mastering projects, and installing audio-visual works in site-specific locations or gallery spaces.

670. (FNAR370) Advanced Graphic Design and Typography. (A)

Gallagher. Prerequisite(s): FNAR 566 AND FNAR 569 or Permission of Instructor.

This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be

placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.

SM 679. (FNAR279) Large Format Photography & Studio Lighting. (B)

Wahl. Prerequisite(s): FNAR 571 or Permission of Instructor. Lab Fee \$50.

The large format camera is the most versatile and widely used camera for fine art, architectural and commercial photography. This course will introduce the student to the basic and advanced operations of the camera. The class will also explore the use of artificial lighting in a studio environment. Recommended for Fine Arts and Architecture students. \$50 Studio Fee.

999. Independent Study. Staff.

Prerequisite(s): See Graduate Program Coordinator for section numbers. Hours and credits arranged.

FOLKLORE (AS) {FOLK}

022. (AFRC050, AFST050, ANTH022, MUSC050) World Music and Cultures. (A) Arts & Letters Sector. All Classes. Muller.

This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways-- particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

SM 025. (HIST025, RELS116, STSC028) Western Science, Magic and Religion 1600 to the present. (C) History & Tradition Sector. All classes. Kuklick.

Throughout human history, the relationships of science and religion, as well as of science and magic, have been complex and often surprising. This course will cover topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.

L/R 029. (RELS005, GSOC109) Women and Religion. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Staff.

Introduction to the role of women in major religious traditions, focusing on the relationship between religion and culture. Attention to views of women in sacred texts, and to recent feminist responses.

075. (AFRC077, GSOC075, MUSC075) Jazz: Style and History. (M) Ramsey, Parberry. Open to all students.

Music 075 401 (Dr. Ramsey): Exploration of the family of musical idioms called jazz. Attention will be given to issues of style, to selected musicians, and to the social, cultural, and scholarly issues raised by its study. Music 075 601 (Professor Parberry): Development of jazz from the beginning of the 20th Century to present. Analysis of the stylistic flux of jazz, such as the progression from dance music to bebop and the emergence of the avant-garde and jazz rock. Attention will be given to both the artists who generated the changes and the cultural conditions that often provided the impetus.

SM 082. (GSOC082) Ritual In American Life. (M) Paxton. Freshman Seminar.

Starting with birth and working chronologically through a series of case studies, this course invites students to examine the centrality of rituals that celebrate the human lifecycle as well as overtly competitive sporting and political rituals. We will explore rituals that unfold at the local level as well as those that most Americans experience only via the media. Rituals under examination include birthday parties, Bat Mitzvahs, Halloween, Quinceaneras, Proms, graduations, rodeos, Homecomings, weddings, Greek initiations, beauty pageants, reunions, and funerals. Students will be encouraged to critically examine their own ritual beliefs and practices and consider these and other theoretical questions: What is the status of ritual in post-industrial culture? What distinguishes popular culture from official ritual and secular from religious ritual? How do sociological variables such as race, class, gender, sexuality, and religion shape people's understanding of, and participation in, modern family life? How do contemporary rituals bond Americans at the local and/or national level? All students will be expected to conduct original research on a ritual of their own.

103. (COML103, HIST093, THAR103) Performing History. (M) St. George.

From medieval processions to the Mummer's Parade, from military reenactments to Mardi Gras, communities do more than "write" or "read" history in order to feel its power and shape their futures. Drawing upon traditions in theater, spectacle, religion, and marketing, they also perform their history--by replaying particular characters, restaging pivotal events and sometimes even changing their

outcomes--in order to test its relevance to contemporary life and to both mark and contest ritual points in the annual cycle. This course will explore diverse ways of "performing history" in different cultures, including royal passages, civic parades, historical reenactments, community festivals, and film.

106. (AFRC147, ANTH156, MUSC146) Studies in African-American Music. (C) Ramsey.

This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Beginning with the African legacy, we situate the conceptual approaches of African American music within the larger African Diaspora. The course provides a foundation for the advanced study of the various strains of black musics to appear in the United States. Covering the 19th and 20th centuries, we explore the socio-political contexts and cultural imperatives of black music from a multidisciplinary perspective (musicology, ethnomusicology, linguistics, African-American literary criticism, cultural studies, history, anthropology). The range of genres, styles, idioms, and time periods include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways in which black music generates "meaning" and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments.

L/R 137. (SOCI137) Sociology of Media and Popular Culture. (C) Society Sector. All classes. Grazian. Also fulfills General Requirement in Arts & Letters for Class of 2009 and prior.

This course relies on a variety of sociological approaches to media and popular, with a particular emphasis on the importance of the organization of the culture industries, the relationship between cultural consumption and status, and the social significance of leisure activities from sports to shopping. Specific course topics include the branding of Disney, Nike and Starbucks; the globalization of popular culture; the blurring of entertainment and politics; and the rise of new media technologies in the digital age.

158. (AFRC158, LALS158, MUSC158) Musics of Latin America, the Caribbean, and Hispanics in the U.S. (M) Rommen.

This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts. Key-concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertoires of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production.

L/R 200. (CLST100, COML200) Greek and Roman Mythology. (C) Arts & Letters Sector. All Classes. Struck.

Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? Investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

201. (ANTH205, RELS205) American Folklore. (C) Staff.

This course will examine American expressive culture through an exploration of narrative; music; dance; drama; public

events; material arts and architecture; religion; medicine; politics; foodways; ways of speaking; and customs surround and celebrating work, leisure, childhood, family, aging, individually and community. In other words, we will be studying the 99% of American life that often goes unnoticed by other college courses! Special topics featured in 2004; tattooing, piercing, branding and other forms of contemporary body arts; UFO abduction as belief and legend; women's home altars; and the African-based North American religion called "vodou.

203. (AFRC203, AFST213) Afro-American Folklore. (C) Staff.

An overview of the major forms of expressive culture developed by Afro-Americans. The course focuses on the continuous development of black cultural expression from slavery to the present, emphasizing the socio-historical context in which they are to be understood and interpreted.

223. (RELS213) Folk Religion. (M) Staff.

This course will emphasize religion as it is believed, practiced, and experienced in everyday life. Emphasis will be placed on Christian belief systems in Europe and America in historical and contemporary perspective. Among the topics to be discussed in 2005 will be stigmata, healing miracles of the saints, apparitions of the Virgin Mary, possession, exorcism, the near-death experience, the Rapture, Vodou, and contemporary Witchcraft.

229. (ANTH226, COML357) Myth in Society. (C) Ben-Amos.

In this course we will explore the mythologies of selected peoples in the Ancient Near East, Africa, Asia, and Native North and South America and examine how the gods function in the life and belief of each society. The study of mythological texts will be accompanied, as much as possible, by illustrative slides that will show the images of these deities in art and ritual.

231. American Popular Culture. (M) Lee.

The course will explore the history and practice of popular culture and culture studies in the United States. We will begin by challenging the concepts of "folk," "mass" and "popular" as well as "American" and "culture." Furthermore, we will interrogate various media such as television, film, music, comics and popular romances to gain insights into the conditions for the reproduction of social

relations. Through an analysis of audience response to performed or viewed events we will explore how and why people actively negotiate and interpret popular materials. This class will attempt to situate popular culture within a larger social, cultural and political framework. Some areas of popular culture we may investigate include MTV, talk shows, fashion, club cultures, rap and other musics, snaps, pro-wrestling, professional sports, Hollywood movies, advertising, McDonald's and there will be room to explore other areas students may find interesting. We will end by looking into the exportation of American popular culture and its reception, interpretation, adaptation and consumption around the world.

233. (AFST233) African Folklore. (M) Staff.

"Despite the overwhelming reality of economic decline; despite unimaginable poverty; despite wars, malnutrition, disease and political instability, African cultural productivity grows apace: popular literatures, oral narrative and poetry, dance, drama, and visual art all thrive."-- Kwame Anthony Appiah from *In My Father's House*

What role(s) does folklore play in the lives of Africans today? How has folklore adapted to the realities of contemporary, urban Africa? This course will investigate the continuation of traditional elements produced in diverse media and circumstances in a modern, largely urban, Africa. Although traditional African culture has been transformed and changed in the face of rapid urbanization and modernity, it continues to provide a means through which people enjoy themselves and comment on a wide range of issues affecting their lives. Issues such as identity, difference, and diversity; tradition and history; modernity and development; wealth and power; politics and political change; and gender relations.

SM 240. (COML240, ENGL290) Fairy Tales. (M) Staff.

An examination of the history and forms of the fairy tale (Marchen) as an oral narrative genre and as a literary construction. Topics covered include the history of collecting folktales in Europe and the United States; the issue of "authenticity" of the tales; and the importance of studying context and artistic performance in storytelling events. Issues of gender and sexuality in fairy tales--and of religious and supernatural beliefs evidenced in the tales will be a focus of the class. We will also discuss fairy tales as children's literature; illustrators of fairy tales from Arthur

Rackham to Wanda Gag and Maurice Sendak; and the uses of images and plots from fairy tales in popular culture (including Disney's films) and in tourism, advertising, and marketing.

241. (COML193, ENGL099) Great Story Collections. (M) Arts & Letters Sector. All Classes. Azzolina.

This course is intended for those with no prior background in folklore or knowledge of various cultures. Texts range in age from the first century to the twentieth, and geographically from the Middle East to Europe to the United States. Each collection displays various techniques of collecting folk materials and making them concrete. Each in its own way also raises different issues of genre, legitimacy, canon formation, cultural values and context.

259. (AFRC258, ANTH227, LALS258, MUSC258) Caribbean Music & Diaspora. (M) Rommen.

This survey course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts <-concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course <- diaspora. Throughout the course, we will listen to many different styles and repertoires of music, ranging from calypso to junkanoo, from rumba to merengue, and from dancehall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relations to our own North-American contexts of music consumption and production.

270. (GSOC270) Folklore and Sexuality. (M) Azzolina.

Sexuality is usually thought of as being biological or social, divided into categories of natural and unnatural. Often missed are its creative and communicative aspects. Examining the constructed social elements of sexuality requires attention be paid to folklore in groups, between individuals and on the larger platform of popular technological media. The most interesting locations for exploration are those places where borderlands or margins, occur

between genders, orientations and other cultural categories. A field-based paper will be required that must include documentary research.

280. (COML283, JWST260, NELC258, RELS221) Jewish Folklore. (C) Ben-Amos.

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.

299. Independent Study. (C) Staff.
Directed study at the sophomore level.

SM 310. (AFRC308, RELS310, URBS310) Religious Diversity in America: West Philadelphia. (M) Matter.

In the 1950's America seemed to be a land of "Protestant, Catholic, and Jew." Now it is clearly also a land of Muslims and Hindus, Buddhists and Taoists, Rastafarians and Neo-pagans and many more religious groups. This course will focus upon a variety of topics: religious diversity in West Philadelphia, Philadelphia and beyond; the politics of religious diversity; religion in American schools and cities; and conflicts and cooperation among diverse religious groups.

SM 321. (ANTH321, ASAM321, URBS327) Exploring Local Memory and Tradition. (M) Hufford M.

In this place-based community service learning course, we explore the use of traditional verbal arts material practices among immigrant communities seeking to make Philadelphia home. We begin with theories of culture, community, identity, and the production of locality from the social science, and move from there into historic, literary, and ethnographic portrayals of relevance to the community we will be working with. Students are introduced to the principles of ethnographic fieldwork, including techniques of participant observation, interviewing, community-based research design, interpretation, and presentation, and the ethical dimensions of fieldwork. Applying

these methods, students develop a project that serves the needs of a collaborating Philadelphia community. Students gain critical thinking and observation skills from the readings, discussion, writing assignments, and field trips. The fieldwork component for the Spring 2007 focuses on the verbal arts and material cultural traditions of South Philadelphia's Indonesian community. In partnership with the Folk Arts and Cultural Treasures School (FACTS), students and faculty will develop an overview of Philadelphia's Indonesian community and its goals for cultural and linguistic maintenance. Students will also work with community members to identify resources on which FACTS can draw in order

to support these goals for the many Indonesian children who have recently enrolled in the school. This one and a half credit course, which fulfills the General Distribution requirement in Society, will be of special value to students interested in anthropology, sociology, folklore and urban studies, linguistics, Asian studies, literary studies and vernacular arts and culture.

323. (HIST323) Material Life in America, 1600-1800. (C) St. George.

This course will explore the history of America's use and fascination with material goods between 1600 and 1860. We will examine such issues as the transfer of European traditions of material culture to the New World, the creation of American creolized forms, the impact of reformers in the late eighteenth and early nineteenth centuries, and the development of regional landscapes. Thematic issues will include consumerism, objects as symbolic communication and metaphor, and the complementary issues of archaeology and history of art in material culture study.

360. (ANTH360, COML362, RELS316) Native American Folklore. (C) J. Berman.

A survey of the indigenous oral literatures of North America that will read Native American myths and other traditional narratives with the primary aim of exploring their meanings to Native people. Topics will include, among other things, moral and religious significance, performance, aesthetics, humor, and the relationship of myth to landscape and individual life experience. The course will also place the study of Native American folklore in the context of the history of scholarship, and current issues such as cultural renewal, language endangerment, cultural representation, and cultural property rights.

SM 369. (HSOC369, STSC359) Introduction Complementary and Alternative Medicine. (A) Staff.

This course will present the study of health traditions in the field of folklore and folklife. It is designed to explore the value of this approach to disciplines and individuals as they simultaneously bear upon all human experience with, communication about, and understanding of illness, disease and healing.

399. Independent Study. (C) Staff.

Directed study at the junior level.

406. (RELS406) Folklore and the Supernatural. (M) Staff.

Some beliefs in the supernatural have not diminished appreciably in modern cultures, in spite of many predictions that they would do so. This course will examine traditional beliefs about supernatural beings, supernatural realms, and humans who interact with these, as well as the historical development of Western ideas of "the supernatural" itself.

420. Culture, Communication, and Body Language. (M) Staff.

Our perception and interpretation of body language is often subliminal, but is crucial in all communication. This course will develop skills in observation and analysis of nonverbal behavior, with a particular emphasis on cross cultural communication. In contemporary society, the analysis of nonverbal communication has applications in education, psychology, business, advertising, medicine, police work, the justice system, the military, religion, sports, and politics. As video and digital cameras are increasingly being placed in public (and private!) locations, the ethical questions of why, how, and by whom body movements and images are analyzed become a topic of primary importance for society. Clothing, scents, gestures, eye contact, silence, music, dance, the built environment -- all are used to construct relationships and develop markets for the new century. Readings from a number of disciplinary perspectives will give us the opportunity to investigate these and other issues related to the body and to nonverbal communication in multicultural societies.

436. (URBS436) Urban Folklore. (M) Staff.

Cities are unique places with neighborhood tales and hidden folk art, and reflect intricate variations in cultural activities. This course will examine a sampling of this city's ethnic arts, as well as the face to face communication within the intersections of city societies. It will involve weekly local

field observations and will be of use to anyone studying human interaction, creative process, or urban ethnography.

SM 485. (COML385, EALC255, THAR485) Japanese Theatre. (B) Kano.

Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

499. Independent Study. (C) Staff.

Directed study at the senior level.

SM 500. (ANTH500) Proseminar in Folklore. (A) Staff.

The shifting definition of folklore as a subject has allowed for the dynamic development of a field that has never been content with narrow disciplinary territory. The course endeavors to provide an entry into the breadth of folkloric expression--told, performed, enacted, believed, or made. We will also study the sociopolitical and intellectual ground on which the study of folklore has been positioned over roughly the last two hundred years. Readings and class discussions will clarify how scholars today conceptualize "expressive culture," exemplify earlier ways of organizing and analyzing the material, and explore the linkage between available technological recording tools and the shape of folklore documentation and analysis. (required course for graduate students in folklore; open to others with instructor's permission)

SM 502. (ANTH506, GSOC502) Fieldwork Theory and Practice. (C) Hufford, M.

This graduate seminar explores the theory and practice of folkloristic ethnography, with a focus on sites in West Philadelphia. Through reading and exercises in ethnographic observation and writing, students consider the nature of the ethnographic encounter, its social functions and civic possibilities, and the writings, archives, films, recordings and community events that form its outcomes. Historical and contemporary reading provide an overview of ethnography as it has emerged in the social sciences over the past century, while attention to the techniques and technologies in fieldnotes, sound and video recording, photography,

archiving, and sensing will develop students' skills as ethnographic scholars, writers, and community activists. Undergraduates may enroll with permission.

SM 503. (ANTH503, COML512, ENGL503) Issues in Folklore Theory. (C) Staff. An introduction to folklore for graduate students, concentrating upon certain key issues in the theory and history of the discipline.

"Fieldwork" is the term folklorists and scholars in related fields use to describe the process by which they arrive at their discipline's subject matter. This includes everything from the pragmatic issues of collecting and documenting materials to the complex relations involved when people study people. Readings, short writing assignments, and class discussions will probe this spectrum of concerns comprehensively. Brief exercises are planned to experience different aspects of fieldwork. On this background of theory and practice, students will work toward designing a fieldwork based project and draft a funding proposal.

SM 510. (RELS507) Ethnography of Belief. (A) Hufford, D.

This course will examine traditional systems of supernatural belief with an emphasis on the role of personal experience in their development and maintenance. The course will focus on the subject of belief generally conceived of as being "folk" in some sense (e.g., beliefs in ghosts), but will not exclude a consideration of popular and academic beliefs where appropriate (e.g., popular beliefs about UFO's and theological doctrines of the immortality of the soul). The course will be multidisciplinary in scope. This course serves as an introduction to folk belief systems and is open to qualified undergraduate students.

SM 512. (RELS503) Spirituality, Religion and Health: Ethical, Cultural and Medical Issues. (M) Hufford, D.

Although many have attributed modern medicine's success to its liberation from the ancient association of healing with religion, recent research has shown that spirituality (the personal aspect of the sacred) and religion (the institutional forms of spiritual belief and practice) are powerful influences in health decision-making and that most American patients want spiritual matters discussed with their medical care. Additional research has documented effects of spiritual belief and religious practice on physical and mental health, ranging from general effects of religiosity on overall

health and longevity to double-blind studies of intercessory prayer. At the same time critics argue that the research is flawed and that clinical involvement in religious matters is unethical. This topic, once marginal, now appears in the pages of major medical journals and has drawn the attention of the National Institutes of Health. This course will examine a variety of spiritual traditions in relation to health, including major world religions and those groups with highly specific health teachings such as Jehovah's Witnesses, Christian Science and shamanic traditions. Competing points of view will be considered in ethical, medical and cultural terms.

514. (HSSC514, RELS519) Human Diversity and the Cultures of Medicine. (M) Hufford, D.

Over the past decade there has been a growing awareness of the importance of such basic aspects of human diversity as culture, (religion, language), ethnicity, economic status, gender, age and disability in health care as in other areas of life. This course will deal with (1) the social and cultural foundations of health care in the modern world and (2) the ways that diversity affects and is affected by health care. Because simplistic views of diversity reinforce stereotypes, the course necessarily recognizes that each individual belongs to more than one group -- each person has a cultural background, a gender, an age, may have one or more disabilities, and so forth. And even within groups, the experiences and needs of each individual are unique. For example, there is no such person as "the African-American patient" or "the female patient." Proper attention to diversity can enhance both cultural and individually appropriate care for all persons. By dealing with these political, social and cultural aspects of diversity and health care, this course will introduce students to complex and basic issues of social construction ranging from cultural dimensions of medical ethics to the importance of differing health traditions (from folk medicine to foodways to such beliefs as the idea that AIDS is a genocidal government conspiracy).

SM 518. (HSPV528) American Vernacular Architecture. (C) St. George.

This course explores the form and development of America's built landscape - its houses, farm buildings, churches, factories, and fields -- as a source of information on folk history, vernacular culture, and architectural practice.

SM 521. (ANTH521) Culture and Psychology: Identity, Self and Culture. (M) Hammarberg.

Psychological implications of differences in human experience arising from distinctive cultural patterns of mankind considered with reference to a variety of problems.

527. (ANTH547, EDUC547, URBS547) Anthropology and Education. (M)

An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.

SM 531. (COML560, NELC684) Prose Narrative. (M) Ben-Amos.

The topics of discussion in the course are the following: the nature of narrative, narrative taxonomy and terminology, performance in storytelling events, the transformation of historical experience into narrative, the construction of symbolic reality, the psycho-social interpretation of folktales, the search for minimal units, the historic-geographic method in folktale studies, the folktale in history and the history of folktale research.

SM 532. (COML529, NELC682) Proverb, Riddle and Speech Metaphor. (M) Ben-Amos.

Through readings and collaborative projects this working seminar will explore the place of metaphor in the genres of proverb and riddle and examine their position in oral communication in traditional and modern societies. Critical readings of former definitions and models of riddles and metaphors will enable students to obtain a comprehensive perspective of these genres that will synthesize functional, structural, metaphoric, and rhetoric theories.

SM 533. (HSSC533, RELS505) Folk and Unorthodox Health Systems. (B) Hufford, D.

Examination of theories concerning the origin and function of folk beliefs, investigation of the expression of folk beliefs in legend, folk art, custom and ritual. Ritual is the focal genre for explanatory purposes, and introduction to the social symbolic approach to analysis and interpretation is primary for exploration and application.

535. (EDUC550) Children's Folklore. (M) Staff.

This course will examine the play, games, and oral lore of childhood cross culturally

with an emphasis on both the uniqueness of children's traditional communication, and its similarities with the culture in which it is found. Classical study of children's lore genres, the complex analysis of play in live performance, and the history of children's folklore research will be discussed. The course will emphasize student field work and the recording of children's folklore in different contexts, and may be of interest to those working in education, psychology, sociology, social welfare, and anthropology.

541. (MLA 541) Academic Writing and Research Design in the Arts and Sciences. (M) Rabberman.

Have you ever noticed that scholars in different academic disciplines seem to speak different languages? Have you wondered how scholars put together a plan for their research, explain their findings, and organize and write their papers? This class is designed to introduce MLA students and other advanced students to the research and writing conventions used by scholars in the arts and sciences. With attention to disciplines in the humanities, social sciences, and sciences, we will identify and explore some of the theories, sources, language, and qualitative and quantitative methodologies that scholars use as they conduct original research in their fields. Throughout the class, we'll also discuss writing conventions across the arts and sciences, with special attention to the structure of argument; the use of evidence; voice and style in both traditional academic writing and more innovative forms of writing; and documentation conventions. Students will develop an original research project through incremental writing assignments, and will write a formal research proposal (15-20 pages), which can be used as their Capstone proposal if they wish.

SM 543. (ANTH543) Ethnographic Writing. (M) Rabberman, Theophano.

Ethnographic research has brought anthropologists and folklorist, sociologists and oral historians face to face with some compelling challenges as they describe specific social and cultural groups to a variety of audiences: insiders and outsiders, academics and lay audiences. Attempting to be both scientific and humanistic, ethnography has been accused of being neither. How can ethnographers best understand their impact on the groups they study, and the impact of their research on their own identity? How can ethnographers balance their personal agendas (related for example to political and ideological goals, particularly Feminism and anti-imperialism)

with an academic quest to produce "scientific," well-supported research? And how have ethnographers experimented with style and genre to break the chains of traditional ethnographic writing and better represent their experience in the field?

SM 548. (HIST512, HSOC545, HSSC545) Comparative Medicine. (M) Feerman.

Health and medicine in the Non-Western World: this seminar explores current readings on health and healing in the colonial and post-colonial world. We give special attention to local healing under conditions of domination, to definitions of the body and the person in biomedicine and in non-European healing traditions, and to the political and cultural place of medicine in regions which have experienced colonial rule.

SM 549. (ANTH545) Structural Analysis. (M) Ben-Amos.

In folklore scholarship, structural analysis extends over several genres. In this course we will examine the analysis of genres from structural perspectives, the critique of structural analysis and the current constructive directions that have emerged in the field in response to criticism of structuralism.

SM 570. (ANTH570) Identity and the Life Course. (C) Hammarberg.

Examines life experience through autobiographies, journals, diaries, life histories and other self-reports in relation to culturally-constituted identities and life plans for different societies and subgroups. Explores tensions, conflicts and creativity associated with sex, gender and age, rites of passage, personal development, family systems, and identity processes and cultural integration. Requirements include your own autobiographical writing and a consultant-based life-history analysis (15-20 page limit).

SM 575. (ENGL584, ENV575, HSSC575) Environmental Imaginaries. (M) Hufford, M.

"Environmental imaginaries" names the contending discourses that order society around processes of development and change. Behind public controversies over development, its subject, objects, and technologies, are an array of collectively wrought fictions that relate people to their material surroundings. We will be especially attentive to solipsistic cartesian fictions that enable the persistent separation of culture from environment. How are these fictions produced, enacted, and materialized in such diverse sites as

Appalachian strip mines and Sea World, nature walks and permit hearing? What kind of environmental imaginary sustains the notion that "wisdom sits in places"? How are alternative ways of knowing and being cojured through naming practices, narratives, and other speech genres, as well as yardscapes, protest rallies and other forms of public display? We will traverse the border between humanities and social sciences. How is Bakhtin's law of placement essential for urban planners? Why is Bateson's notion of the thinking system vital for environmental writers? Moving from theories of world making, multiple realities, and aesthetic ecologies through ethnographic literature on culture and environment, and into your own experience,

observation, and written reflections, this seminar will explore the production of environmental imaginaries across a range of modern genres and practices. At stake is nothing less than place, identity, and the nature of human being.

SM 580. Literature and Activism. (L) Watterson.

How do words transform people, places, and events in ways that bring about social change? What are the motivations, methods, and implications of "doing good work?" How does an understanding of doing good work depend on one's position: as non-profit worker, social justice advocate, community activist, business person? In this interdisciplinary seminar we will cover current issues surrounding social initiatives in many forms of literature: from fiction and non-fiction, to exhibits, web-sites, on-line journals, grant-proposals, and ethnographic documentaries. Students will be given an opportunity to do participatory research on local concerns: witnessing, critiquing, and putting words into action and thereby gain practical knowledge about how artists express themselves in ways that impact and empower local community arts, cultural and education programs. Students may, for example work in programs to learn about how art and community performance can bring people together through location, spirit and tradition and empower people to address difficult social issues. And, as art, after all, is not only created by artist and craftspeople, but disseminated both informally and formally -- through schools, museums and programs -- we will also explore how particular policies affect society and local culture.

SM 603. (ANTH601, RELS603) Food, Culture, and Society. (M) Staff.

Behind a simple proverb like "You are what you eat" lies a great deal of food for thought. Human beings have always elaborated on the biological necessity of eating, and this course will explore the myriad ways in which people work, think, and communicate with food. The course will survey the major approaches from folklore, anthropology and related fields toward the role of food, cookery, feasting and fasting in culture. Among the topics to be addressed are gender roles and differences in foodways, the significance of food in historical transformations, the transmission of foodways in writing and publishing, the relationship of foodways to ethnicity and region, the intimate relationship between food and religion, and foodways in the global market place. Short exercises and a term project will provide students with opportunities to research and write about foodways from different angles.

SM 605. (AFST605, ANTH605, COML605, MUSC605) Anthropology of Music. (C) Muller.

This seminar in ethnomusicology examines music from a cultural perspective. We investigate theoretical and methodological issues that arise when music is situated within an ethnographic context. Theories from anthropology and folklore are studied as they have been applied in ethnomusicology, including structural-functionalism, structuralism, symbolic anthropology, and performance theory. Topics include music and social structure; ritual and performance; social change and historical process; class, ethnic identity, and gender. Case studies from around the globe enrich this exploration of music in culture.

SM 606. (COML760, HSSC680) History of Folklore Studies. (C) Ben-Amos.

A survey of the theoretical basis and the historical development of research in international and American folkloristics.

SM 620. (HIST620) Feminist Theories. (M) Staff. When the topic is "Feminist Theories," FOLK 620 will be crosslisted and the following description applies.

This course gives students the opportunity to engage with the most significant theoretical influences upon feminist thought and historical scholarship in the last 35 years. Foucault, Bourdieu, Rubin, Butler, and Freud are just some of the theorists we will discuss. We will also incorporate recent works in feminist film theory and queer theory. Our focus is

twofold: working collectively through difficult theory that is too daunting to tackle alone, and exploring possible applications of feminist theory for feminist politics and historical studies of women, gender and sexuality. Approximately half of our course reading will be devoted to work designated as "theory" and the other half to recent applications by historians.

SM 629. (COML662, NELC683, RELS605) Theories of Myth. (M) Ben-Amos.

Theories of myth are the center of modern and post-modern, structural and post-structural thought. Myth has served as a vehicle and a metaphor for the formulation of a broad range of modern theories. In this course we will examine the theoretical foundations of these approaches to myth focusing on early thinkers such as Vico, and concluding with modern twentieth century scholars in several disciplines that make myth the central idea of their studies.

SM 639. (COML639, COMM639) Issues in Cultural Studies. (M) Zelizer.

This course tracks the different theoretical appropriations of "culture" and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication, and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as "cultural studies." The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues, and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.

SM 650. Folklore and Critical Regionalism. (M) Hufford, M.

In tandem with global political and economic restructuring, and the related unsettling of national and local identities, scholarship on place has burgeoned. Recently, scholars from multiple disciplines have called for a shift from identity-centered approaches to the study of place and region to a more critical assessment of how the encounter of the

local with "the larger than local" is articulated (Shuman, 1993). "Critical regionalism," a term hailing from architectural theory, names an effort to "frame a dialogue between localized dimensionality and the imperatives of international architecture" (Frampton, 1981). One way of framing this dialogue is to examine the imaginaries that span disjunct places "twinned" through those larger than local processes, imaginaries that regionalize from within (Herr, 1996). What are the foundations for such a project in folkloristics, and what is the role of ethnography in cultivating critical regionalism? To get at such questions, we will examine selected regional ethnographies and place-based folklore programs. Work for the course will include 1) evaluating a regional ethnography and a public program in light of critical regionalist theory and 2) developing, with a partner or group, a proposal for a multi-site ethnography anchored partly in the mid-Atlantic region.

702. Practicum. (C) Hufford, M.

Advanced students may arrange for a practicum. The nature of the learning task and the work to be completed must be discussed both with the student's advisor and the practicum supervisor at the hosting organization or institution. Suitable practicum sites are museums, community or state arts organizations, not-for-profit organizations in the realm of cultural programming and advocacy, etc. The practicum may be taken for credit only once.

706. (ANTH704, COML706, EDUC706, URBS706) Culture/Power/Identities. (A) Hall.

This course will introduce students to a conceptual language and the theoretical tools to analyze the complex dynamics of racial, ethnic, gender, sexual, and class differences. The students will critically examine the interrelationships between culture, power, and identities through the recent contributions in cultural studies, critical pedagogy and post-structuralist theory and will explore the usefulness of these ideas for improving their own work as researchers and as practitioners.

SM 715. (AFST705, ANTH705, COML715, MUSC705, GSOC705) Seminar in Ethnomusicology. (M)

Muller. Open to graduate students from all departments.

Seminar on selected topics in ethnomusicology. Freedom is a pervasive idea in the twentieth century, in the United States and elsewhere. This seminar will examine a range of texts concerned with the idea of freedom, politically, philosophically, and musically. A key part of the seminar will focus on free jazz, as it has been recorded in the twentieth century, and as it occurs in live performances on Penn campus and elsewhere in Philadelphia.

SM 725. (ANTH725) Bodylore. (M)

Hufford, M.

Bodylore, a term coined in the late 1980s by folklorist Katharine Young, names an emerging subfield focused on the body's role in the making of social meanings. In this seminar, we'll consider the body as it is theorized by Bakhtin, Bourdieu, Douglas, Harvey, Stewart, Young, and others, and we'll turn to selected ethnographic case studies to explore problems of embodiment. How does the body enact the discourses that constitute it? How do our ways of imagining and interpreting the body bear on our ways of ordering the social and natural world? How is the body's dual status as both mode and object of knowing (Stewart) negotiated in ethnographic and scientific practice? How might a more humanistic ethnography undo and displace the dualisms of mind and body, body and self, and perhaps even return us to the body as a measure of all things (Harvey)? Work for the course will include in-class presentations, participation in electronic and face-to-face discussion about the readings, and a final paper.

SM 770. (AFRC771, MUSC770) Seminar in Afro-American Music. (M)

Ramsey.

This seminar treats selected aspects of the history, aesthetics, criticism and historiography of African-American music. Topics will vary each time this course is offered.

999. Independent Study and Research. (C)

**GENOMICS AND
COMPUTATIONAL
BIOLOGY
(MD) {GCB}**

SM 513. (CAMB513) Evolution in Cancer. (A) Dr. Carlo Maley and Dr. Lauren Merlo. Prerequisite(s): Permission of the Instructor.

Cancers evolve by mutation and natural selection. This is the basis for both why we get cancer and why it is so hard to cure. We will survey the cancer literature through the lens of evolutionary and ecological theory and review how that theory does and does not apply to cancer biology. This course is restricted to graduate students.

This course is a graduate seminar course with both student and faculty presentations and discussions.

531. (PHRM531) Introduction to Genome Science. (A) J. Hogenesch.

This course introduces theoretical and laboratory aspects of genomics. Main topics include genome sequencing, large-scale genomics projects, expression analysis, proteomics, functional genomic screens, epigenomics, systems approaches, and integration and application of these methods.

L/L 535. (CIS 535, MTR 535) Introduction to Bioinformatics. (A) S. Master S. Hannenhalli. Prerequisite(s): Equipment Prerequisite - IMPORTANT To accommodate an increasing demand for this class, we now require that all students bring a laptop to the lab sessions on Fridays. TAs will provide help with the material, but you should be well-versed with your own laptop and should be willing/capable to download and install free software off the internet.

This course provides a board overview of bioinformatics and computational biology as applied to biomedical research. Course material will be geared towards answering specific biological questions ranging from detailed analysis of a single gene through whole-genome analysis, transcriptional profiling, and systems biology. The relevant principles underlying these methods will be addressed at a level appropriate for biologists without a background in computational sciences. This course should enable students to integrate modern bioinformatics tools into their research program.

Should I take this course? This course will emphasize hands-on experience with application to current biological research problems. However, it is not intended for computer science students who want to learn about biologically- motivated algorithmic problems; GCB/CIS/BIOL536 would be more appropriate for such individuals. The course will assume a solid knowledge of modern biology. An advanced undergraduate course such as BIOL421 or a graduate course in biology such as BIOL526 (Experimental Principles in Cell and Molecular Biology), BIOL527 (Advanced Molecular Biology and Genetics), BIOL528 (Advanced Molecular Genetics), BIOL540 (Genetic Systems), or equivalent, is a prerequisite.

536. (BIOL536, CIS 536) Computational Biology. (M) An introductory computational biology course designed for computational scientists. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling. Students will be expected to learn the basic algorithms underlying computational biology, basic mathematical / statistical proofs and molecular biology. Topics to be covered are genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics and small molecule folding.

SM 537. (BIOL537, CIS 635) Advanced Computational Biology. (A) S. Hannenhalli, L. Wang.

A discussion of special research topics.

SM 752. (CAMB752) Genomics. (B) Dr. Riethman.

Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete set of cellular instructions encoded in the DNA of specific organisms, including dozens of bacterial species, the yeast *Saccharomyces cerevisiae*, the nematode *C. elegans*, and the fruit fly *Drosophila melanogaster*.

The goals of the course are to 1) introduce the basic principles involved in mapping and sequencing genomes, 2) familiarize the students with new instrumentation, informatics tools, and laboratory automation technologies related to genomics; 3) teach the students how to access the information and biological materials that are being developed in genomics, and 4) examine how these new tools and resources are being applied to specific research problems.

999. Independent Study. (C)

GERMANIC LANGUAGES (AS) {GRMN}

GERMAN (GRMN)

SM 001. Water Worlds: From Noah to New Orleans and Beyond. (M) Richter. Freshman Seminar. All lectures and readings in English. No knowledge of German is required.

Judging from the news about the likely impact of global warming, the world that will take shape in the course of this century will be decidedly more watery than we're comfortable with. The polar ice caps are melting, glaciers are retreating, ocean levels are rising at increasing rates, polar bear habitat is disappearing, and countries are already jockeying for control over a new arctic passage.

SM 002. Lords of the Ring. (M) Frei. Freshman Seminar. All readings and lectures in English. No knowledge of German is required.

"One Ring to rule them all; One Ring to find them; One Ring to bring them all and in the darkness bind them; In the Land of Mordor where the Shadows lie." (J.R.R. Tolkien) So begins your journey into legends and traditional lore. You will read stories of unrequited love, betrayal, magical powers, and the deeds of dragon slayers. This course traces the power of the tales of the ring from J.R.R. Tolkien to Richard Wagner, from the Middle High German epic the Nibelungenlied to the Norse poetry of The Saga of the Volsungs, and back to the twentieth century with Thomas Mann's *The Blood of the Walsungs*.

SM 003. (COML003) Censored! A History of Book Censorship. (M) Wiggin. Freshman Seminar. All readings and lectures in English. No knowledge of German is required.

Although its pages may appear innocuous enough, bound innocently between non-descript covers, the book has frequently become the locus of intense suspicion, legal legislation, and various cultural struggles. But what causes a book to blow its cover? In this course we will consider a range of specific censorship cases in the west since the invention of the printed book to the present day. We will consider the role of various censorship authorities (both religious and secular) and grapple with the timely question about whether censorship is ever justified in building a better society. Case studies will focus on many well-

known figures (such as Martin Luther, John Milton, Voltaire, Benjamin Franklin, Goethe, Karl Marx, and Salman Rushdie) as well as lesser-known authors, particularly Anonymous (who may have chosen to conceal her identity to avoid pursuit by the Censor).

SM 004. Germany and the Holocaust. (M) Staff. Freshman Seminar. All readings and lectures in English. No knowledge of German is required.

We know much about the Holocaust. Countless document collections, memoirs, and testimonies have shed light on the worst chapter of 20th century history. Less is known about how Germans have dealt with this cataclysm since 1945. How have writers, politicians, and teachers, young and old people, perpetrators and bystanders, East and West Germans reacted to this event which is still haunting this country? This seminar will illuminate the developments since 1945 with special emphasis on literature, which has been a catalyst for inquiries into memory and guilt.

SM 006. Monsters and Marvels: "Tabloid" Broadides of Early Modern Europe. (M) Staff. Freshman seminar. All readings and lectures in English. No knowledge of German is required.

"Monstrous" creatures - both human and non-human - have fascinated Europeans since the days of the Greek republic. In the late Middle Ages and early modern period, a new communications medium, the printed broadside, opened the door to a flood of "tabloids," small, cheap texts with lurid pictures and graphic descriptions of two-headed babies, deformed animals and exotic creatures from distant lands. We will read some of these texts firsthand and try to understand from them the ways that Westerners viewed the world around them and beyond the seas. We will discuss the war of words between Martin Luther and the pope, whom he called the anti-Christ, and we will consider the role of women and the increased misogyny that, by the seventeenth century, led to the madness of the witch craze. Most of all, we will discover how to use old texts, historical both in their form and content, as windows into a culture quite different from our own.

SM 007. Food for Thought; Cannibalism and Gastronomy in Literature and Film. (M) Richter. Freshman Seminar. All readings and lectures in English. No knowledge of German is required.

Focuses on works of literature and film that explore the philosophical, aesthetic and cultural meanings of hunger, cooking, and eating. Topics include history of gastronomy, culinary ethnic diversity, gender and eating, digestion as philosophical concept, cannibalism and the sublime, hunger and narrative, erotics of food.

SM 008. Superstition & Erudition: Daily Life in the Middle Ages. (M) Brevart. Freshman Seminar. All readings and lectures in English. No knowledge of German is required.

Individuals in medieval times lived basically the same way we do today: they ate, drank, needed shelter, worked in a variety of ways to earn a living, and planned their lives around religious holidays. They talked about the weather and had sex, they had to deal with cold, hunger, illness, epidemics and natural catastrophes. Those fortunate few who could afford the luxury, went to local monastic schools and learned how to read and write. And fewer still managed to obtain some form of higher education in cathedral schools and nascent universities and became teachers themselves. Those eager to learn about other people and foreign customs traveled to distant places and brought back with them much knowledge and new ideas. The similarities, we will all agree, are striking. But what is of interest to us are the differences, the "alterity" (keyword) of the ways in which they carried out these actions and fulfilled their goals. This course concentrates on two very broad aspects of daily life in the Middle Ages (12th - 16th centuries). The first part, Erudition, focuses on the world in and around the University. The second part, Superstition, revolves around astrology, medicine and pharmacy.

SM 010. (JWST101) Translating Cultures. (M) Hellerstein. Freshman seminar. All readings and lectures in English. No knowledge of German is required.

"Languages are not strangers to one another," writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they

want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn't know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depends upon translation between people, between cultures, between texts.

With a diverse group of readings, -- autobiography, fiction, poetry, anthropology, and literary theory -- this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? What are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

SM 011. Bad Taste. (M) MacLeod. Freshman seminar. All readings and lectures in English. No knowledge of German is required.

"Beauty is not a quality inherent to things: it only exists in the mind of the beholder." (David Hume) "Taste classifies, and it classifies the classifier." (Pierre Bourdieu) "Kitsch causes two tears to flow in quick succession. The first tear says: How nice to see children on the grass. The second tear says: How nice to be moved, together with all mankind, by children running on the grass! The second tear makes kitsch kitsch." (Milan Kundera)

Most of us can recognize bad taste as soon as we see it: Harlequin romances, Elvis on black velvet, lawn ornaments. But bad taste also has a history, and kitsch has been identified as a peculiarly modern invention related to capitalism and consumerism. Beginning with a discussion of taste in the eighteenth century (Hume, Kant), we will investigate under what conditions good taste can go bad, for example when it is the object of mass reproduction, and, on the other hand, why bad taste in recent times has increasingly been recuperated as an art form. Categories such as the cute, the sentimental, the miniature, kitsch, and camp will be explored. We will also ask what forms of ideological work have been done by this brand of aesthetics, for example in the connection between politics and kitsch,

femininity and the low-brow, or camp and queer identity.

101. (GRMN501) Elementary German I. (C)

Introduction to the basic elements of spoken and written German, with emphasis placed on the acquisition of communication skills. Readings and discussion focus on cultural differences.

102. (GRMN502) Elementary German II. (C) Prerequisite(s): GRMN 101 or equivalent.

A continuation of GRMN 101. The student's expression and comprehension are expanded through the study of literature and social themes.

103. (GRMN503) Intermediate German I. (C) Prerequisite(s): GRMN 102 or equivalent.

Modern German texts of moderate difficulty and an integrated grammar review advance the student's command of the language.

104. (GRMN504) Intermediate German II. (C) Prerequisite(s): GRMN 103 or equivalent.

A continuation of GRMN 103. Literary and non-literary texts of moderate difficulty. Continued practice in active communication.

106. (GRMN505) Accelerated Elementary German. (A)

An intensive two credit course in which two semesters of elementary German (GRMN 101 & 102) are completed in one. Introduction to the basic elements of spoken and written German, with emphasis placed on the acquisition of communication skills. Readings and discussions focus on cultural differences. Expression and comprehension are then expanded through the study of literature and social themes.

107. (GRMN514) Accelerated Intermediate German. (B)

An intensive two-credit course in which two semesters of intermediate German (GRMN 103 and 104) are completed in one. The course focuses on improving discourse competence (writing and speaking), increasing vocabulary, and developing effective reading and listening strategies. The review of grammar will not be the primary focus. Course includes reading an abridged and glossed version of an authentic literary text offering the opportunity to practice and deepen reading competence and to sensitize cultural and historical awareness of German-speaking countries.

180. German in Residence. (C) Staff.

The German House is a half-credit course with concentrations in German conversation, film, and culture. Though many students enroll for credit, others often come to select events. All interested parties are invited, and you do not have to actually live in the house to enroll for credit. Students from all different levels of language proficiency are welcome. Beginners learn from more advanced students, and all enjoy a relaxed environment for maintaining or improving their German language skills.

215. (GRMN506) Conversation and Composition. (C) Prerequisite(s): GRMN 104 or the equivalent. Required for the major, also carries credit for the minor in German.

Offers students the opportunity to improve significantly written and spoken discourse strategies and to raise language competence to an academic register. In addition, the course familiarizes students with several reading strategies. Students write several essays, weekly reaction pieces, lead discussions, and create short in-class presentations. During the second half of the semester, students create a common course web site in connection with their readings of an authentic literary text. In collaborative group work, students create the contents for different components: biography, text analyses, historical background, geography and didacticizations emphasizing integrated skills and discourse competence. Their work is posted to a web site, which in turn, is incorporated in the 4th-semester syllabus, where students use the peer-generated information and comprehension checks for their understanding of an abridged version of the authentic literary text.

SM 216. (COLL225, COML216) Introduction to German Literature.

(B) Arts & Letters Sector. All Classes. Staff. Prerequisite(s): GRMN 215 or the equivalent. Required for the major, also carries credit for the minor in German. All readings, lectures and discussions in German.

Develops students' basic skills of literary interpretation. Exposure to various reading techniques (e.g. close reading, reading for plot, etc.) and to literary terminology and its application. Readings will include selections from prose, drama and lyric poetry.

219. Business German: A Macro Perspective. (A) James. Prerequisite(s): GRMN 215 or equivalent. No previous knowledge of economics or business required. Course taught in German.

This course offers you insights into the dynamics of Business German, while taking a macro approach. Examples of various course topics include: economic geography and its diversity, the changing role of the European Union, and the economic importance of national transportation and tourism. In addition, the course emphasizes the development of students' discourse competencies, Business German vocabulary and grammar. Course assignments include oral presentations on current events, class discussions, role-play, and collaborative group work. Class time will be utilized to practice speaking, answering questions, reviewing exercises and holding group discussions on various topics. Class participation is a key component of this course.

220. Business German: A Micro Perspective. (B) James. Prerequisite(s): GRMN 215 or equivalent.

This course is designed to enhance your speaking, reading and writing skills, in addition to helping you build a strong foundation in business vocabulary. Course objectives include acquiring skills in cross cultural communication, teamwork, business management, and creating a business plan. German grammar will be covered on a need be basis. This course will prepare you to perform and contribute while in a German-speaking business environment.

221. Advanced Grammar and Composition. (B) Brevart. This course is required for the German major.

This course is designed to help the student develop a more sophisticated writing style in German. This is achieved by means of the study and discussion of the fine points of German syntax (e.g. correct usage of tenses, punctuation, experimentation with word order, etc.), by a variety of exercises in finding synonyms, similes, analogies, and rhetorical strategies, and by exposure to numerous idioms. Emphasis is also placed on determining the appropriate usage of language in a specific situation. The ultimate objective of this course is therefore to encourage an active and imaginative use of the German language. Students should be prepared to undertake an active role in critiquing one another's writing.

229. German Business Culture. (C) All readings and discussions in English.

This course is designed to broaden perspectives on cross-cultural issues related to international business and international relations. In addition, the course will enhance analytical decision-making skills in resolving cross-cultural issues. The course will focus on global issues such as leadership, communication, negotiations and strategic alliances, cultural impacts on international business, effective performance in a global marketplace, and doing business with various nationalities.

231. (COML227, DTCH231) The First World War & After: Depictions of A New Society in French, German and Flemish Literature. (M) de Ridder.

The First World War marks the end of the so-called 'long nineteenth century' and the beginning of the short and extremely violent twentieth century. The Great War also rejuvenated an apocalyptic logic that prophesized that the world had to be destroyed before a new world could emerge. The literature of that era reflects both the devastation that was brought along by the war, and the opportunities it provided. A lot of writers expressed their beliefs and ideas for future societies in their literary works. What were those ideas? Were they different on both sides of the former front? And what went on in 'Flanders' Fields'? This course will explore a selection of French, German and Flemish novels and poems, focusing on their political and ideological contents.

234. (COML232) Literature and Revolution. (M) Wiggin. Common parlance proclaims the pen mightier than the sword. Peaceniks demand books not bombs. The tools of literacy are usually considered to be in opposition to the tools of war. But are they? Our seminar troubles this binary as we consider literature across space and time as an agent of social change at its most radical: revolution. Central to the class are the varied and creative answers to the long question about how to write a progressive literature. Is the concept of a revolutionary literature useful today? We begin by turning to the legacy of Plato's banishment of poets from the good state as well as Aristotle's spirited defense of poets. Writers and readings may also include: pamphlets by Martin Luther, essays by Thomas Paine and Friedrich Schiller; Buechner's drama *Woyzeck*, Marx and Engels' Communist Manifesto, Trotsky's *Literature and Revolution*, Mariano Azuela's novel of the Mexican Revolution, *The Underdogs*, plays by Bert Brecht (*Mother Courage and Her Children*), and others.

235. (COML238) Autobiographical Writing. (M) Weissberg.

How does one write about oneself? Who is the "author" writing? What does one write about? And is it fiction or truth? Our seminar on autobiographical writing will pursue these questions, researching confessions, autobiographies, memoirs, and other forms of life-writing both in their historical development and theoretical articulations. Examples will include selections from St. Augustine's confessions, Rousseau's *Confessions*, Franklin's *Autobiography*, as well as many examples from contemporary English, German, French, and American literature.

L/R 237. (ARTH237, COML237, HIST237, URBS237) Berlin: History, Politics, Culture. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Weissberg. All readings and lectures in English.

What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, its transformation into an industrial city in the late nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will

conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin. Indeed, Berlin will be a specific example to explore German history and cultural life of the last 300 years.

The course will be interdisciplinary with the fields of German Studies, history, history of art, and urban studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

240. (COML243, HIST270) Goethe and His Age. (M) Weissberg. All readings and lectures in English.

Johann Wolfgang Goethe (1749-1832) is known as Germany's pre-eminent writer. He was also a leading scientist, artist, and politician; a person who represented, as well as shaped, his time like no other. He was praised as a genius by some, and hated as a domineering figure by others. This course will engage in an exploration of his life and times, and of the notions of culture and Bildung that he has helped to popularize. Readings will include texts by Goethe and his contemporaries, as well as a discussion of the art, architecture, politics, popular culture, and philosophy of the "Goethe Age."

242. (COML126) The Fantastic and Uncanny in Literature. (M) Arts & Letters Sector. All Classes. Weissberg. All readings and lectures in English.

What is the "Fantastic"? And how can we describe the "Uncanny"? This course will examine these questions, and investigate the historical background of our understanding of "phantasy" as well as our concepts of the "fantastic" and "uncanny" in literature. Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, a choice of Friedrich Schlegel's and Novalis' aphorisms, and Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, and others. All of the texts will be available in English and no knowledge of a foreign language is required.

L/R 244. (COML254, URBS244) Metropolis: Culture of the City. (M) Arts & Letters Sector. All Classes. MacLeod. All lectures and readings in English.

An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doebelin, Marx, Engels, Benjamin, Kracauer. Films include Fritz Lang's *Metropolis* and Tom Tykwer's *Run Lola Run*.

245. (COML231) Literature and Culture of Central Europe. (M) Staff.

It is difficult to imagine the current century without the remarkable contributions of Central European culture. Central Europe is the birthplace of Freud and psychoanalysis, Schoenberg and twelve-tone composition, Kafka, Kraus, and Musil. It is also a combustible world theater for raging conflicts among political ideologies, nationalisms, and world views. This course examines the many legacies of Central Europe to the present. Through literature, cinema, and other arts, it explores a unique history that extends from the Habsburg and Ottoman empires, through two world wars, to communism and beyond. Readings are in English and include representative works from Albanian, Austrian, Bosnian, Czech, Hungarian, and Polish fiction.

246. Heroes Minstrels Knights: Epics and Lyrics of the Middle Ages. (C) Brevart. All readings and lectures in English.

In this course we will read medieval works of international literary importance, such as the Arthurian novels of Hartman von Aue Erec and Iwein, the German Song of the Nibelungs and the Old French Song of Roland as examples of heroic literature, and the tragic love story of Tristan and Isolde by Gottfried von Strassburg. We will also read two Spielmannsessen which have as their central theme the international motif of the bridal quest, namely Sankt Oswald and Koenig Rother, and compare these works with the Nibelungenlied and Tristan, which themselves also involve the bridal quest as one of their principal structural elements.

There is, however, a major and critical distinction between the traditional happy ending of the bridal quest epics and that of

The Nibelungs and of Tristan and Isolde, for those two German works culminate in the total destruction and disintegration of entire peoples and values, or with the utter misery of the ideal couple. With our readings of the love poems of the French Troubadours and those of their German counterparts, the Minnesaenger, our final genre of medieval literature, we will not only discuss the ubiquitous and timeless love theme in all its variations, but also the socio-political implications of such poetry.

247. (COML247, PHIL247) Free Radicals: Marx, Marxism, and the Culture of Revolution. (M) Jarosinski.

"A spectre is haunting Europe--the spectre of Communism": This, the famous opening line of *The Communist Manifesto*, will guide this course's exploration of the history, legacy, and potential future of Karl Marx's most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx's ideas might still hold in a world vastly different from his own.

248. (COML268, PHIL067, RELS238) Nietzsche's Modernity and the Death of God. (M) Jarosinski.

252. (COLL004) The Emergence of the Individual. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Weissberg/Samuels.

The concept of the modern "individual" was, as many would argue, an eighteenth century invention. This course will discuss the period of Enlightenment that gave rise to it, and follow its development until the twentieth century. Why would it be

suddenly important to think of separate human beings with particular desires and needs, rather than a more uniform group of subjects? And what are the consequences of such a move?

Adopting a broad but focused historical perspective, this course will examine the ways in which the individual has been theorized, represented, and understood across various countries and disciplines. Two professors--one from German, and one from French--will provide lectures and lead discussions on the position of the individual in specific historical and cultural contexts, beginning with the French Revolution and ending with Freud and the psychoanalytic revolution.

L/R 253. (COML253, ENGL261, GSOC252, HSOC253, STSC253) Freud: The Invention of Psychoanalysis. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Weissberg. All readings and lectures in English.

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today.

In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his *Interpretation of Dreams*, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

254. The Self-Portrait. (M) Arts & Letters Sector. All Classes. MacLeod & Coates (The class will be taught by two professors). All readings in English.

Who am I? What makes the creative act of representing the self different from representing another? Can the essential self be depicted authentically? Or is what is essential precisely that which can never be represented? Does the act of self-representation change the subject? Is a picture worth a thousand words, or can words provide more scope for self-representation? These are the questions at the heart of humanistic studies and

questions that every university student wrestles with in some form. "The Self-Portrait" will consider these questions from literary and visual perspectives, and will track these issues from the Renaissance to the twentieth century.

The class will be taught by two professors, and will include both lectures and discussion sections. Students will be exposed to a wide range of self-portraits in literature, the fine arts, and film. Within this framework, we will emphasize the literary and visual examples of Cellini, Goethe, and the Surrealists. In addition to analytical assignments and a final exam, students will prepare their own self-portraits during the semester in the medium of their choice, and our course will culminate in an exhibition of their work.

255. (COML255) Mann-Hesse-Kafka. (M) Arts & Letters Sector. All Classes. Jarosinski. All readings and discussions in English.

Based on considerations of the cultural tradition and the intellectual currents of the twentieth century, the course presents a survey of the achievements of Mann, Hesse, and Kafka. The extensive study of representative works focuses on the problems of the artist in the modern age.

L/R 256. (CINE352, COML241, RELS236) The Devil's Pact in Literature, Music and Film. (C) Arts & Letters Sector. All Classes. Richter. All readings and discussions in English.

For centuries the pact with the devil has signified humankind's desire to surpass the limits of human knowledge and power. From the reformation chap book to the rock lyrics of Randy Newman's *Faust*, from Marlowe and Goethe to key Hollywood films, the legend of the devil's pact continues to be useful for exploring our fascination with forbidden powers.

257. (CINE250, COML269) Nazi Cinema. (C) Richter, MacLeod.

Cinema played a crucial role in the cultural life of Nazi Germany. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. This course explores the world of Nazi cinema ranging from infamous propaganda pieces such as *The Triumph of the Will* and *The Eternal Jew* to entertainments by important directors such as Pabst and Douglas Sirk. More than sixty years later, Nazi Cinema challenges us to grapple with issues of more subtle ideological

insinuation than we might think. The course also includes film responses to developments in Germany by exiled German directors (Lubitsch, Wilder). All lectures and readings in English. Weekly screenings with subtitles.

258. (COML270, CINE250) German Cinema. (M) Arts & Letters Sector. All Classes. MacLeod.

An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political context, the course will explore the "Golden Age" of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to "Papa's Kino" and the rise of New German Cinema in the 1960s.

SM 259. (CINE201, ENGL291) Topics in Film History. (M) Katz, Corrigan, Decherney, Beckman.

This topic course explores aspects of Film History intensively. Specific course topics vary from year to year. See the Cinema Studies website at <http://cinemastudies.sas.upenn.edu> for a description of the current offerings.

261. (CINE059, ENGL079, ENGL279, JWST261) Jewish Films and Literature. (M) Arts & Letters Sector. All Classes. Hellerstein.

From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Teyve the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how

these translations of Jewish culture affect and are affected by their implied audience.

262. (GSOC162, JWST102, NELC154) Women in Jewish Literature. (M) Arts & Letters Sector. All Classes. Hellerstein.

This course introduces students of literature, women's studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres--devotional literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relation of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English.

"Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890)

263. (ENGL079, JWST261) Jewish American Literature. (M) Arts & Letters Sector. All Classes. Hellerstein.

What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers "immigrate" from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman.

Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.

SM 264. (COML260, JWST264) Translating Cultures: Literature on and in Translation. (M) Hellerstein. Benjamin Franklin Seminar.

"Languages are not strangers to one another," writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn't know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts.

With a diverse group of readings--autobiography, fiction, poetry, anthology, and literary theory--this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? what are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

265. (GRMN565, HIST265, JWST265, JWST465) Yiddish in Eastern Europe. (M) Hellerstein. All readings and lectures in English.

This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.

269. Introduction to German Culture. (A) Jarosinski. Prerequisite(s): GRMN 104 or equivalent. Readings and lectures in German.

In this course, we examine and explore over a thousand years of cultural history of the German-speaking lands with an eye toward clarifying the key cultural knowledge shared by German speakers. From the Holy Roman Empire in the Middle Ages to the twentieth century, we examine what makes the German nations -- and peoples -- what they are today. We will pay attention both to mainstream tendencies as well as oppositional political and cultural movements. Special emphasis will be placed on cultural achievements such as literature, music, and architecture as well as on a basic understanding of the politics, economics and cultural formations of Germany, Austria and Switzerland in the 20th century. The language of instruction, readings, and discussion is --with few exceptions -- German.

318. (GRMN536) Foreign Exchanges: German Travel Literature and the East. (M) Wiggin. Prerequisite(s): GRMN 216 or equivalent. This course is taught in German.

For centuries the "Orient" has functioned as an important concept in formulating a European as well as a specifically German identity. In the context of today's debates about the expansion of Europe and the so-called war on terrorism, it is a concept which demands further historical investigation. On the basis of travel narratives and other texts, we will explore this key term, noting how it has been insistently (re)formulated since the beginnings of modernity. We will also investigate several theoretical models which can help us to think through the cultural encounters documented in the primary works. A series of fundamental questions will accompany us through the semester: Where is the East? Is the East a homogenous place eliciting either fear or wonder? Who lives in the East and how are the "customs and manners" of its inhabitants comprehended? What happens to a German in the East? And, vice versa, what happens to an "Oriental" in Germany? Is the East only in the East? Can one also find the East in Germany?

321. Germans Cowboys Indians. (M) Wiggin. Taught in German.

325. Politics of the Past: Telling Early Modern Tales to Modern Readers. (M) Wiggin. Prerequisite(s): GRMN 215 or equivalent. Taught in German.

In this class we will focus on how literary hi/stories are (re)written, and to what ends. Over the course of the semester, texts from the seventeenth century will be paired alongside a rewrite from the twentieth. Paired readings may include: Martin Opitz (Buch von der deutschen Poeterey) and G_nther Grass (Das Treffen in Telgt), Grimmelshausen (Coursache) and Bertold Brecht (Mutter Courage) and Abraham _ Sancta Clara (Predigten) and Barbara Frischmuth (Die Klosterschule). In our discussions, we will explore a series of related questions: How does the older text resonate within the new? How does the newer text comment on the old? What are the politics of such dialogues with the distant past?

349. Maerchen. (M) MacLeod. Prerequisite(s): GRMN 215 or equivalent. All readings and lectures in German.

Many of us grew up with Disney's commercialized and formulaic versions of classic fairy-tales. This course will trace tales such as Hansel and Gretel and Little Red Riding Hood back to nineteenth-century German culture and the famous collections of the Brothers Grimm. The rich cultural legacy of the Grimms and other German Romantics will be considered, including feminist and postmodern revisions of the fairy tale. We will also look at the fairy tale as a mechanism for enchanting, improving, or disciplining children.

355. Jugendliteratur: From the Third Reich to the Present. (M) Staff.

This course takes a critical look at Jugendliteratur ranging from the Nazi award-winning TECUMSEH by Steuben to the internationally acclaimed Austrian Kaethe Recheis and her radical account of fascism in Austria. The discussion includes West and East German authors such as Plenzdorf and deals with post-unification reality, including the latest Wunderkind author of age 16. The course will investigate the power and function of Jugendliteratur in various German-speaking settings.

356. Crime and Detection - Dark Deeds. (M) Frei. All readings and lectures in German.

The detective story and the crime drama are time-honored genres of literature and popular culture. We are drawn to morbid scenes of violence and crime, and satisfied

by the apprehension of criminals and their punishment. At the same time, the process of detection, of deciphering clues, is much like the process of reading and interpretation.

In this course we will read a variety of detective and crime stories, some by famous authors (e.g., Droste-Huelshoff, Fontane, Handke), others by contemporary authors that address interesting aspects of German culture (e.g., Turkish-Germans, gay and lesbian subcultures, DDR and Wende). We will also look at episodes from popular West, East, and post-reunification German TV crime shows (e.g., Tatort).

360. Prose of the Twentieth Century. (M)

Lectures and discussions of major works of modern German prose narrative, including Kafka, Mann, Hesse, Seghers, Grass, and Boell.

372. War in Words: War in German Lyric Poetry 1600 - 1945. (M)

Schwarzkopf. Prerequisite(s): GRMN 215 or equivalent. Taught in German.

How can war be depicted in lyric poetry? How does poetry bring war into view?

(Think of the ways in which Tolstoy and Hemingway wrote about war!) What attitudes can be adopted toward war?

These are the main questions we will discuss in this class. Starting from Hegel's concept of lyric poetry, we will look at the German lyric as it confronts the phenomenon of war. Of course, the experience of war is an important part of German culture. Responses have spanned from glorification to condemnation. In this course our main focus will be on the poetry of Andreas Gryphius through Bertolt Brecht, from the Thirty-Years-War to WWII. We will analyze and interpret these poems against their historical context and listen to musical settings (by Robert Schumann, Friedrich Silcher, Hanns Eisler, Norbert Schulze). We will not only see how Leni Riefenstahl uses a German war song in Triumph des Willens, but also Michael Curtiz in Casablanca and Tennessee Williams in The Night of the Iguana; and we will hear Marlene Dietrich sing "Lili Marlen." We will also consult classical texts of the theory of war (e.g. Clausewitz and Schmitt) to complete the picture. Thus our view will range from the Baroque to the Modern: a glance which will not only bring war into view, but also offer an outline of German lyric poetry and insights into German history.

373. Dancing on the Volcano: Modern German Writers Confront Evil. (M) Jarosinski. Prerequisite(s): GRMN 215 or equivalent. Taught in German.

This course will discuss some of the most fascinating texts of German literature that reflect Germany's precarious history in the 20th century with two world wars and Nazi totalitarianism. Central is the individual's reaction to a situation of danger or threat and the ability to preserve dignity and identity. Readings will include shorter pieces and plays by Kafka, Brecht, Boell, Stefan Zweig, Wolf, Weiss, Jurek Becker and others.

Through this course, students will be able to improve their reading and speaking abilities in German on an advanced level.

375. German Literature after 1945. (M) Jarosinski.

Focus on the continuity of the literary tradition, innovation, and prominent themes related to coming-of-age in today's society, and specific stylistic experiments. Topics include: the changing literary perspective on German history and World War II; the representation of such prominent issues as individual responsibility, German reunification, and human relations in modern society.

377. Germany and the European Union. (M) Shields. Prerequisite(s): GRMN 215 or equivalent. Taught in German.

In January 1999, a single monetary system united Germany, a core nation, with 10 other European states. Since January 2002 Euro bank notes and coins have gone into circulation in 12 European countries. The European Union is now stronger than ever before, and on May 1, 2004 ten more countries joined the EU - the largest-ever expansion. Is the EU benefiting from this enlargement or does the arrival of so many new members drain money from the EU budget and slow down the EU decision-making? This course will provide an overview of the political and economic developments towards integration in post-war Europe, focusing on Germany's key role. Studying content-rich reading materials, it explores historic-political, social, economic and cultural issues that are urgent for Germany as well as the European community. Accompanying activities will help students to improve the level of complexity of their language skills.

378. Foreign in Germany. (M) Shields. Prerequisite(s): GRMN 215 or equivalent. Taught in German.

Foreign minority groups are integral elements of German society. This course will provide an overview of the history of foreigners in Germany and their political, social and economic significance. Content-rich reading materials will show Germany as a country that is rapidly developing into a multinational, multiracial and multicultural society. Focusing on the various attitudes of Germans held towards foreigners and the foreigners' attitudes towards life in Germany, the text selection will provide the basis for in-depth study of the subject, including the development of German policy regarding foreigners.

379. Decadence. (M) Weissberg. Prerequisite(s): GRMN 215 or equivalent. Lectures and discussions in German.

The period of the late nineteenth and turn to the twentieth century has often been described as a time of decadence--a decline in the "standards" of morals and virtue. While Freud explored the nature of sexual desire, writers like Schnitzler or Wedekind made this exploration central for their stories or plays. The course will focus on the literature and culture of fin-de-siecle Vienna and Berlin, and consider a variety of texts as well as their later reception and translation into film. Lectures and discussion in German.

380. Heimat. (M) MacLeod. Prerequisite(s): GRMN 215 or equivalent. Taught in German.

The concept of Heimat (homeland, home, roots) has been a focal point of German culture for at least the past two hundred years; but it has no precise translation into English. Heimat is deeply connected with German notions of modernity, nature, community, and gender; but the question of where one belongs has also been associated with escapism, exclusion and marginality. Beginning with a reading of Freud's essay "Das Unheimliche," we will explore literary representations of Heimat (including works by authors such as Eichendorff, Storm, Stifter, Raabe, and Sebald); nineteenth-century paintings by artists such as Leibl; and Edgar Reitz's epic film Heimat (1984).

SM 381. Topics in German Culture: Consuming Culture. (M) Jarosinski. Prerequisite(s): GRMN 216 or equivalent. This course is taught in German.

Have you ever experienced Kaufrausch? Wondered why there are so many English words in German advertisements? Found German ice cream ads

surprisingly...sexual? In this course we will ask how a critical examination of advertising and consumer culture can provide insight into the complex and sometimes contradictory dynamics of modern German (and American) culture. In posing this question, we will take a broad interdisciplinary approach in examining everything from art and literature to historical and demographic data and recent research into consumer anthropology and psychology.

382. The German Media Landscape. (M) Richter. Prerequisite(s): GRMN 215 or equivalent. Taught in German.

An interactive course that introduces students to the world of German media (journalism, television, and radio). Analysis of major newspapers and magazines, editorial policy, history of media in the postwar period, types of television programming. Content-specific language instruction stressing complex language usage.

383. German Political Landscape. (M)

This course will provide an overview of the emergence and development of political parties in Germany since the 19th century. We will start with Robert Michels' classical study "Die Soziologie des Parteiwesens," first published in 1910. The course will cover the Weimar Republic, National Socialism, the founding of political parties in West and East Germany after 1945, the emergence of the Green party and the Republikaner in the 1980s, and developments after unification.

387. Life in-between: Contemporary German Writers. (M) Frei.

Prerequisite(s): GRMN 215 or equivalent. Taught in German. Course is especially designed for German Majors and Minors. Japan, Turkey, Bosnia, and East-Germany--what do these countries have in common? This course investigates texts by contemporary "German" authors with diverse roots, who live in between countries, cultures, heritages, traditions and languages. All have either immigrated to or were born in Germany. Currently, each author lives and works in Germany, writing in German and in their respective "mother tongue". Each author differently questions issues of nationhood and nationality and challenges traditional notions of what it means to be "German" and living in today's Germany. Through the critical reading of their colorful prose, you deepen your understanding of the complexities of global citizenry and look into fixed categories of identity formation. In addition, you break

open stereotypical imaginations of what German literature entails. The course has two particular areas of concentration: Turkey and the European Union. Germany and 20 years after reunification. Authors include Yoko Tawada, Feridun Zaimoglu, Hatice Aky_n und Fatih Akin, Julia Zeh (Ed.) und Ingo Schulze.

SM 395. Thesis Writers' Colloquium. (B) Wiggin / MacLeod. Prerequisite(s): Limited to seniors writing thesis.

In the true spirit of a colloquium (= an informal meeting for the exchange of views), this course provides you with the opportunity to engage in a series of conversations about your thesis project.

Our discussions will focus on research tools and methods and on the writing process. It is tailored as much as possible to meet individual needs. Most importantly, the colloquium should not add to the burden of writing a thesis but should facilitate its completion. Thus, its primary goal is a successfully completed senior thesis. To assist you in obtaining this goal, several short written assignments will be required.

499. Independent Study. (C)

SM 507. Elementary Middle High German. (M)

Designed to familiarize the student with the principal elements of Middle High German grammar and to develop skills in reading and translating a major work of the twelfth century. Limited text interpretation.

SM 516. Teaching Methods. (C) Frei.

This course examines major foreign language methodologies, introduces resources available to foreign language teachers, and addresses current issues and concerns of foreign language teaching and learning, such as second language acquisition theory and application of technology.

SM 517. (EDUC673, ROML691) Technology and Foreign Language Teaching. (B) Frei/McMahon.

This course focuses on the evaluation, design, and development of multimedia in foreign language teaching and seeks to spotlight intersections of pedagogy and technology. Emphases are on the evaluation and production of effective multimedia-based materials and the pedagogical concerns raised by their implementation.

In workshops, you will learn to use video-, image-, and sound-editing software applications. In weekly lectures, you will examine current trends and issues in

pedagogically sound applications of technology. We will focus our discussions mainly on the efficacy of Web-based design and development.

You will design and produce an instructional project including different media such as text, image/graphics, sound, and video and create an on-line teaching portfolio as your final project.

SM 531. German Literature to 18th Century. (A) Staff.

Historical overview of authors, their works, genres, and epochs. Special attention to social, historical, cultural and religious backgrounds. Reading of selected works or passages.

SM 532. German Literature 18th Century to Present. (B) Staff.

A continuation of GRMN 531, this course examines literary developments from the Enlightenment to the present.

SM 534. (CLST511, COML501, ENGL571, ROML512, SLAV500) History of Literary Theory. (M) Jarosinski.

Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing-and-often confrontational dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the /professional / study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature-we will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism.

There will be no examinations. Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be an annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor; it will typically include three or four books and six to eight articles or their

equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare "position notes" each week, which will either be posted on a weblog or circulated in class.

SM 535. (COML536) Goethe's Novels. (M) MacLeod. Prerequisite(s): Upper-level course, assumes some familiarity with German literature and culture.

With each of his major novels, Goethe intervened decisively and provocatively in the genre and wider culture. This seminar will analyze three of Goethe's novels spanning his career: the sensational epistolary novel *The Sorrows of Young Werther* (1774, rev. 1787); the novel of adultery *Elective Affinities* (1809), and the Bildungsroman *Wilhelm Meister's Apprenticeship* (1795/96). (We will also look ahead to his "archival" novel *Wilhelm Meister's Journeyman Years* [1829]). Particular attention will be paid to the ways in which these novels address questions of modernization - technology and secularization, to name only two - through the lens of individuals who understand themselves in relation to artistic media. We will also consider seminal scholarship on the novels (e.g. Benjamin, Lukacs) in addition to recent critical approaches.

536. (GRMN318) Foreign Exchanges: German Travel Literature and the East. (M) Wiggin. Prerequisite(s): GRMN 216 or equivalent. This course is taught in German.

For centuries the "Orient" has functioned as an important concept in formulating a European as well as a specifically German identity. In the context of today's debates about the expansion of Europe and the so-called war on terrorism, it is a concept which demands further historical investigation. On the basis of travel narratives and other texts, we will explore this key term, noting how it has been insistently (re)formulated since the beginnings of modernity. We will also investigate several theoretical models which can help us to think through the cultural encounters documented in the primary works. A series of fundamental questions will accompany us through the semester: Where is the East? Is the East a homogenous place eliciting either fear or wonder? Who lives in the East and how are the "customs and manners" of its inhabitants comprehended? What happens to a German in the East? And, vice versa, what happens to an "Oriental" in Germany? Is the East only in the East? Can one also find the East in Germany?

SM 537. Early Modern Cultural Translations. (M) Wiggin.

Prerequisite(s): GRMN 216 or equivalent. Upper-level course, assumes some familiarity with German literature and culture. This course is taught in German.

SM 540. (ARTH560, COML539, ENGL588, JWST540) Memory, Trauma, Culture. (M) Weissberg. All readings and lectures in English.

In recent years, studies of memory (both individual and cultural) have rivaled those of history, and have produced alternative narratives of events. At the same time, research has also focused on the rupture of narrative, the inability to find appropriate forms of telling, and the experience of a loss of words. The notion of trauma (Greek for "wound") may stand for such a rupture. Many kinds of narratives, most prominently the recollections of Holocaust survivors, are instances in which memories are invoked not only to come to terms with traumatic events, but also to inscribe trauma in various ways. In this seminar, we will read theoretical work on memory and trauma, discuss their implication for the study of literature, art, and culture, read select examples from Holocaust survivors' autobiographies (i.e. Primo Levi, EliWiesel), and discuss visual art (i.e. Boltanski, Kiefer) and film (i.e. Resnais, Lanzmann, Spielberg).

SM 550. (ARTH550, CINE550, COML552) German Film History and Analysis. (M) Richter.

From the early 20th century, German cinema has played a key role in the history of film. Seminar topics may include: Weimar cinema, film in the Nazi period, East German film, the New German cinema, and feminist film.

SM 551. (PHIL465) Kant's First Critique. (M) Guyer.

A study of Kant's epistemology, criticism of metaphysics, and theory of science. A close reading of the Critique of Pure Reason and associated texts.

SM 552. (PHIL466) Kant II. (M) Guyer.

A study of Kant's moral philosophy, political philosophy, and aesthetics, focusing on his *Groundwork for the Metaphysics of Morals*, *Critique of Practical Reason*, *Metaphysics of Morals*, and *Critique of Judgement*.

SM 553. (COML581, RELS508) Hermeneutics. (M) Dunning.

Theory of interpretation and the construction of meaning. Focus is usually

on a text by Hegel or Gadamer. May be repeated for credit.

SM 560. (COML559, JWST560, PHIL551) Topics in Philosophy and Literature. (M) Weissberg. Topics vary.

565. (GRMN265, HIST265, JWST265, JWST465) Yiddish in Eastern Europe. (M) Hellerstein. All readings and lectures in English.

This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.

SM 568. (PHIL568) Hegel's Aesthetics. (M) Hindrichs.

Prerequisite(s): GRMN 216 or equivalent. Upper-level course, assumes some familiarity with German literature and culture. This course is taught in German.

SM 573. (ARTH573, CINE515, COML570, ENGL573, FREN573) Topics in Criticism & Theory: Auteursm: Theories and Practices. (M) Corrigan.

Auteursm has arguably been at the center of film practice, theory and historiography since the 1950s. Originating in the work of the French New Wave, auteursm has shaped our understanding of many film cultures around the world and across different media beyond the cinema. This course will examine the history of auteursm as it has evolved from France to the U.S. and through national cinemas from China and India to Iran and Denmark. As part of this study, we'll investigate the changing theoretical terms of auteursm as it has adapted to the pressures of post-structuralist theory, feminist interventions, cultural and racial distinctions, and the challenges of new media.

SM 578. (ARTH701) Seminar in Method in the History of Art. (M) Staff.

Topics vary.

SM 579. (ARTH584, COML579) Winckelmann. (M) MacLeod.

Prerequisite(s): Upper-level course, assumes some familiarity with German literature and culture.

Celebrity-scholar, literary stylist, cultural monument, pagan hero, self-made man,

homosexual codeword, murder victim: despite his humble origins in Prussia, Johann Joachim Winckelmann (1717-68) enjoyed a meteoric career as an archaeologist and art historian in Rome and came to define a century. His developmental view of culture and his celebration of Greek art challenged prevailing ideas and established new paradigms. The seminar will pay careful attention to Winckelmann's most important writings, including "Reflections on the Imitation of the Painting and Sculpture of the Greeks" (1755), the "History of Ancient Art" (1764), and his famous descriptions of statues such as the Belvedere Apollo and Laocoon group, while keeping in mind the context of mid eighteenth century Rome. The lasting impact of Winckelmann's Greek subject matter, his aesthetic theory, and his literary style will be traced, with readings ranging from Johann Wolfgang Goethe, Gotthold Ephraim Lessing, Walter Peter, Rainer Maria Rilke, and Thomas Mann, to the troubling reincarnation of Winckelmann's statues in Leni Riefenstahl's Fascist Olympic films. Finally, Winckelmann's central role in the field of queer studies will be explored, via a consideration of his representation of the male body beautiful and of his own status as a codeword for homosexual desire.

SM 580. (ARTH560, COML582, ENGL592, PHIL480, PHIL580) Topics In Aesthetics. (M) Staff. Topics vary.

SM 581. (COML584, HIST490, JWST490, RELS429) Topics in Jewish-German Culture. (M) Staff.

Reading and discussion course on selected topics in Jewish history. The instructors are visiting scholars at the Center for Advanced Judaic Studies.

SM 582. (PSCI582, PSCI584) Topics in Political Science. (M)

Topics vary.

SM 602. (LING610) Seminar in German Philology. (M)

Topics vary annually.

SM 604. Seminar in German-Jewish Studies. (M) Weissberg.

The course will focus on a specific topic, such as German-Jewish autobiography, writings related to the Jewish emancipation, German-Jewish philosophy and literature, the notion of exile, the Shoah, or contemporary German-Jewish literature. Topics will be announced.

SM 607. Nibelungenlied. (M) Schwarzkopf. Taught in German.

SM 611. (ARCH711, ARCH712) Topics in History and Theory. (M) Staff.

A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.

SM 631. The Age of Storm and Stress. (M) Richter.

An in-depth investigation of the major thinkers and writers of the Sturm and Drang period (1767-1785). Concepts to be considered include: genius, nature, language, violence, irrationality, "Germanness." Works by Herder, the young Goethe and Schiller, Hamann, Gerstenberg, Lenz, Klinger, and Wagner. Emphasis on drama and drama theory.

SM 632. Romanticism. (M) MacLeod, Weissberg.

The course focuses both on the timely impact and the lasting contribution of Romanticism. Lectures cover the philosophical, intellectual, social, and political currents of the age. Authors: Schlegel, Wackenroder, Tieck, Brentano, Arnim, Novalis, Hoffmann, Kleist, Eichendorff.

SM 633. Classicism. (M) MacLeod, Richter.

An investigation of Weimar Classicism. Drawing on literary and theoretical works by Goethe, Schiller, and others, the seminar will explore concepts such as: aesthetic education; the nature of a "classic;" "autonomous" art; imitation; German responses to Greek antiquity.

SM 635. Goethe's Wilhelm Meister. (M) MacLeod.

Goethe's Wilhelm Meister project spanned several decades and three novels. This seminar will analyze Wilhelm Meisters Lehrjahre (1795), the foundational work in the development of the German Bildungsroman, and Wilhelm Meisters Wanderjahre (1829), an anomalous and eccentric narrative that stretches the boundaries of the novel genre. We will also consider recent critical approaches to the novels, and will discuss in particular Foucauldian and psychoanalytic readings that deal with Bildung as a discourse of desire, formation, and discipline.

SM 636. Literature of Enlightenment. (M) Richter.

German intellectual and literary developments from 1690-1780 in the context of the European enlightenment.

SM 638. Studies in 19th Century Literature. (M) MacLeod, Weissberg.

The course concentrates on issues of "realism" and "representation". Examples will be drawn from nineteenth century German fiction.

SM 641. Drama of the Nineteenth Century. (M) Staff.

A study of the German drama after Goethe and Schiller, with special emphasis on the response of such authors as Kleist, Buechner, Grillparzer, and Hebbel to the classical drama. Discussions of theories and techniques (Freytag, Szondi). Readings also include Nestroy, Hauptmann, and Schnitzler.

SM 642. (COML642) Drama of the Twentieth Century. (M) Jarosinski.

Based on a discussion of the relationship of drama (text) and theater (performance), the course examines the development of realistic and antirealistic currents in modern German drama. From Wedekind and Expressionism to Piscator's political theater, Brecht's epic theater and beyond (Horvath, Fleisser, Frisch, Duerrenmatt, Handke).

SM 646. Novel of the Twentieth Century. (M) Staff.

A study of the major developments in modern German narrative prose in its international context. Discussions of theories and techniques. Readings of authors such as Kafka, Thomas and Heinrich Mann, Doebelin, Seghers, Boell, and Grass.

SM 648. Modern German Lyrics. (M) MacLeod.

Origins and development of modern German lyrical poetry since the late nineteenth century. Authors such as George, Rilke, Hofmannsthal, Brecht, Benn, Bachmann, Celan will be interpreted in light of the important poetic trends in the twentieth century.

SM 650. (PSCI584) Topics in 20th-C Studies. (M) Staff. Topics vary.**SM 653. Baroque. (M)** Wiggin.

Lectures on the concept of "Baroque" in literature and the social and intellectual backgrounds of German Baroque literature; reading and discussion of lyrics, dramas and novel.

SM 654. Renaissance and Reformation. (M) Wiggin.

Major works and authors of the fifteenth and sixteenth centuries. Authors include

Luther, Hans Sachs, Wickram, Fischart, and Frischlin.

SM 660. German Literature After 1945: Recording, Remembrance, and Forgetting. (M) Staff.

The seminar examines literary and other artistic works that represent contested parts of the recent German past. Particular attention will be paid to the use made of historical facts in lyric poetry, prose, documentary theater, film, and photography. Through close readings of emblematic literary and theoretical texts, we will consider the widespread notion of the past as a narrative construction, investigate modes of witnessing and testimony, and examine collective and individual repression as well as private and public rituals of remembrance. The material will be considered along with the larger claim of literary discourse, and lyric poetry specifically, as uniquely suited to represent otherwise inaccessible dimensions of experience.

SM 663. Weimar Literature. (M) Staff. Conducted as a research seminar, requiring an oral presentation and lengthy scholarly paper. Primary readings and discussion will be in German.

This course examines the major cultural developments-including Expressionism, New Objectivity, and the European avant-garde-that took place during the tumultuous years of Germany's first experiment in democracy. We will cover a variety of genres (poetry, drama, fiction and non-fiction), while also paying attention to the visual arts, in particular the cinema. The primary aims of the course are: to familiarize students with the rich cultural efflorescence of the period; to examine the legacy of the First World War, the rise of the urban metropolis and their various representations; and to assess the course of history as reflected both in and outside the literary sphere. Authors to be covered include: Vicki Baum, Walter Benjamin, Bertolt Brecht, Alfred Doebelin, Ernst Juenger, Irmgard Keun, Siegfried Kracauer, Erich Maria Remarque, Joseph Roth and Ernst Toller.

SM 664. (HIST620) Topics in European History. (A) Staff.

This course will focus on problems in European political, social, cultural, and economic development from 1750 to the close of the second World War. Readings will be major works in the different fields of European historical scholarship, ranging from family to diplomatic history and covering a wide variety of methodological approaches.

SM 668. Women in Weimar Classicism. (M) Richter. This course will be taught in German.**SM 670. (ARTH670, COML670) German Literary Theory & Criticism. (M)**

This course will concentrate on major and/or current issues in literary criticism, specific problems, critics, or approaches. Topics will vary; in the past, courses have concentrated on Walter Benjamin's work, and "The Frankfurt School and After."

SM 672. (COML634) Reading Modernity. (M) Jarosinski. Taught in English.

In this course we will examine Modernism and the avant-garde as concepts in literature, theater, and criticism. Both terms in the seminar title will be significant to our work, as we ask not only how to define and debate "modernity" today, but also how to understand various notions of "reading" and cultural analysis that emerge during the period and live on in various ways today. In addition, we will take account of important technological, social, and economic developments marking modernity, focusing our attention on the ways in which they intersect and interact with cultural production, cultural politics, and perception itself. Readings will include key texts by representative authors, including Benjamin, Kafka, Barthes, Kracauer, Brecht, Adorno, Baudelaire, Eliot, Woolf, and others. The final section of the course is concerned with contemporary debates surrounding Modernism's relation to Fascism and the juxtaposition of Modernism and Postmodernism.

SM 674. (ARTH674, CINE591, COML674, PHIL583) Topics in Aesthetic Theory. (M) Weissberg, MacLeod, Corrigan.

Topics vary annually.

SM 676. (COML676, GSOC676) Readings in Feminist Theory. (M) Weissberg.

The seminar will provide a survey of recent feminist theories, and a discussion of literary texts focusing on issues of gender, race, and class. The reading list will include essays by French, English, and American theorists as well as novels by Bachmann, Wolf, and Jelinek.

SM 678. (ARTH678) Realism: Literature and Theory. (M) Weissberg.

What is "realism"? What does it mean to depict the world as a "realist" writer or

artist? This seminar will consider these questions and concentrate on German literature and art of the second half of the nineteenth century. It will focus on writers such as Stifter, Storm, Raabe, and Fontane; but also on Stifter's drawings and paintings, visual artists such as Menzel, and the vogue of historical painting. Finally, the seminar will consider the role of early photography in the development of the notion of "realism." Secondary literature will include studies by Michael Fried, Linda Nochlin, and others.

SM 679. (ARTH662, ARTH762, DTCH601) German Art. (A) Staff.

SM 680. (MUSC760) Studies in Contemporary Music. (M)

Seminar on selected topics in the music of the twentieth century.

SM 691. Travel in German Literature. (M) Wiggin.

During the early modern period (circa 1450-1800) the world became global. A "new world" which challenged "old world" frameworks of knowledge was made to accommodate European travellers. This seminar will devote itself to travel literature (broadly conceived) on the Americas to explore questions historical and actual, literary and theoretical: How did contact initially effect the old world? How did its representation evolve over the early modern period? How can a concept of early modern globalism be useful today?

Weekly seminar topics will be organized around a single primary text (some available only in Van Pelt's Rare Book Room) and an array of secondary materials. Each participant will lead one seminar session, assigning further readings as s/he determines necessary. A one-day seminar within the seminar will allow students to present their work on early modern globalism in a conference-style format. Each contribution will then be re-worked as the final paper. Primary materials may include: Herzog Ernst; Schedel's *Weltchronik*; Muenster's *Cosmographica*, travel accounts by Staden and Hutten; Theodor de Bry's American publications; Ortelius, Blaeu, and Jansson maps; Gottfried's American compilation; travel literature by Penn, Pastorius, and Saur; Insel Felsenburg; Humboldt.

DUTCH (DTCH)

101. (DTCH501) Elementary Dutch I. (A) Naborn.

A first semester language course covering the core Dutch grammar and vocabulary

with the goal of providing the corner stone for developing overall linguistic proficiency in Dutch.

102. (DTCH502) Elementary Dutch II. (B) Naborn.

Continuation of DTCH 101.

103. (DTCH503) Intermediate Dutch I. (A) Naborn. Prerequisite(s): Dutch 102 or equivalent.

A third semester Dutch language course. The emphasis lies on vocabulary expansion through the use of audio-taped materials and readings. Grammar is expanded beyond the basics and focuses on compound sentences, features of text coherence and idiomatic language usage.

104. (DTCH504) Intermediate Dutch II. (B) Naborn. Prerequisite(s): Dutch 103 or equivalent.

105. (DTCH505) Advanced Dutch I - Cultural History of the Netherlands & Flanders. (M) Naborn. Prerequisite(s): DTCH 104 or equivalent.

This course combines a Dutch language course with a content-based course on Dutch history and literature. Units on linguistic aspects of the language are added as review and refinement. The course also serves as an introduction to writing papers in Dutch.

106. (DTCH506) Advanced Dutch II. (M) Naborn. Prerequisite(s): Dutch 105 or equivalent.

Continuation of Dutch 105. The emphasis lies on literary and other writings from the 20th Century.

SM 230. (ARTH260, ARTH262, ARTH263, FOLK232, JWST230) Topics in Dutch Studies. (C) Taught in English.

This seminar will focus on area studies of Belgium and the Netherlands. Topics may include political science, history, folklore or film studies. Students will read about and discuss major developments in the Low-Lands.

SM 330. Advanced Topics in Dutch Studies. (M)

Topics vary.

SM 458. Selected Topics in Dutch Literature. (M) Naborn.

Topics vary according to the needs and interests of students. The focus will be on specific literary and cultural issues of the Flemish and Dutch tradition. Advanced

knowledge of Dutch is required to read original texts.

SM 463. (ARTH463, HIST406, RELS416) Society, Art & Devotion. (M)

This course will deal with the history of the Low Countries during the "Golden Age" of Burgundian rule. The immensely rich resources in art, religion, and history will be treated from the points of three disciplines: history, art history, and religious studies.

473. (ARTH473, HIST407, RELS415) Dutch Art, Religion and History - Baroque Painting in Northern Europe. (M) Silver / Peters.

Emphasis on the "Golden Age" of painting traditions of Holland and Flanders the outset of the Dutch Revolt in the 1560s to the French invasions around 1670. Principal artist include: Pieter and Jan Brueghel, Rubens, Van Dyck, Goltzuis, Hals, Rembrandt, Ruisdael, Vermeer, and Steen. Attention to the rise of pictorial genres: landscape, still life, tavern scenes, portraiture, well as relationship of art to the rise of Absolutist rulers, religious conflicts, and the Thirty Years War.

501. (DTCH101) Elementary Dutch I. (A) Naborn.

A first semester Dutch language course covering the core Dutch grammar and vocabulary with the goal of providing the corner stone for developing overall linguistic proficiency in Dutch.

502. (DTCH102) Elementary Dutch II. (B) Naborn.

Continuation of DTCH 501.

503. (DTCH103) Intermediate Dutch I. (A) Naborn. Prerequisite(s): Dutch 502 or equivalent.

A third semester Dutch language course. The emphasis lies on vocabulary expansion through the use of audio-taped materials and readings. Grammar is expanded beyond the basics and focuses on compound sentences, features of text coherence and idiomatic language usage.

504. (DTCH104) Intermediate Dutch II. (B) Naborn.

505. (DTCH105) Advanced Dutch I - Cultural History of the Netherlands & Flanders. (M) Naborn. Prerequisite(s): DTCH 504 or equivalent.

This course combines a Dutch language course with a content-based course on Dutch history and literature. Units on

UNIVERSITY COURSE REGISTER

linguistic aspects of the language are added as review and refinement. The course also serves as an introduction to writing papers in Dutch.

506. (DTCH106) Advanced Dutch II. (M) Naborn. Prerequisite(s): Dutch 505 or equivalent.

Continuation of Dutch 505. The emphasis lies on literary and other writings from the 20th Century.

507. Dutch for Reading Knowledge. (M) Naborn. No knowledge of Dutch required.

This course is designed for undergraduates, graduate students and faculty who want to be able to read Dutch. Of particular interest to historians and art historians, people interested in international business and law, religious studies, social policy, and literature. Emphasis on reading skills; structures of grammar and pronunciation are taught as needed. Text selection will be tailored to individual student needs. No knowledge of Dutch required.

SCANDINAVIAN (SCND)

101. (SCND501) Elementary Swedish I. (I) Williams.

Basic language course stressing grammatical structures and vocabulary, pronunciation, simple conversation and reading of elementary texts. Credit for this course will only be given upon successful completion of SCND 102.

102. (SCND502) Elementary Swedish II. (J) Williams. Prerequisite(s): SCND 101 or equivalent.

Continuation of SCND 101. This is a two-semester course designed to teach beginning skills in Swedish reading comprehension, vocabulary acquisition, listening comprehension, writing, and conversation. Swedish social development will also be examined in relation to its cultural milieu. A trip to Gloria Dei Old Swedes Church in Philadelphia for their Luciafest will be included on a December weekend, a visit to a Swedish film during the Philadelphia Film festival will take place in late April, and other events as announced.

103. (SCND503) Intermediate Swedish I. (H) Williams.

104. (SCND504) Intermediate Swedish II. (K) Williams.

105. (SCND505) Advanced Swedish I. (M) Staff.

106. (SCND506) Advanced Swedish II. (M) Staff.

501. (SCND101) Elementary Swedish I. (I) Williams.

502. (SCND102) Elementary Swedish II. (J) Williams.

Continuation of SCND 501.

503. (SCND103) Intermediate Swedish I. (H) Williams.

504. (SCND104) Intermediate Swedish II. (K) Williams.

505. (SCND105) Advanced Swedish I. (A) Staff.

506. (SCND106) Advanced Swedish II. (B) Staff.

YIDDISH (YDSH)

101. (JWST031, YDSH501) Beginning Yiddish I. (A) Staff.

The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazie Jewry in studying the language.

102. (JWST032, YDSH502) Beginning Yiddish II. (B) Staff. Prerequisite(s): YDSH 101 or permission of the instructor.

In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.

103. (JWST033, YDSH503) Intermediate Yiddish I. (M) Staff. Prerequisite(s): YDSH 102 or permission of the instructor.

The course will continue the first year's survey of Yiddish grammar with an additional emphasis on reading Yiddish texts. The course will also develop conversational skills in Yiddish.

104. (JWST034, YDSH504) Intermediate Yiddish II. (M) Staff. Prerequisite(s): YDSH 103 or permission of the instructor.

Continuation of GRMN 403. Emphasis on reading texts and conversation.

108. (JWST438, YDSH508) Readings in Modern Yiddish Literature. (M) Hellerstein. Prerequisite(s): Reading knowledge of Yiddish.

This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer, Moyshe-Leyb Halpern, and Kadya Molodowsky.

501. (JWST031, YDSH101) Beginning Yiddish I. (A) Staff.

The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazie Jewry in studying the language.

502. (JWST032, YDSH102) Beginning Yiddish II. (B) Staff. Prerequisite(s): YDSH 101 or permission of the instructor.

503. (JWST033, YDSH103) Intermediate Yiddish I. (M) Staff. Prerequisite(s): YDSH 102 or permission of the instructor.

The course will continue the first year's survey of Yiddish grammar with an additional emphasis on reading Yiddish texts. The course will also develop conversational skills in Yiddish.

504. (JWST034, YDSH104) Intermediate Yiddish II. (M) Staff. Prerequisite(s): YDSH 103 or permission of the instructor.

Continuation of GRMN 403. Emphasis on reading texts and conversation.

508. (JWST438, YDSH108) Readings in Modern Yiddish Literature. (M) Hellerstein. Prerequisite(s): Reading knowledge of Yiddish.

This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer, Moyshe-Leyb Halpern, and Kadya Molodowsky.

GOVERNMENT ADMINISTRATION (AS) {GAFL}

SM 699. POLITICS & THE CLASSROOM.

Undergraduate Courses

SM 139. (PSCI139) Poverty and Development in the United States. (B)

Humanities & Social Science Sector. Class of 2010 & beyond. Summers. This academically based community service seminar will explore the ideas and theories, alliances and opposition that have shaped policy and organizing efforts addressed to the problems associated with urban poverty in the United States. Students will evaluate contemporary policy debates and programs in the light of selected historical case studies and their own experience working with community groups, institutions and federal groups in West Philadelphia. A focus on the role of leadership in politics, theory, institutions and organizing efforts will include several guest speakers.

SM 240. (PSCI240) Religion and U.S. Public Policy. (D)

DiIulio. Religion matters politically in America, and always has. Religious ideas---and ideas about religion---punctuate both early debates about the U.S. Constitution and present-day debates about civil rights and civil liberties. Religion influences opinion, voting, and lawmaking. Religious congregations, service agencies, and charities, many with public funding, predominate in the nation's vast and growing nonprofit sector. Religious leaders influence U.S. public policy and programs, both domestic and international. This seminar explores the historical, intellectual, constitutional, electoral, and institutional dimensions of religious leadership and U.S. public policy.

490. (PSCI138) Policymaking in the US. (A)

Martinez. This course is an opportunity for students to combine the major theoretical perspectives on the policy process with a comprehensive understanding of the actors that influence policymaking and politics. In the first half of the semester, the major theories of public policy making will be explored. In the second half of the semester, the actors in the policy making process will be identified and placed in the context of the policy making models

identified earlier in the course. Students will compare and contrast existing theoretical models and through writing assignments will apply the theory to current policy events. The course is designed to complement an internship in the public policy arena, providing context and background that will enrich the internship experience.

Core Courses

589. Policy Development. (B)

Kettl/Pearson. This course examines the policy development process including: the interaction of branches of government; policy analysis; information; constituencies; and management of a policy development office. The objective of this course is to provide an understanding of the development of government policy, both at the macro level and from the viewpoint of persons who are in supporting roles to the major actors in the process. The formula employed to achieve this objective consists of a combination of readings, lectures, discussions, and activities that are designed to blend conceptual and practical skills.

621. Economic Analysis in the Public Sector. (D)

Madden/Perrins. This course provides students with the knowledge required to understand government operations in relation to the market economy. In theory of supply and demand, students explore the pricing mechanism, price elasticity, and the effects of price controls on markets. Efficiency is examined in connection with competition and again in connection with equity, and market failure is considered as a reason for government intervention. Cost-benefit analysis is examined in the context of selecting among public investment alternatives. The course also assists students in addressing issues connected with local public goods and economic development.

631. Politics, Policy, and Public Service. (D)

Mulhern. This course is designed to orient students to the constraints that characterize leadership and management in the public service. The course traces the origins of these constraints, illustrates their durability, and suggests ways in which public agents may deal with them more effectively. Key historical documents and recent classics are examined for their bearing on contemporary views on topics such as public goods, the role of science in governing, individualism and the theory of

rights, factions and interest groups. The main areas of inquiry are the environment of public service, policy analysis, politics, and political realism.

L/L 703. Statistics for Public Leadership. (D)

Pearson/Perrins. This course will present students with the tools to use statistical information to analyze and measure the performance of public programs.

722. Budgeting and Financial Management for Public and Nonprofit Entities. (D)

Sedehi. In this course, students will gain an enhanced appreciation of the ways in which well conceived planning, competently executed budget construction, budget monitoring, and financial management can improve the effectiveness of public and non-profit entities. Through a combination of practical analyses, research paper, and the construction of a complete budget for a mid-size city, the students will become facile with general budgeting concepts and approaches, revenue projections, expenditure analysis and planning, capital expenditures, and establishing budgetary and financial controls. By including multiple oral presentations, written research report, extensive teamwork, and formal defense of budget submissions, the course is designed to enhance analytical review and comfort with budgetary information along with developing critical financial leadership skills.

732. (PSCI503) Public Management. (D)

DeSeve/Mulhern. In this course, students focus on bureaucracy and related institutional features of government. Differences in organizational culture are examined along with their implications for public managers. Students establish an understanding of leadership issues including incentives, performance, accountability, and program management. Four areas of inquiry are pursued: bureaucracy, centralization and decentralization, performance, and privatization.

735. Performance Management. (D)

Botwinik/Golda. How can leaders manage performance and make decisions that lead to desired outcomes such as less crime, better education, or lower unit costs? This course examines the various ways that public sector organizations can use data to plan strategically, manage risk, and monitor performance. Students will learn about the theory behind performance measurement and risk management, as well as the

benefits, challenges, and limitations of performance management.

783. Public Financial Management. (D) Mullin.

This course prepares students to manage cash and debt in the public sector through a study of theory and operations. Where public finance differs from corporate finance, the difference is highlighted. Students examine current financial management techniques from a strategic perspective and learn to identify the impacts on economic development of tax policies as well as of capital projects which may draw on both public and private sources of funds. The course focuses on five main areas of inquiry: public finance theory and practice; government finance functions; public pensions, enterprises and revenue analysis; municipal bonds; and special project financing.

Representative Electives**SM 502. Public Speaking.** Benedict.

Successful leaders must be able to convey their integrity and their ideas, their vision and their values clearly and convincingly in public settings. By analyzing great political speeches and affording students the opportunity to prepare and deliver different types of speeches, this course teaches the fundamentals of persuasive public speaking while encouraging students to develop their own voice. This is a performance course. Students will gain skill and confidence in their speech writing and public speaking skills through practice, peer feedback, and extensive professional coaching. Class lectures and discussions will focus on persuasive strategies and techniques for handling community meetings, Q and A sessions, and interactions with the media.

SM 510. (CLST310) Ancient and Modern Constitutionmaking. (B) Mulhern.

This course looks to the constitutionmaking tradition as it developed from classical antiquity forward in an attempt to understand the causes of relative success. Students read representative Greek and Latin texts in translation and trace the influence of this tradition into modern times, ending with contemporary constitutionmaking efforts in Europe, Central Asia, and the Middle East.

515. Public Finance Investment Banking. (B) Genyk.

This course examines the field of public finance in theory and in practice. The

purpose of the course is to provide a detailed understanding of the many facets of and applications of finance in the public sector with a focus on public finance investment banking. The course will provide students with a broad-based and technical overview of public finance and municipal bonds as well as a thorough understanding of the business of public finance.

520. Nonprofits and Social Entrepreneurism. (A) Guard.

This course, taught by the Philadelphia Award winner (2005), introduces students to the many layers of entrepreneurship involved in successfully running a nonprofit that aims to tackle new missions. Students will learn key lessons for starting or restructuring an organization, for funding the organization, and for impacting social, economic, and other ills in new and novel ways. They will also learn how to avoid common mistakes made by leaders of young, threatened, or restructuring organizations.

521. Fundraising for Nonprofits. (B) Pearson.

This course provides students with concepts and tools that can help nonprofit organizations better achieve their organizational objectives by securing the resources necessary to do so. Students will, for example, learn how to assess an organization's fundraising capabilities, conduct an annual fund drive, solicit grants from corporations and foundations, conduct prospect research, cultivate and secure major gifts, design planned giving instruments to meet the needs of donors, carry out a capital campaign, and set up information technologies to track fundraising efforts and assist you in the stewardship of gifts. The course is also designed as a study guide for taking (and passing) the examination required to become a Certified Fundraising Executive (CFRE) by the Association of Fundraising Professionals (AFP).

528. Marketing for Nonprofit and Government Organizations. (A) Pearson.

This course provides students with the concepts and tools to help nonprofit and government organizations market their programs and services. The course emphasizes applications, and students will complete a marketing plan during the course for a nonprofit organization or government agency of their choice. Students will learn how to conduct competitive analyses, benchmarking, market segmentation and client needs;

explore opportunities for social research on client needs; explore opportunities for social entrepreneurship and product development; and design effective Web and direct marketing tactics as part of an overall promotion and packaging strategy.

530. Leadership and Politics. (B) Conti.

This course is a review of Pennsylvania politics and state government, predominantly through governors and political leaders, from the turn of the century to the present. This course will take a look at Pennsylvania history to understand how the state developed with such political diversity. Pennsylvania state government, with its numerous levels and strong local control will be studied and policy issues of yesterday and today will be reviewed.

Current and former public officials will visit some classes as guest lecturers. Government relations experts from government and the private sector will also provide valuable insight into the Pennsylvania state government process.

532. Big City Politics: How to Pass Municipal Legislation. (A) Kenney and Hawkins.

This class explores how city administrators and legislatures have addressed the critical issues facing urban America today, including fighting urban blight and transforming neighborhoods, public school funding, public financing of sports stadiums, reducing the tax burden, public health issues like smoking bans, legislative redistricting, crime and safety issues, campaign finance reform, economic development issues like tax increment financing, race relations, welfare reform, public transportation, and how to reverse job and population losses. The goal is to place in context the various ways that elected officials approach complex issues, towards a more realistic understanding of how to influence a proposal as it works its way through the process towards implementation.

560. Women Leaders and Emerging Democracies. (C) Margolies.

In this course you will explore ways to provide women with practical, 'real world' skills--political and community organizing, communications, fundraising, advocacy and media experience--that will enable them to achieve meaningful political, economic, and civic participation in the life of their countries. Students may also be involved with an international trip with Women's Campaign International. The course is designed to give the theoretical

background and tools to put together an insightful international training to politically empower women.

561. Dealing with the Media. (C) Margolies.

This course explores the role of media in politics and discusses strategies for using media resources for greatest effect. The design of the course allows for a flexible workshop format and includes guest lectures by media personalities and politicians as well as a trip to meet with media professionals in Washington. The course also provides regular opportunities for students to implement what they have learned through in-class media trainings, mock editorial board interviews, governing strategy scenarios, campaign strategy scenarios, and political advertisement assessments.

569. (URBS451) The Politics of Housing and Urban Development. (A) Kromer.

This course offers an exploration of how legislative action, government policymaking and citizen advocacy influence plans for the investment of public capital in distressed urban downtowns and neighborhoods. A special emphasis this year will be the Obama Administration's response to the foreclosure crisis and the implementation of neighborhood reinvestment strategies by state and local governments.

SM 626. Developing, Managing, and Leading Talent for Nonprofit and Government Organizations. (M) Nunery.

This course will take a holistic approach in exploring the critical issues that impact how your organization recruits, hires, develops, and assesses its pool of talent. Students will examine a range of economic, legal, social, technological, and political factors that affect the management of today's workforce, with attention paid to the particular challenges facing public and nonprofit sector leaders. There will be special focus on organizing volunteers, working with unions, providing effective professional development opportunities, and other human resource strategies that drive better results.

652. Auditing Government Performance. (A) Maurer.

Topics covered include auditing principles, performance audits, and financial audits. Guest lecturers from the PA Department of the Auditor General visited the fall 2007 class.

713. The Practice of Economic Development. (A) Thornburgh.

This course analyzes and challenges strategies for encouraging economic growth nationally and in states and metropolitan areas, with the goal of helping students become effective practitioners of the art. After reviewing key concepts and context, the course will ask students to evaluate and make choices about economic strategies and investments in a political context.

715. Local Elective Politics. (B) Kenney and Hawkins.

This course explores how people get elected to public offices in city government. Success in getting elected may depend as much upon political institutions, processes, and people as upon the issues, interests and values that appear to be at stake. This course studies both, with special attention to a set of congressional and local government contests in the Philadelphia area. We will focus on the tools needed to run for a big city office in the 21st century, and feature guest appearances from media consultants, press secretaries, pollsters, and other political professionals to help you learn how to use these campaign tools properly.

716. Campaign Management: How to Run and Win. (A) Smith.

This is a practical course designed to impart the elements of a successful political campaign for public office to the student. Study will focus on the local campaign and how it is planned, organized, executed and funded. Local practitioners will augment course sessions to provide interaction between the student and those who have successfully run campaigns, raised funds, and been elected.

725. Development Projects in Cities. (B) Hartling.

This is a skill-based course, teaching students how to conduct market studies and to determine operational, physical, and financial feasibility of urban and economic development proposals. It gives specific attention to feasibility studies for retail, hotel, industrial, and office development projects.

727. Managing Public Funds. (A) olanipekun-Lewis.

This course will focus on the theory and practice of managing public sector investment assets. The course will examine cash management, pension fund management, project and construction fund investment vehicles, longer-term asset management and other aspects of treasury management.

729. Financial Management of Nonprofit Institutions. (B) Bencivenga.

The course is designed to provide the student with an understanding of the primary financial management issues and decisions that confront senior management in nonprofits and government. Students will examine financial analysis techniques from both a practical and strategic perspective as they examine operating and capital decisions. The objective of the course is to allow the student to understand how managers integrate the various discrete financial decisions within a broader framework that allows them to analyze, develop and execute a coherent overall financial strategy.

748. Foundations and Grant Management. (L) Burd.

This course will provide students with the role of the foundation in philanthropy, what it does, how it does it, and what you need to know to be both an effective foundation manager and foundation grant seeker. From the foundation side, the course will include strategic planning, assessment of project results, and the responsibilities of the foundation grant program officer. From the grant seeker side, it will include identifying the appropriate foundations, making the connection to the foundation, grant writing, and relationship management.

749. Leading Nonprofit Organizations. (D) McKenna.

This course will provide an analysis of the nonprofit sector in relation to public and for-profit organizations focusing on building the six core organizational competencies that are essential to a successful nonprofit.

761. Government Relations (Lobbying). (A) Weinberg and Nixon.

In a system of representative government, organizations and individuals with interests at stake often seek the support of a government relations professional. This course addresses government relations from the varying perspectives of the current or aspiring professional, the client, and the government official. It is designed to provide the students with an introduction to government affairs and lobbying at the local, state and federal levels of government and to illustrate how lobbying and the lobbyists shape and affect public policy. The course is not designed as a how to in lobbying, but rather it is designed to expose students to lobbying and more importantly, the lobbying process. To that end, students will draw on many disciplines such as psychology, law, history, political

UNIVERSITY COURSE REGISTER

science, urban affairs, economics, foreign policy, domestic policy and others, to understand the complex mosaic of the lobbying and legislative process.

792. Contracting for Public Services. (B) Nadol and Neiderman.

This course examines how different strategies of ownership affect the performance of programs. This course explores the different forms of

privatization, including asset sales, deregulation, and public sector contracting; ownership and managerial behavior; state-owned enterprises and mixed-ownership enterprises; US and overseas experience; and techniques and politics of privatization.

**GRADUATE ARTS &
SCIENCES
(AS) {GAS}**

600. English Language Skills. (A)

Theodoropoulos.

For prospective International Teaching Assistants seeking English fluency certification, this course emphasizes the

development of oral academic discourse skills and practices prominent features of spoken English that promote successful communication in academic settings, including intelligibility, active listening skills, grammar.

HEALTH AND SOCIETIES (AS) {HSOC}

L/R 001. (STSC001) Emergence of Modern Science. (A) May be counted toward the Hum/SocSci or NatSci/Math Sectors. Class of 2010. Adams.

During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they related to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a "Western Civ" course with a difference, open to students at all levels.

L/R 002. (HIST036, STSC002) Medicine in History. (A) History & Tradition Sector. All classes. Barnes.

This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole--recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down" or "from the bottom up," this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage

students to adopt the perspectives of a range of actors in various historical eras.

003. (STSC003) Technology and Society. (B) Society Sector. All classes. Cowan/Ensmenger.

"We shape our technologies; thereafter they shape us." This course surveys the ways in which technology has shaped our societies and our relations with the natural world. We will examine the origins and impact of technical developments throughout human history and across the globe--from stone tools, agriculture and cave painting to ancient cities, metallurgy and aqueducts; from windmills, cathedrals, steam engines and electricity to atom bombs, the internet and genetic engineering. We will pay attention to the aesthetic, religious and mythical dimensions of technological change and consider the circumstances in which innovations emerge and their effects on social order, on the environment and on the ways humans understand themselves

L/R 010. Health and Societies. (B) Humanities & Social Science Sector. Class of 2010 & beyond. Barnes. Also fulfills General Requirement in Science Studies for Class of 2009 and prior.

This course is an introduction to the vocabulary, skills, and concepts basic to sociocultural studies of health and disease. While recognizing the importance of the biomedical model, particularly to Western civilization, the course asks students to explore other approaches and healing traditions. It does so by exploring how policy analysts, medical care providers, and scholars from a variety of disciplines including anthropology, history and sociology have crafted responses to such real world problems as malnutrition, epidemic disease, and the inequitable distribution of health resources.

SM 018. Medicine in Africa. (M) Feirman.

The story of health, healing and disease on the African continent in its historical context. What is the relationship between the growth of cities and the spread of AIDS, or between globalization and malnutrition? Is biomedicine practiced on the African continent the same way it is in the U.S., or are there important differences? What are the major African healing traditions, and how do they work? What are the forces, in our world today, that lead to malnutrition and disease in Africa, or to health and well-being?

SM 022. (STSC022) Race, Genetics and Social Policy. (M) Staff.

What box do you check if a form asks you to identify your race? Do you fall between boxes? Do you check two or three? Do you refuse to answer the question even if you can check one box? "What is your race?" is a loaded question in American society, because racial identities have social, political and economic ramifications. This course is designed to examine the meanings of race, in particular the ones that have been thought to have a scientific or biological foundation. We will examine the origins of these questions of race from the end of the 19th century to the present, and the way that the genetic science of race has shaped social policy and has changed over time. Most of our focus will be on the United States, but we will also set these questions in a transnational perspective.

SM 025. (HIST025, RELS116, STSC028) Western Science, Magic and Religion 1600 to the present. (C) History & Tradition Sector. All classes. Kuklick.

Throughout human history, the relationships of science and religion, as well as of science and magic, have been complex and often surprising. This course will cover topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.

SM 039. The Healer's Tale: Negotiating Trust in Modern America. (M) Tighe.

Dramatic, deadly, and terrifying in their brutal immediacy, outbreaks of epidemic disease have devastated and transformed human societies since the beginnings of recorded history. From the Black Death to cholera to AIDS, epidemics have wrought profound demographic, social, political and cultural change all over the world. Such is the power of their mystery and horror that while thousands die everyday in the United States from mundane illnesses such as heart disease or lung cancer, panic grips the land at the thought of a handful of deaths from seemingly exotic afflictions such as West Nile encephalitis and "weaponized" anthrax. Through a detailed analysis of specific historical outbreaks, this seminar will investigate the causes and effects of epidemic disease, and will examine the ways in which different societies in different eras have responded in times of crisis.

SM 048. Epidemics in History. (M) Barnes.

Dramatic, deadly, and terrifying in their brutal immediacy, outbreaks of epidemic disease have devastated and transformed human societies since the beginnings of recorded history. From the Black Death to cholera to AIDS, epidemics have wrought profound demographic, social, political and cultural change all over the world. Such is the power of their mystery and horror that while thousands die everyday in the United States from mundane illnesses such as heart disease or lung cancer, panic grips the land at the thought of a handful of deaths from seemingly exotic afflictions such as West Nile encephalitis and "weaponized" anthrax. Through a detailed analysis of specific historical outbreaks, this seminar will investigate the causes and effects of epidemic disease, and will examine the ways in which different societies in different eras have responded in times of crisis.

SM 049. (ANTH049) Aids and Power. (M) Staff.

Epidemics demonstrate the connections between people and places in dramatic and often tragic ways, with routes of contagion and intervention often throwing social, economic and political inequalities into sharp relief. In the last three decades AIDS has gone from an unknown and localized illness in central Africa to a mysterious "gay cancer" among young men in California and New York, to a worldwide pandemic that is transforming global health funding, pharmaceutical regulation, national demographic, international science, and social movements. This course examines how power disparities have shaped disease risk, prevention, and access to treatment, and how people and communities have become empowered via HIV/AIDS, giving rise to a new identities and social movements.

SM 050. Mad, Bad and Sad: The Construction, Prevention and Treatment of Mental Illness. (M) Mandell.

This freshmen seminar is designed to introduce students to research and debatersurrounding the concept of mental disorder and to help them to think critically about these disorders' biological and social construction. In addition to learning about the presentation and treatment of mental illness, they weill also be introduced to concepts in epidemiology, psychology, psychiatry and health services research, and learn about the history of the science surrounding psychiatry and how different

beliefs at different times have influenced policy, systems, services and treatment.

SM 051. (STSC051) Ethics, Technology & the Life Sciences. (M) Moreno.

In this seminar we will explore the roles and functions of the bioethicist, a new profession that has only emerged in the past quarter century or so, and thenew field of bioethics. Bioethicists work in hospitals on clinical ethics, in medical schools and research facilities on experimentation ethics, in public policy and, more recently, in the political arena. We will also explore bioethical theories and specific issues and cases like stem cell research and the Schiavo controversy, and discuss the history of bioethics. And we will pay close attention to bioethical issues in the media during the semester.

SM 052. Autism Epidemic. (M) Mandell.

The CDC estimates that 1 in 150 children have autism. Three decades ago, this number was 1 in 5,000. The communities in which these children are identified in ever increasing numbers are ill prepared to meet their needs. Scientists have struggled to understand the causes of this disorder, its treatment, and why it appears to be rapidly increasing. Families, policy makers, schools and the healthcare system have argued bitterly in the press and in the courts about the best way to cre for these children and the best ways to pay for this care. In this class, we will use autism as a case study to understand how psychiatric and developmental disorders of childhood come to be defined over time, their biological and environmental causes identified, and treatments developed. We will also discuss the identification and care of these children in the broader context of the American education and healthcare systems.

SM 058. What is Cancer? Disease, Society, History. (M) Aronowitz.

What is cancer? Wht causes cancer? What do its high prevalence and devastating effects tell us about ourselves and our society? What can we do about it? Laboratory researchers, epidemiologists, public health officials, medical specialists, environmental activists, and cancer patients have offered different and incomplete answers to such questions. Students will learn about these difference perspectives by analyzing historical documents and scholarship from different disciplines and professions, meeting with health professionals and others, and doing writing and research assignments.

SM 059. Medical Missionaries and Partners. (M) Bream.

Global health is an increasingly popular goal for many modern leaders. Yet critics see evidence of a new imperialism in various aid programs. We ill examine the evolution over time and place of programs designed to improve the health of underserved populations. Traditionally catergorized as public health programs or efforts to achieve a just society, these programs often produce results that are inconsistent with these goals. We will examine the benefits and risks of past programs and conceptualize future partnerships on both a local and global stage. Students should expect to question broadly held beliefs about the common good and service. Ultimately we will examine the concept of partnership and the notion of community health, in which ownership, control, and goals are shared between outside expert and inside community member.

L/R 100. (SOC100) Introduction to Sociological Research. (C) Staff.

This course surveys the different sociological methods, including: survey, content analysis, historical-comparative, participant observation and ethnographic perspectives. It reviews research design, experimental design, evaluation methods, research ethics and the uses of research. Students explore these methods and perspectives in class assignments and exercises. A brief introduction to SPSS (statistical package for the social sciences) is also provided.

L/R 101. (PHIL072, PPE 072) Biomedical Ethics. (M) Society Sector. All classes. Lindee.

A survey of moral problems in medicine and biomedical research. Problems discussed include: genetic manipulation, informed consent, infanticide, abortion, euthanasia, and the allocation of medical resources. Moral theory is presented with the aim of enabling students to think critically and analytically about moral issues. The need for setting biomedical issues in broader humanistic perspective is stressed.

SM 109. (GSOC108) Topics in Health in South Asia. (M) Staff.

Drawing upon theoretical and empirical evidence, the course uses a socio-medical approach for understanding the health status and health behaviors of women in South Asia. Gender is a crucial explanatory variable of women's survival experience; burden of disease; nutritional status; and access to and utilization of

health services. Girls and women face health and disease problems over their life course related to nutrition needs, reproductive health, work conditions, as well as to infectious disease. This course places the experience of women's health in South Asia in contemporary, historic, and comparative frameworks. Lectures, discussion, and assignments provide entry to greater understanding of both the specialized nature of South Asian women's health problems, as well as those common to women worldwide.

L/R 110. (ENGL075, HIST117, STSC110) Science and Literature. (B) Arts & Letters Sector. All Classes. Adams.

This course will explore the emergence of modern science fiction as a genre, the ways it has reflected our evolving conceptions of ourselves and the universe, and its role as the mythology of modern technological civilization. We will discuss such characteristic themes as utopias, the exploration of space and time, biological engineering, superman, robots, aliens, and other worlds--and the differences between European and American treatment of these themes.

111. (SOCl111) Health of Populations. (C) Preston.

This course develops some of the major measures used to assess the health of populations and uses those measures to consider the major factors that determine levels of health in large aggregates. These factors include disease environment, medical technology, public health initiatives, and personal behaviors. The approach is comparative and historical and includes attention to differences in health levels among major social groups.

118. (SOCl118) Sociology of Bioethics. (M) Staff.

The Sociology of Bioethics explores the sociological approach to bioethics. The Sociology of Bioethics is not a course in bioethics itself; rather than discussing the merits of a position (Is assisted suicide ethical?), we will ask how the debate has been framed, who is promoting which arguments, why the debate has arisen now, and how the issue is reflected in policy. In order to do so we will make use of social science research, along with philosophical treatises, legislation, and the popular media. The course is also not designed as a comprehensive treatment of the field; it will focus instead on choice topics that we will explore in depth. Our goal is to understand the nature of the bioethics profession and its modes of argumentation, and to explore the cultural, social, political, and

professional underpinnings of bioethical debates.

L/R 123. (STSC123) Darwin's Legacy. (B) Lindee.

Darwin's conceptions of evolution have become a central organizing principle of modern biology. This lecture course will explore the origins and emergence of his ideas, the scientific work they provoked, and their subsequent re-emergence into modern evolutionary theory. In order to understand the living world, students will have the opportunity to read and engage with various classic primary sources by Darwin, Mendel, and others. The course will conclude with guest lectures on evolutionary biology today, emphasizing current issues, new methods, and recent discoveries. In short, this is a lecture course on the emergence of modern evolutionary biology--its central ideas, their historical development and their implications for the human future.

SM 135. (PSCI135) The Politics of Food. (M) Summers.

This academically based community service seminar will explore the many different politics that shape food production and consumption and problems like food insecurity and obesity here in West Philadelphia and around the world. Students will be encouraged to think broadly about how people engage in politics --articulate goals, form alliances, struggle for power, respond to and engage in leadership- in many different areas: cities, farms, factories, kitchens, markets, schools, churches, research institutions, social movements, elections, legislatures. A focus on case studies of leaders who have made a difference in the politics of food will include guest speakers, who work on food related issues.

L/R 140. History of Bioethics. (C) Linker.

This course is an introduction to the historical development of medical ethics and to the birth of bioethics in the twentieth-century United States. We will examine how and why medical ethical issues arose in American society at this time. Themes will include human experimentation, organ donation, the rise of medical technology and euthanasia. Finally, this course will examine the contention that the current discipline of bioethics is a purely American phenomenon that has been exported to Great Britain, Canada and Continental Europe.

L/R 145. (HIST146, STSC145) Comparative Medicine. (A) History & Tradition Sector. All classes. Feierman.

This course focuses on health and healing in the colonial and post-colonial world. We give special attention to local healing under condition of domination, to definitions of the body and the person in biomedicine and in non-European healing traditions, and to the political and cultural place of medicine in regions which have experienced colonial rule.

L/R 150. (SOCl152) American Health Policy. (C) Linker.

This lecture course will introduce students to a broad range of topics that fall under the heading of American health policy. Its main emphasis will be on the history of health care in America from the U.S. Civil War to the present day. Some of the themes addressed include: American public health movements and hospitals, private health insurance (such as Blue Cross/Blue Shield), industrial health and workmen's compensation, the welfare state (in Europe and the U.S.), women's health, especially maternal and infant care programs, Medicare/Medicaid, the Clinton Health Plan, injured soldiers and the Veterans Administration.

152. (STSC162) Technology and Medicine in Modern America. (L) Staff.

Medicine as it exists in contemporary America is profoundly technological; we regard it as perfectly normal to be examined with instruments, to expose our bodies to many different machines; and to have knowledge produced by those machines mechanically/electronically processed, interpreted and stored. We are billed technologically, prompted to attend appointments technologically, and often buy technologies to protect, diagnose, or improve our health: consider, for example, HEPA-filtering vacuum cleaners; air-purifiers; fat-reducing grills; bathroom scales; blood pressure cuffs; pregnancy testing kits; blood-sugar monitoring tests; and thermometers. Yet even at the beginning to the twentieth century, medical technologies were scarce and infrequently used by physicians and medical consumers alike. Over the course of this semester, we will examine how technology came to medicine's center-stage, and what impact this change has had on medical practice, medical institutions and medical consumers - on all of us!

L/R 154. (ANTH154) The Medical Anthropology of Alcohol Use. (M) Chrzan.

The morality, rights, and responsibilities of alcohol use are hotly debated in the United States. The rhetoric of appropriate use ranges from Puritan-inspired abstinence campaigns, through health-promoting moderation arguments, to discourses legitimizing hedonism. The result of a lack of clear cultural paradigms for intoxicant use is clearly seen on college campuses, where movements for zero-tolerance alcohol bans coexist with social rituals that include binge drinking. This course will utilize medical anthropology theory to: 1) contextualize the phenomenon historically and cross-culturally; 2) encourage students to critically analyze existing paradigms which determine acceptable usage and treatment modalities; 3) use the University of Pennsylvania campus as a local case study/field site to investigate alcohol use. Students will move from theory to action through creation of a feasible proposal addressing alcohol-use education on Penn's campus, or will participate in the modification and implementation of existing proposals to promote rational and low-risk use of alcohol in the college community.

SM 170. (CLST170) Ancient Greek Medicine. (M) Rosen.

The history of modern medicine as we know it in the West is remarkably recent; until the nineteenth century prevailing theories of the body and mind, and the many therapeutic methods to combat disease, were largely informed by an elaborate system developed centuries earlier in ancient Greece, at a period when the lines between philosophy, medicine, and what we might consider magic, were much less clearly defined than they are today. This course will examine the ways in which the Greeks conceptualized the body, disease, and healing, and will compare these to medical culture of our own time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and whenever possible we will juxtapose these writings with modern discourse about similar topics. Several visitors from the Medical School are expected to participate on a regular basis. All readings will be in English and no previous background in Classical Studies is required.

SM 179. (ENVS179, HIST320, STSC179) Environmental History. (B) Greene.

Environmental history studies the interactions between humans and the

natural world. In this kind of study, mosquitoes and rain are actors in history as well as humans and their impact. This course explores these interactions through case studies and topics nationally and globally, such as energy, disease, human migration and settlement, animals, technological changes, urban and suburban development, conservation and politics. This course is geared toward students who want to think about how history happens, in different places and over time.

202. (STSC202) The Scientific Revolution. (M) Staff.

The emergence of science in the sixteenth to eighteenth centuries as an activity that remade ideas of nature and society, that created new professions and institutions, and that ultimately transformed human consciousness. Classical approaches to science, challenges and new departures, the mutation of research inside and outside universities, new patterns in the dissemination of science and in public response.

206. (STSC247) Health and Disease in the Developing World. (M) Staff.

This course will explore the current context of health policy, health reform, and health service delivery in the developing world. After examining global economic and political context of health care, students will analyze the role that economic development plays in promoting or undermining health. Students will examine key disease challenges such as tuberculosis, malnutrition, and HIV/AIDS.

L/R 212. (STSC212) Science Technology & War. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Lindee.

In this survey we explore the relationships between technical knowledge and war in the nineteenth and twentieth centuries. We attend particularly to the centrality of bodily injury in the history of war. Topics include changing interpretations of the machine gun as inhumane or acceptable; the cult of the battleship; banned weaponry; submarines and masculinity; industrialized war and total war; trench warfare and mental breakdown; the atomic bomb and Cold War; chemical warfare in Viet Nam; and "television war" in the 1990s.

SM 216. (GSOC325) Women and Health. (M) Staff.

This course introduces students to anthropological and sociological perspectives on the intersection of gender and health. In the course we will examine several theoretical approaches to women

and health, such as feminist and political economic perspectives. We will explore key women's health issues such as experiences with the medical establishment, health disparities along lines of race and class, reproductive health, reproductive rights, body image and women's experiences with HIV/AIDS. These issues will be explored in the context of the United States and developing countries.

SM 226. (SAST289, STSC226) Science, Medicine and Technology in South Asia. (M) Petrie.

This course examines the history of science, technology and medicine in the Indian subcontinent from ca. 1750 to the present. The first half of the semester will focus on the period of British dominance, considering such topics as: the role of science, medicine and technology in colonial rule and anti-colonial nationalism; Western understandings of and impacts upon Indian environments; the relationship between Western and indigenous forms of knowledge. The second half of the course will examine the post-colonial period, with a particular focus on development and environmental issues and the policies of the governments of India, Pakistan and Bangladesh.

SM 230. Fundamentals of Epidemiology. (B) Kanetsky.

This course introduces students to the basic tenets of epidemiology and how to quantitatively study health at the population level. Students learn about measures used to describe populations with respect to health outcomes and the inherent limitations in these measures and their underlying sources of data. Analytic methods used to test scientific questions about health outcomes in populations then are covered, again paying particular attention to the strength and weaknesses of the various approaches.

SM 232. Social Epidemiology. (M) Cannuscio.**L/R 238. (ANTH238) Medical Anthropology. (C) Barg.**

Introduction to medical anthropology takes central concepts in anthropology -- culture, adaptation, human variation, belief, political economy, the body -- and applies them to human health and illness. Students explore key elements of healing systems including healing technologies and healer-patient relationships. Modern day applications for medical anthropology are stressed.

SM 239. (ANTH273) Globalization and Health. (M) Petryna.

In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world's poor, remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds.

SM 250. Social History of Mental Illness. (M) Tighe.

This course will explore the history of mental illness in the United States, from the eighteenth century to the present. It will focus on a set of questions: to what extent is mental illness socially constructed? How does society arrive at its concepts of and attitudes towards both emotional and behavioral disturbance as well as notions of adjustment and normality? The asylum movement of the nineteenth century, the rise of psychiatry as a medical specialty, the role of the media and lay public in shaping its identity, legal issues such as commitment and competence, as well as the development of psychopharmacology & an increasingly biologically based psychiatry in the twentieth century will be examined.

SM 251. Foundations of Public Health. (C) Sorenson.**252. Law and Medicine. (M)** Staff.

This course is intended to give students an in-depth understanding of the ways in which medical practice and medical decision-making are guided by modern American law. Students will learn how the law's regulatory powers have been used to set boundaries in medicine and, in turn, how medical practice and theory have informed modern legal developments. The field of health care law sits at a crossroads where many of life's "big questions" converge, and consequently is shaped, more than any other legal discipline, by social, ethical, cultural and economic influences. By the end of this course, students should have an understanding both of the current state of American health law, and of the social forces that have shaped its historical development.

273. (SOC1273) Law, Medicine, and Public Policy. (B) Bosk.

First the course will develop a perspective for viewing social problems drawn largely on my own work as well as that of Gusfeldt and Edelman. Next we will explore the domains to which a physician's expertise is limited using Weber, Rosenberg and others. We will then develop a perspective from anthropological and sociological literature on the courts as public arenas for articulating Durkheimian collective conscience. All of this theory building is in the first half of the seminar. The second half of the course will involve intensive case study of a few dilemmas which have wended their way through the courts. I intend to look at "Baby Doe Regulations" and the Intensive Care Nursery; the problem of the cessation of life-supporting treatment; the legitimacy of mass screening for genetic defects or substance abuse; and the propriety of surrogate motherhood.

275. (SOC1275) Medical Sociology. (C) Schnittker.

This course is designed to give the student a general introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. While we will not cover everything, we will attempt to cover as much of the field as possible through four central thematic units: (1) the organization of development of the profession of medicine, (2) the delivery of health-care, (3) social cultural factors in defining health, and (4) the social causes of illness. Throughout the course, our discussions will be designed to understand the sociological perspective and encourage the application of such a perspective to a variety of contemporary medical issues.

SM 305. (SAST285, SAST335, SAST635) Health and Society in South Asia. (M) Staff.

The countries of South Asia have traditional medical systems like Ayurveda and Unani, major public health traditions and problems, as well as the global issues of health delivery and costs for aging populations, in addition to changing threats like HIV. Health service delivery is highly uneven by income and education group as well as by gender and region, and is heavily conditioned by the cultures of the area which influence attitudes to preventive measures like nutrition and hygiene. This course provides an overview of these issues.

SM 310. (ANTH310) Anthropology and Biomedical Science. (M) Staff.

An examination of the role of anthropology in biomedical research, focusing upon health and disease as outcomes of biocultural systems. Where possible, students will engage in collection and analysis of data and the dissemination of the results.

SM 311. (STSC311) Science, Medicine & Media. (A) Wolfe.

This course is an introduction to the history and the contemporary state of science journalism. Public understanding of science, medicine and technology is critical to a society that must make informed decisions about health, the environment and economic growth, but the relationship between science and the public is complex. This course explores not only how books, newspapers, television, films, podcasts and blogs have shaped our understanding of science and scientists, but also the contexts in which these media are created.

SM 312. (STSC312) Weapons of Mass Destruction. (C) Lindee.

The course explores the historical development of traditional weapons of mass destruction such as chemical, nuclear and biological agents, in addition to newer and seemingly non-traditional weapons such as land mines and civilian aircraft that can also be employed to cause large numbers of injuries and deaths among civilian and military populations. Through case studies in technology and public health, students will evaluate the medical, scientific, environmental, and cultural ramifications of these weapons and their effect on human health and society by analyzing the rise of the military-industrial-academic-complex in twentieth century America.

SM 321. (ANTH312, URBS312) Health in Urban Communities. (A) Staff.

This course will introduce students to anthropological approaches to health and to theories of participatory action research. This combined theoretical perspective will then be put into practice using West Philadelphia community schools as a case study. Students will become involved in design and implementation of health-related projects at an urban elementary or middle school. As one of the course requirements, students will be expected to produce a detailed research proposal for future implementation.

SM 323. (ENGL275, STSC323) Writing Science. (M) Mills.

This course surveys the interdisciplinary field of Science and Literature Studies, with an emphasis on the modern life and physical sciences (19th century to the present). During the first part of the semester, we will examine literary responses to science: the "two cultures" debate; the impact of scientific and technical changes on literary practices; representations of science in fiction. In the second half of the course, we will consider science as literature: scientific rhetoric and standards of authorship; inscription or writing technologies in laboratories; scientists as authors of popular literature; the impact of futurism and speculative fiction on science. Course readings will be drawn from fiction, the life and physical sciences, literary theory, and the history of science.

SM 324. (GSOC324, NURS324) United States Child Health 1800-2000. (A) Connolly.

This course explores the impact of historical ideas, events and actors pertaining to the history of children's health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children's health care policy and the delivery of care.

SM 331. Genes, Medicine and Politics. (M) Cowan.

This course explores how human heredity has been scientifically constructed as a political resource. Topics include the rise of eugenics movements around the world, the role of genetics in scientific racism, the social meaning of genetic disease, and the development of the human genome project.

332. (NURS303, NURS503) Contemporary Issues in Human Sexuality. (B) Guidera.

Course content emphasizes theories of sexual development and factors influencing sexual behavior within the continuum of health and illness. Common sexual practices of people are studied within the context of lifestyle and situational life crises. Concepts of normal sexual function and dysfunction are examined. Contemporary sexual issues are explored.

SM 335. (PSCI335) Healthy Schools. (M) Summers.

This academically based community service research seminar will develop a pilot program to test the efficacy of using service-learning teams of undergraduates and graduate students to facilitate the

development of School Health Councils (SHCs) and the Center for Disease Control's School Health Index (SHI) school self-assessment and planning tool in two elementary schools in West Philadelphia. This process is intended to result in a realistic and meaningful school health implementation plan and an ongoing action project to put this plan into practice. Penn students will involve members of the school administration, teachers, staff, parents and community members in the SHC and SHI process with a special focus on encouraging participation from the schools' students. In this model for the use of Penn service-learning teams is successful, it will form the basis of an ongoing partnership with the School District's Office of Health, Safety & Physical Education to expand such efforts to more schools.

SM 338. (GSOC338, NURS338) "Sweet Little Old Ladies and Sandwiched Daughters": Social Images and Issues in our Aging Society. (M) Kagan. Third or fourth year undergraduate students in any major BFS, JWS, and NUHP students.

This course is an intensive and focused introduction to social gerontology as a trans-disciplinary lens through which to examine aspects of social structure, actions, and consequences in an aging society. A variety of sources are employed to introduce students from any field focused on human behavior and interaction to classical notions of social gerontology and current scholarly inquiry in gerontology. Field work in the tradition of thick description creates a mechanism to engage students in newly gerontological understandings of their life worlds and daily interactions. Weekly field work, observing aspects of age and being old in every day experiences forms, is juxtaposed against close critical readings of classical works in social gerontology and current research literature as well as viewings of film and readings of popular literature as the basis for student analysis. Student participation in the seminar demands careful scrutiny and critical synthesis of disparate intellectual, cultural, and social perspectives using readings and field work and creation of oral and written arguments that extend understandings of the issues at hand in new and substantive ways. Emphasis is placed on analysis of field work and literature through a series of media reports and a final term paper.

SM 341. (GSOC318, NURS318) Race, Gender, Class and the History of American Health Care. (A) Fairman.

For Benjamin Franklin Scholars & Nursing Honors Students.

This multidisciplinary course surveys the history of American health care through the multiple perspectives of race, gender, and class, and grounds the discussions in contemporary health issues. It emphasizes the links between the past and present, using not only primary documents but materials from disciplines such as literature, art, sociology, and feminist studies that relate both closely and tangentially to the health professions and health care issues. Discussions will surround gender, class-based, ethnic, and racial ideas about the construction of disease, health and illness; the development of health care institutions; the interplay between religion and science; the experiences of patients and providers; and the response to disasters and epidemics.

359. (ANTH359) Nutritional Anthropology. (M) Staff.

Human nutrition and nutritional status within context of anthropology, health, and disease. Particular emphasis on nutritional problems and the development of strategies to describe, analyze, and solve them. Students will participate in the Urban Nutrition Initiative, an academically based community service project in local area schools.

SM 369. (STSC369) Nanotechnology and Society. (M) Roberts.

One nanometer is about ten hydrogen atoms long. So "nanotechnology" is the art of building useful tools out of very small numbers of atoms. This class will investigate what is being done in nanotechnology, and what is being forecast for its potential. We will take a long look at the prehistory of nanotechnology, then map out what institutions and groups have a stake in the field. Throughout the course, will discuss the ways that nanotechnology is a product of society, and the ways its products in turn change society. Topics include: microelectronics and Moore's Law; futurism and science fiction; controversies and public perception; government sponsorship of nano;

SM 381. (GSOC381, STSC381) Non-Stranger Violence. (C) Sorenson.

The purpose of this course is for students to learn about the definitions, conceptual frameworks, myths, processes, consequences and societal interventions regarding violence in relationships. Using a life course perspective, addressing abuse

from childhood through late life, the course will examine how gender and generational differences in resource distribution, role expectations, etc. shape the occurrence, experience and response to violence in relationships.

SM 387. (HIST387, SAST388) Health Environments in Asia. (A) Staff.

A comparative social history seeking to explain today's nutritional deficits among third world peoples. Based on an ecosystem approach, it considers contending theories, traces the rise of the world food system, and compares detailed case studies covering the period 1800-1980.

SM 404. (ENVS404) Urban Environments: Speaking About Lead in West Philadelphia. (M) Natural Science & Mathematics Sector.

Class of 2010 and beyond. Pepino. ABCS Course. Local middle school visits required.

A study of selected aspects of urban environments, with an emphasis on West Philadelphia. Students will engage middle school children in exercises of applied environmental research.

SM 405. (ENVS405) Urban Environment II. (A) Pepino.

Prerequisite(s): HSOC 404 or permission of instructor. ABCS Course. Local middle school visits required.

A detailed analysis of urban environmental issues.

SM 407. (ENVS407) Urban Environments: Prevention of Tobacco Smoking in Adolescents. (B) Pepino.

ABCS Course. Local middle school visits required.

This course will examine the short and long term physiological effects of smoking, social influences, the effectiveness of cessation programs, tobacco advocacy and the impact of the tobacco settlement. Penn Students will work with middle school students on a campaign to prevent addiction to tobacco smoke.

SM 408. (ENVS408) Urban Environments: The Urban Asthma Epidemic. (B) Pepino.

ABCS Course. Visits to community centers required. This course will examine the epidemiology of asthma, the potential causes of asthma, the public health issues and environmental triggers. Penn students will collaborate with the Children's Hospital's clinical research study - Community Asthma Prevention Program. Students will conduct environmental triggers classes in the community.

411. (SAST386, SAST686) Contemporary Issues in South Asian Health. (C) Staff.

This course will focus on birth, aging, as well as selected chronic and infectious diseases in South Asia. For each health condition/lifestyle a framework of analysis will develop incorporating the complex set of factors that come into play. Sociocultural beliefs; status markers--gender, class, caste, occupation; availability and accessibility of public and private health services; state, national, and international plans and policies will be considered. An overview of South Asian demography, health problems and services will introduce the course.

412. (SAST387) Traditional Medicine in South Asia: Historic Origins and Contemporary Use. (G) Staff.

In South Asia, traditional medical systems (Ayurveda, Unani, and Siddha) have deep affiliation with the scientific, philosophical, religious, and cultural systems. This course will examine the historic origins and socio-cultural dimensions of these systems. Topics will include the encounter between traditional and Western medicine in the nineteenth century; twentieth century revival and professionalizing activities in the traditional systems; state and central government support for education, services, and research in traditional medicine; their role in the overall health care system; and their use by patients in urban and rural areas. The world-wide interest in complementary and alternative medicine as it relates to the Indian medical systems will be considered.

SM 413. (STSC413) Perfect Bodies. (C) Linker.**SM 420. (STSC420) Research Seminar. (B) Staff.**

This seminar in research methods is required in the spring term for all juniors planning on writing a senior thesis in HSOC or STSC.

SM 421. (HIST471) Medicine and Development. (C) Feerman.

This course is devoted to readings and research about medicine and development in resource-poor countries. The focus is on medical institutions and practices as seen within the broader context of development. We try to understand changing interpretations of how development takes place--of its relationship to technical knowledge, power and inequality. The course gives students the opportunity to do intensive original research.

SM 428. (STSC428) Genetics & Social Policy. (M) Cowan.

The focal topic for the semester will be genetics and race. Race will be interpreted broadly to include populations that might be defined by geography, religion, or language, rather than by skin color and facial features. Various social policies were once designed by people who had definitive views about the genetics of race. We will begin with some background reading about the beliefs of Social Darwinists (late 19th century), eugenicists (first half of the 20th century) and sociobiologists and human geneticists (second half of the 20th century; and will then proceed to consider how this history affects current social concerns about genetic testing, personalized and pharmacogenetics.

SM 430. (STSC430) Disease & Society. (C) Aronowitz.

What is disease? In this seminar students will ask and answer this question by analyzing historical documents, scientific reports, and historical scholarship (primarily 19th and 20th century U.S. and European). We will look at disease from multiple perspectives -- as a biological process, clinical entity, population phenomenon, historical actor and personal experience. We will pay special attention to how diseases have been recognized, diagnosed, named and classified in different eras, cultures and professional settings.

SM 431. (STSC431) Cold War Science and Medicine. (B) Wolfe.

During the Cold War, science, technology and medicine occupied a central place in the developing and maintaining state power. The incorporation of science into the apparatus of the Cold War state changed the ways that scientists studied, worked, and communicated with each other and the public. But beyond such practical concern, scientists in both the United States and the Soviet Union had to confront the question of what it meant to pursue natural knowledge in a militarized state. No nation or political system could survive without the weapons, medicine, foodstuffs, and consumer products made possible by modern scientific research--yet science was supposedly an international system free from the dictates of politics. This course explores the contradictions of Cold War science and medicine.

SM 437. (ANTH437, SOCI437) Cultural Models & Health. (B) Barg.

There is a great deal of variation among population groups in the incidence of and

mortality from most major diseases. Biological and social factors can account for some of this variation. However, there is increasing evidence that behavior- and the cultural models that are linked to health behavior- play an important role too. Cognitive anthropology is the study of how people in social groups conceive of objects and events in their world. It provides a framework for understanding how members of different groups categorize illness and treatment. It also helps to explain why risk perception, helpseeking behavior, and decision making styles vary to the extent they do. This seminar will explore the history of cognitive anthropology, schema theory, connectionism, the role of cultural models, and factors affecting health decision making. Methods for identifying

cultural models will be discussed and practiced. Implications for health communication will be discussed.

SM 441. (ANTH441) Cross Cultural Approaches to Health. (B) Barg.

This course will explore the ways that health and illness-related beliefs and behaviors develop within communities. We will identify the forces that shape these beliefs and behaviors and ultimately affect who gets sick, who gets well, and the very nature of the illness experience. Emphasis will be given to the relationships among sociocultural, political and biological factors and the ways that these factors interact to produce the variation that we see in health and illness related attitudes, behaviors and outcomes across cultures.

SM 471. (PUBH534, STSC471) Guns and Health. (C) Sorenson.

The purpose of this course is for students to gain an understanding of the role of guns in health, and population and prevention approaches to violence. The course will include a focus on policies and regulations related to firearms, the primary mechanism by which violence-related fatalities occur in the U.S. We will address the life span of a gun, from design and manufacture through to use. In addition, we will address key aspects of the social context in which firearms exist and within which firearm policy is made.

499. Independent Study. (C)

HEALTH CARE SYSTEMS (WH) {HCMG}

101. Health Care Systems. (C)

Harrington.

This introductory course takes a policy and politics angle to health care's three persistent issues - access, cost and quality. The roles of patients, physicians, hospitals, insurers, and pharmaceutical companies will be established. The interaction between the government and these different groups will also be covered. Current national health care policy initiatives and the interests of class members will steer the specific topics covered in The course aims to provide skills for critical and analytical thought about the U.S. health care system and the people in it.

202. (ECON039) The Economics and Financing of Health Care Delivery.

(C) Kolstad. Prerequisite(s): Economics 1 & 2 or consent of instructor.

The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed. Students who take HCMG 202 may not also take HCMG 302, ECON 039, or ECON 236 for further credit.

203. Clinical Issues in Health Care Management: Doctors, Patients and Managers in Modern Society. (B)

Asch.

This course will explore the effects of the changing health care environment on the physician, patient and health care manager. It is intended for any undergraduate with an interest in how 1/7th of the American economy is organized as well as those planning careers as health care providers and managers. The course complements other health care courses (that take a societal perspective) by focusing on the individuals who participate in the health care enterprise. There are no prerequisites, as the course will stand on its own content. The course will be divided into modules

that focus on the participants of the health care process and the process itself. We will analyze the patient, the doctor, and manager in light of the patient-doctor interaction, the turbulent health care marketplace, expensive new technologies, resource allocation, and ethics.

204. (HCMG859) Comparative Health Care Systems. (A) Danzon.

This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive: How do these different systems deal with tough choices, such as decisions about new technologies? Our main focus is on the systems in four large OECD countries--Germany, Canada, Japan, and the United Kingdom--but we also look at other countries with interesting systems - including Italy, Chile, Singapore and developing countries including China and India. We will draw lessons for the U.S. from foreign experience and vice versa.

211. (HCMG854, LGST211, LGST811) Legal Aspects of Health Care. (A) Rosoff.

This course offers a current and historical overview of the regulation of health care delivery and financing in the US. It examines principles and practical applications of the laws that affect the operational decisions of health care providers, payors, and managers and that impact development of markets for health care products and services. Also considered are the social and ethical issues encountered in trying to balance the interests, needs and rights of individual citizens against those of society. For part of the term, the class will divide into two groups so that students can focus on their choice of (1) health care management (antitrust law, and regulation of the drug and medical device industry) or (2) selected issues of patients' rights (e.g. abortion, treatment of terminal patients, etc.)

212. Health Care Quality and Outcomes: Measurement and Management. (B) Silber. Prerequisite(s): Introductory Statistics or permission of instructor.

This course will familiarize students with methods used to assess the quality of hospital or provider health care using outcomes data, and to understand and evaluate studies involving health care outcomes. Students are exposed to the mechanics of hospital quality evaluation and challenged to evaluate the medical and health services research literature on health care evaluation, as well as to make inferences regarding hospital quality and the comparison or rankings of hospitals or providers. Topics will include the history of health care outcomes analysis; the conceptual framework for outcome studies; consumer demand for information; an overview of medical data and data collection systems; a description of outcome statistics and severity adjustments currently in use; the study of excess variation in outcomes; and the use of guidelines to assess outcomes. By the end of the course, students will have developed a thorough appreciation of the current methods used by policy makers, researchers, and health care providers to evaluate medical outcomes, as well as those used by consumers to choose hospitals and providers.

213. Health Care Strategy and Management: the Business of Health Care. (A) Kimberly.

This course presents an overview of the business of health and how a variety of health care organizations have gained, sustained, and lost competitive advantage amidst intense competition, widespread regulation, high interdependence, and massive technological, economic, social and political changes. Specifically, we evaluate the challenges facing health care organizations using competitive analysis, identify their past responses, and explore the current strategies they are using to manage these challenges (and emerging ones) more effectively. Students will develop generalized skills in competitive analysis and the ability to apply those skills in the specialized analysis of opportunities in producer (e.g. biopharmaceutical, medical product, information technology), purchaser (e.g. insurance), and provider (e.g. hospitals, nursing homes, physician) organizations and industry sectors. The course is organized around a number of readings, cases, presentations, and a required project.

215. Management and Economics of Pharmaceutical, Biotech, and Medical Device Industries. (B)

Danzon. Prerequisite(s): One undergraduate Health Care course or one Economics course or equivalent experience with permission of instructor.

This course provides an overview of the management, economic and policy issues facing the pharmaceutical, biotechnology, and medical device industries. The course perspective is global, but with emphasis on the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure and rapid technological change; biotechnology and genomics startups and alliances with the pharma industry; a complex global marketplace in which prices are regulated in most countries and customers include governments and insurers, as well as physicians, pharmacists and consumers; intense and evolving M&A, including mergers, joint ventures, and complex alliances; government regulation of every business function, including R&D, pricing and promotion; and global products and multinational firms. We use Wharton and industry experts from various disciplines to address these issues.

302. (ECON236) Economics and Financing of Health Care Delivery. (B)

David. Prerequisite(s): ECON 001 and ECON 002 OR BPUB 250.

This course provides an application of economic principles to the health care sector. By recognizing the importance of scarcity and incentives, this course will focus on the critical economic issues in producing, delivering, and financing health care. In particular, the course will analyze determinants of demand for medical care, such as health status, insurance coverage, and income; the unique role of physicians in guiding and shaping the allocation of resources in medical care markets; and competition in medical care markets, especially among hospitals. Special emphasis will be placed on the evaluation of policy instruments such as government regulation, antitrust laws, 'sin taxes' on cigarettes and alcohol, and public health programs. This course is similar to HCMG 202, but uses more advanced quantitative methods and formal economic theory; knowledge of calculus and basic microeconomics is recommended. Students who take HCMG 302 (ECON 236) may not also take HCMG 202 (ECON 039) for further credit.

841. Health Services System. (A)

Burns.

This course provides an overview of the evolution, structure and current issues in the health care system. It examines the unique features of health care as a product, and the changing relationships between patients, physicians, hospitals, insurers, employers, communities, and government. The course examines three broad segments of the health care industry: payors, providers and suppliers. Within the payor segment, the course examines the sources and destinations of spending, managed care (HMOs, PPOs), employer based health insurance, technology assessment, payor strategy, and efforts to pay for the elderly, the poor & the medically indigent. Within the provider segment, the course examines the impact of cost containment and competition on hospitals and integrated delivery systems, long term care and disease management, and the important role of epidemiology in assessing population health needs and risks. Within the supplier segment, the course will examine developments in the biotechnology, pharmaceutical, medical devices, genomics and IT industries. NOTE: This is a required course for Wharton Graduate Health Care Management majors; it counts as an elective course for all other Wharton Graduate students. It is also open to Law School and Nursing School students with a joint Wharton Program.

Please note that during the Wharton Pre-term program, there are three additional sessions that serve as important background material for this course. The instructor presumes you know this material when the regular course begins.

845. Managed Care and the Industrial Organization of Health Care. (B)

Burns.

This course, cotaught with Brad Fluegel of Wellpoint, Inc. will focus on two interrelated topics: managed care and market structure. The section on managed care will cover strategic planning and marketing of managed care services, operational issues in developing a managed care network, actuarial issues, and the management of physician behavior. The section on health care market structure will analyze strategies of vertical integration and horizontal intergration (M+As), and their attempt to alter the balance of power in local healthcare markets. The section will also analyze the operational issues in managing cost and quality in an integrated system, integration along the supply chain, and the performance of these systems.

849. Financial Management of Health Institutions. (A)

Harrington.

Prerequisite(s): Finance 601 or equivalent.

This course focuses on the application of financial analysis to financial and operating decisions in the health care industry. Valuation methods covered include: net present value of free cash flows, decision tree analysis, real options, and multiples. The cases allow students to apply these skills to examine the following types of decisions/situations: estimate the value of a drug that is being developed using both traditional NPV and option pricing; evaluate an R&D limited partnership as an alternative to traditional methods of financing biotech R&D; estimate the value of a pharmaceutical company using publicly available data; identify the best way for a new medical device company to price its products and raise funds; determine why a Medicare HMO is losing money, recommend whether the plan should remain in the market, and recommend changes in benefit design and reimbursement methods if the plan decides to remain in the market; analyze a health system's profitability by product line and discuss the implications for pure play or carve-out companies.

852. Health Services Delivery: A Managerial Economic Approach. (C)

David.

This course is designed to equip students with tools to understand and analyze problems in the rapidly changing health care delivery environment. It focuses on organizational and strategic issues in the delivery of health care in the hospital context. The course is divided into eight topic areas: 1.) Shortages, substitutability and efficiency in hospitals' production, 2.) The role of nonprofit health care providers, 3.) The economics of hospitals and physicians' specialization, 4.) Inpatient vs. outpatient care delivery, 5.) Antitrust laws and regulation and their effect on hospital competition, 6.) Marketing health services, 7.) Defining and improving medical performance, and 8.) Evidence-based medicine and the diffusion of technologies. The course will feature a number of guest speakers.

854. (HCMG211, LGST211, LGST811) Legal Aspects of Health Care. (A)

Rosoff.

This course offers a current and historical overview of the regulation of health care delivery and financing in the U.S. It examines principles and practical applications of the laws that affect the operational decisions of health care providers, payors, and managers and that

impact development of markets for health care products and services. Also considered are the social and ethical issues encountered in trying to balance the interests, needs and rights of individual citizens against those of society. For part of the term, the class will divide into two groups so that students can focus on their choice of (1.) health care management (antitrust law, and regulation of the drugs and medical device industry) or (2.) selected issues of patients' rights (e.g. abortion, treatment of terminal patients, etc.)

855. Management of Health Care for the Elderly. (A) Whitman.

This mini course is designed to provide students with an appreciation of the good, the bad and the ugly of how our current health care system cares for one of our nation's most precious resources - our seniors! This course will review care provided to seniors within a variety of institutional settings (hospitals, nursing facilities, various senior housing levels) as well as outpatient and home care services. Special attention will be paid to nursing homes and senior housing options and their past, present and future role within the overall health care system in the United States. The course will start with an overview of the senior population with special attention to their health and social needs. Several classes will be held off campus at selected nursing facilities and senior housing complexes. In addition, a broad range of special programs and services will be reviewed such as sub-acute care, long term care insurance, Medicare Risk Programs, elderly housing, adult day care, managed care, Medicare Part D, case management, hospice and other recent developments. Throughout the course, emphasis will be placed on entrepreneurial opportunities to serve the senior market at all levels.

Students are required to produce a paper for this course that focuses on a specific area impacting the senior market. This is a wonderful opportunity for students to select an area of personal interest and conduct an in depth review of that area including making direct contact with national experts within the topic selected. All student topics must be approved during the first two weeks of class and the depth of research required agreed upon by the student and the instructor. Interested students not in the HCMG major are urged to speak to the instructor before enrolling in the course.

858. Health Care Marketing. (A) Mahadevan.

This course examines key marketing issues in the pharmaceutical, biotech and medical device industries. The focus is on aspects that distinguish marketing in the pharmaceutical-biotech-device industries from more general (CPG-type) marketing in non-health care industries. After reviewing the similarities and differences, we focus in depth on the following topics: product launch and growth, from a strategic and tactical execution perspective; regulation, direct-to-consumer advertising, and off-label usage; unique features of medical device marketing, including hospital and GPO purchasing, role of sales reps etc.; biotechnology marketing, for both niche and blockbuster products; marketing mix optimization; global brand management. The class ends with an examination of industry evolution and current state of flux inclusive of relatively new marketing expectations such as social media and relationship marketing. Class format includes lecture, case discussion and presentations by industry experts.

859. (HCMG204) Comparative Health Care Systems. (A) Danzon.

Prerequisite(s): HCMG841 or similar background or experience in health care systems.

This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive: How do these different systems deal with the tough choices, such as decisions about new technologies? Our main focus is on the systems in four large OECD countries- Germany, Canada, Japan, and the United Kingdom - but we also look at other countries with interesting systems - including Italy, Chile, and Singapore and developing countries including China and India. We will draw lessons for the U.S. from foreign experience and vice versa.

863. Management and Economics of Pharmaceutical, Biotech and Medical Device Industries. (B) Danzon.

This course provides an overview of the management, economic and policy issues facing the pharmaceutical, biotechnology and medical device industries. The course perspective is global, but with emphasis on

the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure and rapid technological change; biotechnology and genomics startups and alliances with the pharma industry; a complex global marketplace in which prices are regulated in most countries and customers include governments and insurers, as well as physicians, pharmacists and consumers; intense and evolving M&A, including mergers, joint ventures, and complex alliances; government regulation of every business function: including R&D, pricing and promotion; and global products and multinational firms. We use Wharton and industry experts from various disciplines to address these issues.

866. E-Health: Business Models and Impact. (B) Stavrakas.

This course will introduce students to the main components of Health Information Technology (HIT) and how HIT currently affects and in the future, may change health care operating models. Although it will not prepare students for primary technology management positions, it will help them understand the role of HIT in the success of the provider delivery system and other important healthcare sectors. It will provide a foundation that will prepare them as managers and consultants to rely upon or manage information technology to accomplish their objectives. The course will give special attention to key health care processes, topics and sectors such as HIT and the drive for provider quality and cost improvements, the value of patient-centric and other databases for manufacturing marketing and product development, the growth of new information technologies for consumer directed healthcare and telemedicine, the strategies and economics of individual HIT enterprises and the role of government. This course relies heavily on industry leaders to share their ideas and experiences with students.

867. Health Care Entrepreneurship. (B) Kurtzman & Libson.

The course focuses on the creation, funding, and management of biotechnology and health services enterprises. The course is designed to supplement other offerings in the Health Care Systems and Management Departments for those students with entrepreneurial interest in such ventures, and will focus on special issues surrounding the conceptualization, planning, diligence and capitalization, launch, compensation and management of these ventures. In addition, course offers methods for self-assessment &

development of business models and plans, techniques for technology assessment and strategy, develops foundation for capitalization and partnering strategies, and creates a basis for best practices in company launch and plan execution.

868. Private Sector Role in Global Health. (B) Sammut.

This course explores entrepreneurial and other private sector solutions for both health services and access to medicines and technology in the developing world and other underserved areas. The course also encompasses study of creative solutions such as drug development partnerships, public-private partnerships, and other incentive programs to engage the private sector in development of vaccines and medicines for tropical and neglected diseases, as well as therapeutic approaches and care systems for the rapidly growing problems of chronic diseases in populations in the developing world. The course goal is not to duplicate a conventional international public health course, but to build upon what is conventionally known and taught in such courses from a managerial solutions-oriented perspective. Learning is driven through readings, class discussions and a series of guest speakers representing the full range of global health issues. The major assignment in the course is a group student project.

890. Advanced Study Project Seminar: Management of Health Care Service Businesses. (A) Present. Prerequisite(s): HCMG 841.

This course examines issues related to managing or investing in Health Care Services Businesses. Defined as companies that manage, distribute or provide health care services, the Health Care Services sector touches almost every other portion of the health care system. We will study the

key management issues related to a number of different health care services businesses with a focus on common challenges related to reimbursement, regulatory, margin, growth, and competitive issues. We will make extensive use of outside speakers who will all be current industry leaders within different sectors of the health care services industry and will address the current management issues they face in running their businesses. We will also hear Private Equity professionals and people involved legislatively in Washington with health care services. Students will then be asked to develop a plan to both buyout and subsequently manage a specific health care services business. Students will present their plans to a panel of leading Health Care Private Equity investors.

Ph.D. Seminars

900. Proseminar in Health Services Research. (C) Harrington.

This seminar will explore empirical methods in health care research with an emphasis on applications in health care economics and finance. The methods covered include estimation with panel data, program evaluation models, qualitative and limited dependent variable models, stochastic frontier models, estimation with count data, and duration models. The readings consist of a blend of classic and recent empirical studies, including articles on the demand for health care and health insurance, tests for moral hazard and adverse selection, and estimation of provider cost functions. Students are required to conduct an econometric analysis of some issue within the health care field. With the permission of the instructor, the seminar is open to doctoral students from departments other than Health Care Systems.

SM 901. Seminar in Health Care Cost Benefit and Cost Effectiveness Analysis. (A) Pauly.

The purpose of this doctoral level course is to investigate the theory and practice of cost-benefit and cost-effectiveness analysis as applied to health care. The three techniques to be examined are cost-effectiveness analysis with single dimensional outcomes, cost effectiveness analysis with multiple attributes (especially in the form of Quality Adjusted Life Years), and economic cost-benefit analysis. Valuation of mortality and morbidity relative to other goods will be emphasized. Students will be expected to develop written critiques of articles in the literature, and to design a new application of one of the techniques as a term project.

903. Economics of Health Care and Policy. Kolstad.

This course applies basic economic concepts to analyze the health care market and evaluate health policies. The course begins with an analysis of the demand for health, the derived demand for medical care and the demand for health insurance. The second part of the course examines the supply of medical care by physicians and hospitals, medical technology, and the role of managed care organizations. The implication of adverse selection, moral hazard, externalities, and asymmetric information will be explored. The third part of the course examines the rationale for government intervention in medical markets as well as the effectiveness and efficiency of various health policies, including: Medicare, Medicaid, price regulation of hospitals, physician payment reform, medical malpractice, uncompensated care, and physician manpower planning.

HISTORIC PRESERVATION (FA) {HSPV}

516. Building Diagnostics. (B) Henry.

Building diagnostics pertain to the determination of the nature of a building's condition of performance and the identification of the corresponding causative pathologies by careful observation and investigation of its history, context and use. Monitoring, a building diagnostic tool, is the consistent observation and recordation of a selected condition or attribute, by qualitative and/or quantitative measures over a period of time in order to generate useful information or data for analysis and presentation. Building diagnostics and monitoring allow the building professional to identify the causes and enabling factors or past or potential pathologies in a building and building systems, thus informing the development of buildings, the process informs the selection of interventions that satisfy the stewardship goals for cultural resource.

521. American Architecture. (A) De Long.

The development of modern architecture and its descendant modes in the United States is presented through an examination of work by leading architects. Major designs are related to influential stylistic patterns as a basis for historic evaluation of more anonymous examples, and current stylistic terminology is critically evaluated.

SM 528. (FOLK518, HIST510) American Vernacular Architecture. (M) St. George.

This course explores the form and development of America's built landscape--its houses, farm buildings, churches, factories, and fields--as a source of information on folk history, vernacular culture, and architectural practice.

530. American Domestic Interiors Before 1850. (C) Winkler.

The American domestic interior from the early British and French settlements in North America until 1850. Emphasis will be on the social, economic, and technological forces as well as the European influences that determined household decoration ranging from the decorative arts to floor, wall, and window treatments.

531. American Domestic Interiors After 1850. (C) Winkler.

The American domestic interior after 1850 with emphasis on the social, economic, and technological forces, as well as consideration of European influences that determined the decoration and furnishing of the American home. Topics to be covered include the decorative arts, floor, wall and window treatments, and developments in lighting and heating. In addition to the identification of period materials, the course will give special emphasis to recreating historical finishes.

538. Fundamentals of the American Landscape. (M) Mason.

The course presents the history of common American landscapes and surveys of the field of cultural landscape studies. The cultural-landscape perspective is a unique lens for understanding holistically the historical evolution of the built environment and the abstract economic, political and social processes that shape the places where most Americans spend most of their time. The course will focus on the forces and patterns (natural and cultural) behind the shaping of recognizably "American" landscapes, whether urban, suburban, or rural. Class discussions, readings, and projects will draw on work from several disciplines--cultural geography, vernacular architecture, environmental history, art, and more.

540. American Building Technology. (C) Falck.

Presentation of traditional construction materials and methods of the eighteenth, nineteenth and early twentieth centuries in North America. Structural and decorative building components including brick and stone masonry, terra cotta, wood framing, millwork, metals, roofing, and plaster will be discussed.

551. (ARCH739) Building Pathology. (A) Henry. Prerequisite(s): HSPV 555 or one technical course in architecture.

This course addresses the subject of building deterioration and intervention, with the emphasis on the technical aspects of deterioration. Construction and reconstruction details and assemblies are analyzed relative to functional and performance characteristics. Lectures cover subsurface conditions, structural systems, wall and roof systems, and interior finishes with attention to performance, deterioration, and stabilization or intervention techniques.

L/L 555. Conservation Science. (B) Matero. \$30 Lab Fee.

An introduction to architectural conservation and the technical study of traditional building materials. Lectures and accompanying laboratory sessions introduce the nature and composition of these materials, their properties, and mechanisms of deterioration, and the general laboratory skills necessary for characterization. A knowledge of basic college level chemistry is required.

556. Documentation and Conservation of the Historic Landscape. (M) Staff.

"Landscape conservation" is a growing concern in contemporary preservation circles. It is a multi-faceted issue, drawing on the fields of landscape architecture, horticulture, architectural history, regional planning, and archaeology. This course aims to provide a comprehensive overview, a look at the state-of-the-art, including philosophical issues, attempts at international and national guidelines, evaluative/survey systems, technical investigation techniques, and selected case studies. Students will be asked to analyze and develop a preliminary conservation plan for a selected site in the Philadelphia area.

572. Preservation Through Public Policy. (B) Hollenberg.

An exploration of the intersection between historic preservation, design, and public policy. That exploration is based on the recognition that a network of law and policy at the federal, state and local level has profound impact on the ability to manage cultural resources, and that the pieces of that network, while interconnecting, are not necessarily mutually supportive. The fundamental assumption of the course is that the preservation professional must understand the capabilities and deficiencies of this network in order to be effective. The course will look at a range of relevant and exemplary laws and policies existing at all levels of government, examining them through case studies and field exercises.

600. Documentation. (A) Staff.

As in past iterations of the course, a centerpiece of the class will be first-hand exposure to the actual materials of building histories. We will visit a half-dozen key archival repositories, and students will work directly with historical evidence, both textual and graphic, exercising their facility through projects. We will explore various forms of documentation, discussing each in terms of its nature, especially the

motives for its creation and some ways it might find effective use. Philadelphia is more our laboratory than a primary focus in terms of content, as the city is extremely rich in such institutions that hold over three centuries worth of such materials, and students will find here both an exposure to primary documents of most of the species they might find elsewhere, as well as a sense of the culture of such institutions and the kinds of research strategies that can be most effective.

601. Recording and Site Analysis. (B) Staff.

Introduction to documentation and recording of historic buildings and their sites. Assignments will include field investigations, interpretation of architectural evidence, determination of construction chronology, analysis of the restoration process, written descriptions, and preparation of measured drawings.

606. Historic Site Management. (M) Mason.

This course focuses on management, planning, and decision-making for all types of heritage sites- from individual buildings to historic site to whole landscapes. Course material will draw on model approaches to management, as well as a series of domestic and international case studies, with the goal of understanding the practicalities of site management. Particular topics to be examined in greater detail might include conservation policy, interpretation, tourism, or economic development strategies.

SM 620. Seminar in American Architecture. (M) Staff.

This seminar explores connections between the historical evolution of the built environment and the social, economic, and political forces shaping society as a whole. Drawing on the extensive literature on the history of urban places and processes in North America, the class will cover issues spanning the preservation, architecture, planning, and landscape architecture fields. Following a series of lectures and guided discussion of readings, students will research and present selected topics and themes of their own. Written summaries of seminar reports will be required.

L/L 624. Digital Media for Historic Preservation. (A) Hinchman.

The fundamental tools and techniques associated with the use of digital media and information technology as applied to Historic Preservation. Techniques will be introduced according to preservation uses of graphic and textual data such as survey,

documentation, relational databases, and digital imaging and modeling.

625. Preservation Economics. (B) Rypkema.

The primary objective is to prepare the student, as a practicing preservationist, to understand the language of the development community, to make the case through feasibility analysis why a preservation project should be undertaken, and to be able to quantify the need for public/non-profit intervention in the development process. A second objective is to acquaint the student with the measurements of the economic impact of historic preservation and to critically evaluate "economic hardship" claims made to regulatory bodies by private owners.

SM 637. The Seminar on the Common American Landscape. (M) Staff.

The seminar on the Common American Landscape concentrates on a selected topic which illuminates a typical land/or significant aspect of the American landscape in a particular time and place.

650. International Conservation. (M) Staff.

A four week summer course offered in different locations in Europe to teach international theories and methodologies of conservation as practiced there. Lectures, laboratory work, and field trips will be involved. Past course locations included Italy, England and Turkey. Travel and residence fees extra. Not offered every year.

L/L 656. Advanced Conservation Science. (C) Staff. Prerequisite(s): HSPV 555, Conservation Science or Permission of the Instructor.

A methodological approach to the examination and analysis of historic building materials. Practical analytical techniques appropriate for conservation practice include: optical microscopy, wet chemical procedures for qualitative and quantitative analysis of organic and inorganic materials, such as microchemistry, histochemistry, titrimetry, etc. Theoretical and practical applications of advanced procedures for instrumental analysis including atomic and molecular spectroscopies, thermal analysis, and X-Ray techniques will be discussed. Course material will be taught through lectures, laboratory sessions, and readings.

SM 660. Theories of Historic Preservation. (A) Matero.

An examination of theoretical issues governing the field of historic preservation. Accepted concepts are questioned, selected examples of current practice evaluated, and professional ethics reviewed. The instructor's permission is required for any student not in the Historic Preservation Program.

671. (CPLN509, UDES723) Historic Preservation Law. (B) Staff.

Introduction to the legal framework of urban planning and historic preservation, with special emphasis on key constitutional issues, zoning, historic districts, growth management, and state and local laws for conserving historic buildings.

701. Historic Preservation Studio. (A) Mason.

The studio is a practical course in planning urban and regional conservation areas, bringing to bear the wide range of skills and ideas at play in the field of historic preservation. Recognizing that historical areas are complex entities where cultural and socio-economic realities, land use, building types, and the legal and institutional setting are all closely interrelated, the main focus of the studio is understanding the cultural significance of the built environment and the relation of this significance to other economic, social, political, and aesthetic values. Through the documentation and analysis of a selected study area, the studio undertakes planning exercises for an historical area, carries out documentation and historical research, and creates policies and projects. The studio seeks to demonstrate how, through careful evaluation of problems and potentials, preservation planning can respond to common conflicts between the conservation of cultural and architectural values and the pressure of social forces, economic interest, and politics. The studio focuses on a specific area in need of comprehensive preservation effort, most often in Philadelphia proper. Student's work in consultation with local preservation and planning groups, community representatives, and faculty advisors to research and analyze the study area,

define major preservation planning problems and opportunities, formulate policies, and propose preservation plans and actions.

710. Thesis I. (A) Faculty.

Students are admitted to thesis after completion of two semesters or their equivalent in the graduate program. Theses

should be based on original research and relate to each student's elected concentration in history, theory, technology, planning or design. Thesis proposals are required at the time of fall enrollment, and during the fall semester thesis students are required to defend their topics before preservation faculty and students. Thesis guidelines, available in the Historic Preservation office, describe other details.

711. Thesis. (B) Faculty.

Students are admitted to thesis after completion of three semesters or their equivalent in the graduate program. Theses should be based on original research and relate to each student's elected concentration in history, theory, technology, planning, or design. Thesis proposals are required at the time of fall enrollment, and during the fall semester thesis students are required to defend their topics before preservation faculty and students. Thesis guidelines, available in the Historic Preservation office, describe other details.

SM 740. Conservation Seminar. (C) Staff.

Advanced study of historic building materials and techniques focusing on a different material each semester including masonry, metals, wood and surface finishes. Seminars will examine research methods and documentary sources, chemical and physical properties,

deterioration mechanisms, specific methods of analysis, and conservation treatments.

SM 741. Special Problems in Preservation. (M) Staff.

Problems in the theoretical and practical issues surrounding the conservation of historic structures and sites. Both thematic and site-specific topics will vary each year to allow students with different backgrounds and interests the opportunity to develop multi-disciplinary approaches to conservation.

SM 742. (CPLN742) Special Problems In Preservation. (C) Staff.

Problems in the theoretical and practical issues surrounding the conservation of historic structures and sites. Both thematic and site-specific topics will vary each year to allow students with different backgrounds and interests the opportunity to develop multi-disciplinary approaches to conservation.

SM 743. (ANTH508) Conservation Seminar. (C) Staff.

Advanced study of historic building materials and techniques focusing on a different material each semester including masonry, metals, wood, and surface finishes. Seminars will examine research methods and documentary sources, chemical and physical properties, deterioration mechanisms, specific methods of analysis, and conservation treatments.

744. Architectural Archeology. (B) Milner.

This course will introduce the procedure and techniques employed for analyzing an historic building to establish and document its original appearance, and the chronology of physical change that has occurred over its history. The process will be demonstrated through in-depth, on-site investigations of a specific building, supplemented by archival research designed to provide information relevant to the chronology of the building's construction and modification. Evidence of construction campaigns will be identified, analyzed and documented using archival references, sketches, measured drawings, photographs, written descriptions and laboratory analysis.

780. Architectural Conservation Advanced Praxis. (C) Matero.

Offering training beyond the classroom, this advanced praxis in architectural conservation focuses on the integration of theory and practice. A written project proposal must be submitted for consideration and approval by faculty, and a written defense of the work must be presented after the completion of the project. Students must have completed the conservation emphasis within the Master of Science program in Historic Preservation at the University of Pennsylvania.

999. Independent Study. (C) Faculty.

An opportunity for a student to work on a special project under the guidance of a faculty member.

HISTORY (AS) {HIST}

ANCIENT HISTORY (ANCH): All courses taken in Ancient History (ANCH) at the University of Pennsylvania will be considered equivalent to courses taken within the History Department.

SM 474. The Comparative History of Genocide. (C) von Joeden-Forgey.

In this seminar we will study modern genocide with an emphasis on the causes of genocidal processes, possible preventative measures, and social healing after the fact. Particular focus will be on the Holocaust, Rwanda, Bosnia- Herzegovina and Darfur, but other cases will also be examined, including the Herero and Armenian genocides, the genocide of Iraqi Kurds, Guatemala and Cambodia. Using scholarly texts, fiction, film and other media, we will discuss the definition of genocide and its representation, the long- and short-term historical contexts that enable genocide, the question of the uniqueness of the Holocaust and the value of comparative genocide studies, the problem of international response, and the relationship between genocide and other forms of social and political violence.

General Survey Courses (1-99)

L/R 001. Europe in a Wider World. (A) History & Tradition Sector. All classes. Goldberg.
