The rise and growth of European civilization, from the decline of the Roman Empire, through the Middle Ages, to the religious Reformation and the beginnings of overseas expansion.

L/R 002. Europe in A Wider World. (B) History & Tradition Sector. All classes. Granieri.

An examination of European social, economic, political and cultural development from 1500 to the present, with attention to Europe's impact on the rest of the world.

003. (EALC103, EALC503) Asia in a Wider World. (A) Waldron.

Integrated introduction to the history of Asia from the middle ages to early modern times (roughly 1100-1800), including China, Japan, Korea, and Southeast Asia, and the great empires of Genghis Khan, Tamerlane, and the Turks, during the period of transition from cosmopolitan empires to nation-states. Presumes no prior

knowledge. Emphasis is on Asia's place in world history, with basic narrative, consideration of connections through trade, navigation, and migration; examination of warfare and military technology, and comparisons of social, religious, cultural and identity structures. Substantial attention is also paid to Russia, India, and the Middle East, and to relations with Europe. Readings include translated primary sources. Prepares for Hist 004 and for upper level courses in Asian and world history.

004. Asia in a Modern World, 1600-Present. (B) Waldron.

Asia in a Modern World examines the histories and interactions of the states of Asia from roughly 1600 to the present, laying stress on both internal change and international rivalry and cooperation. Although there are no prerequisites, History 004 is the natural continuation of History 003, Asia in a Wider World. History 004 is intended as an introduction to the fascinating and complex history of Eurasia, taken as a whole, from 1600 to the present. It seeks to make this mass of complex events intelligible by clarifying the interrelationships that bind it together.

007. (AFRC001) Introduction to Africana Studies. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Zuberi, Beavers, Charles, Savage, Shaw.

See primary department (AFRC) for a complete course description.

010. (LALS010) The World 900-1750. (C) History & Tradition Sector. All classes. Feros.

An introduction to world history before the industrial revolution. Coverage varies each year, but every year the focus will be on the world outside Europe and the U.S. Focus each semester on comparative and connective themes, such as trade and civilization, empires, agrarian societies and livelihoods, slavery and the slave trade, and expansion of world religions.

L/R 011. The World: History and Modernity. (C) History & Tradition Sector. All classes. Lees.

An explanation of major themes, milestones, and debates in the history of the global community since 1300. Using examples from around the world, the course will explore such issues as the causes of war and revolution; the impact of religion, science and technology on human communities; the development of global systems of slavery, colonialism, and labor migration; the rise of nationalisms; and

perceived differences between "East" and "West," and "tradition" and "modernity." The course will also introduce students to the art and science of historical inquiry using primary sources, maps, pictures, and material culture.

L/R 020. History of the United States to 1865. (A) History & Tradition Sector. All classes. Richter.

An analysis of American society from the founding of the Colonies to the outbreak of Civil War. Topics to be emphasized include: the interaction among European, Indian and African cultures in the New World; the shaping of the distinctive American character; the creation of an independent nation-state; and the crisis of the Union. Special attention will be given to biographical profiles of the men and women who helped shape American history during this period.

L/R 021. United States History 1865 To Present. (B) History & Tradition Sector. All classes. Kropp.

This course covers the social, political, and economic history of the nation from the Civil War to the present. Topics to be discussed include the causes and course of the Civil War, Reconstruction, politics in the Gilded Age, late nineteenth-century urbanization and immigration, Populism, Progressivism, the sociology and politics of the twenties, the New Deal, post-World War II America, the turbulence of the sixties, and contemporary affairs.

L/R 024. (ANCH025, NELC101) Middle Eastern Civilizations. (D) History & Tradition Sector. All classes. Staff.

See primary department (NELC) for a complete course description.

031. Europe 1000-1500: World of the Middle Ages. (C) History & Tradition Sector. All classes. Peters.

The course will consider the creation of a distinctive European civilization from the economic, political, and cultural revolution of the late tenth and eleventh centuries to the beginning of the extension of European power into the non-European world around the turn of the sixteenth century. The course will consider change and continuity on both large and small scales, emphasizing such themes as power and order, the complexities of a pre-industrial economy, the formation of ethnic identities, and the worlds of formal thought and learning as well as those of the imagination and the arts. The course will also consider relations between Europe and the Islamic and Byzantine worlds as well as the role of northern and eastern Europe. A substantial

part of the required reading will be original source materials in translation.

040. Early Modern Europe, 1450-1750. (C) History & Tradition Sector. All classes. Safley.

This course examines those European developments which contributed to the world we understand as modern. Special emphasis will be placed on the transformation of Europe through the advent of new technologies, the creation of a global economy, the consolidation of territorial states, the rise of effective, central governments, the dissolution of religious unity, and the dialect between modern and traditional world views.

048. (RUSS048) The Rise and Fall of the Russian Empire, 1552-1917. (C) History & Tradition Sector. All classes. Nathans/Holquist.

How and why did Russia become the center of the world's largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

L/R 049. (RUSS049) The Soviet Century, 1917-1991. (C) History & Tradition Sector. All classes. Nathans/Holquist.

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world's first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR's sudden implosion at the end of the century. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, and intellectuals; Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

050. England and the British Isles to 1707. (C) Todd.

The subject of this course is the history of the British Isles from the Roman Conquest in 43AD to the creation of the United Kingdom in 1707. Between these two dates the various societies and cultures in the British Isles were brought into the orbit of the Roman Empire, converted to Latin Christianity, and developed distinctive cultures and strong ties with the Continent. From the twelfth century on, the kingdom of England began to exert its power over Wales, Ireland, and Scotland, although English power waxed and waned in these areas between the twelfth and the seventeenth centuries. The Anglo-Norman continental empire of the Plantagenet dynasty also played a large part in shaping the English monarchy, as did the playing out of the Hundred Years War, the internal divisions in fifteenth-century English society, and the rise of the Tudor-Stuart dynasty.

051. Britain Since 1688. (C) Lees.

The course traces British political and social development since the later seventeenth century. Main themes include the creation of a multi-national state through war, revolution, and conquest, the rise and fall of empires, development of parliamentary government, transitions to democracy, urban and industrial growth. Readings include novels, newspaper articles, and other primary sources.

070. (LALS070) Colonial Latin America. (A) History & Tradition Sector. All classes. Farnsworth-Alvear. Fulfills History & Tradition Distribution Requirement.

The development of Latin America from pre-Columbian times to 1850. Emphasis is on the interaction between European, Indian, and African elements in colonial society, the growth of national consciousness, and the related phenomena of political instability and economic underdevelopment.

071. (LALS071) Latin American Survey 1791-Present. (B) History & Tradition Sector. All classes. Farnsworth-Alvear.

Surveys Latin American and Caribbean history from the Haitian Revolution of 1791 to the present. We will examine the legacy of Spanish colonialism and slavery, movements for national and cultural independence, twentieth-century radicalism, and the politics of race in contemporary Latin America. Readings include fictional as well as analytical

representations, and a film series will accompany the course.

L/R 075. (AFRC075, AFST075) Africa to 1800. (B) History & Tradition Sector. All classes. Babou.

Survey of major themes and issues in African history before 1800. Topics include: early civilizations, African kingdoms and empires, population movements, the spread of Islam, and the slave trade. Also, emphasis on how historians use archaeology, linguistics, and oral traditions to reconstruct Africa's early history.

L/R 076. (AFRC076, AFST076) Africa Since 1800. (A) History & Tradition Sector. All classes. Cassanelli.

Survey of major themes, events, and personalities in African history from the early nineteenth century through the 1960s. Topics include abolition of the slave trade, European imperialism, impact of colonial rule, African resistance, religious and cultural movements, rise of nationalism and pan-Africanism, issues of ethnicity and "tribalism" in modern Africa.

L/R 081. (NELC031) History of the Middle East Since 1800. (C) History & Tradition Sector. All classes. Kashani-Sabet/Trouitt-Powell.

A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity.

084. (NELC032) Topics in 20th C. Middle East. (C) Kashani-Sabet.

If "the clash of civilizations" is the first image that jumps to mind when thinking about the modern Middle East, then this is the course for you. From the familiar narratives about the creation of modern nation-states to the oft-neglected accounts of cultural life, this course surveys the multi-faceted societies of the twentieth-century Middle East. Although inclusive of the military battles and conflicts that have affected the region, this course will move beyond the clichés of war and conflict in the Middle East to show the range of issues and ideas with which intellectuals and

governments grappled throughout the century. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered in the course. By considering illustrative cultural moments that shed light on the political history of the period, this course will adopt a nuanced framework to approach the Arab/Israeli conflict, the history of the Gulf States, the Iran-Iraq War, and U.S. involvement in the region.

090. (EALC070) Pre-Modern Japan. (A) History & Tradition Sector. All classes. Staff.

This course will survey the major political, economic, social and intellectual trends in Japan from the earliest epoch through the 16th century.

091. (EALC071) Modern Japanese History. (C) History & Tradition Sector. All classes. Dickinson.

This course will survey the major political, economic, social and intellectual trends in the making of modern Japan. Special emphasis will be given to the turbulent relationship between state and society from 1800 to the present.

093. (COML103, FOLK103, THAR103) Performing History. (C) St. George.

From medieval processions to the Mummers Parade, from military reenactments to Mardi Gras, communities do more than "write" or "read" history in order to feel its power and shape their futures. Drawing upon traditions in theater, spectacle, religion, and marketing, they also perform their history--by replaying particular characters, restaging pivotal events and sometimes even changing their outcomes--in order to test its relevance to contemporary life and to both mark and contest ritual points in the annual cycle. This course will explore diverse ways of "performing history" in different cultures, including royal passages, civic parades, historical reenactments, community festivals, and film.

096. (EALC041) Late Imperial China. (C) History & Tradition Sector. All classes. Fei.

This lecture course -- the first of a two-part sequence -- examines the history of late imperial China through the early 19th century. We begin with the Song dynasty transformation: the rise of gentry society and imperial absolutism, the institution of Confucian orthodoxy, the shift of the population and the economic center of gravity to the south, the commercialization of the economy, and change in the relative

status of women and men. We then trace China's subsequent political and social history, including the following themes: inner vs. outer court politics; law, government, and society; intellectuals and political dissent; gender, family, and kinship practices; patterns of peasant life and rebellion; traditional foreign relations and first contacts with the West; internal sources of the decline of imperial order.

L/R 097. (EALC047) History of Modern China. (C) History & Tradition Sector. All classes. Fei.

From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity.

Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao's China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of "Greater China" that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

Freshman Seminars (101-106) and BFS Seminars (111-116) for Freshmen and

Sophomores.

These courses are open to a limited number of freshmen and, if space permits, to sophomores as well. Topics vary each semester.

SM 101. (JWST103) Freshman Seminar: Europe before 1800. (C) Staff.

SM 102. Freshman Seminar: Europe after 1800. (C) Staff.

SM 103. Freshman Seminar: America before 1800. (C) Staff.

SM 104. (AFRC103, ASAM013) Freshman Seminar: America after 1800. (C) Staff.

SM 105. Freshman Seminar: The World before 1800. (C) Staff.

SM 106. (AFRC107) Freshman Seminar: The World After 1800. (C)

Benjamin Franklin Seminars

Topics vary each semester. Courses are mainly for freshmen and sophomores in the Benjamin Franklin Scholars program. Other students need instructor's consent.

SM 111. Europe before 1800: Benjamin Franklin Seminar. (C) Staff.

SM 112. Europe after 1800: Benjamin Franklin Seminar. (C) Staff.

SM 113. America before 1800: Benjamin Franklin Seminar. (C) Staff.

SM 114. America after 1800: Benjamin Franklin Seminar. (C) Staff.

SM 115. The World before 1800: Benjamin Franklin Seminar. (C) Staff.

SM 116. The World after 1800: Benjamin Franklin Seminar. (C) Staff.

Introductory Courses (100-level)

Topics vary each semester. Listings are posted outside the Department of History office during advance registration. Enrollment is limited; history majors will be given priority in admission.

SM 107. Comparative Capitalist Systems. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Drew.

The course follows the evolution of industrial capitalism since the beginning of the English industrial revolution in the late 18th century. It ranges from the problems of the industrial revolution in England to problems of building a market economy in eastern Europe today. In particular, it

examines industrialization and explores the sources of sustained economic growth from a comparative perspective. Most of the world, especially in so-called emerging economies, is still confronted with the challenge, and often pain, of creating a modern industrial capitalist society. The course attempts to build a conceptual apparatus for understanding models of industrialization and is built around issues such as law, anti-trust, corporate forms, banking institutions, industrial relations, etc. By definition, the course tends to concentrate on successful industrializers around the world, but questions regarding continuing underdevelopment will be addressed.

119. History of the Modern Business Corporation. (C) Drew.

Over the last two centuries, the modern corporation has emerged as the dominant form of doing business throughout the world. As such, it not only affects people's daily lives, but also influences government policies and larger trends in society. This course looks at the history of the international corporation from the industrial revolution to the present, to consider how corporations have evolved and the varying ways in which they have influenced the history of our times. We will consider the fundamental debates surrounding the responsibility between shareholders, managers, workers, customers, and most importantly, society as a whole. Much of the course will involve an examination of case studies of individual companies, industries or issues, to understand how corporations have functioned in specific instances.

120. (EALC081) Korean History before 1860. (C) History & Tradition Sector. All classes.

See primary department (EALC) for a complete course description.

121. (EALC082) Korean History After 1860. (C) History & Tradition Sector. All classes. Staff.

See primary department (EALC) for a complete course description.

123. Economic History of Europe I. (C) Safley.

This course concentrates on the economy of Europe in the Early Modern Period, 1450-1750. It was a time of great transition. Europe developed from an agriculturally-based to an industrially-based economy, with attendant changes in society and culture. From subsistence-level productivity, the European economy expanded to create great surfeits of goods,

with attendant changes in consumption and expectation. Europe grew from a regional economic system to become part--some would say the heart--of a global economy, with attendant changes in worldview and identity. Economic intensification, expansion, globalization, and industrialization are our topics, therefore. Beginning with economic organizations and practices, we will consider how these changed over time and influenced society and culture. The course takes as its point of departure the experience of individual, working men and women: peasants and artisans, merchants and landlords, entrepreneurs and financiers. Yet, it argues outward: from the particular to the general, from the individual to the social, from the local to the global. It will suggest ways in which the economy influenced developments or changes that were not in themselves economic, shaped, and deflected economic life and practice.

126. Europe in the 19th Century. (C) Steinberg.

This course covers the social, political, and cultural history of Europe during the "long" nineteenth-century from 1789-1890. Beginning with the French Revolution and ending on the eve of the First World War, the class focuses on long term developments such as the industrial revolution, urbanization, and imperialism as well as key events like the revolutions of 1848 and the Paris Commune. Readings draw on both primary and secondary material so as to introduce students to the many divergent perspectives necessary to an understanding of the past.

127. Europe: 1890-1945. (C) Steinberg.

This course, designed for first and second year students, continues the history of modern Europe from the high point of Empire and world domination at the end of the nineteenth century to collapse and ruin in 1945. The grand societies and rich states which composed the European state system in 1890 destroyed themselves in these fifty-five years. As many as eighty million Russians, Germans, Poles, Yugoslavs, Greeks, Italians and other Europeans died in slavelabor camps, and six million Jews were systematically murdered. Europe's flourishing Jewish community east of the Rhine was wiped out. On the 9th of May 1945, the day Nazi Germany surrendered, the once prosperous continent was a smoking ruin, covered by rubble, pock-marked by craters and full of miserable starving people. This course will try to explain how and why Europe committed suicide in such a horrific way. It will cover Fascism, Nazism, Stalinism, the two world wars, the

great economic depression and the Holocaust.

128. Europe since 1945. (C) Steinberg.

This course offers a survey of European history, including both eastern and western Europe since World War II until the present. The course examines how Europe in all its complexity and cultures lived under the shadow of the Cold War. It examines the origins and nature of the cold War, not just in its diplomatic and political dimensions, but also its effects on the culture and people of Europe. It explores the reasons for the phenomenon of anti-Americanism and the series of revolts exploding throughout eastern Europe until the fall of the Berlin Wall. Finally, the course examines a number of thematic areas about European political culture, immigration, decolonization, the 1960s revolts and the 1970s terrorism, the resurgence of nationalism, but also the growth of the European community. The course explores the question: what does it mean to be European?

129. European History - 1890 to the Present. (C) Stromberg.**130. History of Globalization. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Drew.**

Globalization seems the essence of modernity, but it is not a new phenomena. The world has already witnessed several eras of globalization, each of which transformed and changed the world in often similar but sometime unique fashions. This course will look at continuing trends towards globalization and consider its rich history and the contentious arguments that it has always provoked. Although the focus of the course will be on globalization during the 19th and 20th centuries, we will also consider earlier episodes of globalization, to fully appreciate its evolution and importance.

139. (JWST156, NELC051, NELC451, RELS120) History of Jewish Civilization I. (B) History & Tradition Sector. All classes. Dohrmann.

A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.

140. (JWST157, NELC052, RELS121) History of Jewish Civilization: Early Middle Ages to the 17th Century. (A) History & Tradition Sector. All classes. Ruderman.

A broad introduction to the history of Jewish civilization from the early Middle Ages to the 17th century. An overview of Jewish society and culture in its medieval and Renaissance settings.

141. (JWST158, NELC053, NELC453, RELS122) History of Jewish Civilization: 17th Century to the Present. (B) History & Tradition Sector. All classes. Wenger.

This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

L/R 146. (HSOC145, STSC145) Comparative Medicine. (C) History & Tradition Sector. All classes. Feerman.
See primary department (HSOC) for a complete course description.

150. (JWST130, JWST430, RELS124) American Jewish Experience. (C) Wenger.

This course offers a comprehensive survey of American Jewish history from the colonial period to the present. It will cover the different waves of Jewish immigration to the United States and examine the construction of Jewish political, cultural, and religious life in America. Topics will include: American Judaism, the Jewish labor movement, Jewish politics and popular culture, and the responses of American Jews to the Holocaust and the State of Israel.

153. (URBS104) Urban Crisis: American Cities Since WW II. (C) Society Sector. All classes. Staff.

See primary department (URBS) for a complete course description.

155. (ASAM003) Introduction to Asian American History. (C) History & Tradition Sector. All classes. Azuma.

This course will provide an introduction to the history of Asian Pacific Americans, focusing on the wide diversity of migrant experiences, as well as the continuing legacies of Orientalism on American-born APA's. Issues of race, class, gender, and sexuality will also be examined.

L/R 159. Technology, Policy & War. (C) History & Tradition Sector. All classes. Waldron.

Comparative and interdisciplinary examination of successful and failed uses of force in international relations, from ancient to modern times, using case studies. Readings will include Clausowitz, Sun Tzu, and a variety of primary and secondary sources for the wars considered each year. Issues of war's fundamental origins, and its many impacts on society, will also be considered.

L/R 160. Strategy, Policy and War. (C) Waldron.

Analysis of the political use of force, both in theory and in practice, through analytical readings and study of selected wars. Readings include Sun Zi, Kautilya, Machiavelli, Clausewitz and other strategists. Case studies vary but may include the Peloponnesian War, the Mongol conquests, the Crusades, the Crimean War, Russo-Japanese War, World War II, Korea, or the Falklands, among others, with focus on initiation, strategic alternatives, decision and termination. Some discussion of the law of war and international attempts to limit it.

161. American Capitalism. (C) Society Sector. All classes. Licht.

A broad overview of American economic history will be provided by focusing on the following topics: colonial trade patterns, the growth of the market economy, the political economy of slavery, industrial expansion, segmentation in the labor force and changes in work, technological and organizational innovations, business cycles, the rise of the corporate welfare state, the growth of monopoly capitalism, and current economic problems in historical perspective.

L/R 164. Recent American History. (C)

This course examines major developments in United States history since the Great Depression, a tumultuous period that gave birth to many of our contemporary debates about the responsibilities of government, the possibility of radical social change, and

the meaning of citizenship. Reading primary documents alongside historical accounts, we will address the building of the New Deal state; the emergence of the United States as a superpower; the domestic and international repercussions of the Cold War; the impact of mass consumption, suburbanization, and new technologies; the civil rights movement and other drives for social change; the cultural and political fallout of the Vietnam War; transformations in gender roles and the family; and the end of the "American century."

L/R 165. The American Identity. (C) Hackney.

This course will examine the history of what Americans have thought of themselves and of how that self-conception has changed over time. It will attempt to answer such questions the content of the core values and beliefs that Americans are assumed to share, who belongs and who doesn't, what is the American Dream and who is allowed to pursue it, is there an American national character and in what ways is it distinctive, how is an American hero supposed to act and how one can spot villains, why metaphors of identity are useful and why they fail, and whether it is possible to know the meaning of being an American, given our ever-changing cultural, racial and ethnic diversity.

168. (AFRC168) History of American Law to 1877. (A) Berry.

The course surveys the development of law in the U.S. to 1877, including such subjects as: the evolution of the legal profession, the transformation of English law during the American Revolution, the making and implementation of the Constitution, and issues concerning business and economic development, the law of slavery, the status of women, and civil rights.

169. (AFRC169) History of American Law Since 1877. (B) Berry.

This course covers the development of legal rules and principles concerning individual and group conduct in the United States since 1877. Such subjects as regulation and deregulation, legal education and the legal profession, and the legal status of women and minorities will be discussed.

L/R 170. (AFRC172) The American South. (D) History & Tradition Sector. All classes. McCurry.

Southern culture and history from 1607-1860, from Jamestown to secession. Traces the rise of slavery and plantation society, the growth of Southern

sectionalism and its explosion into Civil War.

L/R 171. The American South 1860-Present. (D) History & Tradition Sector. All classes. Hackney.

This course will trace the history of the American South from the end of the Civil War to the present. It will investigate Reconstruction, the New South, Populism, racial disfranchisement and the rise of Jim Crow, the politics of the One-Party South, the South in the Progressive era and its role in the New Deal and World War II, the Civil Rights Movement of the 1950s and 1960s, and the rise of the Republican South. While following the narrative of politics and economic development, we will pay particular attention to race relations and will be more than casually interested in gender roles. In addition, we will take frequent peeks at the evolving Southern identity as reflected in popular culture and literature as well as in other corners of the public sphere.

172. Native People of Eastern North America. (C) History & Tradition Sector. All classes. Richter.

This course surveys Native American life east of the Mississippi River from earliest times to the present. The diverse histories of Native peoples will be examined both on their own terms and as continuing elements of the continent's broader story. Topics to be addressed include 16th- and 17th-century demographic, economic, and social consequences of contact with European peoples, 18th century strategies of resistance and accommodation to colonial powers, 19th-century impacts of U.S. government removal and cultural assimilation policies, and 20th-century cultural and political developments among the region's surviving Native American communities.

176. (AFRC176) Afro-American History 1550-1876. (D) History & Tradition Sector. All classes. Engs.

This course will study the history of Afro-Americans from their first encounter with Europeans in the 16th century to emancipation during the Civil War. The course will concentrate on the variety of black responses to capture, enslavement, and forced acculturation in the New World. The difference in the slave experience of various New World countries, and the methods of black resistance and rebellion to varied slave systems will be investigated. The nature and role of the free black communities in antebellum America will also be studied.

177. (AFRC177) Afro American History 1876 to Present. (D) History & Tradition Sector. All classes. Savage.

A study of the major events, issues, and personalities in Afro-American history from Reconstruction to the present. It will also examine the different slave experiences and the methods of black resistance and rebellion in the various slave systems.

179. (LALS179) The Rise and Fall of the Spanish Empire 1450-1700. (C) History & Tradition Sector. All classes. Feros.

This course will provide students with a solid knowledge of the history of early modern Spain (1450-1700). Through readings of primary and secondary texts that offer a complex vision of the cultural, religious, intellectual, and economic contexts and processes, students will be able to appreciate the intricacies of Spain's historical evolution. The course focuses on the rise and decline of the Spanish monarchy: the conditions that enabled Spain to become the most powerful monarchy in early modern times, and the conditions that led to its decline. This course also touches upon other important aspects critical to understanding early modern Spain: relationships among Christians, Muslims, and Jews in the Iberian Peninsula; the conquest and colonization of the New World; and early modern debates about Spain's rights to occupy America and the so-called "destruction of the Indies."

189. (NELC139) Modern Egypt. (C) Trout-Powell.

This course will seek to explore how Egyptian culture has dealt with its many pasts by investigating early modern and modern Egyptian history. With an emphasis on the 18th century to the present we will explore the culture of Egypt under the Ottoman Empire, slavery in Egypt, the unsuccessful French attempt to colonize Egypt and the successful British occupation of the country.

Seminar in History (201-206)

Topics vary each seminar. Listings are available from the Department of History office during advance registration, and at all times on the Web at <http://www.history.upenn.edu>. Enrollment is limited; history majors will be given priority in admission.

SM 201. (COML207, JWST201, RELS233) Major Seminar in History: Europe Before 1800. (C) Staff.

SM 202. (JWST202, LALS202, RUSS212) Major Seminar in History: Europe After 1800. (C) Staff.

SM 203. (GSOC203, HSOC204) Major Seminar in History: America Before 1800. (C) Staff.

SM 204. (AFRC205, GSOC204, JWST204, LALS204, URBS227) Major Seminar in History: America After 1800. (C) Staff.

SM 205. (JWST205, LALS205, NELC235) Major Seminar in History: The World before 1800. (C) Staff.

SM 206. Major Seminar of the World after 1800. (C) Staff.

Advanced Benjamin Franklin Seminars

Topics vary each semester. Courses are mainly for juniors and seniors in the Benjamin Franklin Scholars program. Other students need instructor's consent.

SM 211. Europe before 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

SM 212. (ITAL200) Europe after 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

SM 213. America before 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

SM 214. (AFRC215, GSOC214, JWST214, JWST215, URBS220) America after 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

SM 215. The World before 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

SM 216. (NELC286) The World after 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

Intermediate Courses (220-397)

SM 223. (ASAM203, GSOC222) Topics in Asian American History. (C) Azuma.

Topics include immigration patterns, adjustment to the new society, exclusion, racism, and economic activities.

275. (AFRC274, AFST274) Islam and Society in Africa. (C) Babou.

This course is designed to provide the students with a broad understanding of the history of Islam in Africa. The focus will be mostly on West Africa, but we will also look at developments in other regions of the continent. We will examine the process of islamization in Africa and the interplay between Islam and the African traditional religions and customs. Topics include conversion, Islamic education and literacy, the status of women, Muslim response to European colonial domination, Islamic mysticism, and the contemporary development of Sunni movements.

306. Mediterranean World, 1000-1300. (C) Goldberg.

A medieval ship plying the Mediterranean was often a frail thing: as a paying customer, you might find yourself helping to bail for eight days only to be dumped back on the coast where you started. In this course, we explore a period when increasingly, everyone, from every side of the Mediterranean, whatever the danger, was on the sea. Whether it is Maimonides fleeing Spain to become chief judge in Cairo, Richard the King of England conquering Cyprus but not quite getting to Jerusalem, Marco Polo seeking his fortune but telling his tales from prison in Genoa, a Parisian scholar traveling to Spain to learn the science of the Arabs, a work-a-day Arab businessman trying to get a shipment of cheese from Sicily to Alexandria, or maybe just a black rat carrying the plague, we will be looking at the reasons and ways people and things were on the sea. We will also look at what happened when cultures that mostly ignored each others' existence came into constant contact across and around the Mediterranean.

308. Renaissance Europe. (C) History & Tradition Sector. All classes. Moyer.

This course will examine the cultural and intellectual movement known as the Renaissance, from its origins in fourteenth-century Italy to its diffusion into the rest of Europe in the sixteenth century. We will trace the great changes in the world of learning and letters, the visual arts, and music, along with those taking place in politics, economics, and social organization. We will be reading primary sources as well as modern works.

309. Age of Reformation. (C) History & Tradition Sector. All classes. Safley.

The Protestant Reformation of the 16th century was a watershed in European history. It marked the culmination of centuries of religious, political and social

change and had profound institutional and intellectual consequences. We will examine the central teachings and activities of the Protestant reformers against this broad background. Topics will include: medieval traditions of religious protest and reform; social and political changes in the period of the Reformation; the changing role of the Papacy; and the impact of the new technology of printing. Readings will be both primary texts and secondary sources and discussions will be an integral part of the class.

310. Europe in the Age of Baroque. (C) History & Tradition Sector. All classes. Safley.

The baroque earns its name from a style of art and architecture, developed in Europe between 1550 and 1700 and typified by elaborate ornamentation and color. The term can be applied well to the history of the period, which was characterized by conflict and complexity.

318. Italian History from Napoleon to Berlusconi. (M) Steinberg.

The seminar looks at the evolution of modern Italy from the Napoleonic Era through the unification of the Kingdom in 1861, through its crisis in the First World War and the subsequent struggle for control of the new mass society. It looks at the emergence of the first fascist regime and the first modern dictatorship under Benito Mussolini; the rise and consolidation of that dictatorship, its descent into anti-Semitism, defeat in war and the civil war of 1943-45.

323. (FOLK323) Material Life in America, 1600-1800. (C) St. George.

This course will explore the history of America's use and fascination with material goods between 1600 and 1860. We will examine such issues as the transfer of European traditions of material culture to the New World, the creation of American creolized forms, the impact of reformers in the late eighteenth and early nineteenth centuries, and the development of regional landscapes. Thematic issues will include consumerism, objects as symbolic communication and metaphor, and the complementary issues of archaeology and history of art in material culture study.

331. American Diplomatic History Since 1776. (C) McDougall.

Survey course tracing the origins and evolution of the great traditions of U.S. foreign policy, including Exceptionalism, Unilateralism, Manifest Destiny, Wilsonianism, etc., by which Americans have tried to define their place in the world.

Three hours of lecture per week, extensive reading, no recitations.

339. Making Money before Columbus. (C) Goldberg.

Monday: bought olive oil. Tuesday: hid indigo from custom officials. Wednesday: attacked by pirates. Thursday: sold water-logged flax. This course explores the history of trade in the Mediterranean before the discovery of the New World. We will examine how trade and patterns of trade fit into both the broader economies of the ancient and medieval worlds. We will also look at the culture of traders and merchants: how they organized their work; and their social and cultural role in their societies. Secondary readings for the course are a mix of readings from historians and economists; these will be used to help understand the varied documents of traders themselves--accounts, letters, contracts, and court documents that illuminate the day-to-day struggles and satisfactions of pre-modern business life.

342. (COML342) European Intellectual History, 1300-1600. (C) Moyer.

This course will examine the formation of European traditions of scholarship and letters, including medieval, Renaissance and early modern writings. Topics will include court literature and romance; scholastic thought and university scholarship; political thought; the humanist tradition. It will consider the rise of printing, the formation of the "republic of letters," and the development of popular literature.

343. (COML343) Nineteenth Century European Intellectual History. (C) Breckman.

Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.

344. (COML344) Twentieth Century European Intellectual History. (B) Breckman.

European intellectual and cultural history from 1870 to 1950. Themes to be considered include aesthetic modernism and the avant-garde, the rebellion against rationalism and positivism, Social

Darwinism, Second International Socialism, the impact of World War One on European intellectuals, psychoanalysis, existentialism, and the ideological origins of fascism. Figures to be studied include Nietzsche, Freud, Woolf, Sartre, Camus, and Heidegger.

345. (GSOC345) Gender in American History, 1500-1865. (A) Brown.

From the sixteenth century, when Native American populations flourished on the North American continent, to the Civil War, when North and South collided over the question of slavery, women have played a critical role in American society. This course traces the history of women and gender in America during this period with special emphasis on the importance of women's reproductive and economic roles to the emergence of ethnic, racial, regional, and socio-economic categories in the United States. Slides, lectures, and readings drawn from primary documents introduce students to the conditions of women's lives during the colonial and revolutionary periods and to the rise of women's activism in the nineteenth century. In addition, we will consider how dramatic changes in housework, wage labor, female access to public forms of power, and ideas about female sexuality make it difficult to generalize about what is commonly thought of as women's "traditional" or "natural" role.

346. (GSOC346) Gender in Modern American History. (B) Peiss.

This course explores how immigration, industrialization, racial segregation, and the growing authority of science transformed the fundamental conditions of women's lives in the late nineteenth and early twentieth centuries. Building on previous efforts by female reformers to perfect society, women at the turn of the century organized large social movements dedicated to improving the lives of women and children and gaining public access to political power. We will examine the fruits of this activism as well as the consequences of subsequent events for the rise of several important social movements in the latter half of the century -- including civil rights, women's liberation, and gay rights -- in which women played a vital role. The course concludes with an assessment of feminism in the present day, with special emphasis on the responses of younger women to its legacy.

347. (CINE308, GSOC347) Gender History and American Film. (C) Peiss.

More than any other medium, the motion pictures fostered new ideals and images of

modern womanhood and manhood in the United States. Through the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender in the last 100 years through film.

349. (GSOC349) History of Sexuality in the U.S. (C) Peiss.

This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identities and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.

353. (AFRC353) Slave, Race, & Revolution in the Atlantic World. (M) Hahn.

This course will explore the role of peoples of African descent in the making and transformation of the Atlantic world between the revolutionary era of the late 18th century, which saw the establishment of the first black republic in the Western Hemisphere, and the early decades of the 20th century, when a new pan-African consciousness emerged. We will look at the roles that slavery and the slave trade played in marking the boundaries of a black Atlantic, and we will pay special attention to the part that people of African descent played both in struggles against slavery in the Americas and in the struggles to define the meanings of freedom and peoplehood there and elsewhere.

354. (ASAM354) American Expansion in the Pacific. (C) Azuma.

This class will focus on America's expansion into the Pacific around the turn of the century with the acquisition of Hawaii and the Philippines. It can deal with various issues, including the meaning of "frontier," colonialism, development of capitalist economies in the region,

diplomacy, racism, migration, an American brand of Orientalism in encountering the "natives" and "heathens," and histories of the West and the Pacific Islands in general.

355. Classic Texts in American Popular Culture. (C) Zuckerman.

Before there were movies and radio and television, books were mass media. Over the course of American history, some of them reached extraordinary audiences and achieved extraordinary influence. We will consider a number of those books, from Benjamin Franklin's *Way to Wealth* to Stephen King's *Carrie* in an effort to assess continuity and change in the character and concept of America.

361. American Politics and Society, 1877-1933. (C)

American society as we know it emerged in the late nineteenth and early twentieth centuries. This course examines the profound transformations in government, urban development, and the economy from the Gilded Age to the Great Depression. Themes include the growth of the state, the Populist movement, the rise of big business, the new consumer culture, immigration, urban change and Progressive reform.

L/R 363. (AFRC363) The Civil War and Reconstruction. (B) Engs.

Investigation of the major ingredients--political, social, and economic--leading to the sectional crisis and war, an analysis of the Civil War, leadership on both sides and the major issues of Reconstruction.

SM 371. (AFST373, NELC334) Africa and the Mid-East. (C) Troutt-Powell.

This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism--how the scramble for Africa dovetailed with the last decades of the Ottoman Empire--with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. The course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the

Middle East see their connections, and their differences.

372. (AFST372, AFST542, HIST542) The History of Foreign Aid to Africa. (C) Cassanelli.

This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of 'foreign aid,' that era introduced ideas and institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.

L/R 373. The 1960s in America. (A) Sugrue.

This course examines the political, cultural, and intellectual history of America between 1954 and 1974. It considers the civil rights movement, the New Frontier and Great Society, the Supreme Court and right politics, the rise of the New Right, the debate over Vietnam, student radicalism, sexual liberation movements, black power, the counterculture, the urban crisis, and white backlash. The course emphasizes the transformation of liberalism and the revitalization of conservatism, and the tensions between integration and separatism, between libertarianism and communitarianism that shaped the social movements of the sixties.

380. (JWST380, RELS320) Modern Jewish Intellectual and Cultural History. (C) Ruderman.

An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialist thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geiger, Hirsch, Herzl, Achad-ha-Am, Baeck, Buber, Kaplan, and others. No previous background is required.

L/R 395. (EALC105) East Asian Diplomacy. (A) Dickinson.

This course will survey the history of relations among the great powers in East Asia from 1600 to the present. Special emphasis will be played upon the peculiarities of cross-national exchange in Asia (as compared to Europe), particularly the difficulties of relations among states possessing fundamentally different cultural traditions. We will explore the many informal, as well as formal, means of diplomacy in Asia over the past 400 years.

425. World War I. (D) Holquist.

This survey course examines the outbreak, conduct, and aftermath of the First World War. The First World War put an end to the world of the 19th century and laid the foundations of the 20th century, the age of destruction and devastation. This course will examine the war in three components: the long-term and immediate causes of the First World War; the war's catastrophic conduct, on the battlefield and on the home front; and the war's devastating aftermath. While we will discuss military operations and certain battles, this course is not a military history of the war; it covers the social, economic, political and diplomatic aspects that contributed to the war's outbreak and made possible its execution over four devastating years. No preliminary knowledge or coursework is required.

SM 501. The Nature of Sex. (C) Brown.

What is natural about sex, gender, sexuality and reproduction? This course examines a range of social science, feminist, and historical theories that try to make sense of some of the most intimate and seemingly timeless features of the human experience: the difference between the sexes, the relationship between gender and anatomical sex, and the emotional and social dynamics of reproduction. Among the topics we will consider are the relationship between public and private life; the historic connections between patriarchy and capitalism; reproduction as a social and cultural as well a biological phenomenon; class, race, ethnicity, and religion as alternative sites of identity; citizenship, legal personhood and contract; the dynamics of empire and conquest; feminism; sexuality; the history of the body; visual culture; postmodernist, poststructuralist, and postfeminist ways of thinking about sex and gender; the current debates about the meaning of marriage; and the challenge presented by transgender lives. The course is designed for graduate students but open to undergraduates with the permission of the instructor.

Departmental Honors Program (398, 400-401)

SM 398. Junior Honors in History. (B) Staff.

Open to junior honors candidates in history. Introduction to the study and analysis of historical phenomena. Emphasis on theoretical approaches to historical knowledge, problems of methodology, and introduction to research design and strategy. Objective of this seminar is the development of honors thesis proposal.

SM 400. Senior Honors in History I. (E) Staff.

Open to senior honors candidates in history who will begin writing their honors thesis during this seminar.

Undergraduate Upper Level Courses (403-499). Open to Graduate Students

SM 411. (ENGL234) Introduction to Written Culture, 14th - 18th Centuries. (C) Chartier/Stallybrass.

SM 412. Topics in World History. (C) Waldron.

SM 414. Human Rights and History. (B) Nathans.

The idea of universal, inalienable rights--once dismissed by the philosopher Jeremy Bentham as "nonsense upon stilts"--has become the dominant moral language of our time, the self-evident truth par excellence of our age. Human rights have become a source of inspiration to oppressed individuals and groups across the world, the rallying cry for a global civil society, and not least, a controversial source of legitimation for American foreign policy. This seminar asks: how did all this come to be? We will investigate human rights not only as theories embodied in texts, but as practices embedded in specific historical contexts. Are human rights the product of a peculiarly European heritage, of the Enlightenment and protestantism? How did Americans reconcile inalienable rights with the reality of slavery? Did human rights serve as a "civilizing" mask for colonialism? Can universal rights be reconciled with genuine cultural diversity? Through case studies and close readings, the seminar will work toward a genealogy of human rights.

415. European Intellectual History of the Seventeenth Century. (A) Kors.

A survey based solely on primary sources of the main currents of seventeenth-century European thought: the criticism of inherited systems and of the authority of the past; skepticism, rationalism; empiricism; and the rise of the new natural philosophy. We will study deep conceptual change as an historical phenomenon, examining works that were both profoundly influential in the seventeenth century and that are of enduring historical significance. There are no prerequisites, and one of the goals of the course is to make seventeenth-century thought accessible in its context to the twenty-first century student.

416. European Intellectual History in the 18th Century. (B) Kors.

A survey based solely on primary sources of the main currents of eighteenth-century European thought: the "Enlightenment;" deism; natural religion; skepticism; evangelical revival; political reform; utilitarianism; naturalism; and materialism. The course will focus on works widely-read in the eighteenth century and of enduring historical significance. There are no prerequisites, and one of the goals of the course is to make eighteenth-century thought accessible in its context to the twenty-first century.

SM 418. (COML418) European Intellectual History since 1945. (B) Breckman.

This course concentrates on French intellectual history after 1945, with some excursions into Germany. We will explore changing conceptions of the intellectual, from Sartre's concept of the 'engagement' to Foucault's idea of the 'specific intellectual'; the rise and fall of existentialism; structuralism and poststructuralism; and the debate over 'postmodernity.'

L/R 420. European International Relations from the Age of Enlightenment to the Great War. (A) Granieri/McDougall.

This course will examine the international politics of Europe in the 18th and 19th centuries, up to the outbreak of World War I. During these centuries, the European great powers experienced significant internal transformations and also a revolution in their relations, both of which reinforced and accelerated each other. In the process, Europe asserted a dominant position in world politics, but also sowed the seed for the terrible catastrophes of the 20th Century. The course will address this transformation of European diplomacy with special attention to the rivalries between the

great powers, the impact of nationalism and emerging mass politics, the interplay between military and economic power, and the relationship between the European powers and the rest of the world.

421. European International Relations Since World War I. (D) Granieri.

This course will examine the international politics of Europe in the 20th Century, the period during which Europe, beset by two devastating wars and the horrific experience of genocide, lost its dominant international position and was forced to adjust to a world dominated by extra-European forces. We will examine the decline and (partial) recovery of Europe's international position with special attention to the contrast between international competition and transnational cooperation within Europe, the impact of the two World Wars, the ambivalent legacy of the Cold War, and Europe's developing role in the post-Cold War world.

L/R 430. Rise and Fall of the Third Reich. (A) Childers.

The meteoric rise of Hitler's NSDAP in Germany, the nature of Nazi rule, and the final collapse of the Third Reich. The first half of the semester analyzes the appeal of the NSDAP- who joined the party, who voted for it, and why. Nazi mobilization tactics, campaign strategy, and grass-roots techniques, the content of the party's social appeals. The second half of the course concentrates on the Nazis in power, their use of terror and propaganda, their ideological objective, everyday life in the Third Reich, the possibilities of resistance to the regime. Special attention will be devoted to Nazi Jewish policy and the step that led to the "Final Solution" and the Holocaust.

L/R 431. A World at War: World War II in Europe and Asia. (B) Childers.

This course will examine the diplomatic origins, military course and domestic implications of World War II.

441. North American Colonial History. (A) Brown.

A survey of the development of American colonial society, 1607-1750, with emphasis on the regional differences between life in early New England, the Mid-Atlantic, and the South, as well as the relationships between British colonists, Native Americans, and African Americans.

442. America in the Era of the Revolution, 1763-1800. (B) Beeman.

As a number of historians have observed, the American Revolution now may seem to have been the inevitable culmination of political, economic, and cultural changes underway in the eighteenth century. But for many whose lives were altered by its disruptive contours, it was more improbable than inevitable. How, then, are we to make sense of the Revolution? What were its causes? Its progress? Its extended "settlement," or period of resolution and questions during the course of the semester, we will need to keep our eyes open to changes afoot in many social fields: the ascendancy or democratic and egalitarian thought; the widespread development of consumerism and market capitalism; the linked forms processes of rebellion and nation-building; and the economic and strategic progress of the conflict itself.

443. American National Character. (C) Zuckerman.

Who ARE the Americans, anyway? And are they still what they once were? The course will consider some classic and modern theories of American identity. It will address some allegedly quintessential expressions of this elusive, perhaps essential idea, in Puritanism, Jefferson, Franklin, and Whitman. And it will examine contemporary West Philadelphia to see if the old characterizations still apply in a new day (or ever did apply outside small-town American among affluent white males). Work in, and observation of, a local school will be an integral part of the course.

SM 449. (JWST449) Jewish Intellectual and Cultural History in the Early Modern Era: From the Spanish Expulsion to Spinoza. (C) Ruderman.

Major Jewish ideas and ideologies from the fifteenth to the seventeenth centuries in the context of the Renaissance, the Reformation, the scientific revolution, and religious skepticism. Topics include Jewish reflections on catastrophe in the post 1492 era. Jewish and Christian stuff of the Kabbala, Lurianic messianism, Sabbatianism, Hasidism, and cultural developments in the Marano community of Amsterdam.

L/R 451. United States War and Diplomacy. (C) Kuklick.

A study of United States diplomacy during four critical periods: World War I, World War II, the Cold War and Korean War, and the war in Vietnam. Lectures and discussions will center around the exercise

of power, the limits placed on its use, and problems of political morality. Readings in secondary sources, papers, and exam.

SM 489. (AFRC488, AFST489, URBS489) Africans Abroad: Emigrants, Refugees, and Citizens in the New African Diaspora. (C) Cassanelli.

This seminar will examine the experiences of recent emigrants and refugees from Africa, including many now living in the city of Philadelphia and the surrounding region. In addition to reading some of the historical and comparative literature on migration, ethnic diasporas, and transnationalism, students will have the opportunity to conduct research on specific African communities in Philadelphia or elsewhere in North America, Europe, or the Middle East. African emigres' relations with both their home and host societies will be explored and compared with the experience of other immigrant groups over the past century. Topics include reasons for leaving Africa, patterns of economic and educational adaptation abroad, changes in gender and generational roles, issues of cultural and political identity, and the impact of national immigration policies.

SM 490. (GRMN581, JWST490, RELS429) Topics in Jewish History. (C) Staff.

Reading and discussion course on selected topics in Jewish history.

Graduate Courses (500-999)

SM 525. (JWST524, RELS524) God and Nature: Readings on the Encounter Between Jewish Thought and Early Modern Science. (C) Ruderman.

Readings of texts chosen to shed light on the relationships between Judaism, magic, and science, primarily in the sixteenth and seventeenth centuries. An attempt to compare the Jewish pattern of response to science, medicine, and the natural world with Protestant and Catholic responses in the age of "The Scientific Revolution." Knowledge of Hebrew recommended but not required.

SM 530. (AFRC530) 20th Century Afro-American Historiography. (A) Staff.

This course will study major historical works on African American history for the post-1890 period. Emphasis on intellectual, political, and cultural history, and special attention to current debates about the relevance of this history and race

generally to studies and students of United States history.

SM 533. (JWST533, RELS533) Topics in Ancient and Medieval Christianity. (B) Staff.

Topics vary.

SM 550. (JWST529, JWST551, RELS529) Topics in Jewish History. (C) Staff.

Reading and discussion course on selected topics in Jewish history.

SM 608. (SOCI608, URBS608) Proseminar in Urban Studies. (E) Katz.

This seminar is required for students in the Urban Studies Graduate Certificate Program. They will be given preference for enrollment, which is limited to 15. The course is designed for Ph.D. students who intend to do urban-related research. It is not open to undergraduates. Master's Degree students will be allowed to enroll only in special circumstances and with the permission of the instructor. To earn credit for the Graduate Certificate Program, students must enroll for both fall and spring semesters. Other students may take only the fall semester. Enrollment for the spring semester alone is not permitted. In the fall, the seminar will focus on inter-disciplinary readings concerned with the history of American cities in the twentieth-century. In the spring, students will write a major research paper and meet with scholars and practitioners who exemplify a variety of careers in urban research.

SM 610. (AFRC610, HSSC610, URBS610) Topics in American History. (A) Staff.

Reading and discussion course on selected topics in American history.

SM 620. (COML621, GRMN630, JWST620, SLAV623) Topics in European History. (A) Staff.

Reading and Discussion course on selected topics in European History.

SM 630. (EALC774) Topics in Asian History. (C) Staff.

Reading and discussion course on selected topics in Asian History.

SM 640. Topics in Middle Eastern History. (C) Staff.

Reading and discussion course on selected topics in Middle Eastern history.

SM 650. (AFRC620, AFST650) Topics in African History. (C) Staff.

Reading and discussion course on selected topics in African history

SM 660. Topics in Latin American and Caribbean History. (C) Staff.

Reading and discussion course on selected topics in Latin American and Caribbean history

SM 668. (AFRC668) Colloquium in the History of Law and Social Policy. (A) Berry.

This is a course in the history of law and policy-making with respect to selected social problems. Discussion of assigned readings and papers will elaborate the role law, lawyers, judges, other public official and policy advocates have played in proposing solutions to specific problems. The course will permit the evaluation of the importance of historical perspective and legal expertise in policy debates.

SM 670. (EALC541) Topics in Trans Regional History. (C) Staff.

Reading and discussion course on selected topics in Transregional History

Proseminars and Research Seminars

SM 700. Proseminar in History. (E) Staff.

Weekly readings, discussions, and writing assignments to develop a global perspective within which to study human events in various regional/cultural milieus, c. 1400 to the present.

SM 710. (LAW 969) Research seminar in American history. (C) Staff.

Research seminar on selected topics in American history.

SM 720. (COML721, RELS738) Research in European History. (C) Staff.

Research seminar on selected topics in European history.

SM 730. Research Seminar in Asian History. (C) Staff.

Research seminar on selected topics in Asian history.

SM 740. (AFRC740) Research Seminar in Middle Eastern History. (C) Staff.

Research seminar on selected topics in Middle Eastern history.

UNIVERSITY COURSE REGISTER

SM 750. Research Seminar in African History. (C) Staff.

Research seminar on selected topics in African history.

SM 760. Research Seminar in latin American and Caribbean History. (C) Staff.

Research seminar on selected topics in Latin American and Caribbean history.

HISTORY & SOCIOLOGY OF SCIENCE (AS) {HSSC}

Listings for STSC, the undergraduate major in Science, Technology, and Society (STSC) follow HSSC 999.

SM 503. Current Issues in the History of Medicine. (M) Barnes.

This seminar surveys a variety of popular and scholarly approaches to the study of medicine and its history, ranging from traditional physician-centered narratives to more recent cultural and epistemological methodologies. The potential values of journalistic, sociological, anthropological, geographical and other approaches to the historical study of health, disease, and health care will be explored.

SM 504. Reading Seminar in History of Science. (A) Adams.

Survey of major themes and figures in the history of western science, technology, and medicine since the Renaissance, through reading and discussion of selected primary and secondary sources. Topics include: Kepler, Galileo, Bacon, Newtonianism, Pasteur, the Industrial Revolution, the rise of German science, etc. Concurrent attendance at STSC 1 lectures is recommended.

SM 505. Seminar in the History and Sociology of Science. (A) Staff.

Seminar for first-year graduate students, undergraduate majors, and advanced undergraduates. Reading will introduce the student to current work concerning the effect of social context on science, technology, and medicine.

SM 510. Science and Populr Culture. (C) Lindee.

This course will review major developments in biomolecular sciences and Many historians of science, technology and medicine have embraced the study of popular culture in recent years. They have drawn on a rich literature in mainstream history, on the history of reading, of the book, of museums, of oral culture, journalism, theater, and of the mass media including radio and television. Some have even proposed that popular culture provides insights into elite knowledge systems that are not accessible in other kinds of sources, thus privileging what is publicly known over the traditional private textual, visual and material records of the archive or museum. In this graduate research seminar we will be exploring the relevance

of the study of popular culture to the history of science, technology and medicine. Participants will write an original research paper in which they draw on popular culture as a resource for the interpretation of practices, theories and material resources in natural knowledge systems. Readings will generally focus on surveys that explicitly discuss methods, though we will also read some primary sources possibly including science fiction texts, memoirs of patients, engineers, physicians and scientists, gee-whiz popular science books, and didactic books intended for children.

SM 511. Science and Literature. (M) Adams.

SM 515. The History of Computing. (M) Ensmenger.

The history of computing is about more than just the electronic digital computer. It is the story of a wide range of human activities, scientific practices, and technological developments. The story begins in the early 19th century with the emergence of new demands for information management -- from scientific researchers, expanding government bureaucracies, and increasingly national and international corporations. It includes not only "computers" (itself a large and diverse category) but data processing, communications, and visualization technolgoeis, as well as people, practices and organizational structures. In this course we will explore the history of computing in all of its forms and varieties. We will situate the computer in the broader history of technology, but also consider it from the perspectives of the history of science, labor history and social history.

SM 519. Topics in the Social History of Knowledge. (M) Tresch.

This reading seminar will cover writings on the social history of knowledge that are often mentioned by historians of science but less often read; it will give students a chance to read and discuss authors who are neglected, trendy, difficult, and/or foundational in this field. We will begin with Lovejoy's Great Chain of Being and critiques brought against it, moving to classic histories of scientific ideas with a focus on "mechanical philosophy" followed by recent rethinkings of "the Scientific Revolution." We will then visit major schools of historical interpretation: Foucault's genealogies of knowledge and power, Marxist criticism and the Frankfurt School, Max Weber's analysis of rationalization and the values of science, along with philosophical approaches to

technoscience, biopower, the state of exception and artificial life. Throughout, our guiding questions will be the relationship between scientific knowledge and institutions, practices, technologies and values, as well as the connection between local case studies and the "big picture" of science and technology in the modern world. The seminar is open to graduate students from any discipline who want to engage critically with these works.

SM 520. Scientists and the State. (M) Staff.

This course explores the relationship between the scientist and the State by studying important 20th century scientists in Britain, America, Nazi Germany and the Soviet Union. Topics include the "Galileo myth," and institutional, ideological, and ethical dimensions of the relationship. Scientists to be studied will include J.B.S. Haldane, H.J. Muller, T.D. Lysenko and A.D. Sakharov.

SM 527. (COML525, PHIL525) Topics in Philosophy of Science. (M) Staff.

Topics will vary.

SM 528. (GSOC528) Gender and Science. (M) Lindee.

With a special focus on methods, this course explores the rich literature on gender and technical knowledge.

SM 533. (FOLK533, RELS505) Folk and Unorthodox Health Systems. (B) Hufford.

An examination of theories concerning the origin and function of folk beliefs, and investigation of the expression of folk beliefs in legend, folk art, custom and ritual. Ritual is the focal genre for explanatory purposes, and introduction to the social symbolic approach to analysis and interpretation is primary for exploration and application.

SM 535. Biology in the Last Century. (M) Adams.

A research seminar focusing on some aspects of the history of biology during the last hundred years.

SM 545. (FOLK548, HIST512) Health and Medicine in the Non-Western World. (M) Feierman.

This seminar explores current readings on health and healing in the colonial and post-colonial world. We give special attention to local healing under condition of domination, to definitions of the body and the person in biomedicine and in non-European healing traditions, and to the political and cultural place of medicine in

regions which have experienced colonial rule.

SM 548. (ANTH614) Current Issues in the History of Medicine. (M) Barnes.

This seminar surveys a variety of popular and scholarly approaches to the study of medicine and its history, ranging from traditional physician-centered narratives to more recent cultural and epistemological methodologies. The potential value of journalistic, sociological, anthropological, geographical, and other approaches to the historical study of health, disease and health care will be explored.

SM 550. The Information Sciences. (M) Ensmenger.

This course will explore the emergence and widespread adoption in the early Cold War-period of a set of interrelated tools, techniques, and discourses organized around the concept of "information." These emerging information sciences included not only new disciplines such as cybernetics, information theory, operations research, and ecology, but also some traditional physical sciences - such as biology and chemistry - as well as a broad range of social sciences, including economics, political science, sociology and urban planning. The focus of the course will be on tracing the important structural changes in post-war science that encouraged the adoption of the rhetoric of information (if not its substance), as well as on extending the relevance of these developments to a wide range of topics in the history of science, medicine, and technology.

SM 564. History of Technology. (M) Cowan/Ensmenger.

SM 565. Environmental History. (M) Staff.

A reading seminar in recent environmental or ecological history. Topics include epidemics and history, the Columbian exchange, the ecology of land-use and settlement, cultural perceptions of nature, cities and their regions, and ecology and environmentalism.

SM 584. (RELS507) Ethnography of Belief. (B)

SM 588. Readings in the History of the Human Sciences. (M) Staff.

SM 610. (HIST610) Colloquium in American History. (M) Staff.

Reading & discussion course on selected topics in American history.

SM 620. (GSOC620, HIST620, JWST620, RELS622) Colloquium in European History. (M) Staff.

This course will focus on problems in European political, social, cultural, and economic development from 1750 to the close of the second World War. Readings will be major works in the different fields of European historical scholarship, ranging from family to diplomatic history and covering a wide variety of methodological approaches.

SM 622. Darwin. (M) Adams.

SM 626. Research Seminar in History of Technology. (C) Cowan/Ensmenger.

This graduate seminar provides a structured environment in which each student executes an independent research project. Early class meetings focus on the craft of researching and writing scholarly articles. Later meetings are devoted to discussion of students progress on their research projects. Each student defines their own research topic in the history of technology, subject to the Professor's approval.

SM 629. Readings in Genetics and Genomics. (C) Lindee.

SM 665. Research Seminar in History of Science, Technology and Medicine. (M) Barnes.

SM 677. Scientific Careers. (M) Kuklick.

SM 690. Publish or Perish. (M) Kuklick.

999. Graduate Independent Study. (C)

Available to doctoral students only.

SM 413. (HSOC413) Perfect Bodies. (C) Linker.

SCIENCE, TECHNOLOGY, & SOCIETY (STSC)

L/R 001. (HSOC001) Emergence of Modern Science. (A) May be counted toward the Hum/SocSci or NatSci/Math Sectors. Class of 2010. Adams.

During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work and cultural

contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they related to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a "Western Civ" course with a difference, open to students at all levels.

L/R 002. (HIST036, HSOC002) Medicine in History. (A) History & Tradition Sector. All classes. Barnes.

This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole-- recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down" or "from the bottom up," this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.

003. (HSOC003, SOCI033) Technology and Society. (B) Society Sector. All classes. Tresch/Ensmenger.

"We shape our technologies; thereafter they shape us." This course surveys the ways in which technology has shaped our societies and our relations with the natural world. We will examine the origins and impact of technical developments throughout human history and across the globe--from stone tools, agriculture and cave painting to ancient cities, metallurgy and aqueducts; from windmills, cathedrals, steam engines and electricity to atom bombs, the internet and genetic engineering. We will pay attention to the aesthetic, religious and

mythical dimensions of technological change and consider the circumstances in which innovations emerge and their effects on social order, on the environment and on the ways humans understand themselves

SM 021. From Darwin to DNA. (M)
Lindee.

In this seminar, we consider the history of genetics and genomics, from the Darwinian theory of evolution (1859) to the completion of the mapping of the human genome (2004). We will look at how Darwin thought about heredity, how Mendel's work was interpreted, how ideas about heredity changed in the early twentieth century, how experimental organisms like mice and flies became important to genetics research, how technologies for manipulating genes opened up new possibilities and new ethical questions, and how mapping and sequencing human genes facilitated the rise of genomic medicine and consumer genomics today. This course will help students understand the importance of genetics and genomics in our contemporary world by providing them with critical historical perspectives.

SM 022. (HSOC022) Race, Genetics and Social Policy. (M) Cowan.

What box do you check if a form asks you to identify your race? Do you fall between boxes? Do you check two or three? Do you refuse to answer the question even if you can check one box? "What is your race?" is a loaded question in American society, because racial identities have social, political and economic ramifications. This course is designed to examine the meanings of race, in particular the ones that have been thought to have a scientific or biological foundation. We will examine the origins of these questions of race from the end of the 19th century to the present, and the way that the genetic science of race has shaped social policy and has changed over time. Most of our focus will be on the United States, but we will also set these questions in a transnational perspective.

SM 023. Transformation and Power in the Industrial Age; Europe 1750-1900. (M) Tresch.

Victor Frankenstein created a monster. But he didn't make it out of nothing: he found body parts in operation rooms and graves, sewed them together, and invested the new whole with life following scripts laid down by thinkers both ancient and new. Likewise, in creating Frankenstein, one of the greatest novels of all time, Mary Shelley put together elements from gothic

fiction, moral and political philosophy, romantic poetry and contemporary science. What were the books that Victor Frankenstein read? What ideas animated Shelley's act of creation? In this seminar we will read from the primary texts that made up Frankenstein and Shelley's libraries, along with closely related works from this period, ranging from Renaissance magic, modern electrochemistry and physiology, through to Rousseau, Smith, Milton, Poe and Balzac. These readings will bring to life a crucial moment in the history of the West--after the French Revolution and at the start of the industrial age--which will give us perspective on today's anxieties about technology and science.

026. (PHIL026) Relativity and the Philosophy of Space and Time. (A)

Natural Science & Mathematics Sector. Class of 2010 and beyond. Domotor. Also fulfills General Requirement in Science Studies for Class of 2009 and prior.

This course will present a detailed introduction to Einstein's special and general theories of relativity and will examine their historical development and philosophical significance. No previous physics or philosophy will be presupposed, and only high school mathematics will be used.

SM 028. (HIST025, HSOC025, RELS116) Western Science, Magic and Religion 1600 to the present. (C)
History & Tradition Sector. All classes.
Kuklick.

Throughout human history, the relationships of science and religion, as well as of science and magic, have been complex and often surprising. This course will cover topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.

SM 051. (HSOC051) Ethics, Technology and the Life Sciences. (M) Moreno.

In this seminar we will explore the roles and functions of the bioethicist, a new profession that has only emerged in the past quarter century or so, and the new field of bioethics. Bioethicists work in hospitals on clinical ethics, in medical schools and research facilities on experimentation ethics, in public policy and, more recently, in the political arena. We will also explore bioethical theories and specific issues and cases like stem cell research and the Schiavo controversy, and discuss the history of bioethics. And we will pay close attention to bioethical issues in the media during the semester.

SM 088. Who Owns the Past. (M)
Kuklick.

Stories told about the past have long been understood as moral lessons. An historical narratives have also inevitably been susceptible to partisan construction--to different readings by opposed parties. But the strength of appeals to the past is not a constant: historical experience has at some times and in some places been seen as irrelevant to selection of courses of practical action. Today, in the United States as well as in many other parts of the world, appeals to historical precedent carry considerable weight and are made for all manner of purposes. This course will discuss the uses of history in contemporary and past situations, drawing examples from the United States, Europe, the Middle East and Africa.

SM 100. History of American Science. (M) Staff.

Scientific knowledge has been crucial to the United States' development as a nation and as a global power. This course examines the changing ways Americans have known about the natural and social world from the eighteenth to the twentieth century. We will follow three strands to understand the history of American science. First, we will trace encounters with new landscapes as white settlers migrated from the eastern shores to the prairies to the Rockies. We will examine their efforts to map and categorize nature and to control working landscapes. Second, we will examine changing theories of race, from scientific justifications of slavery and theories of Indian decline to the construction of 'whiteness' and the spread of eugenics. Finally, we will examine the interaction between scientific knowledge and forms of military and industrial production, from the development of industrial gunpowder, to the making of the Atomic bomb, to the building of the "gun belt" across the Southern states. Throughout the course we will also take advantage of our location at the heart of early American Science, using Philadelphia's rich museums and collections of scientific instruments, specimens, and rare texts to illuminate major themes.

SM 108. (COML224, PHIL225) Introduction to Philosophy of Science. (M) Domotor.

A discussion of some philosophical questions that naturally arise in scientific research. Issues to be covered include: The nature of scientific explanation, the relation of theories to evidence, and the development of science (e.g., does science

progress? Are earlier theories refuted or refined?).

L/R 110. (ENGL075, HIST117, HSOC110) Science and Literature. (B) Arts & Letters Sector. All Classes. Adams.

This course will explore the emergence of modern science fiction as a genre, the ways it has reflected our evolving conceptions of ourselves and the universe, and its role as the mythology of modern technological civilization. We will discuss such characteristic themes as utopias, the exploration of space and time, biological engineering, superman, robots, aliens, and other worlds--and the differences between European and American treatment of these themes.

L/R 123. (HSOC123) Darwin's Legacy: The Evolution of Evolution. (B) Living World Sector. All classes. Adams.

Darwin's conceptions of evolution have become a central organizing principle of modern biology. This lecture course will explore the origins and emergence of his ideas, the scientific work they provoked, and their subsequent re-emergence into modern evolutionary theory. In order to understand the living world, students will have the opportunity to read and engage with various classic primary sources by Darwin, Mendel, and others. The course will conclude with guest lectures on evolutionary biology today, emphasizing current issues, new methods, and recent discoveries. In short, this is a lecture course on the emergence of modern evolutionary biology--its central ideas, their historical development and their implications for the human future.

128. (PHIL226, PHIL521, PPE 225) Introduction to the Philosophy of Biology. (M) Natural Science & Mathematics Sector. Class of 2010 and beyond. Domotor, Weisberg.

This course covers the basic philosophical problems of biology, including reductionism, status of teleological reasoning, the problem of species, units of selection, biological function, and levels of organization

135. (HIST035) Emergence of Modern Biology. (C) Natural Science & Mathematics Sector. Class of 2010 and beyond. Adams.

This course will explore the emergence of evolutionary biology, the ways it has reflected our concepts of life and nature, and the human and social implications of biological theories and ideas. We will focus on some of the central historical

figures that have shaped our understanding--Linnaeus, Lamarck, Darwin, Mendel, Galton--and the implications of their ideas for who we are, where we come from, and where we are going.

L/R 145. (HIST146, HSOC145) Comparative Medicine. (A) History & Tradition Sector. All classes. Feierman.

This course explores the medical consequences of the interaction between Europe and the "non-West." It focuses on three parts of the world Europeans colonized: Africa, South Asia, and Latin America. Today's healing practices in these regions grew out of the interaction between the medical traditions of the colonized and those of the European colonizers. We therefore explore the nature of the interactions. What was the history of therapeutic practices that originated in Africa or South Asia? How did European medical practices change in the colonies? What were the effects of colonial racial and gender hierarchies on medical practice? How did practitioners of "non-Western" medicine carve out places for themselves? How did they redefine ancient traditions? How did patients find their way among multiple therapeutic traditions? How does biomedicine take a different shape when it is practiced under conditions of poverty, or of inequalities in power? How do today's medical problems grow out of this history? This is a fascinating history of race and gender, of pathogens and conquerors, of science and the body. It tells about the historical and regional roots of today's problems in international medicine.

160. (SOC1161) The History of the Information Age. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Ensmenger.

Certain new technologies are greeted with claims that, for good or ill, they must transform our society. The two most recent: the computer and the Internet. But the series of social, economic, and technological developments that underlie what is often called the "Information Revolution" include much more than just the computer. In this course, we explore the history of information technology and its role in contemporary society. We will explore both the technologies themselves--from telephones to computers to video games--as well as their larger social, economic and political context. To understand the roots of these ideas we look at the pre-history of the computer, at the idea of the "post industrial" or "information society," at parallels with earlier technologies and at broad currents in the development of American society.

162. (HSOC152) Technology and Medicine in Modern America. (L) Staff.

SM 179. (ENVS179, HIST320, HSOC179) Environmental History. (B) Greene.

Environmental history studies the interactions between humans and the natural world. In this kind of study, mosquitoes and rain are actors in history as well as humans and their impact. This course explores these interactions through case studies and topics nationally and globally, such as energy, disease, human migration and settlement, animals, technological changes, urban and suburban development, conservation and politics. This course is geared toward students who want to think about how history happens, in different places and over time.

182. (GSOC182) Social Science and American Culture. (C) Kuklick.

This course examines the role of social science in the United States during the 20th century. There have been popular social scientific theories since the early 19th century, when the craze spread for interpreting individuals' character by feeling the bumps on their heads. But popular social science is really a 20th century phenomenon. And popular culture influenced academic research. Our coverage cannot be comprehensive. We have insufficient time to treat all human sciences equally. For example, there is enormous popular interest in paleoanthropology and archaeology, but we will not discuss these in class--although you might choose to write your research paper for the course on a specific aspect of one of these disciplines.

L/R 212. (HSOC212) Science Technology and War. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Lindee.

In this survey we explore the relationships between technical knowledge and war in the nineteenth and twentieth centuries. We attend particularly to the centrality of bodily injury in the history of war. Topics include changing interpretations of the machine gun as inhumane or acceptable; the cult of the battleship; banned weaponry; submarines and masculinity; industrialized war and total war; trench warfare and mental breakdown; the atomic bomb and Cold War; chemical warfare in Vietnam; and "television war" in the 1990s.

SM 226. (HSOC226, SAST289) Science, Medicine and Technology in South Asia. (M) Petrie.

This course examines the history of science, technology and medicine in the Indian subcontinent from ca. 1750 to the present. The first half of the semester will focus on the period of British dominance, considering such topics as: the role of science, medicine and technology in colonial rule and anti-colonial nationalism; Western understandings of and impacts upon Indian environments; the relationship between Western and indigenous forms of knowledge. The second half of the course will examine the post-colonial period, with a particular focus on development and environmental issues and the policies of the governments of India, Pakistan and Bangladesh.

SM 242. (HSOC242, GSOC242) Science of Sex and Sexuality. (M) Lundeen.

The author of a New York Times article entitled "On Being Male, Female, Neither or Both" concluded her comments with the following statement: "The definition of sex was (and is) still up for grabs." In our post-modern world, we have become accustomed to the malleability of gender identity and sexuality. We are also aware that individuals undergo sex reassignment surgeries but by and large we assume that transgender people are transitioning from one discrete category to another. Queer activists certainly challenge this assumption, preferring to envision sex, gender, and sexuality on a continuum, but these days even scientists don't concur about a definitive definition of sex. Should sex be defined chiefly by anatomy? Chromosomes? The body's ability to produce and respond to hormones? If the boundaries of biological categories can be contested, what are the implications for culturally constructed ideas about gender identity and sexuality.

247. (HSOC206) Health and Disease in the Developing World. (M) Staff.

This course will explore the current context of health policy, health reform, and health service delivery in the developing world. After examining global economic and political context of health care, students will analyze the role that economic development plays in promoting or undermining health. Students will examine key disease challenges such as tuberculosis, malnutrition, and HIV/AIDS.

L/R 253. (COML253, GRMN253, HSOC253, GSOC252) Freud: The Invention of Psychoanalysis. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Weissberg. Pilot Curriculum Course All readings and lectures in English General Requirement VII: Science Studies.

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today.

SM 260. (SOC1260) Cyberculture. (C) Ensmenger.

Free speech, free software, MOOS, MUDs, anime and cyberpunk. All of these are elements of a broad set of social, technical and political phenomena associated with the emergence of a nascent "cyberculture". In this seminar we explore the ways in which recent developments in information technology -- the computer and the Internet in particular -- relate to changing contemporary notions of community, identity, property and gender. By looking at an eclectic collection of popular and scholarly resources including film, fiction and the World Wide Web, we will situate the development of "cyberculture" into the larger history of the complex relationship between technology and Western society.

SM 269. Computers, Ethics, and Social Values. (M) Ensmenger.

This course will explore the various social implications of information technology: social, cultural, political and economic. Topics will include technology policy, organizational change, globalism and the digital divide, intellectual property rights, Linux and the free software movement, cyber libertarianism, and the rise and fall of the dot.com economy.

271. (ENVS271) Law, Environment and Technology. (M) Staff.

This course will survey episodes in the history of the United States, especially in the twentieth century, that illustrate technology's central role of shaping environments, that illustrate the uses of the law in mediating social conflict concerning technologies and the environment. An important intent of the course will be to lead students to consider various environments along the spectrum of human manipulation, ranging from wilderness to agricultural landscapes and from designed gardens to urban and industrial environments. The main focus of the course will be on uses of the law by

competing groups to mediate environmental conflicts through negotiation of treaties; lobbying legislative bodies to pass laws; influencing regulators to stiffen or weaken regulations; drawing police authorities into the fray; and seeking favorable rulings from the courts.

272. (ENVS272) Energy in American History. (M) Staff.

Energy is at the center of many discussions of today's world. How central is an apparently unlimited supply of energy to a healthy economy? What is the importance of sources of energy supply to national security? How can we expend the energy we need to foster human life as we know it without allowing climate change to disrupt the existing global environments that sustain the lives of humans and other living species in accustomed ways? How crucial is the current level of energy use to patterns of American consumption, and how willing are Americans to alter their consumption habits in order to reduce energy use? What is the connection between various sources of energy and the relationships of social, economic, and political power that exist in the U.S. today. This course will examine changes in energy sources, energy use, and energy technologies across American history in order to help students understand how the U.S. and the world arrived at its present situation with regard to energy and to understand the complex technological, environmental, social, economic, and political challenges implicit in any effort to modify the current trajectories of energy use.

SM 288. (SOC1282) Knowledge and Social Structure. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Kuklick.

Throughout human history, the relationships of science and religion, as well as of science and magic, been complex and often surprising. This course we cover topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.

SM 301. Science and Religion. (M) Adams.

This seminar focuses on the relationship between science and religion in history and the present through the exploration of these topics: Galileo and the Roman Catholic Church, Newton's religion, Natural Theology, Darwinism, the Scopes Trial, Creationism and Intelligent Design. Course requirements include active class participation, short weekly papers, class reports and a final research paper.

SM 311. (HSOC311) Science, Medicine and Media. (A) Wolfe.

This course is an introduction to the history and the contemporary state of science journalism. Public understanding of science, medicine and technology is critical to a society that must make informed decisions about health, the environment and economic growth, but the relationship between science and the public is complex. This course explores not only how books, newspapers, television, films, podcasts and blogs have shaped our understanding of science and scientists, but also the contexts in which these media are created.

SM 312. (HSOC312) Weapons of Mass Destruction. (C) Lindee.

The course explores the historical development of traditional weapons of mass destruction such as chemical, nuclear and biological agents, in addition to newer and seemingly non-traditional weapons such as land mines and civilian aircraft that can also be employed to cause large numbers of injuries and deaths among civilian and military populations. Through case studies in technology and public health, students will evaluate the medical, scientific, environmental, and cultural ramifications of these weapons and their effect on human health and society by analyzing the rise of the military-industrial-academic-complex in twentieth century America.

SM 323. (ENGL275, HSOC323) Writing Science. (B) Mills.

This course surveys the interdisciplinary field of Science and Literature Studies, with an emphasis on the modern life and physical sciences (19th century to the present). During the first part of the semester, we will examine literary responses to science: the "two cultures" debate; the impact of scientific and technical changes on literary practices; representations of science in fiction. In the second half of the course, we will consider science as literature: scientific rhetoric and standards of authorship; inscription or writing technologies in laboratories; scientists as authors of popular literature; the impact of futurism and speculative fiction on science. Course readings will be drawn from fiction, the life and physical sciences, literary theory, and the history of science.

SM 329. (GSOC330) Gender and Science. (M) Lindee.

This course explores the gendered nature of science as social endeavor, intellectual construct and political resource. We consider the rise of gentlemanly science,

masculinity and the arms race, the notion of a "Successor science" grounded in feminist theory, and the historical role of gender in defining who can do science and what counts as scientific data. We also explore how science has interpreted male-female differences. Our goal is to understand the profound impact of social place in the history of science, and thereby to understand the social nature of scientific knowledge.

SM 381. (GSOC381, HSOC381) Non-Stranger Violence. (C) Sorenson.

The purpose of this course is for students to learn about the definitions, conceptual frameworks, myths, processes, consequences and societal interventions regarding violence in relationships. Using a life course perspective, addressing abuse from childhood through late life, the course will examine how gender and generational differences in resource distribution, role expectations, etc. shape the occurrence, experience and response to violence in relationships.

SM 410. Science Fiction. (M) Adams.

An exploration of the interface between science and literature, including: the role of genre, narrative form, metaphor, and style in science; the depiction of science and scientists in fiction; the role of popular culture in reflecting--and creating--the social meaning of science and technology; and the use of science fiction in teaching the history of science, technology and medicine. Themes will include utopias, robots, supermen, aliens, time travel, alternate histories, and future histories.

SM 420. (HSOC420) Research Seminar. (B) Staff.

This seminar in research methods is required in the spring term for all juniors on writing senior thesis in HSOC or STSC.

SM 425. Philosophy of Science. (M) Domotor. Prerequisite(s): Background in elementary logic and some rudiments of science.

Historically oriented survey and contemporary analysis of the basic concepts and arguments in philosophy of science. An in-depth examination of the nature of scientific theories, their confirmation and theory-world relations, laws of nature and their role in unification and explanation, causation, and teleology, reductionism and supervenience, values and objectivity. Additional topics covered include arguments concerning scientific realism, the ontological status of theoretical entities, the Quine-Duhem thesis, Kuhn's

paradigm shifts, Bayesianism, and the success of science.

SM 426. (PHIL426) Philosophy of Psychology. (M) Hatfield.

Is there a science of psychology distinct from physiology? If there is, what is its subject matter? What is the relationship between scientific psychology and traditional philosophical investigation of the mental? Examination of these questions is followed by analysis of some concepts employed in cognitive psychology and cognitive science, particularly in the fields of perception and cognition.

SM 428. (GAFL477, HSOC428) Genetics & Social Policy. (M) Cowan.

The focal topic for the semester will be genetics and race. Race will be interpreted broadly to include populations that might be defined by geography, religion, or language, rather than by skin color and facial features. Various social policies were once designed by people who had definitive views about the genetics of race. We will begin with some background reading about the beliefs of Social Darwinists (late 19th century), eugenicists (first half of the 20th century) and sociobiologists and human geneticists (second half of the 20th century; and will then proceed to consider how this history affects current social concerns about genetic testing, personalized and pharmacogenetics.

SM 430. (HSOC430) Disease and Society. (C) Aronowitz.

What is disease? In this seminar students will ask and answer this question by analyzing historical documents, scientific reports, and historical scholarship (primarily 19th and 20th century U.S. and European). We will look at disease from multiple perspectives -- as a biological process, clinical entity, population phenomenon, historical actor and personal experience. We will pay special attention to how diseases have been recognized, diagnosed, named and classified in different eras, cultures and professional settings.

SM 431. (HSOC431) Cold War Science and Medicine. (B) Wolfe.

During the Cold War, science, technology and medicine occupied a central place in the developing and maintaining state power. The incorporation of science into the apparatus of the Cold War state changed the ways that scientists studied, worked, and communicated with each other and the public. But beyond such practical concern, scientists in both the United States

and the Soviet Union had to confront the question of what it meant to pursue natural knowledge in a militarized state. No nation or political system could survive without the weapons, medicine, foodstuffs, and consumer products made possible by modern scientific research--yet science was supposedly an international system free from the dictates of politics. This course explores the contradictions of Cold War science and medicine.

SM 471. (HSOC471) Guns and Health. (A) Sorenson.

The purpose of this course is for students to gain an understanding of the role of guns in health, and population and prevention approaches to violence. The course will include a focus on policies and regulations related to firearms, the primary mechanism by which violence-related fatalities occur in the U.S. We will address the life span of a gun, from design and manufacture through to use. In addition, we will address key aspects of the social context in which

firearms exist and within which firearm policy is made.

498. Honors Thesis. (A) Staff.

499. Undergraduate Independent Study. (C)

Available with all members of the department faculty subjects ranging from the history of anthropology to the sociology of institutions.

IMMUNOLOGY (MD) {IMUN}

506. (MICR506) Immune

Mechanisms. (A) Terri Laufer, M.D.
Prerequisite(s): Permission of instructor. 4 h. 1 c.u. Taught Monday, Wednesday, with review session on Friday.

This is an introductory graduate course which surveys most areas of immunology. It is assumed that students have a background in biochemistry and molecular biology, and at least some familiarity with immunological concepts.

Topics covered include the major histocompatibility complex, structure of antibodies and T cell receptors, antigen-antibody interactions, the generation of diversity of immunoglobulins and B cells, antigen presentation, and immunological tolerance.

There will be two exams, both of which will require assessment and interpretation of experimental data and/or readings from the primary literature.

508. Immune Responses. (B) Peter Felsburg, VMD., Ph.D. and Kate Sullivan, M.D., Ph.D. Prerequisite(s): IMUN 506 or equivalent and permission of instructor. Taught Monday, Wednesday & Friday, 9:00am-11:00am. 6 hours, 2 cu.

This course is designed to (1) extend the basic immunology principles addressed in 506, and (2) apply the fundamental principles of the mechanism of immune recognition and development presented in 506 to the immune response in health and disease in vivo. The course is designed as a series of minicourses which may change from year to year. Each minicourse will cover an important topic in immunology in detail. Students must take three minicourses over the Spring semester and must take at least one each from the basic and applied immunology categories (see below).

The course will be taught as formal lectures on Monday and Wednesday and the minicourses will be taught as a combination of formal lectures and seminar-format discussions of relevant literature. Each minicourse will have a slightly different format. The minicourses will consist of 6 hours/week for 4 weeks. The semester will be divided into 3 sessions with between 2 to 3 minicourses offered each session. Progress in the course will be evaluated by an exam/paper at the end of each minicourse and class participation. The exams will require students to incorporate the knowledge and

thinking gained from the in depth analyses of these topics.

520. Tutorials in Immunology. (A)

Randy Cron, M.D., Ph.D. Prerequisite(s): A senior undergraduate, graduate or professional school course in Immunology. This tutorial course is designed to provide students with an in-depth knowledge of a specific branch of Immunology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their thesis projects or to expand on a topic that the student found interesting in one of their basic courses. The course is currently the only immunology elective and is, therefore, required for all Immunology Graduate Group students. It is also open as an elective to BGS students who meet the prerequisite. The tutorial course will be examined by the program director and the tutorial leader and the grade will be based on a written paper on the subject studied (5 to 10 typewritten pages) and by an oral presentation of the paper (15 to 20 minutes).

599. Immunology Faculty Research Seminar. (C) Dr. David Artis; Dr. Jonathan Maltzman. Prerequisite(s): Permission of Graduate Group Chair.

Mandatory attendance at weekly research presentations by graduate group faculty.

605. Current Topics in Cellular and Molecular Immunology. (B)

Philip Scott, Ph.D., and Laurence Turka, M.D. Prerequisite(s): IMUN 506 or permission of instructor.

Recent developments in basic cellular and molecular immunology are discussed by students using the current literature as a resource. This course reinforces and expands upon concepts presented in immunology 506. Students gain experience in critically evaluating current literature and orally presenting and defending their ideas.

In the first part of the course, students present one or two papers relevant to a current topic in immunology. In the second part, the students each select a research topic and write and defend orally a small research proposal. Course aims are to provide more in-depth knowledge in specific and timely areas of immunologic research. In addition, the course encourages the development of oral presentation skills and the ability to critically evaluate published research and the ideas of one's peers.

607. Grant Writing. (A) Drs. David Allman and Mike Madaio. Prerequisite(s): IMUN 506, 605, and/or permission of instructor.

This course will introduce the student to basic principles of grant writing. In this regard a primary objective of the course is to teach you how to describe your ideas and experimental objectives in a clear and concise manner within the standard NIH grant format. To accomplish this, you will be required to write an NIH, "RO1" type grant proposal based on your current laboratory project.

609. (CAMB609) Vaccines and Immune Therapeutics. David Weiner, Ph.D., and Paul Offit, M.D. Prerequisite(s): The course is intended for graduate students or Medical Students in various MS, Ph.D. or MD/Ph.D. programs on the campus as well as local scientists and professionals in the community. As a prerequisite students should have taken biology, biochemistry or immunology courses at the advanced college level.

The goal of the Vaccines course is to expand on student's general understanding of the immune system and to focus this understanding towards the application of vaccination. Furthermore the course will give the student a sense of how these principles are applied to vaccine and immune therapeutic development. The course covers basic science as well as the Clinical, Ethical & Political implications of Modern Vaccines.

Initial lectures will review immune mechanisms believed to be responsible for vaccine induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism as well as vaccines for cancer. An appreciation for the application of laboratory science to the clinical development of vaccines is provided in the next section of the course along with lectures that focus on the ethical implications of vaccines in different situations. The financial implications of specific vaccines and their impact on the global community, is a specific focus of the course.

The course is lecture style and will have a required reading list prepared in advance to provide the students background for the specific topic. Students will be graded by course participation as well as by a final written exam. The course is intended for graduate students or Medical Students in various MS, Ph.D. or MD/Ph.D. programs on the campus as well as local scientists and professionals in the community. As a prerequisite students

should have taken biology, biochemistry or immunology courses at the advanced college level. A final project will be graded from all students. The final project is to propose in a written report a vaccine strategy for a current pathogen of importance that does not as yet have an effective vaccine. Strategies used should build on the material presented in the class lectures. The details of the final paper will be further discussed in class.

699. Laboratory Rotation. (C) Various Immunology Group Faculty.

Prerequisite(s): Permission of instructor and immunology chair.

Laboratory research conducted under a faculty advisor. Three different rotations covering usually the fall semester of the first year through the fall semester of the second year are required of all Immunology Ph.D. students. Students will defend the rotation research in their Preliminary Exams.

799. Independent Study.

899. Predissertation Lab.

999. Independent Study. (C) Terri Laufer, M.D. Prerequisite(s): Permission of Graduate Group Chairperson. 1 h. 1 c.u.; taught Fall term.

Directed readings, with or without laboratory research, in various fields of immunology arranged individually with members of staff. Mandatory attendance at weekly research presentations by graduate group faculty.

**INSTITUTE OF
NEUROLOGICAL
SCIENCES
(MD) {INSC}**

521. (BE 521) Brain Computer Interface.

Brain Computer Interface.

SM 573. (PSYC609) Neuroscience Core III. (B) Larry Palmer, Michael Nusbaum.

This course provides an introduction to what is known about how neuronal circuits solve problems for the organism and to current research approaches to this question. Topics include: vision, audition, olfaction, motor systems, plasticity, and oscillations. In addition, the course aims to provide an overview of the structure of the central nervous system. A number of fundamental concepts are also discussed across topics, such as: lateral inhibition, integration, filtering, frames of reference, error signals, adaptation. The course format consists of lectures, discussions, readings of primary literature, supplemented by textbook chapters and review articles.

574. (BE 526) Neuromorphing: Building Brains in Silicon. (B)

Kwabena Boahen. Prerequisite(s): Students with advanced knowledge in neurobiology but rudimentary knowledge in electrical engineering or vice versa are welcome. Biology students should have (1) Biophysics (BE205/CHEM221) or (2) Basic Neuroscience (INSC 591). Systems Neuroscience (INSC 598) and Computational Neuroscience (INSC 594/BE 520) are highly recommended. Engineering students should have (1) Solid-State Device Physics (EE218) or Solid-State Circuits (EE319). VLSI Chip Design (EE560/562/564) is highly recommended. Students do not need to have all these prerequisites to take this course. Please contact the instructor if you have any questions.

We model the structure and function of neural systems in silicon using very large scale integration (VLSI) complementary metal-oxide-semiconductor (CMOS) technology. To build these neuromorphic systems, we proceed from the device level, through the circuit level, to the system level. At the device level, we mimic electrodiffusion of ions through membrane channels with electrodiffusion of electrons through transistor channels. At the circuit level, we derive minimal implementations

of synaptic interaction, dendritic integration, and active membrane behavior. At the system level, we synthesize the spatiotemporal dynamics of the cochlea, the retina, and early stages of cortical processing.

575. (BIOL442, PSYC421) Neurobiology of Learning and Memory. (I) Ted Abel.

This course focuses on the current state of our knowledge about the neurological basis of learning and memory. A combination of lectures and discussions will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.

576. (PHRM550, PSYC750) Neuropsychopharmacology. (A) Irwin Lucki.

Neuropsychopharmacology provides an overview of the neurobiology of major neuropsychiatric illnesses. The course is divided into four modules related to behavioral disorders or disciplines. The specific modules covered are: affective disorders, substance abuse, schizophrenia, and behavioral genetics. The modules present material that integrates clinical and basic neurobiology approaches to research of complex behavioral disorders. Each module covers a specific area using the following format: clinical features basic and clinical neuroscience studies relevant to understanding the pathobiology and mechanisms of treatment of each set of disorders case presentations or outside speakers.

578. (BIOL488, CAMB578) Advance Topics in Behavioral Genetics. (J) Ted Abel/Maja Bucan.

This course focuses on the use of genetic techniques to study the molecular and cellular bases of behavior. Particular emphasis will be given to the role of genetic approaches in understanding the biological processes underlying learning, memory storage, circadian rhythms, and drug abuse. Reverse genetic approaches utilizing gene knockout and transgenic technology, as well as forward genetic approaches using mutagenesis and quantitative genetic techniques, will be discussed.

579. Synaptic Transmission. (H) Tom Parsons. Prerequisite(s): core II and core III or permission of the instructors.

This seminar course will involve critical reading and discussion of classic and modern papers in synaptic physiology. Approximately half the time will be spent

on the neuromuscular junction, with the balance covering central synapses.

581. (PSYC781) Auditory Neurobiology. (J) James Saunders.

The purpose of this course is to convey to upper level undergraduates and graduate students the fundamental processes and mechanisms of the auditory system. The course will develop ideas describing the structure and function of the peripheral and central auditory pathway. The flow of acoustic energy will be analytically and quantitatively traced through the peripheral ear. The details of auditory transduction will be explored as a mechanical and electrochemical system. Information transfer to simple and complex acoustic signals in the central auditory pathway will be explored from the auditory nerve to the cortex. In addition, the pathophysiology or hearing due to excessive sound exposure or ototoxic drug treatment will be considered. The database used in the course will come from primary literature describing the physiological mechanisms of hearing in animal preparations. However, where appropriate, the processes of human hearing will be introduced.

582. (PHRM540, PSYC605) Behavioral Neuropharmacology. (J)

SM 583. (PSYC745) Seminar FMRI Data Analysis. (C) Seminar FMRI Data Analysis.

Seminar FMRI Data Analysis.

584. Neurobiology of Sleep and Circadian Rhythms. (M) Allan Pack.

The objectives of this course are: to discuss and evaluate mechanisms controlling sleep and circadian rhythms; to survey novel approaches to investigations in these areas; indicate the clinical relevance of these ideas where possible. About half the course consists of core lectures on basic rhythms, sleep, and their neural substrates. The rest of the lectures are devoted to special topics which change from year to year.

587. Neurobiology of Disease. (J)

Marc Dichter. Prerequisite(s): Working knowledge of biology and chemistry. Corequisite(s): Permission of course director.

This course is designed to familiarize neuroscientists with basic information about a number of important neurological and psychiatric disease, focusing on a relatively brief clinical description of the condition and a more in depth discussion of what is currently understood about the basic pathobiology of the disorder.

The course is divided into two parts: on Tuesday afternoons there will be a formal didactic teaching session. The first part of each lecture (1/2 hour to 1 hour) will be devoted to a discussion of the disease in question and the second part will consist of one or two student presentations (in lieu of a paper or exam) reviewing in depth one critical neuroscience component of the disease. Each student will work with the course director or an assigned faculty member to develop her/his lecture. On Thursday afternoons, a faculty member will present a research seminar or chalk talk describing the research she or he is conducting in that particular disease. Papers will be provided before the seminar so the students will be familiar with the research. It is expected that having a research seminar given after the introductory lecture will allow the students to become familiar in depth with at least one approach to each disease.

SM 592. (PSYC600, PSYC604) Cognitive Neuroscience of Memory. (K) Sharon Thompson-Schill.
Prerequisite(s): none. Corequisite(s): none.

This course will review the neural mechanisms of learning and memory. Readings will include both seminar and cutting-edge papers on topics ranging from perceptual memory to higher order functions, including working memory, declarative memory, skill learning, and semantic memory. Within each topic we will attempt to integrate the results of different neuroscience approaches, including the study of human neurological patients, lesion studies and single unit recordings in animals, neural network modeling, event-related potentials, and functional imaging techniques.

593. Structural Neurobiology. (B) Peter Sterling.

This course presents brain structure on all levels from gross morphology to microcircuitry to synaptic architecture. It is a lab course which emphasizes learning to find your way around the brain using maps at various levels of resolution. We emphasize learning to "read" the structures and learning the modern methods of studying functional neural architecture. This includes, methods for tracing pathways and identifying chemical architecture. Also, advanced methods of light microscopy will be covered including fluorescence, video-DIC, confocal.

594. (BIBB585, PHYS585, PSYC539) Computational Neuroscience. (B)

Finkel. Prerequisite(s): Previous coursework in physiology and in differential equations and some familiarity with computers, or instructor's permission.

Theoretical studies of neural function from the molecular to the cognitive level. Emphasis on organization and function of neural maps, synaptic plasticity, vision, and recent neural network models of higher brain functions and on neurobiological problems that are well suited to computational study.

SM 595. (PSYC603) Behavioral Neuroscience. (H) Grill, Crawford, Flanagan. Prerequisite(s): Permission of instructor.

Current research on the neural basis of behavior is organized in six subsections: animal communication, sex behavior, circadian rhythms, energy and water balance, synaptic plasticity and learning, and addiction. Topics are selected based on excitement surrounding recent research developments. Each topic is analyzed initially at the behavioral level, followed by the systems and the cell and molecular levels. Throughout the course, attention is paid to the analysis interesting stereotyped behaviors, e.g., bird song, lordosis, licking, whose description and neurology has provided insights into the neural systems that contribute to overall neural control of behavior. Attention is also paid to the development of understanding of the neuroanatomy of selected neural systems.

596. Neurochem - Neuropharm. (B) Steve Thomas. Prerequisite(s): Permission of course director.

The goals of this course are: a) to provide students with a general overview of the biochemical properties of the nervous system; b) to provide students with in-depth information on particular neurotransmitter and effector systems. Emphasis will be placed on the wealth of new molecular information that is being gathered to examine how cells of the nervous system function and communicate. To achieve these goals, the course is divided into 4 sections: 1) overview of neuroanatomy and general neurochemistry; 2) specific neurotransmitters and neuromodulators; 3) molecular approaches to the study of signalling in CNS; 4) current topics in neuropharmacology. There will be 3 exams that roughly correlate with the first 3 sections. The fourth section will entail student presentations toward the end of the semester.

597. (CAMB597) Developmental Neurobiology. (A) Jeff Golden.

The developmental neuroscience course opens with a brief summary of classical experimental embryology and key developmental concepts. Topics covered in the course include: invertebrate and vertebrate pattern formation; neural cell determination; growth cone guidance; synapse formation and plasticity; programmed cell death; neural growth factors; special sense organ development. Each week includes two lectures and a small group discussion in which one or two important papers are analyzed in detail. Each student must write three short grant-style reports (approximately 2 pages each). No exams are given.

598. Advanced Systems Neuroscience. (A) Gary Aston-Jones. Prerequisite(s): Core III or Permission of course director.

This course will evaluate neural function from a systems perspective, using 4 different brain systems as examples: noradrenergic, olfactory, sleep and vestibular. (i) G. Aston-Jones will describe the neuroanatomy, neurophysiology, neuropharmacology and behavioral properties of the locus coeruleus and A1/A2 noradrenergic brain systems. He will use these basic circuit properties to examine hypothesis for roles of these systems in addiction and cognitive function. (ii) M. Ma will focus on the cellular and molecular mechanisms underlying olfactory information coding and processing. This section will deal with one basic question, i.e., what enables us to detect and discriminate thousands of odors. (iii) M. Frank will review the behavioral and electrophysiological features of REM and nonREM sleep, as well as the underlying anatomical structures and neurotransmitter/neurohumeral systems that generate and modulate each state. Several theories of sleep function, including the possible role of sleep in neuronal metabolism, brain development and learning and memory will be reviewed. (iv) D. Solomon will detail the neural circuitry and physiological mechanisms involved in balance and other vestibular functions.

600. Topics in Neurobiology of Disease 001: Neurodegenerative Diseases.

618. Recovery After Neural Injury. (K) B. Neumar.

The human nervous system is subject to several types of injury, (traumatic, ischemic, epileptic, demyelinating and/or

inflammatory) that cause serious functional deficits. The mechanisms used by the central and peripheral nervous systems for functional recovery from these injuries will be described in this course. The molecular and cellular pathobiology of CNS injury will be reviewed and methods to enhance functional recovery will be discussed in detail. These include the limitation of secondary neuronal damage by pharmacological manipulations (neuroprotection), the promotion of regeneration, and plasticity, the application of bioengineering strategies, and the use of behavioral rehabilitative approaches. Course Format: a combination of lecture, journal club style student presentations and classroom discussion.

631. (PSYC631) Cognitive Neuroscience Affect. (K) Martha Farah.

We will survey, and as far as possible synthesize, three bodies of literature on emotion and the brain, specifically: (1) neuroimaging and pharmacologic studies of emotion and the normal human brain; (2) the neuroscience of affective disorders in humans; and (3) relevant studies of reinforcement and learning in animals. (Fulfills the "Brain" requirement)

632. (PSYC632) Cognitive Neuroscience Vision. (K) Russell Epstein.

This course will review the neural basis of visual cognition. Emphasis will be placed on linking cognitive theory to neuroscientific methods. Topics will include object and face recognition, scene perception, visual attention, mental imagery, and visual awareness.

699. Lab Rotation.

705. (PSYC705) Neuroethics. (C)
Neuroethics.

SM 727. (PSYC727) Electronics for Scientists. (B) John Andrews-Labenski.

An introductory theory and practicum course covering the essential principles and applications of electronics. Emphasis is on understanding basic electricity, measurements, instrumentation, circuit simulation, data acquisition, and computer control systems used in research environments.

799. Independent Study. (C)

899. Pre-Dissertation Lab Rotation. (C)

990. Master's Thesis. (M)

INSURANCE AND RISK MANAGEMENT (WH) {INSR}

205. (INSR805, LAW 741) Risk Management. (C) Staff. Prerequisite(s): None.

This course describes the concepts and techniques available to corporations, non-profit organizations, and other organizations in their efforts to manage pure risks. The costs associated with such pure risks as product liability, environmental impairments, property losses, work-related injuries, and employee benefits (e.g., pensions, health insurance, etc.) affect the daily management of organizations. Managers who make decisions without appropriate consideration of risk management issues can jeopardize the long-term survival of their organizations. The course examines a common set of techniques which can be used by managers in dealing with these problems, including risk assumption, prevention, diversification, and transfer via insurance and non-insurance market mechanisms. In turn, students learn to recognize that the institutional structure of the organization itself influence its own risks and their corresponding treatments.

210. (INSR835) Financial Strategies and Analysis: Insurance. (C)

Kartasheva. Prerequisite(s): Good understanding of capital markets, insurance markets, and statistics.

This course is designed to apply and expand upon the theories and methodologies taught in finance to the complex and specific needs of managing financial risk in the insurance enterprise. The types of financial risks that today's insurance professionals face come from both the asset and liability sides of the balance sheet and thus require a wide range of modeling tools. Concurrently, the tools used in the modeling of interest-rate risk, equity risk, and default risk have become increasingly important in an era of increasing convergence between the insurance industry and financial capital markets. This course will introduce several risk management models designed to allow insurance professional to measure and manage each source of risk. We develop and critique theoretical models for each type of risk while strong emphasis is placed on the implementation and calibration of various models. Projects include the risk management and pricing of Variable Equity

Indexed Annuities and Guaranteed Investment Contracts.

This course is intended for students with concentration(s) in Insurance, Finance, and Actuarial Science considering a career in the insurance industry or financial services sector.

221. (INSR822, INSR922) Employee Benefit Plan Design and Financing. (C) Mitchell. Prerequisite(s): None.

Large U.S. employers devote up to 40% of payroll on non-wage benefits, and in other countries, the ratio is higher. What rationales justify such a substantial budget commitment to employee benefits? How are benefit packages designed and how do they evolve to achieve multiple ends? Course units cover aspects of life insurance, health and disability insurance, and deferred compensation plans along with the economic consequences of and regulatory environment shaping each. Executive compensation is also covered. This course is useful to anyone interested in health care, insurance and retirement planning, for either professional or personal reasons.

222. (INSR823) Business Insurance and Estate Planning. (C) Hallman. Prerequisite(s): None.

This course presents an analysis of overall private wealth management. This includes planning for disposition of closely-held business interests; the impact of income taxes and other transfer costs on business interests and other assets; integration of life insurance, disability insurance, medical benefits, and long-term care insurance in the financial plan; planning for concentrated asset (e.g., common stock) positions, diversification techniques, and asset allocation strategies; distribution of retirement assets; lifetime giving and estate planning; and analysis of current developments in the creation, conservation, and distribution of estates. Attention also is given to various executive compensation techniques (including restricted stock and stock options) and planning for various employee benefits. The course also covers sophisticated charitable giving techniques and methods for financing education expenses. Readings consist of textbook, case studies, and bulk pack articles.

This course should be attractive to most students to help them plan for their own or their families' financial affairs. It also should be particularly attractive to students specializing in entrepreneurship, wealth management finance, and law.

230. (INSR825) Managing Pure Risks: Operations and Markets. (A) staff. Prerequisite(s): None.

This course deals with property-liability insurance company financial management "alternative market" mechanisms for managing pure risks such as captive insurance companies, and the securitization of risk-linked bonds and other instruments. It involves extensive discussion of insurance company financial strategies including investments, asset-liability management, value-at-risk, capital estimation, and financial reporting. Additional topics include product distribution and marketing systems, underwriting operations and policy, reinsurance, rate-making and reserves, claims, accounting, and other functions of insurance risk pools. The regulation and taxation of insurance and captive insurance companies are also covered. A number of public policy issues affecting the management of property-liability insurers are discussed including: insurer solvency and state guarantee funds, discrimination in property-liability insurance pricing, the effect of the underwriting cycles, and the convergence of the financial services sector. The characteristics of the property-liability insurance industry also are studied within the framework of the financial services industry.

232. (INSR827, INSR927) Risk Management and Treatment. (B) staff. Prerequisite(s): None.

Nature and objectives of corporate risk management. Primary consideration devoted to the recognition, evaluation, and treatment of pure risks to which the corporation is exposed.

251. (INSR829) Fundamentals of Actuarial Science I. (A) Lemaire.

Prerequisite(s): One semester of calculus.

This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of

annuity and insurance benefits and premiums.

252. (INSR830) Fundamentals of Actuarial Science II. (B) Lemaire.

Prerequisite(s): INSR 251.

This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.

253. (INSR833) Actuarial Statistics. (A) Lemaire.

Prerequisite(s): Math 140-141 or equivalent, Stat 101-102 or 430-431 or equivalent.

This course covers models for insurer's losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains.

260. (INSR831) Applied Statistical Methods for Actuaries. (B) Lemaire.

Prerequisite(s): One semester of probability.

One half of the course is devoted to the study of time series, including ARIMA modeling and forecasting. The other half studies modifications in random variables due to deductibles, co-payments, policy limits, and elements of simulation. This course is a possible entry point into the actuarial science program. No INSR course is a pre-requisite for INSR 831. The Society of Actuaries has approved INSR 831 for VEE credit on the topic of time series.

299. Independent Study. (C) Staff.

805. (INSR205, LAW 741) Risk Management. (C) Staff.

Prerequisite(s): None. None.

This course describes the concepts and techniques available to corporations, non-

profit organizations and other organizations in their efforts to manage pure risks. The costs associated with such pure risks as product liability, environmental impairments, property losses, work-related injuries, and employee benefits (e.g., pensions, health insurance, etc.) affect the daily management of organizations. Managers who make decisions without appropriate consideration of risk management issues can jeopardize the long-term survival of their organizations. The course examines a common set of techniques which can be used by managers in dealing with these problems, including risk assumption, prevention, diversification, and transfer via insurance and non-insurance market mechanisms. In turn, students learn to recognize that the institutional structure of the organization itself influence its own risks and their corresponding treatments.

811. Risk and Crisis Management. (C) Staff.

Prerequisite(s): None.

The success of any firm depends jointly on its ability to create value and on its ability to preserve value. The creation of value arises when a firm is able to identify and execute investments with a positive net present value. The creation of value invariably exposes the firm to risk and this value can easily be jeopardized. A fall in demand for its product, a sudden rise in production or financing costs, a technological failure, destruction of assets or information, a liability suit, or the activities of a rogue trader, each can squander the value created. In extreme cases these risky possibilities can bankrupt the firm. Risk management is becoming increasingly important and firms are devoting increasing time, attention and resources to deriving strategies for preserving value. These strategies include, hedging, insurance, contingent financing and changes in organizational design which make the firm more robust to shocks. Risk and Crisis Management will look at these and related strategies. (Mini course - 6 weeks).

812. Markets for Pure Risk. (C) Cummins.

Prerequisite(s): Basic microeconomics and finance.

This course examines the supply side of global markets for pure risks. Pure risks can be broadly defined as risks that are beyond the core competencies of the majority of firms in the economy. These are risks that must be managed or avoided in order to enable management to add value by focusing on the firm's primary activity. An important category of pure risks encompasses those risks that traditionally

were managed by purchasing insurance - the risk of reduction of firm value due to fires, natural disasters, liability lawsuits, work injuries, and other types of accidents or legal actions. However, pure risks also include other sources of volatility that have not traditionally been traded in insurance markets. The latter category includes weather risk, credit risk, and foreign exchange risk, among others. The course examines insurance and financial markets, "alternative market" approaches to dealing with pure risks such as captive insurance companies, the global market for reinsurance, and markets for securitized risk products such as catastrophe bonds, mortality index bonds, and life insurance reserve financing securitizations.

This course is intended to complement Insurance 811, "Risk and Crisis Management." INSR 811 focuses on how firms can use various types of hedging instruments to manage pure risks, i.e. its emphasis is primarily on the demand side of markets for pure risks, whereas INSR 812 examines the supply side of these markets. (Mini course - 6 weeks)

822. (INSR221, INSR922) Employee Benefit Plan Design and Financing. (C) Mitchell.

Prerequisite(s): None.

Large U.S. employers devote up to 40% of payroll on non-wage benefits, and in other countries, the ratio is higher. What rationales justify such a substantial budget commitment to employee benefits? How are benefit packages designed and how do they evolve to achieve multiple ends? Course units cover aspects of life insurance, health and disability insurance, and deferred compensation plans along with the economic consequences of and regulatory environment shaping each. Executive compensation is also covered. This course is useful to anyone interested in health care, insurance and retirement planning, for either professional or personal reasons.

823. (INSR222) Business Insurance and Estate Planning. (C) Hallman.

Prerequisite(s): None.

This course presents an analysis of overall private wealth management. This includes planning for disposition of closely-held business interests; the impact of income taxes and other transfer costs on business interests and other assets; integration of life insurance, disability insurance, medical benefits, and long-term care insurance in the financial plan; planning for concentrated asset (e.g., common stock) positions, diversification techniques, and asset allocation strategies; distribution of retirement assets; lifetime giving and estate

planning; and analysis of current developments in the creation, conservation, and distribution of estates. Attention also is given to various executive compensation techniques (including restricted stock and stock options) and planning for various employee benefits. The course also covers sophisticated charitable giving techniques and methods for financing education expenses. Readings consist of textbook, case studies, and bulk pack articles.

This course should be attractive to most students to help them plan for their own or their families' financial affairs. It also should be particularly attractive to students specializing in entrepreneurship, wealth management finance, and law.

824. (INSR924) Social Insurance. (A) Smetters. Prerequisite(s): Micro economics; statistics or basic econometrics.

This course presents and evaluates economic rationales for social insurance programs in the developed and developing world. We explore how social insurance programs are designed and implemented in theory and practice, and examine what their economic effects are on key players' behaviors. Topics include systems protecting against unemployment, disability, poverty, old age, and medical care expenses. We examine the relative roles of private versus governmentally-provided benefit programs, focusing on financing and benefit provision. Special attention is devoted to recent and ongoing real-world experiments with privatization.

825. (INSR230) Managing Pure Risks: Operations and Markets. (A) staff. Prerequisite(s): None.

This course deals with property-liability insurance company financial management "alternative market" mechanisms for managing pure risks such as captive insurance companies, and the securitization of risk-linked bonds and other instruments. It involves extensive discussion of insurance company financial strategies including investments, asset-liability management, value-at-risk, capital estimation, and financial reporting. Additional topics include product distribution and marketing systems, underwriting operations and policy, reinsurance, rate-making and reserves, claims, accounting, and other functions of insurance risk pools. The regulation and taxation of insurance and captive insurance companies are also covered. A number of public policy issues affecting the management of property-liability insurers are discussed including: insurer solvency and state guarantee funds, discrimination in property-liability insurance pricing, the

effect of the underwriting cycles, and the convergence of the financial services sector. The characteristics of the property-liability insurance industry also are studied within the framework of the financial services industry.

827. (INSR232, INSR927) Risk Management and Treatment. (B) staff. Prerequisite(s): None.

Nature and objectives of corporate risk management. Primary consideration devoted to the recognition, evaluation, and treatment of pure risks to which the corporation is exposed.

829. (INSR251) Fundamentals of Actuarial Science I. (A) Lemaire.

Prerequisite(s): One semester of calculus.

This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums.

830. (INSR252) Fundamentals of Actuarial Science II. (B) Lemaire.

Prerequisite(s): INSR 829.

This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.

831. (INSR260) Applied Statistical Methods for Actuaries. (B) Lemaire.

Prerequisite(s): One semester of probability.

One half of the course is devoted to the study of time series, including ARIMA modeling and forecasting. The other half studies modifications in random variables due to deductibles, co-payments, policy limits, and elements of simulation. This course is a possible entry point into the

actuarial science program. No INSR course is a pre-requisite for INSR 831. The Society of Actuaries has approved INSR 831 for VEE credit on the topic of time series.

833. (INSR253) Actuarial Statistics. (A) Lemaire. Prerequisite(s): Two

semesters of Statistics.

This course covers models for insurer's losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains.

835. (INSR210) Financial Strategies and Analysis: Insurance. (C)

Kartasheva. Prerequisite(s): Good understanding of capital markets, insurance markets, and basic statistics.

This course is designed to apply and expand upon the theories and methodologies taught in finance to the complex and specific needs of managing financial risk in the insurance enterprise. The types of financial risks that today's insurance professionals face come from both the asset and liability sides of the balance sheet and thus require a wide range of modeling tools. Concurrently, the tools used in the modeling of interest-rate risk, equity risk, and default risk have become increasingly important in an era of increasing convergence between the insurance industry and financial capital markets. This course will introduce several risk management models designed to allow insurance professional to measure and manage each source of risk. We develop and critique theoretical models for each type of risk while strong emphasis is placed on the implementation and calibration of various models. Projects include the risk management and pricing of Variable Equity Indexed Annuities and Guaranteed Investment Contracts.

890. Advanced Study Project. (C) Staff.

891. Thesis Supervision. (C)

899. Independent Study. (C) Staff.

922. (INSR221, INSR822) Employee Benefit Plan Design and Financing. (C) Mitchell. Prerequisite(s): None.

Large U.S. employers devote up to 40% of payroll on non-wage benefits, and in other countries, the ratio is higher. What rationales justify such a substantial budget commitment to employee benefits? How are benefit packages designed and how do they evolve to achieve multiple ends? Course units cover aspects of life insurance, health and disability insurance, and deferred compensation plans along with the economic consequences of and regulatory environment shaping each. Executive compensation is also covered. This course is useful to anyone interested in health care, insurance and retirement planning, for either professional or personal reasons.

924. (INSR824) Social Insurance. (A) Smetters. Prerequisite(s): Some economics and econometrics desirable.

This course presents and evaluates economic rationales for social insurance programs in the developed and developing world. We explore how social insurance programs are designed and implemented in theory and practice, and examine what their

economic effects are on key players' behaviors. Topics include systems protecting against unemployment, disability, poverty, old age, and medical care expenses. We examine the relative roles of private versus governmentally-provided benefit programs, focusing on financing and benefit provision. Special attention is devoted to recent and ongoing real-world experiments with privatization.

926. Markets for Pure Risk. (C) Staff. Prerequisite(s): INSR 825, preferred but not required.

This course deals with economic and financial issues in property-liability insurance. The focus is on the economics of the property-liability insurance industry and on economic and financial aspects of property-liability insurance company management. The course begins by studying the structure of the property-liability insurance industry and its role in the economy. Among the key issues are profit cycles, insurance stock performance, and price and availability problems. The course then moves to a micro level, analyzing the economics of insurance company operations. The role of underwriting is discussed in the context of economic models of asymmetric information and adverse selection. The

efficiency of alternative marketing technologies is considered. A major course segment is devoted to financial models for pricing property-liability contracts and their implications for company management and market behavior. A final major course segment deals with the impact on insurance markets of price and solvency regulation.

932. Contract Theory and Applications. (B) Kartasheva and Gottlieb. Prerequisite(s): None.

The course provides an advanced introduction to the theory of contracts and its mixture of foundational theories and applications to fields such as labor, reinsurance, and organization.

934. Economics of Risk and Time. (A) Nini and Smetters. Prerequisite(s): Economics (Basic).

This course deals with the economic theory of supply, demand, and equilibrium in savings and insurance markets, including social insurance. We will review decision models under conditions of risk and use these to address problems of optimal insurance, moral hazard and adverse selection, social security, and contract enforcement.

999. Independent Study. (C)

INTEGRATED PRODUCT DESIGN (EG) {IPD}

403. (ARCH403) Design Fundamentals. (A)

An introduction to the basic concepts of applied arts in the design of simple three-dimensional objects of use. The description, projection, and fabrication of objects are studied through a series of workshop exercises and seminar discussions. Hand sketching, parametric solid modeling computer-aided design software, and fabrication technologies are used to create and develop virtual models, drawings, and simple prototypes.

L/L 501. Integrated Computer-Aided Design, Manufacturing and Analysis. (C) Prerequisite(s): MEAM 101, MEAM 150, and MEAM 210, or graduate standing in the School of Engineering, Design, or Wharton with similar experience.

The majority of today's engineered products move through an advanced computer-aided workflow which greatly speeds design and process time. This course will explore the fundamental components of this workflow through a combination of lectures, hands-on exercises, and a semester design project. General course topics include: fundamental design principles, project definition and needfinding, advanced computer-aided design, rapid prototyping techniques, computer-controlled machining, and an in-depth exploration of the modern analysis and simulation tools that have revolutionized the way in which products are designed. Enrollment is limited.

509. Needfinding. (C)

Needfinding is an approach that puts people and their needs at the center of product development and business strategy creation. Over 90% of new products introduced into the marketplace fail. A good portion of these failures are due to lack of understanding of end consumers and their needs. To develop truly successful new products, it's not enough just to ask people what they need or want. Designers and engineers need tools and techniques to get beyond what people can explicitly state and determine their implicit needs. Needfinding is an approach for developing deep insights that provide strategic direction for corporations and open up new possibilities for product development. In this class students will gain a toolset from which to develop their

own approaches to conducting researching for design: learning how to think about other people, about culture, and about new perspectives. They will also learn tactical skills: how to define research questions, how to conduct observations and interviews, how to interpret results, how to synthesize them into fodder for design, and how to communicate their findings in a way that is compelling and actionable for designers, marketers, and business strategists.

This class is designed for graduate students and upper level undergrads with a specific interest in product design or design thinking.

514. (MEAM514) Design for Manufacturability. (B) Prerequisite(s): Senior or Graduate standing in the School of Design, Engineering, or Business with completed product development and/or design engineering core coursework or related experience.

This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems.

516. (MEAM516) Advanced Mechatronic Reactive Systems. (C)

This course teaches advanced mechatronics concepts that include the design and implementation of networked embedded systems, large-scale actuation, advanced sensing and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a collection of short performance pieces inspired by Shakespeare's A Midsummer Night's Dream with both mechatronic and human

performers from the Pig Iron Theater Troupe. A final paper will be required that is ready for conference proceedings.

SM 526. (ARCH726) Furniture Design. (B)

L/L 528. (ARCH728, ARCH729) Industrial Design: Design of Contemporary Products. (C)

This course was designed to explore intersections of functionality and performance using an experimental platform to uncover opportunities within the built environment to create domestic products. Provides practical insights into the material manipulation and aesthetic experimentation that are essential for the design and fabrication of products. Lectures and case studies help students to learn from examples and develop their own designs. Through a series of exercises, students design and fabricate a prototype using actual materials. The course addresses problems unique to product design, such as scale, weight, cost and production.

SM 530. (ARCH730) Building Product Workshop: TRANSWALL. (C)

As Craig Vogel notes in The Design of Things to Come, "we are in a new economic age that is in need of a new renaissance in product development, on that leverages multiple minds working in concert." With this mindset, this interdisciplinary workshop guides students through the product design process from design brief to concept generation in one semester, working firsthand with Transwall, a leading manufacturer of demountable wall systems, to focus on a specific product need. The design opportunity looks for the next generation of pre-manufactured wall systems; getting away from field constructed walls and looking at critical issues of mass-produced wall systems; flexibility, mobility, structural stability, acoustics, transparency/opacity, and operability. During the workshop, students will explore the context that creates the unique need for a new product and have an opportunity to conceptualize their design ideas through sketches, scale model studies and partial prototypes.

532. (ARCH632) Surface Effects. (B)

Several sections are offered from which students make a selection. This year's selections include: Space and Structure; Surface/Effects.

544. (ARCH744) Digital Fabrication.

A seminar and design workshop that explores associative and parametric CAD-CAM strategies, to enable an interactive continuity between conception and fabrication. Through parametric 3D constructions, students will explore how to link different aspects of the architectural projects, such as: (1) design intention; (2) control of variation and adaptation; (3) construction constraints; (4) digital fabrication processes. The course emphasizes the cross-fertilization of formal, technical and performative aspects of the design activity.

549. (EAS 449) Product Development in Entrepreneurial Ventures. (B)

Prerequisite(s): Seniors and Graduate students from the School of Design, Engineering or Business that have an interest in product design and/or integrated product development in an entrepreneurial environment.

The field of Product Development which, of its nature, is an interdisciplinary activity

has always been at the core of entrepreneurship. Though in modern mythology entrepreneurship is a solitary effort by a passionate individual, entrepreneurship is frequently more successful when pursued in an interdisciplinary environment. Through the review and analysis of case studies, class discussion, lecture subjects, a semester long project and fieldtrips, this class will provide insight into the methodologies of product definition, creative processes, decision priorities, and aesthetic sensitivities required to appreciate and accomplish excellence in product development in an entrepreneurial environment.

Product Development can be the critical element in an entrepreneurial effort. Though it rarely requires the greatest time investment, concentration of personnel, the majority of the funding or even the greatest depth of expertise to accomplish with basic competence, it can be the difference between a successful and failed venture. A poorly designed "product" can prevent a venture from being successful. An excellently designed product can make a

competent business plan much more successful. A well defined and designed product can not only meet customer expectation but can create desirability. A well defined and designed product creates a connection with the user that can produce satisfaction and even pride of ownership.

Through the review and analysis of case studies, class discussion, lecture subjects and field trips, this class will provide insight into the methodologies of product definition, creative processes, decision priorities, and aesthetic sensitivities required to appreciate and accomplish excellence in product development.

Specific knowledge areas to be explored: Product design processes, User needs research, Intellectual property research, Experience design, Industrial design, Interface design, Product Driven Financial development

899. Independent Study.

**INTERNATIONAL
RELATIONS
(AS) {INTR}**

**101. International Relations in
Theory and Practice. (C) Staff.**

A survey of theoretical and conceptual approaches to the study of International Relations as they are employed by analysts and practitioners in the field.

199. Independent Study. (C)

250. Political Risk Analysis. (C) Staff.
Prerequisite(s): ECON 01 & ECON 02 - recommended.

This course teaches students to apply social science theories and concepts together with futures methodologies (e.g. Delphi method; country risk assessments used by ratings agencies) to the challenges of addressing international political risks to the continuity, effectiveness and operations of business, government and other organizations in their international transactions.

**290. (CINE290, PSCI050) Topics in
International Relations. (C) Society
Sector. All classes. Staff.**

**SM 390. Senior Seminar for Thesis
Research. (A) Staff.** Prerequisite(s): Intr
101. Senior Seminar for Thesis Research.

Seminar in International Relations. A two semester sequence including review of advanced International Relations theory and research methods for the preparation of the senior thesis.

**SM 391. Senior Seminar For Thesis
Research. (B) Staff.** Department Honors.

Seminar in international relations. Second semester of a two semester sequence including review of advanced international relations theory and research methods for the preparation of the senior thesis.

**399. Independent Study for Thesis
Research. (C)**

JEWISH STUDIES PROGRAM (AS) {JWST}

Jewish Studies at Penn is an interdisciplinary program which draws upon the methodologies and expertise of a wide range of university departments, including Near Eastern Languages and Civilizations, Religious Studies, History, Anthropology, Political Science, English, Folklore, Sociology, Germanic Languages and Literatures, and the Law School. Please look for courses under listings for these departments.

031. (YDSH101, YDSH501) Beginning Yiddish. (A) Staff.

The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazie Jewry in studying the language.

032. (YDSH102, YDSH502) Beginning Yiddish II. (B) Staff. Prerequisite(s): JWST 031 or permission of the instructor.

In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.

033. (YDSH103, YDSH503) Intermediate Yiddish I. (A) Hellerstein. Prerequisite(s): GRMN 402 or equivalent.

The course will continue the first year's survey of Yiddish grammar with an additional emphasis on reading Yiddish texts. The course will also develop conversational skills in Yiddish.

034. (YDSH104, YDSH504) Intermediate Yiddish II. (B) Hellerstein. Prerequisite(s): GRMN 403 or permission of the instructor.

Continuation of JWST 033; emphases in reading texts and conversation.

051. (HEBR051, HEBR651) Elementary Modern Hebrew I. (F) Staff.

An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew.

052. (HEBR052, HEBR652) Elementary Modern Hebrew II. (F) Staff. Prerequisite(s): HEBR 051 or permission of instructor.

A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

053. (HEBR053, HEBR653) Intermediate Modern Hebrew I. (C) Staff. Prerequisite(s): HEBR 052 or permission of the instructor.

Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

054. (HEBR054, HEBR654) Intermediate Modern Hebrew II. (C) Staff. Prerequisite(s): HEBR 053 or permission of instructor.

This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

059. (HEBR059, HEBR552) Advanced Hebrew: Reading & Comprehension. (C) Engel. Prerequisite(s): HEBR 054 or permission of instructor.

Further development of reading, writing, and speaking skills in modern Hebrew. The course is designed for students who have completed the basic language courses and passed the proficiency examination (or passed the Department's placement test at the appropriate level). The readings are based on literary texts and poetry. Special attention is given to the recurrence of biblical themes in modern Hebrew writing.

083. (AFRC083, ENGL083) 20th-Century Literatures in Dialogue. (M)

What dialogues have defined and constituted American and other literatures? This course examines critical intersections between different literatures, addressing questions of race, ethnicity, and culture. Previous versions of this course have included such titles as "African-American and Jewish-American Literature." Our

readings will consider a range of literary interactions, and will take a self-consciously comparative and intertextual approach.

See the Jewish Studies Program website for a description of the current offerings.

SM 100. (NELC252, RELS129) Themes in Jewish Tradition. (M) History & Tradition Sector. All classes. Staff.

Course topics will vary; have included The Binding of Isaac, Responses to Catastrophies in Jewish History, and Concepts of Jewishness from Biblical Israel to the Modern State (Stern); Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Women in Jewish Literature (Hellerstein).

SM 103. (HIST101) JEWISH MEDIEVAL HISTORY. (C)

SM 113. (RELS113, GSOC113) Major Western Religious Thinkers. (M) Staff.

Introduction to the writings of one or two significant western religious thinkers, designed for those who have no background in religious thought. Possible thinkers to be studied: Augustine, Maimonides, Spinoza, Luther, Teresa of Avila, Edwards, Mendelssohn, Kierkegaard, DuBois, Bonhoeffer, King.

122. (RELS002) Religions of the West. (C) History & Tradition Sector. All classes. Matter/Fishman.

Introduction to Judaism, Christianity, and Islam, the three major traditions that originated in the Middle East. Attention to sacred scriptures, historical development, and modern expressions.

SM 123. (NELC283, RELS123) Introduction to Judaism. (C) Fishman.

Focusing on the festivals of the Jewish calendar and on Jewish life-cycle events, this course examines primary sources from various periods and places that illuminate changes in Jewish practice, in Jewish understandings of ritual, and in ritual's place in Jewish life.

126. (NELC186, RELS126) Jewish Mysticism. (M) Staff.

Survey of major periods of development of mystical speculation and experience within Judaism. Mystical symbolism as a basis for theosophical interpretations of Torah, Immanentist theologies, mystical ethics. Types of experiences and practices which were cultivated by Jewish mystics in order to achieve intimate communion with the

Divine and to facilitate a sacred transformation of themselves and the world. Includes "Riders of the Chariot", The Zohar (Book of Splendor), Lurianic Kabbalah, Hasidism.

128. (RELS128) Jews, Judaism, and Modernity. (M) Staff.

A survey of Jewish thinkers and movements of the modern period focusing on the historical, intellectual, and social foundations of modern Judaism. Through careful reading of primary sources in translation, students will be exposed to seminal writings that respond both to new challenges and the broader issues of religious continuity and discontinuity.

130. (HIST150, JWST430, RELS124) American Jewish Experience. (A) Wenger.

This course offers a comprehensive survey of American Jewish history from the colonial period to the present. It will cover the different waves of Jewish immigration to the United States and examine the construction of Jewish political, cultural, and religious life in America. Topics will include: American Judaism, the Jewish labor movement, Jewish politics and popular culture, and the responses of American Jews to the Holocaust and the State of Israel.

136. (RELS136) DEATH AND THE AFTERLIFE. (C)

150. (NELC150, RELS125) Introduction to the Bible (The "Old Testament"). (A) Humanities & Social Science Sector. Class of 2010 & beyond. Tigay.

A survey of the major themes and ideas of the Bible, with special attention paid to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity.

SM 151. (COML057, NELC156, RELS027) Great Books of Judaism. (A) Stern.

The study of four paradigmatic classic Jewish texts so as to introduce students to the literature of classic Judaism. Each text will be studied historically -- "excavated" for its sources and roots -- and holistically, as a canonical document in Jewish tradition. While each text will inevitably raise its own set of issues, we will deal throughout the semester with two basic questions: What makes a "Jewish" text? And how do these texts represent different aspects of Jewish identity? All readings will be in translation.

SM 152. (NELC152, RELS127) Introduction to Jewish Law. (A) Eichler. Freshman Seminar.

An introduction to the literary and legal sources of Jewish law within an historical framework. Emphasis will be placed upon the development and dynamics of Jewish jurisprudence, and the relationship between Jewish law and social ethics.

SM 153. (COML257, NELC158, NELC458, RELS223) Jewish Literature in the Middle Ages. (C) Stern.

An introduction to medieval Hebrew literature, with special attention to poetry, narrative, and the interpretation of the Bible, and to the varieties of Jewish experience that these literary works touch upon. All readings in translation.

154. (CINE159, COML282, NELC159) Modern Hebrew Literature and Culture in Translation. (M) Arts & Letters Sector. All Classes. Gold. The course is taught in English and the texts are in translation. The content of this course changes from year to year, and therefore, students may take it for credit more than once.

This course analyzes modern and post modern film fiction and poetry that highlight dreams, fantasy and madness in the Israeli context. The Zionist meta-narrative tells of an active, conscious, and rational enterprise of Israeli nation-building. Yet, its subversive shadow-side lurks in literary and cinematic nightmares, surrealist wanderings and stories packed with dreams. This tension exists in the Hebrew Literature of the twentieth century and persists in contemporary films and writings that question the sanity of protagonist and artist alike. Although S.Y. Agnon, the uncontested master of Hebrew literature, denied ever reading Freud, his works suggest otherwise. His literary heirs, A. Ox and A.B. Yehoshua, the pillars of the Israeli canon, often speak in the symbolic language of the subconscious. Israeli film classics like *The Summer of Avia*, as well as newly released works like *Sweet Mud*, also confront similar issues. English and German works by Kafka, Woolf and Plath play a comparative role.

156. (HIST139, NELC051, NELC451, RELS120) History of Jewish Civilization I--Jews and Judaism in Antiquity: From the Bible to the Talmud. (A) History & Tradition Sector. All classes. Staff.

An overview of Jewish culture and society in its Biblical, Hellenistic-Roman, and Rabbinic settings. It will trace the political,

social, and intellectual-religious development of Judaism from its biblical beginnings through the Second Temple period to the formation of the rabbinic class and its literature. Some topics to be covered include: Biblical thought and religious practice; varieties of Judaism, the Dead Sea sect and the birth of Christianity; the emergence of the rabbinic class and institutions; Babylonian Judaism and the composition of the Talmud; the role of the Geonim and the solidification of normative religious practice.

157. (HIST140, NELC052, NELC452, RELS121) History of Jewish Civilization II: The Middle Ages. (A) History & Tradition Sector. All classes. Ruderman.

Exploration of intellectual, social, and cultural developments in Jewish civilization from the dawn of rabbinic culture in the Near East through the assault on established conceptions of faith and religious authority in 17th century Europe. Particular attention will be paid to the impact of Christian and Muslim "host societies" on expressions of Jewish culture.

158. (HIST141, NELC053, NELC453, RELS122) History of Jewish Civilization: 17th Century to the Present. (B) History & Tradition Sector. All classes. Nathans.

This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

171. (HEBR151, HEBR451, JWST471) Elementary Biblical Hebrew I. (A) Carasik. Prerequisite(s): For the second semester: Completion of the first semester or permission of the instructor.

This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.

173. (HEBR153, HEBR453, JWST473) Intermediate Biblical Hebrew I. (A)
 Carasik. Prerequisite(s): Successful completion of HEBR 152 or permission of the instructor.

This course will focus on using the grammar and vocabulary learned at the introductory level to be able to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the cantillation/punctuation marks used in the Bible. A suitable entry point for students who know modern Hebrew or have previously learned Biblical Hebrew in a less demanding framework.

179. (ENGL079) Jewish-American Literature. (M) Staff.

From vaudeville comedy to modernist poetry, from Tin Pan Alley to the postwar novel, from Yiddish theater to midrashic approaches to literary interpretation, Jewish American literature and thought have been central to, and on the cutting edge of, the fabric of American culture -- high, low, and, especially, in between. This course will examine the many facets of Jewish American literature, both secular and observant, assimilationist and particularist - from films such as *The Jazz Singer* (1927) to the fiction of Roth and Bellow to the poetry of Bob Dylan and Adrienne Rich. While we will focus on significant works of fiction and poetry, we also will read within the wider world of philosophy, criticism, radio, film, theater, and television that surround them.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

199. Directed Readings. (C) Staff.

A tutorial under the direction of a member of the Jewish Studies Program faculty. Student and faculty member will create a reading list designed to achieve specific goals. The students will meet regularly with the faculty member and submit written assignments. Prior approval and sponsorship by a Jewish Studies Program faculty member is needed to take the course.

200. (EDUC200) Teaching Jewish Texts. (M) Reiss-Medwed.

This course is designed to provide you with opportunities to develop the intellectual and

practical tools and skills crucial to teaching Jewish texts. We will focus on two main questions over the course of the semester. First, what does learning entail, and what does it mean to "know" something? Second, what do teachers need to do to prepare content for teaching? How is this different from what one does to learn content oneself? How do teachers move from thinking about content, to designing lessons, to creating ways to assess their students? This course will focus on the teaching of Humash and rabbinic texts. The ability to read these texts in the original is strongly desirable.

SM 201. (HIST201) Major Seminar in History: Europe Before 1800. (C) Staff.

SM 202. (HIST202, JWST502, RELS207) Major Seminar in History: Europe After 1800. (C) Staff.

203. (EDUC245) Jewish Education and Developmental Psychology. (M)

Staff. Prerequisite(s): No previous background in psychology or Jewish education is required for the course. Students will be introduced to pertinent material from both fields through the class. Education, to be successful, must be closely attuned to the psychological development of students. This course applies theories and empirical data from the field of lifespan developmental psychology to issues in Jewish education. For example, how can contemporary research on spiritual development inform the teaching of Jewish prayer and theology at different ages? What should educators in Jewish settings consider about adolescent social learning when they plan their curricula and programs? What are the implications of recent research on adult development for adult Jewish learning? Students will have opportunities to observe learners in a variety of Jewish education settings.

SM 208. (ANCH208, CLST208, NELC288, RELS219) Jerusalem: Jews, Christians and the Struggle for the Holy City in Late Antiquity. Staff.

(Jerusalem between Its Demise as a Jewish Center and Its Appropriation by the Church, 1st - 5th centuries CE) This course examines the role of the city of Jerusalem within the ongoing polemics and dialogue between Christianity and Judaism in Late Antiquity. The seminar focuses on the holy city of Jerusalem, exploring the events leading to its demise in 70 CE at Roman hands and its fate in the centuries that followed. We will examine the complex

history and symbolic legacy of the city in the Jewish and Christian imaginations-- from the formative period of early Christianity when Jerusalem was at the forefront of contention between the two groups, to the relative demise of attention to the city in Jewish and Christian thought during the 2nd and 3rd centuries under pagan Roman rule, to the revival of interest in the 4th century under Roman Emperor Constantine, with the appropriation of Jerusalem as a Christian city in a Christian world. Following the fascinating transmutations in the history of the holy city, this course explores the exchange of ideas between adherents of both Judaism and Christianity in this ancient cradle of their pasts.

SM 215. (HIST214) RE-READING THE HOLOCAUST.

SM 225. (NELC251, RELS225) Introduction to the Dead Sea Scrolls. (M) Staff.

Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to other known Jewish groups at that time (the beginning of the common era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocrypha" and "pseudepigrapha," biblical texts and interpretations.

SM 227. (PHIL255, RELS227) Modern Jewish Thought. (M) Staff.

Through a reading of such thinkers as Martin Buber, Gershom Scholem and Franz Rosenzweig, the course will address some of the fundamental issues in modern Jewish thought and experience.

SM 239. (PHIL239) The Golden Age of Jewish Philosophy. (M) Manekin.

The course will examine three hundred years of Jewish philosophy from Maimonides to the expulsion of the Jews from Spain. Attention will be paid to Maimonides and the post-Maimonidean thinkers Abner of Burgos, Moses of Narbonne, Levi Gersonides, Hasdai Crescas, and Joseph Albo. Topics to be discussed will be: the existence of God, creation, providence, prophecy, free will, and Divine knowledge. Of special interest will be the increasing influence of Christian

philosophy on Jewish philosophy during this period.

251. (ANTH235, NELC255, RELS215) Archaeology and Society in the Holy Land--4,500 BCE - 500 BCE. (M) Staff.

This course will survey the archaeological history of the southern Levant (Israel, West Bank and Gaza, Jordan, southern Lebanon and Syria) from the early complex societies of the Chalcolithic through the demise of the biblical early complex societies of the Chalcolithic through the demise of the biblical states of the Iron Age. It will focus in particular on the changing organization of society through time, using excavated evidence from burials, houses, temples and palaces to track changes in heterogeneity, hierarchy and identity. In following the general themes of this course, students will have opportunity to familiarize themselves with the geographic features, major sites and important historical events of the southern Levant. Class materials will be presented in illustrated lectures and supplemented by the study of artifacts in the University Museum's collections. Anyone interested in a better understanding of the land that has given us both the "Old Testament"/TaNaK and so much of our daily news, should find much of interest in this course.

SM 255. (COML380, NELC250, NELC550, RELS224) The Bible in Translation. (C) Tigay. May be repeated for credit.

Careful textual study of a book of the Hebrew Bible ("Old Testament") as a literary and religious work in the light of modern scholarship, ancient Near Eastern documents, and comparative literature and religion. The book varies from year to year.

256. (COML228, HEBR250, RELS220) Studies in the Hebrew Bible. (C)

Tigay. Fluency in reading and translating Biblical Hebrew and prior study of the Bible in the original, at a high school or college level.

The aim of this course is to introduce students to the methods and resources used in the modern study of the Bible. To the extent possible, these methods will be illustrated as they apply to a single book of the Hebrew Bible that will serve as the main focus of the course.

The course is designed for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes a working knowledge of Biblical Hebrew grammar.

SM 257. (HEBR257, RELS226) Studies in Rabbinic Literature: Talmudic Literature. (D) Stern.

This course will introduce students to the modern study of Talmudic literature-- Mishnah, Tosefta, and the Palestinian and Babylonian Talmuds. The first part of the course will deal with the history of the concept of the Oral Law (Torah shebe'al peh) and its practice, and the history of the literature that eventually comes out of that oral tradition, including the history of its transmission in medieval manuscripts and printed editions, and the ways in which the material shape of the text influenced its study and reception in Jewish culture. The second part of the course will consist of an intensive analysis of one chapter in the Talmud, Berakhot 8, by tracing its history through the documents of Talmudic literature (the Mishnah, Tosefta, and two Talmuds). No previous experience in Rabbinic literature is required (although it is recommended), but all students must be able to read unpointed Hebrew texts. If you have a question as to whether this course is appropriate for you, please contact the professor.

SM 258. (FOLK258, HEBR258, NELC285, RELS228) Studies in Medieval Hebrew Literature. (A) Stern. Prerequisite(s): Reading knowledge of Hebrew.

This course introduces students to medieval Jewish literature and to the various modern methods and critical approaches--cultural history, literary theory, codicology, the comparative history of religions that have been developed to study the literature and its cultural meaning. Texts studied will vary from semester to semester, and will include medieval Hebrew poetry, both religious and secular, Biblical exegesis, philosophical and ethical texts, and historiographic works.

SM 259. (COLL227, COML266, HEBR259, HEBR559) Introduction to Modern Hebrew Literature. (A) Arts & Letters Sector. All Classes. Gold.

Prerequisite(s): Near-advanced or advanced knowledge of Hebrew. The content of this course changes from year to year; and, therefore, students may take it for credit more than once.

"I Want to Die in My Bed", a young Yehuda Amichai's anti-war poem, led the rebellion of Israeli authors in the 1950s. Scholars would later call Amichai and his peers "The Generation of the State," because they were the first authors to publish in the State of Israel (after it was established) and they forged its literary future. These "rebels" distanced

themselves from the Zionist father-figures and their ideological focus. Poets, like Nathan Zach, promoted the use of common language while A.B. Yehoshua and Amos Oz wrote anti-heroic short stories.

Fall 2006: This course concentrates on contemporary Israeli short stories, post-modernist as well as traditional, written by male and female authors. The diction is simple, often colloquial, but the stories reflect an exciting inner world and a stormy outer reality. For Hebrew writers, the short story has been a favorite genre since the Renaissance of Hebrew literature in the 19th century until now, when Hebrew literature is vibrant in a country where Hebrew is spoken. The lion share of the course focuses on authors who emerged in the last 25 years like Keret, Kastel-Bloom, Taub.

260. (COML283, FOLK280, NELC258, RELS221) Jewish Folklore. (C) Ben-Amos.

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.

261. (CINE059, ENGL079, GRMN261, GRMN263) Topics in Jewish-American Literature. (M) Arts & Letters Sector. All Classes. Hellerstein.

From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Teyve the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we

"read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

SM 262. (CINE330, ENGL261) Jewish Literature in Translation. (M) Staff.

The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year.

265. (GRMN265, GRMN565, HIST265, JWST465) Yiddish in Eastern Europe. (C) Hellerstein. All readings and lectures in English.

This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.

299. Independent Study. (C) Staff.

An independent study course culminating in a final written project. Prior approval and sponsorship by a member of the Jewish Studies Program faculty is needed to take the course.

SM 320. (JWST520, NELC454, RELS321, RELS520) Spirit and Law. (M) Fishman.

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

SM 349. (HEBR350, HEBR550) A Book of the Bible. (A) Tigay.

Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English. The course is designed primarily for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading Biblical Hebrew, including a working knowledge of Biblical Hebrew grammar.

In-depth textual study of a book of the Hebrew Bible studied in the light of modern scholarship (including archaeology and ancient Near Eastern literature) as well as ancient and medieval commentaries. The book varies each semester and the course may be repeated for credit.

SM 351. (HEBR350, HEBR550, RELS322) A Book of the Bible. (A)

Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English. The course is designed primarily for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading Biblical Hebrew, including a working knowledge of Biblical Hebrew grammar.

In-depth textual study of a book of the Hebrew Bible studied in the light of modern scholarship (including archaeology and ancient Near Eastern literature) as well as ancient and medieval commentaries. The book varies each semester and the course may be repeated for credit.

352. (HEBR357, HEBR657, JWST552) Classical Midrash & Aggadah. (D)

Stern. Prerequisite(s): Students must be able to read an unpointed Hebrew text. Readings in Rabbinic lore from classical Midrashic texts.

355. (HEBR358, HEBR658) Siddur and Piyyut *. (M) Stern. Prerequisite(s): AMES 052 or equivalent.

A study of the institution of Jewish prayer, its literature, and synagogue poetry. Texts will be read in Hebrew with supplementary English readings.

SM 356. (COML556, JWST555, NELC356, RELS418) Ancient Interpretation of the Bible. (M) Stern.

Christianity and Judaism are often called "Biblical religions" because they are believed to be founded upon the Bible. But

the truth of the matter is that it was less the Bible itself than the particular ways in which the Bible was read and interpreted by Christians and Jews that shaped the development of these two religions and that also marked the difference between them. So, too, ancient Biblical interpretation -- Jewish and Christian -- laid the groundwork for and developed virtually all the techniques and methods that have dominated literary criticism and hermeneutics (the science of interpretation) since then.

The purpose of this course is to study some of the more important ways in which the Bible was read and interpreted by Jews and Christians before the modern period, and particularly in the first six centuries in the common era. We will make a concerted effort to view these interpretive approaches not only historically but also through the lens of contemporary critical and hermeneutical theory in order to examine their contemporary relevance to literary interpretation and the use that some modern literary theorists (e.g. Bloom, Kermode, Derrida, Todorov) have made of these ancient exegetes and their methods. All readings are in English translation, and will include selections from Philo of Alexandria, the Dead Sea Scrolls, Rabbinic midrash, the New Testament and early Church Fathers, Gnostic writings, Origen, and Augustine. No previous familiarity with Biblical scholarship is required although some familiarity with the Bible itself would be helpful.

SM 358. (FOLK355, NELC358) Readings in Jewish Folklore. (M) Ben-Amos.

For the last forty five years folklorists in Israel have been recording and transcribing folktales told by Jews who came to Israel from many countries. In this course we will read - in Hebrew and English translation - tales that were submitted to the Israel Folktale Archives. We will try to interpret them by employing comparative, historical, literary and cultural analyses.

SM 359. (CINE359, COML359, HEBR359, HEBR659, JWST556) Seminar Modern Hebrew Literature. (B) Arts & Letters Sector. All Classes.

Gold. Prerequisite(s): Near-advanced or advanced knowledge of Hebrew. This course fulfills the Language and Literature component of the English major.

The purpose of this seminar is to analyze Hebrew and Israeli literary texts through the framework of various theoretical approaches. The original text will be our point of departure for both, the above analysis and our broader discussion of the

writer's relationship to society and political issues. Prerequisite for this course is HEBR259 or permission of instructor, as the texts are more complex, linguistically and artistically. This course is designed for students seeking to further their acquaintance with this literary corpus and who are in advanced to native levels. Past topics include: "Hebrew Poetry and Identity: 1900-1948;" "He and She in Modern Hebrew Literature;" "Rebel Children of Israeli Literature;" and "Giants of Hebrew Literature."

L/R 380. (HIST380, RELS320) Modern Jewish Intellectual and Cultural History. (C) Ruderman.

An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialist thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geige Hirsch, Herzl, Achad-ha-Am, Baeck, Buber, Kaplan, and others. No previous background is required.

SM 390. Senior Research Seminar. (B) Staff. Permit required.

JWST 390 is required of all students majoring in the Interdisciplinary Jewish Studies major, but all majors and minors in the various departmental programs are encouraged to take the seminar. Students will conduct independent research and complete a 20-30 page paper.

399. Senior Honors Thesis. (C) Staff.

Jewish Studies Honors majors must take JWST 399 in which they will design, with the guidance of an advisor, an individualized directed reading program culminating in the writing of an honors thesis.

SM 419. (NELC489, RELS419) Jewish-Christian Relations Through the Ages. (M) Fishman.

This is a Bi-directional course which explores attitudes toward, and perceptions of, the religious "Other", in different periods of history. Themes include legislation regulating interactions with the Other, polemics, popular beliefs about the Other, divergent approaches to scriptural interpretation, and cross-cultural influences, witting and unwitting.

Different semesters may focus on Late Antiquity, the Middle Ages, Early Modern period, or contemporary times. May be repeated for credit.

SM 426. (HEBR486, RELS426) Rabbinic Writers on Rabbinic Culture. (M) Fishman. Prerequisite(s): Reading knowledge of Hebrew.

This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period -- Midrash, Mishna, and Talmud -- and in later juridical genres -- Talmudic commentary, codes and responsa. Attention will be paid to the mechanics of different genres, the role of the underlying proof-text, the inclusion or exclusion of variant opinions, the presence of non-legal information, attitudes toward predecessors, balance between precedent and innovation.

430. (HIST150, JWST130, RELS124) American Jewish Experience. (A) Wenger.

This course offers a comprehensive survey of American Jewish history from the colonial period to the present. It will cover the different waves of Jewish immigration to the United States and examine the construction of Jewish political, cultural, and religious life in America. Topics will include: American Judaism, the Jewish labor movement, Jewish politics and popular culture, and the responses of American Jews to the Holocaust and the State of Israel.

435. (GRMN425) Women in Jewish Literature. (M) Hellerstein.

This course will introduce undergraduate and graduate students of literature, women's studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres -- devotional literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relations of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century.

438. (YDSH108, YDSH508) Readings in Modern Yiddish Literature. (M) Hellerstein. Prerequisite(s): Reading knowledge of Yiddish.

This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer,

Moyshe-Leyb Halpern, and Kadya Molodowsky.

SM 448. (HIST448) Jews and Christians in the Renaissance. (C) Ruderman.

Intensive study of aspects of Jewish cultural history during the periods of the Renaissance and Baroque [the period of the ghetto] in Italy, with special emphasis on Jewish-Christian interaction. Reading of primary documents in order to define the special character of the era in the Jewish experience. Topics include: Jewish/Christian polemics, the influence of rhetoric and humanism on Jewish culture, Jewish historical writing, Jewish and Christian study of magic and kabbalah, Jewish messianism, Jewish scientific writing, and more. Course will consider the impact of the erection of the ghetto on the formation of Jewish religion and culture.

SM 449. (HIST449) Jewish Historical Writing. Ruderman.

The seminar will consider Jewish reflections on the meaning of the past from the Bible until the present. It will present a survey of the history of Jewish historical writing including Josephus, medieval chronicles written both in the Moslem and Christian worlds, Jewish histories of the Renaissance and Early Modern Europe, and the rise of the academic study of Judaism in the 19th century. It will conclude with a consideration of modern and contemporary historical trends. The alleged tension between Jewish notions of memory and the modern writing of history, as articulated in Yosef Yerushalmi's well-known book *Zachor*, will be a consistent theme throughout the course. Considerable reading of primary sources. A reading knowledge of Hebrew is helpful but not required.

457. (ANEL575, ANEL576) Aramaic. (E) Golomb. Prerequisite(s): For the Spring semester, completion of the first semester or permission of the instructor.

An introduction to the grammar of the Aramaic language with emphasis on developing skills in reading Aramaic texts.

465. (GRMN265, GRMN565, HIST265, JWST265) Yiddish in Eastern Europe. (C) Hellerstein. All readings and lectures in English.

This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how

Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.

471. (HEBR151, HEBR451, JWST171) Elementary Biblical Hebrew I. (A)

Carasik. Prerequisite(s): For the second semester: Completion of the first semester or permission of the instructor.

This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.

473. (HEBR153, HEBR453, JWST173) Intermediate Biblical Hebrew I. (A)

Carasik. Prerequisite(s): Successful completion of HEBR 152 or permission of the instructor.

This course will focus on using the grammar and vocabulary learned at the introductory level to be able to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the cantillation/punctuation marks used in the Bible. A suitable entry point for students who know modern Hebrew or have previously learned Biblical Hebrew in a less demanding framework.

SM 490. (GRMN581, HIST490, RELS429) Topics in Jewish History. (C) Staff.

Reading and discussion course on selected topics in Jewish history.

499. Independent Study. (C)

SM 512. (RELS512) Comparing Judaism to Christianity. (M) Staff.

SM 520. (JWST320, NELC454, RELS321, RELS520) Spirit and Law. (M) Fishman.

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from

overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

SM 523. (COML527, HEBR583, HIST523, RELS523) Studies in Medieval Jewish Culture. (A) Fishman.

Prerequisite(s): Unless otherwise noted, reading knowledge of Hebrew is required.

Primary source readings from a broad array of medieval Jewish genres. Topic will vary from one semester to another, for example: custom, gender, dissent.

SM 525. (COML580, RELS525) Varieties of Judaism in the Greco-Roman Era. (H) Kraft.

An examination of the varieties of Jewish Thought current from ca. 300 B.C.E. to ca. 200 C.E., and of the ways in which the early Christian church adapted and/or reacted to this Jewish heritage.

SM 533. (HIST533, RELS533) Ancient and Medieval Church History. Staff.

Topics vary.

SM 540. (COML539, ENGL588, GRMN540) Memory, Trauma, Culture. (M) Weissberg. All readings and lectures in English.

In recent years, studies of memory (both individual and cultural) have rivaled those of history, and have produced alternative narratives of events. At the same time, research has also focused on the rupture of narrative, the inability to find appropriate forms of telling, and the experience of a loss of words. The notion of trauma (Greek for "wound") may stand for such a rupture. Many kinds of narratives, most prominently the recollections of Holocaust survivors, are instances in which memories are invoked not only to come to terms with traumatic events, but also to inscribe trauma in various ways. In this seminar, we will read theoretical work on memory and trauma, discuss their implication for the study of literature, art, and culture, read select examples from Holocaust survivors' autobiographies (i.e. Primo Levi, EliWiesel), and discuss visual art (i.e. Boltanski, Kiefer) and film (i.e. Resnais, Lanzmann, Spielberg).

545. (HEBR555) Hebrew Epigraphy.

(D) Staff. Ability to read an unpointed Hebrew text and facility in the Hebrew Bible.

This course is a seminar covering inscriptions in Hebrew of the Biblical period, such as the Gezer Calendar, the Arad and Lachish letters, and numerous other inscriptions. We will read these texts and examine their linguistic features, but primarily we will focus on the ways these texts are useful in Biblical studies. The historical and linguistic information we glean from these texts, and the use of this information in studying Biblical history and interpreting the Hebrew Bible will be central to the course.

SM 550. (HEBR550, RELS521) Book of the Bible. (A) Tigay. Prerequisite(s):

Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Qualified undergraduates are welcome but must contact the instructor for permission to register and show how they meet the requirements. Language of instruction is in English.

In-depth study of a book of the Bible studied in the light of modern scholarship (including archaeology and ancient Near Eastern literature) as well as ancient and medieval commentaries. The book varies each semester and the course may be repeated for credit.

SM 551. (HIST550) Topics in Jewish History. (C) Staff.

Reading and discussion course on selected topics in Jewish history.

552. (HEBR357, HEBR657, JWST352) Classical Midrash and Aggadah. (M)

Stern. Prerequisite(s): Students must be able to read an unpointed Hebrew text.

See description for JWST 352.

SM 555. (COML556, JWST356, NELC356, RELS418) Ancient Interpretation of the Bible. (M) Stern. May be repeated for credit.

See NELC 356 for description. Graduate option would require a lengthier research paper.

SM 556. (COLL227, COML359, HEBR359, HEBR659, JWST359) Seminar Modern Hebrew Literature. (M)

Gold. Prerequisite(s): Near-advanced or advanced knowledge of Hebrew. The content of this course changes from year to year; and, therefore, students may take it for credit more than once.

The purpose of this seminar is to analyze Hebrew and Israeli literary texts through the framework of various theoretical approaches. The original text will be our point of departure for both, the above analysis and our broader discussion of the writer's relationship to society and political issues. Prerequisite for this course is HEBR259 or permission of instructor, as the texts are more complex, linguistically and artistically. This course is designed for students seeking to further their acquaintance with this literary corpus and who are in advanced to native levels. Past topics include: "Hebrew Poetry and Identity: 1900-1948;" "He and She in Modern Hebrew Literature;" "Rebel Children of Israeli Literature;" and "Giants of Hebrew Literature."

558. (ANEL572) Northwest Semitic Epigraphy. (M) Staff. Prerequisite(s): Ability to read an unpointed Hebrew text and facility in the Hebrew Bible.

This is a seminar in which we read inscriptions in the Canaanite dialects other than Hebrew (Phoenician, Moabite, Ammonite, Edomite) as well as Aramaic and Philistine texts, which were written in the 10th-6th centuries BCE, and discovered in the last 140 years by archeologists. The course is a continuation of HEBR555, but can be taken independently.

SM 560. (COML559, GRMN560, PHIL551) Topics in Philosophy and Literature. (M) Weissberg. Topics vary.**SM 580. (COML578, ENGL592, CINE544, ITAL580) Holocaust in Italian Literature & Film. (M)** Staff.

Topics for discussion may vary from semester to semester. One possible topic is: "The Literature of the Holocaust in Italy". Taking Primo Levi as a focal point, the first part of the course will center on his work. Through the study of a range of texts drawn from different genres, using memoir, fiction, poetry, and historiography, we will consider major aspects such as incarceration in Auschwitz, the annihilation of the personality versus the "liberation" of poetic expression, linguistic plurality, miscomprehension as a basis for condemnation and death, the language of violence as a universal language and the jargon of the camps. Analysis of these themes will lead us to consider such issues as the drama of survival and the inadequacy of the therapy of writing. We will also look at other intellectuals, among them Jean Amery, who wrote about their experiences in the concentration camps, from the perspective of the question of limits of intellect and his theory of suicide. We will contrast the experience of Levi and Amery with that of Paul Celan. The second part of the course will deal both with the Italian women writing about the Holocaust (Edith Bruck, Giuliana Tedeschi) and Italian Jewish writers introducing the Holocaust in their fiction (Giorgio Bassani, Carlo Levi, Elsa Morante).

SM 620. (HIST620, RELS621, GSOC620) Modern Jewish History. (A) Staff.

JWST 620 will be offered when the HIST 620 Colloquium subject matter is appropriate.

SM 650. (HEBR556, RELS620) Seminar in Biblical Studies. (A) Tigay. Prerequisite(s): Facility in Biblical Hebrew.

In-depth study of a special topic or problem in biblical studies.

SM 655. (HEBR658) Siddur & Piyut. (M) Stern.

A study of the institution of Jewish prayer, its literature, and synagogue poetry. Texts will be read in Hebrew with supplementary English readings.

699. Independent Study. (C) Staff.**SM 726. (ANTH726) Readings and Research in Near Eastern Archaeology. (M)** Staff. May be repeated for credit.

Advanced seminar for students wishing to pursue study of field data, methods, theoretical problems in archaeology of Near East.

SM 735. (CLST735, RELS735) Seminar in Judaism and/or Christianity in the Hellenistic Era. (F)

Kraft. Knowledge of Greek Presupposed. Student may enter either term.

Selected topics from current research interests relating to early Judaism and early Christianity.

999. Independent Study. (C)

LANDSCAPE ARCHITECTURE & REGIONAL PLANNING (FA) {LARP}

Core Courses

501. Studio I. (A) Faculty.

The focus of this foundation studio is to explore ways of recording and representing landscape - with an emphasis on material, space, rhythm and measure - through a range of drawings and constructions. The studio attempts to create a sensibility toward landscape where the act of surveying a site is as much an imaginative endeavor as is the crafting of an artifact or the construction of a path in a landscape. Emphasis is placed on visual and manual skills in two dimensional and three dimensional constructions (drawing, fabrications, model-making, etc.), while developing ways to "see" landscape. The studio is structured around the themes of wetness/dryness and enclosure/disclosure, and works with one or more sites in the Philadelphia region. In the past, the studio has focused on a territory around Martha's Furnace in the Pine Barrens, NJ; a part of the Meadowlands in northern NJ; an anthracite strip-mine in part of Pennsylvania's Appalachian Mountains; Great Falls in Paterson, N.J.; and the Wissahickon Creek in Philadelphia. Projects involve the making of pathways, platforms, and markings in these otherwise undesigned environments.

502. Studio II. (B) Faculty.

This foundation design studio explores the relationship between sites, drawings, and the making of landscape architectural projects. The sites are typically urban, complex, and large in scale. Students begin with a series of site interpretations (ranging from photographic recordings and sketches to measured surveys and documentation). They are then asked to build a large model of the site, emphasizing its topographical form. The first design project is for an enclosure, "a civic garden," where the emphasis is upon the relationship of "inside" to "outside" and the architecture of spatial fabrication. The second project is for a large urban park that is to accommodate a diverse series of urban events and gatherings. Students work with a wide-range of conceptual, graphic, and projective techniques. At the end of the studio, each student is asked to graft each of their individual projects into a large plan

of the existing precinct, presenting the urban landscape as an interactive field of accretive forces and entities. Past studios have proposed new urban gardens and parks for Tacony, PA; the Schuylkill Waterfront surrounding the Philadelphia Museum of Art; the Camden Waterfront, NJ; the derelict Venice Island territory of Manayunk, PA; and the North Delaware Riverfront in Philadelphia; and Bergen Point in Bayonne, NJ.

511. Workshop I: Ecology and Materials (Module 1 and 2). (A) Willig and Falck.

Module 1: Land, Water and Vegetation Systems; This workshop examines particular sites within the major physiographic regions in the vicinity of Philadelphia (inner and outer coastal plains, piedmont plateau, etc.) where the inter-connections between the underlying geology, hydrology, vegetation, and human interventions are discussed. Field trips to both natural and constructed sites introduce students to the substance and ecology of these places; there are trips to bogs, forests, flood plains, dunes, and uplands, etc. A vocabulary (recognition, identification and nomenclature) of the materials of landscape, its substance, its ecology, and its changing nature owing to place and time is developed.

Module 2: Transformation of Materials; This workshop examines the transformation and production of materials used in the construction of landscapes. The relationship between rock type, landform assemblages and stone extraction and manufacturing; the production of plants, their modes of cultivation, propagation, and plant management (coppice, polarding, etc.); and the transformation of wood from forest plantations to standard size lumber are examined both in their sites of production and in built landscapes. Field trips to nurseries, quarries, lumber yards, as well as to urban sites where the students observe those materials, seen in Module 1 in their natural state, now transformed to comply with the aesthetic and functional requirements of urban landscapes.

L/L 512. Workshop II: Landform and Planting Design (Module 1 and 2). (B) Olgyay. Corequisite(s): Summer Field Ecology Laboratory/Willig.

Module 1: Landform; This foundation workshop focuses on the means by which landscapes are shaped by earthwork grading. Lectures and exercises develop the student's sensibility toward three-dimensional form given by ground-plane manipulation. Students explore the formal, textural, and scalar differences between

naturally-occurring landform types, such as eskers, drumlins, etc., and human scaled landform types, such as stairs, ramps, and terraces. Related environmental considerations, such as drainage, aspect, growth, and the relationship between planting and landform are also covered in this workshop. Teaching in Workshop II emphasizes hands-on work with modeling and drawing, and field trips to sites that are especially appropriate for observing, measuring, and experiencing the sculptural qualities and capabilities of landform.

Module 2: Planting Design; This workshop focuses on both the cultural and the technical aspects of planting design. Through a series of short design projects students investigate the characteristics of basic plant typologies, such as bosque, grove, glade, allee, hedgerow, etc., their origins in productive landscapes, and their application to contemporary landscape architecture. Students also learn technical aspects of planting such as basic horticulture, hardiness zones, and soil requirements. Planting details, planting plans and plant lists, specifications, plant inspection and selection criteria, and site inspections are also covered at this time. During the first week of May, a five-day field course focuses on techniques of urban revitalization, sustainable land use, reclamation, and restoration. The field trips offer insight into the diversity of approaches to using plants to promote positive environmental change.

533. Media I: Drawing and Visualization. (A) Faculty.

Drawing is the ability to experience deeply things we see and envision. It allows us, not only to represent things or images seen, but, to discover and construct space and depth on the two dimensions of drawing surface. Expanding the tools of drawing, this course presents inquiries into applied media providing a basis for envisioning the speculative and developing an economy of expression. Work will be closely related to work in Studio I. Students will be introduced to the formal syntax of drawing (line, contour, structure, texture, chiaroscuro), graphic grammar (orthographic, oblique, perspective projection drawings and free-hand sketching) alongside exercises in material expression (collage, assemblage).

535. Theory I: Case Studies in Landscape Architecture. (A) Hunt.

Reading and Writing the Site: A Historical Survey - The objectives of the course are to allow the students to acquire familiarity with some major episodes of (largely western) landscape architecture through a

study of selected key sites and their designers, and to understand the historical contexts for their creation and continuing interpretation; and to advance the profession of landscape design by a critical understanding of built works from different times and cultures. By "critical understanding" is meant the ability to research a site on the ground, in libraries and in archives, to "read" it fully, to grasp the different ways in which it has been or can be represented, to isolate some of its significant aspects, and to be able to communicate that understanding verbally and visually. The students are expected to acquire a sufficient knowledge of the key moments or milestones in landscape architectural history to undertake the conceptual and synchronic enquiries of visually and verbally an understanding and assessment of a given site and its cultural production.

540. Theory II: Topics in Contemporary Landscape Architecture. (B) Hunt.

This course builds upon the historical survey of Theory I by focusing upon recent, contemporary built works, their designers, and the issues that these raise for professional theory and practice today. It also addresses the topic of how we talk about - how we criticize - recent built work: what criteria do we invoke, what modes of description can we adopt, and what kind of commentary or conclusions are we concerned to elaborate as a result? The agenda is a mixed one, and the structure of the semester mirrors that: there are presentations by visitors as well as by other Penn faculty, and these focus both on built work and on topics arising there from. Students begin the course by brainstorming about the issues, topics, designs and designers that should be at the center of the discussions.

542. Media II: Digital Visualization: AutoCAD. (B) Faculty.

Continuing the sequence of Landscape Architecture Media classes, this course will develop the student's aptitude for working with digital media in creative and effective ways. While the course will devote time to learning the necessary techniques and skills to work with a variety of visualization software, the primary focus throughout will be on the development of a critical eye - that is, the capacity to discern between visual economies of means (saying much with little) and visual noise (or imprecise excess). Just as in a drawing class, one must learn not only the techniques of rendering but also the skill of visual judgement and discernment.

The course will begin by introducing 2-D digital presentation techniques, primarily as afforded by AutoCAD and the more fluid Adobe Illustrator. Students will then progress to working with some advanced imaging techniques in Adobe Photoshop. The final section of the course will concentrate on working fluently and in an integrated way amongst each of these three programs, developing imaginative potentials within each.

543. Media III: Digital Modeling. (A) Faculty.

This course is the third in the media sequence and is required of all MLA students at the 600 level. Commanding the ability to seamlessly utilize a vast array of virtual applications and design media provides incredible potential to develop, test, produce and communicate spatial ideas with great clarity. This course is geared to fine-tune the fundamental skills and cultivate the necessary tools required to productively work in a 3-dimensional modeling environment, and extract data for communication purposes. Demonstrations of essential tools and techniques will be made at the outset of each session and the corresponding weekly exercises will be presented in class. Exemplary and relevant precedents will be presented and discussed in the lab, along with the content of assigned readings. Most time this semester, however, will be spent rigorously sharpening essential tools and skills through hands-on practice - ultimately, it will become second nature to work in an inter-operable, 3-dimensionally driven environment.

601. Studio III. (A) Sanders/Faculty.

This studio brings together both two-year and three-year MLA students for a term-long studio problem that emphasizes a wide range of fundamental and traditional landscape architectural issues and professional skills ranging from site analysis and site planning, to the siting of structures (buildings, paths, drives, walls, pavements) grading and storm water management, the creation of spaces for human use, vegetation and planting for environmental and cultural purposes, and their design development and realization in form and construction. The studio introduces students to issues of collaboration with clients and other professionals and of the realization of program and ideas in physical construction. The students work in a variety of scales and media, with a sequence of exercises and products. Instruction includes conventional desk critiques with group pin-up presentations and discussions

approximately every three weeks and several field trips to the site and other related locations.

Past studios have proposed new urban landscapes for the Mill Creek community neighborhood in West Philadelphia; grounds for a new school in Philadelphia; the reclamation of a large brownfield and waste-land-fill site in Pennsbury, PA; the redesign of the Woodstock concert site in Bethel, NY as a performing arts park; the transformation of the Philadelphia Naval Base and Shipyard to civilian use; the Delaware Riverfront in Bensalem, PA; and the former steel mill site of Roebing, NJ; the Camden, NJ Waterfront North; and sites in Baltimore, MD and Pittsburgh, PA.

602. Studio IV. (B) Olin/faculty.

This elective option studio is designed for work at an advanced level, introducing students to advanced problems in landscape architectural design. Typically sites and programs tend to be large in scale, entailing the design of urban parks, waterfront developments, residential/community developments, urban renewal projects that also address territories in transition. Models are also typically emphasized in this studio. Students develop design strategies through the processes of mapping and fieldwork as well as specific proposals and projects that emerge from these. They are also expected to develop their design work through a series of construction documents (grading, planting, details) and to present these alongside strategic and conceptual drawings/models at the end of the semester.

Past studios have included the design of new urban landscapes for the Naval Shipyard in South Philadelphia; the suburban fringes of Philadelphia; the lower Mississippi floodplains; and low income housing and community development in Camden, NJ; the Valles Caldera in New Mexico; the Beijing Yuan-Ming Yuan District revitalization study; a park in East Stroudsburg, PA; urban design strategies for Chengde, China; Children's Island in Prague; U.S. and Mexican borderlands; Jones Point in Alexandria, VA; vacant lands in Philadelphia; Lisbon, Portugal's Portela Airport site; Slavonice in the Czech Republic; and infrastructure projects in Phoenix, AZ.

611. Workshop III: Site Engineering and Water Management (Module 1 and 2). (A) Olgyay.

Module 1: Site Engineering: Landform and grading. This intermediate workshop continues the study of landform manipulation with particular emphasis on the design of infrastructure. Students

explore more complex exercises of contour manipulation, vehicular and pedestrian circulation systems, road and path alignment, and drainage and utility planning.

Module 2: Water Management: This workshop focuses on the study of water in the landscape, with particular emphasis on the role it plays as a determining factor on the functioning and viability of landscapes. Students learn to assess the drainage characteristics of a site as a basic tool for understanding landscapes. Direction and expression of water flow, storm water management, swales, retention and detention basins, riparian plantings, and wetlands restorations are addressed in this workshop.

Teaching in both of these workshops includes illustrated lectures, case studies, and field trips. Students are asked to develop grading and circulation schemes as well as water management solutions for their projects in design studio, thus incorporating the workshop into the design activities of the curriculum.

612. Workshop IV: Advanced Landscape Construction (Module 1 and 2). (B) Falck/Faculty.

Module 1: The Art and Craft of Detailing: This first module of Workshop IV introduces students to the design and construction of a used by landscape designers in the creation of the man-made environment. The course focuses on the various materials available for these designs, their physical characteristics, their modes of production, sequences of assembly, their life-in-use, maintenance needs, and ultimate re-cyclability where appropriate. Some of the topics covered in this module are the various materials employed in the design of the ground plane and its conditions of change: surfaces, transitions, accessibility and the laws of ADA, joints, seams, edges, etc.; free standing and retaining walls; decks and overhead structures; and understanding and developing specifications. Construction techniques covered in this course include: reinforced concrete and "in-earth" retaining wall systems, reinforced concrete superstructures, wood frame superstructures, steel frame superstructures, glass superstructures, and tensile membrane or cable-net superstructures and ETFE type air-inflated superstructures.

Module 2: Urban Landscapes and Manufactured Sites Topics; This advanced workshop presents innovative techniques associated with current professional practice in landscape architectural construction, engineering, and planting design with special emphasis on urban

landscapes. A number of special topics and case studies such as site remediation, landfill sites, structural soils and urban plantings are introduced by specialists.

The teaching in Workshop IV includes detailed studies of construction documentation, project design, material and horticultural technology, and new building techniques. These studies are facilitated through case studies and visits to selected built works and professional offices.

701. Studio V. (A) Faculty.

These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Corner, Mathur, M'Closkey, Olin, Sanders, Tomlin), visitors have included Bernard Lassus (Paris), Paolo Burgi (Switzerland), Margie Ruddick (Philadelphia), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), Catherine Mosbach (Paris), Nanako Umemoto (New York), Chris Reed (Boston), Valerio Morabito (Italy), David Gouverneur (Venezuela), Carol and Colin Franklin (Philadelphia), Peter Latz (Germany), Keith Kaseman (Philadelphia), Silvia Bedito (New York), Claudia Taborda (Portugal), and Anita Berrizbeitia.

702. Studio VI. (B) Faculty.

These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Corner, Mathur, M'Closkey, Olin, Sanders, Tomlin), visitors have included Bernard Lassus (Paris), Paolo Burgi (Switzerland), Margie Ruddick

(Philadelphia), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), Catherine Mosbach (Paris), Nanako Umemoto (New York), Chris Reed (Boston), Valerio Morabito (Italy), David Gouverneur (Venezuela), Carol and Colin Franklin (Philadelphia), Peter Latz (Germany), Keith Kaseman (Philadelphia), Silvia Bedito (New York), Claudia Taborda (Portugal), and Anita Berrizbeitia.

Elective Courses

SM 720. Topics in Representation.

(B) Faculty. Prerequisite(s): LARP501, LARP533, LARP601, ARCH501, ARCH532 OR ARCH601.

In these advanced representation courses the work extends to new ways of documenting and seeing landscape. These courses are open to all interested School of Design students who have previous drawing experience or have taken foundation studios. Recent topics have been: Seeing & Imagining Landscapes (fall annually) instructors: Valerio Morabito and Paolo Burgi; Landscape Drawing (spring annually) instructors: Laurie Olin, Trevor Lee, David Gouverneur; Shifting Landscapes: A Workshop in Representation (spring 2005, 2004), instructor: Anuradha Mathur; and The Agile Pencil and Its Constructs (spring 2004), instructor: Mei Wu.

730. Topics in Professional Practice. (B) Sanders.

These seminar courses explore ideas and methods in current landscape architectural practice. They include instruction in professional procedures, office management, project development, contracts, and collaborative ventures. They include visits to construction sites, professional offices and archives. These courses are open to all interested PennDesign students. Recent topics have been: Office Practice (spring annually) instructor: Lucinda Sanders.

740. Topics in Digital Media. (C)

Faculty. Prerequisite(s): LARP-543, MEDIA III.

These courses offer advanced instruction in the uses and applications of various digital media, including Geographical Information

Systems, 3-D modeling, digital fabrication, video, animation, and web-design. These courses are open to all interested School of Design students who already have a working knowledge of basic digital graphic techniques and with permission of the instructor. Recent topics have been: Interoperable Terrains (fall 2009, 2008) instructor: Keith Kaseman; Digital Fabrication (spring annually), instructors: Keith VanDerSys, Keith Kaseman; Geometry Clouds, Fluid Landscapes (fall 2006, 2005, 2004, 2003, 2002), instructor: David Ruy; and Tactical Surfaces / Topographic Modeling (fall 2002), instructor: Charles McGloughlin.

741. (CPLN632) Modeling Geographic Space. (A) Tomlin.

The major objective of this course is to explore the nature and use of image-based (as opposed to drawing-based) geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes. This course is open to all. Previous experience in GIS is not required. Offered in spring annually.

SM 743. Cartographic Modeling. (A) Tomlin.

This course offers students an opportunity to work closely with faculty, staff, local practitioners, and each other in conducting independent projects that involve the development and/or application of geographic information system (GIS) technology. These projects often take advantage of resources made available through Penn's Cartographic Modeling Lab [<http://www.cml.upenn.edu>]. This course is open to all students who can demonstrate sufficient experience, expertise, or initiative to pursue a successful term project. Offered in fall annually.

745. Topics in Digital Media: Advanced Topics in GIS. (M) Tomlin.

The primary objective of this course is to equip students with a selected set of sophisticated and specialized tools for the practical use of geographic information systems in a variety of application settings. Participants will have the opportunity to focus on particular topics in each of four major areas including: data acquisition - e.g. remote sensing, LiDAR imagery, global positioning systems, mobile GIS, applied geocoding, geodatabases, ArcSketch, and/or CAD interaction; communication - e.g. web mapping, animation, and/or professional cartographic techniques; problem solving - e.g. cartographic pattern recognition, geospatial allocation, agent-based modeling, geostatistics, network analysis, and/or

spatio-temporal simulation; and tool building - e.g. Python scripting, GoogleMap mashups, and/or open source GIS. The course is conducted in a seminar format with weekly sessions devoted to lectures, demonstrations, and discussions conducted by the instructor, students and invited guests. Offered in the spring annually.

750. Topics in Horticulture and Planting Design. (C) Faculty.

These courses explore relevant topics in horticulture and planting design as they relate to contemporary landscape architecture. The aim is to supplement fundamental skills and ideas explored in the core curriculum workshops with more advanced, cutting-edge research, technology and case studies. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested School of Design students.

Recent topics have been: Building New Urban Landscapes (fall 2009) instructor: Tom Ryan; Urban Horticulture (fall 2009) instructor: David Ostrich; Advanced Design with Plants (fall 2006), instructor: Dennis McGlade; Urban Horticulture: Designing and Managing Landscape Plantings in Stressful Environments (fall even years), instructor: Paul Meyer; Advanced Planting Design (spring annually), instructor: Rodney Robinson, (fall 2004) instructor: Sheila Brady; and Sustainable Large Scale Planting of Trees, Shrubs, Perennials and Grasses (fall 2001), instructor: Wolfgang Oehme.

755. Issues in Arboretum Management I (internship). (A) Arboretum Staff.

The Morris Arboretum of the University of Pennsylvania provides a case study in public garden management. Aspects of horticulture, landscape design, education, conservation, history, preservation, and management are considered. Work often includes seminars followed by outdoor practical sessions. For more information contact Jan McFarlan at the Arboretum, 215-247-5777, ext. 156. (This course is an internship that meets at the Morris Arboretum in the Chestnut Hill section of Philadelphia on Thursday afternoons during the Fall term.)

756. Issues in Arboretum Management II (internship). (B) Arboretum Staff.

A continuation of LARP 755. Students research, design, complete and present a project as part of their work. For more

information contact Jan McFarlan at the Arboretum, 215-247-5777, ext. 156. (This course is an internship that meets on Thursday afternoons during the Spring term.)

760. Topics in Ecological Design. (C) Faculty.

These elective courses explore relevant topics in ecological design and new technologies as they relate to contemporary landscape architecture. The course explores topics such as ecology, sustainability, habitat restoration, hydrology, green roof and green architecture technology, soil technology, and other techniques pertinent to the construction of ecologically dynamic, functioning landscapes. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested PennDesign students.

Recent topics have been: Large-Scale Land Reclamation Projects (spring annually) instructor: William Young, (spring 2004) instructor: James Ludwig; Restoration Ecology (fall 2006, 2004), instructor: David Robertson; Sustainable Landscape Design for Watershed Protection (fall 2008, 2006, 2005, 2004, 2003, 2002), instructor: Katrin Scholz-Barth; and Ecological Restoration in the Urban Context (spring 2002, 2001), instructor: Deborah Marton.

770. (COML776) Topics in Landscape Architecture History and Theory. (C) Hunt.

This advanced seminar explores central issues in the history and theory of landscape architecture from the Renaissance to the present day. The focus will be upon the cultural context of built works, their relation to conceptual writings (contemporary with the designs as well as modern) and the dialogue between modern professional practice and historical example and method. These courses fulfill the Landscape Architecture Theory III requirement and are open to all interested students in the PennDesign and elsewhere in the University. These courses are cross-listed with Comparative Literature 776-401.

Recent Topics have been: Six Landscape Architects & What We Say About Them (spring 2007); Open Spaces & Open Places: The Design and Use of American Landscapes (spring 2006), co-taught with Emily Cooperman; Reception, or the After Life of Landscapes (Spring 2005), Land Art and Ian Hamilton Finlay (fall 2004), Lawrence Halprin: Theory, Practice, Context & the Archival record (spring 2004) co-taught with Emily

Cooperman; Franch Landscape Architecture: Case Studies (spring 2003); Picturesque as Modernism (spring 2002); Understanding Venice Research Seminar (spring 2009); Sculpture Parks and Sculpture in Parks (fall 2008).

780. (ARCH411) Topics in Theory and Design. (C) Faculty.

These advanced seminars explore advanced ideas in contemporary landscape architectural design and theory. A special link is made between the analysis of built work and text to design practice and the making of projects. Topics include the intersections of art, nature and creativity; practices of analysis and criticism; ideas of urbanism and infrastructure; collaborative ventures and cross-disciplinarity; vision and visuality; and representational structures, both verbal and visual. These courses fulfill the Landscape Architecture Theory III requirement and are open to all interested PennDesign students.

Recent topics have been: Concepts & Theories in Contemporary Landscape Architecture (fall 2007, 2006, 2004, 2003), instructor: Anita Berrizbeitia; Environment

Regimes (fall 2009, spring 2007, 2006), instructor: Dilip da Cunha; Case Studies in Urban Design (spring 2010, 2009, fall 2007, 2006, 2005, spring 2004), instructor: David Gouverneur; Contemporary European Landscape Architecture (fall 2007), instructor: Joseph Disponzio; Max Ernst's Liminal Nature (spring 2005), instructors: Linda Pollak and Sandro Marpillero; Active Time in Cinema and Landscape (fall 2006, 2005, 2004, 2003), instructor: Ed Keller; Metropolitan Landscapes: Design, Leisure, and Regeneration (spring 2004), instructor: Ray Gastil; Nature, Society and Cities (spring 2003), instructor: Neil Smith; Land, Art and Criticism (fall 2003), instructor: Sebastien Marot; Landscape Architecture and the Art of Hope (fall 2002), instructor: Sebastien Marot; Organizational Ecologies: Emergent Forms and Practices in Complex Landscapes (fall 2002) instructor: James Corner; Surrealism and Nature: Liminality (spring 2002), instructors: Linda Pollak and Sandro Marpillero; One Two Paradox: Strategies for Building City Landscape (spring 2001), instructors: Linda Pollak and Sandro Marpillero; Landscape Production

and Visual Culture (fall 2009), instructor: Claudia Taborda.

796. Independent Studio. (B) Faculty.

An independent studio may be undertaken in the final semester but is not required. The independent studio is intended to provide highly motivated students who have demonstrated their ability to work independently with the opportunity to pursue topics that extend the boundaries of the profession. For permission, students must prepare a written proposal in the preceding semester and apply for approval from the faculty. Details available in Landscape Architecture department office.

999. Independent Study. (C) Faculty.

And independent study may be taken for elective credit at any point during the degree program, for a letter grade. For permission, students must prepare a written proposal in the preceding semester and obtain a Landscape Architecture faculty advisor to oversee their work. Details are available in the Landscape Architecture department office.

LATIN AMERICAN AND LATINO STUDIES (AS) {LALS}

010. (HIST010) The World 900-1750. (C) History & Tradition Sector. All classes. Feros. HIST 010 is a topics course. LALS 010 will be cross-listed only when the subject matter is relevant to Latin American and Latino Studies.

An introduction to world history before the industrial revolution. Coverage varies each year, but every year the focus will be on the world outside Europe and the U.S. Focus each semester on comparative and connective themes, such as trade and civilization, empires, agrarian societies and livelihoods, slavery and the slave trade, and expansion of world religions.

SM 016. (ENGL016) Topics in Literature. (C) Freshman Seminar.

Freshman Seminars under the title "Topics in Literature" will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare's period to the ethnic fiction of contemporary America. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be applied to a period, genre, or thematic requirement within the major.

SM 032. (ANTH032) The Rise and Fall of the Ancient Mayan Civilization. (M) Sabloff, J. Freshman Seminar.

The civilization of the ancient Maya, which flourished between approximately 1000 B.C. and the Spanish Conquest of the sixteenth century A.D. in what is now southern Mexico and northern Central America, has long been of wide public interest. The soaring temples of Tikal, the beautiful palaces of Palenque, the sophisticated carved monuments and sculpture, and the complex writing, astronomical, and mathematical systems of this pre-industrial civilization have been widely photographed and written about. However, revolutionary advances in archaeological research which have provided important new data about the farmers and craftspeople who supported the

great Maya rulers, and the decipherment of Maya hieroglyphics writing over the past two decades have led to the overthrow of the traditional model of Lowland Maya civilization and the growth of new understandings of the development of Lowland Maya civilization, the rise of urban states, and the successful adaptation to a difficult and varied tropical environment. Through a series of case studies, this seminar will examine the research that has led to these new insights and will evaluate the exciting new models of Maya civilization and its achievements that have emerged in recent years.

057. (ENGL057) Literature of Americas Before 1900. (M) Padilla, Amparo.

This course examines U.S. literature and culture in the context of the global history of the Americas. Historical moments informing the course will range from the origins of the Caribbean slave-and-sugar trade at the beginning of the nineteenth century, to the Monroe Doctrine of 1823 and the U.S. Mexico and Spanish-American wars. Readings will include works by authors such as Frances Calder_n de la Barca, Frederick Douglass, Helen Hunt Jackson, Henry Wadsworth Longfellow, Jose Marti, Herman Melville, John Rollin Ridge, Mar_a Amparo Ruiz de Burton, and Felix Varela.

070. (HIST070) Colonial Latin America. (A) History & Tradition Sector. All classes. Farnsworth-Alvear. Fulfills History & Tradition Distribution Requirement.

The development of Latin America from pre-Columbian times to 1850. Emphasis is on the interaction between European, Indian and African elements in colonial society, the growth of national consciousness, and the related phenomena of political instability and economic underdevelopment.

071. (HIST071) Latin America 1791-Present. (B) History & Tradition Sector. All classes. Farnsworth-Alvear.

Surveys Latin American and Caribbean history from the Haitian Revolution of 1791 to the present. We will examine the legacy of Spanish colonialism and slavery, movements for national and cultural independence, twentieth-century radicalism, and the politics of race in contemporary Latin America. Readings include fictional as well as analytical representations, and a film series will accompany the course.

SM 107. (AFRC107) Freshman Seminar. (M) Staff.

116. (AFRC116, ANTH116) CARIBBEAN CULT & POLITIC. (M)

SM 133. (ANTH133) Native People and Their Environment. (M) Erickson. Freshman Seminar.

The relationship between the activities of native peoples and the environment is a complex and contentious issue. One perspective argues that native peoples had little impact on the environments because of their low population densities, limited technology, and conservation ethic and worldview. At other extreme, biodiversity, and Nature itself, is considered the product of a long history of human activities. This seminar will examine the Myth of the Ecologically Noble Savage, the Myth of the Pristine Environment, the alliance between native peoples and Green Politics, and the contribution of native peoples to appropriate technology, sustainable development and conservation of biodiversity.

136. (HIST136) Chicano History in the United States. (M) Kropp.

On one level Chicano History is the history of Mexican-origin peoples in the United States since 1848. But Chicano also refers to the emergence of a specific historical identity grounded in the protest movements of the late 1960s and early 1970s. Both definitions are part of the project of this course. We will survey the histories of the many Mexican American people who might (or might not) consider themselves Chicano from the Mexican American War to the Zoot Suit Riots, from El Plan Espiritual de Aztl_n to Selena. The class will also explore issues of ethnicity, immigration past and present, class and gender differences, cultural conflict and exchange, transnational economies and identities, popular cultural images and production, family life and community building, struggles for equality, the relationship of Mexican Americans to Latino/as, and the controversies raised by the emergence of an increasingly multi-ethnic, multilingual society.

SM 202. (HIST202) Major Seminar in History: Europe After 1800. (C) Staff.

SM 204. (AFRC205, HIST204) Major Seminar - Americas, Post 1800. (C) Staff.

HIST 204 is a topics course. LALS 204 will be cross-listed only when the subject

matter is relevant to Latin American and Latino Studies.

L/R 213. (PSCI213) Latin American Politics. (C) Falletti.

Study of the empirical and logical validity of some of the main arguments that connect the economy and politics in Latin America. The course focuses on themes such as the agro-exporting economy, the oligarchic state, import-substitution industrialization, bureaucratic-authoritarian regimes, transition to and consolidation of democracy, and structural reforms.

SM 220. (CINE224, PRTG222) Literature, Film and Music of Brazil. (M)**SM 221. (COML223, SPAN221) Early Hispanic Literature and Culture. (A)** Staff.

This course engages in an in-depth study of Spanish and Colonial Spanish American culture(s) from the Pre-Roman period through the 17th century. Among the topics included are: Islamic Spain, the Spanish Reconquista, the Inquisition, the Origins of the Spanish Language, Sephardic Culture in Spain, the Pilgrimage Route to St. James, Picaresque Literature, Golden Age Spanish Drama, pre-Columbian Civilizations, the Conquest of the New World, and the establishment of colonial rule in Spanish America.

SM 231. (PRTG221) Perspectives in Brazilian Culture. (M) Flannery Marcia. Prerequisite(s): Taught in Portuguese.**SM 233. (HIST233) WORLD HISTORY: LATAM.****235. (SOCI266) Special Topics in Sociology. (C)** Furstenberg, Park, Zuberi.

Topics vary from semester to semester. Some which have been offered in the past include: Media, Culture & Society; Biotechnology, Bioethics and the Body; African Urbanization, and Urban Families; Schools and Neighborhoods; Research and Service/Learning.

250. (ANTH250) Aztecs, Mayas, & Incas. (M) Sharer.

A survey of the development of Pre-Columbian civilization in the Americas, from the appearance of the earliest states in Mexico and the Andes to the Spanish Conquest.

251. (PSCI251) Inter-American Relations. (C) Staff.

Patterns of inter-American conflict and cooperation: United States-Latin American relations, regional and subregional organizations. Problems of development, dependency, and security.

SM 252. (COML252, SPAN250) Spanish American Literature in Translation. (C) Arts & Letters Sector. All Classes. Laddaga. All readings will be offered in English.

This course -- taught in translation -- is devoted to literary masterworks of Spain and Latin America.

SM 254. (ANTH254) Archaeology of the Inca. (M) History & Tradition Sector. All classes. Erickson.

The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn's impressive Museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, ceque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.

258. (AFRC258, ANTH227, FOLK259, MUSC258) Caribbean Music & Diaspora. (M) Rommen.

This survey course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts <-concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course <- diaspora. Throughout the course, we will listen to many different styles and repertoires of music, ranging from calypso to junkanoo, from rumba to merengue, and from dancehall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relations to our own North-American

contexts of music consumption and production.

SM 260. (AFRC262, AFST260, ENGL260, GSOC260, LING470) Advance Topics in Narrative. (M) Clarke.

This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. Specific course topics will vary from year to year.

268. (ANTH258, CIS 106) Visualizing the Past/Peopling the Present. (M) Badler/Erickson.

Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of "ancient, mysterious, and lost" civilizations, and tours often led by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote the past? This class will focus on case studies and critiques of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art.

SM 270. (SPAN250) Major Works in Spanish & Latin American Literature. (M)

This course -- taught in translation -- is devoted to literary masterworks of Spain and Latin America.

SM 271. (URBS270) Ethnicity. (M) Vitiello.

Immigration is a controversial issue, dividing Americans from Congress to big cities to small towns. What's at stake in these debates? What does immigration mean for cities and regions? And what roles should policy makers planners, and community organizations play in shaping migration and its impacts? This course examines these questions in the context of immigrant, refugee, and receiving communities in the United States. It surveys public policy and community and economic development practices related to migration, at the local, regional, and trans-national scale. Class readings, discussions, and regular visits to a variety of Philadelphia's immigrant neighborhoods explore themes including labor markets, political mobilization, social and cultural policy, and the built environment.

275. Race and Ethnicity in U. S. Latino/a Literature. Carmen Lamas.

In this course we will study the construction of race and ethnicity in key novels written in English by Latina/o writers. We will examine how U.S.-American race relations shape Latino/a notions and constructions of race in these texts and how the authors' connections with Latin America and the Caribbean do the same. In order to understand these constructions from a hemispheric perspective, we will juxtapose our reading of Latina/o texts with works by Latin American writers that address similar issues but in a Latin American context. All coursework and discussions are in English.

SM 286. (AFRC289, ENGL286, HIST286, URBS286) Topics in American Literature. (M)

This course explores an aspect of American literature intensively; specific course topics will vary, and have included "American Authors and the Imagined Past" and "American Gothic."

SM 293. (COML293, ENGL293) Topics in Literature & Society. (M)

Awkard/Dayan. ENGL 293 is a Topics course. When the topic is Caribbean literature, the following description applies. This course explores an aspect of Postcolonial literature intensively; specific course topics vary from year to year.

303. (HIST303) Social Movements in Latin America. (C) Farnsworth/Alvear.

This course has two goals: first, to provide an in-depth look at a select number of twentieth century social movements in Latin America. Second, to allow students to "learn by doing;" each participant will produce a major research paper based on primary sources. Readings will include testimonial accounts and fictional works, as well as critical studies.

SM 314. (PSCI314) Transitions to Democracy. (C) Falletti.

This seminar is open to advanced undergraduates and graduate students. We will review and analyze the theoretical literatures on regime change and compare the experiences of countries emerging from bureaucratic authoritarianism, military rule, and socialism. How do previous regimes and economic systems, political culture, social structure and socio-economic development, and international pressures affect attempts to build democratic institutions? We will employ concepts drawn from comparative and theoretical writings to investigate cases of regime change in Europe and the former Soviet

Union, as well as Latin America and other areas of the developing world.

SM 331. (PSCI331) LATINO POLITICS.

SM 355. (SPAN355) Topics in Spanish Drama. (M) Staff.

Topics vary.

SM 370. (ENGL370) Topics in Latina/o Literature. (M) Padilla.

This course explores an aspect of Latina/o literature intensively; specific course topics will vary from year to year.

SM 390. (FREN390) Survey of Francophone Literature. (M)

A brief introduction about the stages of French colonialism and its continuing political and cultural consequences, and then reading in various major works -- novels, plays, poems -- in French by authors from Quebec, the Caribbean, Africa (including the Maghreb), etc. Of interest to majors in International Relations, Anthropology and African Studies as well as majors in French.

SM 391. (SPAN391) Spanish American Poetry. (M) Staff.

Topics vary.

SM 392. (SPAN392) Colonial Spanish American Literature. (M)

Topics vary.

SM 393. (COML396, ROML396) Latin American Literature. (M) Staff.

SM 394. (SPAN394) Spanish American Fiction. (M) Staff.

Topics vary.

SM 395. (SPAN395) Hispanic Theater. (M) Sequeira.

Topics vary.

L/R 396. (COML390, SPAN390) Introduction to Spanish American Literature. (M) Staff.

Topics vary.

SM 397. (CINE396, GSOC396, SPAN396) Studies in Spanish-American Literature. (M) Staff.

Topics vary.

SM 398. (SPAN397) History of Spanish American Culture. (M) Staff.

Topics vary.

SM 414. (URBS414) Memory and Urbanism in the Americas. (M) Hill.

This course will examine the role that memory plays in the formation of the city with an emphasis on post-colonial cities in the Americas. It will explore the specific social, historical, and state influences that gave rise to the specific spatial form of the colonial city in Latin America such as the grid-shaped layout the plaza and the colonial house and the forms of resistance to this spatial form by various exploited classes. It will then study how contemporary historical and globalization processes such as urban redevelopment, revitalization and conservation are played out in the context of this inherited spatial form, and the way that these former histories are used to support new interests, projects, protests, and utopian plans. Specific attention will be given to the tension between preservation and destruction of the urban built environment, between the interests of urban elites (architects, historians, intellectuals) in preserving the city's past and social movements that seek to create new urban functions and forms. The course will be comparative in nature, contrasting post-colonial city centers in the Caribbean and Latin America with the city of Philadelphia.

SM 419. (PSCI419) Democracy and Decentralization. (M)

433. (ANTH433) Andean Archaeology. (M) Erickson.

Consideration of culture history of native peoples of Andean area, with emphasis on pre-conquest archaeology of Central Andean region.

468. (ANTH468) The Ancient Maya. (M) Sharer.

Examination of current understanding of Ancient Maya, emphasizing critical review of recent archaeological research and theories.

SM 557. (AAMW557, ANTH557) Archaeology: Theory & Methodology. (M)

Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized toward these interpretative ends.

SM 586. (ENGL586) Topics in 20th Century American Fiction. (M) Staff.

This course covers topics in 20th-Century American fiction with specific emphasis determined by the instructor.

SM 587. (HIST587) Iberian Colonialism. (H) Farriss.

The creation of colonial societies in America under Spanish and Portuguese rule. Emphasis on primary sources (English translation) dealing with the social, cultural and biological effects of European contact. Topics include: the role of missionaries and evangelization, Iberian and Indian perceptions of the "other", the impact of Old-World diseases, animals and plants on American people and ecosystems.

SM 589. (ANTH589, HIST589) Conquest and Conversion. (C) Farriss.

Early culture contact in Mesoamerica (Mexico and Central America) and the Andes. Compares European and Amerindian conceptions of time and space of evil and disorder, the individual's relation to society, the physical world, and the sacred. Emphasis is on the zones and the means of intercultural communication - especially as influenced by the introduction of European writing -- and on the intermediaries who straddled the linguistic and cultural boundaries.

SM 590. (FREN590) Introduction to Francophone Literature. (M)

An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.

SM 592. (ENGL592) 20th Century Literature & Theory. (M)

This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor.

SM 655. (PSCI655) Democratization. (M) Falleti.

SM 677. (SOCL677) International Migration. (M) Staff.

A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory, and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course concludes with an evaluation of immigration policies in the United States.

SM 690. (COML691, SPAN690) Studies in Spanish American Literature. (M) Staff.

Topics vary. Previous topics have included Latin American Narrative and Art in Times of Globalization, Modernismo / fin de siglo, Art, Literature, and Society in Latin America at the End of the 20th Century.

SM 692. (SPAN692) Colonial Literature of Spanish America. (M) Martinez-San Miguel.

Study of the historical context of the colonial period in Spanish America and of major works in prose and poetry.

SM 697. (SPAN697) Studies in Latin American Culture. (M) Staff.

The course will be an investigation of the most influential styles of conceptualizing the relationship between artistic or literary productions and political practices in Latin America between the 1950s and the present. We will pay special attention to the genesis and structure of the notion of "liberation", and to its subsequent crisis. We will also try to determine the predicament of political art and literature in times of globalization. We will read texts by, among others, Pablo Neruda, Julio Cortazar, Glauber Rocha, Reinaldo Arenas, Osvaldo Lamborghini, and Diamela Eltit,

and analyze images of several artists, from Antonio Berni and Helio Oiticica, to Doris Salcedo and Cildo Meireles.

SM 720. (COML720, MUSC720) Studies in Renaissance Music. (M) Tomlinson.

Seminar on selected topics in the music of the Renaissance.

SM 770. (AFRC771, FOLK770, MUSC770) Seminar in Afro-American Music. (M) Ramsey.

This course will consider the American musical landscape from the colonial period to the present with an emphasis, though not exclusive focus, on non-written traditions. The course is not a chronological journey, but rather a topical treatment of the various issues in the history of American music. Some of the specific, project-oriented activities of the course will consist of, but will not be limited to the following: (1)participating in the development of a traveling exhibition on the Apollo Theater for the Smithsonian Institution; (2)development of a permanent website for a history of jazz course at Penn; (3)reviewing two manuscripts for publication to a major press; (4)developing a working proposal for a history of African American music. In this context students will learn the basics of contemporary music criticism, including: identifying a work's significant musical gestures; positioning those gestures within a broader field of musical rhetoric, conventions, and social contracts; and theorizing the conventions with respect to large systems of cultural knowledge, such as historical, geographical contexts as well as the lived experiences of audiences, composers, performers, and dancers. Other topics covered: origin and development of American popular music and gendered and racial aspects of American classical music.

LAW
(LW) {LAW}

The course list below represents courses currently offered at Penn Law. Detailed information on these courses including course descriptions are available at <http://www.law.upenn.edu/registrar/descriptions>. While most of these courses are open to Penn Law students only-some courses are available to students enrolled in other Schools at Penn. LEGAL STUDIES AND BUSINESS ETHICS (WH) {LGST}

101. Introduction to Law and Legal Process. (C) Staff.

This course presents law as an evolving social institution, with special emphasis on the legal regulation of business. It considers basic concepts of law and legal process, in the U.S. and other legal systems, and introduces the fundamentals of rigorous legal analysis. An in-depth examination of contract law is included.

202. (LGST802) Law of Corporate Management and Finance. (C) Constan, Orts.

This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stake holders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed.

204. (LGST804, REAL204, REAL804) Real Estate Law. (C) Phillips.

This course examines the fundamentals of real estate financing and development from a legal perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition; finance; choice entity; tax aspects; management (leasing, environmental); disposition of property (sale of mortgaged property,

foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments.

205. (LGST805, MKTG236, MKTG760) Law of Marketing and Antitrust. (C) Constan.

The course explores the legal aspects of marketing strategy. The first half considers relevant antitrust doctrine and policy: mergers, acquisitions, and joint ventures; pricing strategy (e.g., price fixing, exchanging price information, predatory pricing, and discriminatory pricing); marketing channel strategy (e.g., resale price maintenance, territorial and customer restrictions, exclusive dealing, refusals to deal, etc.); and limits on market dominance. The second half considers issues the intellectual property dimension (including federal patent, copyright, and trademark law), as well as federal and state laws pertaining to trade secrets, unfair competition, and consumer protection. The focus is primarily on U.S. law, but the challenges posed by diverse domestic, foreign, and international regimes will also be emphasized. The course is useful to students contemplating employment in the field of marketing, and to students interested in anticipating legal constraints on competitive strategies. Most broadly, the course should be of interest to anyone desiring to understand the legal and public policy issues relating to the government regulation of business.

206. (MGMT291, OPIM291) Negotiation and Conflict Resolution. (C) Staff.

This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.

207. (LGST809) The Sports Industry: Business and Legal Aspects. (C) Rosner, Shropshire.

The purpose of this course is to introduce future sports leaders to a compendium of business and legal issues that apply in the context of the management of professional and amateur sports. Although the factual situations will focus upon sports, the technique of inserting a legal dimension into management decision analysis transferable to other industries as well. The course will provide both practical and theoretical approaches. Students will read standard case law and business cases in the

sports area as well as law review articles and economic materials.

208. (LGST808, MGMT247) The Law at Work: Employment Law for Managers. (C) Weinstein.

Practical business solutions to problems arising in the workplace and effective human resources policy and procedures require knowledge and understanding of employment law. This course examines the development, evolution and current status of workplace laws with particular emphasis on workplace privacy and security issues including electronic communications, surveillance and monitoring; recruiting and hiring; civil rights in employment including discrimination, harassment, diversity and affirmative action; the non-employee workforce; and the regulatory environment including laws protecting workers, fair labor standards and labor/management relations. It provides students with an introduction to the law of the workforce and examines the balance between business goals and employment law compliance.

210. Corporate Responsibility and Ethics. (C) Staff.

This course explores business responsibility from rival theoretical and managerial perspectives. Its focus includes theories of ethics and their application to case studies in business. Topics include moral issues in advertising and sales; hiring and promotion; financial management; corporate pollution; product safety; and decision-making across borders and cultures.

211. (HCMG211, HCMG854, LGST811) Legal Aspects of Health Care. (C) Rosoff, Field.

This course offers a current and historical overview of the regulation of health care delivery and financing in the U.S. It examines principles and practical applications of the laws that affect the operational decisions of health care providers, payers, and managers and that impact the development of markets for health care products and services. Also considered are the social, moral, and ethical issues encountered in trying to balance the interests, needs and rights of citizens against those of society. For part of the term, the class will divide into two groups so that students can focus on their choice of (1) health care management (antitrust law, and regulation of the drug and medical device industry) or (2) selected issues of patients' rights (e.g., abortion, treatment of terminal patients, etc.).

212. (BPUB212) Economic Analysis of Law. (C) Asher. Prerequisite(s): Econ 001.

The course is designed to teach students how to think as an economist about legal rules; to evaluate alternative legal rules against standards of economic efficiency and distributive justice; and to understand the nature of the legal process and several specific areas of the law. With the use of alternative texts, both deductive and inductive reasoning will be employed to study the formation and interpretation of legal rules.

213. (LGST813) Legal Aspect of Entrepreneurship. (C) Flocos.

Legal Aspects of Entrepreneurship is a practical and intensive course that examines the critical legal issues confronting start-up and emerging growth companies. Although the context of the course is early stage companies, many of the concepts studied are equally applicable to more mature, established companies. The course provides perspective on how to use the law strategically to manage risk, deploy resources and maximize shareholder value. Topics include the enforceability of confidentiality, non-competition and other restrictive covenants in employment agreements; choice of business form including the legal, financial and tax advantages and disadvantages of general partnerships, limited partnerships, corporations and limited liability companies; tax and securities law; legal aspects of raising capital including structuring venture capital and private equity financing; letters of intent and mergers and acquisitions, employment law, and intellectual property law including trade secrets, copyrights, patents, and trademarks.

214. (LGST814) International Business Transactions. (C) Nichols.

This course aims to familiarize students with and prepare students for the conduct of international transactions. Students will work their way through a series of hypothetical trade transactions, placed against a background of concepts and general theories. Students will take a hypothetical firm through a series of possible transnational investments, again after discussion of concepts and general theories. Throughout, the course will discuss issues of importance to emerging economies. Students should be able to make thoughtful choices rather than simply reciting bullet points about international business transactions.

215. (LGST815, MGMT213, MGMT713) Environmental Management: Law & Policy. (C) Orts.

This course provides an introduction to environmental management with a focus on law and policy as a basic framework. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment and to think critically about how best to manage this relationship.

216. Emerging Economies. (C) Nichols.

This course explores important issues in conducting business internationally in and with emerging economies. Much of the course attempts to define emerging economies and to understand the changes occurring in these countries. The course also examines the position of emerging economies in the global context, and how broad social issues affect the development of emerging economies and the ability to establish relationships or conduct business in emerging economies.

218. (AFRC218) Diversity and the Law. (C) Anderson.

The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include examinations and class discussions.

219. Law and Policy in International Business. (C) Mayer.

This course introduces students to the frameworks for regulating international business national, regional, and international, singling out the most relevant features of these for special attention. Topics include international dispute resolution, trade law, jurisdictional and choice of law problems, patterns in extraterritoriality, managing conflicting legal standards, and problems in the way of creating more uniform rules affecting the conduct of international business. Students are encouraged to evaluate the policy dimensions of current legal regimes and proposals for reforms and to develop their own critical perspectives regarding these.

220. (LGST820) International Business Ethics. (C) Hsieh, Radin.

This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.

221. Constitutional Law and Free Enterprise. (C) Constan, Rosoff.

The course explores the fundamentals of U.S. constitutional doctrine and adjudication, with an emphasis on commercial and business issues and implications of constitutional law. The course starts by considering the Constitution and the structure and relationship of the governmental entities it establishes and upon which it depends. Special attention is given to the role of the federal courts, especially the Supreme Court, in interpreting and applying constitutional principles. From this foundation, the course moves on to examine in detail the major economic and business implications of constitutional law in different eras of the nation's history. A core theme is how historical events and changing notions of public policy have affected and been affected by the evolution of constitutional doctrine.

222. Law of E-Commerce. (C) Werbach.

This course examines the legal rules governing electronic commerce and the Internet. These are no longer new phenomena, but the law in many critical areas is still evolving. The course includes both private and public law components. Private law issues involve matters between parties involved in e-commerce. Examples include making contracts online, intellectual property rules, and jurisdiction over online transactions. Public law issues involve regulatory or governance obligations on Internet users and service providers. Examples include privacy, Internet domain names, certain types of forbidden content, spam, and regulation of communications networks. The course will examine legal cases as well as examples of

e-commerce businesses, which demonstrate how these rules apply to particular scenarios.

223. (LGST807) Securities Regulation. (C) Tyson, Matwyslyn.

The course examines the federal securities laws and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management, and real estate.

224. Human Rights and Globalization. (C) Bellace, Mayer.

The 2000 UN Global Compact and the 2003 UN Norms on the Responsibilities of Transnational Corporations and Other Business Enterprises with Regard to Human Rights have confirmed the role of TNCs as central actors in the field of international human rights law. This course introduces students to how international human rights law is currently being expanded to capture the operations of TNCs and why this development is controversial. The course examines competing perspectives on the pros and cons of imposing human rights responsibilities on businesses based in capital-exporting countries that are operate in emerging economies. Perspectives of various governments, businesses, international institutions, academics, and NGOs on issues of human rights and globalization will be considered, and a variety of case studies will be analyzed.

226. Markets, Morality & the Future of Capitalism. (C) Hussain.

Markets play a central role in the life of a capitalist democracy. But is this a good thing? Should we let markets decide who is rich and who is poor? Who makes decisions and who follows them? Whose ideas get heard and whose ideas do not? The goal of this class will be to examine the market from the perspective of various social values to see whether we should want a market system and, if so, what kind of market system we should want. Among the issues we will examine are the following. Does the market contribute to the common good? If so, how? Does the market conflict with the idea that all human beings are of equal value? What is the relation between the market and freedom? Does the market liberate us or oppress us? Can we reconcile the market with our democratic ideals? What role should corporations play in a healthy democracy? What role should markets play in an increasingly globalized world? We will read several important philosophers, economists and political theorists writing on these issues, including Adam Smith, John Rawls, Amartya Sen, Friedrich Hayek, Karl Marx, Robert Nozick, Ronald Dworkin, Jürgen Habermas, Peter Singer, and others.

227. Literature of Success. (C) Shell.

This course explores the history, literature, and philosophy of two age-old questions: what does it mean to be successful and how does one achieve this elusive goal? It surveys some of the classics of the "success" genre - from Benjamin Franklin's Autobiography in the 18th century to Dale Carnegie's How to Win Friends and Influence People and Marcus Buckingham's Now, Discover Your Strengths in the 20th and 21st centuries. Case studies of remarkable achievements in business and society and Arthur Miller's play Death of a Salesman provide additional contexts within which to reflect on the questions at the center of the course. Students will keep a personal journal and use web-based tools to examine their own character strengths, talents, and achievement orientations. Grading is based on class attendance and participation, reading response papers, two short papers on themes related to success, and a final, longer paper exploring, based on course readings and original research, each student's personal philosophy of success. No final exam.

228. Sports Law. (C) Brandt, Shropshire.

This course focuses on the areas of association, contract, constitutional, labor, antitrust, and agency law as they apply to

the sports industry. This course exposes the student to many of the legal issues facing those in sport organizations. Special attention is given to the regulation of professional and amateur athletics, agency law, antitrust law, the organizational structure of sports leagues and associations, labor-management relations, and Title IX. The development of effective communication skills will be emphasized through class presentations and written assignments, leadership and interpersonal communications will be developed through small group projects and meetings, and critical thinking and problem solving skills will be fostered through the careful study of numerous cases.

230. Social Impact and Responsibility: Foundations. Hsieh.

Prerequisite(s): none.

This course provides undergraduates with the opportunity to develop an integrated framework for approaching the wide-ranging field of social impact and responsibility. The course involves the critical analysis of key issues that lie at the foundation of social impact and responsibility as an area of study, and is organized around addressing the question: How should business enterprises and business thinking be engaged to improve society in areas not always associated with business?

A key element of the course is the development of frameworks to define and measure social improvement. The course also examines approaches for success in corporate philanthropy, corporate social responsibility, socially responsible investing, business-nonprofit partnerships, social entrepreneurship and the adaptation of business thinking to the social sector. Examples are drawn from a range of areas, including the environment, education, health, economic development, microfinance, human rights, and community engagement. The course is intended for students who seek careers in this field and for students who seek to prepare themselves for the social and political demands placed upon business enterprises operating in a global economy. The course is required for the secondary concentration in Social Impact and Responsibility.

292. (MGMT292, OPIM292) Adv Topics Negotiations. (C) Schweitzer, Staff. Prerequisite(s): LGST 206 Negotiations.

This course is designed to teach negotiation principles and to enable student to develop their negotiation skills. This course assumes familiarity with the basic

negotiation concepts covered in the prerequisite for this course: Negotiations.

In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

SM 299. Seminar in Law and Society. (C) Staff. See department for current offerings.

A study of the nature, functions, and limits of law as an agency of societal policy. Each semester an area of substantive law is studied for the purpose of examining the relationship between legal norms developed and developing in the area and societal problems and needs.

SM 799. SEMINAR IN LAW & SOCIETY. (C)

SM 920. Ethics in Business and Economics. (M) Donaldson, Hsieh. Ph.D Course.

The seminar explores the growing academic literature in business ethics. It also provides participants an opportunity to investigate an ethical issue of their

choosing in some depth, using their field of specialty as context. The seminar assumes no previous exposure to business ethics. Different theories and frameworks for investigating issues will be discussed. In turn, these theories will be applied to a range of issues, both domestic and international. Such issues include: corruption in host countries, the management of values in modern corporations, the ethical status of the corporation, ethics in sophisticated financial transactions (such as leveraged derivative transactions), and gender discrimination in the context of cultural differences. Literature not only from business ethics, but from professional and applied ethics, law, and organizational behavior will be discussed. Often, guest speakers will address the seminar. At the discretion of the class, special topics of interest to the class will be examined. Students will be expected to write and present a major paper dealing with a current issue within their major field. The course is open to students across fields, and provides integration of ideas across multiple business disciplines.

SM 921. Foundations of Business Law. (M) Orts, Strudler. Ph.D Course.

This course will introduce students to basic jurisprudential discussions and debates that relate to understanding business in society.

Topics will include a general overview of the nature of law and its relationship to ethics; theories of contract, torts, and property; criminal law as it applies to business situations; and theories of the business enterprise and its regulation. Selected topics will also be chosen in accordance with the interest of participants in the seminar.

SM 922. Human Rights Law and International Business. (M) Staff. Ph.D. Course.

The seminar will explore how international human rights law is increasingly being treated as setting universal standards that govern the conduct of international business with the aim of promoting a critical awareness of the problems that this entails. Students will acquire a grasp of various theories and cases involving the expansion of human rights law to cover corporations, as well as the ongoing controversies over the nature of the human rights responsibilities that should be incumbent on international business. Seminar participants will be challenged to formulate their own positions regarding this crucial development.

**LINGUISTICS
(AS) {LING}**

American Sign Language and Irish Gaelic courses are sponsored by the Department of Linguistics and offered through the Penn Language Center. Please see <http://ccat.sas.upenn.edu/plc/>

Undergraduate Courses

L/R 001. Introduction to Linguistics. (C) Natural Science & Mathematics Sector. Class of 2010 and beyond. Liberman/Buckley. Also fulfills General Requirement in Living World for Class of 2009 and prior.

A general introduction to the scientific study of language structure, history, and use. Topics include notions of "grammar"; written versus spoken (and signed) language; the structure of sounds, words, sentences, and meanings; language in culture and society; language change over time; language acquisition and processing; comparison with non-human communication systems.

010. Fundamentals of the Grammar of Standard English. (L) Staff. Offered through CGS.

LING 010 uses a combination of traditional and modern approaches to grammar to improve the student's knowledge of the English language. The course covers a wide range of topics, including traditional grammar (parts of speech and sentence diagramming), prescriptive grammar/stylistics (dangling participles, split infinitives, etc.), modern generative syntax (sentence structure, pronoun reference), discourse structure, and composition. LING 010 is of use to anyone who wishes to strengthen his or her oral and written communication skills as well as to those students who plan to teach English or language arts.

SM 054. Bilingualism in History. (A) Sankoff. Freshman Seminar.

This course takes a historical approach to tracing (and reconstructing) the nature of language contacts and bilingualism, over the course of human history. Contacts between groups of people speaking different languages, motivated by trade, migration, conquest and intermarriage, are documented from earliest records. At the same time, differences in socio-historical context have created different kinds of linguistic outcomes. Some languages have been completely lost; new languages have

been created. In still other cases, the nature and structure of language has been radically altered. The course introduces the basics of linguistic structure through a discussion of which aspects of language have proved to be relatively stable, and which are readily altered, under conditions of bilingualism.

SM 058. Language and Cognition. (B) Living World Sector. All classes. Embick. Freshman Seminar.

Because of its apparently species-specific nature, language is central to the study of the human mind. We will pursue an interdisciplinary approach to such questions in this course, moving from the structures of language as revealed by linguistic theory to connections with a number of related fields that are broadly referred to as the "cognitive sciences". A number of specific topics will be addressed from these related fields. The structures of language and its role in human cognition will be set against the background of animal communication systems. We will examine the question of how children acquire extremely complex linguistic systems without explicit instruction, drawing on psychological work on the language abilities of children. Additional attention will be focused on the question of how language is represented and computed in the brain, and, correspondingly, how this is studied with brain-imaging techniques.

L/R 102. Introduction to Sociolinguistics. (B) Society Sector. All classes. Labov/Sankoff. Satisfies Quantitative Data Analysis.

Human language viewed from a social and historical perspective. Students will acquire the tools of linguistic analysis through interactive computer programs, covering phonetics, phonology and morphology, in English and other languages. These techniques will then be used to trace social differences in the use of language, and changing patterns of social stratification. The course will focus on linguistic changes in progress in American society, in both mainstream and minority communities, and the social problems associated with them. Students will engage in field projects to search for the social correlates of linguistic behavior, and use quantitative methods to analyze the results.

103. Introduction to Language: Language Structure and Verbal Art. (A) Arts & Letters Sector. All Classes. Noyer.

The purpose of this course is to explore the relationship between linguistic structure and the use of language for artistic purposes. The syllabus is organized as a

sequence of units, each built around a particular theme. These include the sound structure of poetry (meter, rhyme, and other linguistic patterns in Jaberwocky, the Odyssey, Shakespeare, the Troubadours, and others); how precise linguistic data can be used to solve an outstanding literary problem (determining the approximate date when Beowulf was composed); and the structure of folktales of various cultures and of narratives of everyday experience.

105. (CIS 140, COGS001, PHIL044, PSYC107) Introduction to Cognitive Science. (A) Brainard/Ungar. Satisfies Formal Reasoning & Analysis for Class of 2010 and later.

Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce undergraduates from many areas to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between such modules. The course shows how the different views from the parent disciplines interact, and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories, and provides an introduction to some of the main directions of current research in the field.

L/R 106. Introduction to Formal Linguistics. (A) Schwarz. Satisfies Formal Reasoning & Analysis for Class of 2010 and later.

This course is intended as an introduction to the application of formal language theory, automata theory, and other computational models to the understanding of natural human language. Topics include regular languages and finite state automata; context-free languages and pushdown automata; recursive transition networks; augmented transition networks; tree-adjointing grammars.

110. Introduction to Language Change. (B) History & Tradition Sector. All classes. Ringe.

This course covers the principles of language change and the methods of historical linguistics on an elementary level. The systematic regularity of change, the reasons for that regularity, and the

exploitation of regularity in linguistic reconstruction are especially emphasized. Examples are drawn from a wide variety of languages, both familiar and unfamiliar. Since there are no prerequisites, the course includes mini-introductions to articulatory phonetics, basic phonology (especially the principle of contrast), and basic morphology (especially inflection), all of which must be understood in order to understand the ways in which they change.

L/R 115. Writing Systems. (A) History & Tradition Sector. All classes. Buckley.

The historical origin of writing in Sumeria, Egypt, China, and Mesoamerica; the transmission of writing across languages and cultures, including the route from Phoenician to Greek to Etruscan to Latin to English; the development of individual writing systems over time; the traditional classification of written symbols (ideographic, logographic, syllabic, alphabetic); methods of decipherment; differences between spoken and written language; how linguistic structure influences writing, and is reflected by it; social and psychological aspects of writing.

120. Introduction to Speech Analysis. (C) Yuan. Satisfies Quantitative Data Analysis.

This course focuses on experimental investigations of speech sounds. General contents include: the fundamentals of speech production and perception; speech analysis tools and techniques; and topics in phonetic studies. The course consists of integrated lectures and laboratory sessions in which students learn computer techniques for analyzing digital recordings.

135. (PSYC135) Psychology of Language. (M) Dahan. Prerequisite(s): LING 001 or PSYC 001.

This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. Subtopics include animal communication, language pathologies, second-language learning, and language in special populations (such as Down Syndrome and autistic children, and children born deaf or blind).

160. (AFRC160) Introduction to African American and Latino English. (A) Labov.

An introduction to the use and structure of dialects of English used by the African American and Latino communities in the United States. It is an academically based service learning course. The field work component involves the study of the language and culture of everyday life and

the application of this knowledge to programs for raising the reading levels of elementary school children.

SM 161. (AFRC161) The Sociolinguistics of Reading: A Service Learning Seminar. (B) Labov.

This course will be concerned with the application of current knowledge of dialect differences to reduce the minority differential in reading achievement. Members will conduct projects and design computer programs to reduce cultural distance between teachers and students in local schools and to develop knowledge of word and sound structure.

230. (LING503) Sound Structure of Language. (B) Noyer.

An introduction to phonetics and phonology. Topics include articulatory phonetics (the anatomy of the vocal tract; how speech sounds are produced); transcription (conventions for representing the sounds of the world's languages); classification (how speech sounds are classified and represented cognitively through distinctive features); phonology (the grammar of speech sounds in various languages: their patterning and interaction); advanced issues in phonological representation (syllables and feature geometry); Optimality Theory (constraint-based versus derivational phonological grammars).

240. (GRMN210) Structure of a Language. (M) Staff.

250. Introduction to Syntax. (B) Santorini. This course was formerly numbered LING 150 and is identical in content.

This course is an introduction to current syntactic theory, covering the principles that govern phrase structure (the composition of phrases and sentences), movement (dependencies between syntactic constituents), and binding (the interpretation of different types of noun phrases). Although much of the evidence discussed in the class will come from English, evidence from other languages will also play an important role, in keeping with the comparative and universalist perspective of modern syntactic theory.

255. Formal Semantics and Cognitive Science. (M) Schwarz.

This course introduces the components and formal mechanisms underlying meaning in human language and uses them as a window on the human mind, its psychological development and adult cognitive processes. Topics include what

kinds of concepts a noun or a determiner can encode; how children learn the meaning of words; how these "atoms" of meaning are combined in a mathematical procedure to yield the meaning of sentences; how semantic ambiguities are processed psychologically; and the development of a theory of mind. Formal tools from Set Theory and Predicate Logic will be introduced and applied both to the linguistic and to the cognitive characterization of meaning.

270. Language Acquisition. (M) Yang. An introduction to language acquisition in children and the development of related cognitive and perceptual systems. Topics include the nature of speech perception and the specialization to the native language; the structure and acquisition of words; children's phonology; the development of grammar; bilingualism and second language acquisition; language learning impairments; the biological basis of language acquisition; the role in language learning in language change. Intended for any undergraduate interested in the psychology and development of language.

SM 300. Tutorial in Linguistics. (A) Santorini. Prerequisite(s): Senior status or permission of the instructor. Majors only.

This tutorial allows students to deal in a concentrated manner with selected major topics in linguistics by means of extensive readings and research. Two topics are studied during the semester, exposing students to a range of sophisticated linguistic questions.

301. Conference. (C)

An independent study for majors in linguistics.

302. (LING502) Linguistic Field Methods. (M) Buckley/Legate. Prerequisite(s): Ling 230 and Ling 250.

Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 502.

310. History of the English Language. (A) Ringe/Kroch.

This course traces the linguistic history of English from its earliest reconstructable ancestor, Proto-Indo-European, to the present. We focus especially on significant large-scale changes, such as the restructuring of the verb system in Proto-Germanic, the intricate interaction of sound changes in the immediate prehistory of Old English, syntactic change in Middle

English, and the diversification of English dialects since 1750.

398. Senior Thesis. (C) Staff.**404. Morphological Theory. (M)**

Embick.

This course will explore some issues concerning the internal structure of words. After a brief introduction to some basic terms and concepts, we will discuss the interaction of morphology with phonology. We will look both at how morphology conditions phonological rules and how phonology conditions morphology. Then we will turn to the interaction of syntax and morphology. We will look at some problems raised by inflectional morphology, clitics and compounds. The main requirement for the class will be a series of homework exercises in morphological analysis.

SM 411. Old English. (M) Kroch.

The main purpose of this course is to teach students to read Old English ("Anglo-Saxon"), chiefly but not exclusively for research in linguistics. Grammar will be heavily emphasized; there will also be lectures on the immediate prehistory of the language, since the morphology of Old English was made unusually complex by interacting sound changes. In the first eight weeks we will work through Moore and Knott's "Elements of Grammar" and learn the grammar; the remainder of the term will be devoted to reading texts.

440. Pidgins and Creoles. (H) Sankoff.

The origins and development of pidgins (languages of intercommunication that have evolved for practical reasons in situations of trade, conquest, or colonization, and spoken as second or auxiliary languages) and creoles (languages with native speakers that have developed from previous pidgins); relations between creoles and other languages; implications of creole studies for general theories of language and language change.

450. Languages in Contact. (I)

Sankoff.

Multilingualism from a societal, individual, and linguistic point of view. The different types of contacts between populations and between individuals which give rise to multilingualism. Second-language acquisition and the problem of the "critical age." Cognitive and cultural aspects of multilingualism; applications to the teaching of languages. "Bidialectalism." Code-switching (alternation), interference and integration: the mutual influences of

languages in contact. Political and social aspects of multilingualism.

SM 470. (AFST260, ENGL260, LALS260) Narrative Analysis. (M)

Labov.

The course will develop our understanding of narrative structure on the basis of oral narratives of personal experience, told by speakers from a wide range of geographic backgrounds and social classes. It will link the principles governing oral narratives to the narratological examination of myth, literature and film by Propp, Greimas, Prince, Chatman, and others. The principles that emerge from the study of oral narrative will be re-examined in literary narrative, including Scandinavian, Greek and Hebrew epics, medieval romances, film, and modern novels, with attention to the differences between vernacular, literary and academic style. The class will then consider the work of psychologists on how narratives are remembered and understood, based on the causal network theory of Trabasso, and apply these principles to narratives written to teach children to read, particularly those designed to reflect the cultural and linguistic framework of African American children.

Graduate Courses**SM 500. Research Workshop. (A)**

Embick.

This course is intended for advanced graduate students who are interested in developing a research paper. Each student will present his or her topic several times during the semester as the analysis develops, with feedback from the instructor and other students to improve the organization and content of the analysis. The goal is an end product appropriate for delivery at a national conference or submission to a journal.

501. Survey of Sociolinguistics. (J)

Sankoff. Prerequisite(s): LING 102 or equivalent.

Speech communities as a focus for the understanding of language evolution and change: language variation in time and space. The relationship between language structure and language use; between language change and social change. Populations as differentiated by age, sex, social class, race, and ethnicity, and the relationship of these factors to linguistic differentiation.

SM 502. (LING302) Linguistic Field Methods. (M) Buckley/Legate.

Prerequisite(s): LING 530 and Ling 550.

Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 302. Each student will write a final paper on some aspect of the language.

503. (LING230) Sound Structure of Language. (B) Noyer.

An introduction to articulatory and acoustic phonetics; phonetic transcription; basic concepts and methods of phonological analysis.

505. Research Topics. (C)

A reading course on specialized topics in linguistics. Arranged by instructor.

510. Introduction to Historical and Comparative Linguistics. (A) Ringe.

Synchronic and diachronic systems. Analogic processes. Semantic change. Effects of contact. Internal reconstruction. Comparative method and reconstruction.

SM 515. Dynamics of Language. (C)

Yang. Prerequisite(s): Ling 510.

This course introduces the tools, techniques, as well as current research on the approach to language as a dynamical system, which seeks to fruitfully integrate linguistic theory, psycholinguistics, corpus linguistics, and historical linguistics through the means of mathematical modeling. Topics include: string processing, dynamical systems and stability, stochastic processes, mathematical models of population dynamics, and dynamical models of language learning, processing, and change.

L/L 520. Introduction to Phonetics.

(A) Yuan. Prerequisite(s): An introductory course in linguistics, or consent of instructor.

Speech: its linguistic transcription, its quantitative physical description, and its relationship to the categories and dimensions of language structure and use. The physical basis of speech: acoustics, vocal tract anatomy and physiology, hearing and speech perception, articulation and motor control. Phonetic variation and change. Prosody: stress, intonation, phrasing speech rate. Phonetic instrumentation, the design and interpretation of phonetic experiments, and the use of phonetic evidence in linguistic research, with emphasis on computer

techniques. Introduction to speech signal processing. Speech technology: introduction to speech recognition, text-to-speech synthesis, speech coding. This course will emphasize the phonetics of natural speech, and its connections to issues in other areas of linguistics and cognitive science.

L/L 521. Introduction to Phonetics II. (B) Yuan. Prerequisite(s): LING 520.

This is a methodology course, which focuses on how to conduct phonetics research using very large speech corpora. Topics include scripting and statistical techniques, automatic phonetic analysis, integration of speech technology in phonetics studies, variation and invariability in large speech corpora, and revisiting classic phonetic and phonological problems from the perspective of corpus phonetics.

525. (CIS 558) Computer Analysis and Modeling of Biological Signals and Systems. (A) Liberman.

A hands-on signal and image processing course for non-EE graduate students needing these skills. We will go through all the fundamentals of signal and image processing using computer exercises developed in MATLAB. Examples will be drawn from speech analysis and synthesis, computer vision, and biological modeling.

530. Phonology I. (A) Noyer.

Prerequisite(s): LING 503 or equivalent.

First half of a year-long introduction to the formal study of phonology. Basic concepts in articulatory phonetics; the distribution of sounds (phonemes and allophones); underlying and surface forms, and how to relate them using both ordered-rule and surface-constraint approaches. The survey of theoretical topics in this term includes distinctive features (context, organization, underspecification); the autosegmental representation of tone; and the theory of phonological domains and their interaction with morphological and syntactic constituency. Emphasizes hands-on analysis of a wide range of data.

531. Phonology II. (B) Buckley.

Prerequisite(s): LING 530.

Second half of a year-long introduction; continues LING 530. Topics to be surveyed include syllable structure and moraic theory; the prosodic hierarchy; the properties and representation of geminates; templatic and prosodic morphology; reduplication and emergence of the unmarked; and metrical phonology (properties of stress, foot typology, and

issues of constituency). Emphasizes hands-on analysis of a wide range of data.

SM 548. Proof Theoretic Foundations of Linguistic Structure. (A) Clark.

This course covers the fundamentals of proof theory and logic as they apply to linguistics. The notion of a well-formed derivation is fundamental to all flavors of formal linguistics and all sub-disciplines of linguistics-phonology, morphology, syntax and semantics. It rests, ultimately, on axiomatic systems developed by logicians to encode the process of valid formal reasoning. We will place a particular emphasis on constructive methods and, where appropriate, develop connections with parsing theory, automatic theorem proving and computational semantics. Time permitting, we will consider some introductory topics in substructural logic-systems that encode some proper sub-part of first order logic. These systems have proven very important in planning, theorem proving, dynamic logic and computational linguistics. The course is intended as a preparation for Linguistics 553 (Formal Semantics I). It includes a review of the propositional and predicate calculus before introducing tableaux and resolution systems, unification, axiomatic systems, natural deduction and sequent calculi. The latter two systems are particularly relevant for grammar formalisms like phrase structure grammars, TAGs and Categorical Grammar.

549. (CIS 477) Mathematical Techniques in Natural Language Processing. (A) Joshi.

Basic concepts of set theory, relations and functions, properties of relations. Basic concepts of algebra. Grammars, languages, and automata-finite state grammars, regular expressions, finite state transducers, context-free grammars and pushdown automata. Context-sensitive grammars-string context sensitivity and structural context-sensitivity. Mildly context-sensitive grammars. Turingmachines. Grammars and deductive systems, parsing as deduction. Stochastic grammars. The course will deal with these topics in a very basic and introductory manner, i.e., the key ideas of the proofs and not detailed proofs will be presented. More importantly, throughout the course plenty of linguistic examples to bring out the linguistic relevance of these topics will be discussed.

550. Syntax I. (A) Kroch.

A general introduction to the graduate level to the analysis of sentence structure. The approach taken is that of contemporary generative-transformational grammar.

551. Syntax II. (B) Legate.

Prerequisite(s): LING 550 or permission of instructor.

The second half of a year-long introduction to the formal study of natural language syntax. Topics to be covered include grammatical architecture; derivational versus representational statement of syntactic principles; movement and locality; the interface of syntax and semantics; argument structure; and other topics. The emphasis is on reading primary literature and discussing theoretical approaches, along with detailed case-studies of specific syntactic phenomena in different languages.

SM 556. Historical Syntax. (M) Kroch.

Prerequisite(s): LING 551 or the equivalent.

Introduction to the study of the syntax of languages attested only in historical corpora. The course will cover methods and results in the grammatical description of such languages and in the diachronic study of syntactic change.

SM 560. The Study of the Speech Community: Field Methods. (E)

Labov/Sankoff.

For students who plan to carry out research in the speech community. Techniques and theory derived from sociolinguistic studies will be used to define neighborhoods, enter the community, analyze social networks, and obtain tape-recorded data from face-to-face interviews. Students will work in groups and study a single city block.

SM 562. Quantitative Study of Linguistic Variation. (I) Labov.

Prerequisite(s): LING 560.

Multivariate analysis of data gathered in continuing research in the speech community; variable rule analysis and use of Cedergren/Sankoff program; instrumental analysis of speech signal; experimental techniques for study of subjective correlates of linguistic boundaries.

SM 563. Sound Change in Progress. (M) Labov. Prerequisite(s): LING 520.

The study of current sound changes in the speech community through instrumental means. Causes of linguistic diversity and consequences for speech recognition.

568. Dialect Geography. (M) Labov.

The principles, practices and findings of dialect geography from the nineteenth century to the present. Computational organization of dialect data. The study of

current dialect differentiation in American English and other areas.

SM 570. Developmental Psycholinguistics. (B) Yang.

The generative literature on language acquisition has produced many accurate and insightful descriptions of child language, but relatively few explicit accounts of learning that incorporate the role of individual experience into the knowledge of specific languages. Likewise, the experimental approach to language development has identified processes that could provide the bridge between the data and the grammar, but questions remain whether laboratory findings can sufficiently generalize to the full range of linguistic complexity. This course is an overview of research in language acquisition with particular focus on the important connection between what children know and how they come to know it.

575. Mental Lexicon. (M) Yang.

An investigation of the psychological representations and processing of words. Topics include: the extraction of words from speech; lexical access and production; the induction of morphological and phonological regularities in word learning; decomposition of morphologically complex words; frequency effects in morphological processing; storage vs. computation in the lexicon; the past tense debate; morphological change. This course makes extensive use of linguistic corpora. Students will also be familiarized with experimental design issues in the psycholinguistic study of the lexicon.

580. (LING380) Semantics I. (A)

Schwarz. Prerequisite(s): Ling 550. Corequisite(s): Ling 550.

This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.

581. Semantics II. (B) Schwarz.

Prerequisite(s): Ling 551. Corequisite(s): Ling 551.

The first part of the course expands the system from LING 580 to include intensional contexts. In particular, we

discuss analyses of modals, attitude verbs, and conditionals, as well as the scope of noun phrases in modal environments. The second part of the course discusses a selection of topics from current work in semantics, such as the semantics of questions, tense and aspect, donkey anaphora, indefinites, genericity, degree constructions, events and situations, domain restriction, plurality and focus.

590. Linguistic Pragmatics I. (A) Staff. Prerequisite(s): LING 550 or permission of instructor.

This course is the first of a two-term introduction to linguistic pragmatics, the branch of linguistics whose goal is to provide a formal characterization of discourse competence, i.e. of what people know when they "know" how to use (a) language. Among the topics investigated are: The Cooperative Principle, conversational and conventional implicature, speech acts, reference, and presupposition.

SM 591. Linguistic Pragmatics II. (B)

Staff. Prerequisite(s): LING 590.

This course is the second of a two-term introduction to linguistic pragmatics. Among the topics investigated are: given/new information, definiteness/indefiniteness, topic/comment, Centering Theory, discourse structure, and the functions of syntax.

595. Game Theoretic Pragmatics. (M)

Clark.

A great deal of linguistic meaning can be explained if we conceive of language as being a signaling system used by rational agents. Game theory provides an explicit mathematical account of rational, strategic interaction. This course will lay out the fundamentals of game theory, evolutionary game theory and multi-agent systems necessary to develop a theory of "radical pragmatics." We will discuss game theoretic models of implicature; presupposition and accommodation; reference tracking; scalar implicature as well as a number of other phenomena.

SM 603. Topics in Phonology. (M)

Buckley/Noyer. Prerequisite(s): LING 530-531.

Topics are chosen from such areas as featural representations; syllable theory; metrical structure; tonal phonology; prosodic morphology; interaction of phonology with syntax and morphology.

SM 604. Topics in Discourse

Analysis. (C) Staff. Prerequisite(s): LING 550 and LING 590 or permission of instructor.

Selected topics in discourse and pragmatics, e.g. reference, presupposition, functions of syntax.

SM 610. (GRMN602) Seminar in Historical and Comparative Linguistics. (C) Ringe.

Selected topics either in Indo-European comparative linguistics or in historical and comparative method.

SM 615. Comparative Indo-European Grammar. (E) Ringe.

A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.

SM 620. Topics in Prosody. (M)

Liberman/Yuan.

SM 630. Seminar in Morphology. (M)

Noyer/Embick. Prerequisite(s): LING 530.

Readings in modern morphological theory and evaluation of hypotheses in the light of synchronic and diachronic evidence from various languages.

SM 640. Formal Semantics and Mathematical Linguistics. (B) Clark.

Advanced readings in formal semantics and discrete and continuous models of linguistic behavior.

SM 650. Topics in Natural-Language

Syntax. (C) Staff. Prerequisite(s): LING 551 or permission of instructor.

Detailed study of topics in syntax and semantics, e.g., pronominalization, negation, complementation. Topics vary from term to term.

SM 653. Topics in the syntax-semantics interface. (A)

Topics in the Syntax-Semantics Interface

SM 656. Seminar in Historical Syntax. (M) Kroch.

This course analyzes several well documented syntactic changes in the European languages with the tools of modern grammatical and quantitative analysis. The focus is on the competition between forms and systems as in the loss of the verb-second constraint in English and French and the competition between head initial and head final word orders in the several West Germanic languages.

SM 660. Research Seminar in Sociolinguistics. (M) Sankoff. This course will have different topics each term. Students approaching the dissertation level will explore with faculty frontier areas of research on linguistic change and variation. Topics addressed in recent years include: experimental investigation of the reliability of syntactic judgments; the development of TMA systems in creoles; transmission of linguistic change across generations. The course may be audited by those who have finished their course work or taken for credit in more than one year.

999. Independent Study and Research. (C) Student must submit brief proposal for approval. May be repeated for credit.

Language Courses

071. American Sign Language I. (C) Staff. Offered through the Penn Language Center.

Introduction to learning and understanding American Sign Language (ASL); cultural values and rules of behavior of the Deaf community in the United States. Includes receptive and expressive readiness activities; sign vocabulary; grammatical structure; facial expressive, body movement, gestures signs; receptive and expressive fingerspelling; and deaf culture.

072. American Sign Language II. (C) Staff. Prerequisite(s): LING 071 or Permission of the Instructor. Offered through the Penn Language Center. Increased communication skill in American Sign Language (ASL); cultural values and behavioral rules of the deaf community in the U.S.; receptive and expressive activities; sign vocabulary; grammatical structure; receptive and expressive fingerspelling and aspects of Deaf culture.

073. American Sign Language III. (C) Staff. Prerequisite(s): LING 072 or permission of instructor. Offered through the Penn Language Center. Expanded instruction of American Sign Language (ASL). Receptive and expressive activities; sign vocabulary; grammatical structure; receptive and expressive fingerspelling; narrative skills, cultural behaviors; and aspects of Deaf culture. Abstract and conversational approach.

074. American Sign Language IV. (C) Staff. Prerequisite(s): LING 073 or permission of instructor. Offered through the Penn Language Center.

Increases the emphasis on more abstract and challenging conversational and narrative range. Includes receptive and expressive readiness activities; sign vocabulary; grammatical structure; receptive and expressive fingerspelling; various aspects of Deaf culture and cultural behavior rules.

075. American Sign Language V. (C) Fisher. Prerequisite(s): LING 074 or permission of instructor. Offered through the Penn Language Center.

This course is an advanced ASL course in which students will continue to expand their conversational and narrative range. While receptive readiness activities continue to be an important part of the class, the emphasis moves toward honing expressive sign skills. Various aspects of Deaf culture and cultural behavior rules will be incorporated into the course; a key component of the course is a unit on Deaf history and famous Deaf people.

SM 078. Topics in Deaf Culture. (C) Fisher. Prerequisite(s): LING 074 or permission from coordinator. Offered through Penn Language Center.

This course is an advanced/conversational ASL course that explores several key topics related to Deaf Culture. Using only ASL in class, students will read and discuss books, articles, and films related to the following topics: What is Deaf Culture?, The History of the Deaf American, Communication Issues and Pathological Perspectives on Deafness, Deafness and Education, CODAs (Children of Deaf Adults), and Performing Arts by the Deaf. Vocabulary, grammar, and idioms related to the topics will be presented through direct instruction as well as through the course of class conversation.

SM 079. Linguistics of American Sign Language. (B) Draganac-Hawk. Prerequisite(s): Successful completion of Ling 073 or equivalent.

This course is an introduction to the basic concepts of linguistics as they relate to American Sign Language. Phonological, morphological, syntactic, semantic, and sociolinguistic principles of ASL will be examined and discussed. Successful completion of LING 073/ASL III or having the equivalent signing skills is required. An Introduction to Linguistics course (or the equivalent) is preferred but not required for this course. This course is taught in American Sign Language and is not voice interpreted.

081. Beginning Irish Gaelic I. (D) Blyn-LaDrew. Offered through the Penn Language Center.

Irish Gaelic, spoken primarily on the west coast of Ireland, is rich in oral traditions, song, poetry and literature. Knowledge of this language provides a foundation to understanding Celtic folklore and linguistics and also enhances the study of Anglo-Irish literature and history. The first-year course will include reading, conversation, listening and speaking.

082. Beginning Irish Gaelic II. (C) Blyn-LaDrew. Prerequisite(s): LING 081 or permission from instructor. Offered through Penn Language Center.

083. Intermediate Irish Gaelic I. (C) Blyn-LaDrew. Prerequisite(s): LING 082 or equivalent. Offered through the Penn Language Center.

085. Advanced Irish Gaelic I. (C) Blyn-LaDrew. Prerequisite(s): LING 084 or equivalent. Offered through Penn Language Center.

086. Advanced Irish Gaelic II. (C) Blyn-LaDrew. Prerequisite(s): LING 085 or equivalent. Offered through the Penn Language Center.

This course will emphasize reading of literary texts, and advanced aspects of grammar, composition, and conversation.

088. History of the Irish Language. (L) Blyn-LaDrew. Offered through the Penn Language Center.

From downloadable lists of computer terminology in Irish to Ogam inscriptions chiseled in stone in the 5th century, the history of the Irish language reflects the history of the people themselves. This course outlines the language's changes through time and emergence from the unwritten Celtic, proto-Celtic, and Indo-European speech of its ancestors. Beginning in the modern period, when the very status of Irish as a living language has been hotly debated, the course will look backwards at the Celtic cultural revival of the late 19th century, the impact of the famine, nationalism, colonialism, the arrival of Christianity and the Roman alphabet, and the position of Irish within the Celtic branch of the Indo-European language family. Term papers may be based on fieldwork in the Irish-American community, or research. Audio and visual resources will supplement the lectures. Knowledge of Irish Gaelic is not required.

**LOGIC, INFORMATION
AND COMPUTATION
(AS) {LGIC}**

010. (PHIL005) Ideas in Logic and Computation. (B) Weinstein.

This course provides an introduction to some of the fundamental ideas of logic and computation. Topics will include truth functional logic, quantificational logic, and logical decision problems.

210. (MATH340) Applied Mathematics of Information and Computation I. (A) Scedrov.

The first semester of a two-semester course designed to introduce students to a range of mathematical subjects useful in the analysis of information and computation. This

course will treat topics chosen from set theory, combinatorics, graph theory, and number theory.

220. (MATH341) Applied Mathematics of Information and Computation II. (M) Scedrov.

The second semester of a two-semester course devoted to mathematical subjects useful in the analysis of information and computation. Topics will be drawn from automata theory, formal languages, computability and complexity, and information theory.

310. (MATH570, PHIL006) Logic I. (C) Weinstein, Scedrov.

The first semester of a two-semester course on the fundamental results and techniques of mathematical logic. This course will treat the basic metamathematics of first-order logic including the Completeness

Theorem, Compactness Theorem, Lowenheim-Skolem Theorem, Godel Incompleteness Theorems, and Church's Theorem. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.

SM 320. (MATH571, MATH670, PHIL412, PHIL416) Logic II. (C) Weinstein.

The second semester of a two-semester course on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.

MANAGEMENT (WH) {MGMT}

L/R 100. Leadership and Communication in Groups.

As a Wharton undergraduate, you are in a position to become a future business leader. Management 100 is designed to increase your understanding of leadership and communication in teams and to help you build skills that are necessary for professional success. You will study literature on leadership, management communication, and group dynamics and also complete a field project, an integral part of the course. Your field project provides the context in which you will develop as a leader, practice communication skills, learn about the nature of group work, and enhance your sensitivity to community issues. Management 100 will enrich your Wharton experience by providing many opportunities for interaction with peers, advanced students, alumni, faculty and the community.

L/R 101. Introduction To Management. (C) Prerequisite(s): None.

This course addresses contemporary management challenges stemming from changing organizational structures, complex environmental conditions, new technological developments and increasingly diverse workforces. It highlights critical management issues involved in planning, organizing, controlling and leading an organization. This course will help you understand some of the issues involved in both managing and being managed and equip you to become more effective contributors to organizations that you join. The course will cover several topics in management, organization and strategy. Each topic will span one or two weeks. Topics include combinations of the following areas: organizational structure, organizational culture, strategy, interorganizational relationships, job design, groups, reward systems, work force composition, power and politics, social responsibility, organizational change, organizational decision-making, business history. The professor will cover an overview of the topic with frameworks and examples in the lecture and the teaching assistant will lead a case discussion that integrates these frameworks in the recitation.

104. Industrial Relations and Human Resource Management. (C)

Prerequisite(s): MGMT 100 & MGMT 101.

The focus of Management 104 is the economic and institutional constraints on organizations in the formulation and implementation of human resources management policies and strategies in the United States and, as appropriate, internationally. The specific constraints discussed are labor markets (external and internal), labor laws (governing employment policies and employee relations), and labor unions (and the threat thereof). Particular attention is paid to the relationship of these constraints to the competitiveness of American enterprise in the global economy.

111. Multinational Management.

Prerequisite(s): MGMT 100 & MGMT 101.

Multinational management is the study of the international corporation and the global political and economic environment. This course provides an introduction to the more advanced offerings. It covers the historical origins of the multinational corporation, the economics of trade, money and investment in the world economy, and the policies and behavior of governments and international organizations. We place considerable emphasis in understanding the national and historic origins of the international firm, as well as on current issues regarding emerging economies and shifts in the political economy of global markets.

205. Multinational Corporate Strategies. (B) Prerequisite(s): MGMT 100, MGMT 101, & MGMT 111.

This course focuses on the creation of competitive advantage in the multinational firm. It examines the nature of global competition by exploring the characteristics of global versus non-global industries and firms. We also explore different types of international strategy and structure and examine the specific challenges of managing in multiple countries and markets. Finally, we consider the strategic allocation of resources along the value chain and the role of strategic alliances as a crucial element of an effective global strategy.

208. Globalization and International Political Economy. (B) Prerequisite(s): MGMT 100 & MGMT 101.

Globalization and International Political Economy is an upper level undergraduate course designed to provide the background necessary to understand globalization and the changes taking place in the international political-economy. The course objective is to help students develop a conceptual

framework that will provide an understanding of the current international political-economic environment, provide a basis for thinking about the fundamental changes which are now taking place, and to build a solid foundation to which new material can be added throughout the students' careers.

209. The Political Environment of the Multinational Firm. Prerequisite(s): For Wharton students: MGMT 100, MGMT 101 & MGMT 111 (recommended); For College students: A familiarity with international political economy.

This course explores the intersection of international strategy and international relations to help students to identify and introduce sustainable and profitable business strategies in sectors with a history of or strong potential for ongoing political intervention. We will examine the identity, background, incentives and operations of relevant national and international political actors; and the process by which they generates policies that can adversely or favorably influence firm profitability. Corporations whose success depends crucially on a sophisticated analysis of the contending forces in the geopolitical arena and an ability to influence policy outcomes will serve as examples of the first-order strategic importance of incorporating the political environment in multinational strategy formulation.

211. Competitive Strategy. (A)

Prerequisite(s): MGMT 100 & MGMT 101 and some knowledge of microeconomics is suggested. The course will be discussion oriented and based largely on case materials and mini-lectures.

This is an advanced course in competitive strategy. The course will apply the tools of industrial organization economics and game theory to examine the strategic decisions that managers make. We will examine those decisions concerning pricing, capacity investment, advertising, new product introductions, and research and development. Emphasis will be placed on the strategic interaction among rival sellers. In particular we will look at the various methods of entry deterrence and strategic commitment. The course will attempt to integrate traditional economic models with case study materials.

212. (MGMT810) Entrepreneurship & Societal Wealth Venturing. (B)

Prerequisite(s): MGMT 100 & 101.

The basic thesis of this elective half-semester course is that many social problems, if engaged entrepreneurially, create opportunities for launching

businesses that simultaneously generate profits and alleviate the social problem. This approach generates social wealth as well as entrepreneurial wealth. The course is distinguished from public sector initiatives to address social problems, and also from "social entrepreneurship" programs where social wealth creation is a by-product rather than the target of the entrepreneurial effort. Students are expected to begin the course with already conceived ideas for entrepreneurial solutions to social problems.

223. Business Strategy and Policy.

Prerequisite(s): MGMT 100 & 101; seniors and juniors that have completed introductory courses in finance, marketing, and accounting.

This course encourages students to analyze the problems of managing the total enterprise in the domestic and international setting. The focus is on the competitive strategy of the firm, examining issues central to its long- and short-term competitive position. Students act in the roles of key decision-makers or their advisors and solve problems related to the development or maintenance of the competitive advantage of the firm in a given market. The first module of the course develops an understanding of key strategic frameworks using theoretical readings and case-based discussions. Students will learn concepts and tools for analyzing the competitive environment, strategic position and firm-specific capabilities in order to understand the sources of a firm's competitive advantage. In addition, students will address corporate strategy issues such as the economic logic and administrative challenges associated with diversification choices about horizontal and vertical integration. The second module will be conducted as a multi-session, computer-based simulation in which students will have the opportunity to apply the concepts and tools from module 1 to make strategic decisions.

The goal of the course is for students to develop an analytical tool kit for understanding strategic issues and to enrich their appreciation for the thought processes essential to incisive strategic analysis. This course offers students the opportunity to develop a general management perspective by combining their knowledge of specific functional areas with an appreciation for the requirements posed by the need to integrate all functions into a coherent whole. Students will develop skills in structuring and solving complex business problems.

225. (MGMT714) American Business History. Prerequisite(s): MGMT 100 & MGMT 101.

This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course's objectives are descriptive and narrative. Its deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. The course will discuss the historical development of the business enterprise as an institution. It will also cover the evolution of competition and strategy of corporate finance. The focus will be on American developments, since many of the innovations took place here; but there will be a number of comparisons to institutions in Japan and the leading European economies. The course considers issues arising in a number of different management disciplines and shows off their interrelationships.

230. Entrepreneurship. Prerequisite(s): MGMT 100 & MGMT 101;

Entrepreneurship (MGMT 230) integrates the material introduced in core courses and applies it to the evaluation and creation of new ventures. You must have attained Junior standing at Wharton and completed all of the undergraduate courses (i.e., at least one course each in marketing, management, introductory and advanced accounting and finance). Ideally, you will also have mastered the concepts of Business Policy.

MGMT 230 integrates the material introduced in core courses and applies it to the design and evaluation of new ventures. The purpose of this course is to explore the many dimensions of new venture creation and growth to foster innovation and new business formations in independent and corporate settings. The course addresses both a theoretical perspective on venture initiation and the application of writing an actual business plan.

231. Entrepreneurship & Venture Initiation. (B) Prerequisite(s): Completion of MGMT 100, MGMT 101, AND MGMT 230 or MGMT 235.

MGMT 231 is an advanced sequel to Mgmt.230 focusing on independent entrepreneurship, business plans and the business planning process, and the operating management of small firms. Ideally, the course builds upon venture opportunities identified in MGMT 230.

233. (MGMT833) Strategies and Practices of Family-Controlled Companies. (B) Prerequisite(s): MGMT 100 & 101.

This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth management. It will focus on shareholder decision making; financial and market driven options for long-run competitiveness, organizational structures and management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, wealth, leadership and relationship family dynamics and communication issues; and leadership empowerment. The course is intended for those who plan to control family-controlled companies and for those planning a career in their family firm.

234. (MGMT875, PSCI228) International Comparative Management: The Challenge of Diversity and Integration. (B)

Prerequisite(s): Mgmt 100, Mgmt 101 & Mgmt 111. This course is comprised of lectures with case discussions, group and individual short papers and quizzes on the readings.

This is essentially a course in comparative national environments for business and how aspects of these environments impact on the firm. The course examines a number of institutions and phenomena in various countries. Issues range from language, religion, gender and ethnicity to legal systems, financial markets and corporate governance. The lectures draw on ideas from history, geography, sociology, political science and economics to inform our analyses. The lectures and cases range over both developed market economies and emerging economies.

235. Technological Innovation and Entrepreneurship. (A) Prerequisite(s): MGMT 100 & MGMT 101; open to juniors and seniors in Engineering, Applied Science, and Wharton; others only with special permission. All students must receive instructor's permission. Graduating M&T students receive priority enrollment.

The focus of this course is on analysis of the issues and options which must be faced in developing a new technological venture. Particular attention is directed to the identification of technology-based venture opportunities, evaluation of technical feasibility and commercial potential, and planning for successful commercialization.

237. Management of Technology. (B)

Prerequisite(s): MGMT 100 & MGMT 101; limited to Management and Technology sophomore students.

This course examines the innovative process within technology-based organizations and the range of internal and external forces which impact on technological innovation and growth. Emphasis is placed on managerial initiatives which can influence the nature and rate of technological development. Technological innovation and change, technology forecasting and assessment, R&D management, technical planning, and organizational models are among the topics to be considered.

238. Organizational Behavior. (B)

Prerequisite(s): MGMT 100 & MGMT 101.

Management 238 is the standard undergraduate course in Organizational Behavior. The course deals essentially with the management of people at work. It examines the individual employee in his organizational environment, as well as the organization itself. Topics range from motivation, leadership groups all the way to organization structure, culture, human resources and organizational change. The course develops some themes in which these topics become relevant -- for example the networking organization and diversity at the workplace. Students should expect to conduct group projects involving actual fieldwork and might be asked to give a presentation in class.

239. Organization Design.

Prerequisite(s): MGMT 100 & MGMT 101.

We are born in and spend much of our lives in organizations. From families to schools to athletic teams and jobs, organizations play a central role in our experience. And this is especially so as we pursue careers. Few of us have the luxury of working as a lone artist unfettered by an organization's demands and restrictions. At times we are grateful to organizations for their services and protection. At other times we hate them being unfeeling and inflexible bureaucracies. In this course we shall examine how organizations are structured with a particular emphasis on businesses and not-for-profit organizations for which most of us will work. How can they be structured so that they are effective and efficient? And how can we personally survive in them when they are less than we might want?

240. Group Dynamics.

This course is designed to develop students' skills in effectively designing, leading and consulting to teams in organizations. This

will be a highly interactive course with emphasis on class participation and experiential learning. One of the goals of this course is to provide both the conceptual understanding and the behavioral skills required to implement strategies. To this end, class sessions will make use of a variety of approaches to teaching and learning, including the case method, simulation exercises and lectures. We will cover topics such as leading groups, group formation and socialization, diversity, creativity, group problem solving and decision making, conflict and knowledge sharing. Students will leave this class with knowledge of how to most effectively lead a team as well as how to be an effective team member. [NOTE: Instructors may have different objectives for this course. Please see individual instructors' syllabi for further clarification.]

247. (LGST208, MGMT795) Employment Law.**249. Corporate Development: Mergers and Acquisitions.**

Prerequisite(s): MGMT 100 & MGMT 101.

This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it also will explore leveraged buy-outs and hostile financial acquisitions as well as their influence on corporate buyers.

251. Consulting to Growth Companies. (A) Prerequisite(s): MGMT 100 & 101; Junior or Senior Standing Recommended.

This course offers students a unique opportunity to develop consulting skills and entrepreneurial expertise by working as consultants to entrepreneurial ventures in the Philadelphia area. This capstone course combines both fieldwork and class work and allows students to apply knowledge and skills acquired through other course work to real world issues that must be addressed by operating companies. An understanding of characteristics producing rapid entrepreneurial growth and skills related to effective communications and management of a business relationship are emphasized.

SM 253. (CINE285, THAR285) Creating, Managing, and Presenting the Arts. (M) Prerequisite(s): Mgmt 100 & Mgmt 101.

A study of the creation and presentation of art (e.g., theater, film, sculpture), the cultural context of creativity and the management of individual and institutional performance and exhibition. A combination of lectures by instructors and practitioners, case studies and consulting projects with local institutions will illustrate the relationship between creativity and presentation. Students will be required to write papers, proposals, and complete a term project.

264. Venture Capital and Entrepreneurial Management. (A)

Prerequisite(s): MGMT 100 & 101; Junior or Senior Standing Recommended.

This elective course focuses on venture capital management issues in the context of a high-growth potential start-up company. The course is motivated by rapid increases in both the supply and demand for private equity over the past two decades. On the supply side, the amount of private equity under management has increased from under \$5 billion in 1980 to over \$300 billion at the beginning of 2003. Despite the recent downturn in private equity fundraising and investment activity, private equity funding is likely to remain an important activity in the near future as pension funds and other institutions continue to diversify their portfolios. On the demand side, an increasing number of entrepreneurs are interested in forming and growing their ventures. The supply and demand for funds are growing globally.

The course is designed principally to address the interests of students who either expect to embark on an entrepreneurial career, or those who expect to assume a managerial role with a venture-backed start-up company, or students who wish to pursue a career in venture capital. The course will touch upon a range of fields including management, finance, accounting, strategy, and legal- and attempt to identify mainstream "best practices" in the area of high growth potential start-ups, with the objective of ensuring that students completing the course will have a solid understanding of the questions and issues that face the typical start-up.

282. Strategic Implementation.

Prerequisite(s): MGMT 100 & MGMT 101.

This course is directed toward the attainment of three interdependent objectives: 1) to develop an understanding of strategy implementation in complex organizations, 2) to understand how

organizational planning, design, control and human resource decisions are interdependent and critical to successful implementation, and 3) to develop a sensitivity to the "realities" of strategy implementation in "real-world" organizations. Consideration of theories of implementation is not sufficient; it is necessary also to see strategy implementation as a process of that change that, to be successful, must take a number of factors into consideration. These include how decisions affect individuals in organizations and their consequent commitment to implementation efforts. To meet these objectives, emphasis will be on lectures, class discussions, and case studies as the instructional techniques.

283. (MGMT783) Strategies for Economic Inclusion. Keith Weigelt.

The majority of humans, estimated to exceed 4 billion people, exist on incomes less than \$3,000 per year. Over 1 billion of these poor exist on less than \$1 per day. Many poor are denied the opportunity to engage in the global business environment.

Constraints they face include those of capital, knowledge, and services.

This course is designed to attract those who are interested in the market for the poor. It will provide a managerial guide to those who may want to pursue careers in this space. The course is designed to present a multi-functional view of decisions managers will face.

288. (MGMT788) Governance and Management of Chinese Firms. (A)

Prerequisite(s): MGMT 100 & MGMT 101.

This course provides an examination of some of the largest business firms in the Peoples Republic of China, acquainting students with the governance and management (both management structure and management teams) of some of the largest and best known Chinese firms. Students will also become acquainted with the capabilities and liabilities of Chinese firms and their strategic options. Tools needed to assess the investment potential of Chinese firms will be provided, and students will have an opportunity to do original research on issues of governance and management of Chinese firms.

291. (LGST206, OPIM291)

Negotiations. Prerequisite(s): MGMT 100 & MGMT 101.

This course includes not only conflict resolution but techniques which help manage and even encourage the valuable aspects of conflict. The central issues of this course deal with understanding the behavior of individuals, groups, and organizations in conflict management situations. The purpose of this course is to understand the theory and processes of negotiations as it is practiced in a variety of settings. The course is designed to be relevant to the broad spectrum of problems that are faced by the manager and professional including management of multinationals, ethical issues, and alternative dispute resolutions. Cross listed w/ LGST 206 & OPIM 291.

292. (LGST292, OPIM292) Advanced Negotiation.

353. Wharton Field Challenge. Weigelt and Staff.

**MARKETING
(WH) {MKTG}**

**L/R 101. Introduction to Marketing.
(C) Niedermeier.**

The objective of this course is to introduce students to the concepts, analysis, and activities that comprise marketing management, and to provide practice in assessing and solving marketing problems. The course is also a foundation for other Wharton courses, and for advanced electives in Marketing. Topics include marketing management, pricing, promotion, channels of distribution, salesforce management, and competitive analysis.

**211. (MKTG773) Consumer Behavior.
(C) Prerequisite(s): MKTG 101.**

An examination of the factors (both internal and external) that influence people's behavior in a buying situation. Course objectives are: (1) to provide conceptual understanding of consumer behavior, integrating theories from psychology, sociology, and economics; (2) to provide experience in the application of buyer behavior concepts to marketing management decisions; and (3) to introduce behavioral research approaches.

**212. (MKTG756) Marketing Research.
(C) Prerequisite(s): MKTG 101, STAT 101. Students are highly encouraged to take statistics in the semester immediately preceding this course.**

Appreciation of the role of marketing research in the formulation and solution of marketing problems and development of the student's basic skills in conducting and evaluating marketing research projects. Special emphasis is placed on problem formulation, research design, alternative methods of data collection (including data collection instruments, sampling, and field operations), and data analysis techniques. Applications of modern marketing research procedures to a variety of marketing problems are explored.

**221. New Product Management. (C)
Prerequisite(s): MKTG 101. 0.5 c.u. One-half term.**

Examination of the marketing aspects of products. A total immersion in the new product development process. Focuses on decisions regarding product introduction, positioning, improvements, deletion, and the tools available for making these decisions. May take this course or MKTG232, but not both.

**222. (MKTG754) Pricing Policy. (C)
Prerequisite(s): MKTG 101 and Sophomore standing. 0.5 c.u. One-half term.**

The pricing decision process including economic, marketing, and behavioral phenomena which constitute the environment for pricing decisions and the information and analytic tools useful to the decision maker.

**224. Advertising Management. (C)
Prerequisite(s): MKTG 101 or permission of instructor. 0.5 c.u. One-half term.**

Examination of the practice of advertising. Focuses on decisions regarding advertising objectives, copy selection, budget setting and media selection. May take this course or MKTG 235, but not both.

225. (MKTG793) Principles of Retailing. (C) Prerequisite(s): MKTG 101. 0.5 c.u. One-half term.

This course is an introduction to the management of retail operations. Topics covered include: retail strategy, store location, product merchandising and display, vendor relations, and the marketing mix as it relates to retailers. The emphasis is on developing a basic understanding of what makes a retailing establishment run and on learning to apply this understanding.

228. (MKTG728) Contagious: How Products, Ideas, and Behaviors Catch On. (C) Berger. Prerequisite(s): Marketing 101 and 211 are recommended, but not required.

Why do some products catch on and achieve huge popularity while others fail? Why do some behaviors spread like wildfire while others languish? How do certain ideas seem to stick in memory while others disappear the minute you hear them? More broadly, what factors lead to trends, social contagion, and social epidemics?

This course looks at these and other topics as it examines how products, ideas, and behaviors catch on and become popular. Marketers want their product to be popular, organizations want their social change initiative to catch on and entrepreneurs want their ideas to stick. This course will provide insight into the factors underlying these dynamics. To study these issues, students will read and discuss academic research from Psychology, Sociology, Economics, and Marketing (as well as other disciplines).

Along the way, the course will touch on four main aspects: (1) Characteristics of products, ideas, and behaviors that lead them to be successful; (2) Intrapersonal processes, or aspects of individual psychology that influence what things are successful; (3) Interpersonal processes, or

how interactions between individuals drive success; (4) Social networks, or how patterns of social ties influence success.

**232. New Product Development. (C)
Hutchinson. Prerequisite(s): MKTG 101.**

The development of new products (goods or services) is an intensively cross-functional process. This course examines that process from the marketing perspective and identifies the key points of contact with operations, finance, organizational policy, and strategic planning. Although an overview of the entire process is provided in the course, special emphasis is placed on the evaluation of concepts early in the process. Thus, this course is very much concerned with ideas and how to select the best ideas and make them a reality.

The main objectives of the course are (1) to familiarize students with the strategies, frameworks, conceptual tools, and types of marketing research that are considered best practices in the development of new products and (2) to give students the opportunity to apply some of these ideas and methods in the evaluation of a specific product concept, customizing the learning experience to their own needs and interests.

233. (MKTG733) The Social Impact of Marketing. (C) Wes Hutchinson. Prerequisite(s): MKTG101 or permission of instructor. One half term - 0.5 c.u.

This course explores the ways in which the marketing actions of firms can have an impact on society (positive or negative). Of particular interest are the actions that are central to the main products and services delivered by the firm (e.g., the development of products and brands, pricing, advertising, and distribution). It adopts specific markets and also assesses impact in the aggregate marketing and social systems within which those transactions occur. For example, many analyses examine how the actions for suppliers further back in the value chain contribute to social impact and become part of branding strategies and consumer perceptions. This course contrasts with courses that focus on strategies for the design and execution of marketing programs for social causes, non-profit and non-governmental organizations or corporate social responsibility initiatives, although the material covered is foundational for such programs.

The course is structured around four problem areas: impact on health and well-being (physical and mental), impact on the environment, impact on culture (including innovation and creativity), and impact on poverty and economic development. In each area, we will identify marketing-

related causal factors and assess current knowledge and controversies surrounding those factors. There is also a focus on current metrics for assessing social impact and how specific marketing actions and companies considered in the entirety can be "scored" in terms of their impact on society. Students will learn how to conduct analyses of net social impact. The course meets twice a week. Typically, one session is lecture and/or a case, and one session is an in-class event (e.g., guest speaker, student presentations, simulation game, etc.). The main deliverables for the course are two position papers and a final short essay evaluating the social impact of companies or products in a specific industry.

235. Principles of Advertising. (C)
Prerequisite(s): MKTG 101. May be substituted for MKTG 224 as part of Major. Credit will not be given for both courses.

Marketing management's use of advertising as a promotional variable. The course will concentrate on concepts and theories of advertising as they apply to the strategic decisions of an advertising or brand manager. Emphasis will be placed on product positioning, the communication process, and the measurement and evaluation of advertising effects.

236. (LGST205, LGST805, MKTG760) Law of Marketing and Antitrust. (C)
Prerequisite(s): MKTG 101.

Study of the antitrust laws and the law of intellectual property. Emphasis on the legality of various pricing, promotion, and distribution strategies. Current developments are emphasized.

SM 271. (MKTG771) Models for Marketing Strategy. (M) Prerequisite(s): MKTG 101, STAT 101.

The purpose of the course is to help participants become better managers by exposing them to various tools developed for analyzing marketing decision problems, and by helping them understand different types of models that have been used to support marketing decisions. The course provides participants with critical skills necessary for evaluating new marketing models about which they may read in the literature and it thus enables them to read the relevant literature more effectively. Participants will understand marketing problems more clearly by analyzing them quantitatively and will become managers who are not likely to be taken advantage of by some quantitative consultants.

277. (MKTG777) Marketing Strategy. (C) Prerequisite(s): MKTG 101. Lectures, discussions, cases.

This course introduces the student to problems in high-level marketing decision making with several strategic marketing planning frameworks frequently applied during the analysis of those problems. The course will focus on a variety of management problems which include the following characteristics: (1) Several strategic business units are involved in the decision. (2) Competitors' behaviors are formally taken into account. (3) Long-term marketing advantages are sought. (4) Profit and other financial consequences are considered.

278. Strategic Brand Management. (C) Cassie Mogilner. Prerequisite(s): MKTG 101.

Which brands make you happy? Apple? Starbucks? The Daily Show? Google? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand, where brand is defined as "a sensibility" - departing from traditional perspectives of brand. The course is created for students interested in building their own brands and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, all of which culminate in a brand audit group project that students will present in the final class session. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students' ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.

281. (MKTG781) Entrepreneurial Marketing. (M) Prerequisite(s): MKTG 101; MKTG 212 (can take concurrently); students are discouraged from taking this course and MKTG 221 without the permission of the marketing undergraduate faculty advisor. 0.5 c.u. One-half term.

This course focuses on the key marketing concepts and methods relevant for entrepreneurs. In particular, it covers the marketing elements of new venture initiation (including a business plan), as well as marketing decisions for small and

growing organizations. Topics include product/service design, assessment of market potential, creation of successful distribution relationships, and new product pricing. In contrast to the product development course, the emphasis here is on a new startup business rather than a new offering from an existing business. Topics covered in this course also include low-budget or no-budget market research, successful strategic alternatives for small business, alternatives to high-cost advertising (e.g., direct marketing, alternative media, and personal selling) segmentation, and targeted marketing. Students will prepare a marketing plan for an entrepreneurial organization of their choice, possibly for a new venture they are considering.

282. (MKTG782) Multinational Marketing. (C) Prerequisite(s): MKTG 101. 0.5 c.u. One-half term.

Global marketing is an extremely demanding discipline but, from a career standpoint, one which is both challenging and rewarding. Inherent to the success of any global marketing professional, yet many times overlooked and/or underappreciated, is the critical nature of human understanding and relationships in business planning and execution. This is especially relevant in today's business environment when you consider the dual multinational company imperative of continued revenue and profit growth in mature markets and successfully expanding into new growth and emerging markets. This course assumes an understanding of marketing principles and some exposure to and appreciation of the global environment. The objective of the course is to provide an understanding of how the global environment (particularly cultural diversity) affects the application of marketing principles and business practice on a global basis and the competencies necessary to be a successful global manager.

288. Pricing Strategies. (C)
Prerequisite(s): MKTG 101.

This course is designed to equip you with the concepts, techniques, and latest thinking on pricing issues, with an emphasis on ways in which you can help a firm improve its pricing. The orientation of the course is about practice of pricing, not theory. We will focus on how firms can improve profitability through pricing, look at how firms set their prices and how to improve current practices to increase profitability. In the first part of the course you will learn how to analyze costs, customers, and competitors in order to

formulate proactive pricing strategies. In the second part of the course you will learn about price promotions, price bundling, price discrimination, versioning, nonlinear pricing, pricing through a distribution channel, dynamic pricing, etc.

392. (MKTG792) SPECIAL TOPICS: Visual Aesthetics and Style in Retail Merchandising. (C)

This course is a visual and practical approach of understanding global styles and it involves readings, active participation in the creation of lifestyle boards, brand books, exercises to develop all the senses and the development of a total lifestyle concept. Students will be exposed to the Through the Whitaker Lifestyle Segmentation of the Global Consumer system and will learn: you will learn: How to anticipate and predict consumers needs and their style evolution; How to identify new retail opportunities; How to create innovative retail concepts and brands; How to merchandise the appropriate products for a specific lifestyle; and How to develop your intuition and creative power. In addition, students will critically evaluate this style segmentation system and compare it to other segmentation approaches. This course is relevant for students interested in developing their intuition and creativity. The topics of this course are a foundation for anyone working in any area of the retail industry: marketing, merchandising, visual merchandising, store design, planning, advertising, etc.

394. Interactive Media Marketing. (C)

Diamond. Prerequisite(s): MKTG 101 and MKTG 211. Students who have not taken MKTG211 may waive this requirement with instructor's permission.

Few businesses experience as dramatic a paradigm shift as the one currently facing the media and entertainment industries. As entertainment and technology converge in interactive offerings, not only are media and entertainment being redefined, but also the underpinnings and business models on which those industries are based.

This rapidly changing marketplace is also impacting those businesses traditionally dependent upon media for advertising and brand building. As the locus of control shifts from providers to consumers, it is imperative to understand the marketing implications of this shift as well as its impact on other industries. Although media and entertainment are not traditional consumer products, they nonetheless face the same marketing mix issues of product, price, distribution, and promotion, and the need to understand the

marketplace, their consumers, the decision making process, and behavioral drivers. In the midst of change, these questions become more vexing and of paramount importance for business survival.

This course will examine the marketing implications of the media and entertainment industries evolution from its original one-to-many model, to its present transition into a more customized, individualized approach. The course will begin by looking at the industries overall and the forces creating change. The second section considers emerging media, the future of the media and entertainment industries and consumer experience moving forward. This class is unique in that the instructor specializes in entertainment and marketing research; the class will draw upon practical experience and feature guest lectures from other industry experts. Because the industry changes are happening real time, the class will focus heavily on current events rather than theory or academic research.

396. (MKTG896) Retail Merchandising. (M) Prerequisite(s): MKTG 101; MKTG 225. 0.5 c.u., One-half term.

This course provides a detailed introduction to the role of merchandising at various retailers, including apparel and other softlines businesses, grocery stores, mass-merchandisers and "category killers". Selected topics may include product development, line planning, sourcing, product lifecycle, forecasting, planning and allocation, pricing and markdowns, and vendor relations.

399. Independent Study.

Prerequisite(s): MKTG 212 and written permission of instructor and the department undergraduate advisor. Content arranged by project supervisor, 1.0 c.u.

476. (MKTG776, STAT476) Applied Probability Models for Marketing. (C)

Fader. Prerequisite(s): A high comfort level with basic integral calculus and recent exposure to a formal course in probability and statistics such as STAT 430 is strongly recommended.

This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these

techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.

SM 960. Judgment and Decision Making Perspectives on Consumer Behavior. (J) PhD Course. Alternates with MKTG963. Offered every other year.

The purpose of this course is to provide a solid foundation for critical thinking and research on the judgment, decision-making and choice aspects of consumer behavior.

There is a focus on how people process information when making judgements and choices and how the processes of judgement and choice might be improved. Topics of discussion include rationality, judgment under uncertainty, judgment heuristics and biases, risk taking, dealing with conflicting values, framing effects, prospect theory, inter-temporal choice, preference formation, and the psychology of utility. The focus will be on the individual decision-maker, although the topics will also have some applicability to group and organizational decision-making and behavioral research methodologies.

SM 961. Economic/OR Models of Marketing. (K) PhD Course. Alternates with MKTG964. Offered every other year.

This doctoral seminar reviews analytical models relevant to improving various aspects of marketing decisions such as new product launch, product line design, pricing strategy, advertising decisions, sales force organization and compensation, distribution channel design and promotion decisions. The primary focus will be on analytical models. The seminar will introduce the students to various types of analytical models used in research in marketing, including game theory models for competitive analysis, agency theory models for improving organization design and incentives within organizations, and optimization methods to improve decision making and resource allocation. The course will enable students to become familiar with applications of these techniques in the marketing literature and prepare the students to apply these and other analytical approaches to research problems that are of interest to the students.

SM 963. Information Processing Perspectives on Consumer Behavior. (K) PhD Course. Alternates with MKTG960. Offered every other year.

The purpose of this seminar is to provide graduate students with a solid foundation for critical thinking and research in

psychology and marketing on information processing related topics. Topics of discussion include consumer knowledge (learning, memory and categorization), attitude theory, persuasion, affect and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior, as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.

SM 964. Empirical Models in Marketing. (J) PhD Course. Alternates with MKTG961. Offered every other year.

This course is designed to generate awareness and appreciation of the way several substantive topics in marketing have been studied empirically using quantitative models. This seminar reviews empirical models of marketing phenomena including consumer choice, adoption of new products, sales response to marketing mix elements, and competitive interaction. Applies methods and concepts developed in econometrics and statistics but focuses on substantive issues of model structure and interpretation, rather than on estimation techniques. Ultimately, the goals are a) to prepare students to read and understand the literature and b) to stimulate new research interests. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.

966. Measurement and Data Analysis in Marketing. (A) PhD Course.

In this course we consider models for binary, count, and continuous data including contingency table models, logistic and probit regression, ANOVA, ANCOVA, conjoint analysis, and OLS. In addition we cover multidimensional techniques such as MDS, cluster analysis, principal components analysis, factor analysis, and discriminant analysis. We utilize the statistics package SPlus 2000, and also BUGS for implementing many of

the techniques described in a Bayesian manner.

SM 967. Research Methods in Marketing. (A) PhD Course.

This course provides an introduction to the fundamental methodological issues that arise in experimental and quasi-experimental research. Illustrative examples are drawn from the behavioral sciences with a focus on the behavior of consumers and managers. Topics that are covered include: the development of research ideas; data collection and reliable measurement procedures; threats to validity; control procedures and experimental designs; and data analysis. Emphasis is placed on attaining a working knowledge of the use of regression methods for non-experimental and quasi-experimental data and analysis of variance methods for experimental data. The primary deliverable for this course is a meta-analysis of a research problem of the students choosing that investigates the effects of research methods on empirical results.

968. Advanced Topics in Marketing Research. (C) Ph.D.Course. Offered alternate weeks from (MKTG 969) Advanced Topics in Consumer Behavior.

This course is taught collectively by the faculty members from the Marketing Department. It is designed to expose advanced Ph.D. students (2nd year and up) to the cutting-edge research in marketing models in order to help them to define and advance their research interests (an equivalent course is also offered on behavior research). This course will offer: in-depth discussions on some important topics in marketing by experts in respective areas; tools, and methodologies required for conducting research in those areas; broad exposure to our faculty members and their proven research styles.

969. Advanced Topics in Consumer Behavior. (C) Staff. PhD Course. Offered alternate weeks from (MKTG968) Advanced Topics in Marketing Research.

The purpose of this course is to investigate advanced topics in consumer behavior. This class will be organized in a way that

allows you to 1) gain depth in important areas of consumer behavior research identified by faculty; 2) gain exposure to various faculty in marketing and their research values and styles; and 3) develop and advance your own research interests.

SM 970. Seminar in Marketing Strategy. (C) Intended for 2nd year PhD students and above.

This PhD seminar is designed to help students understand the roles of marketing within the organization, its business strategy, and its success. It exposes students to the main issues in marketing strategy and marketing strategy research, and helps them critically evaluate both fundamental ideas and more recent developments.

The course follows a weekly seminar discussion format requiring each participant to be actively involved in each session. Participants will be assigned readings to present or critique, but all participants will be expected to have read every paper. Students will be assessed based on class contributions, short response papers, and a term paper. The term paper will address an important issue in marketing strategy. It will comprise a research question that is grounded in the relevant literature, a motivation for studying the question, and a proposal for researching it. The proposed research could take the form of an analytical model with a well-specified structure or an empirical study involving an experiment, quasi-experiment, survey, analysis of secondary data, or meta-analysis. The paper will be due on the last day of the exam period. During the last class, each student will make a presentation of their proposed study and share what they have learned so far with the class.

995. Dissertation. (C)

999. Supervised Independent Study. (C) Staff. Ph.D course.

Requires written permission of instructor and the department graduate adviser.

MATERIALS SCIENCE AND ENGINEERING (EG) {MSE}

099. Undergraduate Research and/or Independent Study. (C) Open to all students.

An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. Note: a maximum of 2 c.u. of MSE 099 may be applied toward the B.A.S. or B.S.E. degree requirements.

215. Introduction to Nanoscale Functional Materials. (B)

Prerequisite(s): MSE 221.

The purpose of this first course in the major is to introduce the student to key concepts underlying the design, properties and processing of nanoscale functional materials, and how they are employed in practical applications. Fundamental chemical and physical principles underlying the properties of electronic, dielectric and magnetic materials will be developed in the context of metals, semiconductors, insulators, crystals, glasses, polymers and ceramics. Miniaturization and the nanotechnology revolution confronts materials science with limitations and opportunities; examples in which nanoscale materials are really different from our macro world experience will be explored.

L/R 220. Structural and Biomaterials. (C) Prerequisite(s): Knowledge of basic calculus and chemistry.

This course provides an introduction to the fundamental concepts of Materials Science through an examination of the structure, property, performance relationship for synthetic and biologic structural materials with a focus on surgical implants and medical devices. Consideration is given to issues of biocompatibility, degradation of materials by the biologic systems, and biologic response to artificial materials. Particular attention will be given to the materials of total hip and knee prostheses

and their relationship to the long term outcomes in hip and knee arthroplasty.

L/R 221. Quantum Physics of Materials. (C) Prerequisite(s): PHYS 150, 151 concurrent and MATH 240. Meets Natural Science Requirement.

The course is directed at the development of a background in the basic physics required to understand the behavior of electrons in atoms, molecules and solids. Examples to illustrate the application of these techniques will be centered in the free and nearly free electron theory of solids. The application of modern physics to many state-of-the-art materials analysis techniques will be demonstrated throughout the course.

L/L 250. Nano-scale Materials Lab. (B) Prerequisite(s): MSE 220.

The course provides an in-depth experimental introduction to key concepts in materials and the relationships between nanoscale structure, the properties and performance. The use of laboratory methods to examine the structure of materials, to measure the important properties, and to investigate the relationship between structure and properties is covered. Emphasis is placed on a complete exposure of Nano and Materials science as a field. Most experiments require multiple laboratory sessions, with priority given to experiments in which students explore the entire range of materials science, from the synthesis of materials and the characterization of structure, thermodynamics and composition, to the measurement of properties and discussion of applications. Students are able to realize working devices as an end product of the key laboratories in this course. Practice in oral and written communication is realized through course assignments.

260. Energetics of Macro and Nano-scale Materials. (B) Prerequisite(s): CHEM 101 or 102.

Basic principles of chemical thermodynamics as applied to macro and nano-sized materials. This course will cover the fundamentals of classical thermodynamics as applied to the calculation and prediction of phase stability, chemical reactivity and synthesis of materials systems. The size-dependent properties of nano-sized systems will be explored through the incorporation of the thermodynamic properties of surfaces. The prediction of the phase stability of two and three component systems will be illustrated through the calculation and interpretation of phase diagrams for metallic,

semiconductor, inorganic, polymeric and surfactant systems.

330. (BE 330) Soft Materials: Colloids, Polymers, Gels and Crystals. Faculty. Prerequisite(s): CHEM 102 ; MSE 220 (Intro. to Materials) or equivalent (Concurrent is OK).

Soft matter describes materials that are neither pure crystalline solids with long range atomic order or pure liquids characterized by one simple viscosity. Many times soft materials display both solid and liquid like behavior depending on the timescale of the applied stress. Colloids, polymers, amphiphiles, liquid crystals, and biomacromolecules are types of soft matter. The focus of this course is on the characteristics common to soft materials namely their length scale, fragile binding energies or proximity to phase transitions, dynamics and propensity to self-assemble.

360. Structure of Materials. (A)

Prerequisite(s): MSE 260.

Basic principles of material structure and organization from nano to macro sizes. This course will cover the fundamentals of materials structure including the crystalline, liquid crystalline and glassy states as well as 1-D, 2-D and 3-D structure and defects. Examples will be used from the different classes of materials - metallic, semiconductor, inorganic, polymeric - with particular emphasis on important components of structure on the nanoscale including particles, surfaces, interfaces and defects.

393. Materials Selection. (B)

Prerequisite(s): MSE 220, Junior or Senior Standing.

Throughout mankind's history, materials have played a critical role in civilization and technology. The selection of materials has been based on availability and functionality. The rapid advances of materials technologies in the last 150 years, however, have made nearly all classes and forms of materials available, at a cost. Therefore, in theory at least, materials selection can now proceed on a rational basis as an optimization process. In this course, we will focus on two major areas of materials applications in modern world, structural applications where mechanical design is central and electronic applications where system functionality is the driver, to examine the validity of the above proposition, sometimes reaching surprising conclusions. Issues of process integration in material selection, which feature especially prominently in electronic materials with continuing trend toward

miniaturization (now down to 90 nm in commercial products), are emphasized. Emerging bionic applications and historical trends will also be examined in student projects and assigned readings. By the end of the course, the students can expect to acquire a level of engineering familiarity with a broad range of materials, and be prepared to undertake material design projects in the future.

405. (MEAM405, MEAM505, MSE 505) Mechanical Properties of Macro/Nanoscale Materials. (A)

The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.

430. (CBE 430, CBE 510, MSE 580) Polymers and Biomaterials. (B)

Prerequisite(s): MSE 260 or equivalent course in thermodynamics or physical chemistry (such as BE 223, CHE 231, CHEM 221, MEAM 203).

This course focuses on synthesis, characterization, microstructure, rheology, and structure-property relationships of polymers, polymer directed composites and their applications in biotechnology. Topical coverage includes: polymer synthesis and functionalization; polymerization kinetics; structure of glassy, crystalline, and rubbery polymers; thermodynamics of polymer solutions and blends, and crystallization; liquid crystallinity, microphase separation in block copolymers; polymer directed self-assembly of inorganic materials; biological applications of polymeric materials. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, molecular templating of sol-gel growth using block copolymers as templates; structure-property of conducting and optically active polymers; polymer degradation in drug delivery; cell adhesion on polymer surface in tissue engineering.

440. Phase Transformations. (B)

The state of matter is dependent upon temperature, thermal history, and other variables. In this course the science of structural transitions is treated, with the purpose in mind of utilizing them for producing materials with superior properties. The subjects covered include

the methods of structural analysis, solidification, solid state transformation, and order-disorder transition.

465. (MSE 565) Fabrication and Characterization of Nanostructured Devices.

This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and chemical applications. Basic principles of chemistry, physics, thermodynamics and kinetics are applied to solid state, liquid, and colloidal approaches to making materials. The newest approaches to nanofabrication: microcontact printing, self-assembly, and Nanolithography, are covered. The course is heavily lab based, with 25% of class time and 30% of the homework devoted to hands on experiences. Lab assignments are a series of structured group projects. Evaluation is based on 3-4 lab reports, 4-5 problem sets, and 4-5 journal paper summaries.

495. Senior Design. (A)

Independent student or team research on the design and construction of an original experimental or theoretical project related to materials science. The results of this project are presented at the end of the year in the form of a thesis and in an oral presentation to peers and faculty.

496. Senior Design. (B)

Independent student or team research on the design and construction of an original experimental or theoretical project related to materials science. The results of this project are presented at the end of the year in the form of a thesis and in an oral presentation to peers and faculty.

500. Experimental Methods in Materials Science. (M) Fischer.

Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.

Laboratory course covering many of the experimental techniques used in materials science: optical and electron microscopy, mechanical testing, x-ray diffraction, electrical and optical measurements, superconducting and magnetic properties, solid-state diffusion.

505. (MEAM405, MEAM505, MSE 405) Mechanical Properties of Macro/Nanoscale Materials. (A)

The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and

elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.

520. Structure of Materials. (A)

Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.

Description of Crystal Structure-Symmetry, Point and Space Groups. Structures of different material types-glasses, polymers, semiconductors, ceramics and metals. Relationship between bonding and structural types. Methods of structure determination. Diffraction of x-rays and neutrons--x-ray methods. Microstructures of solids. Topology of granular structures. Grain boundary structures. Fractal description of microstructures.

530. Thermodynamics and Phase Equilibria. (A) Worrell, Winey.

Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.

Review of fundamental thermodynamic laws and criteria for equilibrium. Reaction equilibria in multicomponent systems. Free energies of mixing solutions, liquids, solids, and polymers. Binary and ternary phase diagrams. Surfaces and interfaces.

537. (MEAM537) Nanomechanics and Nanotribology at Interfaces. (C)

Faculty. Prerequisite(s): Freshman physics; MEAM 354 or equivalent, or consent of instructor.

Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. Mechanics enters a new regime where the role of surfaces, interfaces, defects, material property variations, and quantum effects play more dominant roles. This course will provide an introduction to nano-scale mechanics and tribology at interfaces, and the critical role these topics play in the developing area of nanoscience and nanotechnology. We will discuss how mechanics and tribology at interfaces become integrated with the fields of materials science, chemistry, physics, and biology at this scale. We will cover a variety of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Literature reviews, critical peer discussion,

individual and team problem assignments, a laboratory project, and student presentations will be assigned as part of the course.

540. Phase Transformations. (B)

Chen. Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.

The atomic structure of condensed matter is dependent upon temperature, pressure, thermal history and other variables. In this course, the science of such structural transitions is treated. The topics discussed include introduction to statistical mechanics, theory of nucleation and growth kinetics, solidification, diffusionless solid state transformations, and microscopic theory of phase transition.

550. (MEAM519, MSE 420) Mechanical Properties of Nano and Macro-Scale Materials. (A)

Vitek. Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.

Elastic and plastic behavior of materials. Stress, strain, anisotropic Hook's law, equations of elasticity; solution of selected stress distribution problems plane elasticity. Yield criteria. Fracture criteria. Microscopic mechanisms of plasticity and fracture, dislocation theory.

555. Environmental Degradation. (A)

This course is designed to provide an understanding of the corrosion principles and the engineering methods used to minimize and prevent corrosion. Metals and alloys are emphasized because these are the materials in which corrosion is the most prevalent. Aqueous environments are also emphasized these are the common corrosion conditions.

In the first half of the course, the impact and electrochemical nature of corroare described, and then the corrosion fundamentals (electrochemical reactions, phase (pourbaix) diagrams, aqueous corrosion kinetics, passivity, and high-temperature oxidation) are emphasized. The forms of corrosion (galvanic, pitting and crevice, environmentally induced cracking) and corrosio in the human body (for example, surgical implants and prosthetic devices) and in other selective environments (concrete, seawater, and water solutions conta dissolved salts, sulfur, and bacteria) are also described in the second half

561. (MEAM660) Atom Mod in Mats Science. (C)

565. (MSE 465) Fabrication and Characterization of Nanostructured Devices. (M)

Bonnell. Prerequisite(s): MSE 360 or MSE 560.

This course will focus on the processing of inorganic materials used as ceramics. The physical interactions in processes specific to the formation of ceramics are examined; e.g., fractionation, disperison forces in compacts, sintering, etc. Structure and properties of amorphous oxides and devitrification to form glass ceramics will be discussed.

566. Physical Properties of Ceramics. (A)

Prerequisite(s): MSE 360 or MSE 560 and a good foundation in solid state physics are prerequisites for this class.

This course will focus on the properties of inorganic compounds considered to be ceramics. Optical, dielectric and magnetic properties of oxides are treated in depth and illustrated with laboratory demonstrations and experiments. Strategies for mechanical property optimization are examined.

570. (ESE 514) Physics of Materials I. (C)

Fischer. Prerequisite(s): Undergraduate physics and math thru modern physics and differential equations.

Failures of classical physics and the historical basis for quantum theory. Postulates of wave mechanics; uncertainty principle, wave packets and wave-particle duality. Schrodinger equation and operators; eigenvalue problems in 1 and 3 dimensions (barriers, wells, hydrogen, atom). Perturbation theory; scattering of particles and light. Free electron theory of metals; Drude and Sommerfeld models, dispersion relations and optical properties of solids. Extensive use of computer-aided self-study will be made.

571. (ESE 515) Physics of Materials II. (M)

Fischer. Prerequisite(s): MSE 570 or equivalent.

Failures of free electron theory. Crystals and the reciprocal lattice wave propagation in periodic media; Bloch's theorem. One-electron band structure models: nearly free electrons, tight binding. Semiclassical dynamics and transport. Cohesive energy, lattic dynamic and phonons. Dielectric properties of insulators. Homeogenous semiconductors and p-n junctions. Experimental probes of solid state phenomena; photoemission, energy loss spectroscopy, neturon scattering. As time permits, special topics selected from the following: correlation effects, semiconductor alloys and heterostructures, amorphous semiconductors, electro-active polymers.

575. Statistical Mechanics. (C)

580. (MSE 430) Polymers and Biomaterials. (B) Prerequisite(s): MSE 260 or equivalent course in thermodynamics or physical chemistry (such as BE 223, CHE 231, MEAM 203).

This course focuses on synthesis, characterization, microstructure, rheology, and structure-property relationships of polymers, polymer directed composites and their applications in biotechnology. Topical coverage includes: polymer synthesis and functionalizaiton; polymerizaiton kinetics; structure of glassy, crystalline, and rubbery polymers; thermodynamics of polymer solutions and blends, and crystallization; liquid crystallinity, microphase separation in block copolymers; polymer directed self-assembly of inorganic materials; biological applications of polymeric materials. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, molecular templating of sol-gel growth using block copolymers as templates; structure-property of conducting and optically active polymers; polymer degradation in drug delivery; cell adhesion on polymer surface in tissue engineering.

581. Advanced Polymer Physics. (A)

Winey/Composto. Prerequisite(s): MSE 430 or equivalent.

Advanced polymer physics includes the topics of polymer chain statistics, thermodynamics, rubber elasticity, polymer morphology, fracture, and chain relaxation. Rigorous derivations of select theories will be presented along with experimental results for comparison. Special topics, such as liquid crystalline polymers, blends and copolymers, will be presented throughout the course. Special topics, such as liquid crystallintiy, nanostructures, and biopolymer diffusion, will be investigated by teams of students using the current literature as a resource.

590. Surface and Thin Film Analysis Techniques. (B)

Bonnell, Composto. The objective of this course is to study the fundamental physics of the interaction of ions, electrons, photons, and neutrons with matter. A second objective is to use the products of these interactions to characterize the atomic (or molecular) structure, composition, and defects of a semiconductor, ceramic, polymer, composite, or metal. Ion beam techniques will include Rutherford backscattering and forward recoil spectrometry, and secondary ion mass pectrometry. Electron probe techniques will include x-ray photoelectron

spectroscopy. Neutron techniques will include neutron reflectivity. The strengths and weaknesses of each technique will be discussed. Examples will be drawn from metallurgy, electronic materials, polymer science, ceramic science, archaeology, and biology.

610. Electron Microscopy. (B) Luzzi.

Theoretical and practical aspects of conventional and high-resolution transmission electron microscopy and related techniques. Imaging theory; kinematical and dynamical diffraction theory. Diffraction contrast analysis of imperfect crystals; phase contrast analysis of crystal lattice structures. With laboratory.

650. Micromechanisms of Deformation and Fracture. (M) Laird.

Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.

Basic mechanisms of deformation and fracture, theory of dislocations (continuum theory and effects of the atomic structure), deformation properties of different crystal structures (fcc, bcc, hcp, ordered alloys, amorphous materials), hardening mechanisms (solid solution and dispersion hardening), creep deformation and fracture at high temperatures, micromechanisms of fracture.

670. Statistical Mechanics of Solids. (A)

This course constitutes an introduction to statistical mechanics with an emphasis on application to crystalline solids. Ensemble theory, time and ensemble averages and particle statistics are developed to give the

basis of statistical thermodynamics. The theory of the thermodynamic properties of solids is presented in the harmonic approximation anharmonic properties are treated by the Mie-Gruneisen method. Free electron theory in metals and semiconductors is given in some detail, with the transport properties being based on conditional transition probabilities and the Boltzmann transport equation. The theory of order-disorder alloys is treated by the Bragg-Williams, Kirkwood and quasi-chemical methods.

790. Selected Topics in Materials Science and Engineering. (C) Staff.

Both terms.

Students should check department office for special topics.

895. Teaching Practicum. (C)

MATHEMATICS (AS) {MATH}

CALCULUS: MATH 104, the first calculus course, assumes that students have had AB Calculus or the equivalent. Students who have not had AB Calculus or did poorly in AB Calculus should take MATH 103, which provides an introduction to calculus. There are two second-semester calculus courses. Students are advised to check their major department or their program for the specific requirements. In general, Math 114 is taken by students in the natural sciences, engineering and economics. Math 114 prepares students for the more advanced Calculus courses Math 240 and 241. Those who do not plan to take Math 240 may still want to consider taking Math 114. Math 115 is for students who do not plan to take more calculus like Math 240, and want an introduction to probability and matrices. Premed students who do not need Math 114 for their majors could take Math 115. Most Wharton students may take either Calculus II course.

MATH 103, 104, 114, 115, and 170 fulfill the FORMAL REASONING & ANALYSIS General Requirement. Also, MATH 170 satisfies the NATURAL SCIENCE & MATHEMATICS General Requirement.

Students may not receive credit for two courses at the same level where the content is similar. For example, a student may not receive credit for both MATH 114 and MATH 115. The list of FORBIDDEN PAIRS of courses is (114, 115), (312, 370), (312, 412), (360, 508), (361, 509), (370, 502), (371, 503), and several statistics courses. Students are allowed to take a "topics course" such as MATH 480 more than once if the topics are different.

PROSPECTIVE MATH MAJORS should note that the "proof in mathematics" courses, 202 and 203, are recommended for the major. These are courses that are taken concurrently with Calculus. Potential majors who begin Calculus with MATH 114 or 240 usually take at least one of these courses during their freshman year. Potential majors who begin with MATH 104 often postpone their proof courses until the following year. Please see <http://www.math.upenn.edu/ugrad/major.html> for more information. To find out the requirements for MATH MINORS, please visit our web site <http://www.math.upenn.edu/ugrad/minor.html> for details. Majors and Minors could also find the most current listing of the cognate courses Majors or Minors may take at

<http://www.math.upenn.edu/ugrad/cognates.html>

L/R 103. Introduction to Calculus. (C) Staff.

Introduction to concepts and methods of calculus for students with little or no previous calculus experience. Polynomial and elementary transcendental functions and their applications, derivatives, extremum problems, curve-sketching, approximations; integrals and the fundamental theorem of calculus.

L/R 104. Calculus, Part I. (C) Staff.

Brief review of High School calculus, applications of integrals, transcendental functions, methods of integration, infinite series, Taylor's theorem. Use of symbolic manipulation and graphics software in calculus.

L/R 114. Calculus, Part II. (C) Staff. Prerequisite(s): Math 104.

Functions of several variables, vector-valued functions, partial derivatives and applications, double and triple integrals, conic sections, polar coordinates, vectors and analytic geometry, first and second order ordinary differential equations. Applications to physical sciences. Use of symbolic manipulation and graphics software in calculus.

L/R 115. Calculus, Part II with Probability and Matrices. (C) Staff. Prerequisite(s): Math 104.

Functions of several variables, partial derivatives, multiple integrals, differential equations; introduction to linear algebra and matrices with applications to linear programming and Markov processes. Elements of probability and statistics. Applications to social and biological sciences. Use of symbolic manipulation and graphics software in calculus.

L/R 116. Honors Calculus. (C) Staff.

Students who are interested in math or science might also want to consider a more challenging Honors version of Calculus II and III, Math 116 and Math 260 (the analogues of Math 114 and Math 240, respectively). These courses will cover essentially the same material as 114 and 240, but more in depth and involve discussion of the underlying theory as well as computations.

L/L 123. Community Math Teaching Project. (M) Staff.

This course allows Penn students to teach a series of hands-on activities to students in math classes at University City High School. The semester starts with an

introduction to successful approaches for teaching math in urban high schools. The rest of the semester will be devoted to a series of weekly hands-on activities designed to teach fundamental aspects of geometry. The first class meeting of each week, Penn faculty teach Penn students the relevant mathematical background and techniques for a hands-on activity. During the second session of each week, Penn students will teach the hands-on activity to a small group of UCHS students. The Penn students will also have an opportunity to develop their own activity and to implement it with the UCHS students.

L/R 170. Ideas in Mathematics. (C)

Natural Science & Mathematics Sector. Class of 2010 and beyond. Staff. May also be counted toward the General Requirement in Natural Science & Mathematics.

Topics from among the following: logic, sets, calculus, probability, history and philosophy of mathematics, game theory, geometry, and their relevance to contemporary science and society.

180. (PPE 180) Analytical Methods in Economics, Law, and Medicine. (M) Staff.

Elementary applications of decision analysis, game theory, probability and statistics to issues in accounting, contracting, finance, law, and medicine, amongst others.

L/L 202. Proving Things: Analysis. (C) Staff. Corequisite(s): Math 104, 114 or 240.

This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying real and complex numbers, sequences, series, continuity, differentiability and integrability. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.

L/L 203. Proving things: Algebra. (C) Staff. Corequisite(s): Math 104, 114 or 240.

This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying arithmetic, algebra, linear algebra, groups, rings and fields. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem.

Homework is intended to be thought-provoking, rather than skill-sharpening.

210. Mathematics in the Age of Information. (C) Staff. Prerequisite(s): Math 114, Math 115 or equivalent.

This course counts as a regular elective for both the Mathematics Major and Minor.

Style: the course will center around a sequence of case studies and projects rather than go systematically through a textbook. Many of these topics will be drawn from current events in the world. The class will be divided into small teams that will carry out work on each topic, perform whatever mathematical analysis is appropriate according to the mathematical topics being discussed.

Internet. An important ingredient in the course will be to learn to present interactive material on the Web using a computer language such as Perl. No special computer background is presumed; learning it is part of the course.

Topics: Some probability/statistics (including Markov chains), mathematical modeling (including differential equations). Many of the topics will use calculus and matrices.

L/R 240. Calculus, Part III. (C) Staff. Prerequisite(s): Calculus II.

Linear algebra: vectors, matrices, systems of linear equations, eigenvalues and eigenvectors. Vector calculus: functions of several variables, vector fields, line and surface integrals, Green's, Stokes' and divergence theorems. Series solutions of ordinary differential equations, Laplace transforms and systems of ordinary differential equations. Use of symbolic manipulation and graphics software.

L/R 241. Calculus, Part IV. (C) Staff. Prerequisite(s): MATH 240.

Sturm-Liouville problems, orthogonal functions, Fourier series, and partial differential equations including solutions of the wave, heat and Laplace equations, Fourier transforms. Introduction to complex analysis. Use of symbolic manipulation and graphics software.

L/R 260. Honors Calculus, Part II. (M) Staff. Prerequisite(s): Calculus II.

This is an honors version of Math 240 which explores the same topics but with greater mathematical rigor.

312. (MATH412) Linear Algebra. (M) Staff. Prerequisite(s): MATH 240. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

Linear transformations, Gauss Jordan elimination, eigenvalues and eigenvectors, theory and applications. Mathematics majors are advised that MATH 312 cannot be taken to satisfy the major requirements.

313. (CIS 313, MATH513) Computational Linear Algebra. Staff. Prerequisite(s): Math 114 or 115, and some programming experience. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

Many important problems in a wide range of disciplines within computer science and throughout science are solved using techniques from linear algebra. This course will introduce students to some of the most widely used algorithms and illustrate how they are actually used.

Some specific topics: the solution of systems of linear equations by Gaussian elimination, dimension of a linear space, inner product, cross product, change of basis, affine and rigid motions, eigenvalues and eigenvectors, diagonalization of both symmetric and non-symmetric matrices, quadratic polynomials, and least squares optimization.

Applications will include the use of matrix computations to computer graphics, use of the discrete Fourier transform and related techniques in digital signal processing, the analysis of systems of linear differential equations, and singular value decompositions with application to a principal component analysis.

The ideas and tools provided by this course will be useful to students who intend to tackle higher level courses in digital signal processing, computer vision, robotics, and computer graphics.

320. Computer Methods in Mathematical Science I. (A) Staff. Prerequisite(s): MATH 240 or concurrent and ability to program a computer, or permission of instructor.

Students will use symbolic manipulation software and write programs to solve problems in numerical quadrature, equation-solving, linear algebra and differential equations. Theoretical and computational aspects of the methods will be discussed along with error analysis and a critical comparison of methods.

321. Computer Methods in Mathematical Sciences II. (M) Staff. Prerequisite(s): MATH 320.

Continuation of MATH 320.

340. (LGIC210) Discrete Mathematics I. (M) Staff. Prerequisite(s): MATH 114 or Math 115 or permission of the instructor.

Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations, posets, asymptotics.

341. (LGIC220) Discrete Mathematics II. Staff. Prerequisite(s): Math 340/Logic 210 or permission of the instructor.

Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.

350. Number Theory. (M) Staff.

Congruences, Diophantine equations, continued fractions, nonlinear congruences, and quadratic residues.

L/L 360. Advanced Calculus. (C) Staff. Prerequisite(s): MATH 240.

Syllabus for MATH 360-361: a study of the foundations of the differential and integral calculus, including the real numbers and elementary topology, continuous and differentiable functions, uniform convergence of series of functions, and inverse and implicit function theorems. MATH 508-509 is a masters level version of this course.

L/L 361. Advanced Calculus. (C) Staff. Prerequisite(s): MATH 360.

Continuation of MATH 360.

L/L 370. Algebra. (C) Staff.

Prerequisite(s): MATH 240. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

Syllabus for MATH 370-371: an introduction to the basic concepts of modern algebra. Linear algebra, eigenvalues and eigenvectors of matrices, groups, rings and fields. MATH 502-503 is a masters level version of this course.

L/L 371. Algebra. (C) Staff.

Prerequisite(s): MATH 370. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513.

Students can receive credit for at most one of Math 312 and Math 313/513.

Continuation of MATH 370.

410. (AMCS510) Complex Analysis. (C) Staff. Prerequisite(s): MATH 241 or permission of instructor.

Complex numbers, DeMoivre's theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy's integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.

Complex numbers, DeMoivre's theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy's integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.

420. (AMCS520) Ordinary Differential Equations. (C) Staff. Prerequisite(s): MATH 241 or permission of instructor.

After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.

425. (AMCS525) Partial Differential Equations. (A) Staff. Prerequisite(s): MATH 241 or permission of instructor.

Knowledge of PHYS 150-151 will be helpful.

Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.

430. (AMCS530) Introduction to Probability. (M) Staff. Prerequisite(s): MATH 240.

Random variables, events, special distributions, expectations, independence, law of large numbers, introduction to the central limit theorem, and applications.

432. (AMCS532) Game Theory. (C) Staff.

A mathematical approach to game theory, with an emphasis on examples of actual games. Topics will include mathematical models of games, combinatorial games, two person (zero sum and general sum) games, non-cooperating games and equilibria.

450. (MATH542) Seminar in Computational Mathematics. (M) Staff. Prerequisite(s): Permission of instructor.

May, with permission, be repeated for credit.

A seminar devoted to the study of algorithms for solving problems in discrete mathematics.

475. Statistics of Law. (M) Staff.

Prerequisite(s): Permission of instructor; no formal mathematical prerequisite, but one year of college calculus would be helpful.

Introduction to probability and statistics with illustrative material drawn from cases. Statistical inference. Basic concepts of information theory. This course may not be taken to satisfy the requirements of the major.

480. (MATH550) Topics in Modern Math. (M) Staff.

A survey of a number of actively-growing areas of mathematics, according to the interests of the students and the instructor. For example, the course might focus on famous unsolved problems, such as the Riemann Hypothesis. Explorations with computer packages for symbolic manipulation.

499. Supervised Study. (C) Staff.

Prerequisite(s): Permission of major adviser. Hours and credit to be arranged.

Study under the direction of a faculty member. Intended for a limited number of mathematics majors.

500. Geometry-Topology, Differential Geometry. (M) Staff. Prerequisite(s): Math 240/241.

Point set topology: metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.

501. Geometry-Topology, Differential Geometry. (M) Staff. Prerequisite(s): Math 500 or with the permission of the instructor.

Review of 2- and 3-dimensional vector calculus, differential geometry of curves and surfaces, Gauss-Bonnet theorem, elementary Riemannian geometry, knot theory, degree theory of maps, transversality.

L/L 502. Abstract Algebra. (A) Staff.

Prerequisite(s): Math 240. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513.

Students can receive credit for at most one of Math 312 and Math 313/513.

An introduction to groups, rings, fields and other abstract algebraic systems, elementary Galois Theory, and linear algebra -- a more theoretical course than Math 370.

L/L 503. Abstract Algebra. (B) Staff.

Prerequisite(s): Math 502 or with the permission of the instructor. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513.

Students can receive credit for at most one of Math 312 and Math 313/513.

Continuation of Math 502.

504. Graduate Proseminar in Mathematics. (A) Staff.

This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.

505. Graduate Proseminar in Mathematics. (B) Staff.

This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.

L/L 508. Advanced Analysis. (A) Staff.

Prerequisite(s): Math 240/241. Math 200/201 also recommended.

Construction of real numbers, the topology of the real line and the foundations of single variable calculus. Notions of convergence for sequences of functions. Basic approximation theorems for continuous functions and rigorous treatment of elementary transcendental functions. The course is intended to teach students how to read and construct rigorous formal proofs. A more theoretical course than Math 360.

L/L 509. Advanced Analysis. (B) Staff. Prerequisite(s): Math 508 or with the permission of the instructor. Linear algebra is also helpful.

Continuation of Math 508. The Arzela-Ascoli theorem. Introduction to the topology of metric spaces with an emphasis on higher dimensional Euclidean spaces. The contraction mapping principle. Inverse and implicit function theorems. Rigorous treatment of higher dimensional differential calculus. Introduction to Fourier analysis and asymptotic methods.

512. Advanced Linear Algebra. Staff. Prerequisite(s): Math 114 or 115. Math 512 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 and Math 512.

Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.

513. (CIS 313, MATH313) Computational Linear Algebra. Staff.

A number of important and interesting problems in a wide range of disciplines within computer science are solved by recourse to techniques from linear algebra. The goal of this course will be to introduce students to some of the most important and widely used algorithms in matrix computation and to illustrate how they are actually used in various settings. Motivating applications will include: the solution of systems of linear equations, applications matrix computations to modeling geometric transformations in graphics, applications of the Discrete Fourier Transform and related techniques in digital signal processing, the solution of linear least squares optimization problems and the analysis of systems of linear differential equations. The course will cover the theoretical underpinnings of these problems and the numerical algorithms that are used to perform important matrix computations such as Gaussian Elimination, LU Decomposition and Singular Value Decomposition.

520. Selections from Algebra. (M) Staff. Corequisite(s): Math 502 or permission of the instructor.

Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.

521. Selections from Algebra. (M) Staff. Corequisite(s): Math 502 or permission of the instructor.

Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.

524. Topics in Modern Applied Algebra. (M) Staff. Prerequisite(s): Math 371 or Math 503.

Topics such as automata, finite state languages, Boolean algebra, computers and logical design will be discussed.

525. Topics in Modern Applied Algebra. (M) Staff. Prerequisite(s): Math 371 or Math 503.

Topics such as automata, finite state languages, Boolean algebra, computers and logical design will be discussed.

530. Mathematics of Finance. (M) Staff. Prerequisite(s): Math 240, Stat 430.

This course presents the basic mathematical tools to model financial markets and to make calculations about financial products, especially financial derivatives. Mathematical topics covered: stochastic processes, partial differential equations and their relationship. No background in finance is assumed.

540. (MATH730) Selections from Classical and Functional Analysis. (M) Staff. Corequisite(s): Math 508 or permission of the instructor.

Informal introduction to such subjects as compact operators and Fredholm theory, Banach algebras, harmonic analysis, differential equations, nonlinear functional analysis, and Riemann surfaces.

541. Selections from Classical and Functional Analysis. (M) Staff. Corequisite(s): Math 508 or permission of the instructor.

Informal introduction to such subjects as compact operators and Fredholm theory, Banach algebras, harmonic analysis, differential equations, nonlinear functional analysis, and Riemann surfaces.

542. (MATH450) Calculus of Variations. (M) Staff. Prerequisite(s): Math 241.

Introduction to calculus of variations. The topics will include the variation of a functional, the Euler-Lagrange equations, parametric forms, end points, canonical transformations, the principle of least action and conservation laws, the Hamilton-Jacobi equation, the second variation.

546. (STAT530) Probability Theory. (A) Staff.

The required background is (1) enough math background to understand proof techniques in real analysis (closed sets, uniform convergence, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross's probability text or some exposure to probability in a statistics class).

After a summary of the necessary results from measure theory, we will learn the probabilist's lexicon (random variables, independence, etc.). We will then develop the necessary techniques (Borel Cantelli lemmas, estimates on sums of independent random variables and truncation techniques) to prove the classical laws of large numbers. Next come Fourier techniques and the Central Limit Theorem, followed by combinatorial techniques and the study of random walks.

547. (STAT531) Stochastic Processes. (M) Staff.

548. Topics in Analysis. (M) Staff. Prerequisite(s): Math 360/361 and Math 370; or Math 508/509 and Math 502.

Topics may vary but typically will include an introduction to topological linear spaces and Banach spaces, and to Hilbert space and the spectral theorem. More advanced topics may include Banach algebras, Fourier analysis, differential equations and nonlinear functional analysis.

L/L 549. Topics in Analysis. (M) Staff. Prerequisite(s): Math 548 or with the permission of the instructor. Continuation of Math 548.

560. Selections from Geometry and Topology. (M) Staff. Corequisite(s): Math 500 or permission of the instructor.

Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.

561. Selections from Geometry and Topology. (M) Staff. Corequisite(s): Math 500 or permission of the instructor.

Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.

570. (LGIC310, PHIL006, PHIL506) Introduction to Logic and Computability. (M) Staff. Prerequisite(s): Math 371 or Math 503.

Propositional logic: semantics, formal deductions, resolution method. First order

logic: validity, models, formal deductions; Godel's completeness theorem, Lowenheim-Skolem theorem: cut-elimination, Herbrand's theorem, resolution method. Computability: finite automata, Turing machines, Godel's incompleteness theorems. Algorithmically unsolvable problems in mathematics.

SM 571. (LGIC320, MATH671, PHIL412) Introduction to Logic and Computability. (M) Staff. Prerequisite(s): Math 570 or with the permission of the instructor.

Continuation of Math 570.

572. Introduction to Axiomatic set theory. Staff.

Topics will include: the axioms, ordinal and cardinal arithmetic, formal construction of natural numbers and real numbers within set theory, formal treatment of definition by recursion.

574. Mathematical Theory of Computation. (M) Staff. Prerequisite(s): Math 320/321.

This course will discuss advanced topics in Mathematical Theory of Computation.

575. Mathematical Theory of Computation. (M) Staff. Prerequisite(s): Math 574 or with the permission of the instructor.

Continuation of Math 574.

580. Combinatorial Analysis and Graph Theory. (M) Staff. Prerequisite(s): Permission of the instructor.

Generating functions, enumeration methods, Polya's theorem, combinatorial designs, discrete probability, extremal graphs, graph algorithms and spectral graph theory, combinatorial and computational geometry.

581. Combinatorial Analysis and Graph Theory. (M) Staff. Prerequisite(s): Math 580 or with the permission of the instructor.

Continuation of Math 580.

582. Applied Mathematics and Computation. (M) Staff. Prerequisite(s): Math 240-241. Math 312, Math 360. Knowledge of Math 412 and Math 508 is recommended.

This course offers first-hand experience of coupling mathematics with computing and applications. Topics include: Random walks, randomized algorithms, information theory, coding theory, cryptography, combinatorial optimization, linear programming, permutation networks and

parallel computing. Lectures will be supplemented by informal talks by guest speakers from industry about examples and their experience of using mathematics in the real world.

583. Applied Mathematics and Computation. (M) Staff. Prerequisite(s): Math 582 or with the permission of the instructor.

Continuation of Math 582.

584. (BE 584) The Mathematics of Medical Imaging and Measurement. (M) Staff. Prerequisite(s): Math 241, knowledge of linear algebra and basic physics.

In the last 25 years there has been a revolution in image reconstruction techniques in fields from astrophysics to electron microscopy and most notably in medical imaging. In each of these fields one would like to have a precise picture of a 2 or 3 dimensional object which cannot be obtained directly. The data which is accessible is typically some collection of averages. The problem of image reconstruction is to build an object out of the averaged data and then estimate how close the reconstruction is to the actual object. In this course we introduce the mathematical techniques used to model measurements and reconstruct images. As a simple representative case we study transmission X-ray tomography (CT). In this context we cover the basic principles of mathematical analysis, the Fourier transform, interpolation and approximation of functions, sampling theory, digital filtering and noise analysis.

585. The Mathematics of Medical Imaging and Measurement. (M) Staff. Prerequisite(s): Math 584 or with the permission of the instructor.

Continuation of Math 584.

590. Advanced Applied Mathematics. (M) Staff. Prerequisite(s): Math 241.

This course offers first-hand experience of coupling mathematics with applications. Topics will vary from year to year. Among them are: Random walks and Markov chains, permutation networks and routing, graph expanders and randomized algorithms, communication and computational complexity, applied number theory and cryptography.

591. Advanced Applied Mathematics. (M) Staff. Prerequisite(s): Math 590 or with the permission of the instructor.

Continuation of Math 590.

594. (PHYS500) Advanced Methods in Applied Mathematics. (M) Staff.

Prerequisite(s): Math 241 or Permission of Instructor. Physics 151 would be helpful for undergraduates.

Introduction to mathematics used in physics and engineering, with the goal of developing facility in classical techniques. Vector spaces, linear algebra, computation of eigenvalues and eigenvectors, boundary value problems, spectral theory of second order equations, asymptotic expansions, partial differential equations, differential operators and Green's functions, orthogonal functions, generating functions, contour integration, Fourier and Laplace transforms and an introduction to representation theory of SU(2) and SO(3). The course will draw on examples in continuum mechanics, electrostatics and transport problems.

599. Independent Study. (C)

600. Topology and Geometric Analysis. (A) Staff. Prerequisite(s): Math 500/501 or with the permission of the instructor.

Differentiable functions, inverse and implicit function theorems. Theory of manifolds: differentiable manifolds, charts, tangent bundles, transversality, Sard's theorem, vector and tensor fields and differential forms: Frobenius' theorem, integration on manifolds, Stokes' theorem in n dimensions, de Rham cohomology. Introduction to Lie groups and Lie group actions.

601. Topology and Geometric Analysis. (B) Staff. Prerequisite(s): Math 600 or with the permission of the instructor.

Covering spaces and fundamental groups, van Kampen's theorem and classification of surfaces. Basics of homology and cohomology, singular and cellular; isomorphism with de Rham cohomology. Brouwer fixed point theorem, CW complexes, cup and cap products, Poincare duality, Kunnet and universal coefficient theorems, Alexander duality, Lefschetz fixed point theorem.

602. Algebra. (A) Staff. Prerequisite(s): Math 370/371 or Math 502/503.

Group theory: permutation groups, symmetry groups, linear algebraic groups, Jordan-Holder and Sylow theorems, finite abelian groups, solvable and nilpotent groups, p-groups, group extensions. Ring theory: Prime and maximal ideals, localization, Hilbert basis theorem, integral extensions, Dedekind domains, primary decomposition, rings associated to affine varieties, semisimple rings, Wedderburn's theorem, elementary representation theory.

Linear algebra: Diagonalization and canonical form of matrices, elementary representation theory, bilinear forms, quotient spaces, dual spaces, tensor products, exact sequences, exterior and symmetric algebras. Module theory: Tensor products, flat and projective modules, introduction to homological algebra, Nakayama's Lemma. Field theory: separable and normal extensions, cyclic extensions, fundamental theorem of Galois theory, solvability of equations.

603. Algebra. (B) Staff. Prerequisite(s): Math 602 or with the permission of the instructor.

Continuation of Math 602.

604. First Year Seminar in Mathematics. (A) Staff. Prerequisite(s): Open to first year Mathematics graduate students. Others need permission of the instructor.

This is a seminar for first year Mathematics graduate student, supervised by faculty. Students give talks on topics from all areas of mathematics at a level appropriate for first year graduate students. Attendance and preparation will be expected by all participants, and learning how to present mathematics effectively is an important part of the seminar.

605. First Year Seminar in Mathematics. (B) Staff. Prerequisite(s): Open to first year Mathematics graduate students. Others need permission of the instructor.

Continuation of Math 604.

608. (AMCS608) Real Analysis. (C) Staff. Corequisite(s): Math 600/601.

Lebesgue measure and integral, Borel measures, convergence theorems. Banach spaces, Hahn-Banach Theorem, L_p-spaces, Riesz-Fischer theorem, Stone-Weierstrass theorem, Radon-Nikodym theorem. Applications to Fourier series and integrals, Plancherel Theorem, Distributions, convolutions and mollifiers. Partitions of unity. Applications to P.D.E.'s

609. Complex Analysis. (C) Staff. Corequisite(s): Math 600/601.

Complex numbers, analytic functions, Cauchy's theorem and consequences, isolated singularities, analytic continuation, open mapping theorem, infinite series and products, harmonic and subharmonic functions, maximum principle, fractional linear transformations, geometric and local properties of analytic functions, Weierstrauss Theorem, normal families, residues, conformal mapping, Riemann

mapping theorem, branch points, second order linear O.D.E.'s.

618. Algebraic Topology, Part I. (A) Staff. Prerequisite(s): Math 600/601 or with the permission of the instructor.

Homotopy groups, Hurewicz theorem, Whitehead theorem, spectral sequences. Classification of vector bundles and fiber bundles. Characteristic classes and obstruction theory.

619. Algebraic Topology, Part I. (B) Staff. Prerequisite(s): Math 618 or with the permission of the instructor.

Rational homotopy theory, cobordism, K-theory, Morse theory and the h-cobordism theorem. Surgery theory.

SM 878. Probability and Algorithm Seminar. Staff.

Seminar on current and recent literature in probability and algorithm.

Advanced Graduate Courses

Algebra

620. Algebraic Number Theory. (M) Staff. Prerequisite(s): Math 602/603.

Dedekind domains, local fields, basic ramification theory, product formula, Dirichlet unit theory, finiteness of class numbers, Hensel's Lemma, quadratic and cyclotomic fields, quadratic reciprocity, abelian extensions, zeta and L-functions, functional equations, introduction to local and global class field theory. Other topics may include: Diophantine equations, continued fractions, approximation of irrational numbers by rationals, Poisson summation, Hasse principle for binary quadratic forms, modular functions and forms, theta functions.

621. Algebraic Number Theory. (M) Staff. Prerequisite(s): Math 620 or with the permission of the instructor.

Continuation of Math 620.

622. Complex Algebraic Geometry. (M) Staff. Prerequisite(s): Math 602/603 and Math 609.

Algebraic geometry over the complex numbers, using ideas from topology, complex variable theory, and differential geometry. Topics include: Complex algebraic varieties, cohomology theories, line bundles, vanishing theorems, Riemann surfaces, Abel's theorem, linear systems, complex tori and abelian varieties, Jacobian varieties, currents, algebraic surfaces,

adjunction formula, rational surfaces, residues.

623. Complex Algebraic Geometry. (M) Staff. Prerequisite(s): Math 622 or with the permission of the instructor.

Continuation of Math 622.

624. Algebraic Geometry. (M) Staff. Prerequisite(s): Math 602/603.

Algebraic geometry over algebraically closed fields, using ideas from commutative algebra. Topics include: Affine and projective algebraic varieties, morphisms and rational maps, singularities and blowing up, rings of functions, algebraic curves, Riemann Roch theorem, elliptic curves, Jacobian varieties, sheaves, schemes, divisors, line bundles, cohomology of varieties, classification of surfaces.

625. Algebraic Geometry. (M) Staff. Prerequisite(s): Math 624 or with the permission of the instructor.

Continuation of Math 624.

626. Commutative Algebra. (M) Staff. Prerequisite(s): Math 602/603.

Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor's interests.

627. Commutative Algebra. (M) Staff. Prerequisite(s): Math 602/603.

Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor's interests.

628. Homological Algebra. (M) Staff. Prerequisite(s): Math 602/603.

Complexes and exact sequences, homology, categories, derived functors (especially Ext and Tor). Homology and cohomology arising from complexes in algebra and geometry, e.g. simplicial and singular theories, Cech cohomology, de Rham cohomology, group cohomology, Hochschild cohomology. Projective resolutions, cohomological dimension, derived categories, spectral sequences. Other topics may include: Lie algebra cohomology, Galois and étale cohomology, cyclic cohomology, l-adic cohomology. Algebraic deformation theory, quantum groups, Brauer groups, descent theory.

629. Homological Algebra. (M) Staff. Prerequisite(s): Math 628 or with the permission of the instructor.

Continuation of Math 628.

Algebraic and Differential Topology

630. Differential Topology. (M) Staff. Prerequisite(s): Math 600/601.

Fundamentals of smooth manifolds, Sard's theorem, Whitney's embedding theorem, transversality theorem, piecewise linear and topological manifolds, knot theory. The instructor may elect to cover other topics such as Morse Theory, h-cobordism theorem, characteristic classes, cobordism theories.

631. Differential Topology. (M) Staff. Prerequisite(s): Math 630 or with the permission of the instructor.

Continuation of Math 630.

632. Topological Groups. (M) Staff. Prerequisite(s): Math 600/601 and Math 602/603.

Fundamentals of topological groups. Haar measure. Representations of compact groups. Peter-Weyl theorem. Pontrjagin duality and structure theory of locally compact abelian groups.

633. Topological Groups. (M) Staff. Prerequisite(s): Math 632 or with the permission of the instructor.

Continuation of Math 632.

638. Algebraic Topology, Part II. (C) Staff. Prerequisite(s): Math 618/619.

Theory of fibre bundles and classifying spaces, fibrations, spectral sequences, obstruction theory, Postnikov towers, transversality, cobordism, index theorems, embedding and immersion theories, homotopy spheres and possibly an introduction to surgery theory and the general classification of manifolds.

639. Algebraic Topology, Part II. (C) Staff. Prerequisite(s): Math 638 or with the permission of the instructor.

Continuation of Math 638.

Classical Analysis

640. Ordinary Differential Equations. (M) Staff. Prerequisite(s): Math 508/509.

The general existence and uniqueness theorems for systems of ordinary differential equations and the dependence of solutions on initial conditions and parameters appearing in the equation. The proofs of existence and uniqueness are related to numerical algorithms for finding approximate solutions for systems of ODE's. We consider special properties of constant coefficient and linear systems. We then present the theory of linear

equations with analytic coefficients, the theories of singular points, indicial roots and asymptotic solutions. We then turn to boundary value problems for second order equations with an emphasis on the eigenfunction expansions associated with self adjoint boundary conditions and the Sturm comparison theory. The remaining time is devoted to topics; for example: Hamiltonian systems and symplectic geometry, singular boundary value problems, perturbation theory, the Lyapounov-Schmidt theory and the Poincare-Bendixson theorem, the equations of mathematical physics, the calculus of variations, symmetries of ODE's and transformation groups.

641. Ordinary Differential Equations. (M) Staff. Prerequisite(s): Math 640 or with the permission of the instructor.

Continuation of Math 640

644. Partial Differential Equations. (M) Staff. Prerequisite(s): Math 600/601, Math 608/609.

Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and non-linear problems. Sobolev spaces and the theory of distributions will be developed as needed.

645. Partial Differential Equations. (M) Staff. Prerequisite(s): Math 600/601, Math 608/609.

Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and nonlinear problems. Sobolev spaces and the theory of distributions will be developed as needed.

646. Several Complex Variables. (M) Staff. Prerequisite(s): Math 600/601, Math 608/609.

Analytic spaces, Stein spaces, approximation theorems, embedding theorems, coherent analytic sheaves, Theorems A and B of Cartan, applications to the Cousin problems, and the theory of Banach algebras, pseudoconvexity and the Levi problems.

647. Several Complex Variables. (M) Staff. Prerequisite(s): Math 646 or with the permission of the instructor.

Continuation of Math 646.

Functional Analysis

650. Lie Algebras. (M) Staff. Prerequisite(s): Math 602/603.

Connections with Lie groups, universal enveloping algebras, Poincare-Birkhoff-Witt Theorem, Lie and Engels theorems, free Lie algebras, Killing form, semisimple algebras, root systems, Dynkin diagrams, classification of complex simple Lie algebras, representation theory of Lie algebras, cohomology of Lie algebras.

651. Lie Algebras. (M) Staff. Prerequisite(s): Math 650 or with the permission of the instructor.

Continuation of Math 650.

652. Operator Theory. (M) Staff.

Subject matter may include spectral theory of operators in Hilbert space, C^* -algebras, von Neumann algebras.

653. Operator Theory. (M) Staff.

Subject matter may include spectral theory of operators in Hilbert space, C^* -algebras, von Neumann algebras.

654. Lie Groups. (M) Staff. Prerequisite(s): Math 600/601, Math 602/603.

Connection of Lie groups with Lie algebras, Lie subgroups, exponential map. Algebraic Lie groups, compact and complex Lie groups, solvable and nilpotent groups. Other topics may include relations with symplectic geometry, the orbit method, moment map, symplectic reduction, geometric quantization, Poisson-Lie and quantum groups.

655. Lie Groups. (M) Staff. Prerequisite(s): Math 654 or with the permission of the instructor.

Continuation of Math 654.

656. Representation of Continuous Groups. (M) Staff.

Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.

657. (PHYS657) Representation of Continuous Groups. (M) Staff.

Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.

Differential Geometry

660. Differential Geometry. (M) Staff.

Prerequisite(s): Math 600/601, Math 602/603.

Riemannian metrics and connections, geodesics, completeness, Hopf-Rinow theorem, sectional curvature, Ricci curvature, scalar curvature, Jacobi fields, second fundamental form and Gauss equations, manifolds of constant curvature, first and second variation formulas, Bonnet-Myers theorem, comparison theorems, Morse index theorem, Hadamard theorem, Preissmann theorem, and further topics such as sphere theorems, critical points of distance functions, the soul theorem, Gromov-Hausdorff convergence.

661. Differential Geometry. (M) Staff.

Prerequisite(s): Math 660 or with the permission of the instructor.

Continuation of Math 660.

Other Subjects

SM 670. (LGIC320, PHIL412, PHIL416, PHIL516) Topics in Logic. (M) Staff.

Prerequisite(s): Math 570/571.

Discusses advanced topics in logic.

SM 671. (MATH571, PHIL412) Topics in Logic. (M) Staff. Prerequisite(s): Math 570/571.

Discusses advanced topics in logic.

676. (CIS 610) Advanced Geometric Methods in Computer Science. (M) Staff.

Prerequisite(s): Math 312 or Math 412, or with the permission of the instructor.

Advanced geometric methods used in geometric modeling, computer graphics, computer vision, and robotics.

678. (MATH440, MATH441) Combinatorial Analysis and Graph Theory. (M) Staff.

Generating functions, enumeration methods, Polya's theorem, combinatorial designs, discrete probability, extremal graphs, graph algorithms and spectral graph theory, combinatorial and computational geometry.

680. Applied Linear Analysis. (M) Staff.

Prerequisite(s): Math 241 and one semester of: Math 360/361 or Math 508/509.

Application of techniques from linear algebra to real problems in economics, engineering, physics, etc. and the difficulties involved in their

implementation. Particular emphasis is placed on solving equations, the eigenvalue problem for symmetric matrices and the metric geometry of spaces of matrices. Applications to problems such as options pricing, image reconstruction, airplane and ship design, oil prospecting, etc. (these topics will vary from year to year). Analysis of the numerical algorithms available to solve such problems, rates of convergence, accuracy and stability.

681. Applied Linear Analysis. (M) Staff.

Prerequisite(s): Math 680 or with the permission of the instructor.

Continuation of Math 680.

690. Topics in Mathematical Foundations of Program Semantics. (M) Staff.

This course will discuss Mathematical Foundations of Computer Security in the Fall and will be followed in Spring by Math 691, Advanced Topics in Mathematical Foundations of Computer Security. In Fall we will study basic topics in cryptography and network security protocols.

"What is to distinguish a digital dollar when it is as easily reproducible as the spoken word? How do we converse privately when every syllable is bounced off a satellite and smeared over an entire continent? How should a bank know that it really is Bill Gates requesting from his laptop in Fiji a transfer of \$100,000,000 to another bank? Fortunately, the mathematics of cryptography can help. Cryptography provides techniques for keeping information secret, for determining that information has not been tampered with, and for determining who authored pieces of information." (From the Foreword by R. Rivest to the "Handbook of Applied Cryptography" by Menezes, van Oorschot, and Vanstone.)

Textbook: Douglas R. Stinson. "Cryptography: Theory and Practice". Publisher: Chapman & Hall/CRC; 3 edition (November 1, 2005) ISBN: 1584885084.

691. Topics in Mathematical Foundations of Program Semantics. (M) Staff.

The course discusses advanced topics in mathematical foundations of semantics of programming languages and programming structures.

692. Numerical Analysis. (M) Staff.

Prerequisite(s): Math 320/321.

A study of numerical methods for matrix problems, ordinary and partial differential equations, quadrature and the solution of algebraic or transcendental equations. Emphasis will be on the analysis of those

methods which are particularly suited to automatic high-speed computation.

693. Numerical Analysis. (M) Staff.

Prerequisite(s): Math 692 or with the permission of the instructor.

Continuation of Math 692.

694. (PHYS654) Mathematical Foundations of Theoretical Physics. (M) Staff.

Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.

695. (PHYS655) Mathematical Foundations of Theoretical Physics. (M) Staff.

Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.

696. (PHYS656) Topics in Mathematical Physics and String Theory. (M) Staff.

Prerequisite(s): Math 694 or permission of the instructor.

This interdisciplinary course discusses advanced topics in mathematical physics. Topics may include elliptic operators, heat kernels, complexes and the Atiyah-Singer index theorem, Feynman graphs and anomalies, computing Abelian and non-Abelian anomalies, and the relation of anomalies to the index theorem.

697. (PHYS657) Topics in Mathematical Physics and String Theory. (M) Staff.

Prerequisite(s): Math 696 or permission of the instructor.

Continuation of Math 696. Topics may include the family index theorem, equivariant cohomology and loop spaces, the homological algebra of BRST invariance and the Wess-Zumino consistency condition, the descent equations, and worldsheet anomalies in string theory.

Advanced Topics Courses

702. Topics in Algebra. (M) Staff.

Topics from the literature. The specific subjects will vary from year to year.

703. Topics in Algebra. (M) Staff.

Topics from the literature. The specific subjects will vary from year to year.

720. Advanced Number Theory. (M)

Staff. Prerequisite(s): Math 620/621.

Ramification theory, adeles and ideles, Tate's thesis, group cohomology and Galois cohomology, class field theory in terms of ideles and cohomology, Lubin-Tate formal groups, Artin and Swan conductors, central simple algebras over local and global fields, general Hasse principles. Other topics may include the following: zero-dimensional Arakelov theory, Tate duality, introduction to arithmetic of elliptic curves, local and global epsilon factors in functional equations, p-adic L-functions and Iwasawa theory, modular forms and functions and modular curves.

721. Advanced Number Theory. (M)

Staff. Prerequisite(s): Math 720 or with the permission of the instructor.

Continuation of Math 720.

724. (MATH694) Topics in Algebraic Geometry. (M) Staff. Prerequisite(s):

Either Math 622/623 or Math 624/625.

Topics from the literature. The specific subjects will vary from year to year.

725. Topics in Algebraic Geometry. (M) Staff. Prerequisite(s):

Either Math 622/623 or Math 624/625.

Topics from the literature. The specific subject will vary from year to year.

730. (MATH540) Topics in Algebraic and Differential Topology. (M) Staff.

Prerequisite(s): Math 618/619.

Topics from the literature. The specific subjects will vary from year to year.

731. Topics in Algebraic and Differential Topology. (M) Staff.

Prerequisite(s): Math 618/619.

Topics from the literature. The specific subjects will vary from year to year.

748. Topics in Classical Analysis. (M) Staff.

Prerequisite(s): Math 608 and Math 609 and permission from the instructor.

Harmonic analysis in Euclidean space, Riemann surfaces, Discontinuous groups and harmonic analysis in hyperbolic space, Pseudodifferential operators and index theorems, Variational methods in non-linear PDE, Hyperbolic equations and conservation laws, Probability and stochastic processes, Geometric measure theory, Applications of analysis to problems in differential geometry. The specific subjects will vary from year to year.

749. Topics in Classical Analysis. (M) Staff.

Prerequisite(s): Math 748 or with the permission of the instructor.

Continuation of Math 748.

750. Topics in Functional Analysis. (M) Staff.

Topics from the literature. The specific subjects will vary from year to year.

751. Topics in Functional Analysis. (M) Staff.

Topics from the literature. The specific subjects will vary from year to year.

752. Topics in Operator theory. (M) Staff.

Topics from the literature. The specific subjects will vary from year to year.

753. Topics in Operator Theory. (M) Staff.

Topics from the literature. The specific subjects will vary from year to year.

760. Topics in Differential Geometry. (M) Staff. Prerequisite(s):

Math 660/661.

Topics from the literature. The specific subjects will vary from year to year.

761. Topics in Differential Geometry. (M) Staff. Prerequisite(s):

Math 660/661.

Topics from the literature. The specific subjects will vary from year to year.

794. Physics for Mathematicians. (M)

Staff. Prerequisite(s): Math 694.

Corequisite(s): Math 695.

This course is designed to bring mathematicians with no physics background up to speed on the basic theories of physics: mechanics,relativity,quantum mechanics,classical fields,quantum field theory, the standard model,strings,superstrings,and M-theory.

Graduate Seminars

SM 820. Algebra Seminar. (M) Staff.

Seminar on current and recent literature in algebra.

SM 821. Algebra seminar. (M) Staff.

Seminar on current and recent literature in algebra.

SM 824. Seminar in Algebra, Algebraic Geometry, Number Theory. (M) Staff.

Seminar on current and recent literature in algebra, algebraic geometry, and number theory.

SM 825. Seminar in Algebra, Algebraic Geometry, Number Theory. (M) Staff.

Seminar on current and recent literature in algebra, algebraic geometry, and number theory.

SM 830. Geometry-Topology Seminar. (M) Staff.

Seminar on current and recent literature in geometry-topology

SM 831. Geometry-Topology Seminar. (M) Staff.

Seminar on current and recent literature in geometry-topology

SM 840. Analysis Seminar. (M) Staff.

Seminar on current and recent literature in analysis.

SM 841. Analysis Seminar. (M) Staff.

Seminar on current and recent literature in analysis.

SM 844. Seminar in Partial Differential Equations. (M) Staff.

Seminar on current and recent literature in partial differential equations.

SM 845. Seminar in Partial Differential Equations. (M) Staff.

Seminar on current and recent literature in partial differential equations.

SM 850. Seminar in Functional Analysis. (M) Staff.

Seminar on current and recent literature in functional analysis.

SM 851. Seminar in Functional Analysis. (M) Staff.

Seminar on current and recent literature in functional analysis.

SM 860. Seminar in Riemannian Geometry. (M) Staff.

Seminar on current and recent literature in Riemannian geometry.

SM 861. Seminar in Riemannian Geometry. (M) Staff.

Seminar on current and recent literature in Riemannian geometry.

SM 870. Logic Seminar. (M) Staff.

Seminar on current and recent literature in logic.

SM 871. Logic Seminar. (M) Staff.

Seminar on current and recent literature in logic.

SM 872. Seminar in Logic and Computation. (M) Staff.

Seminar on current and recent literature in logic and computation.

SM 873. Seminar in Logic and Computation. (M) Staff.

Seminar on current and recent literature in logic and computation.

SM 880. Combinatorics Seminar. (M) Staff.

Seminar on current and recent literature in combinatorics.

SM 881. Combinatorics Seminar. (M) Staff.

Seminar on current and recent literature in combinatorics.

MECHANICAL ENGINEERING AND APPLIED MECHANICS (EG) {MEAM}

511. (MEAM511) Creative Thinking and Design. (A)

This is a creative & iterative problem solving course that uses a series of mechanical design challenge projects to move students into the broad realm of unpredictable often incalculable time-constrained problem solving. It explores a wide variety of problem definition, exploration and solving "tools," and a variety of surrounding "design thinking" topics, such as ethics and the design of experience. Drawing and prototyping are used in the projects for ideation, iteration, speculation and communication.

515. (MEAM515, OPIM415) Product Design.

This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype. The course is open to juniors and seniors in SEAS or Wharton.

527. (ARCH727) Industrial Design I. (A)

This course provides an introduction to the ideas and techniques of Industrial Design, which operates between Engineering and Marketing as the design component of Integrated Product Development. The course is intended for students from engineering, design, or business with an interest in multi-disciplinary, needs-based product design methods. It will follow a workshop model, combining weekly lectures on design manufacturing, with a progressive set of design exercises.

SM 699. IPD Seminar. (C)

799. Studio Project Thesis. (C)

099. Independent Study. (C) Open to all students. A maximum of 2 c.u. of MEAM 099 may be applied toward the B.A.S. or B.S.E. degree requirements.

An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal.

L/L 101. Introduction to Mechanical Design. (C)

This hands-on, project-based course covers the fundamentals of the modern mechanical design process, from needfinding and brainstorming to the basics of computerized manufacturing and rapid prototyping. Topics include: product definition (needfinding, observation, sketching, and brainstorming); computer-aided design (part creation, assemblies, and animation using SolidWorks); fundamental engineering design practices (material selection, dimensioning, tolerances, etc.); basic computer simulation and analysis; and rapid prototyping (laser cutter, 3-D fused-deposition modeling, and an introduction to computer-controlled machining).

L/R 110. Introduction to Mechanics. (A)

Corequisite(s): MATH 104.
This lecture course and a companion laboratory course (MEAM 147) build upon the concepts of Newtonian (classical) mechanics and their application to engineered systems. This course introduces students to mechanical principles that are the foundation of upper-level engineering courses including MEAM 210 and 211. The three major parts of this course are: I. Vector Mechanics; II. Statics and Structures; and III. Kinematics and Dynamics. Topics include: vector analysis, statics of rigid bodies, introduction to deformable bodies, friction, kinematics of motion, work and energy, and dynamics of particles. Case studies will be introduced, and the role of Newtonian mechanics in emerging applications including bio- and nano- technologies will be discussed.

111. Visual Thinking. (C)

Visual Thinking is a drawing, creative thinking, and iterative prototyping course using a series of mechanical design projects to help move engineers, (and artists and others) out of the often analytical, even

equation based comfort zones into the broader realm of unpredictable time constrained problem solving. This kind of problem solving sees "solutions" as a broad to infinite range of possibilities instead of as a single final predictable answer. Drawing is utilized both as a critical communication tool and as tangible speculation in the development of designs. Dozens of creative thinking strategies are implemented towards the accomplishment of 3 challenge projects, 2 of which are team work, and one individual.

147. Introduction to Mechanics Lab. (A)

Corequisite(s): MEAM 110 or AP credit for Physics C, Mechanics.
This half-credit laboratory class is a companion to the Introduction to Mechanics lecture course (MEAM 110). It investigates the concepts of Newtonian (classical) mechanics through weekly hands-on experiments, emphasizing connections between theoretical principles and practical applications in engineering. In addition to furthering their understanding about the workings of the physical world, students will improve their skills at conducting experiments, obtaining reliable data, presenting numerical results, and extracting meaningful information from such numbers.

L/L 150. Fundamentals of Mechanical Prototyping. (C)

Constructing functional prototypes is an intrinsic part of the mechanical design process. This hands-on course covers the fundamentals of layout, measurement, part generation, milling, turning, and computer-controlled machining. By immersion in the department's manufacturing environment, students will gain an intuitive understanding of the techniques and skills necessary to successfully prototype a wide variety of mechanical systems. Enrollment is limited.

L/R 203. Thermodynamics I. (B)

Thermodynamics is the study of the fundamental concepts underlying the conversion of energy in such mechanical systems as internal and external combustion engines (including automobile and aircraft engines), compressors, pumps, refrigerators, and turbines. This course is intended for students in mechanical engineering, chemical engineering, materials science, physics and other fields. The topics include: Basic definitions, microscopic and macroscopic points of view; properties of pure substances and reversibility and irreversibility, the thermodynamic temperature scale, entropy, availability, second law analysis, power

and refrigeration cycles and their engineering applications.

L/R 210. Statics and Strength of Materials. (A) Prerequisite(s): Physics 150 or MEAM 110/147. Corequisite(s): Math 240 and MEAM 247 are strongly recommended.

This course is intended for students in mechanical engineering, civil-systems, materials science, and other fields. It continues the treatment of the statics of rigid bodies begun in Physics 150 and MEAM 110 and leads to the treatment of deformable bodies and their response to loads. The concepts of stress, strain, and linearly elastic response are introduced and they are applied to the behavior of rods, beams, shafts and pressure valves. Safety factors and the onset of mechanical failure are discussed. The course incorporates the use of computers to solve problems, and includes a written library research assignment and a team design project.

L/R 211. Engineering Mechanics: Dynamics. (B) Prerequisite(s): MEAM 210. Corequisite(s): MATH 241.

This course introduces the basic concepts in kinematics and dynamics that are necessary to understand, analyze and design mechanisms and machines. These concepts are also fundamental to the modeling and analysis of human movement, biomechanics, animation of synthetic human models and robotics. The topics covered include: Particle dynamics using energy and momentum methods of analysis; Dynamics of systems of particles; Impact; Systems of variable mass; Kinematics and dynamics of rigid bodies in plane motion; Computer-aided dynamic simulation and animation.

215. Elements of Mechanical Engineering Design. (C)

Prerequisite(s): MEAM 210, MSE 220, or equivalent; MATH 240 corequisite; MEAM 101 helpful but not required.

This course introduces the broad field of mechanical design, in which engineering science and inventive thinking are combined to solve real-world problems. Many of the tools, techniques, materials, and devices required for practical applications are covered, with emphasis on how to intelligently select and employ them. Topics include modern design methods (simulation, graphics, ergonomics, etc), manufacturing processes (machining, casting, automation, etc), and physical components (bearings, gears, pumps, motors, etc). Students receive a comprehensive technological grounding which, in conjunction with theoretical and

specialized knowledge, will empower them to produce creative and practicable new designs.

L/L 245. Introduction to Flight. (A) Prerequisite(s): PHYS 150 or MEAM 110/147. Corequisite(s): MATH 240.

Basic concepts: pressure, density, velocity, forces. The standard atmosphere. Introduction to low speed aerodynamics. Airfoils, wings, and other aerodynamic shapes. Aircraft performance. Aircraft stability and control. Aircraft propulsion.

L/L 247. Mechanical Engineering Laboratory I. (C) Prerequisite(s):

Sophomore standing in engineering. Corequisite(s): MEAM 210 (Fall) and MEAM 203 and 211 (Spring) are strongly recommended.

This is a sophomore level laboratory course that students will complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement systems as well as design. The fall semester follows closely with MEAM 210, doing experiments to explore the principles taught in statics and strength of materials. The spring semester follows closely with MEAM 203 and MEAM 211 with hands-on design projects in thermodynamics and dynamics.

250. Energy Systems, Resources and Technology. (C) Prerequisite(s):

Sophomore standing in Engineering. Freshman Chemistry, Freshman Physics or Mechanics.

The course will present a comprehensive overview of the global demand for energy, and the resource availability and technology used in its current and future supply. Through a personal energy audit, students will be made aware of the extensive role that energy plays in modern life, both directly, through electricity and transportation fuel, and indirectly in the manufacturing of goods they use. The course will cover how that energy is supplied, the anticipated global growth in energy demand, the resource availability and the role of science and technology in meeting that demand in a world concerned about climate change. The roles of conservation, improved efficiency and renewable energy in meeting future demand in a sustainable, environmentally benign way will be covered.

L/R 302. Fluid Mechanics. (A)

Prerequisite(s): MATH 241 and PHYS 150 or MEAM 110/147.

Physical properties; fluid statics; Bernoulli equation; fluid kinematics; conservation laws and finite control-volume analysis;

conservation laws and differential analysis; inviscid flow; The Navier-Stokes equation and some exact solutions; similitude, dimensional analysis, and modeling; flow in pipes and channels; boundary layer theory; lift and drag.

L/R 310. Design of Thermal/Fluid Systems. (M) Prerequisite(s): MEAM 203, 302, MATH 241. Corequisite(s): MEAM 333.

The objective of the course is to teach the principles of design, with emphasis on components and systems involving the flow of fluids, heat and mass transfer, air conditioning and refrigeration, energy conversion, power generation, and propulsion. The topics covered include introduction to engineering design, economics, modeling, creativity, thermal/fluid equipment and components, reliability, liability, safety, optimization, and materialization of the design as a market product. At least one team design, construction, and testing project is included.

L/R 321. Vibrations of Mechanical Systems. (A) Prerequisite(s): MATH 241 and MEAM 211.

This course teaches the fundamental concepts underlying the dynamics of vibrations for single-degree of freedom, multi-degree and infinite-degree of freedom mechanical systems. The course will focus on Newton's Force Methods, Virtual-Work Methods, and Lagrange's Variation Methods for analyzing problems in vibrations. Students will learn how to analyze transient, steady state and forced motion of single and multi-degree of freedom linear and non-linear systems. The course teaches analytical solution techniques for linear systems and practical numerical and simulation methods for analysis and design of nonlinear systems.

L/R 333. Heat and Mass Transfer. (B) Prerequisite(s): MATH 241 and MEAM 302.

This course is a required course for all MEAM undergraduates. It covers fundamentals of heat and mass transfer and applications to practical problems in energy conversion and conservation. Emphasis will be on developing a physical and analytical understanding of conductive, convective, and radiative heat transfer, as well as design of heat exchangers and heat transfer with phase change. Topics covered will include: types of heat transfer processes, their relative importance, and the interactions between them, solutions of steady state and transient state conduction, emission and absorption of radiation by real

surfaces and radiative transfer between surfaces, heat transfer by forced and natural convection owing to flow around bodies and through ducts, analytical solutions for some sample cases and applications of correlations for engineering problems. Students will develop an ability to apply governing principles and physical intuition to solve problems.

L/R 338. Thermodynamics II. (M)

Prerequisite(s): MEAM 203 or CBE 231.

To introduce students to advanced classical equilibrium thermodynamics based on Callen's postulational approach, to exergy (Second-Law) analysis, and to fundamentals of statistical and nonequilibrium thermodynamics.

Applications to be discussed include advanced power and aerospace propulsion cycles, fuel cells, combustion, diffusion, transport in membranes, materials properties, superconductivity, elasticity, and biological processes.

L/L 347. Mechanical Engineering Design Laboratory. (A)

Prerequisite(s): Junior standing in engineering.

This is a junior level laboratory course. The course teaches the principles of design and measurement systems including basic electromechanical systems. It follows MEAM 302 and MEAM 321 including experiments in fluid mechanics, and vibration in the design of mechanical systems.

L/L 348. Mechanical Engineering Design Laboratory. (B)

Prerequisite(s): Junior standing in engineering.

This course is a junior lab which follows MEAM 333 Heat Transfer and MEAM 354 Mechanics of Materials with design projects based on those topics. In the broader context of design/independent skill development, this course also introduces open ended topics, wider design options, and introduces project planning and management.

354. Mechanics of Solids. (B)

Prerequisite(s): MEAM 210 or equivalent, BE200 or permission of instructor.

This course builds on the fundamentals of solid mechanics taught in MEAM 210 and addresses more advanced problems in strength of materials. The students will be exposed to a wide array of applications from traditional engineering disciplines as well as emerging areas such as biotechnology and nanotechnology. The methods of analysis developed in this course will form the cornerstone of machine design and also more advanced topics in the mechanics of materials.

402. (MEAM502) Energy Engineering.

(A) Prerequisite(s): MEAM 203 or equivalent, and MEAM 333 or equivalent, (Heat Transfer can be taken concurrently with MEAM 402).

Quantitative introduction to the broad area of energy engineering, from basic principles to applications. The focus is on the science and engineering, and includes environmental impact and some economics considerations. A review of energy consumption, use, and resources; sustainability, methods of energy and exergy (second law) analysis; power cycles, combined cycles, and co-generation; batteries and fuel cells; nuclear energy and wastes; fusion power; solar energy; power generation in space.

405. (MEAM505, MSE 405, MSE 505) Mechanical Properties of Macro/Nanoscale Materials. (A)

The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.

L/L 410. (MEAM510) Design of Mechatronic Systems. (A)

Prerequisite(s): Junior or Senior standing in MEAM and a first course in Programming.

In many modern systems, mechanical elements are tightly coupled with electronic components and embedded computers. Mechatronics is the study of how these domains are interconnected, and this hands-on, project-based course provides an integrated introduction to the fundamental components within each of the three domains, including: mechanical elements (prototyping, materials, actuators and sensors, transmissions, and fundamental kinematics), electronics (basic circuits, filters, op amps, discrete logic, and interfacing with mechanical elements), and computing (interfacing with the analog world, microprocessor technology, basic control theory, and programming).

420. (CIS 390, MEAM520) Robotics.

(A) Prerequisite(s): MATH 240, PHYS 150 or MEAM 110/147.

The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include planetary rovers, robotic pets, medical surgical-assistive devices, and semi-

autonomous search-and-rescue vehicles. This introductory-level course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: coordinate transformations, manipulator kinematics, mobile-robot kinematics, actuation and sensing, feedback control, vision, motion planning, and learning. The material is reinforced with hands-on lab exercises including basic robot-arm control and the programming of vision-guided mobile robots

445. Mechanical Engineering Design Projects. (A)

Prerequisite(s): Junior standing. This is a capstone design project course in mechanical engineering and is required of all mechanical engineering students. Students will be involved in selected group or individual projects emphasizing design, development, and experimentation, under the supervision of a MEAM faculty advisor. Projects are sponsored either by industry or by Penn professors.

Alternatively, students may propose their own projects. Each project is approved by the instructor and the faculty advisor. The work is spread over MEAM 445 and MEAM 446. In addition to being involved in the design project, MEAM 445 covers project planning, patent and library searches, professional education, ethics, writing skills, communication, and technical presentation.

446. Mechanical Engineering Design Projects. (B)

This is the second course in the two course sequence involving the capstone design project. See MEAM 445 for course description.

454. (MEAM554) Mechanics of Materials. (M)

Prerequisite(s): MEAM 210, MATH 240, 241.

This course is an upper level course that discusses the behavior of materials, the selection of materials in mechanical components, and the mechanics of deformable bodies. It is intended for students in material science, mechanical engineering, and civil engineering. The topics covered include: Stress. Strain. Principal Stresses. Compatibility. Elastic stress-strain relations. Strain energy. Plane strain. Plane stress. Rods and trusses. Bending of beams. Torsion. Rotating disks. Castigliano's Theorem. Dummy loads. Principle of virtual work. The Rayleigh-Ritz Methods. Introduction to the finite element method. Non-linear material behavior. Yielding. Failure.

455. (BE 455, MEAM544) Continuum Biomechanics. (A)

Continuum mechanics with applications to biological systems. Fundamental engineering conservation laws are introduced and illustrated using biological and non-biological examples. Kinematics of deformation, stress, and conservation of mass, momentum, and energy. Constitutive equations for fluids, solids, and intermediate types of media are described and applied to selected biological examples. Class work is complemented by hands-on experimental and computational laboratory experiences.

502. (MEAM402) Energy Engineering. (A) Prerequisite(s): MEAM 203 or equivalent, and MEAM 333 or equivalent (could be taken concurrently with MEAM 402).

Quantitative introduction to the broad area of energy engineering, from basic principles to applications. The focus is on the science and engineering, and includes environmental impact and some economics considerations. A review of energy consumption, use, and resources; sustainability, methods of energy and exergy (second law) analysis; power cycles, combined cycles, and co-generation; batteries and fuel cells; nuclear energy and wastes; fusion power; solar energy; power generation in space.

505. (MEAM405, MSE 405, MSE 505) Mechanical Properties of Macro/Nanoscale Materials. (A)

The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.

509. Mechanics of Human Motion. (M)

This course considers normal human movement (especially grasping, reaching, walking, and running), pathological conditions (e.g., resulting from disease, injury, malformations), and engineering approaches such as prostheses (limb replacements) and orthoses (limb assists) that may ameliorate the conditions and promote normal movements and function. In doing so, we will also learn musculoskeletal anatomy, comparative anatomy, muscle mechanics, and neural control. An objective of the course is to

bring together technical analysis and synthesis skills of students with the practical problems of persons disabled by amputation, stroke, spinal cord injury, and other causes. The potential problems of applying engineering techniques to human beings will be emphasized. Engineering design comprises that are necessary are also given emphasis.

L/L 510. (MEAM410) Design of Mechatronic Systems. (A)

Prerequisite(s): Graduate standing in engineering or permission of the instructor. In many modern systems, mechanical elements are tightly coupled with electronic components and embedded computers. Mechatronics is the study of how these domains are interconnected, and this hands-on, project-based course provides an integrated introduction to the fundamental components within each of the three domains, including: mechanical elements (prototyping, materials, actuators and sensors, transmissions, and fundamental kinematics), electronics(basic circuits, filters, op amps, discrete logic, and interfacing with mechelements), and computing (interfacing with the analog world, microprocessor technology, basic control theory, and programming).

511. (IPD 511) Creative Thinking and Design. (A)

This is a creative & iterative problem solving course that uses a series of mechanical design challenge projects to move students into the broad realm of unpredictable often incalculable time-constrained problem solving. It explores a wide variety of problem definition, exploration and solving "tools," and a variety of surrounding "design thinking" topics, such as ethics and the design of experience. Drawing and prototyping are used in the projects for ideation, iteration, speculation and communication.

513. (ESE 406, ESE 505) Modern Feedback Control Theory. (B)

Prerequisite(s): ESE 210, Juniors and Seniors encouraged to enroll. Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.

514. (IPD 514) Design for Manufacturability. (B) Prerequisite(s): Senior or Graduate standing in the School of Design, Engineering, or Business with completed product development and/or design engineering core coursework or related experience.

This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems.

515. (IPD 515, OPIM415) Product Design. (C)

This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype. The course is open to juniors and seniors in SEAS or Wharton.

516. (IPD 516) Advanced Mechatronic Reactive Spaces. (C)

This course teaches advanced mechatronics concepts that include the design and implementation of networked embedded systems, large-scale actuation, advanced sensing and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a collection of short performance pieces inspired by Shakespeare's A Midsummer Night's Dream with both mechatronic and human

performers from the Pig Iron Theater Troupe. A final paper will be required that is ready for conference proceedings.

519. (MSE 550) Elasticity and Micromechanics of Materials. (C)

This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby's problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed.

520. (CIS 390, MEAM420) Robotics and Automation. (A) Prerequisite(s):

Graduate standing in engineering or permission of instructor.

The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include planetary rovers, robotic pets, medical surgical-assistive devices, and semi-autonomous search-and-rescue vehicles. This introductory-level course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: coordinate transformations, manipulator kinematics, mobile-robot kinematics, actuation and sensing, feedback control, vision, motion planning, and learning. The material is reinforced with hands-on lab exercises including basic robot-arm control and the programming of vision-guided mobile robots.

521. Introduction to Parallel Computing. (M) Prerequisite(s):

Programming. Familiarity with Linux or Unix will help.

From numerical weather prediction and earthquake simulations, to quantum mechanics, and to genome sequencing and molecular dynamics, high-performance computing (HPC) is a fundamental tool for science. The basic principles on how to design, implement, and evaluate HPC techniques will be covered. Topics include parallel non-numerical and numerical algorithms, computing platforms, and message passing interface. Science applications will sample techniques applied to partial differential equations, many-body problems, and statistical physics. Practical problem-solving and hands-on examples will be a basic part of the course.

522. Fundamentals of Sensor Technology. (M)

Explores the principles of sensor science, develops the relationship between intensive and extensive variables, and presents the linear laws between these variables. Students will review the flux-force relations describing kinetic phenomena against the context of means for transducing temperature, stress, strain, magnetic processes and chemical concentration into electrical signals. The need for multivariate signal processing will be introduced and selected applied topics considered.

L/R 527. (ENM 427) Finite Element Analysis. (A) Prerequisite(s): MATH 241 and PHYS 151.

The objective of this course is to equip students with the background needed to carry out finite elements-based simulations of various engineering problems. The first part of the course will outline the theory of finite elements. The second part of the course will address the solution of classical equations of mathematical physics such as Laplace, Poisson, Helmholtz, the wave and the Heat equations. The third part of the course will consist of case studies taken from various areas of engineering and the sciences on topics that require or can benefit from finite element modeling. The students will gain hand-on experience with the multi-physics, finite element package FemLab.

528. Advanced Kinematics. (M)

Prerequisite(s): Multivariate calculus, introductory abstract algebra, mathematical maturity.

Differential geometry, Lie groups and rigid body kinematics, Lie algebra, quaternions and dual number algebra, geometry of curves and ruled surfaces, trajectory generation and motion planning, applications to robotics and spatial mechanisms.

529. (ESE 529) Introduction to MEMS and NEMS. (A)

Introduction to RM MEMS technologies; need for RF MEMS components in wireless communications. Review of micromachining techniques and MEMS fabrication approaches. Actuation methods in MEMS, TRF MEMS design and modeling. Examples of RF MEMS components from industry and academia. Case studies: micro-switches, tunable capacitors, inductors, resonators, filters, oscillators and micromachined antennas. Overview of RF NEMS.

530. Continuum Mechanics. (A)

Prerequisite(s): Multivariable Calculus, Linear Algebra, Partial Differential Equations.

This course serves as a basic introduction to the Mechanics of continuous media, and it will prepare the student for more advanced courses in solid and fluid mechanics. The topics to be covered include: Tensor algebra and calculus, Lagrangian and Eulerian kinematics, Cauchy and Piola-Kirchhoff stresses, General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics; constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure.

533. (MEAM433) Advanced Heat and Mass Transfer. (M) Prerequisite(s):

MEAM 302 and MEAM 333 or equivalent.

This course follows a first general course in heat transfer, to give further understanding of the basic mechanisms, the kinds of transport processes and of engineering applications, design and methodology. More generalized formulations, treatment, and results for conductive, convective, radiative and combined transport will be given. Extensive use of computers for numerical solutions of complex problems and computer-aided education. Several specific design applications will be considered in detail, such as the following: heat exchangers, thermal stressing, solar collectors, electronic equipment cooling, cooling towers, environmental discharges, engine cooling and structure icing.

535. Advanced Dynamics. (A)

Rigid body kinematics; Newtonian formulations of laws of motion; concepts of momentum, energy and inertia properties; generalized coordinates, holonomic and nonholonomic constraints. Generalized forces, principle of virtual work, D'Alembert's principle. Lagrange's equations of motion and Hamilton's equations. Conservation laws and integrals of motion. Friction, impulsive forces and impact. Applications to systems of rigid bodies.

536. (MEAM436) Viscous Fluid Flow. (M) Prerequisite(s): MEAM 302. This course may be taken by M.S.E. students for credit. M.S.E. students will be required to do some extra work, they will be graded on a different grade scale than undergraduate students, and they will be required to demonstrate a higher level of maturity in their class assignments. MEAM doctoral candidates will not be permitted to count this course as a part of their degree requirements.

Review of the fundamental laws of fluid mechanics. Analysis and discussion of the theory of incompressible viscous flow. Dimensional reasoning, similarity, Stokes approximations, laminar boundary layer theory, methods for non-similar boundary layers, approximate techniques, stability and turbulence.

537. (MSE 537) Nanomechanics and Nanotribology at Interfaces. (B) Prerequisite(s): Freshman physics; MEAM 354 or equivalent, or consent of instructor. Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. Mechanics enters a new regime where the role of surfaces, interfaces, defects, material property variations, and quantum effects play more dominant roles. This course will provide an introduction to nanoscale mechanics and tribology at interfaces, and the critical role these topics play in the developing area of nanoscience and nanotechnology. We will discuss how mechanics and tribology at interfaces become integrated with the fields of materials science, chemistry, physics, and biology at this scale. We will cover a variety of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Literature reviews, critical peer discussion, individual and team problem assignments, a laboratory project, and student presentations will be assigned as part of the course.

540. Optimal Design of Mechanical Systems. (M) Prerequisite(s): MATH 240, 312 or equivalent; MEAM 210, 453 or equivalent, or permission of the instructor; familiarity with a computer language; undergraduates require permission. Mathematical modeling of mechanical design problems for optimization. Highlights and overview of optimization methods: unconstrained optimization,

unidirectional search techniques, gradient, conjugate direction, and Newton methods. Constrained optimization. KKT optimality conditions, penalty formulations, augmented Lagrangians, and others. SLP and SQP and other approximate techniques for solving practical design problems. Monotonicity analysis and modeling of optimal design problems. Optimization of structural elements including shape and topology synthesis. Variational formulation of distributed and discrete parameter structures. Design criteria for stiffness and strength. Design sensitivity analysis. The course will include computer programs to implement the algorithms discussed and solve realistic design problems. A term project is required.

544. (BE 455, MEAM455) Continuum Biomechanics. (A) Prerequisite(s): Statics, linear algebra, and differential equations. Biological and non-biological systems are both subject to several basic physical balance laws of broad engineering importance. Fundamental conservation laws are introduced and illustrated using examples from both animate as well as inanimate systems. Topics include kinematics of deformation, the concept of stress, conservation of mass, momentum, and energy. Mechanical constitutive equations for fluids, solids and intermediate types of media are described and complemented by hands-on experimental and computational laboratory experiences. Practical problem solving using numerical methods will be introduced.

545. Aerodynamics. (B) Prerequisite(s): MEAM 302. MEAM doctoral candidates will not be permitted to count this course as part of their degree requirements. Review of fluid kinematics and conservation laws; vorticity theorems; two-dimensional potential flow; airfoil theory; finite wings; oblique shocks; supersonic wing theory; laminar and turbulent boundary layers.

550. Micro-Electro-Mechanical Systems. (M) Prerequisite(s): MEAM 527 or equivalent is recommended. Undergraduates need permission. Introduction to Micro-Electro-Mechanical Systems (MEMS). A brief overview of micromachining. Modeling strategies and algorithms for multi-energy domain coupled governing equations of MEMS components, devices, and systems. Component-level and system-level dynamics. Design case studies covering a wide range of transducers including mechanical, electrostatic, thermal,

magnetic, optical, etc. Synthesis methods for MEMS. Review of selected recent papers from the literature. A term-project or a term-paper on a selected topic is required.

554. (MEAM454) Mechanics of Materials. (M) Prerequisite(s): MEAM 210, MATH 240, 241. This course is cross-listed with an advanced level undergraduate course. It may be taken by M.S.E. students for credit. M.S.E. students will be required to do some extra work, they will be graded on a different scale than undergraduate students, and they will be required to demonstrate a higher level of maturity in their class assignments. MEAM doctoral students will not be permitted to count 400/500 courses as part of their degree requirements.

Rods and trusses. Stress. Principal stresses. Strain. Compatibility. Elastic stress-strain relations. Strain energy. Plane strain. Plane stress. Bending of beams. Torsion. Rotating disks. Castigliano's Theorem. Dummy loads. Principle of virtual work. The Rayleigh-Ritz methods. Introduction to the finite element method. Non-linear material behavior. Yielding. Failure.

L/R 555. (BE 555, CBE 555) Nanoscale Systems Biology. (C) Prerequisite(s): Background in Biology, Chemistry or Engineering with coursework in thermodynamics or permission of the instructor.

From single molecule studies to single cell manipulations, the broad field of cell and molecular biology is becoming increasingly quantitative and increasingly a matter of systems simplification and analysis. The elaboration of various stresses on cellular structures, influences of interaction pathways and convolutions of incessant thermal motions will be discussed via lectures and laboratory demonstration. Topics will range from, but are not limited to, protein folding/forced unfolding to biomolecule associations, cell and membrane mechanics, and cell motility, drawing from very recent examples in the literature. Frequent hands-on exposure to modern methods in the field will be a significant element of the course in the laboratory. Skills in analytical and professional presentations, papers and laboratory work will be developed.

L/R 561. Thermodynamics I. (M) Prerequisite(s): Undergraduate thermodynamics.

To introduce students to advanced classical equilibrium thermodynamics based on Callen's postulational approach, to exergy

(Second-Law) analysis, and to fundamentals of statistical and nonequilibrium thermodynamics. Applications to be discussed include advanced power and aerospace propulsion cycles, fuel cells, combustion, diffusion, transport in membranes, materials properties, superconductivity, elasticity, and biological processes.

L/L 564. (ESE 460, ESE 574) The Principles and Practice of Microfabrication Technology. (A)

Prerequisite(s): Any of the following courses: ESE 218, MSE 321, MEAM 333, CHE 351, CHEM 321/322, Phys 250 or permission of the instructor.

A laboratory course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures, microelectronic and microstructural materials, photolithography, diffusion, oxidation, materials deposition, etching and plasma processes. Basic laboratory processes are covered in the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).

L/R 570. (CBE 640) Transport Processes I. (A) Diamond, Sinno.

The course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered.

571. Advanced Topics in Transport Phenomena. (M) Prerequisite(s): Either MEAM 570, MEAM 642, CHE 640 or equivalent, or Written permission of the Instructor.

The course deals with advanced topics in transport phenomena and is suitable for graduate students in mechanical, chemical and bioengineering who plan to pursue research in areas related to transport phenomena or work in an industrial setting that deals with transport issues. Topics include: Multi-component transport processes; Electrokinetic phenomena; Phase change at interfaces: Solidification, melting, condensation, evaporation, and combustion; Radiation heat transfer: properties of real surfaces, non-

participating media, gray medium approximation, participating media transport, equation of radiative transfer, optically thin and thick limits, Monte-Carlo methods: Microscale energy transport in solids; microstructure, electrons, phonons, interactions of photons with electrons, phonons and surfaces; microscale radiation phenomena.

572. Micro/Nanoscale Energy Transport. (A) Prerequisite(s):

Undergraduate thermodynamics and heat transfer (or equivalent), or permission of the instructor. Undergraduates may enroll with permission of the instructor.

As materials and devices shrink to the micro- and nanoscale, they transmit heat, light and electronic energy much differently than at the macroscopic length scales. This course provides a foundation for studying the transport of thermal, optical, and electronic energy from a microscopic perspective. Concepts from solid state physics and statistical mechanics will be introduced to analyze the influence of small characteristic dimensions on the propagation of crystal vibrations, electrons, photons, and molecules. Applications to modern microdevices and thermometry techniques will be discussed. Topics to be covered include natural and fabricated microstructures, transport and scattering of phonons and electrons in solids, phonon-phonon and photon-electron interactions, radiative recombinations, elementary kinetic theory, and the Boltzmann transport equation.

575. Physicochemical Hydrodynamics and Interfacial Phenomena. (M)

The course will focus on a few topics relevant to micro-fluidics and nanotechnology. In particular, we will learn how the solid liquid interface acquires charge and the role that this charge plays in colloid stability, electroosmosis, and electrophoresis. Other topics will include controlled nano-assembly with dielectrophoresis, and stirring at very low Reynolds numbers (Lagrangian Chaos). The focus of the course will be on the physical phenomena from the continuum point of view. The mathematical complexity will be kept to a minimum. Software tools such as Maple and Femlab will be used throughout the course. The course will be reasonably self-contained and necessary background material will be provided consistent with the students' level of preparation.

610. Advanced Mechatronics. (C)

Prerequisite(s): MEAM 410/510 or equivalent, (understanding of DC motors, basic prototyping skills, familiarity with programming microcontrollers, basic digital electronics, ideal op-amps).

This course provides an in-depth exploration into electro-mechanical systems. Topics covered will expand on actuation mechanisms (including shape memory alloy and brushless motors); sensing mechanisms (including range sensors and proximity detectors), signal conditioning (with particular emphasis on dealing with noise and the non-idealities of typical components); programming modalities (including real-time operating systems and filters); and communication mechanisms (such as wireless RF, CANbus, SPI/I2C and others). The project-based course will focus on the integration of systems at the OEM-component level and will include significant mechanical interface design.

613. (CBE 617, CIS 613, ESE 617) Nonlinear Control Theory. (M)

Prerequisite(s): Undergraduate Controls Course.

This course focuses on nonlinear systems, planar dynamical systems, Poincare Bendixson Theory, index theory, bifurcations, Lyapunov stability, small-gain theorems, passivity, the Poincaré map, the center manifold theorem, geometric control theory, and feedback linearization.

620. Robotics. (B) Prerequisite(s):

Graduate standing in engineering and MEAM 535 or ESE 500 or CIS 580 or equivalent.

Geometry of rigid body displacements, coordinate systems and transformations; Kinematics of spatial mechanisms, direct and inverse kinematics for serial chain linkages, velocity and acceleration analysis; Dynamics, trajectory generation and control of manipulators; Motion planning and control of robotic systems.

L/R 625. Haptic Interfaces. (B)

Prerequisite(s): Graduate standing in engineering and MEAM 510 (Mechatronics), MEAM 520 (Robotics and Automation), MEAM 535 (Advanced Dynamics) or equivalent. Undergraduates require permission.

This class provides a graduate-level introduction to the field of haptics, which involves human interaction with real, remote, and virtual objects through the sense of touch. Haptic interfaces employ specialized robotic hardware and unique computer algorithms to enable users to explore and manipulate simulated and

distant environments. Primary class topics include human haptic sensing and control, haptic interface design, virtual environment rendering methods, teleoperation control algorithms, and system evaluation; current applications for these technologies will be highlighted, and important techniques will be demonstrated in a laboratory setting. Coursework includes problem sets, programming assignments, reading and discussion of research papers, and a final project. Appropriate for students in any engineering discipline with interest in robotics, dynamic systems, controls, or human-computer interaction.

630. Advanced Continuum

Mechanics. (M) Prerequisite(s): One graduate level course in applied mathematics and one in either fluid or solid mechanics.

This course is a more advanced version of MEAM 530. The topics to be covered include: tensor algebra and calculus, Lagrangian and Eulerian kinematics; Cauchy and Piola-Kirchhoff stresses. General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics. Constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure.

631. Advanced Elasticity. (M)

Prerequisite(s): MEAM 519 or permission of instructor.

Reciprocal theorem. Uniqueness. Variational theorems. Rayleigh-Ritz, Galerkin, and weighted residue methods. Three-dimensional solutions and potentials. Papkovitch-Neuber formulation. Problems of Boussinesq and Mindlin. Hertz theory of contact stress.

632. Plasticity. (M) Prerequisite(s): MEAM 519 or permission of instructor.

Plastic yield conditions and associated flow rules. Phenomenological theories for strain-hardening plasticity. Large strain theory. Physical theories of single crystal and polycrystal plasticity. Boundary value problems and plane strain slip line fields. Variational principles and limit analysis. Creep. Applications to structures, metal forming, friction and wear, contact, and fracture.

633. Fracture Mechanics. (M)

Prerequisite(s): Background equivalent to MEAM 519 and ENM 510.

Linear elastic analysis of bodies with cracks. Energy balance criterion for crack growth and stability. Analysis of cracks in

elastic-plastic and rate-dependent materials. J integral and applications to crack growth and stability. Large-scale yielding and dynamic fracture. Interface fracture.

634. Rods and Shells. (M)

Prerequisite(s): First-year graduate-level applied mathematics for engineers (ENM 510 and 511) and a first course in continuum mechanics or elasticity or permission of instructor.

This course is intended for 2nd year graduate students and introduces continuum mechanics theory of rods and shells with applications to structures and to biological systems as well as stability and buckling. The course begins with topics from differential geometry of curves and surfaces and the associated tensor analysis on Riemannian spaces. A brief introduction to variational calculus is included since variational methods are a powerful tool for formulating approximate structural mechanics theories and for numerical analysis. The structural mechanics theories of rods, plates and shells are introduced including both linear and nonlinear theories.

635. Composite Materials. (M)

Prerequisite(s): ENM 510. Corequisite(s): ENM 511.

This course deals with the prediction of the average, or effective properties of composite materials. The emphasis will be on methods for determining effective behavior. The course will be concerned mostly with linear mechanical and physical properties, with particular emphasis on the effective conductivity and elastic moduli of multi-phase composites and polycrystals. However, time-dependent and non-linear properties will also be discussed.

642. Fluid Mechanics I. (C)

Fluid mechanics as a vector field theory; basic conservation laws, constitutive relations, boundary conditions, Bernoulli theorems, vorticity theorems, potential flow. Viscous flow; large Reynolds number limit; boundary layers.

643. Fluid Mechanics II. (M)

Waves, one-dimensional gas dynamics. Transition, turbulence. Small Reynolds number limit: Stokes' flow. Compressible potential flow. Method of characteristics. Rotating flows. Stratified flows. Jets.

644. BioTransport: Fluid Mechanics, Heat and Mass Transfer. (M)

Role of transport processes in biological systems; Detailed review of Fluid Mechanics, Heat transfer and Mass transfer to enable a study of BioTransport;

Cardiovascular system; Respiratory system; Rheology of Blood; Approximate methods for the analysis of complex physiological flows; Detailed treatment of blood flow in vessels; Mass transport in biological systems; Transport in porous media; Transport of gases between blood and tissues; Introduction to Bioheat transfer.

645. Fluid Mechanics IV. (M)

Gas kinetic theory: Boltzmann equation. H-theorem, equilibrium solutions, transport coefficients. Rarified gas dynamics, methods of approximate solution to Boltzmann equation. Continuum limit: Navier-Stokes equations.

646. Computational Mechanics. (M)

Prerequisite(s): ENM 510, ENM 511, and one graduate level introductory course in mechanics. FORTRAN or C programming experience is necessary.

The course is divided into two parts. The course first introduces general numerical techniques for elliptical partial differential equations - finite difference method, finite element method and spectral method. The second part of the course introduces finite volume method. SIMPLER formulation for the Navier-Stokes equations will be fully described in the class. Students will be given chances to modify a program specially written for this course to solve some practical problems in heat transfer and fluid flows.

647. Fundamentals of Complex

Fluids. (M) Prerequisite(s): ENM 510, MEAM 530 or MEAM 570, or permission of the instructor.

Complex fluids are a broad class of materials. They are usually homogeneous at the macroscopic scale and disordered at the microscopic scale, but possess structure at an intermediate scale. The macroscopic behavior of these fluids is controlled by the fluid intermediate scale. This course will cover the basic concepts of structure, dynamics, and flow properties of polymers, colloids, liquid crystals, and other substances with both liquid and solid-like characteristics. Both the experimental and theoretical aspects of rheology will be discussed. The basic forces influencing complex fluid rheology will be outlined and discussed. These include van der Waals, electrostatic, excluded volume and other interactions. Methods for characterizing structure will be covered including scattering techniques, optical microscopy. Examples will focus on several types of complex fluids such as polymeric solutions and melts, emulsions & foams, gelling systems, suspensions and self-assembling fluids.

660. (MSE 561) Atomistic Modeling in Materials Science. (B)

Why and what to model: Complex lattice structures, structures of lattice defects, crystal surfaces, interfaces, liquids, linking structural studies with experimental observations, computer experiments. Methods: Molecular statics, molecular dynamics, Monte Carlo. Evaluation of physical quantities employing averages, fluctuations, correlations, autocorrelations, radial distribution function, etc. Total energy and interatomic forces: Local density functional theory and abinitio electronic structure calculations, tight-binding methods, empirical potentials for metals, semiconductors and ionic crystals.

661. Advanced Thermodynamics Seminar. (M) Upon demand.

Classical statistical mechanics as developed by Gibbs and Boltzmann. The H-theorem and approach to equilibrium. Fluctuations, application to ideal and real gases and to chemical equilibrium, quantized systems, theory of specific heats, Maxwell Boltzmann, Bose-Einstein and Fermi-Dirac Statistics, mean-free path phenomena diffusion, the Boltzmann equation and transport phenomena.

L/R 662. (BE 662, CBE 618) Advanced Molecular Thermodynamics. (A)

Review of classical thermodynamics. Phase and chemical equilibrium for multicomponent systems. Prediction of thermodynamic functions from molecular properties. Concepts in applied statistical mechanics. Modern theories of liquid mixtures.

663. Entropic Forces in Biomechanics. (C)

This course is targeted for engineering/physics students working in the areas of nano/bio technology. The course will start with a quick review of statistical mechanics and proceed to topics such as Langevin dynamics, solution biochemistry (Poisson-Boltzmann and Debye-Huckel theory), entropic elasticity of bio-polymers and networks, reaction rate kinetics, solid state physics and other areas of current technological relevance. Students will be expected to have knowledge of undergraduate mechanics, physics and thermodynamics.

664. Heat Conduction and Mass Diffusion. (M) Prerequisite(s): ENM 510 or equivalent, and undergraduate level heat and/or mass transfer.

Advanced modeling and solutions of heat conduction and mass diffusion, with

emphasis on the similarities and analogies between these phenomena. Analytical and numerical solutions, including the use of available general and specific software for the solution of the associated differential equations. Inverse problem solution techniques. Applications including basic and combined problems as well as moving interfaces, effects of energy sources and chemical reactions, interfacial contact resistance, advanced insulation, thermal stresses, composite materials, and microscale and non-continuum systems.

665. Heat Transfer II: Convection. (M) Prerequisite(s): Undergraduate level heat transfer and MEAM 642 or permission of instructor.

Development of formulations governing forced, buoyancy induced, and phase change transport and convective motions with emphasis on the underlying conservation principles. Following the delineation of the different kinds of transport, the principal models, and methods applicable for each kind are discussed.

666. Heat Transfer III: Radiation. (M) Prerequisite(s): MEAM 664 and 665.

Introduction, black body radiation, radiation to and from a surface element, radiative heat exchange among surfaces separated by a non-participating medium, radiation and conduction in non-participating media, radiation and convection in non-participating media, introduction to radiative heat transfer in participating media.

690. Advanced topics in solid mechanics, dynamics, thermal-fluid science, or energy disciplines. (M)

This course will be offered when demand permits. The topics will change due to the interest and specialties of the instructor(s). Some topics could include: Computational Fluid Mechanics, Visualization of Computational Results, Free Surface Flows, Fluid Mechanics of the Respiratory System, and transport in Reacting Systems.

691. Special Topics in Mechanics of Materials. (M)

This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Compliant Mechanisms, Optimal Control, and Fluid-Structure interaction.

692. Topics in Mechanical Systems. (M)

This course will be offered when demand permits. The topics will change due to the

interests and specialties of the instructor(s). Some topics could include: Electromagnetics, Control Theory, and Micro-Electro-Mechanical Systems.

SM 699. MEAM Seminar. (C)

The seminar course has been established so that students get recognition for their seminar attendance as well as to encourage students to attend. Students registered for this course are required to attend weekly departmental seminars given by distinguished speakers from around the world. There will be no quizzes, tests, or homeworks. The course will be graded S/U. In order to obtain a satisfactory (S) grade, the student will need to attend more than 70% of the departmental seminars. Participation in the seminar course will be documented and recorded on the students transcript. In order to obtain their degree, doctoral students will be required to accumulate six seminar courses and MS candidates (beginning in the Fall 2001) two courses. Under special circumstances, i.e. in case of conflict with a course, the student may waive the seminar requirement for a particular semester by petition to the Graduate Group Chair.

895. Teaching Practicum. (C)

This course provides training in the practical aspects of teaching. The students will attend seminars emphasizing teaching and communication skills, deliver demonstration lectures, lead recitations, lead tutorials, supervise laboratory experiments, develop instructional laboratories, develop instructional material, prepare and grade homework; grade laboratory reports, and prepare and grade examinations. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of the 0.5 c.u. of teaching practicum, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation signed by the faculty member responsible for the course. The evaluation will be based on comments of the students taking the course and the impressions of the faculty in charge.

899. Independent Study. (C)

For students who are studying specific advanced subject areas in mechanical engineering and applied mechanics. Before the beginning of the term, the student must submit a proposal outlining and detailing the study area, along with the faculty supervisor's consent, to the graduate group chair for approval. At the conclusion of the independent study, the student should prepare a brief report.

990. Masters Thesis.

Master's Thesis

999. Thesis/Dissertation Research.

(C) Both terms.

For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.

995. Dissertation.

MILITARY SCIENCE (PV) {MSCI}

Military Science (Army ROTC - Reserve Officers' Training Corps) is open to any student desiring to earn a commission in the Active Army, US Army Reserve, or Army National Guard upon graduation.

The primary purpose of Army ROTC is to prepare college men and women to serve as commissioned officers in the US Army. Students enrolled in the ROTC program receive instruction in fundamentals of leadership with emphasis on self-discipline, integrity, confidence, and responsibility.

All students enrolled in Military Science courses will participate, unless ineligible or exempt, in a weekly leadership laboratory (a nominal lab fee is charged), one weekend field training exercise (FTX) per semester, and a physical training program. This training augments the classroom instruction and is included into the final grade.

Freshman and sophomore students can enroll in the ROTC Basic Course without incurring an obligation to serve in the US Army. The term Basic Course refers to first and second year courses, MSCI 101, 102, 201, and 202, which are designed for beginning students who want to qualify for entry into the Advanced Course, and for students who may want to try Military Science without obligations. A number of popular or challenging extracurricular activities are associated with these courses.

101. Basic Leadership I

Laboratory/Practicum. (A) Staff.

Corequisite(s): Enrollment in MSCI 110 Basic Leadership I Lecture required. 1 h. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

102. Basic Leadership I

Laboratory/Practicum. (B) Staff.

Corequisite(s): Enrollment in MSCI 120 Basic Leadership I Lecture required. 1 h. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

110. Leadership and Personal

Development. (A) Staff. Corequisite(s): Enrollment in MSCI 101 Basic Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation.

Introduces students/cadets to the personal challenges and competencies that are critical for effective leadership. Focus is placed on developing basic knowledge and comprehension of the U.S. Army's Leadership Dimensions while gaining a "big picture" understanding of the Army ROTC program, its purpose in the U.S. Army and our nation, and its advantages for the student. Classes are conducted for one hour once each week.

120. Foundations In Leadership. (B)

Staff. Corequisite(s): Enrollment in MSCI 102 Basic Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation.

Reviews leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students/cadets are also exposed to key fundamentals of skills required to be successful as an MS II cadet; namely military map reading and land navigation, and small unit operations/leadership drills.

201. Basic Leadership 2

Laboratory/Practicum. (A) Staff.

Corequisite(s): Enrollment in MSCI 210 Basic Leadership 2 Lecture required. 2 h. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

202. Basic Leadership

Laboratory/Practicum. (B) Staff.

Corequisite(s): Enrollment in MSCI 202 Leadership I Lecture required. 2 h. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

Basic Course Leadership Laboratory. 2h. Open only to (and required of) students in the associated Military Science course. Series, with different roles for students at different levels in the program. Learn and practice basic skills. Gain insight into Advanced Course in order to make an informed decision whether to apply for it. Build self-confidence and team-building leadership skills that can be applied throughout life.

Basic Course Physical Fitness. Only open to students in MSCI 101,102, 201 and 202. Series, with different roles for students at different levels in the program. Participate in and learn to lead a physical fitness program. Emphasis on the development of an individual fitness program and the role of exercise and fitness is one's life.

Students who continue in the advanced course as juniors and seniors become obligated to serve either on active duty or in the reserve component. The Advanced Course consists of the courses MSCI 301, 302, 401 and 402. It is open only to students who have completed the Basic Course or earned placement credit for the basic course (various methods). The Advanced Course is designed to qualify a student for a commission as an officer of the United States Army. Students must complete all courses numbered greater than 300, to include a six-week Advanced Camp during the summer, usually between the junior and senior years. The courses must be taken in sequence unless otherwise approved by the Professor of Military Science. All contracted students receive \$150 per month stipend during the school year.

210. Innovative Tactical Leadership.

(A) Staff. Corequisite(s): Enrollment in MSCI 201 Basic Leadership 2 Laboratory required. 1.00 CU - Credit excluded from full-time calculation.

Explores the dimensions of creative and innovative tactical leadership strategies and styles by studying historical case studies and engaging in interactive student exercises. Focus is on continued development of the knowledge of leadership values and attributes through an understanding of rank, uniform, customs and courtesies.

220. Leadership In Changing

Environments. Staff. Corequisite(s): Enrollment in MSCI 202 Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation.

Examines the challenges of leading in complex contemporary operational environments. Students/cadets are exposed to more complex land navigation/map reading tasks, as well as more advanced small unit operations/leadership drills. Cadets develop greater self awareness as they practice communication and team building skills.

301. Leadership**Laboratory/Practicum 3. (A) Staff.**

Prerequisite(s): Completion of MSCI 100 and 200 level courses. Corequisite(s): Enrollment in MSCI 310 Basic Leadership 3 Lecture required. 2.5 hours. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

302. Leadership**Laboratory/Practicum. (B) Staff.**

Prerequisite(s): Completion of MSCI 100 and 200 level courses. Corequisite(s): Enrollment in MSCI 320 Basic Leadership 3 Lecture required. 2.5 hours. No credit, or awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

ROTC Advanced Camp. A six-week camp conducted at an Army post. Only open to (and required of) students who have completed MS 301 and 302. The student receives pay. Travel, lodging and most meal cost are defrayed by the US Army. The Advanced Camp environment is highly structured and demanding, stressing leadership at small unit levels under varying, challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The leaders and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type commission and job opportunities given to the student upon graduation from ROTC and the university

Nurse Summer Training Program. Consist of three weeks at an Advanced Camp (see above) and up to five weeks serving as a nurse in a military medical treatment facility. Only open to (and required of) nursing students who have completed MSCI 301 and 302. Replaces normal advanced. The student receives pay. Travel, lodging and most meal costs are defrayed by the US Army. The camp and clinical environments are demanding, stressing leadership and basic skills performance are evaluated throughout. The leadership and skills evaluations weigh heavily on the subsequent selection process that determines the job opportunities offered to the nurse upon graduation.

310. Leadership in Contact. Staff.

Prerequisite(s): Completion of MSCI 100 and 200 level courses. Corequisite(s): Enrollment in MSCI 301 Leadership 3 Lab required. 1.00 CU - Credit excluded from full-time calculation.

Uses increasingly intense situational leadership challenges to build cadet awareness and skills in leading small units. Skills in decision-making, persuading, and motivating team members when "in combat" are explored, evaluated, and developed.

320. Complex Team Leadership

Issues. (B) Staff. Corequisite(s): Enrollment in MSCI 302 Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation.

Challenges cadets with more complex leadership issues to further develop, practice, and evaluate adaptive leadership. Cadets continue to analyze and evaluate their own leadership values, attributes, skills and actions in preparation for the Leadership Development and Assessment Course (LDAC). Primary attention is given to preparation for LDAC and the development of both tactical skills and leadership qualities.

401. Leadership**Laboratory/Practicum 4. (A) Staff.**

Prerequisite(s): Completion of MSCI 100, 200 and 300 level courses. Corequisite(s): Enrollment in MSCI 410 Leadership 4 Lecture required. 1.00 CU - credit excluded from full-time calculation.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

402. Leadership**Laboratory/Practicum. (B) Staff.**

Prerequisite(s): Completion of MSCI 100, 200 and 300 level courses. Corequisite(s): Enrollment in MSCI 420 Basic Leadership 4 Lecture required. 2.5 hours. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

Advance Course Leadership Laboratories. 2h. Open only to students in

the associated Military Science course. Series, with different roles for students at different levels in the program. Involves leadership responsibilities for the planning, coordination, execution and evaluation of various training and activities with Basic Course students and for the ROTC program as a whole. Students develop, practice and refine leadership skills by serving and being evaluated in a variety of responsible positions.

Advanced Course Physical Fitness.

Only offered to (and required of) students in MSCI 301,302, 401 and 402, of which this program is an integral part. Series, with different roles for students at different levels in the program. Participate in and learn to plan and lead physical fitness programs. Develops the physical fitness required of an officer in the Army. Emphasis on the development of an individual fitness program and the role of exercise and fitness in one's life.

410. Developing Adaptive Leaders.

(A) Staff. Prerequisite(s): Completion of MSCI 100, 200 and 300 level courses. Corequisite(s): Enrollment in MSCI 401 Leadership 4 Lab required. 1.00 CU - credit excluded from full-time calculation.

Develops cadet proficiency in planning, executing, and assessing complex operations, functioning as a member of a staff, and providing leadership performance feedback to subordinates. Cadets are given situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC cadets.

420. Leadership in the Contemporary Operating Environment of the 21st Century. Staff.

Prerequisite(s): Completion of MSCI 100, 200 and 300 level courses. Corequisite(s): Enrollment in MSCI 402 Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation.

Explores the dynamics of leading in the complex situations of current military operations. Cadets examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. Aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support are examined and evaluated.

MUSIC (AS) {MUSC}

Undergraduate Studies

Freshman Seminars

014. Songwriting in the 20th Century. (M) Weesner.

This course will alternate between an analytical approach and a critical approach to the study of a wide range of songs composed throughout the 20th century. We will study musical techniques such as melody, harmony, form, rhythm, instrumentation, style, and text-setting. We will also pose far-ranging questions, such as, what makes a song a song? What makes a song a good song? What is the difference between an art song and a pop song? This course will occasionally focus on specific composers, such as Cole Porter, Charles Ives, John Harbison, and Liz Phair, and will also consider the musical ramifications of collaboration, covers and re-makes.

SM 015. What Music Means. (M) Kallberg.

This course will explore how music takes on meaning in cultures of the present and the past. To this end we will consider a number of basic and important questions: What is music? What kinds of functions has it served in the past, and what kinds does it serve today? What is the nature and significance of musical value? How does music inform notions of society and personal identity? Students will listen to a variety of musics ("classical" music will be in the forefront of our investigations, but we will also explore various popular and ethnic musics), and will read selected critical texts about these musics. The course will combine lecture and discussion; students will write a series of interpretive papers.

SM 016. Freshman Seminar. (M)

(Spring 2010) Abbate. The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Past topics in music are: Origins of Music, Music and Kitsch, The Changing Self, Beatles, and Film Music/Film Sound.

SM 018. Origins of Music. (M) Tomlinson.

Music-making seems to be as universal an expressive mode among humans as language itself. Historical evidence points to the emergence of music early in human cultures, and, more strikingly, recent findings in paleoanthropology and cognitive studies suggest that musical capacities lie deep in the brain and extend far back in hominid evolution. The seminar will take up the age-old questions of when, how, and why music began. We will scrutinize this problem from the vantage of recent scientific findings in a variety of fields, including cognitive studies, language acquisition studies, and archaeology. We will attempt to relate these findings to our experience of music in the world today. Prior musical experience is not required for this seminar.

History of Music

021. 1000 Years of Musical Listening. (M) Arts & Letters Sector. All Classes. Dillon/Dolan. Open to all students.

"In this historical survey, students learn to listen analytically, historically, and creatively to music from the Middle Ages to the present day. A wide range of musical repertoires including plainchant, opera, orchestral music, and chamber music is covered. Composers studied include Bach, Mozart, Beethoven, Verdi, and Wagner. No prior musical knowledge is required.

025. Mahler's World. (C) Kallberg.

027. Haydn and Mozart. (M) Staff. Prerequisite(s): Music 021.

The creative careers of Haydn and Mozart. Genres to be studied include the symphony, string quartet, concerto, and opera.

SM 028. Beethoven. (M) Kallberg. Prerequisite(s): Music 021.

An exploration of the music of Beethoven.

SM 029. Romantic Music. (M) Kallberg. Prerequisite(s): Music 021. Open to all students.

Manifestations of Romanticism in the music of the nineteenth century, exclusive of Beethoven.

030. History of Opera. (M) Abbate, Dillon. Open to all students.

This course aims to introduce students to the history of opera, from its beginnings in sixteenth-century Italy down to the present day. It will treat the main conventions of opera at each stage of its development and

the social contexts in which opera was and is listened to, and aim to develop technical skills for the appreciation of opera. Detailed study of operas by Monteverdi, Handel, Mozart, Donizetti, Verdi, Wagner, Puccini and Stravinsky will leave students with a context and a vocabulary for understanding and talking about opera, designed to enhance their future encounters with opera.

040. History of the Symphony. (M) Bernstein, Staff. Open to all students.

A survey of representative symphonies by such composers as Haydn, Mozart, Beethoven, Schubert, Berlioz, Schumann, Brahms, Tchaikovsky, and Mahler. Historical developments will be considered, along with the effects upon symphonic literature of such major sociological changes as the emergence of the public concert hall. But the emphasis will be on the music itself--particularly on the ways we can sharpen our abilities to engage and comprehend the composers' musical rhetoric.

120. History of Music - Medieval. (M) Dillon.

European music from the 9th to the 15th century, from Gregorian chant through Dunstable.

121. History of Music - Renaissance. (M) Bernstein.

European music from the 15th to the early 17th century.

122. History of Music - 1600 to 1750. (M) Staff. Prerequisite(s): Music 070.

European music of the Baroque period, through the middle of the 18th century.

123. History of Music - 1750 to 1850. (M) Kallberg. Prerequisite(s): Music 071.

European music from the mid-18th to the mid-19th century.

124. History of Music - 1850 to present. (M) Kallberg. Prerequisite(s): Music 071.

European and American classical music from the late 19th-century to the present.

130. Introduction to the History of Western Music. (M) Staff.

Prerequisite(s): Music 070. Fulfills the requirements of the Music Major.

This course will introduce music majors and minors to the history of western music. Focussing on the development and transformation of musical styles from medieval plainchant through the works of J.S. Bach, the course will also explore the

cultural and social resonances of the repertoires in question.

131. Introduction to the History of Western Music. (M) Staff.

Prerequisite(s): Music 070. Fulfills the requirements of the Music Major.

The continuation of Music 130, focusing on the development and transformation of musical styles from the classical period through the present.

SM 330. Honors in History I. (M) Staff.

Individual study under the supervision of a faculty member

430. Seminar in Music History. (M) Staff.

Advanced study in selected topics in music history.

American Music

044. Interpreting Popular Music. (M) Staff.

An exploration of diverse styles of popular music from historical, cultural, and musical perspectives. Students will use their critical thinking and writing skills to develop a sophisticated understanding of the roles popular music plays in modern life. Ability to read music is not required.

075. (AFRC077, FOLK075, GSOC075) Jazz: Style and History. (M) Ramsey, Parberry. Open to all students.

Music 075 401 (Dr. Ramsey): Exploration of the family of musical idioms called jazz. Attention will be given to issues of style, to selected musicians, and to the social, cultural, and scholarly issues raised by its study. Music 075 601 (Professor Parberry): Development of jazz from the beginning of the 20th Century to present. Analysis of the stylistic flux of jazz, such as the progression from dance music to bebop and the emergence of the avant-garde and jazz rock. Attention will be given to both the artists who generated the changes and the cultural conditions that often provided the impetus.

140. Introduction to the Musical Life in America. (M) Arts & Letters Sector. All Classes. Ramsey. Prerequisite(s): Music 070. Fulfills the requirements of the Music Major.

This course surveys American musical life from the colonial period to the present. Beginning with the music of Native Americans, the European legacy, and the African Diaspora, the first part of the course treats the social and political milieu that shaped America's musical landscape.

Working from this foundation, the course moves to 19th-century figures in musical composition, education, performance, and promotion. The establishment of apopular sphere, the development of concert music, and the subsequent cultural hierarchies that resulted from each realm form important threads of investigation. The course concludes with 20th-century topics, including the appearance of jazz, the trajectory of western art music in the United States, and the eventual dominance of American popular music.

145. Jazz Improvisation. (M) Ramsey, Primosch. Prerequisite(s): Music 070.

This introductory "hands-on" course surveys and applies various theoretical approaches to playing specific idioms of jazz and related musical styles. Our approach will be eclectic, including the study of written scores, recordings, transcriptions, live performances, and selected theoretical treatises.

146. (AFRC147, ANTH156, CINE146, FOLK106) Studies in African American Music. (M) Ramsey.

This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways in which black music generates "meaning" and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments.

440. Seminar in American Music. (M) Staff.

Advanced study in selected topics in American Music.

Anthropology of Music

050. (AFRC050, AFST050, FOLK022) World Musics and Cultures. (C) Arts & Letters Sector. All Classes. Muller, Rommen.

This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways-- particularly as traditions in transformation. Students gain an understanding of traditional music

as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

053. (AFRC053, AFST053, ANTH053, COML053, RELS115) Music of Africa. (M) Muller.

African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwaito to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post-colonial era.

150. Introduction to Global Music. (M) Arts & Letters Sector. All Classes. Muller, Rommen. Fulfills the requirements of the Music Major.

This course introduces students to the field of ethnomusicology through a series of case studies that explore a range of traditional, popular, and art musics from around the world. The course takes as a point of departure several works of musical ethnography, musical fiction, and musical autobiography and, through in-depth reading of these texts, close listening to assigned sound recordings, and in-class case studies, generates a context within which to think and write about music.

157. (AFRC157, FOLK157, LALS157) Accordions in the New World. Rommen.

This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move

toward the Midwest, travelling though the polka belt. From there, our investigation turns toward Louisiana and Texas--toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will include in the Caribbean, where we will spend some time thinking about merengue and rake-n-scrape music. Throughout the semester, the musical case studies will be matched by readings and films that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World.

158. (AFRC158, FOLK158, LALS158) Music of Latin America. (M) Rommen.

This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts--concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertoires of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production.

250. (ANTH257, ANTH657, FOLK255, MUSC650) Field Methods in Ethnomusicology. (M) Muller, Rommen.

This course explores various methodological problems and theoretical constructs that confront us during the course of ethnomusicological fieldwork. How can we approach writing about our ethnographic work without silencing the voices of those who should be heard? In what ways might transcription and notation complicate power structures and reinforce our own musical values? What special challenges need to be negotiated in the process of documenting ethnographies on film? How do ethical and economic dilemmas inform our approach to making sound recording? A series of readings in

ethnomusicology and anthropology will suggest some answers to these questions-- answers that will, in turn, be tested by means of several interconnected fieldwork projects focused on gospel music in West Philadelphia. Our readings and fieldwork experiences will shape our classroom discussions, leading not only to a better understanding of ethnomusicological methods, but also to a deeper appreciation of the "shadows" that we cast in the field.

SM 251. Music and the Body. (M)

The relationship between music and the body may appear to be self-evident: bodies by themselves, or in consort with various technologies make and are affected by music. While this matter-of-fact schematization is certainly true, our goal in this course will be to explore with greater nuance specific instances of the complex and bidirectional interfacing between the auditory and the somatic, critically examining the ways in which apparently natural relationships are, to greater or lesser extent, mediated. Via diverse theoretical and disciplinary vantage points, and engaging musics from a wide range of generic, geo-cultural, and historical locations, some of our broad areas of inquiry will include the ways in which bodies are situated and interact within musical environments; the connections between musical and bodily forms; music and the structuring of physical action; music and emotion; gendering and sexing of musical discourses; and the effect of modern technology on the practices, products and conceptualizations of the (musical) body.

253. (AFRC253, AFST253, ANTH253, FOLK253, GSOC253) Music and Performance of Africa. (M) Muller.

This class provides an overview of the most popular musical styles, and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required, though completion of MUSC 050 is recommended.

258. (AFRC258, ANTH227, FOLK259, LALS258) Caribbean Music & Diaspora. (M) Rommen.

This survey course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an

investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts -- concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course -- diaspora. Throughout the course, we will listen to many different styles and repertoires of music, ranging from calypso to junkanoo, from rumba to merengue, and from dancehall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relations to our own North-American contexts of music consumption and production.

450. Seminar in the Anthropology of Music. (M) Staff.

Advanced study in selected topic in the Anthropology of Music.

Theory & Composition

070. Theory & Musicianship I. (C)

Primosch, Weesner. Required of music majors and minors.

An introduction to the basic notational and theoretical materials of music, complemented by work in ear-training and sight-singing. Topics covered include the notation of time and pitch, scales, intervals, chords, progressions, melodic and formal construction, and key change. Open to all students.

L/L 071. Theory and Musicianship II. (C) Staff.

Prerequisite(s): MUSC 070.

Required of music majors.

Intermediate tonal harmony and musicianship

L/L 170. Theory & Musicianship III. (A) Staff.

Prerequisite(s): MUSC 071.

Required of music majors.

Advanced tonal harmony and musicianship.

L/L 171. Theory and Musicianship IV. (B) Staff.

Prerequisite(s): MUSC 170.

Required of music majors.

Counterpoint I and advanced musicianship.

172. Music and Technology. (M) Lew.

Prerequisite(s): MUSC 070.

This course provides an overview of various aspects of the field of music technology, with an equal emphasis on conceptual knowledge and technical skills. The course offers a practical introduction to the application of computer systems in musical composition, recording,

performance, instruction, multi-media design, and research.

270. Sixteenth-Century

Counterpoint. (M) Staff. Prerequisite(s): MUSC 071. MUSC 170 may be taken at the same time.

16th century techniques. Analysis of the principal styles of sixteenth century music. Frequent composing assignments in all styles.

271. Eighteenth Century

Counterpoint. (M) Staff. Prerequisite(s): MUSC 170.

18th-Century techniques. Analysis of the principal styles of 18- century music. Frequent composing assignments in all styles.

272. Analytical Techniques and Methods. (M)

Staff. Prerequisite(s): MUSC 170.

Advanced analytic techniques. Study of contemporary techniques in music theory and analysis. Special projects and frequent writing assignments.

273. Twentieth-century styles and techniques. (M)

Staff. Prerequisite(s): MUSC 071.

Advanced study in selected 20th-century styles and techniques. Frequent composing assignments in all styles.

274. Topics in Theory. (M)

Staff. Prerequisite(s): MUSC 170.

Advanced study in selected topics in music theory and composition.

285. Orchestration. (M)

Primosch, Reise. Prerequisite(s): MUSC 070, 071.

An introduction to writing for the instruments of the orchestra. Course will include study of individual instruments and various instrumental combinations, including full orchestra. Representative scores from the 18th century to the present day will be analyzed. Students will be responsible for several scoring projects and will have opportunities to hear readings of their projects. Prerequisite: at least two semesters of music theory or permission of instructor.

286. Introduction to Electronic Music. (M)

Primosch. Prerequisite(s): MUSC 070, 071.

This hands-on course will cover basic MIDI sequencing and patch editing, as well as the rudiments of sampling, digital recording, and software synthesis. Students will complete projects using hardware and software in the Music Department's

Undergraduate Computer Lab. Musical examples from the classic and popular literatures of electronic music will be analyzed and discussed. Although basic musical literacy is assumed, prior experience in electronic music is not required.

370. Honors in Theory I. (M)

staff. Advanced study in selected topics in music theory. Fall 2006: This class will survey some of the connections between music and art. The two have been linked throughout history. The geometric scaling of musical tones and color relations in psychological experiments offer tantalizing clues why this may be so. In music we will analyze tonal melodies from the eighteenth and nineteenth centuries. In art we will analyze the use of color in abstract and minimalist paintings. Prerequisite: Ability to read music.

470. Seminar in Theory and Composition. (M)

Staff. Prerequisite(s): MUSC 170.

Advanced study in selected topics in music theory and composition.

Other Undergraduate Courses

007. Ensemble Performance. (E)

Staff.

Successful participation in a music department sponsored group for two consecutive semesters (i.e. one academic year). Ensemble groups: University Orchestra, University Wind Ensemble, Choral Society, University Choir, Ancient Voices, Baroque and Recorder Ensemble, Chamber Music Society and Jazz Combo. This course must be taken for a letter grade (Pass/Fail registration option may not be utilized for this course).

010. Applied Music. (E)

Staff. Prerequisite(s): Must be a music major or minor.

Instruction in vocal and instrumental performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance.

011. Chamber Music. (E)

Staff. Prerequisite(s): Must be a music major or minor.

Instruction chamber music performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance.

SM 012. Chamber Music: Performance and Analysis. Staff.

Participation in the course in contingent upon a successful audition. This course must be taken for a letter grade (pass/fail option may not be utilized for this course). This weekly seminar will explore chamber music from the past and present through class discussions of both performance and analytical aspects of the music led by the Daedalus Quartet. The chamber groups will prepare for a final performance at the end of the semester as well as a paper/presentation.

060. (SAST104) Beginning Tabla I. (M)

Staff. An introduction to the tabla, the premier drum of north Indian and Pakistani classical music traditions.

061. (SAST106) Indian Musical Performance A: Elementary. (C)

Nalbandian.

Introduction to the fundamentals of Indian music; instruction in performance on the sitar.

062. (SAST105) Tabla II. (B)

Staff. Continued study in Tabla

063. (SAST107) Beginning Sitar II. (C)

Nalbandian. Continuation of MUSC 061.

090. (PSYC413) Psychology of Music. (M)

Staff. Prerequisite(s): PSYC 001.

This course brings together two seemingly very different subjects, the art of music and the science of psychology. Parallel theories, empirical evidence, and demonstrations of how fundamental psychological processes are used in the music repertory will explore common convergences between the two fields. Major subjects covered include psychophysics; perception and cognition of melody, rhythm, harmony, and timbre; musical structures; learning, memory, tonality, and musical style; development; emotion, affect, and aesthetics; performance, social psychology; neural processing; and the biological origins of music.

099. Guided Research. (C)

Staff. Department honors.

Individual research under the supervision of a member of the faculty.

161. (SAST108) Intermediate Sitar I. (C) Miner.

North Indian classical music is performed in a format shared by stringed, bowed and wind instruments. Intermediate North Indian Instrumental performance is open to students who play a Western or Indian instrument with at least an intermediate degree of proficiency and to those who have completed Beginning Sitar. The course will cover North Indian methods of composition, rhythm and improvisation and focus on two or three performance pieces. A group performance will be given at the end of the semester.

164. (SAST115) India's Classical Musics. (M) Miner.

Hindustani and Karnatak music are among the great classical music systems of the world. Developed in temple, shrine, court, and concert stage environments in North and South India, they have a strong contemporary following in urban South Asia and a significant international presence. This course is an introduction to theory, structures, instruments, and aesthetics. We will work with primary and secondary texts, recordings, videos, and live performances. Topics will cover selected aspects of raga, tala, composition, improvisation and social contexts. The course aims to give students analytical and listening skills with which to approach and appreciate India's classical music. No prior music training is required.

Graduate Studies in Music

Musical Analysis

505. Advanced Chromatic Harmony. (M) Reise.

Analytical Studies in Harmony.

SM 515. Analysis of Twentieth-Century Music. (M) Primosch.

Analytical studies of twentieth-century music.

516. Analysis of 20th Century Music II. (M) Staff.

Analytical Studies of 20th century music focusing on post World War II music.

SM 620. Analytical Methods: Tonal Music. (M) Narmour.

Current methods in the analysis of tonal music.

SM 621. Analytical Methods: Twentieth-Century Music. (M) Staff.

Current methods in the analysis of twentieth-century music.

SM 622. Analytical Methods: Early Music. (M) Staff.

Analytical methods in early music.

Proseminars in the History, Theory, and Anthropology of Music

SM 600. The Interpretation of Evidence. (M) Bernstein.

The nature of evidence; basic methods of musicological research.

SM 601. The Interpretation of Written Traditions. (M) Staff.

Topics may include notation, codicology, editing and print culture.

SM 602. The Interpretation of Theoretical Treatises. (M) Staff.

A consideration of theoretical principles based upon the reading and interpretation of selected treatises.

SM 603. Aesthetics and Criticism. (M) Staff.

Topics may include hermeneutics, methods of formulating value judgements, the relationship of evaluation to interpretation, and the role of aesthetics in history.

SM 604. Historiography. (M) Staff.

Theories and models of historical investigation. Analysis of both historiographic writings and musicological works exemplifying particular approaches.

SM 605. (ANTH605, COML605, FOLK605) Anthropology of Music. (M) Muller, Rommen. Open to graduate students from all departments.

Topics may include the intellectual history of ethnomusicology, current readings in ethnomusicology, a consideration of theoretical principles based upon the reading and interpretation of selected monographs, and area studies.

SM 606. (AFRC606, FOLK616) The Interpretation of Oral Traditions. (M) Staff.

Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology.

SM 608. Writing About Music. (C)

Abbate, Dillon, Dolan, Kallberg, Moreno, Muller, Ramsey, Rommen, Tomlinson.

Writing about music is team-taught course, designed to introduce first year graduates to a broad spectrum of ideas and approaches to music, and to develop their skills for writing about music. This course is not about establishing fixed models and methodologies; nor does it set out to debate disciplinary, or to give students full coverage of any one field. Rather, it will examine music in its fullest definition (as sound, text, memory, belief and so on), selecting materials from the broadest possible temporal and geographic range. Taught by two faculty, there will be the chance to work both in depth on materials with individual professors, and also collaboratively and comparatively during sessions in which faculty teach side-by-side. As well as helping students to develop new skills (archival, analytical, critical), and to engage with musical traditions and materials foreign to them until now, this course also encourages students to experiment with new approaches to their own fields of interest. There will be a substantial written component, with four written assignments during the semester in addition to a longer project.

SM 610. Musical Notation. (M) Dillon.

Concepts and systems of the notation of medieval and Renaissance music. Chant, monophonic song, and polyphony through the mid-thirteenth century.

650. (ANTH257, ANTH657, FOLK650, MUSC250) Field Methods in Ethnomusicology. (M) Muller, Rommen.

The goal of the seminar is to give students a compressed dissertation research experience--taking them from the beginnings of "researching" a community and its music, through the documentation and representation stages. Students do background and methods reading, though the focus of the class is the development of basic ethnographic and documentation skills. This is a community partnership seminar, which means that all forms of representation are produced in collaboration with community partners in West Philadelphia. These include photographic essays, an NPR style audio documentary, but most significantly, twenty-three minute documentary films on a particular subject. See sample syllabus and projects on <http://ccat.sas.upenn.edu/music/westphillymusic>

SM 705. (AFRC705, ANTH705, COML715, FOLK715, GSOC705) Seminar in Ethnomusicology. (A)

Muller. Open to graduate students from all departments.

Topics in Ethnomusicology. Spring 2010: Imagining Africa Musically: This seminar considers ways in which scholars write about and imagine the African continent through the lens of musical performance. We will consider a range of writings about Africa as a continent, regionally, and nationally, including north Africa and the Maghreb through series of themes including: diaspora, cosmopolitanism, gender, spirituality, and as world music. This is a reading and listening intensive seminar.

Seminars in Music

SM 710. (COML638, FREN638) Studies in Medieval Music. (M) Staff.

This course will explore the main repertoires of medieval lyric from the dual perspectives of words and music (and disciplinary perspectives of musicology and literary studies). Our focus will be vernacular song and poetry from the late thirteenth to early fifteenth centuries, including detailed exploration of some of the following: polytextual motet, music and poetry of Adam de la Halle, the Roman de Fauvel, Machaut, Ciconia and some early Dufay. In exploring how late thirteenth-century writers and composers defined themselves as part of a tradition, we will also look back to their 'history' -- to the repertoire of troubadour lyrics. The course will place particular emphasis on the ways medieval writers and musicians construed their creations, and the many productive tensions between language and sound; singing and speaking; words and music. We will explore how that concern with etymologies of song played out not only in the lyrics themselves, but also in theoretical writing about song, and in its manuscript representation and codification. Included in our discussions will be writings by Johannes de Grocheio, Philippe de Vitry, Brunetto Latini and Deschamps, and consideration of a range of chansonniers, including the Chansonnier du roi, the Montpellier codex, and the Machaut manuscripts.

SM 720. (COML720, LALS720) Studies in Renaissance Music. (M) Staff.

Seminar on selected topics in the music of the Renaissance.

SM 730. Studies in Baroque Music. (M) Staff.

Seminar on selected topics in the music of the Baroque period.

SM 740. Studies in Classical Music. (M) Staff.

Seminar on selected topics in the music of the Classical period.

SM 750. (STSC418) Studies in Nineteenth-Century Music-French Opera Comique and Operetta 1860-1933. (M) Staff.

The late 18th and early 19th centuries saw the invention of many new instruments in both music and science. They were sometimes made by the same people, and they were often understood to have the same purpose: to attune individuals to the rhythms, proportions, and harmonies of nature. This seminar draws connections between music, science, politics, ethics and aesthetics between 1750 and 1850, a crucial point in European history. We will examine the role of instruments in conceptions of nature, society, and the individual, traversing the clockwork regularity of the enlightenment, the turbulent longings of Romanticism, and the spooky delirium of the fantastic. The course begins with light refracting through prisms; it ends with the blaring trombones of Berlioz's opium-induced *Symphonie Fantastique*; along the way we will visit ideas of mimesis, mechanical observation, theories of the passions, global science, demonic virtuosity, phantasmagoria, the uncanny, and the paradoxes of bourgeois selfhood. Students will work with actual instruments, read primary texts, and might meet a 21st century dandy. The class is open to creative undergraduates and graduates from any field who want to explore a range of ideas of what it means to be human in the modern world.

SM 760. (GRMN680) Studies in Twentieth-Century Music. (M) Staff.

Seminar on selected topics in the music of the twentieth century.

SM 770. (AFRC771, FOLK770, LALS770) Seminar in Afro-American Music. (M) Ramsey.

This course will consider the American musical landscape from the colonial period to the present with an emphasis, though not exclusive focus, on non-written traditions. The course is not a chronological journey, but rather a topical treatment of the various issues in the history of American music. Some of the specific, project-oriented activities of the course will consist of, but will not be limited to the following:

- (1) participating in the development of a traveling exhibition on the Apollo Theater for the Smithsonian Institution;
- (2) development of a permanent website for a history of jazz course at Penn;
- (3) reviewing two manuscripts for publication to a major press;
- (4) developing a working proposal for a history of African American music. In this context students will learn the basics of contemporary music criticism, including: identifying a work's significant musical gestures; positioning those gestures within a broader field of musical rhetoric, conventions, and social contracts; and theorizing the conventions with respect to large systems of cultural knowledge, such as historical, geographical contexts as well as the lived experiences of audiences, composers, performers, and dancers. Other topics covered: origin and development of American popular music and gendered and racial aspects of American classical music.

SM 780. Studies in Music Theory and Analysis. (M) Staff.

Seminar on selected topics in music theory and analysis.

Composition

508. Advanced Musicianship. (E)

Staff. Prerequisite(s): Reasonable keyboard and sight-reading facility.

Advanced techniques of score reading and general musicianship at the keyboard. Students already proficient in these areas may arrange for an examination whereby they may be excused from this course if it is a requirement of the program in which they are enrolled.

520. Orchestration. (M) Reise.

A study of the instruments of the orchestra and their combination. Frequent written projects.

SM 525. Composition in Selected Forms. (M) Staff.

Study of the style and form of one genre, composer, or historical period, with emphasis on written projects.

SM 530. Introduction to techniques of electronic composition. (M) Primosch.

Introduction to techniques of electronic composition.

SM 700. Seminar in Composition. (M) Staff.

Seminar in selected compositional problems, with emphasis on written projects.

UNIVERSITY COURSE REGISTER

Individual Study

698. Preparation of the A.M. Portfolio. (C)

Guidance in preparation of the A.M. portfolio in composition.

699. Preparation of the A.M. Essay in History and Theory. (C)

Guidance in preparation of the A.M. essay in the history and theory of music.

797. Preparation PhD Essay. (C)

798. Preparation for the A.M. Comprehensive Examination in Composition. (C)

Preparation for the A.M. Comprehensive Examination in Composition

799. Guided Reading in Musical Scholarship. (C)

Guidance in preparation for the A.M. comprehensive examination in the history and theory of music.

800. Teaching Music History. (M)
Staff.

The teaching of music history courses to undergraduates.

801. Teaching Music Theory. (M)
Staff.

The teaching of music theory courses to undergraduates.

802. Teaching World Musics. (M)
Muller, Rommen.

The teaching of world music courses to undergraduates.

988. Preparation Dissertation Composition. (M)

990. Masters Thesis. (C)

994. Preparation of Ph.D. Proposal. (C)

995. Dissertation. (C)

998. Independent Study in Composition. (C) May be taken for multiple course-unit credit.

Private instruction in musical composition.

999. Independent Study and Research. (C) May be taken for multiple course-unit credit.

Individual study and research under the supervision of a member of the faculty.

NAVAL SCIENCE (PV) {NSCI}

100. Naval Science Drill. (C)

Prerequisite(s): Prerequisite (Sophomores, Juniors, Seniors) Fall NSCI 101/Spring NSCI 102. Corequisite(s): Corequisite (Freshmen) Fall NSCI 101/Spring NSCI 102.

A professional laboratory covering various aspects of naval leadership and professional development. While emphasis is given to military marching, formation, and parade, the course also includes lectures from sources in and out of the Navy. Guest speakers cover topics such as leadership, Navy career paths, equal opportunity, rights and responsibilities, AIDS awareness, terrorism/counterterrorism, naval warfare doctrine, employment of naval forces, ethics and values, operations security, and safety.

101. Naval Orientation. (A)

A course designed to familiarize the student with the history, characteristics and present employment of sea power. Particular emphasis is placed upon our naval forces and their capability in achieving and maintaining our national objectives. Naval organization and operational functions are discussed in conjunction with sea power concepts. Additionally, the student is given an insight into the Naval Service, shipboard organization and safety, time management skills and study techniques.

102. Seapower and Maritime Affairs. (B)

Engineering and Nursing students receive credit.

A broad survey of naval history designed to add historical perspective to current defense problems. Topics covered include: naval power as an aspect of national defense policy, navies as an instrument of foreign policy, strategy selection, resource control, technology, and manning.

201. Leadership & Management. (A)

Staff. Only Engineering, Nursing, and Wharton students receive credit.

This course emphasizes principles of leadership, personnel and material management, and subordinate development in the context of the naval organization. Practical applications are explored through experiential exercises and case studies.

202. Navigation I. (B)

Only Engineering students receive credit.

A comprehensive study of the theory and practice of terrestrial, and electronic navigation and the laws of vessel operations. Topics include fundamentals of coastal and harbor piloting, electronic navigation and mean of navigating without reference to land. An in-depth study of the international and inland nautical Rules of the Road is also included. Case studies and practical exercises are used to reinforce the fundamentals of marine navigation.

301. Engineering. (A)

Only Engineering students receive credit.

This course provides an overview of how propulsion and electricity are provided to our Navy's fighting ships. The basic engineering principles relating to thermodynamics, steam propulsion (conventional and nuclear), gas turbine propulsion, internal combustion engines, electricity generation and distribution, and various support systems will be taught. Ship design, stability, damage control, and some engineering-related ethical issues will also be discussed.

302. Weapons. (B)

Only Engineering students receive credit.

This course provides an overview of the theory and concepts underlying modern weapons systems. The principles behind sensors and detection systems, tracking systems, computational systems, weapon delivery systems, and the fire control problem will be examined, with a consistent emphasis on the integration of these components into a "weapons system".

Case studies will be used to illustrate and reinforce concepts introduced in the course.

310. Evolution of Warfare. (H)

This course is designed to add broad historical perspective to understanding military power. Treating war and the military as an integral part of society, the course deals with such topics as: war as an instrument of foreign policy, military influences on foreign policy, the military as a reflection of society, manning and strategy selection.

401. Navigation II. (A)

Insight into modern naval operations is gained through analysis of relative motion pertaining to ships at sea, underway replenishment, shiphandling, and tactical communications. The process of command and control and leadership is examined through case studies of actual incidents at sea.

402. Leadership and Ethics. (B)

Only Wharton students receive credit.

The capstone course of the NROTC curriculum, this course is intended to provide the midshipman with the ethical foundation and basic leadership tools to be effective junior officers. Topics such as responsibility, accountability, ethics, the law of armed conflict, military law, division organization and training, and discipline are introduced through practical exercises, group discussion, and case studies.

410. Amphibious Warfare. (I)

A study of amphibious warfare as an element of a naval strategy. The course traces the development of and use of amphibious operations from the civil war to present. Topics covered include research and development of equipment, doctrinal development, conduct of operations, and contemporary applications in power projection.

NEAR EASTERN LANGUAGES AND CIVILIZATIONS (AS) {NELC}

GENERAL

L/R 085. (COLL004, EALC011) Life and Death in Ancient China and Ancient Egypt. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Steinhardt/Silverman/Wegner.

Using materials excavated in tombs, this course investigates funerary cults, death rituals, beliefs about the afterlife, and the preparations for death during life in China from 1500 BCE to AD 1000 and in Egypt from 3000-1000 BCE.

NEAR EASTERN NON- LANGUAGE COURSES IN LITERATURE, HISTORY AND CULTURE

030. (HIST147, RELS147) Islamic History to 1517. (C) Staff.

This course consists of an overview of the history of the major Islamic dynasties which ruled over the Middle East and North Africa from the beginning of the "Islamic empire" to 1517 A.D.

L/R 031. (HIST081) History of the Middle East Since 1800. (C) History & Tradition Sector. All classes. Kashani-Sabet.

A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity. Requirements: one paper and two take-home exams.

032. (HIST084) The Middle East in the 20th-Century. (C) Kashani-Sabet.

If "the clash of civilizations" is the first image that jumps to mind when thinking about the modern Middle East, then this is

the course for you. From the familiar narratives about the creation of modern nation-states to the oft-neglected accounts of cultural life, this course surveys the multi-faceted societies of the twentieth-century Middle East. Although inclusive of the military battles and conflicts that have affected the region, this course will move beyond the clichés of war and conflict in the Middle East to show the range of issues and ideas with which intellectuals and governments grappled throughout the century. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered in the course. By considering illustrative cultural moments that shed light on the political history of the period, this course will adopt a nuanced framework to approach the Arab/Israeli conflict, the history of the Gulf States, the Iran-Iraq War, and U.S. involvement in the region.

SM 037. People of Modern Egypt. (M) Sharkey. Freshman Seminar.

During the past hundred years, Egypt has been the cultural and political pacesetter in the Middle East. It has been on the cutting edge of developments in Arabic literature, movies, and music, and has produced intellectual leaders ranging from feminists to Muslim activists. In the 1950s and '60s, the Egyptian president Gamal Abdel Nasser inspired the pan-Arab movement and at the same time made his country a central player in postcolonial Africa. Meanwhile, Egypt led the Arab countries in opposing the state of Israel until breaking ranks in 1978 to sign peace accords at Camp David. In this class, we will approach the history of twentieth-century Egypt through the lives of a spectrum of its peoples, including Muslims, Christians, and Jews; presidents and peasants; singers, writers, and radical thinkers. Along the way we will examine the social pressures that have inspired modern Egyptian revolutionaries and militants, and attempt to explain the reasons for the country's continuing prominence in the Arab and Muslim worlds.

SM 038. (AFST038) Narrative Journeys: Africa and Asia. (A) Allen.

Have you ever read the Tales of Sindbad and his travels? Do you like narratives about journeys, both ancient and contemporary? The purpose of this seminar is to introduce freshmen to a variety of narratives in different literary genres; to do so through the theme of the journey, whether it be a physical journey from one place to another, a process of change--a rite of passage perhaps, or an

inward psychological quest. Female and male authors are presented, as are different periods in the long history of the Middle East and Africa. All the texts to be read are in English translation.

046. (RELS014) Myths and Religions of the Ancient World. (B) History & Tradition Sector. All classes. Frame.

This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.

SM 047. Magical Science: Sages, Scholars and Knowledge in Babylon and Assyria. (M) Tinney. Freshman Seminar.

From sympathetic rituals to cure sexual dysfunction to the sages' esoteric creation of worlds through the manipulation of words, we will learn from the ancient writings of Assyria and Babylonia just what knowledge was, what it was good for, and how it was divided up. This interdisciplinary course will combine literary, anthropological, historical and cultural approaches to textual, archaeological and iconographic data to bring to life the world, words and beliefs of these ancient intellectuals.

048. Introduction to Mesopotamian Civilization. (M) History & Tradition Sector. All classes. Tinney.

This class provides a chronologically organized survey of ancient Mesopotamian culture and history from the dawn of urbanization to the advent of the Greeks. Material culture and primary texts in translation are discussed in their contexts, introducing alongside the history such topics as urbanization and state formation; the invention of writing and the development of education; the king and his scholars in the Assyrian empire; the epic of

Gilgamesh and other major works of Sumerian and Akkadian literature. One class will be held at the Penn Museum and will include hands-on experience of cuneiform school texts.

SM 049. Myths of Ancient Mesopotamia. (M) Tinney. Sometimes offered as a Freshman Seminar.

Iraq's ancient civilizations, Sumer, Babylon and Assyria, have emerged spectacularly from their ruin mounds over the last century and a half. In this class we will read the core myths of these cultures in translation and situate them in their literary, historical, religious and cultural contexts. The case of characters includes, among other, Enki, trickster and god of wisdom; Inana, goddess of sex and war; and Marduk, warrior son, slayer of the sea, king of the gods and founder of Babylon. Themes range from creation to flood, from combat to the dangers of humans acting in the worlds of the divine, to the heroic peregrinations of Gilgamesh as he wrestles with monsters, fate and the pain of mortality.

051. (HIST139, JWST156, NELC451, RELS120) History of Jewish Civilization I--Jews and Judaism in Antiquity: From the Bible to the Talmud. (A) History & Tradition Sector. All classes. Dohrmann.

A broad introduction to the history of Jewish civilization from its Biblical beginnings until the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam. Fulfills History & Tradition Sector (all classes) and Cross Cultural Analysis - Class of '10 and after.

052. (HIST140, JWST157, NELC452, RELS121) History of Jewish Civilization II: The Middle Ages. (A) History & Tradition Sector. All classes. Ruderman.

Exploration of intellectual, social, and cultural developments in Jewish civilization from the dawn of rabbinic culture in the Near East through the assault on established conceptions of faith and religious authority in 17th century Europe. Particular attention will be paid to the impact of Christian and Muslim "host societies" on expressions of Jewish culture.

L/R 053. (HIST141, JWST158, NELC453, RELS122) The History of Jewish Civilization from the Late Seventeenth Century to the Present. (B) History & Tradition Sector. All classes. Ruderman.

This course offers an intensive survey of the major currents in Jewish life from the process by which the Jews gradually ceased to be a society unto themselves to the transformations of the modern era, from the Enlightenment and the rise of a bourgeois and revolutionary socialism. Within the evolving forms of Jewish religious experience as emancipation, Jewish-gentile relations, the emergence of distinct Jewish communities, the denigration of political sovereignty in modern Israel. Weekly readings include primary sources such as memoirs, petitions, folklore, and works of literature.

061. (NELC463) Literary Legacy of Ancient Egypt. (M) Houser Wegner.

This course surveys the literature of Ancient Egypt from the Old Kingdom through the Graeco-Roman period, focusing upon theme, structure, and style, as well as historical and social context. A wide range of literary genres are treated, including epics; tales, such as the "world's oldest fairy tale;" poetry, including love poems, songs, and hymns; religious texts, including the "Cannibal Hymn"; magical spells; biographies; didactic literature; drama; royal and other monumental inscriptions; and letters, including personal letters, model letters, and letters to the dead. Issues such as literacy, oral tradition, and the question of poetry vs. prose are also discussed. No prior knowledge of Egyptian is required.

062. (AFST062) Land of the Pharaohs. (C) History & Tradition Sector. All classes. Wegner.

This course provides an introduction to the society, culture and history of ancient Egypt. The objective of the course is to provide an understanding of the characteristics of the civilization of ancient Egypt and how that ancient society succeeded as one of the most successful and long-lived civilizations in world history.

064. (NELC664) The World of Cleopatra. (M) Houser Wegner.

The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra

lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt's Ptolemaic period which culminated in the reign of Cleopatra VII.

SM 066. Lords of the Nile: Rulership and Government in Ancient Egypt. (M) Wegner. Freshman Seminar.

In this course we will examine the ways in which one of the world's most ancient and longest lasting civilizations was governed. Egypt is renowned for the ubiquitous images of its Pharaohs: divine kings who ruled Egypt under the divine sanction of the gods. The king was only the top of a vast pyramid of powerful officials which included viziers, treasurers, military leaders, local governors, town mayors and scribes. The course aims to investigate the ways in which the rulership of Egypt worked: from the highest levels of royal power down to the running of towns and villages.

In the first part of the course we will explore the nature of the Pharaoh and his role as the supreme political and religious leader in the country. We will continue by looking at the activities of the royal family and central government working our way into an examination of how Egypt's provinces were run by local noble families (the "nomarchs"-who could often become as powerful as the king himself). At a lower level, but perhaps more important in the daily lives of most ancient Egyptians, we will look at the administration of cities, towns and villages by local headmen and mayors. Other topics we will delve into will include the role of the temples; crime and punishment; the military; the lifestyles of Egypt's rich and powerful, as well as the ways in which Egypt's rulers could be rapidly altered through revolution, coups and assassinations. Our ultimate goal will be an appreciation of both the successes and failures of the lords of the Nile in ruling their country over the remarkable time span of 3000 years.

068. (NELC668) Art and Architecture in Ancient Egypt. (M) Silverman.

This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated

lectures and will include visits to the collection of the University Museum.

L/R 101. (ANCH025, HIST024) Introduction to the Ancient Near East. (A) History & Tradition Sector. All classes. Frame.

The great pyramids and mysterious mummies of Egypt, the fabled Tower of Babel, and the laws of the Babylonian king Hammurabi are some of the things that might come to mind when you think of the ancient Near East. Yet these are only a very few of the many fascinating -- and at time perplexing -- aspects of the civilizations that flourished there c. 3300-300 BCE. This is where writing first developed, where people thought that the gods wrote down what would happen in the future on the lungs and livers of sacrificed sheep, and where people knew how to determine the length of hypotenuse a thousand years before the Greek Pythagoras was born. During this course, we will learn more about these other matters and discover their place in the cultures and civilizations of that area.

This is an interdisciplinary survey of the history, society and culture of the ancient Near East, in particular Egypt and Mesopotamia, utilizing extensive readings from ancient texts in translation (including the Epic of Gilgamesh, "one of the great masterpieces of world literature"), but also making use of archaeological and art historical materials. The goal of the course is to gain an appreciation of the various societies of the time, to understand some of their great achievements, to become acquainted with some of the fascinating individuals of the time (such as Hatshepsut, "the women pharaoh," and Akhenaten, "the heretic king"), and to appreciate the rich heritage that they have left us.

102. Introduction to the Middle East. (B) History & Tradition Sector. All classes. Cobb, Sharkey.

This is the second half of the Near East sequence. This course surveys Islamic civilization from circa 600 (the rise of Islam) to the start of the modern era and concentrates on political, social, and cultural trends. Although the emphasis will be on Middle Eastern societies, we will occasionally consider developments in other parts of the world, such as sub-Saharan Africa, Central Asia, and Spain, where Islamic civilization was or has been influential. Our goal is to understand the shared features that have distinguished Islamic civilization as well as the varieties of experience that have endowed it with so much diversity.

103. (ANTH121, URBS121) Origin and Culture of Cities. (A) History & Tradition Sector. All classes. Zettler.

The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.

104. Jerusalem through Ages. (M) Zimmerle. Offered through the College of General Studies.

A study of Jerusalem, the sacred city for three different world religions, is fundamental to a rich understanding of the history and religions of the Middle East. Beginning in antiquity and continuing through the medieval and modern periods, this course will chronicle the rise, fall and reconstruction of Jerusalem many times over. Particular emphasis will be placed on the archaeology and architecture of the city, the phenomenology of sacred space, the meanings of Jerusalem in art, and the religious history of the city. We will investigate the meanings Jerusalem has had in the past and will also consider current questions about its future.

115. (COML114, NELC515, RELS144, RELS544) Persian Mystical Thought: Rumi. (M) Minuchehr.

This course examines the works and ideas of the thirteenth century sufi and founder of the Mevlevi order, Mowlana Jalaluddin Rumi. Although Rumi composed his mystical poetry in Persian, numerous translations in a multitude of languages have made this poet an international personality. In this course, we will examine Rumi's original mystical vocabulary and allegorical style in English translations. We will also look at Rumi's reception in different parts of the world, especially in America, where he has been on the best-seller lists for a decade.

118. (CINE118, COML118, GSOC118, GSOC418, NELC618) Iranian Cinema: Gender, Politics and Religion. (C) Minuchehr.

This seminar explores Iranian culture, art, history and politics through film in the

contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rakhshan Bani-Etemad, Tahmineh Milani, Jafar Panahi, Bahman Ghobadi, among others.

SM 119. (CINE119, COML119) Middle Eastern Cinema: Law and Society. (M) Minuchehr.

In the past two decades, films from the Middle East have gained exceptional international reception. This course is designed to explore the reasons behind this reception through a study of the prevalent social, political, and historical themes and issues in Middle Eastern cinema. Questions such as women's laws, literature and its function, familial issues and gender roles, historical legacies and political tensions, and religion, will be discussed. This course assumes no previous knowledge of film studies or languages of the region. Films from Israel, the Arab World, Turkey, and Iran will be shown in subtitled versions.

130. (RELS140) Introduction to the Qur'an. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Lowry.

The goal of this course is to provide students with a general introduction to the holy scripture of the religion of Islam, the Qur'an. In particular, students will become familiar with various aspects of Qur'anic content and style, the significance of the Qur'an in Islamic tradition and religious practice, scholarly debates about the history of its text, and contemporary interpretations of it. Through close readings of a wide range of passages and short research assignments, students will gain first-hand knowledge of the Qur'an's treatment of prophecy, law, the Biblical tradition, and many other topics. No previous background in Islamic studies or Arabic language is required for this course.

SM 132. Origins of Islamic Political Thought. (C) Lowry.

This seminar will introduce students to the early and medieval tradition of Islamic political thought. The course will begin by examining notions of power in the Qur'an, and then turn to the career of the Prophet Muhammad. Much of the course will then be devoted to a consideration of the

formation of the institution of the caliphate and of resistance of various kinds to caliphal legitimacy and authority. Medieval responses to the caliphate and its waning will also be considered, as well as the distinctive contribution of Iranian ideas and the Iranian heritage to Islamic political thought. The course will conclude with a brief consideration of some contemporary appropriations of the tradition. (This course will not cover the important, but arguably discrete topic of the reception of Greek political thought in the Islamic intellectual tradition.) The majority of the readings consist of translations of primary Arabic and Persian sources. Due consideration will be given to the literary character of these sources, as well as to the question of the limits of the qualifiers "Islamic" and "Muslim" in regard to the political ideas that emerge from the readings.

134. Getting Crusaded. (H) History & Tradition Sector. All classes. Cobb.

What did it feel like to get crusaded? In this course, we will examine the roughly two-century period from the call of the First Crusade in 1095 to the final expulsion of Latin Crusaders from the Middle East in 1291. Our examination will be primarily from the perspective of the invaded, rather than the invaders, as is usually done. How did the Muslims, Jews, and Eastern Christians of the medieval Middle East respond to the presence of Frankish invaders from Europe?

136. (RELS143, SAST139) Introduction to Islam. (A) Elias.

This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

139. (HIST189) Modern Egypt. (C) Troutt-Powell.

This course will seek to explore how Egyptian culture has dealt with its many pasts by investigating early modern and

modern Egyptian history. With an emphasis on the 18th century to the present we will explore the culture of Egypt under the Ottoman Empire, slavery in Egypt, the unsuccessful French attempt to colonize Egypt and the successful British occupation of the country.

SM 145. Ancient Iraq: Mesopotamian Culture and Its Legacy. (M) Frame. Sometimes offered as a Benjamin Franklin Seminar.

A study of Mesopotamian civilization, its cultural impact on the ancient Near East and the Bible, and the legacy it bequeathed to Western civilization. Topics will include Mesopotamian religion, law, literature, historiography, and socio-political institutions.

150. (JWST150, NELC450, RELS125) Introduction to the Bible (The "Old Testament"). (A) Humanities & Social Science Sector. Class of 2010 & beyond. Tigay.

An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.

SM 152. (JWST152, RELS127) Jewish Law & Ethics. (A) Staff. Freshman Seminar.

An introduction to the literary and legal sources of Jewish law within an historical framework. Emphasis will be placed upon the development and dynamics of Jewish jurisprudence, and the relationship between Jewish law and social ethics.

154. (GRMN262, GSOC162) Women in Jewish Literature. (M) Arts & Letters Sector. All Classes. Hellerstein.

This course introduces students of literature, women's studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres--devotional literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relation of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are

portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English.

155. (ANTH124, JWST124, RELS024) Archaeology and the Bible. (M) Staff.

The Hebrew Bible (Tanakh) and archaeological research provide distinct, and at times conflicting, accounts of the origins and development of ancient Israel and its neighbors. Religion, culture and politics ensure that such accounts of the past have significant implications for the world we live in today. In this course we will discuss the latest archaeological research from Israel, the Palestinian Territories and Jordan as it relates to the Bible, moving from Creation to the Babylonian Exile. Students will critically engage the best of both biblical and archaeological scholarship, while being exposed to the interpretive traditions of Anthropology as an alternative approach to the available evidence. Open discussions of the religious, social and political implications of the material covered will be an important aspect of the course.

SM 156. (COML057, JWST151, NELC456, RELS027) Great Books of Judaism. (A) Stern.

The study of four paradigmatic and classic Jewish texts so as to introduce students to the literature of classic Judaism. Each text will be studied historically -- "excavated" for its sources and roots -- and historically, as a canonical document in Jewish tradition. While each text will inevitably raise its own set of issues, we will deal throughout the semester with two basic questions: What makes a "Jewish" text? And how do these texts represent different aspects of Jewish identity? All readings will be in translation.

SM 158. (COML257, JWST153, NELC458, RELS223) Jewish Literature in the Middle Ages. (C) Stern.

An introduction to medieval Hebrew literature, with special attention to poetry, narrative, and the interpretation of the Bible, and to the varieties of Jewish

experience that these literary works touch upon. All readings in translation.

159. (CINE159, COML282, ENGL279, JWST102, JWST154) Modern Hebrew Literature and Culture in Translation: The City in Israeli Literature and Film. (C) Arts & Letters Sector. All Classes. Gold. There will be five film screenings; the films will also be placed on reserve at the library for those students unable to attend the screenings. The content of this course changes from year to year, and therefore, students may take it for credit more than once.

This course focuses on the artistic ways in which the Israeli city, be it Jerusalem, Haifa or Tiberias, is represented in Israeli literature and film. The emotional and physical connection between the writer and his/her place of dwelling is transformed in the literary or cinematic work. The artistic depiction of the city reflects the inner world as well as ideological and political conflicts and highlights questions of belonging. The "city" may become a locus for national expression, of gender identification, or even of pure aesthetic enchantment. We will analyze how, through her portrayals of the Carmel Mountain and the pure aesthetic enchantment. We will analyze how, through her portrayals of the Carmel Mountain and the Haifa Bay, Yehudit Katzir expresses the complex bond with her mother; how Tel Aviv's streets enable Dahlia Ravikovitch examine questions of loyalty; how the "Jerusalems" of A.B. Yehoshua and Yehuda Amichai reflect their loves and hatreds and how the film director Shemi Zarhin sings a love song to the Sea of Galilee through shooting his film in his native Tiberias.

166. (NELC468, RELS114) The Religion of Ancient Egypt. (M) Silverman/Wegner.

Weekly lectures (some of which will be illustrated) and a field trip to the University Museum's Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic religious art and architecture, and the religion of daily life.

168. (AFST168, GSOC168) Women in Ancient Egypt. (M) Houser Wegner.

This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas,

Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.

180. (COML125, ENGL103, FOLK125) Narrative Across Cultures. (C) Arts & Letters Sector. All Classes. Allen.

The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at some shorter types of narrative: short story, the novella, and the fable, but also some extracts from longer works such as autobiography. While some of the works will be from the Anglo-American tradition, a large number of others will be from European and non-Western cultural traditions and from earlier time periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.

182. (ANTH139, URBS139) Ancient Civilizations of the World. (M) History & Tradition Sector. All classes. Zettler.

The archaeology of the complex societies of the Old and New Worlds from the end of the paleolithic up to and including the earliest civilizations.

201. (COML212) Modern Middle Eastern Literature in Translation. (B) Arts & Letters Sector. All Classes. Allen/Gold.

This course is team-taught by four professors with specialties in Arabic, Hebrew, Persian and Turkish literatures. The course deals with the modern literature within each tradition and focuses on poetry, short story and the novel. The readings are all in English. The course is conducted in a seminar format. Students are expected to participate in classroom discussion of the materials assigned for each session, and evaluation is partially based on the quality of that participation. A short paper is assigned on the poetry and the short stories, and there is a final, longer term paper.

233. (COML215) Arabic Literary Heritage. (A) Allen.

This course provides a survey of the genres and major figures in Arabic literary history from the 6th century up to the present day. Selections will be read in translation after a general introduction to the cultural background and a session devoted to the

Qur'an and its influence, a sequence of sessions will be devoted to poetry, narratives, drama, and criticism. Each set of texts is accompanied by a collection of background readings which place the authors and works into a literary, political and societal context. This course thus attempts to place the phenomenon of "literature" into the larger context of Islamic studies by illustrating the links between Arab litterateurs and other contributors to the development of an Islamic/Arab culture on the one hand and by establishing connections between the Arabic literary tradition and that of other (and particularly Western) traditions.

234. The Mongol Experience. (M) Cobb.

Was Genghis Khan really such a bad guy after all? Were the Mongol Invasions of the 13th century really a disaster? It almost seems immoral to ask questions like this, but in this class we'll go ahead and ask them anyway. This course is a survey of the history of the medieval Mongol Empire, which, at its greatest extent, stretched from Korea to Germany. We will focus more specifically on that smaller Middle Eastern piece of the empire known as the Il-Khanate, which merely stretched from Turkey to Afghanistan, and made Iran a locus for synthesizing the cultures of Iran, the Arab world, Central Asia, and China. It also produced a lasting political, economic, and cultural legacy throughout much of the Middle East and beyond.

236. (RELS246) Islamic Mysticism. (A) Staff.

Typical forms of mystical experience in Islam. The cultural assimilation of ideas achieved by Muslim mystics. The development of Sufism and the formation of the sufi orders. Medieval trends of Sufi speculation and esoteric doctrine. Emphasis on primary readings.

238. (RELS248) Introduction to Islamic Law. (A) Lowry.

This course will introduce students to classical Islamic law, the all-embracing sacred law of Islam. Among the world's various legal systems, Islamic law may be the most widely misunderstood and even misrepresented; certainly, misconceptions about it abound. Islamic law is, however, the amazing product of a rich, fascinating and diverse cultural and intellectual tradition. Most of the readings in this course will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Quran, gender and sexuality, the modern

application of Islamic law, Islamic government and other selected topics.

241. (ANTH236, ANTH636, NELC641, URBS236) Iraq: Ancient Cities and Empires. (M) Zettler.

This course surveys the cultural traditions of ancient Mesopotamia, the land between the Tigris and Euphrates Rivers, a region commonly dubbed "cradle of civilization" or "heartland of cities," from an archaeological perspective. It will investigate the emergence of sedentism and agriculture; early villages and increasingly complex Neolithic and Chalcolithic cultures; the evolution of urban, literate societies in the late 4th millennium; the city-states and incipient supra-regional polities of the third and second millennium; the gradual emergence of the Assyrian and Babylonian "world empires," well-known from historical books of the Bible, in the first millennium; and the cultural mix of Mesopotamia under the successive domination of Greeks, Persians and Arabs. The course seeks to foster an appreciation of the rich cultural heritage of ancient Mesopotamia, an understanding of cultural continuities in the Middle East and a sense of the ancient Near Eastern underpinnings of western civilization. No Prerequisite.

SM 250. (COML380, JWST255, NELC550, RELS224) The Bible in Translation. (C) Tigay.

Careful study of a book of the Hebrew Bible (the Old Testament) as a literary and religious work in the light of modern scholarship, ancient Near Eastern documents, comparative literature and religion, and its reverberations in later Judaism, Christianity, and Western (particularly American) Civilization. May be repeated for credit. Benjamin Franklin Seminar. Fulfills Distribution CRS Arts & Letters-class of '09 and prior and Cross Cultural Analysis - Class of '10 and after.

SM 251. (JWST225, NELC651, RELS225) Dead Sea Scrolls. (M) Staff.

Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to the known Jewish groups at that time (the beginning of the Common Era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocrypha" and

"pseudepigrapha," biblical texts and interpretations.

SM 252. (JWST100, NELC552, RELS129) Themes in Jewish Tradition. (C) History & Tradition Sector. All classes. Ben-Amos, Stern, Dohrmann.

Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, and Concepts of Jewishness from Biblical Israel to the Modern State (Stern); Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann).

254. (COML259, FOLK296, JWST102) Jewish Humor. (M) Arts & Letters Sector. All Classes. Ben-Amos.

In modern American popular culture Jewish humor is considered by Jews and non-Jews as a recognizable and distinct form of humor. Focusing upon folk-humor, in this course we will examine the history of this perception, and study different manifestation of Jewish humor as a particular case study of ethnic in general. Specific topics for analysis will be: humor in the Hebrew Bible, Jewish humor in Europe and in America, JAP and JAM jokes, Jewish tricksters and pranksters, Jewish humor in the Holocaust and Jewish humor in Israel. The term paper will be collecting project of Jewish jokes.

255. (ANTH235, JWST251, NELC555, RELS215) Archaeology and Society in the Holy Land--4,500 BCE - 500 BCE. (M) Staff.

This course will survey the archaeological history of the southern Levant (Israel, West Bank and Gaza, Jordan, southern Lebanon and Syria) from the early complex societies of the Chalcolithic through the demise of the biblical states of the Iron Age. It will focus in particular on the changing organization of society through time, using excavated evidence from burials, houses, temples and palaces to track changes in heterogeneity, hierarchy and identity. In following the general themes of this course, students will have opportunity to familiarize themselves with the geographic features, major sites and important historical events of the southern Levant. Class materials will be presented in illustrated lectures and supplemented by the study of artifacts in the University Museum's collections. Anyone interested in a better understanding of the land that has given us both the "Old Testament"/TaNaK and so much of our daily news, should find much of interest in this course.

258. (COML283, FOLK280, JWST260, RELS221) Jewish Folklore. (A) Ben-Amos.

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish Folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.

266. (NELC666) History of Ancient Egypt. (A) Wegner.

Review and discussion of the principal aspects of ancient Egyptian history, 3000-500 BC.

281. (ANTH100, ANTH654, NELC681, SAST161) Topics In Anthropology and the Modern World. (B) Spooner.

This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.

SM 283. (JWST123, RELS123) Introduction to Classical Judaism. (M) Fishman.

Focusing on the festivals of the Jewish calendar and on Jewish life-cycle events, this course examines primary sources from various periods and places that illuminate changes in Jewish practice, in Jewish understandings of ritual, and in ritual's place in Jewish life.

SM 285. (JWST258, RELS228) Jews Under Medieval Islam. (M) May be counted as a General Requirement Course in Arts & Letters. Class of 2009 & prior only. Goldstein.

This seminar will examine what Jews living in Muslim lands wrote during medieval times, focusing on a range of primary sources including poetry, Bible commentary, historiography and polemics. Through these sources we will develop an understanding of the place of this community in Jewish history as well as within the medieval empire of Islam.

SM 331. (AFST331, AFST531, NELC531) Iraq, Egypt, Algeria: Case Studies from the Arab World. (M)

Sharkey. Prerequisite(s): A university-level survey class in Middle Eastern and North African history.

This reading- and discussion-intensive seminar will use historical and political analyses, ethnographic studies, novels, and films to consider and compare the experiences of Iraq, Egypt, and Algeria in the modern period. Themes to be covered include the nature of local Arab and Arabic cultures; the impact and legacies of Ottoman and Western imperialism; the development of Islamist, nationalist, and feminist movements; the status of non-Arab or non-Muslim minorities (notably the Iraqi Kurds, Egyptian Copts, and Algerian Berbers); and patterns of social and economic change. The class will culminate in research projects that students individually design and pursue. This class is intended for juniors, seniors, and graduate students.

SM 332. (AFST332, AFST533, NELC632) North Africa: History, Culture, Society. (M)

Sharkey. Prerequisite(s): A university-level survey course in Middle Eastern, African, or Mediterranean history.

This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.

SM 334. (AFST373, HIST371) Africa and the Middle East. (C)

Troutt Powell.

SM 335. (HIST630, JWST335, NELC535, RELS311) Muslim, Christian, and Jewish Relations in the Middle East and North Africa: Historical Perspectives. (C)

Sharkey. This class is a reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been

characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and

Middle Eastern history is required.

SM 336. (NELC536) Nationalism and Communal Identity in the Middle East. (A)

Sharkey. Prerequisite(s): NELC 102 (AMES 036) or other relevant introductory courses on the Middle East.

This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are "imagined communities" built on "invented traditions." At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context. Students must take a survey of modern Middle Eastern history or politics before enrolling in this class.

SM 342. (NELC642) Introduction to Mesopotamian Literature. (C)

Tinney. An introduction to the literature of Ancient Mesopotamia.

351. (NELC551) History and Civilization of Ancient Israel. (M)

Staff. This course is a study of ancient Israel from its pre-nation origins through the early Second Temple period. Topics include: methodological issues for the reconstruction of Israelite history; pre-

Israelite Canaan - a bridge between empires; the patriarchal and Exodus traditions; Israelite settlement of Canaan; the rise of the monarchy; the Davidic dynasty; the states of Israel and Judah in the context of the greater ancient Near East; the fall of the Israelite states - the Assyrian and Babylonian exiles - and the return from exile in the Persian period. Special issues include: the development of monotheism; the role of the prophet in Israelite society; and the formation of Biblical corpus. Archaeological evidence from the land of Israel and other Near Eastern States, especially written material, will be utilized to supplement the Biblical sources.

SM 356. (COML556, JWST356, JWST555, NELC556, RELS418) Ancient Interpretation of the Bible. (M)

Stern. Christianity and Judaism are often called "Biblical religions" because they are believed to be founded upon the Bible. But the truth of the matter is that it was less the Bible itself than the particular ways in which the Bible was read and interpreted by Christians and Jews that shaped the development of these two religions and that also marked the difference between them. So, too, ancient Biblical interpretation -- Jewish and Christian-- laid the groundwork for and developed virtually all the techniques and methods that have dominated literary criticism and hermeneutics (the science of interpretation) since then.

The purpose of this course is to study some of the more important ways in which the Bible was read and interpreted by Jews and Christians before the modern period, and particularly in the first six centuries in the common era. We will make a concerted effort to view these interpretive approaches not only historically but also through the lens of contemporary critical and hermeneutical theory in order to examine their contemporary relevance to literary interpretation and the use that some modern literary theorists (e.g. Bloom, Kermode, Derrida, Todorov) have made of these ancient exegetes and their methods. All readings are in English translation, and will include selections from Philo of Alexandria, the Dead Sea Scrolls, Rabbinic midrash, the New Testament and early Church Fathers, Gnostic writings, Origen, and Augustine. No previous familiarity with Biblical scholarship is required although some familiarity with the Bible itself would be helpful.

382. (HIST302) Islam and the West. (C)

Haq.

422. (ARTH422) Art of the Ancient Near East. (C) Pittman.

Emphasis on monumental art work of the Ancient Near East as the product of cultural and historical factors. Major focus will be on Mesopotamia from the late Neolithic to the Neo-Assyrian period, with occasional attention to related surrounding areas such as Western Iran, Anatolia, and Syria.

434. (COML353, COML505) Arabic Literature and Literary Theory. (A) Allen.

This course takes a number of different areas of Literary Theory and, on the basis of research completed and in progress in both Arabic and Western languages, applies some of the ideas to texts from the Arabic literary tradition. Among these areas are: Evaluation and Interpretation, Structuralism, Metrics, Genre Theory, Narratology, and Orality.

SM 437. Islamic Intellectual Tradition. (M) Lowry.

This comprehensive survey of the traditions of rational thought in classical Islamic culture is distinguished by its attempt to contextualize and localize the history of what is best described as philosophy in Islam, including not only the Islamic products of the Hellenistic mode of thought but also religious and linguistic sciences whose methodology is philosophical. Reading history as a set of local contingencies, the course examines the influence of these different disciplines upon each other, and the process of the Islamic "aspecting" of the Greek intellectual legacy. The readings thus include not only the works of Hellenized philosophers (falasifa) of Islam, but also those of theologians (mutakallimun), legists (fiqh scholars), and grammarians (nahw/lugha scholars). No prerequisites. Additional advanced-level assignments can be given for graduate credit.

450. (NELC150) Introduction to the Bible (The "Old Testament"). (A) Tigay.

An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.

451. (HIST139, JWST156, NELC051, RELS120) History of Jewish Civilization I--Jews and Judaism in Antiquity: From the Bible to the Talmud. (A) Staff.

A broad introduction to the history of Jewish civilization from its Biblical beginnings until the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam. Fulfills History & Tradition Sector (all classes) and Cross Cultural Analysis - Class of '10 and after.

452. (HIST140, JWST157, NELC052, RELS121) History of Jewish Civilization II: The Middle Ages. (A) Ruderman.

Exploration of intellectual, social, and cultural developments in Jewish civilization from the dawn of rabbinic culture in the Near East through the assault on established conceptions of faith and religious authority in 17th century Europe. Particular attention will be paid to the impact of Christian and Muslim "host societies" on expressions of Jewish culture.

L/R 453. (HIST141, JWST158, NELC053, RELS122) The History of Jewish Civilization from the Late Seventeenth Century to the Present. (B) Ruderman.

This course offers an intensive survey of the major currents in Jewish life from the process by which the Jews gradually ceased to be a society unto themselves to the transformations of the modern era, from the Enlightenment and the rise of a bourgeois revolutionary socialism. Within the evolving forms of Jewish religious experience as emancipation, Jewish-gentile relations, the emergence of distinct Jewish communities, and the reestablishment of political sovereignty in modern Israel. Weekly readings include primary sources such as memoirs, petitions, folklore, and works of literature.

SM 454. (JWST320, JWST520, RELS321, RELS520) Spirit and Law. (M) Fishman.

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their

intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

SM 456. (NELC156) Great Books of Judaism. (A) Stern.

The study of four paradigmatic and classic Jewish texts so as to introduce students to the literature of classic Judaism. Each text will be studied historically -- "excavated" for its sources and roots -- and holistically, as a canonical document in Jewish tradition. While each text will inevitably raise its own set of issues, we will deal throughout the semester with two basic questions: What makes a "Jewish" text? And how do these texts represent different aspects of Jewish identity? All readings will be in translation.

SM 458. (COML257, JWST153, NELC158, RELS223) Jewish Literature in the Middle Ages. (C) Stern.

An introduction to medieval Hebrew literature, with special attention to poetry, narrative, and the interpretation of the Bible, and to the varieties of Jewish experience that these literary works touch upon. All readings in translation.

463. (NELC061) Literary Legacy of Ancient Egypt. (M) Silverman.

This course surveys the literature of Ancient Egypt from the Old Kingdom through the Graeco-Roman period, focusing upon theme, structure, and style, as well as historical and social context. A wide range of literary genres are treated, including epics; tales, such as the "world's oldest fairy tale;" poetry, including love poems, songs, and hymns; religious texts, including the "Cannibal Hymn"; magical spells; biographies; didactic literature; drama; royal and other monumental inscriptions; and letters, including personal letters, model letters, and letters to the dead. Issues such as literacy, oral tradition, and the question poetry vs. prose are also discussed. No prior knowledge of Egyptian is required.

465. Egyptian Artifacts. (C) Wegner.

Detailed typological and chronological discussion of principal kinds of ancient Egyptian artifacts.

SM 466. Archaeology and History of the Middle Kingdom. (M) Wegner.

467. (AFST467) History of Egypt - New Kingdom. (M) Wegner.

Covers principal aspects of ancient Egyptian culture (environment, urbanism, religion, technology, etc.) with special focus on archaeological data; includes study of University Museum artifacts. Follows AMES 266/466 - History of Egypt taught in the Fall semester.

468. (NELC166, RELS114) The Religion of Ancient Egypt. (M)

Silverman/Wegner.

Weekly lectures (some of which will be illustrated) and a field trip to the University Museum's Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic

469. (AFST469) The Archaeology of Nubia. (M) Wegner.

The course will examine the archaeology of Ancient Nubia from Pre-history through the Bronze and Iron Ages, ca. 5000 BCE to 300 AD. The course will focus on the various Nubian cultures of the Middle Nile, and social and cultural development, along with a detailed examination of the major archaeological sites and central issues of Nubian archaeology.

SM 489. (JWST419, RELS419) Jewish-Christian Relations Through the Ages. (M) Fishman.

This is a Bi-directional course which explores attitudes toward, and perceptions of, the religious "Other", in different periods of history. Themes include legislation regulating interactions with the Other, polemics, popular beliefs about the Other, divergent approaches to scriptural

515. (NELC115, RELS544) Persian Mystical Thought: Rumi. (M)

Minuchehr.

SM 531. (AFST331, AFST531, NELC331) Iraq, Egypt, Algeria: Case Studies from the Arab World. (M) Sharkey.

This reading- and discussion-intensive seminar will use historical and political analyses, ethnographic studies, novels, and films to consider and compare the experiences of Iraq, Egypt, and Algeria in the modern period. Themes to be covered include the nature of local Arab and Arabic cultures; the impact and legacies of Ottoman and Western imperialism; the development of Islamist, nationalist, and feminist movements; the status of non-Arab or non-Muslim minorities (notably the Iraqi Kurds, Egyptian Copts, and Algerian

Berbers); and patterns of social and economic change. The class will culminate in research projects that students individually design and pursue. This class is intended for juniors, seniors, and graduate students. required.

SM 534. (RELS545) Topics in Islamic Religion. (M) Staff.

Selected topics, such as Sufi texts or The Qur'an, in the study of Islamic religion.

SM 535. (HIST630, NELC335, RELS311) Muslim, Christian, and Jewish Relations in the Middle East and North Africa: Historical Perspectives. (M) Sharkey.

This class is a reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies useful.

SM 536. (NELC336) Nationalism and Communal Identity in the Middle East. (A) Sharkey. Prerequisite(s): NELC 101 or other relevant introductory courses on the Middle East.

This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are "imagined communities" built on "invented traditions." At the same

time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context.

537. Introduction to Islamic Intellectual History: Hellenism, Arabism, and Islamism. (C) Staff.

A comprehensive survey of the traditions of rational thought in classical Islamic culture. The course is distinguished by its attempt to contextualize and localize the history of what is best described as philosophy in Islam, including not only the Islamic products of the Hellenistic mode of thought but also religious and linguistic sciences whose methodology is philosophical. Reading history as a set of local contingencies, the course examines the influence of these different disciplines upon each other, and the process of the Islamic "aspecting" of the Greek intellectual legacy. The readings thus include not only the works of Hellenized philosophers (falasifa) of Islam, but also those of theologians (mutakallimun), legists (fiqh-writers), and grammarians (nahw/lughawriters). No prerequisites. Additional advanced-level assignments can be given for graduate credit.

SM 550. (COML380, JWST255, NELC250, RELS224) The Bible in Translation. (C) Tigay. May be repeated for credit.

Careful study of a book of the Hebrew Bible (the Old Testament) as a literary and religious work in the light of modern scholarship, ancient Near Eastern documents, comparative literature and religion, and its reverberations in later Judaism, Christianity, and Western (particularly American) Civilization.

551. (NELC351) History and Civilization of Ancient Israel. (M) Staff.

This course is a study of ancient Israel from its pre-nation origins through the early Second Temple period. Topics include: methodological issues for the reconstruction of Israelite history; pre-Israelite Canaan - a bridge between empires; the patriarchal and Exodus traditions; Israelite settlement of Canaan; the rise of the monarchy; the Davidic dynasty; the states of Israel and Judah in the context of the greater ancient Near East; the fall of the Israelite states - the Assyrian and Babylonian exiles - and the return from exile in the Persian period. Special issues

include: the development of monotheism; the role of the prophet in Israelite society; and the formation of Biblical corpus. Archaeological evidence from the land of Israel and other Near Eastern States, especially written material, will be utilized to supplement the Biblical sources.

SM 552. (JWST100, NELC252, RELS129) Themes in Jewish Tradition. (C) Ben-Amos, Stern.

Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, and Concepts of Jewishness from Biblical Israel to the Modern State (Stern); Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann)

555. (NELC255) Archaeology and Society of the Holy Land. (M) Staff.

This course will survey the archaeological history of the southern Levant (Israel, West Bank and Gaza, Jordan, southern Lebanon and Syria) from the early complex societies of the Chalcolithic through the demise of the biblical states of the Iron Age. It will focus in particular on the changing organization of society through time, using excavated evidence from burials, houses, temples and palaces to track changes in social heterogeneity, hierarchy and identity. In following the general themes of this course, students will have opportunity to familiarize themselves with the geographic features, major sites and important historical events of the southern Levant. Class material will be presented in illustrated and supplemented by the study

SM 556. (NELC356) Ancient Interpretation of the Bible. (M) Stern. May be repeated for credit.

Christianity and Judaism are often called "Biblical religions" because they are believed to be founded upon the Bible. But the truth of the matter is that it was less the Bible itself than the particular ways in which the Bible was read and interpreted by Christians and Jews that shaped the development of these two religions and that also marked the difference between them. So, too, ancient Biblical interpretation -- Jewish and Christian-- laid the groundwork for and developed virtually all the techniques and methods that have dominated literary criticism and hermeneutics (the science of interpretation) since then.

The purpose of this course is to study some of the more important ways in which the Bible was read and interpreted by Jews and Christians before the modern period, and particularly in the first six centuries in the common era. We will make a concerted

effort to view these interpretive approaches not only historically but also through the lens of contemporary critical and hermeneutical theory in order to examine their contemporary relevance to literary interpretation and the use that some modern literary theorists (e.g. Bloom, Kermode, Derrida, Todorov) have made of these ancient exegetes and their methods. All readings are in English translation, and will include selections from Philo of Alexandria, the Dead Sea Scrolls, Rabbinic midrash, the New Testament and early Church Fathers, Gnostic writings, Origen, and Augustine. No previous familiarity with Biblical scholarship is required although some familiarity with the Bible itself would be helpful.

SM 557. (JWST553) Seminar in Rabbinic Literature. (B) Stern. May be repeated for credit.

Readings in Rabbinic literature for students with advanced knowledge of Hebrew.

SM 567. Seminar on Egyptian Archaeology and History. (M) Wegner. Specific topics will vary from year to year.

SM 569. Problems in Ancient Egyptian History. (M) Wegner.

In depth analysis of specific historical issues and topics. Reading knowledge in French and German is required.

SM 617. (AAMW518, ARTH518) Art of Iran. (M) Holod.

Iranian art and architecture of the Parthian, Sassanian and Islamic periods, with particular emphasis on regional characteristics in the period. Different themes are explored each time the course is offered. In the past, these have been Ilkhanid and Timurid painting, the city of Isfahan, metropolitan and provincial architecture in the fourteenth century.

618. (NELC118) Iranian Cinema: Gender, Politics and Religion. (C) Minucheher.

This seminar explores Iranian culture, art, history and politics through film in the contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rakhshan Bani-Etemad, Tahmineh Milani,

Jafar Panahi, Bahman Ghobadi, among others.

SM 632. (AFST332, AFST533, NELC332) North Africa: History, Culture, Society. (M) Sharkey.

Prerequisite(s): A university-level survey course in Middle Eastern, African, or Mediterranean history.

This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.

SM 633. Seminar in Selected Topics in Arabic Literature. (B) Allen.

This is the graduate seminar course in which a variety of aspects of Arabic literature studies are covered at the advanced graduate level. Students in this course are expected to be able to read large amounts of literature in Arabic on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent topics have included: 1001 NIGHTS; the short story; the novel; MAQAMAT; classical ADAB prose; the drama; the novella; modern Arabic poetry.

SM 638. (LAW 737, RELS648) Approaches to Islamic Law. (M)

Lowry. Prerequisite(s): Some background knowledge about Islam is an asset.

This course aims to introduce students to the study of Islamic law, the all-embracing sacred law of Islam. In this course we will attempt to consider many different facets of the historical, doctrinal, institutional and social complexity of Islamic law. In addition, the various approaches that have been taken to the study of these aspects of Islamic law will be analyzed. The focus will be mostly, though not exclusively, on classical Islamic law. Specific topics covered include the beginnings of legal thought in Islam, various areas of Islamic positive law (substantive law), public and private legal institutions, Islamic legal theory, and issues in the contemporary development and application of Islamic law.

641. (ANTH236, NELC241) Mesopotamia: The Heartland of Cities. (M) Zettler.

This course surveys the cultural traditions of ancient Mesopotamia, the land between the Tigris and Euphrates Rivers, a region commonly dubbed "cradle of civilization" or "heartland of cities," from an archaeological perspective. It will investigate the emergence of sedentism and agriculture; early villages and increasingly complex Neolithic and Chalcolithic cultures; the evolution of urban, literate societies in the late 4th millennium; the city-states and incipient supra-regional polities of the third and second millennium; the gradual emergence of the Assyrian and Babylonian "world empires," well-known from historical books of the Bible, in the first millennium; and the cultural mix of Mesopotamia under the successive domination of Greeks, Persians and Arabs. The course seeks to foster an appreciation of the rich cultural heritage of ancient Mesopotamia, an understanding of cultural continuities in the Middle East and a sense of the ancient Near Eastern underpinnings of western civilization. No Prerequisite.

SM 642. (NELC342) Introduction to Mesopotamian Literature. (C) Eichler.

An introduction to the literature of ancient Mesopotamia.

SM 651. (NELC251, RELS225) Dead Sea Scrolls. (M) Staff.

Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to the known Jewish groups at that time (the beginning of the Common Era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocrypha" and "pseudepigrapha," biblical texts and interpretations.

SM 653. (FOLK653, JWST653) Folklore in the Hebrew Bible. (M) Ben Amos.

664. (NELC064) The World of Cleopatra. (M) Houser Wegner.

The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the

Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt's Ptolemaic period which culminated in the reign of Cleopatra VII.

666. (NELC266) History of Ancient Egypt. (A) Wegner.

Review and discussion of the principal aspects of ancient Egyptian history, 3000-500 BC.

668. (NELC068) Art and Architecture in Ancient Egypt. (M) Silverman.

This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.

681. (ANTH100, ANTH654, NELC281, SAST161) Topics In Anthropology and the Modern World. (B) Spooner.

This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.

682. (COML529, FOLK532) Proverb, Riddle & Speech Metaphor. (M) Ben-Amos.

Through readings and collaborative projects this working seminar will explore the place of metaphor in the genres of proverb and riddle and examine their position in oral communication in traditional and modern societies. Critical readings of former definitions and models of riddles and metaphors will enable students to obtain a comprehensive perspective of these genres that will synthesize functional, structural, metaphoric, and rhetoric theories.

683. (COML662, FOLK629, RELS605) Theories of Myth. (M) Ben-Amos.

Theories of myth are the center of modern and post-modern, structural and post-structural thought. Myth has served as a vehicle and a metaphor for the formulation of a broad range of modern theories. In this course we will examine the theoretical foundations of these approaches to myth focusing on early thinkers such as Vico, and concluding with modern twentieth century scholars in several disciplines that make myth the central idea of their studies.

ANCIENT NEAR EASTERN LANGUAGE COURSES (ANEL)

246. (ANEL646) The Land of Sumer: Writing, Language, and Culture. (C) Tinney.

This self-contained course sets the Sumerian language, writing system and use of writing in their social and historical context. The aim is to provide students of ancient history and culture from diverse disciplines with a good grounding in Sumerian culture, familiarity with the Sumerian language and cuneiform writing system and the requisite knowledge for critical assessment of published translations and of the secondary literature. The course is organized as two threads, culture on the one hand and language on the other. The two threads are united by taking examples in the language exercises, vocabulary assignments, etc., as far as possible from the domain of the week's cultural topics. The net effect is to examine the culture both through contemporary secondary literature and through direct contact with elementary primary texts of relevance to the various topics of discussion. The language component of the course will be carried out in a combination of transliteration and cuneiform, with an expectation that all students will gain familiarity with at least the core 80 syllabic signs, and about 100 additional logographic signs.

440. (ANEL640) First Year Akkadian I. (A) Staff.

Introduction to the grammar of the Akkadian language with emphasis on developing skills in the cuneiform writing system and reading of selected texts.

441. (ANEL641) First Year Akkadian II. (B) Staff. Prerequisite(s): ANEL 440.

Introduction to the grammar of the Akkadian language with emphasis on developing skills in the cuneiform writing system and reading of selected texts.

460. (AFST460) Middle Egyptian. (E) Silverman.

Introduction to the grammar of Middle Egyptian.

461. Middle Egyptian Texts: Literary. (C) Silverman. Prerequisite(s): ANEL 460.

This course will deal with those texts of the Middle Kingdom that are written in the classical form of the language. It will include both monumental inscriptions, such as autobiographical stela inscriptions (P. Newberry, BENI HASSAN) and stelae (Seth, LESESTUCKE) as well as narratives in prose (DeBuck, READING BOOK). Religious texts (ibid. and COFFIN TEXTS) will also be studied and analyzed. Distinctions between the grammar of the literary and non-literary genres will be discussed.

462. (AFST462) Middle Egyptian Texts: Non-Literary. (C) Silverman. Prerequisite(s): ANEL 460.

The course will emphasize non-literary texts dating to Middle Kingdom: letters, reports, medical and mathematical papyri, and dialogues in tombs. The material will in large part be in the hieratic script, except for the tomb inscriptions.

540. Akkadian Literary Texts. (C) Frame. Prerequisite(s): ANEL 441/641.

Readings in Akkadian literary texts from ancient Mesopotamia.

541. Akkadian Historical Texts. (C) Frame. Prerequisite(s): ANEL 441/641.

Readings in Akkadian historical texts from ancient Mesopotamia

542. Akkadian Letters. (C) Frame. Prerequisite(s): ANEL 441/641.

Readings in Akkadian letters from ancient Mesopotamia.

546. Intermediate Sumerian. (E) Tinney.

549. Introduction to Hittite. (M) Staff.

Basic grammar and vocabulary. Mastery of cuneiform writing system and reading of selected texts.

560. Late Egyptian. (C) Staff. Prerequisite(s): ANEL 460.

Introduction to the grammar of Late Egyptian.

561. Late Egyptian Texts: Literary. (C) Silverman. Prerequisite(s): ANEL 560.

This course will concentrate on the literary texts of the New Kingdom: Late Egyptian narratives such as THE DOOMED

PRINCE, THE TWO BROTHERS, and HOURS AND SETH (Gardiner, LATE EGYPTIAN STORIES) and poetry; (Gardiner, CHESTER BEATTY I and Muller, LIEBESPOESIE). The grammar will be analyzed (Erman, NEUAGYPTISCHE GRAMMATIK and Korostovtzev, GRAMMARIE DU NEO-EGYPTIEN) and compared to that used in non-literary texts (Groll, THE NEGATIVE VERBAL SYSTEM OF LATE EGYPTIAN, NON-VERBAL SENTENCE PATTERNS IN LATER EGYPTIAN, and THE LITERARY AND NON-LITERARY VERBAL SYSTEMS IN LATE EGYPTIAN).

562. Late Egyptian Texts: Non-Literary. (C) Silverman. Prerequisite(s): ANEL 560.

This course will concentrate on the translation and grammatical analysis of non-literary texts.

563. (AFST563) Old Egyptian. (C) Silverman. Prerequisite(s): ANEL 460.

This course is an introduction to the language of the Egyptian Old Kingdom. The grammar of the period will be introduced during the early part of the semester, using Edehl's ALTAGYPTISCHE GRAMMATIK as the basic reference. Other grammatical studies to be utilized will include works by Allen, Baer, Polotsky, Satzinger, Gilula, Doret, and Silverman. The majority of time in the course will be devoted to reading varied textual material: the unpublished inscriptions in the tomb of the Old Kingdom official Kapure--on view in the collection of the University Museum; several autobiographical inscriptions as recorded by Sethe in URKUNDEN I; and a letter in hieratic (Baer, ZAS 93, 1966, 1-9).

564. Ancient Egyptian Biographical Inscription. (M) Silverman.

571. History of the Linguistics of the Near East. (M) Staff.

572. (JWST558) Northwest Semitic Epigraphy. (D) Staff. Prerequisite(s): Ability to read an unpointed Hebrew text and facility in the Hebrew Bible.

This is a seminar in which we read inscriptions in the Canaanite dialects other than Hebrew (Phoenician, Moabite, Ammonite, Edomite) as well as Aramaic and Philistine texts, which were written in the 10th-6th centuries BCE, and discovered in the last 140 years by archeologists. The course is a continuation of HEBR555, but can be taken independently.

573. Ugaritic I. (A) Staff.

An introduction to the grammar of the Ugaritic language with emphasis on developing skills in reading Ugaritic texts.

574. Ugaritic II. (B) Staff. Prerequisite(s): ANEL 573 or permission of the instructor.

An introduction to the grammar of the Ugaritic language with emphasis on developing skills in reading Ugaritic texts.

575. (JWST457) Aramaic I. (A) Staff.

An introduction to the grammar of the Aramaic language with emphasis on developing skills in reading Aramaic texts.

576. (JWST457) Aramaic II. (B) Staff. Prerequisite(s): ANEL 575 or permission of the instructor.

An introduction to the grammar of the Aramaic language with emphasis on developing skills in reading Aramaic texts.

577. Syriac I. (A) Staff.

An introduction to the grammar of Syriac with emphasis on developing skills in reading Syriac texts.

578. Syriac II. (B) Staff. Prerequisite(s): ANEL 577 or permission of the instructor.

An introduction to the grammar of Syriac with emphasis on developing skills in reading texts.

640. (ANEL440) First Year Akkadian I. (A) Staff.

Introduction to the grammar of the Akkadian language with emphasis on developing skills in the cuneiform writing system and reading of selected texts.

641. (ANEL441) 1st Year Akkadian II. (M) Staff. Prerequisite(s): ANEL 440, ANEL 640 or permission of the instructor.

Introduction to the grammar of the Akkadian language with emphasis on developing skills in the cuneiform writing system and reading of selected texts.

SM 642. (ANEL242) Readings in the Aramaic Targums. (M) Tigay.

Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or comparable setting.

In late antiquity, both in Israel and in Babylonia, the custom developed of accompanying the Bible reading in synagogues with simultaneous oral translation (targum) into the Aramaic spoken language of the day. The translators negotiated their way between literal translation and various degrees of interpretive translation based on the

different styles and idioms of Hebrew and Aramaic and considerations of theology, law, and other matters. Those targums popular in the land of Israel expanded the text considerably by introducing aggadic lore in the translation. They were studied by the laity, exerted a strong influence on the medieval Bible commentators and are still regularly studied in some Jewish circles today. They constitute a valuable resource for the study of the Hebrew Bible and for understanding Jewish belief, practice, and folklore. Since the Renaissance they have also been studied by Christian scholars as an aid to understanding Scripture and as a window on Jewish belief contemporary with the early development of Christianity. The translators' methods, especially as explained by S.D. Luzzatto (Shadal) in the 19th century, are a virtual encyclopedia of the philosophy and techniques of translation.

The course will begin with a brief orientation in the grammar of the targums to enable students to recognize the main differences between Hebrew and Aramaic. The main focus will be on studying and comparing selected narrative, poetic and legal passages and analyzing their interpretive emphases, their religious ideas, and their methods of translation.

646. (ANEL246) The Land of Sumer: Writing, Language, and Culture. (C) Tinney.

This self-contained course sets the Sumerian language, writing system and use of writing in their social and historical context. The aim is to provide students of ancient history and culture from diverse disciplines with a good grounding in Sumerian culture, familiarity with the Sumerian language and cuneiform writing system and the requisite knowledge for critical assessment of published translations and of the secondary literature. The course is organized as two threads, culture on the one hand and language on the other. The two threads are united by taking examples in the language exercises, vocabulary assignments, etc., as far as possible from the domain of the week's cultural topics. The net effect is to examine the culture both through contemporary secondary literature and through direct contact with elementary primary texts of relevance to the various topics of discussion. The language component of the course will be carried out in a combination of transliteration and cuneiform, with an expectation that all students will gain familiarity with at least the core 80 syllabic signs, and about 100 additional logographic signs.

660. Old Egyptian Texts: Religious. (C) Silverman. Prerequisite(s): ANEL 563.

This course will examine the texts and grammar of religious and wisdom literature. The religious texts utilized will come from the spells of the Pyramid Texts (K. Sethe, DIE ALTAGYPTISCHEN PYRAMIDENTEXTS), and the offering formulae carved on stelae and tomb walls. Sources for the latter will include published and unpublished material from Dendera, Giza, and other sites in the collections of the University Museum (H. Fischer, DENDERA IN THE THIRD MILLENNIUM, B.C., C. Fisher, THE MINOR CEMETERIES AT GIZA and W. Barta, AUFBAU UND BEDEUTUNG DER ALTAGYPTISCHEN OPFERFORMEL). For the wisdom literature, the texts of Kagemni (Jequier, LE PAPYRUS PRISSE ET SES VARIANTES) and Prince Hordjedef (Brunner-Traut, ZAS 76 (1940), 3-9 will be read.

661. Old Egyptian Texts: Secular. (C) Silverman. Prerequisite(s): ANEL 563.

This course will concentrate on non-religious themes written in Old Egyptia. The texts utilized will include those written in the hieratic as well as hieroglyphic script; comparisons to and distinctions between the grammar in these texts and those in the religious material will be made. The autobiographical inscriptions in tombs from Giza, Elephantine and Saqqara, (Sethe, URKUNDEN I) will be studied in addition to contemporaneous letters (Gunn, ASAE 25, (1925) 242-55, Gardiner and Sethe, LETTERS to the DEAD, and P. Posener-Krieger, HIERATIC PAPYRI in the BRITISH MUSEUM) and economic documents (ibid. and LES ARCHIVS du TEMPLE FUNERAIRE de NEFERIRKARE-KAKAI).

664. (RELS616) Coptic. (M) Silverman.

The course will be an introduction to the writing, grammar, and literature of Coptic.

665. Demotic. (M) Houser Wegner.

The course will be an introduction to the writing, grammar, and literature of Demotic, the phase of the language in use during the latter periods of Egyptian history.

740. Akkadian Religious and Scientific Texts. (C) Frame.

Prerequisite(s): ANEL 441/641.

Readings in Akkadian of religious and scientific texts from ancient Mesopotamia.

741. Akkadian Legal Texts. (C) Frame. Prerequisite(s): ANEL 441/641.

Readings in Akkadian legal texts and law corpora from ancient Mesopotamia.

742. Akkadian Economic Texts. (C) Frame. Prerequisite(s): ANEL 441/641.

Readings in Akkadian economic texts from ancient Mesopotamia.

743. Peripheral Akkadian. (C) Staff. Prerequisite(s): ANEL 441/641.

Readings in selected texts in Akkadian from the periphery of Mesopotamia, including Alalah, Ugarit, Nuzi, Suza and El-Amarna.

746. Readings in Sumerian Texts. (C) Tinney. Prerequisite(s): ANEL 246/646.

Selected readings in Sumerian texts.

SM 748. Sumerian Seminar. (C) Tinney.

Extensive readings in a variety of Sumerian texts.

SM 749. Seminar in Cuneiform Texts. (C) Staff. Prerequisite(s): ANEL 441.

Extensive readings in selected cuneiform texts.

Amharic Language Courses (NELC)

481. (AFRC240, AFRC540, AFST240, AFST540) Elementary Amharic I. (A) Wogayehu.

482. (AFRC241, AFRC541, AFST241, AFST541) Elementary Amharic II. (B) Staff. Prerequisite(s): Completion of NELC 481. Offered through the Penn Language Center.

483. (AFRC242, AFRC543, AFST242, AFST543) Intermediate Amharic I. (A) Wogayehu. Prerequisite(s): Completion of NELC 482 or permission of the instructor.

484. (AFRC243, AFRC544, AFST243, AFST544) Intermediate Amharic II. (B) Staff.

583. (AFST247, AFST547) Advanced Amharic. (M) Staff. Prerequisite(s): Completion of NELC 484 or permission of the instructor.

An advanced Amharic course that will further sharpen the students' knowledge of the Amharic language and the culture of the Amharas. The learners' communicative skills will be further developed through listening, speaking, reading and writing.

There will also be discussions on cultural and political issues.

ARABIC LANGUAGE COURSES (ARAB)

031. (ARAB631) Elementary Arabic I. (A) Staff.

This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 002) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government's Foreign Service Institute), from 'incipient survival' to 'full' survival' in the native-speaking environment.

032. (ARAB632) Elementary Arabic II. (B) Staff. Prerequisite(s): ARAB 031.

This course is a continuation of ARAB 031/631.

033. (ARAB633) Intermediate Arabic III. (A) Staff. Prerequisite(s): ARAB 032 or equivalent.

This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This is the continuation of ARAB031 and ARAB 032, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 031-032, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.

034. (ARAB634) Intermediate Arabic IV. (B) Staff. Prerequisite(s): ARAB 033.

This course is a continuation of ARAB 033/633.

035. (ARAB635) Advanced Intermediate Arabic I. (A) Staff.

Prerequisite(s): ARAB 034.

This is a proficiency-based course which continues from the first intermediate course, ARAB 033/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency- based. The test of speaking ability will consist of the Oral Proficiency Interview.

036. (ARAB636) Advanced Intermediate Arabic II. (B) Staff.

Prerequisite(s): ARAB 035.

This course is a continuation of ARAB 035/635.

037. (ARAB637) Advanced Arabic and Syntax I. (A) Rushdie.

Prerequisite(s): ARAB 036/636 or permission of the instructor.

Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them.

038. (ARAB638) Advanced Arabic & Syntax II. (B) Staff. Prerequisite(s): ARAB 037.

This course is a continuation of ARAB 037/637.

039. (ARAB639) Colloquial Arabic. (C) Staff.

A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.

041. Beginning Arabic I. (A) Sayed.

See the CLPS Course Guide. **This course does not fulfill the College language requirement.

This is a beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more

traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 042) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government's Foreign Service Institute), from 'incipient survival' to 'full' survival' in the native-speaking environment.

043. Continuing Arabic III. (A) Sayed. See the CLPS Course Guide. **This course does not fulfill the College language requirement.

This is the continuation of ARAB041 and ARAB 042, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 041-042, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Liberal and Professional Studies language requirement in Arabic but not for the School of Arts and Sciences. However, it should be emphasized that you will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.

331. (ARAB531) Advanced Spoken Standard Arabic. (C) Staff.

Prerequisite(s): ARAB 036/636.

The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview.

332. (ARAB532) Advanced Arabic Composition. (M) Staff. Prerequisite(s): ARAB 036/636.

Development of writing skills within a variety of subjects. Extensive readings in various prose techniques and a thorough review of Arabic grammar.

SM 333. Readings in the Qur'an and Tafsir. (M) Lowry. Prerequisite(s): ARAB 35 or permission of the instructor.

The primary goal of this course is to introduce undergraduate students to reading the Qur'an in Arabic. Through the reading and study of selected major Qur'anic narratives, students will become familiar

with Qur'anic vocabulary, style, recitation practices, and other intricacies of the Qur'anic text. All students will also memorize a short sura of their choice and practice reciting it in an aesthetically appropriate manner (typically sura 1, 112, 113, or 114). In addition, through in-class discussion of the text in Arabic and Arabic writing assignments, students will reinforce their Arabic speaking, listening, and writing skills.

SM 432. (COLL226, COML432) Arabic Readings in Belles-Lettres. (A) Arts & Letters Sector. All Classes. Allen. Prerequisite(s): Proficiency in ARAB 036/636.

Readings in Arabic texts taken from a variety of literary genres from all periods. The course aims to improve reading skills and vocabulary by introducing students to extensive passages taken from Arabic literature.

433. Arabic Readings in the Social Sciences and the Media. (K) Staff. Prerequisite(s): Proficiency in ARAB 036/636.

This course is designed to train students interested in a professional career involving the use of Arabic written materials. The texts are selected to reflect various topics and styles. An additional specialized glossary will be

SM 435. Readings in Islamics. (M) Lowry. Prerequisite(s): Completion of ARAB 036/636 Advanced Intermediate Arabic; or permission of the instructor.

This course provides practice in reading pre-modern classical Arabic texts drawn from a variety of intellectual disciplines, especially (but not exclusively) the religious sciences.

SM 436. Introduction to Classical Arabic Texts. (C) Lowry. Prerequisite(s): Completion of ARAB 036/636 Advanced Intermediate Arabic; or permission of the instructor.

This course aims to provide incoming graduate students and advanced undergraduate students with an introduction to issues in Arabic grammar and syntax that commonly arise in pre-modern Arabic texts. Students will also be introduced to, and expected to consult, the standard reference works used as aids in reading such texts. Students will be expected to prepare a text or set of texts assigned by the instructor for each session. Preparation means, for these purposes, supplying all vowels and other necessary diacritical marks, as well as looking up unfamiliar words and constructions in appropriate

dictionaries or other reference works. Regular attendance and thorough preparation are essential to success in this course. It is intended that, upon completion of this course, students will be able to work independently with a wide variety of pre-modern Arabic texts.

531. (ARAB331) Advanced Spoken Standard Arabic. (A) Staff. Prerequisite(s): ARAB 036/636.

The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview.

532. (ARAB332) Advanced Arabic Composition. (M) Staff. Prerequisite(s): ARAB 036/636.

Development of writing skills within a variety of subjects. Extensive readings in various prose techniques and a thorough review of Arabic grammar.

SM 533. Readings in Islamic Law. (M) Lowry. Prerequisite(s): Completion of ARAB035/636 or permission of the instructor.

631. (ARAB031) Elementary Arabic I. (E) Staff. Prerequisite(s): For the second semester: completion of the first semester or permission of the instructor.

This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 002) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government's Foreign Service Institute), from 'incipient survival' to 'full' survival' in the native-speaking environment.

632. (ARAB032) Elementary Arabic II. (E) Staff.

This course is a continuation of ARAB 031/631.

633. (ARAB033) Intermediate Arabic III. (E) Staff. Prerequisite(s): ARAB 033 or equivalent. For the second semester: completion of the first semester or permission of the instructor.

This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This is the continuation of ARAB031 and ARAB 032, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 031-032, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.

634. (ARAB034) Intermediate Arabic IV. (E) Staff.

This course is a continuation of ARAB 033/633.

635. (ARAB035) Advanced Intermediate Arabic I. (E) Staff. Prerequisite(s): ARAB 033 or permission of instructor.

This is a proficiency-based course which continues from the first intermediate course, ARAB 033/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency- based. The test of speaking ability will

636. (ARAB036) Advanced Intermediate Arabic II. (E) Staff.

This course is a continuation of ARAB 035/635.

637. (ARAB037) Advanced Arabic and Syntax I. (C) Staff. Prerequisite(s): ARAB 036/636 or permission of the instructor.

Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading

whole works in Arabic and giving reports on them.

638. (ARAB038) Advanced Arabic & Syntax II. (B) Staff.

This course is a continuation of ARAB 037/637.

639. (ARAB039) Colloquial Arabic. (M) Staff.

A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.

SM 730. Topics in Islamics. (C) Staff.

The topic may vary from year to year.

SM 731. Topics in Islamic Studies. (C) Lowry.

Topics vary from year to year in accordance with the interests and needs of students.

SM 733. Arabic Texts in Islamic History. (M) Cobb. Prerequisite(s): ARAB 036 or permission of the instructor.

This is a graduate seminar course in which different genres of premodern Arabic texts are covered at the advanced graduate level. Students in this course are expected to be able to read and prepare (vowel, parse, and translate) passages from Arabic texts on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent and potential topics include: Geographers and travel accounts; biographical dictionaries; chronicles; heresiography; poetry; memoir and sira.

HEBREW LANGUAGE COURSES (HEBR)

051. (HEBR651, JWST051) Elementary Modern Hebrew I. (C) Staff.

An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew.

052. (HEBR652, JWST052) Elementary Modern Hebrew II. (C) Staff. Prerequisite(s): HEBR 051 or permission of instructor.

A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or

above and new students with equivalent competency.

053. (HEBR653, JWST053) Intermediate Modern Hebrew III. (C) Staff. Prerequisite(s): HEBR 052 or permission of the instructor.

Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

054. (HEBR654, JWST054) Intermediate Modern Hebrew IV. (C) Staff. Prerequisite(s): HEBR 053 or permission of instructor.

This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

059. (HEBR552, JWST059) Advanced Modern Hebrew: Reading and Composition. (E) Engel. Prerequisite(s): HEBR 054 or permission of instructor.

Reading and discussion of contemporary Israeli journalism and imaginative writing and development of conversation skills, accompanied by visual material from films and the internet. Students will be expected to give a classroom presentation and to write short essays.

151. (HEBR451, JWST171, JWST471) Elementary Biblical Hebrew I. (A) Carasik.

This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.

152. (HEBR452, JWST172, JWST472) Elementary Biblical Hebrew II. (B) Carasik. Prerequisite(s): Successful completion of HEBR 151 or permission of the instructor.

A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts.

A suitable entry point for students who have had some modern Hebrew.

153. (HEBR453, JWST173, JWST473) Intermediate Biblical Hebrew I. (A) Carasik. Prerequisite(s): Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is "permitted" into that semester; you must take the previous semester course).

This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.

154. (HEBR454, JWST174, JWST474) Intermediate Biblical Hebrew II. (B) Carasik. Prerequisite(s): Successful completion of HEBR 153.

This course is a continuation of the Fall semester's Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the Fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.

250. (COML228, JWST256, RELS220) Studies in the Hebrew Bible. (B) Tigay.

This course introduces students to the methods and resources used in the modern study of the Bible. To the extent possible, these methods will be illustrated as they apply to a single book of the Hebrew Bible that will serve as the main focus of the course.

The course is designed for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading and translating Biblical Hebrew and a working knowledge of Biblical Hebrew grammar.

SM 257. (HEBR557, JWST257, RELS226) Studies in Rabbinic Literature: Responses to the Destruction of the Temple. (D) Stern.

This course will introduce students to the modern study of Talmudic literature-- Mishnah, Tosefta, and the Palestinian and Babylonian Talmuds. The first part of the course will deal with the history of the concept of the Oral Law (Torah shebe'al peh) and its practice, and the history of the literature that eventually comes out of that oral tradition, including the history of its transmission in medieval manuscripts and printed editions, and the ways in which the material shape of the text influenced its study and reception in Jewish culture. The second part of the course will consist of an intensive analysis of one chapter in the Talmud, Berakhot 8, by tracing its history through the documents of Talmudic literature (the Mishnah, Tosefta, and two Talmuds). No previous experience in Rabbinic literature is required (although it is recommended), but all students must be able to read unpointed Hebrew texts. If you have a question as to whether this course is appropriate for you, please contact the professor.

SM 258. (FOLK258, HEBR558, JWST258, RELS228) Studies in Medieval Jewish Literature. (C) Stern. Prerequisite(s): Reading knowledge of Hebrew.

This course introduces students to medieval Jewish literature and to the various modern methods and critical approaches--cultural history, literary theory, codicology, the comparative history of religions--that have been developed to study the literature and its cultural meaning. Texts studied will vary from semester to semester, and will include medieval Hebrew poetry, both religious and secular, Biblical exegesis, philosophical and ethical texts, and historiographic works.

SM 259. (COLL227, COML266, HEBR559, JWST259) Introduction to Modern Hebrew Literature: Generation of the State. (A) Arts & Letters Sector. All Classes. Gold. Prerequisite(s): HEBR 059 or equivalent. The class will be conducted in Hebrew and the texts read in the original. There will be 3-4 short papers and a final exam.

"I Want to Die in My Bed", a young Yehuda Amichai's anti-war poem, led the rebellion of Israeli authors in the 1950s. Scholars would later call Amichai and his peers "The Generation of the State," because they were the first authors to publish in the State of Israel (after it was established) and they forged its literary

future. These "rebels" distanced themselves from the Zionist father- figures and their ideological focus. Poets, like Nathan Zach, promoted the use of common language while A.B. Yehoshua and Amos Oz wrote anti- heroic short stories.

The content of this course changes from year to year, thus students may take it for credit more than once.

SM 350. (HEBR550, JWST351, RELS322) A Book of the Bible. (A) Tigay. Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English. The course is designed primarily for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading Biblical Hebrew, including a working knowledge of Biblical Hebrew grammar.

In-depth textual study of a book of the Hebrew Bible studied in the light of modern scholarship (including archaeology and ancient Near Eastern literature) as well as ancient and medieval commentaries. The book varies each semester and the course may be repeated for credit.

356. (HEBR656, RELS327) Talmudic Midrashic Literature. (M) Stern. Prerequisite(s): Two years of Hebrew or equivalent required.

An introduction to the reading of classical Rabbinic literature. The topic will vary ranging from Talmudic to Siddur. Readings will be in Hebrew with supplemental English works.

357. (HEBR657, JWST352, JWST552) Classical Midrash & Aggadah. (D) Stern. Prerequisite(s): Students must be able to read an unpointed Hebrew text.

Readings in Rabbinic lore from classical Midrashic texts.

358. (HEBR658, JWST355) Siddur and Piyut. (M) Stern. Prerequisite(s): HEBR 052 or equivalent.

A study of the institution of Jewish prayer, its literature, and synagogu poetry. Texts will be read in Hebrew with supplementary English readings.

SM 359. (CINE359, COLL227, COML359, JWST359, JWST556) Seminar Modern Hebrew Literature: The Holocaust in Israeli Literature & Film. (B) Arts & Letters Sector. All Classes. Gold. Prerequisite(s): HEBR 059 or HEBR 259 or permission of the instructor. This class is conducted in Hebrew and the texts are read in the original. The content of this course changes from year to year and therefore students may take it for credit more than once.

Israeli literature "waited" until the 1961 public indictment of a Nazi war-criminal to hesitantly begin to face the Holocaust. The Zionist wish to forge a "New Jew" was in part responsible for this suppression. Aharon Appelfeld's understated short stories were the first to enter the modernist literary scene in the 1960s, followed in 1970 by the cryptic verse of Dan Pagis, a fellow child survivor. Only in 1988 two Israeli-born pop singers--haunted children of survivors--broke the continuous practice of concealing the past and its emotional aftermath in the watershed documentary "Because of That War." The process of breaking the silence intensified in the last two decades; the "Second Generation" burst forth artistically with writers like Etgar Keret, Amir Gutfreund and Savyon Liebrecht who told what their parents were unable to utter. This course will analyze the transformation of Israeli literature and cinema from instruments of suppression into means for dealing with the national trauma.

451. (HEBR151, JWST171, JWST471) Elementary Biblical Hebrew I. (A) Carasik.

This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.

452. (HEBR152, JWST172, JWST472) Elementary Biblical Hebrew II. (B) Carasik. Prerequisite(s): Successful completion of HEBR 451 or permission of the instructor.

A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some modern Hebrew.

453. (HEBR153, JWST173, JWST473) Intermediate Biblical Hebrew I. (A)

Carasik. Prerequisite(s): Successful completion of HEBR 452 or permission of the instructor. This course is the prerequisite for HEBR 454 (no one is "permitted" into that semester; you must take the previous semester course).

This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.

454. (HEBR154, JWST174, JWST474) Intermediate Biblical Hebrew II. (B)

Carasik. Prerequisite(s): Successful completion of HEBR 453.

This course is a continuation of the Fall semester's Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the Fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.

455. Post-Baccalaureate Hebrew Texts. (M) Staff.**SM 486. (JWST426, RELS426) Rabbinic Writers on Rabbinic Culture. (M) Fishman. Prerequisite(s):**

Reading knowledge of Hebrew.

This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period -- Midrash, Mishna, and Talmud -- and in later juridical genres -- Talmudic commentary, codes and responsa. Attention will be paid to the mechanics of different genres, the role of the underlying proof-text, the inclusion or exclusion of variant opinions, the presence of non-legal information, attitudes toward predecessors, balance between precedent and innovation.

SM 550. (HEBR350, JWST550, RELS322, RELS521) A Book of the Bible. (A) Tigay. Prerequisite(s):

Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English. The course is designed primarily for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading Biblical Hebrew, including a working knowledge of Biblical Hebrew grammar.

In-depth textual study of a book of the Hebrew Bible studied in the light of modern scholarship (including archaeology and ancient Near Eastern literature) as well as ancient and medieval commentaries. The book varies each semester and the course may be repeated for credit.

551. (JWST456, RELS427) Dead Sea Texts. (M) Staff. Prerequisite(s): Reading knowledge of Hebrew and ability to read unpointed texts.**552. (HEBR059, JWST059) Advanced Hebrew: Reading & Comprehension. (E) Engel. Prerequisite(s):**

HEBR 054 or permission of instructor.

Further development of reading, writing, and speaking skills in modern Hebrew. The course is designed for students who have completed the basic language courses and passed the proficiency examination (or passed the Department's placement test at the appropriate level). The readings are based on literary texts and poetry. Special attention is given to the recurrence of biblical themes in modern Hebrew writing.

555. (JWST545) Hebrew Epigraphy. (D) Staff. Ability to read an unpointed Hebrew text and facility in the Hebrew Bible.

This course is a seminar covering inscriptions in Hebrew of the Biblical period, such as the Gezer Calendar, the Arad and Lachish letters, and numerous other inscriptions. We will read these texts and examine their linguistic features, but primarily we will focus on the ways these texts are useful in Biblical studies. The historical and linguistic information we glean from these texts, and the use of this information in studying Biblical history and interpreting the Hebrew Bible will be central to the course.

This course is a seminar covering inscriptions in Hebrew of the Biblical period, such as the Gezer Calendar, the Arad and Lachish letters, and numerous other inscriptions. We will read these texts and examine their linguistic features, but primarily we will focus on the ways these texts are useful in Biblical studies. The historical and linguistic information we glean from these texts, and the use of this information in studying Biblical history and interpreting the Hebrew Bible will be central to the course.

SM 556. (JWST650, RELS620) Seminar in Biblical Studies. (B) Tigay. Prerequisite(s): Facility in Biblical Hebrew. May be repeated for credit.

Prerequisite(s): Facility in Biblical Hebrew. May be repeated for credit.

In-depth study of a special topic or issue in Biblical studies.

SM 557. (HEBR257, JWST257, RELS226) Studies in Rabbinic Literature: Talmudic Literature. (D) Stern.

This course will introduce students to the modern study of Talmudic literature-- Mishnah, Tosefta, and the Palestinian and Babylonian Talmuds. The first part of the course will deal with the history of the concept of the Oral Law (Torah shebe'al peh) and its practice, and the history of the literature that eventually comes out of that oral tradition, including the history of its transmission in medieval manuscripts and printed editions, and the ways in which the material shape of the text influenced its study and reception in Jewish culture. No previous experience in Rabbinic literature is required (although it is recommended), but all students must be able to read unpointed Hebrew texts. If you have a question as to whether this course is appropriate for you, please contact the professor.

SM 558. (FOLK258, HEBR258, JWST258, RELS228) Studies in Medieval Jewish Literature. (C) Stern. Prerequisite(s): Undergraduates need permission from the instructor.

Prerequisite(s): Undergraduates need permission from the instructor.

Advanced studies in Medieval Hebrew literature. Topics range from liturgy to exegesis.

SM 559. (COLL227, COML266, HEBR259, JWST259) Introduction to Modern Hebrew Literature: Generation of the State. (A) Gold. Prerequisite(s): HEBR 059 or equivalent.

Prerequisite(s): HEBR 059 or equivalent. The class will be conducted in Hebrew and the texts read in the original. There will be 3-4 short papers and a final exam.

"I Want to Die in My Bed", a young Yehuda Amichai's anti-war poem, led the rebellion of Israeli authors in the 1950s. Scholars would later call Amichai and his peers "The Generation of the State," because they were the first authors to publish in the State of Israel (after it was established) and they forged its literary future. These "rebels" distanced themselves from the Zionist father-figures and their ideological focus. Poets, like

Nathan Zach, promoted the use of common language while A.B. Yehoshua and Amos Oz wrote anti-heroic short stories.

The content of this course changes from year to year, thus students may take it for credit more than once.

SM 583. (COML527, HIST523, JWST523, RELS523) Studies in Medieval Jewish Culture. (A) Fishman.

Prerequisite(s): Unless otherwise noted, reading knowledge of Hebrew is required. Primary source readings from a broad array of medieval Jewish genres. Topic will vary from one semester to another, for example: custom, gender, dissent.

651. (HEBR051, JWST051) Elementary Modern Hebrew I. (C) Staff.

An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew.

652. (HEBR052, JWST052) Elementary Modern Hebrew II. Staff.

Prerequisite(s): HEBR 651 or permission of instructor.

A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

653. (HEBR053, JWST053) Intermediate Modern Hebrew III. (C) Staff.

Prerequisite(s): HEBR 652 or permission of the instructor.

Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

654. (HEBR054, JWST054) Intermediate Modern Hebrew IV. (C) Staff.

Prerequisite(s): HEBR 653 or permission of instructor.

This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

656. (HEBR356, RELS327) Talmudic Midrashic Literature. (M) Stern.

Prerequisite(s): Two years of Hebrew or equivalent required.

An introduction to the reading of classical Rabbinic literature. The topic will vary ranging from Talmudic to Siddur. Readings will be in Hebrew with supplemental English works.

657. (HEBR357, JWST352, JWST552) Classical Midrash & Aggadah. (D) Stern.

Prerequisite(s): Students must be able to read an unpointed Hebrew text.

Readings in Rabbinic lore from classical Midrashic texts.

658. (HEBR358, JWST355, JWST655) Siddur & Piyyut. Stern.

Prerequisite(s): HEBR 054 or equivalent.

A study of the institution of Jewish prayer, its literature, and synagogue poetry. Texts will be read in Hebrew with supplementary English readings.

SM 659. (COML359, HEBR359, JWST359, JWST556) Seminar Modern Hebrew Literature: The Holocaust in Israeli Literature & Film. (M) Gold.

Prerequisite(s): HEBR 059 or HEBR 259 or permission of the instructor. This class is conducted in Hebrew and the texts are read in the original. The content of this course changes from year to year and therefore students may take it for credit more than once. The content of this course changes from year to year; and, therefore, students may take it for credit more than once.

Israeli literature "waited" until the 1961 public indictment of a Nazi war-criminal to hesitantly begin to face the Holocaust. The Zionist wish to forge a "New Jew" was in part responsible for this suppression. Aharon d Applefeld's understated short stories were the first to enter the modernist literary scene in the 1960s, followed in 1970 by the cryptic verse of Dan Pagis, a fellow child survivor. Only in 1988 two Israeli-born pop singers--haunted children of survivors--broke the continuous practice of concealing the past and its emotional aftermath in the watershed documentary "Because of That War." The process of breaking the silence intensified in then last two decades; the "Second Generation" burst forth artistically with writers like Etgar Keret, Amir Gutfreund and Savyon Liebrecht who told what their parents were unable to utter. This course will analyze the transformation of Israeli literature and cinema from instruments of suppression into means for dealing with the national trauma.

PERSIAN LANGUAGE COURSES (PERS)

011. (PERS611) Elementary Persian I. (A) Minuchehr.

An introduction to the spoken and written language of contemporary Iran.

012. (PERS612) Elementary Persian II. (B) Minuchehr.

An introduction to the spoken and written language of contemporary Iran.

013. (PERS613) Intermediate Persian I. (A) minuchehr. Prerequisite(s): PERS 012 or equivalent.

A continuation of PERS 012, with graded readings.

014. (PERS614) Intermediate Persian II. (B) Minuchehr.

015. (PERS615) Advanced Persian I. (A) Staff. Prerequisite(s): For the second semester: completion of the first semester or permission of the instructor; PERS 013 or PERS 017 or permission of the instructor. Offered through the Penn Language Center.

016. (PERS616) Advanced Persian II. (B) Staff.

017. (PERS617) Persian Reading and Writing for Fluent Speakers. (C) Staff. Prerequisite(s): Fluency in spoken Persian. Offered through Penn Language Center.

An intensive course designed to teach the reading and writing of standard Tehran Persian to those with a speaking knowledge of that language. In recent years there has been an increasing demand from Persian-speaking Iranian-American students for formal instruction in Persian. While many of these students have some degree of spoken fluency in Persian, they are often unable to read or write it. Their speaking ability makes it difficult to integrate them into first- or second-year classes of students who have started with no knowledge of Persian. If these Persian-speaking students could be brought to at least a second-year level of reading and writing, they could then be enrolled in more advanced courses in Persian where they would be more or less at the same level as other students. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.

018. Advanced Persian in the Media. (C) Staff.

111. (PERS511, SAST405) Beginning Pashtu I. (A) Santry. Offered through the Penn Language Center.

Reading, writing, basic grammar and elemental speaking.

112. (PERS512, SAST415) Beginning Pashtu II. (B) Santry. Prerequisite(s): For second semester, completion of the first semester. Offered through Penn Language Center. This is a two-semester course.

Reading, writing, basic grammar and elemental speaking.

113. (PERS513, SAST425) Intermediate Pashtu. (A) Santry. Prerequisite(s): Beg. Pashtu, or permission by instructor. Offered through the Penn Language Center.

A wide variety of reading genres, writing, and oral expression.

114. (PERS514, SAST416) Intermediate Pashtu II. (B) Santry. Offered through Penn Language Center. This is a two-semester course.

Beg. Pashto, or permission of the instructor. A wide variety of reading genres, writing, and oral expression

115. (PERS515, SAST435) Advanced Pashtu I. (A) Santry. Prerequisite(s): Beg. And Int. Pashto required. Offered through the Penn Language Center.

Modern literary short stories. BBC news broadcasts for listening comprehension and discussion.

116. (PERS516, SAST445) Advanced Pashtu II. (B) Santry. Offered through Penn Language Center.

Pashto dialects, using recordings from different regions. BBC broadcasts for listening comprehension and discussion.

511. (PERS111, SAST405) Beginning Pashtu I. (A) Santry. Offered through the Penn Language Center.

Reading, writing, basic grammar and elemental speaking.

512. (PERS112) Beginning Pashtu II. (G) Santry. Prerequisite(s): For second semester, completion of the first semester. Offered through Penn Language Center. This is a two-semester course.

Reading, writing, basic grammar and elemental speaking.

513. (PERS113, SAST431) Intermediate Pashtu I. (G) Santry. Prerequisite(s): Beg. Pashtu, or permission by instructor. Offered through the Penn Language Center.

A wide variety of reading genres, writing, and oral expression.

514. (PERS114) Intermediate Pashtu II. (G) Santry. Offered through Penn Language Center. This is a two-semester course.

515. (PERS115, SAST432) Advanced Pashtu I. (G) Santry. Offered through the Penn Language Center.

516. (PERS116) Advanced Pashtu II. (G) Santry. Offered through Penn Language Center.

611. (PERS011) Elementary Persian I. (A) Minuchehr. Prerequisite(s): For the second semester: completion of first semester or permission of the instructor. Offered through Penn Language Center.

An introduction to the spoken and written language of contemporary Iran.

612. (PERS012) Elementary Persian II. (B) Staff.

An introduction to the spoken and written language of contemporary Iran.

613. (PERS013) Intermediate Persian I. (A) Staff. Prerequisite(s): For the second semester: Completion of the first semester or permission of the instructor. Offered through the Penn Language Center. See the CGS course guide.

A continuation of PERS 011, with graded readings.

614. (PERS014) Intermediate Persian II. (B) Staff.

615. (PERS015) Advanced Persian I. (A) Staff. Prerequisite(s): For the second semester: completion of the first semester or permission of the instructor; PERS 013 or PERS 017 or permission of the instructor. Offered through the Penn Language Center.

616. (PERS016) Advanced Persian II. (B) Staff.

617. (PERS017) Persian Reading and Writing for Fluent Speakers. (C) Staff. Prerequisite(s): Fluency in spoken Persian. Offered through Penn Language Center.

An intensive, one-semester course designed to teach the reading and writing of standard Tehran Persian to those with a speaking

knowledge of that language. In recent years there has been an increasing demand from Persian-speaking Iranian-American students for formal instruction in Persian. While many of these students have some degree of spoken fluency in Persian, they are often unable to read or write it. Their speaking ability makes it difficult to integrate them into first- or second-year classes of students who have started with no knowledge of Persian. If these Persian-speaking students could be brought to at least a second-year level of reading and writing, they could then be enrolled in more advanced courses in Persian where they would be more or less at the same level as other students. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.

TURKISH LANGUAGE COURSES (TURK)

021. (TURK621) Elementary Turkish I. (A) Derperliouglu & Hatibloglu. Offered through Penn Language Center.

This is a course for beginners who have no previous knowledge of Turkish. Using a communicative approach, Elementary Turkish introduces basic vocabulary and grammar rules and focuses on building language competencies in listening, reading, speaking and writing. By the end of the course, students will be able to participate in simple conversations, to know daily expressions, and will understand simple dialogues in day-to-day context and will be able to count and tell time. Will be able to speak about events that happened in the past and express plans for the future. Students will also develop writing strategies that will allow them to write simple letters and fill in commonly-used forms.

022. (TURK622) Elementary Turkish II. (B) Derperliouglu & Hatiboglu. Prerequisite(s): TURK 021, Elementary Turkish I, or equivalent.

This course is a continuation of TURK 021 and is designed to strengthen and extend students' listening, speaking, reading and writing competence and to deepen an understanding of Turkish people in Turkey. By the end of this course, students will be able to handle a variety of day to day needs in Turkish-speaking settings and engage in simple conversations. Students can expect to be able to order food and drinks, purchase things, and to be able to be familiar with current social topics. Students will be able to talk about all tenses, present, future, past, past

continuous, make comparisons, describe people and things in detail, make travel plans, make reservations in hotels and holiday resorts, write complain letters. By the end of the course, students will be able to talk about their studies and their plans for the future. Also, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Students will learn practical life in Turkey and will explore Turkish culture on the internet.

023. (TURK623) Intermediate Turkish I. (A) Hatiboglu. Prerequisite(s): TURK 022 or equivalent. Offered through Penn Language Center.

A continuation of elementary Turkish, with emphasis on grammar and reading. This course is for students who have previous knowledge of Turkish or students who have completed Elementary Turkish I and II. This course is designed to improve students' writing and speaking competence, to increase vocabulary, to deepen grammar usage and to help develop effective reading and listening strategies in Turkish, and in order give them cultural knowledge, students are exposed to authentic materials.

024. (TURK624) Intermediate Turkish II. (B) Hatiboglu.

Expands students writing and speaking competence in Turkish, increases vocabulary, and helps students' practice effective reading and listening strategies. Our in-class discussions are based on role-plays and weekly readings and news reports from TV and newspapers. We create discussion groups and let them communicate through, threaded discussions, chat rooms and skype. The review of grammar will not be the primary focus of the course. Students will, expand

and deepen their knowledge of grammar through specific grammar exercises. They will have opportunity to practice and read about the cultural and historical issues and get prepared for an advanced level Turkish.

025. (TURK625) Advanced Modern Turkish I. (A) Hatiboglu. Prerequisite(s): TURK 024, Intermediate Turkish II.

The study of modern Turkish at the advanced level; emphasis on grammar and reading, focusing on Business Turkish. Interviews with professionals from different business groups will take place, such as, education, medicine, business law and political science.

026. (TURK626) Advanced Modern Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 025, Advanced Modern Turkish I, or equivalent.

This course is designed to improve students writing and speaking levels through role plays, case studies, essays, interviews, reading articles from newspapers, analyzing books of contemporary Turkish authors such as Orhan Pamuk, Elif Safak, Ayse Kulin, Yasar Kemal and introduce students to Turkish poets such as Nazim Hikmet, Orhan Veli, Ozdemir Asaf, Murathan Mungan, Can Yucel. During each lesson, students will be asked to interview each other on given news articles about different subjects including economy, politics, sports, art, music and daily news. These conversations will take place on student's level of Turkish knowledge.

621. (TURK021) Elementary Turkish I. (A) Hatiboglu. Offered through Penn Language Center.

This course is TURK-021 for graduate students. Introduction to the spoken and written language of contemporary Turkey.

622. (TURK022) Elementary Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 621, Elementary Turkish II or equivalent.

This course is TURK 022 for graduate students.

623. (TURK023) Intermediate Turkish I. (A) Hatiboglu. Prerequisite(s): TURK 622, Elementary Turkish II, or equivalent.

Offered through Penn Language Center.

A continuation of TURK 622, with emphasis on grammar and reading. This course is TURK 022 for graduate students.

624. (TURK024) Intermediate Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 623, Intermediate Turkish I or equivalent.

This course is TURK 024 for graduate students.

625. (TURK025) Advanced Modern Turkish I. (A) Hatiboglu. Prerequisite(s): TURK 024, Intermediate Turkish II or equivalent.

The study of modern Turkish at the advanced level; emphasis on grammar and reading, focusing on business Turkish. Interviews with professionals from different business groups will take place, such as, education, medicine, business, law, and political science. This course is TURK 025 for graduate students.

626. (TURK026) Advanced Modern Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 625, Advanced Modern Turkish I, or equivalent.

This course is TURK 026, Advanced Modern Turkish II for graduate students.

NURSING (NU) {NURS}

L/L 040. Principles of General and Organic Chemistry. (A) Lafferty-Della Valle. 3 h. lect. 3 h. lab. Lab fee \$100. Also offered in Summer Session I.

Concepts of General Chemistry basic to the understanding of the health related sciences. Principles of atomic structure, chemical bonding, chemical and nuclear reactions, acids, bases, and chemical equilibria will be included. Fundamentals of Organic nomenclature and a survey of the physical, chemical and biological properties of the main organic functional groups.

041. An Introduction to Organic Chemistry, Biological Chemistry and Molecular Genetics. (L) Lafferty-Della Valle. Prerequisite(s): NURS 040, CHEM 001, or CHEM 101. Also offered in Summer Session II.

Concepts of organic chemistry and biochemistry basic to the understanding of the fundamental processes of living organisms. Fundamentals of nomenclature and the physical, chemical and biological activities of functional organic groups, structural and functional relationships of the major biomolecules, interrelationships of the various metabolic pathways and basics of molecular biology will be included.

L/L 042. (BIOL042, BIOL175) Introduction to Microbiology and Human Biochemistry. (B) Lafferty / Pohlschr_der. Prerequisite(s): CHEM 101, CHEM 053, CHEM 102, CHEM 054 or NURS 040. 3 h. lect. 4 h. lab. 1 h. rec. Lab fee \$100.

This lecture and laboratory course covers concepts of Cellular Biochemistry, Microbiology and Molecular Genetics basic to an understanding of the fundamental processes of living organisms. The organization and characteristics of prokaryotic and eukaryotic cells, structural and functional relationships of the major biomolecules, interrelationships of the various metabolic pathways, basics of molecular genetics and immunology are covered.

L/R 050. Introduction to Nursing. (A) Cuellar; Abraham; Lake; D'Antonio. 0.5 course units.

Introduction to the roles of the professional nurse. Content includes overview of health care delivery systems and nursing's

multiple roles in those systems; history of nursing; preparation for roles assumed by professional nurses; and the philosophy of this School of Nursing. Emphasis will be placed on assisting students to understand the nature of nurses' work and their contributions to promoting and maintaining the health status of individuals and groups.

L/R 051. Human Development. (B) Hutchinson.

This course provides an overview of human development across the lifespan. Phases of the life span covered include: the prenatal period, infancy, early childhood, middle and late childhood, adolescence, young adulthood, middle adulthood, and late adulthood. Development is examined from a variety of theoretical perspectives including biological, psychoanalytic, cognitive, behavioral, and systems. The leading models of development are critiqued and the unique perspectives and biases that are inherent in any given view are addressed. Cross-cultural perspectives and contemporary issues in lifespan human development, especially those related to health, are emphasized.

054. Principles of Human Nutrition. (C) Compher; Bergen; Volpe. Prerequisite(s): NURS 040 or CHEM 101.

Essentials of normal nutrition and its relationship to the health of individuals and families. These concepts serve as a basis for the development of an understanding of therapeutic application of dietary principles and the nurse's role and responsibility in this facet of patient care.

SM 098. Sexual Health Promotion & Risk Reduction in West Philadelphia: A Seminar on Urban Campus/Community Norms. (B) Jemmot. Prerequisite(s): Junior or Senior academic standing. Satisfies Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

This course is a unique combination of hands-on research, teaching, and service to the West Philadelphia community. Students research sexual risk behaviors and risk reduction for HIV and FSTI's in the West Philadelphia community, both on and off Penn's campus, and make concrete recommendations for interventions to promote sexual health & reduce risks for infection based on their findings.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

104. Concepts in Nursing: Healthy Life Styles I. (A) Riegel; Quigley.

Prerequisite(s): NURS 040, 042, 051, 054 or by permission. Corequisite(s): NURS 131. Also offered in Summer Session.

This introductory clinical course deals with health promotion and disease prevention with healthy and at-risk individuals in the community. Students will address the theoretical component of the course in weekly seminars. The clinical component focuses on the communication techniques and basic clinical skills and technologies used to assess health status, promote health and prevent illness. Students then integrate theoretical concepts and clinical skills and apply them in a variety of community settings, focusing on health promotion and disease prevention with healthy and at-risk individuals.

L/R 106. Concepts in Nursing: Healthy Life Styles II. (B) Sullivan-Marx; Quigley. Prerequisite(s): NURS 54, 104, 131, or by Permission. Corequisite(s): NURS 132. Also offered in Summer Session.

This course focuses on health promotion and disease prevention across the health-illness continuum for healthy and at risk individuals in the community. Students build on their previously mastered communication techniques and clinical skills to develop comprehensive assessment skills and to define needs among specific at risk groups in a family and community context.

In weekly seminars, students integrate theories of behavior and health, epidemiologic principles, clinical decision making, and critical thinking skills. Theories are applied utilizing case studies and data sources to develop health promotion and disease prevention strategies. A key component of the course is the development of communication and physical assessment skills and specified clinical techniques. The influence of gender, life span, culture, race, and ethnicity on health promotion and disease prevention is specifically addressed throughout the course.

112. Nutrition: Science & Applications. (C) Williams, J.; Griehs; Makris; Compher. For Non-Nursing Majors.

An overview of the scientific foundations of nutrition. The focus is on the functions, food sources and metabolism of carbohydrate, fat, protein, vitamins and minerals. Effects of deficiency and excess are discussed and dietary recommendations for disease prevention are emphasized. Current issues and controversies are

highlighted. Students will analyze their own dietary intakes and develop plans for future actions.

L/L 131. Human Anatomy and Physiology - Part A. (A) Scanga.

Prerequisite(s): NURS 40, NURS 41 or NURS 42. 4 h. lec. 2 h. lab. \$100 lab fee.

The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment.

L/L 132. Human Anatomy and Physiology - Part B. (B) Scanga.

Prerequisite(s): NURS 40, (41 or 42), 131. 4 h. lec. 2 h. lab. \$100 lab fee.

The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of each organ system are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment. Basic concepts of pathophysiology are introduced and applied to certain clinical disorders.

L/L 210. Nursing of the Childbearing Family: Theory/Clinical. (C) Guidera.

Prerequisite(s): NURS 104, 106, 131, 132.

Course content is based on a family centered approach in which the needs of the family members during various phases of the childbearing process are considered. The student is provided with a theory base necessary for the care of women, families, and their newborns. This theory base is organized according to the concepts of the person or family, environment, health and nursing and their relation to each other during childbearing. Using the nursing process, nursing strategies are developed for maintaining family members individually, for promoting optimal physiological and psychological functioning, and enhancing strengths within the family members and within the family unit.

Clinical experiences provide opportunities for application and integration of the theory base with parents and newborns. The student participates in clinical experiences in a variety of settings including acute care facilities, the community, and the Instructional Technology Center (ITC). The student will care for families with both simple and complex needs in all phases of the

childbearing cycle. During this course, the student will assist in managing the care of families during the antepartum, intrapartum, postpartum, and neonatal periods.

L/L 220. Nursing of Children: Theory/Clinical. (C) Vito.

Prerequisite(s): NURS 104, 106, 131, 132.

Using developmental and systems frameworks and a family centered approach, the health and illness needs of children from birth through adolescence, and the related needs of their caregivers are addressed. The student is provided with a theory base, as well as opportunities for providing care to children with acute and chronic health problems, and their families. Using critical thinking, including the nursing process, strategies are developed for optimizing health; maintaining individuality; promoting optimal developmental, physiological, and psychological functioning; and, for enhancing strengths within the family unit.

There are three primary foci for this course: taking care of sick children and families, child development, and professionalism.

230. Introduction to Statistics. (A)

Tulman; Pinto-Martin.

Application of statistical methods to health care data. Descriptive statistics, including correlation and simple linear regression. Models that underlie inference will be examined, including laws of probability and probability distributions for dichotomous and continuous data. Confidence intervals for percentages and means and testing hypotheses using normal and chi square distributions.

L/L 240. Nursing Care of Young and Middle Aged Adult: Theory/Clinical. (C) Walsh-Brennan. Prerequisite(s): NURS 104, 106, 131, 132.

The four central themes of nursing (person, environment, health and nursing) will form the basis for an exploration of the health and illness related issues facing young and middle aged adults. A functional status conceptual framework encompassing a biopsychosocial approach to nursing practice will be used. The course will present a comprehensive overview of functional status impairments, developmental concerns, assessment parameters, common health problems, treatment modalities, nutritional interventions, nursing care strategies, resources and barriers to treatment, psychosocial needs as well as ethical and cultural considerations. Clinical

application of content covered will occur in an acute care hospital setting.

Students will care for young and middle aged adults recovering from illness and injury and participate in one observational experience which may include the operating room/post-anesthesia care unit, pain experience team, hemodialysis, transplant team, HIV outpatient experience or ostomy experience.

242. Concepts of Pharmacology & Therapeutics. (A) Boullata.

Prerequisite(s): NURS 40, (41 or 42), 131, 132.

Essential concepts of pharmacology and pharmacodynamics are reviewed for the major drug classes. The biochemical and physiological effects of drugs are related to their therapeutic and toxicologic effects.

260. Research Methodology. (B)

Tulman; Lake. Prerequisite(s): NURS 230.

Focus of the course is on critiquing and using clinical nursing research in practice. Experimental and non-experimental research designs, sampling procedures including human subjects considerations, data collection methods, and interpretation of results will be discussed in the context of research utilization.

L/L 270. Nursing Care of the Older Adult: Theory/Clinical. (C) Zurakowski.

Prerequisite(s): NURS 104, 106, 131, 132.

This course is an overview that integrates selected theoretical information into research-based nursing care of the older adult. The overview includes principles of gerontological care; specialized ns; assessment of the older adult; effects of physiological aging changes on health and illness; psychosocial problems associated with aging, with special attention to family issues; pharmacological, nutritional, and ethical considerations; and the settings where older persons are the recipients of care. The clinical application takes place in an acute care setting and emphasizes transitional care for older adults across the health care continuum.

299. Independent Study in Nursing. (C)

Prerequisite(s): Permission of instructor and NURS 106.

An opportunity to develop and implement an individual plan of study under faculty guidance.

303. (HSOC332, NURS503)

Contemporary Issues in Human Sexuality and Health. (B) Guidera; Villari.

Course content emphasizes theories of sexual development and factors influencing sexual behavior within the continuum of health and illness. Common sexual practices of people are studied within the context of lifestyle and situational life crises. Concepts of normal sexual function and dysfunction are examined. Contemporary sexual issues are explored.

313. (NURS513) Obesity and Society. (A) Compher.

This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

315. (NURS515) Sociocultural Influences on Health. (A) Wall.

Foundational Course for Minor in Multicultural/Global Health Care.

This course is intended for students interested in U.S./Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture.

This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.

316. (NURS516) International Nutrition: Political Economy of World Hunger. (B) Chrzan.

Prerequisite(s): Junior-year or higher; at least one background course in nutrition, anthropology, sociology or economics.

A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition.

317. Migration and Health. (B) de Leon Siantz.

This course provides a critical and reality based approach to the complex phenomenon of migration and its impact on health. It includes an overview of the current knowledge about immigration trends, push- pull factors, culturally based health beliefs, health risks, health status, and protective factors among migrant families across the lifespan. The availability of health care resources at the local, state, and federal level for students interested in societal factors affecting health care will be critiqued. Current bi-national health initiatives, public policieand legislation developed to plan migrant health care, promote healthy behaviors, maintain border security, and reduce health risks for the migrant farm worker family will also be examined within a social justice framework. The migrant farm worker stream (Western, Midwestern, Pacific Northwest, and Eastern) from Mexico to communities in the United States will serve as an exemplar of international family migration.

SM 318. (GSOC318, HSOC341) Race, Gender, Class and the History of American Health Care. (A) Fairman.

For Benjamin Franklin Scholars & Nursing Honors Students.

This multidisciplinary course surveys the history of American health care through the multiple perspectives of race, gender, and class, and grounds the discussions in contemporary health issues. It emphasizes the links between the past and present, using not only primary documents but materials from disciplines such as literature, art, sociology, and feminist studies that relate both closely and tangentially to the health professions and health care issues. Discussions will surround gender, class-based, ethnic, and racial ideas about the construction of disease, health and illness; the development of health care institutions; the interplay between religion and science; the

experiences of patients and providers; and the response to disasters and epidemics.

Skills for document analysis and critique are built into the course as is the contextual foundation for understanding the history of health care. This course satisfies both the Society & Social Structures and the Histories & Traditions sectors for the Nursing Class of 2012 and beyond.

321. Psychiatric Mental Health Nursing: Theory. (A) Wall; D'Antonio.

Prerequisite(s): NURS 210, 220, 240, 270. Corequisite(s): NURS 322. Also Offered in Summer I.

This course examines limitations in psychosocial functioning of individuals and families that are due to psychiatric disorders. Content focuses on the biobehavioral basis of psychiatric disorders, as well as the psychosocial, developmental, and physiological needs of individuals and their families. Care of individuals having acute episodes and chronic problems are discussed.

322. Psychiatric Mental Health Nursing: Clinical. (A) Kurlowicz; Evans;

Wall; D'Antonio; Philmon. Prerequisite(s): NURS 210, 220, 240, 270. Corequisite(s): NURS 321. 0.5 c.u. Also offered in Summer I.

Clinical experience provides opportunities for application of theories and principles to persons with psychiatric disorders and their families. Student clinical experiences occur primarily in acute care settings with optional experiences in a variety of primary care, acute, and long-term care settings.

SM 323. Pathophysiology for Clinical Practice. (M) Tkacs. Prerequisite(s):

NURS 131, 132. This course uses group discussion of case studies to review common pathophysiological processes involving the major organ systems. Students are encouraged to draw on their knowledge of biochemistry ad metabolism, nutrition, anatomy, physiology, and microbiology as this knowledge is applied to complex disease processes. This integrated approach to understanding disease mechanisms will increase the student's ability to critically evaluate cases encountered in clinical course work and plan appropriate responses to improve outcomes.

SM 324. (GSOC324, HSOC324) Children's Health in the United States, 1800-2000. (A) Connolly. For

Benjamin Franklin Scholars & Nursing Honors Students.

This course explores the impact of historical ideas, events, and actors

pertaining to the history of children's health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children's health care policy and the delivery of care.

This course satisfies the History & Traditions Sector for Nursing Class of 2012 and Beyond.

330. Theoretical Foundations of Health Care Ethics. (C) Perlman; Ulrich.

The theoretical foundations of health care ethics including definitions of ethics, history of bioethics and nursing ethics, and the influence of religion, psychology of moral development and philosophy in the development of ethical theory. Nursing code of ethics, changing ideas in ethics, and discussion of the developing profession of nursing are included.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

331. (NURS531) Forensic Mental Health. (A) Brown, K.; Burgess; Akiyama.

Forensic mental health is the interface between the law and mental health. This course examines the components of human behavior that bring people into a judicial setting. Content will cover: criminal personalities, forensic interview, and the role of forensic psychiatry. Domestic violence offenders, sex offenders, stalkers, gang members, and offenders who commit homicide will be discussed. Definitions and dynamics of criminal motherhood and the psychodynamics of violent juvenile offenders will be presented. Use of the internet by offenders will also be discussed. This course also offers a field experience in which student's interview incarcerated individuals.

L/R 332. (NURS534) Forensic Science I. (B) Brown, K.; Burgess; Akiyama.

This course discusses the interface of law and science. Forensic science is the application of scientific principles in the legal arena. This course examines the contribution of forensic science to criminal and civil investigation. Crime scene analysis is accomplished via disciplines within forensic science. The role of the medical examiner, the structure and function of crime laboratories, death investigation and the role of health care personnel in forensic cases is discussed.

L/R 333. (NURS533) Victimology. (C) Brown, K.; Burgess; Akiyama. Summer Session I.

This course examines the wide range of victimization experiences from the perspective of the victim, their families and society. Crimes to be studied include workplace violence, corporate crime, robbery, burglary, assault, rape, stalking, domestic violence, homicide, suicide, elderly abuse and child sexual abuse and exploitation. The role of the medical examiner, health care providers and the FBI as they relate to victims of crime will be discussed. Emphasis will be given to exploring the elements of each crime and response patterns to victimizations. Services available to victims of crime will be discussed.

336. (NURS536) Current Topics in Pain. (A) Polomano. Prerequisite(s):

Junior or senior status in the nursing curriculum or by permission of the instructor.

This course focuses on biopsychosocial aspects of the pain experience and interpatient differences and how these form the basis for understanding pain perception, physiological and behavioral reactions and response to pain interventions. Content includes an integrated overview of the neurobiology of pain, measurement pain, pharmacological and nonpharmacological approaches for acute and chronic pain syndromes, health policy and care delivery models for improving pain assessment and management. Peripheral processing, neuroanatomical pathways and central integrating mechanisms involved in nociception and pain are examined. The role of individual biochemical mediators, neurotransmitters and neuromodulators are examined and linked to the effectiveness of pharmacological and alternative methods for pain control. The challenges of pain assessment and pain management in special clinical populations are considered. Relevant topics of special interest to course participants will be introduced for class discussion in the form of student presentations.

337. (NURS537) Foundations in Patient Safety. (A) Barnsteiner; Burke, K.

This course is designed to provide the student with a comprehensive multidisciplinary background in the science of patient safety. Historical perspectives, current understandings related to error management, and directions in health policy and research will be covered.

SM 338. (GSOC338, HSOC338, NURS638, NURS838) "Sweet Little Old Ladies and Sandwiched Daughters": Social Images and Issues in our Aging Society. (B)

Kagan. Third or fourth year undergraduate students in any major BFS, JWS, and NUHP students.

This course is an intensive and focused introduction to social gerontology as a trans-disciplinary lens through which to examine aspects of social structure, actions, and consequences in an aging society. A variety of sources are employed to introduce students from any field focused on human behavior and interaction to classical notions of social gerontology and current scholarly inquiry in gerontology. Field work in the tradition of thick description creates a mechanism to engage students in newly gerontological understandings of their life worlds and daily interactions. Weekly field work, observing aspects of age and representations of aging and being old in every day experiences forms, is juxtaposed against close critical readings of classical works in social gerontology and current research literature as well as viewings of film and readings of popular literature as the basis for student analysis. Student participation in the seminar demands careful scrutiny and critical synthesis of disparate intellectual, cultural, and social perspectives using readings and field work and creation of oral and written arguments that extend understandings of the issues at hand in new and substantive ways. Emphasis is placed on analysis of field work and literature through a series of media reports and a final term paper.

Creative approaches to identifying literature, analyzing field work and representing critique are encouraged. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

SM 339. (GSOC339, HSOC339) "Aging, Beauty, and Sexuality": Psychological Gerontology in the 21st Century. (B) Kagan. Third or fourth year undergraduate students in any major BFS, JWS, and NUHP students.

This honors course examines the psychological gerontology of advancing age and identity in the 21st century. Examination emphasizes gendered notions of beauty and sexuality in ageing and the life span to foster discourse around historical notions and images of beauty and ugliness in late life in contrast to contemporary messages of attractiveness and age represented by both women and men. The course is designed to create

intellectual foundations as place from which to critique socially mediated and personally conveyed images and messages from a variety of media and their influence on intrapersonal and interpersonal constructions and social processes. Contemporary and historical ideas encompassing stereotypical and idealized views of the older person are employed to reflect dialogue around readings and field work.

Classical and contemporary scholarship from gerontology, anthropology, biomedicine and surgery, nursing, and marketing among other disciplines as well as select lay literature are critiqued and compared with interpretation of field work to build understandings of diverse individual, familial, and cultural impressions of aging and identity. Skills for participant observer field work in the tradition of thick description are built to allow reflection and analysis of discourse about aging, beauty, sexuality, and other relevant aspects of human identity. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

340. Nursing in the Community: Theory. (A) McCauley, L.; Lewis, L. Prerequisite(s): NURS 210, 220, 240, 270, 321, 322. Corequisite(s): NURS 341. Also offered in Summer II.

This course will provide an introduction to community health nursing in the context of the public health paradigm. Through a series of lectures and discussions, students will identify applications of the public health paradigm to community-based nursing practice with individuals, families, and populations. Topics include the history of public health, the core public health sciences, environmental and occupational health, oral health, global health and the social determinants of health, health promotion, as well as prevention and intervention approaches to chronic and infectious diseases and injuries.

341. Nursing in the Community: Clinical. (A) Bonaduce; Staff. Prerequisite(s): NURS 210, 220, 240, 270, 321, 322. Corequisite(s): NURS 340. .5 c.u. Summer II.

Clinical practice promotes synthesis of community health nursing theory through provision of nursing care to clients in community settings. Implementation and evaluation of nursing care is emphasized for clients in the community with common functional and physiological problems.

Synthesize public health strategies through clinical practice in community settings focusing on health promotion,

disease prevention and care for clients, families and communities across the lifespan.

356. Case Study: Culture of Birth. (B) McCool. Prerequisite(s): NURS 210, 220 or Permission of Instructors.

This course will explore the cultural context of birth and the activities of women and professionals and/or attendants in meeting the health care needs of pregnant women. The history of caring for women at birth, international health care, cultural mores/societal values, place of birth, psychosocial factors, ethical decision-making and the role of technology are content areas that will be discussed.

359. (NURS559) Case Study: Quality Care Challenges in an Evolving Health Care Market. (B) Jones, Carol. Prerequisite(s): NURS 104, 106.

Quality care is an issue for consumers, providers, purchasers, and policy makers. This case study examines the multiple challenges that surround the quality of health care in the evolving United States health care marketplace. Through classroom discussion and special project experience, the student will become familiar with the concept of health care quality and approaches to the measurement and management of quality. Using Donabedian's construct of structure, process and outcomes, strategies to improve quality while containing or reducing costs are reviewed, including the contributions of clinical practice guidelines. The evolving dominant structures for providing health care services, managed care and integrated delivery systems, and their approaches to quality management and reporting will be explored.

360. Case Study: Nursing Practice with HIV+ Patients. (A) Vincent. Prerequisite(s): NURS 104, 106.

This course is directed at the need to increase nursing majors knowledge and clinical expertise in the care of persons with HIV/AIDS. Hands on clinical practice with nurses who are AIDS experts will be combined with seminars that provide epidemiologic, clinical assessment, infection control, symptom management, patient teaching, psychosocial, ethical, cultural, political, and policy information.

361. Case Study: Breast Feeding & Human Lactation. (A) Spatz. Prerequisite(s): NURS 104, 106.

Human milk is recognized universally as the optimal diet for newborn infants. The health benefits of breastfeeding are so significant that a National Health Objective

set forth by the Surgeon General of the United States for the year 2010 is to increase the proportion of mothers who breastfeed their babies in the postpartum period. Through classroom and clinical experiences, this course will provide an in depth examination of the anatomy and physiology of lactation, essential aspects of establishing and maintaining lactation, and the nurses' role in counseling the breastfeeding family. Emphasis will be placed on current research findings in the content area.

362. (NURS562) Case Study: Use of Complementary and Alternative Medicine (CAM). (K) Cuellar. Prerequisite(s): NURS 104; NURS 106.

This course will examine the use of complementary and alternative medicine (CAM) in health promotion and disease prevention, as well as in acute and chronic health conditions, through evidence-based research and practice. Implications of CAM on culture, health disparities, society, economics, safety, legal, ethical, and health policy issues will be explored and discussed.

363. Case Study: Aggressive Behavior in Healthcare: Assessment Prevention and Treatment. (B) Coleman. Prerequisite(s): NURS 104, 106.

The escalating incidence and prevalence of aggression in the health care setting requires that providers acquire a new set of pragmatic competencies for managing its complex sequelae. This course presents theoretical frameworks for understanding, predicting, preventing and responding to aggressive behaviors across the life span. Historical, bio-behavioral, social, and cultural explanations for aggression will be synthesized and analyzed within the context of multiple points of entry into the health care system across clinical settings. Personal self-awareness, debriefing, and stress management techniques exemplify techniques to prevent untoward consequences in providers. This course also uses exemplars and a range of experiential learning strategies, including skill development, situation analysis, concept mapping, unfolding case studies and cooperative learning, to examine the assessment, prevention, treatment, and response to aggressive behavior in patients and management of its consequences in self and others.

364. Case Study: Cancer. (B) Hollis. Prerequisite(s): NURS 104, 106.

This elective case study offers students the opportunity to learn about the etiology, diagnosis, and management of cancer

across the lifespan. Building on existing clinical knowledge and skills, students will explore cancer care from the perspectives of prevention, early detection, treatment, survivorship, and death. Observational clinical experiences and selected case studies will enhance students' understanding of patients' and families' cancer experience.

365. Case Study: Case Analysis in Clinical Nutrition. (B) Williams, J.
Prerequisite(s): NURS 104, 106.

This course is designed for present and future nurse professionals who wish to increase their knowledge of nutrition and expertise and application of knowledge to achieve optimal health of clients and themselves. Principles of medical nutrition therapy in health care delivery are emphasized in periods of physiologic stress and metabolic alterations. Individual nutrient requirements are considered from pathophysiologic and iatrogenic influences on nutritional status. Nutritional considerations for disease states will be explored through epidemiological, prevalence, incidence, treatment and research data. Understanding application of medical nutrition therapy are included through case analysis and field experiences

366. (NURS566) Case Study: Living with Dementia. (M) Strumpf; Kagan; Cotter. Prerequisite(s): NURS 104, 106 or Permission from Instructor.

Living with Dementia provides a two fold experience: guided observation of an individual with dementia and a seminar series on dementia - neuropathology, assessment, care and treatment. Students will interact with a person with AD and his/her caregiver. The goal is to understand the demented individual's functional abilities and impact of environment on performance and behavior. A further goal is to develop an appreciation of the primary caregiver's role and the strengths and limitations of community support systems. Each team of two to three will be assigned a family unit for study. In so far as possible, teams will be interdisciplinary.

367. (NURS557) Case Study: Principles of Palliative Care. (A) Ersek. Prerequisite(s): NURS 104, NURS 106.

This course prepares students to collaborate effectively with an interdisciplinary team in assessing patients and families, and planning and evaluating palliative and end of life care for diverse populations with progressive illness in multiple health care settings. Course content and assignments focus on the nurse's role in addressing the

complex assessment and responses to the psychosocial and spiritual concerns of patients and caregivers across the trajectory of advanced illness.

368. (NURS550) Case Study: Home Health Care. (A) Doyle. Prerequisite(s): NURS 104, NURS 106.

This course examines the major aspects of home-based care across patients' life spans from acute to long term care. New trends, advances, and issues in home management of complex conditions, innovative delivery systems and legal, ethical and policy consideration will be explored.

L/R 370. Advanced Clinical Practicum in Nursing: Theory. (C)

Clarke; Sochalski. Prerequisite(s): NURS 321, 322, 340, 341. Corequisite(s): NURS 371.

This final clinical nursing course focuses on the integration and synthesis of scientific knowledge with clinical nursing practice and the development of the professional nursing role. Building on content from prior courses, students will develop an understanding of management of patient care from the perspective of the individual client and family to groups of clients and eventually to management of health care systems. Principles of leadership, accountability and change will be integrated throughout. The process of transition from the student role to that of the professional nurse will be facilitated through discussion of organizational systems, professional issues, mechanisms for evaluation of care and the role of the nurse as patient advocate and change agent.

Students will select from several practice options for the clinical content of the course. Clinical seminar content will build on core content and will provide an exposure to advanced nursing concepts within the area of specialty practice. Application of conceptual models to clinical practice will be discussed and nursing research will be integrated throughout the course.

371. Advanced Clinical Practice: Clinical. (C) Clarke; Sochalski; Rogers; Staff. Prerequisite(s): NURS 321, 322, 340, 341. Corequisite(s): NURS 370.

This final clinical nursing course focuses on the integration and synthesis of scientific knowledge with clinical nursing practice and the development of the professional nursing role. Students select from a variety of options a primary, secondary or tertiary care setting in which to practice. Students will examine nursing care planning and delivery from the standpoint of at least one conceptual model.

They will increase their skills in patient assessment, planning, and providing the full range of direct and indirect nursing care and evaluating the outcome of care. To the extent that it is possible within the clinical agency, they will provide care in more than one patient care delivery setting, to identify how nursing care requirements changes as the acuity or the site of care delivery changes. Principles of leadership, accountability and change will be applied to clinical practice as the student begins to operationalize the professional nursing role. Emphasis will be placed on the nurse as a knowledgeable provider of health care who is both a change agent and client advocate.

375. Nutrition Throughout The Life Cycle. (A) Berman-Levine.

Prerequisite(s): NURS 54, or NURS 112, comparable nutrition course, or approved introductory course.

Understanding and meeting nutritional needs from conception through adulthood will be addressed. Nutrition-related concerns at each stage of the lifecycle, including impact of lifestyle, education, economics and food behavior will be explored.

376. Issues in Nutrition, Exercise, and Fitness. (A) Volpe. Prerequisite(s): NURS 54 or NURS 112.

An examination of the scientific basis for the relationship between nutrition, exercise and fitness. The principles of exercise science and their interaction with nutrition are explored in depth. The physiological and biochemical effects of training are examined in relation to sports performance and prevention of the chronic diseases prevalent in developed countries.

385. Senior Inquiry. (C) Naylor. Prerequisite(s): NURS 321, 322, 340, 341, or Permission of Advisor and Instructor.

Provides the senior nursing student the opportunity to explore, analyze, and formulate implications of the research and related literature on a selected topic under the guidance of a faculty advisor. A detailed scholarly paper in APA format will be written by the student.

SM 386. Nursing Honors Research Project. (M) Kagan; McCauley, K. Prerequisite(s): NURS 260 or NURS 637, NURS 385H. Enrollment in Nursing Undergraduate Honors Program Required.

This course is an advanced seminar for research and scholarship to be taken by honors students in nursing. Enrollment is concurrent with implementation of the individual student's honors project. Practical considerations in carrying out

such a project, including scholarly approach and scientific integrity as well as scholarly writing and dissemination will be discussed and illustrated, using exemplars and student projects. The various phases of students' projects will be used as launching points for discussions and to complement students' work with their faculty supervisors. Paths and planning for careers in nursing and related disciplines and the idea of scholarship and research trajectories will be developed throughout the course.

399. Faculty Directed Research Practicum. (C) Prerequisite(s):

Permission of instructor and completion of a research course (NURS 260 or NURS 637).

SM 400. Advances In Health Systems Research And Analysis. (K) Sochalski; Clarke. by Permission Only.

Capstone Course for NURS/WH Joint Degree Students.

500. (PUBH502) Introduction to Principles and Methods of Epidemiology. (B) Pinto-Martin.

Prerequisite(s): Elementary statistics.

This course provides an introduction to epidemiologic methods and overview of the role of epidemiology in studies of disease etiology and in the planning, delivery and evaluation of health services. The population-based approach to the collection and analysis of health data will be emphasized throughout the course. Through textbook reading, problems sets, class discussion and review of the recent literature, students will become acquainted with the basic designs of epidemiologic studies in theory and in practice. Students will develop the basic skills necessary to use epidemiologic knowledge and methods as the basis for scientific public health practice.

This course satisfies the Global & Cultural Studies Sector for Nursing Class of 2012 and Beyond.

501. Advanced Health Communications: I. (A) Buchheit.

Advanced Health Communication: I provides foundation training in academic skills and in those linguistic features of English which are relevant to those skills. The course focuses on reading strategies, academic writing conventions, discussion skills, and critical thinking. In addition to these academic skills, the participants work on general English pronunciation, accurate grammar, and vocabulary.

This course satisfies the Arts & Letters Sector for Nursing Class of 2012 and Beyond.

502. Advanced Health Communications: II. (B) Buchheit.

Advanced Health Communication: II continues the work in Academic English started in Advanced Health Communication: I. In addition, the course provides more intensive training in the overall intelligibility needed to participate effectively in classes and in clinical settings. The focus is on accurate speech production, understanding different dialects and varieties of English, and understanding the way English is used in various social and professional settings.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

503. (HSOC332, NURS303) Contemporary Issues in Human Sexuality and Health. (B) Guidera;

Villari. Junior and Senior undergraduates. Open to all graduate students.

Emphasizes the theories of sexual development and sexual behavior within the continuum of health and disease. Common sexual practices of people are studied in relation to life-style and/or situational life crisis. Contemporary issues in sexuality and health will be examined.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

504. Advanced Health Communications: III. (A) Buchheit.

Advanced Health Communications: III focuses on the language used by patients and caregivers in clinical context, including receiving and giving information and building relationships. Work on accurate pronunciation is continued, and there is an increased focus on colloquial vocabulary. Participants look at the ways that culture is reflected in concepts of health, treatment, and healing, and they build skills in 'reading' both language-based and social-based clues to attitude and belief.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

508. Applied Pharmacology in Nursing Practice. (C) Boullata.

Prerequisite(s): NURS 607.

Principles of clinical pharmacology are applied to the nursing care of family members. Proper prescribing and monitoring procedures for the various drug regimens used to treat various disease states are reviewed. Problems inherent in self-medication, overuse and abuse of drugs are also considered.

509. The Medically Fragile Child. (L) Barnsteiner; Howe. Summer Session II.

This course is designed to assist prospective practitioners develop advanced skills in identifying the needs and interventions for medically fragile neonates, children and their families.

511. Loss, Grief and Bereavement. (L) Gillis-Donavan. Summer Session II.

Loss, grief and bereavement are pervasive aspects of the human experience. The content of this course provides a basis both for personal development and professional growth. Through a series of seminars, key issues surrounding loss, death, dying, grief and bereavement will be examined.

513. (NURS313) Obesity and Society. (A) Compher. Prerequisite(s):

Undegraduates by permission of instructor.

This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

515. (NURS315) Sociocultural Influences on Health. (A) Wall.

This course is intended for students interested in U.S./Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture.

This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.

516. (NURS316) International Nutrition: Political Economy of World Hunger. (B) Chrzan. Graduate Students Only.

A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

517. Advanced Nutrition and Metabolism. (B) Compher; Bloedon. Prerequisite(s): Nurs 54 or Nurs 112 (Students with extensive background in life sciences by permission of faculty).

Essentials of nutritional biochemistry from the molecular level to the level of the whole human organism. Nutrient functions and inter-relationships are explored with attention to the association between nutrients and disease risk. Topics include energy metabolism and regulation of fat storage, new functions of vitamins and minerals, gene nutrient interactions and current research topics.

518. (GSOC518) Nursing, Health and Illness in the U.S., 1860-1985. (B) Fairman; Wall.

This course uses nursing's history as a framework for analyzing gendered themes in health and health care. It considers the influence of gender on class based, ethnic, and racial ideas about health and illness; the development of health care institutions; the interplay between religion and science; the experiences of patients and providers; and the creation of voluntary and tax-supported health initiatives.

This course satisfies the History & Traditions Sector for Nursing Class of 2012 and Beyond.

SM 521. Current Topics in Nutrition. (H) Compher; Bloedon; Berman-Levine.

The objective of the course is to integrate the nutrition knowledge obtained from previous course work in nutrition and provide the student the opportunity to explore, analyze and formulate implications of the research and related literature on a self-selected topic under the guidance of the faculty coordinator. Current topics and controversies in nutrition will be discussed weekly. Readings will be assigned in coordination with each discussion topic and students will be required to seek out other sources of information to add to the class discussion. Topics will change from year

to year to reflect the most recent interests and issues.

525. Ethical Aspects of Health and Technology. (B) Ulrich.

Interdisciplinary approach to the study of the interface between ethics and law in the provision of health and illness care. This course draws upon the disciplines of philosophy, law, biomedical engineering and nursing in examining such concepts as the use/nonuse of biomedical technology, who and how one decides what shall be done for a given "patient," and the "rights" and responsibilities (accountability) of all persons involved in health/illness care decisions. The interplay of ethical theory, personal value systems, law and technology will be stressed throughout. Lectures, seminars and case studies will be used.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

531. (NURS331) Forensic Mental Health. (A) Brown, K.

Forensic mental health is the interface between the law and mental health. This course examines the components of human behavior that bring people into a judicial setting. Content will cover: criminal personalities, forensic interview, and the role of forensic psychiatry. Domestic violence offenders, sex offenders, stalkers, gang members, and offenders who commit homicide will be discussed. Definitions and dynamics of criminal motherhood and the psychodynamics of violent juvenile offenders will be presented. Use of the internet by offenders will also be discussed. This course also offers a field experience in which student's interview incarcerated individuals.

532. Cognitive Behavior Strategies in Health Care. (B) Kuehlwein.

Cognitive therapy will be studied as it has been adapted to treat a broad spectrum of clinical disorders including depression, anxiety, phobias, substance, obesity, marital problems, sexual dysfunction, and psychosomatic disorders. Students will have an opportunity to study and observe the crucial link between thoughts and emotions and the sense of competency patients can develop through self-help techniques. The course utilizes didactic, experiential and observational techniques.

L/R 533. (NURS333) Victimology. (C) Brown, K. Offered Fall, Spring & Summer I.

This course examines the wide range of victimization experiences from the perspective of the victim, their families and

society. Crimes to be studied include workplace violence, corporate crime, robbery, burglary, assault, rape, stalking, domestic violence, homicide, suicide, elderly abuse and child sexual abuse and exploitation. The role of the medical examiner, health care providers and the FBI as they relate to victims of crime will be discussed. Emphasis will be given to exploring the elements of each crime and response patterns to victimizations. Services available to victims of crime will be discussed.

L/R 534. (NURS332) Forensic Science I. (B) Brown, K.

This course discusses the interface of law and science. Forensic science is the application of scientific principles in the legal arena. This course examines the contribution of forensic science to criminal and civil investigation. Crime scene analysis is accomplished via disciplines within forensic science. The role of the medical examiner, the structure and function of crime laboratories, death investigation and the role of health care personnel in forensic cases is discussed.

536. (NURS336) Current Topics in Pain. (B) Polomano. for Graduate Students and Junior and Senior Undergraduate Nursing Students (with Course Faculty Permission).

This course focuses on biopsychosocial aspects of the pain experience and interpatient differences and how these form the basis for understanding pain perception, physiological and behavioral reactions and response to pain interventions. Content includes an integrated overview of the neurobiology of pain, measurement pain, pharmacological and nonpharmacological approaches for acute and chronic pain syndromes, health policy and care delivery models for improving pain assessment and management. Peripheral processing, neuroanatomical pathways and central integrating mechanisms involved in nociception and pain are examined. The roles of individual biochemical mediators, neurotransmitters and neuromodulators are examined and linked to the effectiveness of pharmacological and alternative methods for pain control. The challenges of pain assessment and pain management in special clinical populations are considered. Relevant topics of special interest to course participants will be introduced for class discussion in the form of student presentations.

537. (NURS337) Foundations in Patient Safety. (A) Barnsteiner; Burke, K. For Graduate Students Only - Undergrads take NURS 337.

This course is designed to provide the student with a comprehensive multidisciplinary background in the science of patient safety. Historical perspectives, current understandings related to error management, and directions in health policy and research will be covered.

540. Current Issues In Health and Social Policy. (L) Sochalski.

Analysis of key contemporary issues in health and social policy that will provide students with a deeper understanding of the design and structure of the U.S. health care system, the policy initiatives that have shaped it, and the roles of the government, the private sector, and consumers and advocacy groups in setting the policy agenda. Seminars will examine the origins of each issue, the policies enacted and their effects, both intended and unintended, and will propose and debate the merits of alternative policy solutions. The role of health services and policy research in informing the policy debate and directions will be highlighted.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

545. Maternal and Infant Care in the Americas. (B) Guidera; Durain.

Registration By Permission of Instructor.

This clinical elective will provide an intensive historical, sociopolitical, and cultural perspective of health and health care delivery in the Americas with a special emphasis on Latin America and the Caribbean. Classroom, direct clinical care and field experiences are designed to provide students with a broad view of the history and culture system of the country of focus. The delivery of health care to women and children will be explored from a sociopolitical, cultural and historical context. Service learning experiences are an integral component of this course. The course includes 5 seminars on campus and 10-14 days on site in the country of focus. The country of focus may vary each semester.

548. Negotiation for Health Care Change Agents. (B) Burke, K.,.

Prerequisite(s): Undergraduates must have permission of instructor.

This course examines the process that leads to change in health care settings and situations. Students will develop skills that lead to effective negotiations in interpersonal and organizational settings.

Included in the discussion are: concepts of organizational structure and power, negotiating in difficult situations, and the role of the health care professional in negotiation and change. The course also examines techniques leading to successful implementation of negotiated change in the practice setting.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

549. Quality Improvement Process in Healthcare. (B) Burke.

This course is designed to introduce the student to the quality improvement process in healthcare. The key programs and tools used to improve the quality of healthcare will be addressed. The role of the nurse executive in leading a healthcare organization for continual improvements will be examined. Students will analyze several case studies and participate in process improvement exercises and projects. The student does not need to have any prior experience with formal improvement methods.

550. (NURS368) Home Health Care Concepts: Mgmt. & Delivery of Community-Based Care. (A) Buhler-Wilkerson.

This course examines the major aspects of home-based care across patients' life spans from acute to long term care. New trends, advances, and issues in home management of complex conditions, innovative delivery systems and legal, ethical and policy consideration will be explored.

551. Applied Health Informatics. (A)

Bowles. Prerequisite(s): Experience in using the Internet to retrieve information. Basic knowledge of Microsoft Access is expected.

Catalogue Description: This course is designed to address issues related to the impact of information technology on health care practitioners and consumers of all ages. Students will learn about and gain experience with practical applications of information technology (Access, handheld devices, telehealth, Internet resources) that improve the quality of health care communication and delivery and facilitate health care research. Class projects include working with clinical databases and evidence based information sources.

555. (GSOC555) Women and Incarceration. (A) Brown, K.; Guidera; Durain. Registration By Permission Only.

This elective course will afford students the opportunity to participate in service learning and health education in the

Philadelphia prison system, in particular to incarcerated women. Students will explore the social and historical framework and trends in the incarceration of women and the health status of incarcerated women. During seminar discussions with experts in the criminal justice system and with staff and inmates at Riverside, the Philadelphia women's jail, students will explore the health, health care and health care needs of incarcerated women and identify specific areas in need of attention, especially with regard to health education. In collaboration with Philadelphia jail staff and female inmates, students will design and implement a health education project.

557. (NURS367) Principles of Palliative Care. (A) Ersek.

Prerequisite(s): Undergraduate Students Need Permission. for Graduate Students and Junior and Senior Undergraduate Nursing Students (with Course Faculty Permission).

This course examines national and global perspectives and clinical issues in the delivery of palliative care with diverse populations in multiple health care settings. Students focus on the care of persons with life-threatening, progressive illness, emphasizing respect for patients' and families' beliefs, values, and choices. Students also explore psychosocial and spiritual dimensions of palliative care. Historical, sociocultural, economic, legal, and ethical trends in palliative care are discussed. Factors affecting health care systems and societal attitudes are considered in evaluating the delivery of care during advanced illness and at the end of life. Students engage in the critical analysis of literature, research, and observational experiences concerning biopsychosocial needs of patients and families. Students acquire competencies in patient/family assessment, communication, decision-making, and interdisciplinary collaboration in palliative care.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

559. (NURS359) Quality Care Challenges in an Evolving Health Care Market. (J) Lang.

Quality care is an issue for consumers, providers, purchasers, and policy makers. This case study examines the multiple challenges that surround the quality of health care in the evolving United States health care marketplace. Through classroom discussion and special project experience, the student will become familiar with the concept of health care quality and approaches to the measurement

and management of quality. Using Donabedian's construct of structure, process and outcomes, strategies to improve quality while containing or reducing costs are reviewed, including the contributions of clinical practice guidelines. The evolving dominant structures for providing health care services, managed care and integrated delivery systems, and their approaches to quality management and reporting will be explored.

560. Pediatric Pharmacology and Therapeutics in Nursing. (B) Boullata; O'Neill. Prerequisite(s): NURS 684.

Principles of clinical pharmacology are applied to the nursing care of pediatric patients. Prescribing and monitoring procedures for the drug regimens used to treat pediatric patients are reviewed. Problems inherent in misuse of commonly used drugs are also considered.

562. (NURS362) Case Study in Complementary and Alternative Medicine. (K) Cuellar. Undergrads Need Permission.

This course will examine the use of complementary and alternative medicine (CAM) in health promotion and disease prevention, as well as in acute and chronic health conditions, through evidence-based research and practice. Implications of CAM on culture, health disparities, society, economics, safety, legal, ethical, and health policy issues will be explored and discussed.

566. (NURS366) Living with Dementia. (M) Strumpf; Cotter.

Living with Dementia provides a two fold experience: guided observation of an individual with dementia and a seminar series on dementia - neuropathology, assessment, care and treatment. Students will interact with a person with AD and his/her caregiver. The goal is to understand the demented individual's functional abilities and impact of environment on performance and behavior. A further goal is to develop an appreciation of the primary caregiver's role and the strengths and limitations of community support systems. Each team of two to three will be assigned a family unit for study. In so far as possible, teams will be interdisciplinary.

567. An Evidence-based Approach to Managing Symptoms in Advanced Illness. (B) Meghani; Ersek.

Prerequisite(s): Junior and Senior undergraduate students may be admitted with course faculty permission.

This course uses an evidence-based approach towards systematic assessment

and management of common symptoms and symptom clusters accompanying progressive, life-limiting illnesses within a framework of nationally recognized standards and guidelines for palliative and end-of-life care. Students are prepared to apply principles of palliative management to diverse patient populations across clinical settings including acute, primary, long-term, and community care. Refer to course syllabus or email course faculty for respective requirements.

L/R 570. (PUBH500) Introduction to Public Health. (A) McCauley, L.; Morrissink; Cotroneo. Prerequisite(s): Undergrads Need Permission.

This course will provide a foundational overview of the field of public health and grounding in the public health paradigm. Content will include the history of public health, an introduction to the basic public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental public health, policy and management and prevention of chronic and infectious diseases and injuries, future directions for public health and an introduction to issues in international health, ethics, context analysis (specifically the notion of urban health), health promotion and disease prevention paradigms.

577. Advanced Practice Issues for Palliative Care Nurses. (L) Ersek; Meghani; Polomano. Prerequisite(s): NURS 557. Undergraduates Need Permission.

This course provides an in-depth examination of 1) key practice, policy, and ethical issues affecting the delivery of palliative care and 2) the responsibilities of advanced practice nurses (APRN) providing care to patients with progressive, life-limiting illness and their families. Learning experiences will focus on conducting patient/family conferences; examining selected ethical issues in palliative care; analyzing organizational, economic and health policy issues that affect the delivery of hospice and palliative care; exploring current and emerging models of palliative care delivery; and creating approaches to enhancing continuity of palliative care across settings. Students will choose assignments to meet their professional goals.

580. Pharmacology of Anesthesia and Accessory Drugs I. (A) Magro; Lynn. Prerequisite(s): NURS 617.

This course explores the various routes of anesthetic administration addressing the potential benefits and risk of each. Special

emphasis is placed on specific anesthetic agents and their appropriate use. The responses and common complications associated with these agents are discussed.

588. (GSOC588) The Politics of Women's Health Care. (B) McCool; Durain; Lewis, L.

This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

589. Mind-Body Medicine and Mindfulness Meditation: Theory and Practice. (B) Stringer; Baime. Junior and Senior Undergraduates and Graduate Students.

This course, for nursing and medical students explores theory and research about physiologic stress responses as the basis for a standardized, replicable mindfulness-based stress reduction intervention. Mindfulness-based stress reduction intervention is a previously standardized, evidenced based, clinical intervention that provides a systematic approach to develop enhanced awareness of moment-to-moment experience (mindfulness) of perceptible mental processes. The concept of the stress reaction, the biology of the effects of stress on the body, mindfulness-based communication, and its role in healing experienced by patients, will be critically examined in a culturally relevant context.

600. Curriculum & Teaching in Advanced Practice Nursing & Midwifery. (A) McHugh; Keim;

Kershbaumer. Prerequisite(s): Baccalaureate in Nursing plus a Master's Degree in Nursing or in a Health Related Area. Current Master or Doctoral Students with permission of the Program Director and the Course Director. 2 c.u.

This course is designed to provide expert advanced practice nurses and midwives, currently holding faculty positions, with a theory and practice base to promote excellence in classroom teaching. The focus of the course is theories and principles of teaching and learning related to adult learning. Personal and educational philosophies and their relationship to the learner are explored. Basic components of curriculum development are integral to the course. A designated mentor teacher at the home university with a Masters or Doctorate degree, nominated by the student and approved by the Course Director, works in partnership with the student and Penn faculty.

601. Clinical Teaching & Evaluation for Advanced Practice Nurses & Midwives. (B) McHugh; Keim;

Kershbaumer. Prerequisite(s): NURS 600.

This course builds on the knowledge attained in NURS 600 as well as the knowledge and skills of the expert clinician. The focus of the course is clinical teaching for the advanced practitioner, preceptor preparation and issues related to establishing and maintaining clinical sites. Academic responsibilities of faculty members, ethical and legal issues in education and educational effects of professional trends, health care policies and rapidly changing environments are also explored.

L/R 607. Advanced Physiology and Pathophysiology. (A) Lafferty / Tkacs.

Prerequisite(s): Completion of undergraduate courses that include Biochemistry, Nutrition, Anatomy and Physiology or permission of the instructor.

This course integrates advanced pathophysiology and clinical implications for graduate nursing students. Recent scientific advances will be discussed with application to new approaches to disease and symptom management. The interrelationships between clinical pathophysiology and basic physiology and genetics are emphasized.

610. Concepts in Healthcare Economics. (B) Piper, A.

This course examines health care from an economic perspective tailored for the nurse

manager and executive. Emphasis is on the allocation of health care resource policies in the United States with examination of different health care programs. Within the health care industry, focus is on public and private health care funding in addition to the role of managed care systems with relation to financing and delivery of health services.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

611. Conceptual & Theoretical Foundations of Advanced Nursing Practice. (M) Breckenridge.

Exploration of the conceptual-theoretical basis of nursing. Analysis and evaluation of conceptual models of nursing and nursing theories with emphasis on implications for nursing practice.

617. Principles of Nurse Anesthesia Practice I. (L) Magro; Lynn. 12-Week Summer Session.

This course explores the various routes of anesthetic administration addressing the potential benefits and risk of each. Special emphasis is placed on the monitoring of patients during the intra-operative phase. The responses to the common complications that occur during the intra-operative phase are discussed utilizing a case study approach.

618. Principles of Nurse Anesthesia Practice II. (B) Magro; Lynn.

Prerequisite(s): NURS 617.

This course explores the indications, contraindications and considerations regarding the administration of regional, epidural and spinal anesthesia. Anatomical and physiological considerations regarding the administration, monitoring and reversing of anesthetic agents are reviewed. Common side effects and adverse effects are discussed and the effective treatments of each are explained. Factors leading to substance abuse are identified and discussed. Opportunities to practice spinal needle placement and administration of anesthetics are provided in the simulation laboratory.

619. Principles of Nurse Anesthesia Practice III. (L) Magro; Lynn; Winner.

Prerequisite(s): NURS 618. 12-Week Summer Session.

This course explores the special considerations of pediatric, obstetric, and geriatric patients undergoing anesthesia. The pre-anesthesia assessment of these patients is discussed with particular emphasis on the commonly occurring complications and how to anticipate and

manage them. Monitoring for anesthetic effect, hemodynamic effect and potential adverse reactions is reviewed using a case study approach

620. Principles of Nurse Anesthesia Practice IV. (A) Magro; Lynn.

Prerequisite(s): NURS 619.

This course provides a systems approach to examining specialty surgical procedures and the anesthesia requirements for each. Analysis of the pre-anesthesia assessment, the intraoperative monitoring and the post-anesthesia care required for patients undergoing the surgical procedure will be presented. Population specific considerations will be emphasized.

621. Principles of Nurse Anesthesia Practice V. (B) Magro; Lynn.

Prerequisite(s): NURS 620.

This course provides a systems approach to examining specialty surgical procedures and the anesthesia requirements for each. Analysis of the pre-anesthesia assessment, the intraoperative monitoring and the post-anesthesia care required for patients undergoing the surgical procedure will be presented. Population specific considerations will be emphasized.

622. Pathogenesis of Mental Disorders Across the Lifespan. (A)

Hanrahan; Tkacs.

The conceptual and practice application of brain-behavior relationships for individuals with mental health and psychiatric conditions is developed in this course. Students learn interview and differential diagnostic skills to screen for neuropsychological etiologies of mental disorders such as schizophrenia, bipolar disorders, mood disorders and anxiety disorders. The course reviews specific theories of etiology and diagnostic classifications found in the Diagnostic and Statistical Manual of Mental Disorders-Fourth Edition- Text Revision (DSM IV-TR). Students develop the ability to make critical decisions as they learn finer points of differential diagnosing of mental disorders using a case based method of learning, allowing students to focus on specific populations such as aged, adults, adolescents, and children.

625. Clinical Modalities Across the Life Cycle in Advanced Practice Psychiatric Mental Health Nursing. (A)

Coleman, C. Prerequisite(s): NURS 622.

Crisis intervention, brief psycho-therapy, group processes and practices, milieu therapy, and intervention with families are

examined as they relate to nursing practice in mental health.

626. Family and Organizational Systems Across the Life Span. (L)
Gillis-Donovan. Summer Session I.

This course presents Bowen Family Systems Theory as it applies to families over the life and organizations over time. This is a theoretical course whose purpose is to provide the student with a broad, systemic perspective on human functioning. The course begins with a detailed presentation of Systems Theory, from both a family and organizational perspective. As presented there is a continual compare and contrast to other dominant theories of human functioning. It then applies the concepts of Systems Theory to the understanding and assessment of the stages of the normal family life cycle from a multi-generational, multi-cultural perspective. This is followed by discussions of the theory's application to the emotional problems of children, adolescents, adults and their families. Likewise, application to organizational behavior is made, including health care organizations. Relevant research is discussed throughout.

628. Mental Health and Aging. (B)
Evans; Kurlowicz.

An examination of the psycho-socio-cultural processes which influence the behavior patterns, coping, and adaptation of older adults. The course emphasizes strategies to promote mental health as well as assessment, presentation, and intervention in the major acute and chronic psychiatric disorders affecting the older adult.

630. Understanding Statistics. (A)
Tulman; Ratcliffe. Permission from Department Required.

The relationship between statistical methodology and interpretation will be examined. Understanding the uses of basic statistical methods, how to perform them in SPSS, and how to interpret the results will be the focus of this course. Published nursing research will be evaluated for statistical merit in order to build critical statistical thinking.

SM 631. The Bridge to Scholarship: Establishing the Pathway. (B) Keane / Griffiths. Permission from Department Required.

This course will promote personal and professional socialization of master's students for transition to doctoral study and emphasize mentoring and experiential learning as tools to support scholarly

development. A range of scholarly literature will be examined to focus on existing programs of research and related methodological concerns. Critical thinking will be emphasized. Teaching strategies will provide opportunities to confirm the purpose of doctoral study in nursing, to understand the scope of the researcher role, to define personal and professional goals, to identify the contributions of research in the development of new nursing knowledge, to understand and value the need to create the next generation of nurse scientists, and to develop productive mentoring relationships. Opportunities will be provided for dialogue and active participation with nurse researchers and definition of beginning research questions, along with the requisite skills to understand approaches to them.

SM 632. Research Internship: Becoming a Member of the Research Team. (A) Keane; Griffiths. Permission Required from Department.

This course will support students' transition to membership on a research team and foster a relationship with a research mentor who facilitates students' ability to think critically and pursue scholarly investigations. Course activities will provide opportunities to develop an appreciation of the literature supporting the research team's scholarly investigation and an understanding of the range of research team roles and activities. Course discussion and readings will emphasize the responsible conduct of research including conflicts of interest, responsible authorship, standards of research conduct, policies guiding the inclusion of human subjects, clinical trials, and data management.

SM 633. Grant Writing for Research Training Fellowships. (M) McCauley, L.; Keane; Griffiths; Porreca. Prerequisite(s): Master's-level course in research design and permission of the faculty. Permission Required from Department.

This seminar provides an overview of the process of applying for external funding for research traineeships. Through a series of lectures and discussions and computer laboratories, students will prepare a draft application that incorporates the essential components of describing the candidate, a research plan, sponsor or mentor, and the training environment. Students will become familiar with the process of submitting grants, developing time frames and work plans for the completion of applications. Students will also participate in activities designed to further develop a competitive application for doctoral study.

637. Introduction to Research Methods and Design. (C) Rogers, A.;

Bowles; Polomano; Libonati. Prerequisite(s): NURS 230 or equivalent. In addition, students must have completed a semester of Junior Level clinicals. Also offered in 6 week Summer Session I and 12 week Summer Session I & II.

The relationships among nursing theory, research and practice will be examined. An emphasis will be placed on research competencies for advanced practice nurses (APNs), including understanding nursing research methods and strategies in order to evaluate research results for applicability to practice and to design projects for evaluating outcomes of practice. An understanding of statistical techniques will be integrated into the course and build on the required undergraduate statistics course. Published nursing research studies will be evaluated for scientific merit and clinical feasibility, with a focus on evidence-based practice.

SM 638. (NURS338, NURS838) "Sweet Little Old Ladies and Sandwiched Daughters": Social Images and Issues in our Aging Society. (B) Kagan. Prerequisite(s): Permission of Instructor Needed.

This course is an intensive and focused introduction to social gerontology as a trans-disciplinary lens through which to examine aspects of social structure, actions, and consequences in an aging society. A variety of sources are employed to introduce students from any field focused on human behavior and interaction to classical notions of social gerontology and current scholarly inquiry in gerontology. Field work in the tradition of thick description creates a mechanism to engage students in newly gerontological understandings of their life worlds and daily interactions. Weekly field work, observing aspects of age and representations of aging and being old in every day experiences forms, is juxtaposed against close critical readings of classical works in social gerontology and current research literature as well as viewings of film and readings of popular literature as the basis for student analysis. Student participation in the seminar demands careful scrutiny and critical synthesis of disparate intellectual, cultural, and social perspectives using readings and field work and creation of oral and written arguments that extend understandings of the issues at hand in new and substantive ways. Emphasis is placed on analysis of field work and literature through a series of media reports and a final term paper.

Creative approaches to identifying literature, analyzing field work and representing critique are encouraged. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

640. (SOC1640) Global Health and Health Policy. (M) Aiken.

This participatory interdisciplinary seminar course examines contemporary issues in public health policy and global health. The organizing framework is social determinants of health. We consider evidence that inequalities in education, income, and occupation influence health status, and the policy dilemma that broad interventions to improve population health may increase health disparities. We critically examine whether prevention is always better than cure, and what modern medicine has to offer in terms of health. We explore the public policy process in health using the "tobacco wars" as a case example, of how politics, policy, law, commercial interests, and research intersect to affect the public's health. We examine whether global health is in a state of decline, and the extent to which failures in public health, public policy, and foreign policy have contributed to increasing threats to world health. Likewise we will examine the potential for greater integration of health into foreign policy to create global infrastructure upon which to advance health. We will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.

There are no prerequisites. The course is designed for graduate students in the social and behavioral sciences, health professions, public health, business and law. Advanced undergraduate students will be admitted with permission.

644. Health Care in an Aging Society. (B) Bradway; Strumpf.

Individual and societal influences on the care of older adults are examined in detail within the context of an emerging health care system. Normal changes in physical and psychological health are explored in depth. Significant issues affecting care of older adults and their families at the global and national level are discussed.

645. Psychopharmacology Across the Lifespan. (B) Hanrahan.

Prerequisite(s): NURS 622.

This course focuses on the development of knowledge and skills related to the use of psychopharmacologic agents to treat mental illness by the advanced practice nurse.

Using a case study method to encourage the application of knowledge to clinical practice, the course addresses culturally diverse client populations, across the life span, who present with a range of symptom manifestations, at all levels of severity. The course emphasizes evidence-based practice, research-based clinical decision making and a wholistic approach to integrating the science and biology of the mind with social and behavioral interventions. The case base method allows students to focus on specific populations such as older adults, adults, adolescents, and children.

646. Primary Care of the Middle Aged and Older Adult. (C) Sullivan-Marx; O'Sullivan; Houldin. Prerequisite(s): NURS 657.

This course focuses on primary care problems encountered by middle-aged and older people and their families in ambulatory and occupational settings. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the complex health problems of middle-aged and older adults.

647. Clinical: Primary Care of the Middle Aged and Older Adult. (C) Sullivan-Marx; O'Sullivan. Prerequisite(s): NURS 657. Corequisite(s): NURS 646.

Management and evaluation of primary care problems of middle-aged and older adults in a variety of ambulatory and occupational settings. Opportunity to implement the role of the nurse practitioner with middle-aged and older adults and their families in the community. Interdisciplinary experiences will be pursued & collaborative practice emphasized. Students are expected to assess and begin to manage common chronic health problems in consultation with the appropriate provider of care. The initiation of health promotion & health maintenance activities with individuals and groups is stressed. Includes 16 hours a week of clinical experience with a preceptor.

648. Primary Care: The Frail Older Adult. (B) Strumpf; Cotter.

Prerequisite(s): NURS 646, 647.

The role of the gerontological nurse practitioner in the care and management of frail elders and their families in institutions and in the community is emphasized. Content is directed at assessment and management of acute presentations of illness and complex, multiple health problems. Issues in eptor. rehabilitation

and the maintenance of quality of life are addressed.

649. Primary Care of the Frail Older Adult II. (B) Strumpf; Cotter.

Prerequisite(s): NURS 646, 647.

Corequisite(s): NURS 648.

Opportunity is given to implement the role of the gerontological nurse practitioner with frail elders and their families in institutions and in the community. Students are expected to assess and to take a prominent role in the management of more complex health problems in consultation with the appropriate provider of care. Synthesis of the entire clinical experience is used to help students articulate the new roles they will assume. Sixteen hours a week of clinical experience with a preceptor is required.

L/L 650. Health Systems Analysis. (B) Burke, K.; Keim.

This course focuses on the integration of systems thinking and the practice of nursing administration in various settings such as acute care, occupational health, home care and long term care. Systems Theory and Stakeholder Analysis will provide theoretical frameworks for examining the external and internal environments affecting nursing practice. This course may be taken as an elective by non majors

651. Nursing Informatics. (L) Bowles; Staff. Prerequisite(s): Basic Computer Skills. Summer Session II.

This course is designed to introduce the student to fundamental concepts and issues surrounding technology and information management in today's rapidly changing health care environment. Emphasis will be placed on defining informatics and the models and theories used in its development. To prepare the student to take a leadership role in information system design and selection the class will study the process of information systems analysis, implementation and evaluation involving functional, organizational and human aspects.

652. Health Care Accounting and Financial Management. (L) Keim; Fuir. Summer Session I.

This course focuses on the management of financial resources in the health care industry, with a focus on acute care, ambulatory care, home care, and long-term care. Specific emphasis is on applied financial management, management control systems, budgeting and nursing staffing.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

654. Business and Strategic Planning. (A) Piper, L. Prerequisite(s): NURS 652.

This course focuses on Healthcare strategic planning and the role of the Nursing Executive/Leader in that process. The course will involve the development of a business plan for a selected internal organizational project. The content will include use of executive Dashboards, sources of internal and external data.

655. Nursing Administration Practicum. (C) Burke; K.; Keim. Prerequisite(s): NURS 699.

This administrative practicum will be individually tailored to meet each student's career goals. Students will be placed with an expert role model who in most instances will be a practicing nurse executive. The setting may vary according to the student's interests and objectives. Examples include acute care, home care, long term care, occupational health, community based clinics, consulting groups and political/legislative experiences.

656. Primary Care Concepts in Urban Health. (A) O'Sullivan. Corequisite(s): NURS 657.

Intended for nurses planning a career in primary health care practice, this course includes lectures, discussions and readings focused on health, social, economic and professional factors influencing health care delivery. It is a companion course to NURS 657.

L/L 657. Clinical Decision Making in Advanced Nursing Practice. (A) Zurakowski; Cross; O'Hara; Bosnick; Buzby.

This is a laboratory/clinical course designed to help prospective nurse practitioners develop advanced clinical assessment skills. Provider-patient interaction, data collection, and hypothesis formulation are emphasized. All participants engage in actual practice with fellow students, and/or models, and consenting patients.

658. Clinical Management of Primary Care with Young Families. (C) O'Sullivan. Prerequisite(s): NURS 656, 657. Corequisite(s): NURS 659.

Assessment and treatment of the young child in ambulatory care settings is the focus of this developmentally organized course. This course provides the nurse practitioner student with the necessary

knowledge and experience to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, the maturational tasks and problems of children and their families in relation to illness and health are explored.

659. Clinical Practicum: Primary Care with Young Families. (C) O'Sullivan. Prerequisite(s): NURS 656, 657. Corequisite(s): NURS 658.

Management and evaluation of primary care problems of children in a variety of ambulatory settings. Opportunity to implement the role of nurse practitioner with children and their families in the community occurs under the guidance of faculty and experienced preceptors. The initiation of health promotion and health maintenance activities with individuals and groups is stressed. Collaborative, interdisciplinary practice is emphasized as students assess and manage common problems in consultation with an appropriate provider of care. 20 hours a week of clinical experience with a preceptor is arranged.

SM 660. Clinical Practice with Select Populations: Adolescents. (L) O'Sullivan. Prerequisite(s): NURS 656, 657, 658, 659. Summer Session I.

Focus on assessment and treatment of adolescents in a variety of settings. Didactic emphasis is on the special needs encountered among adolescents. This course adds to the student's previous knowledge and skill in the delivery of primary care. Working with this specific population the student gains necessary knowledge and experience in assisting individuals with most common health problems, including acute episodic illness and stable chronic disease, as well as health promotion needs.

SM 661. Clinical Management of Primary Care with Adults. (L) O'Sullivan. Prerequisite(s): NURS 646, 647 or NURS 658, 659. Summer Session I.

Assessment and treatment of younger adults in ambulatory care settings is the focus of this clinical course. The course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with most common health problems, including acute episodic illness. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, maturational

tasks and problems of the adult and family in relation to illness and health are explored.

SM 663. Advanced Concepts in Primary Care. (L) O'Sullivan. Prerequisite(s): NURS 660 or NURS 661. Summer Session II.

In conjunction with the development of advanced clinical skills, students focus on advanced practice role development and the study of issues in health service delivery related to the practice of primary health care. Economics, case management and cultural/ethical aspects of care are discussed.

664. Advanced Practice Nursing for Oncology Care. (L) Hollis; Polomano. Prerequisite(s): NURS 607; NURS 637. Summer 12 Week Session ; Permission to take this course as an elective must be approved by the course faculty.

Students are introduced to cancer epidemiology and pathophysiology, cancer genetics, prevention, risk assessment and reduction for specific cancers, screening techniques, diagnostic procedures and criteria, and local and systemic therapies used to treat cancer. The influence of individual characteristics on health promotion, health behaviors, population cancer risk, and cancer detection are explored in the context of biological, psychological, socioeconomic and sociocultural factors across age groups from adolescents to older adults. Evidence-based practice guidelines and research are applied to promote healthy lifestyles, monitor cancer risk, address psychosocial issues, facilitate access to care, and reduce health care disparities for populations at risk and diagnosed with cancer, and cancer survivors.

666. Effects of Cancer and Cancer Therapy. (B) Houldin. Prerequisite(s): NURS 646, 664. Corequisite(s): NURS 667.

Principles of cancer treatment, associated responses and symptom management are presented. Emphasis is on the development of advanced clinical decision making skills in identifying multiple alterations resulting from cancer and cancer therapy.

667. Oncology Nursing: Assessment, Diagnosis, & Cancer Management. (B) Houldin. Prerequisite(s): NURS 646, 664. Corequisite(s): NURS 666.

Emphasis is on the application of critical thinking and diagnostic reasoning skills in advanced clinical decision making. Students access, diagnose, and manage the

care of oncology patients with a variety of cancers. The delivery of care and evaluation of role effectiveness within the health care system are examined.

677. (PUBH530) Environmental Toxicology: Risk Assessment and Health Effects. (L) McCauley, L. Undergraduates Need Permission.

This course presents general principals of toxicology and the disposition of toxins in the body. Case studies of the effects of environmental and occupational toxins on individuals will be analyzed. This course is designed for students who desire a strong foundation in toxicological concepts and principals and provides an overview of major toxins in our environment and their association with human health.

678. (PUBH533) Exposure Assessment and Safety in the Workplace. (B) McCauley, L.; O'Hara.

This course is designed to present an overview of the interdisciplinary nature of monitoring and controlling workplace hazards. Didactic course content on the major factors contributing to occupational health hazards and safety will be presented along with discussion of regulatory and site-specific interventions to promote worker safety and health. Five site visits will be conducted to apply the principles of workplace assessment and to discuss strategies that are used for hazard recognition and evaluation in different work environments. Experts in workplace hazard recognition and control will share current challenges and priorities from their worksites.

679. Issues in Occupational Health Nursing. (A) McCauley, L.; O'Hara.

Designed as an exploration of concepts, issues and content relevant to occupational health nursing, this course is presented as a series of lectures and seminars. Participants can expect to gain an understanding and appreciation for the specialty of occupational health and the nurse's roles in this area of specialization.

SM 680. Advanced Practicum/Residency in Occupational Health. (A) McCauley, L.

This course should be taken in the last semester of the Occupational Health Nursing Program. As such, it is meant to provide opportunity for the students to focus upon the occupational health setting, integrate course work and test their roles in occupational health in concert with an experienced colleague. Whenever possible, team assignments will be made for administration/consultation option and

primary care options students so they can act in complimentary roles in the residency. Selected seminars are included to focus discussion and learning on health problems and concerns in occupational health.

681. Applied Physiology for Nurse Anesthetists I. (L) Magro; Lynn; Tkacs. 12 Week Summer Session.

This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the respiratory and cardiovascular systems and related anesthesia implications. The concepts of ventilation and perfusion as they relate to oxygen and anesthetic delivery and metabolism are examined. The effects of compromised cardiac and pulmonary function and their implications for the patient and anesthesia plan are reviewed. The impact of anesthesia on the structure and function of the heart as a pump as well as the characteristics of systemic circulation will be explored. The effect of surgery and anesthesia on the respiratory and cardiovascular systems will be emphasized.

682. Applied Physiology for Nurse Anesthetists II. (A) Magro; Lynn; Badellino. Prerequisite(s): NURS 681. Corequisite(s): NURS 607.

This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the hepatic, renal, nervous, hormonal, immunologic and hematological systems and related anesthesia implications. The focus of discussion will be on the special considerations when delivering anesthetic agents to patients. Emphasis will be placed on the assessment of the patient with common disorders of these systems. Nurse anesthesia care related to patients undergoing surgeries involving each system will be discussed.

683. Applied Science Related to Anesthesia. (B) Magro; Lynn; Scanga. Prerequisite(s): NURS 607, 681, 682.

This course is an in-depth analysis of the chemical and physical principles as they apply to nurse anesthesia practice. Aspects of organic and biochemistry including the chemical structures of compounds and its significance in pharmacology will be explored. Applications of the laws of physics as they pertain to nurse anesthesia practice will be reviewed with specific examples. Emphasis on the dynamics of the anesthesia delivery system and related equipment will be presented.

L/R 685. Advanced Developmental Physiology and Pathophysiology. (A) Trimarchi; Marino; Lafferty.

Prerequisite(s): Undergraduate course in Anatomy & Physiology.

This course will address advanced human embryology, physiology and pathophysiology. Biochemical genetics and the genetic basis of disease will be discussed. Normal fetal development and physiology of organ systems will be used as the foundation for understanding the pathophysiology of disease across the lifespan.

686. (NURS736, NURS781) Well Woman Health Care. (A) McCool; Durain. Prerequisite(s): NURS 657 (may also be taken as a Co-Req). Corequisite(s): NURS 737.

Theory and practice related to nurse-midwifery management of preconception and interconceptional care. Includes anatomy and physiology of postpartum and perimenopausal women, endocrinology, current contraceptive methods, minor gynecological conditions. Seminars and clinical practice.

688. Complementary/Alternative Therapies in Women's Health. (A) Grube; Durain.

The dramatic rise in the use of complementary and alternative medicine (CAM) by the American public requires that the contemporary health care practitioner have an awareness of CAM therapies and modalities currently available. The end result of this course will not be proficiency in the practice of any of these modalities in particular, but rather a basic understanding of each approach to common conditions and their potential contribution to health and well being. The focus of the CAM modalities discussed in this course will center on their use in women's health care provision.

693. Professional Issues in Midwifery. (A) McCool; Reale; McHugh. Prerequisite(s): NURS 686, 687, 689, 690. Corequisite(s): NURS 691.

In-depth discussion of current issues facing the profession of nurse-midwifery which impact on professional education, certification, and practice. Includes ethical, legal, and political aspects of nurse-midwifery practice.

699. Advanced Roles in Administrative Nursing Practice. (L)

Rich ; Keim. Prerequisite(s): For Students of the Nursing Administration and Healthcare Leadership Only. Summer II Semester.

Offered at the end of the Nursing and Health Care Administration or Health Care Leadership programs, this course prepares the graduate for entry into a myriad of administrative or leadership roles. Students will explore role responsibilities for various levels of management positions; health care consultants; health policy advocates; global health leaders; staff development directors; and administrators in non-traditional settings i.e., journal editors, professional associations etc.

701. Sleep Across the Lifespan. (A)

Weaver. Part of the Post-Masters Certificate Program in Sleep.

This one semester survey course provides an overview of sleep across the lifespan. It will consider normal sleep during childhood, adolescence, adulthood, and changes associated with aging. Components of normal sleep will be addressed in addition to discussing the health and societal consequences of sleep deprivation. Measurement of sleep will also be addressed.

702. Diagnosis and Management of Selected Sleep Disorders. (B)

Rogers, A. Prerequisite(s): NURS 701. Part of the Post-Masters Certificate Program in Sleep.

This course explores the diagnosis, and management of common sleep disorders across the lifespan. Symptoms, predisposing factors, differential diagnosis, and management will be discussed. The use of questionnaires and common diagnostic tests and questionnaires will also be included in course content. Special emphasis will be placed on cognitive-behavioral therapies and strategies to improve CPAP compliance. s.

703. Clinical Practicum in Sleep. (L)

Richards; Cuellar. Prerequisite(s): NURS 701, NURS 702. Part of the Post-Masters Certificate Program in Sleep.

This one semester clinical course provides a supervised practicum in managing patients with a variety of sleep disorders. The initial two weeks of the practicum will be completed onsite at the Penn Sleep Disorders Center with the remaining clinical experiences completed under the guidance of a preceptor in the student's geographic area. Clinical experiences at the Penn Sleep Disorders Center will be selected to expose students the use of cognitive behavioral therapy for treatment

of insomnia and to a variety of patients that may not be seen in smaller centers.

SM 705. (NURS771) Advanced Practice Nursing Practice: Psychiatric Mental Health NP I. (A)
Scharff.

Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Focus is on clinical assessment/diagnosis and decision-making. A minimum of 16 hours of practice and 3 hours of small group supervision is required.

SM 706. (NURS772) Advanced Practice Nursing Practice: Psychiatric Mental Health NP II. (B)
Scharff.

Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Refinement and development of clinical intervention with an increasingly diverse caseload. A minimum of 16 hours of practice and 3 hours of small group supervision is required.

SM 707. (NURS773) Advanced Practice Nursing Practice: Psychiatric Mental Health NP III. (L)
Scharff. Summer Session I.

Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Outcome evaluation, termination and professional role development. A minimum of 16 hours of practice and 3 hours of small group supervision is required.

708. Public Policy Leadership in the American Public/Private System of Health Care. (B) Durain.

This course will explore the philosophy and growth of public policy that has directed the American Health Care System in its ever expanding movement toward universal health care for all citizens. Analysis of health policy and systems content will assist the students to identify the knowledge and skills needed for the health or human service provider to assume leadership roles in the formulation of public policy for change; this includes system restructuring, service delivery and funding of health care. Emphasis will be on the

effect of policy on the individual/family user of health care services rather than the effect on professional health care providers or health care delivery systems. Special attention will be given to the effect of policy on populations, both urban and rural, living near and below the poverty level.

710. (NURS731) Principles of Critical Care Nursing of Children I. (B)

Verger; Perkel. Prerequisite(s): NURS 684, 720, 721. Corequisite(s): NURS 711.

Provides the foundation for advanced practice in pediatric critical care. Body system failure is examined as the potential common outcome from a variety of etiologic agents. The adaptation of children and their families to critical illness and intensive care is analyzed. Management strategies based on clinical decision making include nursing, medical, pharmacological, and other therapies and resources.

711. (NURS733) Clinical Practicum in Critical Care Nursing of Children I. (B)

Verger; Perkel. Prerequisite(s): NURS 684, 720, 721. Corequisite(s): NURS 710.

This clinical course is designed to assist prospective advanced practitioners, in pediatric critical care develop advanced assessment and management skills through structured, supervised interventions with critically ill children. Particular emphasis is placed on the role components of expert practitioner. The student gains the necessary management skills to provide specialized care to critically ill children and their families and to assist them with adaptation.

712. (NURS776) Principles of Critical Care Nursing of Children II. (L)

Verger; Perkel. Prerequisite(s): NURS 560, 710, 711. Corequisite(s): NURS 713. Summer Session I.

This course examines specific pathophysiological mechanisms which may result in body system failure. Strategies for clinical management are examined based on a synthesis of biological, behavioral, medical, pharmacological, and nursing knowledge. Theoretical analysis of the roles of the advanced practitioner with critically ill patients is emphasized.

713. (NURS777) Clinical Practicum in Critical Care Nursing of Children II. (L)

Verger; Perke. Prerequisite(s): NURS 560, 710, 711. Corequisite(s): NURS 712. Summer Session I.

This clinical course is designed with emphasis on continued development of advanced clinical skills in the care of critically ill children. Emphasis is placed

on integration of the roles of the advanced practitioner. This course adds to the student's previous knowledge and skills in advanced practice and prepares them to manage care of critically ill children.

714. (NURS778) Clinical Practicum in Critical Care Nursing of Children III. (L) Verger; Perkel. Prerequisite(s): NURS 712, 713. Summer Session II.

This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.

715. Pediatric Oncology Theory I. (A) Hobbie; Mooney-Doyle.

This course examines the unique contribution made by nurses with advanced clinical skills in the care of children with oncologic and hematologic disorders, and their families, from the time of diagnosis throughout the treatment period and beyond. The course provides the student with the most recent advances in knowledge about cancer in childhood.

While the focus is on oncology, hematologic disorders as well as AIDS will be discussed. Recent methods of treatment and the nursing management of children and their families will be addressed.

717. Pediatric Oncology Theory II. (B) Hobbie; Mooney-Doyle.

The focus of this course will be current practices, research, and issues related to the care of infants, children, and adolescents with cancer and hematologic disorders. Emphasis is given to developing a framework for practice based on a synthesis of biological, behavioral, nursing, and medical knowledge through the process of clinical decision making.

720. Nursing of Children Theory I: Child and Family Development. (A) Deatrick; Murphy, K.

This course focuses on developmental theories and concepts that form the basis for nursing assessment and intervention with children and families. Emphasis is given to current research and issues in child and family development and functioning.

L/R 721. Nursing of Children Clinical: I. (A) Lipman; Reilly, L. Corequisite(s): NURS 684.

This clinical course is designed to help prospective advanced practitioners develop

advanced skills in physical and developmental assessment of children in a variety of well-child, ambulatory, and hospital settings. The medical management and pharmacologic treatment of various disorders will also be discussed. Data collection, data interpretation, and hypothesis formulations are emphasized. The role of the practitioner in health promotion is incorporated throughout the course. Collaboration as an integral part of screening will be an ongoing focus.

722. Nursing of Children Theory II. (B) Deatrick; Lipman. Prerequisite(s): NURS 684, 720, 721. Corequisite(s): NURS 723.

The focus of this course is the current practices, research and issues related to the care of children and adolescents with acute health deviations. Emphasis is given to developing a framework for practice based on a synthesis of biological, behavioral, nursing, and medical knowledge through the process of clinical decision making with children who have serious acute health deviations and their families.

723. Nursing of Children Clinical: II. (B) Deatrick; Lipman; Murphy, K.

Prerequisite(s): NURS 684, 720, 721. Corequisite(s): NURS 722 or NURS 717.

This clinical course focuses on the implementation of the role of the advanced practice nurse. Applications of nursing, biological and behavioral science are emphasized in the clinical assessment and management of acutely ill children and their families. The student gains the necessary clinical management skills to provide specialized care to acutely ill children and to assist their adaptation and the adaptation of their families.

724. Nursing of Children Theory III. (L) Deatrick; Lipman; Murphy, K.

Prerequisite(s): NURS 722, 723. Corequisite(s): NURS 725. Summer Session I.

This course focuses on current practices, research and issues related to the care of children and adolescents with chronic health deviations. The role of the advanced practice nurse in promoting optimal child/family outcomes is emphasized.

725. Nursing of Children Clinical: III. (L) Deatrick; Lipman; Murphy, K.

Prerequisite(s): NURS 722, 723. Corequisite(s): NURS 724. Summer Session I.

This clinical course focuses on the continued development of advanced clinical skills in the care of acute and chronically ill children. Emphasis is placed

on experiences that integrate the roles of the advanced practice nurse with children who have chronic illnesses with particular emphasis on management, consultation, and research dissemination skills.

731. (NURS710) High-Risk Neonate, Theory. (B) Verger; Perkel.

Prerequisite(s): NURS 684, 720, 721. Corequisite(s): NURS 733. Summer Session I.

This course focuses on the care of high-risk neonates within the context of the family unit. The biological and psychosocial aspects are studied as a basis for nursing practice. Emphasis is placed on the role of the Advanced Practice nurse in improving services to high-risk neonates with the purpose of decreasing mortality and morbidity rates and improving the quality of life of high-risk newborns and infants.

733. (NURS711) Clinical Practicum for the High Risk Neonate. (B) Verger; Perkel. Prerequisite(s): NURS 684, 720, 721. Corequisite(s): NURS 731.

This clinical course focuses on the care of the high risk infant within the context of the family unit. Clinical experiences provide students with opportunities to expand their skills in managing the care of infants, both acutely ill and growing neonates. Students continue their experiences with neonatal nurse practitioners to examine role issues of these individuals.

This clinical course focuses on the care of the high risk infant within the context of the family unit. Clinical experiences provide students with opportunities to expand their skills in managing the care of infants, both acutely ill and growing neonates. Students continue their experiences with neonatal nurse practitioners to examine role issues of these individuals.

740. Advanced Practice Concepts for the Childbearing Family. (A) Steele.

The seminar will provide students with the skills necessary to provide primary health care to high risk infants in ambulatory settings. Course material will include detailed physical assessment skills of the infant through the first year of life. The clinical component will include home visits and experience in the ambulatory and long term care settings.

741. Nursing of Children Clinical: IV. (L) Deatrick; Lipman; Murphy, K.

Prerequisite(s): NURS 724, 725. Summer Session II.

This clinical course focuses on the implementation of the role of the advanced practice nurse with particular emphasis on providing continuity of care for children with specialized health needs across their transitions in sites of care delivery and throughout phases in the cycle of their illnesses. Application of nursing, biological and behavioral science is emphasized in the community aspects of clinical assessment and management of children with health care needs and their families.

743. Fetal Evaluation. (B) Stringer.
Prerequisite(s): NURS 607.

This course focuses on identifying at risk and high risk maternal fetal dyads, developing knowledge relating to assessment of fetal well being, and understanding the implications of obstetric, non obstetric, and fetal complications on the management of the high risk pregnancy. Additionally the course provides an understanding of the scientific basis for new technologies used to evaluate at risk and high risk populations. Information about the physics of ultrasound, pulse echo imaging, and doppler techniques will be provided. Students must be able to practice ultrasound skills while in this course.

746. Evidence-Based Practice for Nurse Anesthetists I. (L) Magro; Lynn; Gidaro. 12 Week Summer Session.

This course examines the evidence-based research to determine whether the procedures and techniques performed by nurse anesthetists are supported by the literature. Population specific topics of concern to nurse anesthetists are discussed. Student led seminars will guide the classroom discussions.

747. Evidence-Based Practice for Nurse Anesthetists II. (A) Magro; Lynn; Gidaro. Prerequisite(s): NURS 746.

This course examines the evidence-based research to determine whether the procedures and techniques performed by nurse anesthetists are supported by the literature. Population specific topics of concern to nurse anesthetists are discussed. Student led seminars will guide the classroom discussions.

748. Leadership Development for Health. (A) Burke, K.; Sherr A.

This course will provide the conceptual and theoretical framework for examining the concept of leadership within the contexts of health systems, health professionals and health policy. It will focus on characteristics of personal and professional leadership, change theory, and the application of critical thinking to the analysis of work environments, systems and the politics of health.

749. History, Health and Social Policy. (B) D'Antonio.

This course explores the impact of historical ideas, events, and actors on current issues in health and illness care. Topics include the movement from hospitals to health care systems; the changing definitions of professionalism and professional practice patterns; and the ways

historical context shapes definitions of leadership roles and theoretical knowledge.

750. Inquiry and Nursing. (A) Fairman.
For doctoral students in nursing.

This course introduces students to the process of intellectual inquiry. It explores the intellectual foundations of scholarly disciplines in general and the discipline of nursing in particular. Emphasis is placed on the process of knowledge development, with particular emphasis on historical, philosophical, positivist, and gendered and phenomenological ways of knowing. Emphasis is also placed on having students develop their particular intellectual approach to disciplinary inquiry and on formulating ideas for publications and presentations.

752. Issues of Nursing Leadership in Planning and Policy Making. (A) McCausland; O'Sullivan. For doctoral students in nursing.

A critical examination of the role of nursing leadership in light of current health care issues. Among the topics to be considered are: identification of leadership behaviors and characteristics that influence organizations and individuals; processes required to influence the improvement of health; theoretical models of planned change; and different views of futurist models.

753. Evolving Nursing Science. (B) Medoff-Cooper. For doctoral students in nursing.

A consideration of contemporary nursing research as it pertains to the current state of the art and directions for future study. Advanced analysis of methodology, assumptions, and theoretical structures that underpin the work.

754. Quantitative Research Design and Methods. (B) Tulman; Pinto-Martin.
For doctoral students in nursing.

This one semester survey course provides an overview of quantitative clinical research design and methods. Ethical and legal considerations in human subjects research, access to patient populations, sampling designs and power analysis, experimental and non-experimental designs, measurement of variables, data collection techniques, and data management are included. This course is intended for doctoral students in the health sciences.

761. Principles of Acute Care I. (A) Becker; Doherty.

This didactic course examines the diagnostic and management issues related to the care

of acutely ill adults. Students will examine the pathophysiologic as well as the psychosocial influences underlying acute illness and injury. The dynamic interplay of assessment, diagnosis, management and treatment options relevant to patients with acute illnesses and injuries will be examined in detail. An evidence-based approach to the nursing and medical management as well as pharmacologic and other therapies will be emphasized. Content will focus on patients with cardiovascular, pulmonary, infectious and nutritional issues.

762. Principles of Acute Care II. (B) Becker; Doherty. Prerequisite(s): NURS 605.

This didactic course continues to examine diagnostic and management issues related to the care of acutely ill adults. Students will examine the pathophysiologic as well as the psychosocial influences underlying acute illness and injury. The dynamic interplay of assessment, diagnosis, management and treatment options relevant to patients with acute illnesses and injuries will be examined in detail. An evidence-based approach to the nursing and medical management as well as pharmacologic and other therapies will be emphasized. Content will focus on patients with neurologic, gastrointestinal, renal and metabolic health problems.

763. Principles of Acute Care III. (L) Becker; Doherty. Prerequisite(s): Nursing 605. Summer Session I.

This course expands the emphasis on the acute care nurse practitioner's assessment and management of acutely ill and injured adults. Emphasis is placed on clinical decision making and multifaceted treatment options as they relate to the evaluation and management of patients in a variety of acute care settings. Nursing and medical interventions as well as other treatment modalities are explored and tested. Emphasis is placed on research-based practice and the role of the acute care nurse practitioner in conducting, evaluating, and utilizing research. Content will focus on special populations of patients with commonly encountered acute health problems.

L/R 764. Advanced Technologies & Clinical Decisions in Acute Care. (A) Becker. Prerequisite(s): NURS 607, 657. Corequisite(s): NURS 761.

This fieldwork course focuses on development of a systematic approach to advanced physical assessment, the use of diagnostic technologies and the development of a diagnostic reasoning as it

applies to patient management of the acutely ill and injured. Emphasis is placed on development of competence to perform a comprehensive history and decision making for the management of acutely ill patients.

765. Acute Care Nurse Practitioner: Professional Role & Clinical Practicum I. (B) Becker. Prerequisite(s): NURS 764. Corequisite(s): NURS 508, 762.

In this course students will explore issues relevant to the role of the Acute Care Nurse Practitioner within the multiple layers of the American health care system. The development of advanced clinical competencies and clinical decision making abilities will be emphasized. Strategies to maintain continuity in the patient's psychosocial support system, and nursing and medical management in the face of a fragmented health care system will be discussed. Reimbursement issues, role development, and nursing interventions will be introduced and discussed in the classroom, and principles will be applied in the clinical practicum.

766. Acute Care Nurse Practitioner: Professional Role and Clinical Practicum II. (L) Becker. Prerequisite(s): NURS 761, 762, 764, 765. Corequisite(s): NURS 763. Summer Session I.

This course focuses on the role of the Acute Care Nurse Practitioner and the expansion of advanced clinical competencies and clinical decision making abilities. Clinical experiences in acute care settings provide the student with opportunities to explore multiple governmental, social and personal resources available to acutely ill and injured adults. The application of advanced nursing, medical and biopsychosocial knowledge in the management of patients and the collaboration between the nurse practitioner and the patients, family and other health care professionals are emphasized.

767. Acute Care Nurse Practitioner: Professional Role & Clinical Practicum III. (L) Becker; Doherty. Prerequisite(s): NURS 764, 765, 766. Summer Session II.

This course will provide the student with the opportunity to refine the role and develop the clinical expertise necessary to function as an Acute Care Nurse Practitioner. Within the clinical setting students will expand clinical decision making abilities and practice advanced, complex, case management under the supervision of an appropriate professional

preceptor. Analysis of the role of the ACNP will be emphasized.

768. Role of the Clinical Nurse Specialist. (A) Pawlow; Becker; Dubendorf.

This didactic and seminar course explores the core theory of the Clinical Nurse Specialist (CNS) role and the development and practice within the context of the complex health care delivery system. Students will examine and discuss the key characteristics of the CNS role. The dynamic interplay of the characteristic role components will be explored and will include discussion of how these components interact with each other and the complex systems in which CNS practice takes place. The role of the CNS in optimizing patient outcomes will be examined. Strategies to enhance professional practice, both by the CNS and by professional colleagues will be discussed.

769. Clinical Nurse Specialist Clinical I. (C) Dubendorf; Becker. Prerequisite(s): NURS 657. Corequisite(s): NURS 768.

This fieldwork course focuses on the application of CNS theory to practice and will enable nurses to enhance their implementation of the role by acquiring knowledge and skills characteristic of CNS practice. Students will apply their knowledge of key components of the CNS role to their practice environments. Barriers and facilitators to professional practice in complex health care systems they affect patient care and influence patient outcomes will be explored.

SM 771. (NURS705) Advanced Practice Nursing Practice: Psychiatric Mental Health CNS I. (A)

SM 772. (NURS706) Advanced Practice Nursing Practice: Psychiatric Mental Health CNS II. (B)

SM 773. (NURS707) Advanced Practice Nursing Practice: Psychiatric Mental Health CNS III.

776. (NURS712) High Risk Neonate Theory II. (L) Verger; Perkel. Prerequisite(s): NURS 731, 733. Corequisite(s): NURS 777.

This course examines specific pathophysiological mechanisms which may result in body system failure. Strategies for clinical management are examined based on a synthesis of biological, behavioral, medical, pharmacological, and nursing

knowledge. Theoretical analysis of the roles of the advanced practitioner with critically ill patients is emphasized.

777. (NURS713) High Risk Neonatal Clinical II. (L) Verger; Perkel. Prerequisite(s): NURS 731, 733. Corequisite(s): NURS 776.

This clinical course is designed with emphasis on continued development of advanced clinical skills in the care of critically ill children. Emphasis is placed on integration of the roles of the advanced practitioner. This course adds to the student's previous knowledge and skills in advanced practice and prepares them to manage care of critically ill children.

778. (NURS714) High Risk Neonatal Clinical III. (L) Verger; Perkel. Prerequisite(s): NURS 776, 777.

This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.

780. Health Care of Women and Primary Care. (L) Grube; Durain; McHugh. Corequisite(s): NURS 657.

The focus of this course is a clinical approach to primary care problems commonly encountered by women in an ambulatory setting. This course provides the women's health care nurse practitioner and midwifery student with the knowledge and problem solving approach to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum.

781. (NURS686) Well Women Health Care, Theory. (A) Stringer; Durain; Grube. Prerequisite(s): NURS 607, 657, 780. Corequisite(s): NURS 782.

This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in meeting the primary women's health care needs in contemporary society. Social influences that have an impact on women's lives are also explored.

782. Well Women Health Care, Clinical. (A) Stringer; Durain; Grube. Prerequisite(s): NURS 607, 657, 780. Corequisite(s): NURS 781.

This clinical course further prepares students in understanding and developing the Health Care of Women nurse practitioner and Nurse-Midwifery roles. This clinical course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care needs of women from adolescence through post-menopausal years. Emphasis is placed on promoting and maintaining wellness, clinical decision making, systematic health interview, physical assessment, interpretation of laboratory findings, and diagnosis and treatment of gynecological problems.

783. (NURS687, NURS734) Health Care of Childbearing Women, Theory. (B) Stringer; Durain; Grube; McHugh. Prerequisite(s): NURS 781, 782. Corequisite(s): NURS 784.

The antepartum course builds upon the well-woman health care course. The focus is management of prenatal care for the childbearing family. Conceptual threads of public policy and ethics are integrated within the content to help students to identify broader implications for prenatal care. Content includes theory and practice related to nurse-midwifery/ nurse practitioner management of the normal pregnant woman, and nurse-midwifery/ nurse practitioner management and strategies to reduce selected obstetric complications.

784. (NURS735) Health Care of Childbearing Women, Clinical. (B) Stringer; Durain; Grube; McHugh. Prerequisite(s): NURS 781, 782. Corequisite(s): NURS 783.

This course focuses on the management and evaluation of the childbearing women and their families in primary care settings. The course presents the opportunity to implement the role of the Nurse Practitioner with the childbearing woman and her family. The focus is on comprehensive physical, psychosocial and educational management of women and their families during pregnancy and postpartum.

785. (NURS739) Integration I. (L) Stringer; McCool; Grube; Reale. Prerequisite(s): NURS 783, 784.

Intensive integration of theory and clinical practice in women's health care with emphasis on ambulatory care. Clinical practice in all areas of ambulatory women's

health care, teaching rounds, case presentations, and seminars with professional colleagues.

786. Integration II: Midwifery Integration. (A) McCool; Reale. Prerequisite(s): NURS 783, 784. Corequisite(s): NURS 785.

Intensive integration of theory and clinical practice in women's health care with emphasis on intrapartum, postpartum, and newborn care. Clinical practice during the intrapartum and postpartum, teaching rounds, case presentations, and seminars with professional colleagues.

787. Intrapartum / Postpartum / Newborn Care, Theory. (L) McCool; Reale ; Stringer. Prerequisite(s): NURS 783, 784. Corequisite(s): NURS 788.

Anatomy and physiology relevant to the care of the women and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications.

788. Intrapartum / Postpartum / Newborn Care, Clinical. McCool; Reale; Stringer.

Clinical care and management of women, newborns and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications. Clinical assignments related to module objectives.

SM 791. Clinical Fieldwork in Nurse Anesthesia Practice I. (A) Magro; Lynn; Briel.

This course provides students the opportunity to integrate theory into practice within the clinical setting. The focus is on the development of diagnostic, therapeutic, ethical and cultural judgments with the perioperative patient. Students progress from the care of healthy patients undergoing minimally invasive surgical procedures to the more complex patient with multiple health issues. The student begins to develop an advanced practice nursing role that integrates role theory, nursing theory, and research knowledge through weekly seminars. Scope of practice, role development and nursing interventions will be introduced and explored in the classroom, and principles will be applied in the clinical practicum.

SM 792. Clinical Fieldwork in Nurse Anesthesia Practice II. (B) Magro; Lynn; Briel. Prerequisite(s): NURS 791.

This course provides the opportunity for students to integrate theoretical knowledge

and research finding into practice within the clinical setting. Students progress by providing anesthesia care for patients with more complex health problems. Techniques for managing the acute pain of clients are emphasized. Anesthetic requirements as dictated by patient assessment including the surgical procedure are studied in greater depth. The student now possesses the ability to combine theories and skills in selected clinical situations. The guidance of CRNA faculty preceptors contributes to the development of the student's critical thinking.

SM 793. Clinical Fieldwork in Nurse Anesthesia Practice III. (L) Magro; Lynn; Briel. Prerequisite(s): NURS 792. 12 Week Summer Session.

This course focuses on the delivery of anesthesia care within advanced nursing practice in a broad range of clinical situations for patients with multiple, complex health problems. Through refinement of assessment and management skills, critical thinking is further developed. Students progress by providing anesthesia care for special populations of patients with simple and complex health problems. The guidance of CRNA faculty preceptors contributes to the development of the student's critical thinking. Collaborative practice within a care team model is emphasized and with supervision, the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience.

SM 794. Nurse Anesthesia Residency I. (A) Magro; Lynn; Briel. Prerequisite(s): NURS 793.

This course is the first of two residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative

experience, with clinical support as required.

SM 795. Nurse Anesthesia Residency II. (B) Magro; Lynn; Briel. Prerequisite(s): NURS 794.

This course is the second of two residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.

SM 800. (NURS801) Dissertation Seminar I. (A) Richmond; Strumpf.

Prerequisite(s): NURS 750, 753, 754, 813, 2 semesters of Statistics, plus six concentration courses. For doctoral students in nursing.

Advanced study and research in nursing leading to the completion of the dissertation proposal.

SM 802. Directed Study in Applied Clinical Scholarship. (A) Graduate Group Faculty. Prerequisite(s): Permission of Faculty. For Nursing PhD Students Only.

The purpose of this course is to facilitate experiences for MS students pursuing doctoral study related to developing potential research topics and engaging in clinical scholarship and inquiry. Students work with a member of the School of Nursing Graduate Group to design a tailored mentored learning experience that develops the student's ability to recognize researchable phenomena and synthesize related literature to formulate research questions. Field experiences help the student appreciate how research can be applied to advance scientifically driven and evidence-based practice.

SM 810. Doctoral Seminar: Cultural Perspectives in Nursing and Health Care. (M) Staff. For doctoral students in nursing.

Exploration of selected cultural theories, concepts and issues related to nursing and health care. Emphasis on research approaches and the analysis and evaluation of culturally relevant nursing research and research from other disciplines. Topics tailored to the individual needs and interests of students in the seminar.

SM 811. Historical Thought in Nursing. (B) Fairman; Buhler-Wilkerson. For doctoral students in nursing.

A seminar open to enrolled doctoral students who plan to conduct historical research as some aspect of their program. Meets for one semester on a schedule determined by participants and faculty.

SM 813. Qualitative Paradigm Empirical Nursing Research. (A)

Deatrick. Prerequisite(s): NURS 750. For doctoral students in nursing.

Study of selected qualitative paradigm empirical research approaches, including design and methodology. Critique of selected qualitative research reports from the literature of nursing and related disciplines. Fieldwork exercise and research proposal required.

SM 814. Doctoral Seminar: Ethics and Nursing. (K) Deatrick. For doctoral students in nursing.

A critical review of the theoretical and empirical literature dealing with bioethics, nursing ethics, moral development, women's ethics and specific ethical concerns in health and illness care. Students will study topics related to their own interests/needs, guided by the instructor in relation to the discipline of ethics.

SM 816. Health Status, Functional Status, & Quality of Life. (H) Tulman; Richmond; Weaver. For doctoral students in nursing.

This course focuses on diverse perspectives of health status, functional status, and quality of life during normal life transitions, such as parenthood and aging, and critical life situations, such as acute and chronic illness and injury. Predictors and consequences of changes in health status, functional status, and quality of life will be considered. Conceptual and measurement issues will be explored.

SM 817. Theoretical Perspectives of Growth and Development: A Health Care Perspective. (A) Medoff-Cooper; Deatrick; Lipman; O'Sullivan.

This seminar will explore issues related to the theoretical perspectives of growth and development during childhood. Areas of emphasis will include: methodological issues related to research of childhood growth and development, the analysis of developmental data, and measurement issues common to research of development. Included in the discussion will be an analysis of theories in relationship to research of childhood development. The seminar will conclude with an agenda for future directions of research of growth and development.

SM 818. Families and Research. (J) Deatrick. For doctoral students in nursing.

This seminar will explore issues related to research of families. Included in the ongoing discussion will be an analysis of nursing and other theories in relationship to research of families. Methodological issues related to research of families will be discussed, as will the analysis of family data and measurement issues common to research of families. The seminar will conclude with an agenda for future directions to research of families.

SM 819. Seminar on the Social History of Nursing. Fairman. For doctoral students in nursing.

This course will involve a guided review of the pertinent literature relating to the history of technology in 20th century America. The focus will include a critical examination and review of the social origins and implications of technological development and diffusion in healthcare. Various theoretical frameworks in the history of technology will be closely examined in attempt to assist the student in the development of their own framework.

SM 820. Current Topics in Neuroscience and Clinical Implications. (M) Tkacs. For doctoral students in nursing.

This course reviews basic neurobiology concepts and builds on that foundation to explore recent advances in neurobiology research as they relate to a variety of clinical disorders. Emphasis will be placed on the students synthesis of underlying concepts and applications of this knowledge pertinent to their own programs of research. Textbook readings will be accompanied by primary research articles for class discussion of the methodological approaches used in the field of neuroscience.

SM 821. (SOC1821) Proseminar in Health Outcomes Research. (B) Lake; Aiken. Prerequisite(s): Prior coursework at undergraduate or masters level in statistics and quantitative methods.

This the first of a two-course sequence designed for doctoral students interested in conducting health outcomes research. The first course (821) focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research; the second course (822) focuses on applying health outcomes research through the development and implementation of a research project. In the first course Penn faculty researchers will use their ongoing studies to illustrate how study design, sampling, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research. In the second course, students will design and implement a health outcomes research project.

SM 822. (SOC1822) Applications of Health Outcome Research. (C) Aiken. Prerequisite(s): Prior coursework at undergraduate or masters level in statistics and quantitative methods, Nursing 821/Sociology 821 is preferred.

This the second of a two-course sequence designed for doctoral students interested in conducting health outcomes research. The first course (821) focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research; the second course (822) focuses on applying health outcomes research through the development and implementation of a research project. In the first course Penn faculty researchers will use their ongoing studies to illustrate how sampling, study design, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research. In the second course, students will design and implement a health outcomes research project.

SM 823. Designing Interventions to Promote Health and Reduce Health Disparities. (K) Jemmott; Teitelman. Doctoral Students Only.

Advanced analysis, design and evaluation of interventions to promote health and reduce health disparities with a focus on underserved vulnerable minority or ethnic populations, through culturally competent research, education and clinical practice. Areas to be evaluated include: -- Health disparities as it relates to health promotion and disease prevention behavioral intervention research in vulnerable

communities -- Concepts of marginalization, race, ethnicity, class, gender and culture as it relates to health disparities -- Social-psychological theoretical and research approaches related to developing culturally congruent health promotion interventions to reduce health disparities for vulnerable populations -- The use of elicitation, focus groups and ethnographic techniques to tailor health behavior theory to meet the needs of the population -- Culturally competent research methodologies, involving education and/or clinical practice, e.g. culturally competent measures, recruitment, retention, and informed consent in hard to reach populations

-- Community participatory research as a strategy for working with the community to build research partnership and build capacity for sustained health promotion initiatives -- Health promotion intervention strategies for reducing health disparities in vulnerable communities -- Strategies to evaluate the effectiveness of interventions using randomized controlled trials (RCTs) in community and clinical settings - - Strategies for tailoring successful evidenced-based health promotion interventions to a variety of different populations for use in clinical trials and community settings -- Examine approaches for the translating and disseminating evidenced-based intervention research

SM 824. Health Equity: Conceptual, Linguistic, Methodological, and Ethical Issues. (A) Sommers. For Doctoral Students Only.

The course focuses on advanced analysis and evaluation of theories, concepts, and methods related to health equity. Topic areas include models and frameworks of health equity; linguistic choices related to equity, disparity, and vulnerability; role of economics, class, gender, sex, sexuality, race, and ethnicity; health equity in special populations; and issues in health policy, research ethics, and research methods. Emphasis is on advanced discourse and analysis of health equity theory and research.

SM 825. Proseminar in Gerontological Nursing Research. (A) Strumpf. For Doctoral Students Only.

SM 826. Advanced Qualitative Research Methods. (B) Kagan. For Doctoral Students Only.

The course extends beginning qualitative research methods skills to a more advanced

level. Students planning a dissertation or career focus in qualitative or mixed methods may use the course to refine interest and skill. The focus of the course centers on interactionist perspectives and collective analysis though methods tangential to these perspectives. Standpoint and participatory methods and analysis may be considered given sufficient student interest. Students are actively involved in selection and critique of seminal and critical readings. Students must have at their disposal a suitable dataset with commensurate permissions or have plans to collect qualitative data amenable to analysis during the course term. This data base can be from previous research proposals and fieldwork can be used as the building blocks for the course assignment(s). The course will focus on data collection, analyses, interpretation, and presentation of results. Skill building will center on collection and management of data; analytic technique including comparative, narrative, and text analysis; development and management of coding schemas; abstraction and development of situation specific theory; and dissemination and diffusion of findings, theories, and relevance to similar phenomena and use in practice.

SM 827. Self-Care of Chronic Illness. (M) Riegel. For PhD Students Only.

This course introduces the history, definitions, predictors, measurement, and outcomes of self-care in chronic illness. Historical, classic and current literature from various disciplines will be studied to give students a broadened perspective of the self-care construct and the issues that patients face when dealing with chronic illness.

SM 828. Response to Chronic Illness: Theory and Research. (A) Riegel. Prerequisite(s): Permission of faculty.

Millions of people of all ages live with chronic illness(es). A diagnosis of a chronic illness is a life-changing event, causing disruption and a sense of loss for many. Common early responses are stress, anxiety, depression, fear, and anger. Over time, with support and experience with the illness, many adjust. But, others report persistent feelings of loss due to physical, emotional, spiritual/existential, social, occupational, and/or financial influences of chronic illness. Those who adjust the best typically find a way to return a sense of normalcy to their lives. Loved ones and caregivers are equally affected by chronic illness and much has been written in recent years about caregiver burden. However, some individuals (caregivers and patients)

report positive responses to illness, including a deepened purpose for living and a reordering of life priorities.

The focus of this course is on individual responses to chronic illness- the person diagnosed and his/her loved ones. This course is intended to complement N818, which focuses on families and dyads dealing with chronic illness. In this course we will explore the major theoretical perspectives that underlie this field. The literature describing common responses of both those diagnosed and their loved ones as well as the social and cultural context that helps explain the responses of individuals facing chronic illness will be examined. Methods used to study chronic illness will be explored in depth.

SM 829. Biometric Methods Related to Health Outcome Disparity. (A)

Sommers. For Pre-Doctoral and Post-Doctoral students interested in describing health disparities and developing and testing interventions in vulnerable women, children, and families.

This graduate course is an advanced exploration of biometric methods (branch of science that includes the measurement of physiological variables and parameters) and their use in quantitative research. A particular focus will be on biological measures that can be used as outcome variables to evaluate interventions to promote health and health equity, and reduce health outcome disparities in vulnerable or marginalized populations.

Areas to be evaluated include: * Measurement theory and instrument science as they relate to biological signals; role of biometrics in health outcome disparities research * Ethical considerations and how they relate to biometrics; mitigating perceived threats (profiling, stereotyping); the role of human subjects considerations; the responsible conduct of research * Derivation and types of biologic signals; time-based characteristics * Accuracy and precision of biologic measures; random and non-random error; application and exemplars of strategies to determine accuracy and precision * Role of biological rhythms in biometric measurement; analysis of multiple data points and repeated measures of biological variables * Methods relative to vulnerable women, children, and families: genetics; environmental contaminants; digital image analysis; hormones, metabolites; drugs and alcohol

831. Advanced Topics in Health Informatics. Bowles. Prerequisite(s): NURS 651, NURS 551, SYS 528, or permission of instructor.

This course is designed to survey a broad range of advanced topics in the field of health informatics. Course faculty and invited speakers will provide the content for weekly meetings conducted in a blended environment (both on-line and in the classroom). Each week, students will listen to a lecture and then participate in a group discussion. Approximately half of these lecture/discussion sessions will take place in a "live" classroom, while the remainder will be available asynchronously in an online setting (i.e. using Blackboard). There will be no textbook, however each speaker will provide links to web-based resources that provide either background information or further elaboration of their topic. A group of students (depending upon size of class, probably 2-3 per topic) will take the lead for each topic, communicating with the speaker and facilitating the class discussion. As a final project, these student groups will also develop a more complete web resource for their selected topic.

SM 838. (NURS338, NURS638) Seminar on Socially Defined Images and Issues of Aging. (B) Kagan. For PhD students developing interests allied with an aging society.

This doctoral seminar explores selected topics in social gerontology and consequences of advancing age in the 21st century. The examination is designed to analyze and critique social images, constructions and processes. Contemporary and historical ideas ranging from stereotypes of the dirty old man and the sweet little old lady to language of intergenerational conflict and the sandwich generation are fair game. Foundations used include classical works in social gerontology and emerging research in aging studies and related fields viewed through a critical lens built from understandings of diverse individual, familial, cultural and societal notions of aging and human experience and drawing on student and faculty background and life experience. Skills for theory and research critique as well as participant observer field work in the tradition of thick description are built to allow reflection of current representations of aging and being old in contrast to the contemporary and historical ideas gleaned from the literature.

SM 840. Proseminar in Advanced Quantitative Designs and Methods for Nursing & Health Research. (B)

Tulman. Prerequisite(s): Completion of (or concurrently completing) research methods and statistical analysis course requirements in doctoral program; postdoctoral fellow; permission of instructor. For Predoctoral students, postdoctoral fellows, and advanced graduate students only.

Proseminar on selected topics in quantitative design and analysis of nursing and health research. Topics will vary by semester based on the research interests of the students. In Spring 2009, topics included database construction, measurement selection, factor analysis, recruitment and sampling issues, secondary analysis, subset analysis, and hierarchical modeling.

890. Nursing Doctoral Teaching Residency. (A) Designated Member of the School of Nursing Grad Group. For Nursing Doctoral Students Only.

The purpose of this required one semester teaching residency is to enhance the expertise of students in the role of educator. The residency will be tailored to the student's individual learning needs. At the minimum, students with no or minimal prior teaching experience will gain a beginning level of expertise in course planning, course evaluation, dealing with difficult student situations, test construction, paper assignment construction and grading, content delivery methods, as well as other aspects of the faculty teaching role. Students with more extensive teaching experience will tailor their residencies with their residency supervisor to enhance their expertise in these various areas.

897. Nursing Doctoral Research Residency. (A) Designated Member of the School of Nursing Grad Group. For Nursing Doctoral Students Only.

The purpose of this required one semester research residency is to enhance student research training early in the doctoral program by providing a mentored research experience. The residency is designed to be a tailored hands-on experience to provide students with exposure and the opportunity to participate in one or more aspects of an on-going research project. Research residencies are experiential activities designed to meet the student's individual learning needs. At the minimum, students with no or minimal prior research experience will gain a beginning level of experience on a variety of components of an ongoing research project. Students with more extensive

UNIVERSITY COURSE REGISTER

research experience will tailor their residencies with their residency supervisor to enhance their expertise in these various areas.

900. Directed Study. (C)

Must be arranged with the written permission of the sponsoring faculty member prior to registration.

995. Dissertation. (C)

Dissertation General Tuition

OPERATIONS AND INFORMATION MANAGEMENT (WH) {OPIM}

L/R 101. Introduction to the Computer as an Analysis Tool. (C) Staff. There are no recitations or Lab sections for this course.

Computers have become an essential tool in nearly all organizations; no management student's education is complete without acquiring knowledge about using computers to solve management problems. OPIM 101 provides a solid foundation in both computers and modeling for use in subsequent courses at Wharton as well as for the students professional career. The course is intended to build student skill and comfort using the computer to solve problems, teach management software tools for course work and professional life, and provide an understanding of the role of computers in modern organizations. Topics include budgeting, analytical modeling, sensitivity analysis, database management, inventory control analysis, decision analysis, optimization, neural networks, genetic algorithms, and simulation.

The new course format incorporates all previous recitation material into lectures. The recitation or lab section has been replaced with an open laboratory policy that allows students to complete labs at their convenience. The open computing lab is staffed by OPIM 101 consultants during the day. Three weekly one hour lectures provide conceptual and analytical material as well as demonstrate skills using a computer that helps students to learn to solve problems using Microsoft Excel. Students complete six realistic cases playing the role of solving a problem for a client. Cases require model solutions using Microsoft Excel and an executive slide presentation of results and management recommendations using Microsoft Excel or Powerpoint. No prior background in either computers or operations and information management is expected.

210. Management Information Systems. (C) Staff.

This course provides a broad-based introduction to the management of information technology focusing on three interrelated themes: technology, organization, and strategy. The goal of this course is to equip students with the knowledge and tools to utilize information systems to pursue a firm's strategic and organizational goals. The course has no

prerequisites other than a general interest in the applications of information technology.

221. (ESE 522) Operations Strategy and Process Management. (C) Staff. Cross listed with ESE 522.

This course examines how organizations can develop and leverage excellence in process management. The first module focuses on operations strategy. In these classes, we examine what constitutes an operations strategy and how organizations can create value by managing complexity, uncertainty, and product development. In the second half of the course, we discuss recent developments in both manufacturing and service industries. Specifically, we examine initiatives in quality, lean manufacturing and enterprise-wide planning systems. The course is recommended for those interested in consulting or operations careers, as well as students with an engineering background who wish to develop a better understanding of managing production processes.

223. Service Operations Management. (C) Staff.

This course covers a mix of simple quantitative and qualitative models that should help you to better understand both the underlying economics and the difficulty of managing various service operations. The course covers the following topics: the design of service delivery systems, service quality and customer retention, capacity management, and demand management. The course uses a mix of lectures and case discussions. Example industries include airlines, fast food, hospitality, hospitals, retailing, retail financial services, and travel agencies.

261. (BPUB261, BPUB761, BPUB961, ESE 567, OPIM761) Risk Analysis and Environmental Management. (C) Staff. Crosslisted with OPIM 761, BPUB 261, 761, 961, and ESE 567. See description under OPIM 761.

290. Decision Processes.

Prerequisite(s): STAT 101 or equivalent strongly recommended.

This course is an intensive introduction to various scientific perspectives on the processes through which people make decisions. Perspectives covered include cognitive psychology of human problem-solving, judgment and choice, theories of rational judgment and decision, and the mathematical theory of games. Much of the material is technically rigorous. Prior or current enrollment in STAT 101 or the equivalent, although not required, is strongly recommended.

291. (LGST206, MGMT291) Negotiations. (C) Staff.

Negotiation is the art and the science of creating good agreements. This course develops managerial negotiation skills by mixing lectures and practice, using cases and exercises in which students negotiate with each other. The cases cover a wide range of problems and settings: one-shot deals between individuals, repeated negotiations, negotiations over several issues, negotiations among several parties (both within and between organizations), and cross-cultural issues. Performance in the cases accounts for nearly half the course grade. Students must also describe their experience and thoughts in a journal, and write a term paper.

292. (LGST292, MGMT292) Adv Topics Negotiation.

311. Business Computer Languages. (C) Staff.

The purpose of this course is to introduce students to the management and technical issues associated with developing computer programs for business and to provide students with a marketable skill. Although you will be using C++, Visual Studio.NET, and Microsoft's .NET Framework to develop computer programs and Web applications, this course is not so much a C++/.NET course as it is a course in the management issues attendant to realizing the potential of object-oriented programming languages and the promise of code reuse.

314. (OPIM662) Enabling Technologies. (C) Staff.

This course is about understanding emerging technology enablers with a goal of stimulating thinking on new applications for commerce. No prerequisite or technical background is assumed. The class is self-contained (mainly lecture-based) and will culminate in a class-driven identification of novel businesses that exploit these enablers.

The course will take a layered approach (from network infrastructure to data infrastructure to applications infrastructure, or direct enablers of commerce) to first, understanding and then, thinking about technology enablers. Network infrastructure layers include fundamentals of wired and wireless infrastructure technologies such as protocols for networking, broadband technologies - for last (DSL, Cable etc) and other miles (advances in optical networking) and digital cellular communications. Data infrastructure layers include usage tracking technologies, search technologies and data mining. Direct

application layers include personalization technologies (CRM), design technologies for content and exchanges, software renting enablers, application service provision, agents and security mechanisms. Finally some emerging technology enablers (such as bluetooth, biometrics and virtual reality) are identified and discussed.

315. Data Base Management Systems. (C) Staff.

Organizations continue to increase their reliance on computerized database management and information retrieval systems. Whether purchasing airplane tickets, managing retail merchandise, processing financial trades or simply sending email, data management defines the modern firm. This course aims to provide students with both a practical and theoretical introduction to the design, implementation, and use of such systems. Students are introduced to the fundamental concepts and principals of data management and gain practical experience by designing and deploying a working system. Throughout the course, case studies are used to illustrate theoretical concepts while acquainting students with innovative commercial uses of these systems.

316. (OPIM661) Systems Analysis, Design, and Implementation. (C) Staff.

At its surface this course introduces students to the management and technical issues associated with planning and designing large-scale computer systems. It does so in part as an elaboration of Fred Brooks's observation that "The technology, the surrounding organization, and the traditions of the craft conspire to define certain items of paperwork." But if that were our only goal, we would soon find ourselves mired in (and probably arguing about) the minutiae of how such paper items ought to be constructed - not a very helpful pedagogical exercise. So then, at a deeper level we seek to understand why the conspiracy endures, and why in spite of it, systems still take too long and cost too much to build as a systems project's team members struggle to understand one another across disparate discourse communities and world views, differences in experience and training, and over long periods of time. More than anything else, within the context of working with the main tools and techniques of systems analysis and design, this course treats communication, corroboration, and thinking within the boundaries of a technology-oriented project as its primary subjects.

SM 319. Advanced Decision Systems: Evolutionary Computation. (C) Staff.

Evolutionary computation is an exciting new technology that applies principles of evolution - such as natural selection, genetic recombination and mutation - to discover solutions to problems, adapt to the environment, and even make it possible for computers to program themselves. This seminar explores genetic algorithms, genetic programming, and classifier systems. It focuses on practical applications of this technology, including: discovering profitable investment strategies, formulating strategies for multilateral negotiations, managing a transcontinental pipeline, modeling decision processes of consumers, and multiobjective planning and scheduling of production. Students apply this technology to sample problems and work in groups on larger term projects of their own choice. Common Lisp is used for all projects, and is learned during the semester. To help students learn Lisp, we will discuss readings from the Lisp textbook and work through generic code written in Lisp for evolutionary computation.

321. Introduction to Management Science. (C) Staff.

Decision making is becoming increasingly quantitative; hence the use and abuse of quantitative techniques is an important concern of management. Emphasis in this course is placed on understanding the formulation, analysis, and implementation of management science tools for a broad range of managerial decision problems. Topics covered include mathematical programming, decision making under uncertainty, and simulation. This course is concerned with methodological issues relating to the design and control of operations.

325. Computer Simulation Models. (C) Staff. Prerequisite(s): OPIM 101 or equivalent.

This course focuses on agent-based computational models in the social sciences, especially in economic, in commercial and in strategic (game-theoretic) contexts. This relatively recent and now rapidly-developing form of computer simulation seeks to explain and predict complex social phenomena "from the ground up", through interactions of comparatively simple agents. The course reviews experimental and theoretical results, and exposes the students to modern development environments for this form of simulation. Students have the opportunity to design and implement agent-based

simulations. Programming, however, is not required. This course aims to integrate various topics in agent-based simulation, while developing an appreciation of the problems that are particularly characteristic of this form of simulation so that students will understand its promise and potential.

397. (OPIM697) Retail Supply Chain Management. See description under OPIM 697.**398. (OPIM698) Retail Supply Chains.**

The course will examine how retailers understand their customers' preferences and respond with appropriate products through effective supply chain management. The course class sections will deal with the following major items: (1) linking finance and operations in retailing, (2) what assortment of products should a retailer carry in each store, (3) optimizing the inventory carried of each SKU in each store, (4) markdown pricing, (5) store execution and (6) supply chain design. In addition, we will consider a broad range of issues facing two retailers, Mothers Work, and Best Buy, when we are visited by current and past senior executives from these firms.

The course is highly recommended for students interested in careers in: (1) Retailing and retail supply chains, (2) Businesses like banking, consulting and information technology that provide services to retail firms, (3) Manufacturing companies that sell their products through retail firms. Even if you don't expect to work for a retailer, this course can be useful to you in two ways. First, because retailers are such dominant players in many supply chains today, it is important that the processes they follow be understood by manufacturers and distributors, or by the consultants and bankers that service retailers and their suppliers. Second, the problems retailers face (e.g., making data accessible, interpreting large amounts of data, reducing lead-times, eliciting the best efforts from employees, and so forth), are shared by firms in many other industries. It's easier to understand these issues through case studies in retailing because we all experience the industry as consumers and can readily relate to chronic problems such as stock outs and markdowns.

The course will be highly interactive, using case discussions in more than half of the classes and including senior retail executives in a number of the class sessions.

399. Supervised Study. (C) 1 c.u. By appointment.

Decision science majors read and report on a bibliography of works in their field of specialization provided by a faculty member.

410. (OPIM672) Decision Support Systems. (C) Staff. Crosslisted with OPIM 672. See description under OPIM 672.

412. Intro to Computer Programming. (C)

415. (IPD 515, MEAM515) Product Design.

This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype. The course is open to juniors and seniors in SEAS or Wharton.

469. Information Strategy and Economics. (C)

The course is devoted to the study of the strategic use of information and the related role of information technology. The topics of the course vary year to year, but generally include current issues in selling digital products, intermediation, and disintermediation, designing and competing in electronic markets, outsourcing, and technology project management. Heavy emphasis is placed on utilizing information economics to analyze new and existing businesses in information-intensive industries. Technology skills are not required, although a background in information technology management (equivalent to OPIM210), strategic management or managerial economics is helpful.

621. Decision Models and Uncertainty. (A)

631. Operations Management: Quality and Productivity. (B)

632. Operations Management: Supply Chain Management. (B)

651. Innovation, Problem Solving and Design. (M) Prerequisite(s): OPIM 621, 631.

The course is first and foremost an intensive, integrative, project course in which student teams create one or more real businesses. Some businesses spun out of the course and now managed by alumni include Terrapass Inc. and Smatchy Inc. The project experience is an exciting context in which to learn key tools and fundamentals useful in innovation, problem solving, and design. Examples of these tools and fundamentals are: problem definition, identification of opportunities, generating alternatives, selecting among alternatives, principles of data graphics, and managing innovation pipelines. The course requires a commitment of at least 10 hours of work outside of class and comfort working on unstructured, interdisciplinary problems. Students with a strong interest in innovation and entrepreneurship are particularly encouraged to enroll. Please read carefully the syllabus posted on-line before registering for this course.

653. Mathematical Modeling and its Application in Finance. (C) Staff.

Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the volatility of fixed-income markets since interest rate deregulation, the increased globalization of the financial markets, the proliferation of information technology, and so on. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and swaps are discussed. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB.

This course is quantitative and will require extensive computer use. The course is intended for students who have a strong interest in finance. Prospective students of this course should be comfortable with quantitative methods, such as basic statistics and the methodologies (mathematical programming and simulation) taught in OPIM 621 Management Science.

654. Product Design and Development. (B) Staff.

The course provides the student with a number of tools and concepts necessary for

creating and managing product development processes. The course consists of two interwoven parts. First, it presents the basic steps that are necessary for moving from a "cool idea" to a product sufficiently mature to launch an entrepreneurial start-up. This includes cases, lectures, and exercises on topics like identifying customer needs, developing a product concept as well as effective prototyping strategies. The capstone of this first part is a real project in which student teams conceptualize and develop a new product or service up to the completion of a fully functional prototype.

Second, the course discusses a number of challenges related to product development as encountered by management consultants, members of cross-functional development teams as well as general managers. We will analyze several cases related to, among others, resource allocation in R&D organizations, organizational forms of product development teams, as well as managing development projects across large geographic distances.

655. (MKTG655) Operations, Marketing, and Design Integration. (B) Staff. Prerequisite(s): MKTG 621, MKTG 622, OPIM 631, OPIM 632. Crosslisted with MKTG 655.

This course covers topics that span marketing and operations management. Students will examine issues and decisions that require significant coordination between managers in marketing and operations. Topics include channel management, supply chain design, product variety management and service operations pricing and control.

656. (ESE 522) Operations Strategy. (C) Staff. Prerequisite(s): OPIM 621, OPIM 631, and OPIM 632 or equivalent. Crosslisted with ESE 522.

This course examines how organizations can develop and leverage excellence in process management. The first module focuses on operations strategy. In these classes, we examine what constitutes an operation strategy and how organizations can create value by managing complexity, uncertainty, and product development. In the second half of the course, we discuss recent developments in both manufacturing and service industries. Specifically, we examine initiatives in quality, lean manufacturing and enterprise-wide planning systems. The course is recommended for those interested in consulting or operations careers, as well as students with an engineering background who wish to develop a better

understanding of managing production processes.

658. Service Operations

Management. (C) Staff. Prerequisite(s): Courses in operations management, linear programming, probability and statistics.

The service sector represents the largest segment of most industrial economies. In the U.S., for example, it accounts for approximately 70% of GDP and 70% of employment. In addition to this "pure" service sector, the operations and competitive positions of many manufacturing firms are becoming increasingly service-oriented. While operational excellence is critical for success in most industries today, in a wide range of service industries this is particularly true. For example, recent, significant deregulation in banking, health care, and communications has led to intensified competition and pressure on operations. At the same time, the rapid evolution of information technology has enabled firms to operate in a fashion - and offer a level of service - that has not been previously possible. Elements common to most services make the management of their operations complex, however. In particular, services are intangible, not storable or transportable, and often highly variable. Frequently their delivery involves distributed operations with a significant amount of customer contact. All of these factors make service operations end up looking quite a bit different than manufacturing operations, and the task of achieving excellence in them requires specialized analysis frameworks and tools.

This course covers a mix of qualitative and quantitative models that provide the necessary tools. The class will focus on simple models that should help you to better understand both the difficulty of managing and the underlying economics of the service operations being considered. You will have the opportunity to apply these course tools in a group service assessment field project.

659. Advanced Topics in Quantitative Methods and Operations Management. (C) Staff.

Prerequisite(s): OPIM 631 and OPIM 632.

The specific content of this course varies from semester to semester, depending on student and faculty interest. Recent topics have included global operations, product design and development, quality management, and logistics strategy. See department for course description.

660. (ESE 508) Information Systems for Managers. (B) Staff. Crosslisted with ESE 508.

The advances achieved in information technologies and systems (IT&S) -- primarily computing and communications systems -- have been, and will continue to be extraordinary. Consequently, the scope and practical import of IT&S can hardly be overestimated. "Management Information Systems (MIS) is the practice of using computer and communication systems to solve problems in organizations. This course is designed to provide the essential skills and technology-based insights needed in order to manage effective problem solving with information technologies and systems (IT&S), and to extract the most value from an actual or potential information system."

The course is organized around several "hands on" cases or projects, through which students teams become familiar with important information technologies, including databases and the Internet.

Students completing this course will have mastered a basic understanding of information technology, the fundamentals of the use of information technology in business, and essential information technology survival skills.

661. (OPIM316) Systems Analysis, Design, and Implementation. (C)

Staff. Description under OPIM 316.

662. (OPIM314) Enabling Technologies. (A)

Technology is a vital input to the process of wealth creation in a networked economy. This course is about understanding emerging technology enablers with the goal of stimulating thought on new applications for commerce. The class is a comprehensive overview of various emerging technologies and culminates in a class-driven identification of new and novel businesses that exploit these enablers.

No prerequisite or technical background is assumed. Students with little prior technical background can use the course to become more technologically informed. Those with moderate to advanced technical background may find the course a useful survey of emerging technologies. The course is recommended for students interested in careers in consulting, investment banking and venture capital in the tech sector.

664. Database and Information Management Systems. (C) Staff.

Data and information are critical to the modern organization. Whether used in

knowledge management, business intelligence, enterprise resource planning (ERP), product design, marketing, personalization and other aspects of managing customer relationships (CRM), the underlying principles of data management are the same. This course aims to provide a practical introduction to the fundamental principles. Examples and exercises will cover the relational database tools at the core of ERP, CRM, and on-line exchanges and portals. However, the course will also use the same basic foundations to consider emerging technologies and standards such as XML, ebXML, UDDI, etc.

665. Operations Management in Health Care. Faculty.

In an era where health care systems around the world face rapidly rising costs and quality issues, organizations large and small are looking into the operational side of health care for solutions. Likewise, the abundance of unfulfilled needs in the health care marketplace has led to an array of technology ventures with innovative new products and services. In this course, we apply the tools of operations management to analyze the health care value chain. The course consists of four modules: (1) the management of productivity, quality, and variability by care providers, (2) capacity and investment decisions under uncertainty confronting pharmaceuticals, (3) the design of health insurance by health plans and the determination of health benefits by employers, and (4) business ideas and operations models from the intersection of academic research and technology ventures. Students will learn from case discussions, hands-on decision tools, and several distinguished speakers and alumni from Stanford Hospital & Clinics, Merck, U.S. Naval Academy, and Deloitte Consulting. No prior exposure to the health care industry is assumed. The course prepares students for several career paths including consulting, operations management, and health care administration and is open to both first- and second-year MBA students.

666. Information: Industry Structure and Competitive Strategy. (C) Staff.

This course is in the tradition of Operations courses as exercises in the systematic understanding of complex systems, rather than in the tools and techniques for understanding aspects of those systems. It draws upon the most recent experience in the impact of information technology upon diverse industries, ranging from securities trading to consumer packaged goods retailing. It integrates that experience with

relevant theory to develop an approach to information-based strategies generally, including resurgent interest in strategies for Commerce. It is not a tools and techniques course; likewise it is not a technology or an implementation course. It provides a focused and modern complement to strategic planning.

The increase in consumer informedness is changing consumer behavior in a wide range of situations. Customers find the least expensive alternative in categories of little importance to them, while finding the perfect match with their wants and needs, cravings and longings, in categories they find salient. Online trust is a strong determinant of shopping behavior and will continue to be. Likewise, the increase in information available to firms, and the increasing variety of strategies available for the use of information - from dynamic repricing to online distribution, from labor productivity enhancements to labor arbitrage and outsourcing - requires a dramatic revision of managerial mental models of their competitive options. Revising mental models and enhancing mental agility are both essential to executive leadership, rather than mere conservation and management, in today's environment of rapid and discontinuous change in the competitive environment.

The ability to target profitable market segments and to identify individual customers is reducing the value of scale-based operations and the strategic advantage of large firms with existing market share. The ability to monitor the performance of units abroad is leading to greater reliance upon outsourcing, benefiting many service industries and once again reducing the advantage of many large firms. At the same time, the impact of information technology on the transparency and efficiency of securities markets is destroying the profits of entire segments of financial services. All aspects of the firm-production, service, sales, marketing, and strategy - will be affected. Clearly, some firms will win and others will lose; nearly all will have to change. And yet, fundamental laws of economics have not been repealed. How can previous economic theory, and previous experience with rapid technological change, provide insights for the development of strategy in an increasingly digital age?

667. Business Transformation. (C)

Staff. Prerequisite(s): OPIM 666 or permission of instructor is required. This course is a direct sequel to OPIM 666 and it addresses strategic problem solving in the context of business transformation

engagements. The course is intended to prepare students for leadership roles in dynamic and rapidly evolving industries, and for careers in strategic consulting. I view this as the most exciting and rewarding aspect of strategic planning and strategic consulting. In order to perform strategic transformation, either as a member of the firm's executive team or as an external strategy consultant, it is necessary to address the following questions: (1) Understanding the future: What has changed and what will change in the business environment of the firm? Why is it going to be necessary to engage in strategic change? What information will be required to function effectively? (2) Future capability assessment: What will the firm need to do in order to compete in this new environment? What specific actions will be required? What information will be required to function effectively? (3) Current activities audit: What does the firm do now? What changes will be necessary? What information is currently available? (4) Leadership challenges: Who will be adversely affected by those changes? Who will resist making them? Who will be unable to implement them for other reasons? How can you facilitate difficult change?

(5) Information infrastructure: How will information endowment determine competitive positioning? What information systems will be required for the firm and its partners? What information capability will be possessed by customers and competitors? (6) Getting started: Determine your value proposition and your pricing.

Thus, while this is a course in Information Strategy and Economics, and while information endowment is central to our strategic analyses, information systems and technology together represent only one of the issues that must be addressed in order to complete strategic business transformation.

668. Telecommunications Technology and Competitive Strategy. (B) Staff.

Telecommunications technology is changing rapidly, with profound implications for quality of everyday life and the competitive position of firms in all industries. Regulators, sociologists, executives and even those responsible for planning for firms in the telecommunications industry as yet poorly understand these changes.

This course presents a broad summary of telecommunications including the basics of analog and digital media, long-haul and local data communications technology, and the emerging structure of telephony. It

addresses the implications for competitive strategy, both within and outside the telecommunications industry.

This course is recommended for students in strategic management, especially those with an interest in high technology firms, and for students with an interest in the communications industry. No background in technology is required, though an understanding of technology-driven competitive strategy is helpful. Students completing this course will have acquired a basic understanding of the competitive implications of modern telecommunications technology and the implications of this technology for the future structure of commerce.

669. Advanced Topics in Information Strategy. (B) Staff.

The capstone course for the MBA major "Information Strategy, Systems, & Economics," OPIM 669 covers essential topics in information strategy - such as pricing of information goods; competing in electronic markets; market transparency and search issues; information-intensive strategies; IT outsourcing; and software project management - that have high impact on 21st-century business but are not typically covered in other Wharton courses.

670. Special topics in Information Systems: Simulation and Dynamic Competitive Strategy. (M)

This course introduces tools and techniques for modeling dynamic competitive strategies - strategies that evolve over time as you and competitors take actions in response to each other and to changes in the competitive environment. This goes beyond case discussions and approximates the rigor of theoretical or game theoretical analyses, even for problems for which no traditional analytical solutions exist. Students of the course will learn to model business environments and design simulators with the goal of gaining insight and designing policies for strategy implementation. Students will develop understanding of the timing and sequencing of the actions required, as well as understanding how to modify strategies on the fly based on changing conditions or objectives. Students are introduced to state of the art software for general purpose business modeling and simulation.

672. (OPIM410) Decision Support Systems. (C) Staff. Crosslisted with OPIM410.

The past few years have seen an explosion in the amount of data collected by businesses and have witnessed enabling technologies such as database systems,

client-server computing and artificial intelligence reach industrial strength. These trends have spawned a new breed of systems that can support the extraction of useful information from large quantities of data. Understanding the power and limitations of these emerging technologies can provide managers and information systems professionals new approaches to support the task of solving hard business problems. This course will provide an overview of these techniques (such as genetic algorithms, neural networks, and decision trees) and discuss applications such as fraud detection, customer segmentation, trading, marketing strategies and customer support via cases and real datasets.

673. Global Supply Chain Mgmt.

676. Electronic Markets: Structures, Market Mechanisms and IT Enabled Strategies. Prerequisite(s): MGEC 621 is recommended.

This course deals with Electronic Markets and Market structures and the strategic uses of information within the firm. The course consists of four related modules on the design and functioning of Business to Business markets, use of technology to source services from global providers - i.e., outsourcing of business processes (as opposed to IT), the use of strategic technological platforms such as CRM and Web Services and the technology-enabled precision pricing techniques. Further, students are exposed to strategy formulation and execution in an online market where they compete both against each other and against (electronic) agents. This course is recommended for students interested in a career in consulting, strategic management and to students interested in information technology related professions. The course will be delivered through a mix of lectures, case discussions and hands-on trading in virtual markets using different market mechanisms. The course Web cafe will be used for discussions and responses from instructor and TA. We do not assume or require any specific technical knowledge.

Workings of electronic markets and market mechanisms and how IT can enable the formulation of new strategies and empower firms to define new markets in ways that were not possible until recently. This is an advanced elective that covers several essential topics in information strategy - IT and market structure, impact of IT on knowledge-intensive products and services and creating hybrid markets that span multiple channels. Students will compete in simulated electronic markets,

using different market mechanisms and formulate information-based strategies. Students will also study how IT has enabled the globalization of services through the outsourcing of processes (BPO) and how quasi market structures which combine elements of organization and markets are emerging in knowledge-intensive service industries.

690. (MGMT690) Managerial Decision Making. (C) Staff. Crosslisted with MGMT 690.

Making decisions, from the trivial to the fundamental, is part of everyday life of every manager and investor. For the last 30 years psychologists - and more recently also economists - have studied how people process information and make decisions. This research program has provided an insightful understanding how people's decisions deviate from "optimal" ones, and the consequences of such biases in financial and personal terms. This course is devoted to understanding the nature, causes, and managerial implications of these limitations.

The material from this course provides useful insights that will likely improve the student's decision making skills in many different domains.

691. (LGST806, MGMT691, OPIM291) Negotiations. (C) Staff. Prerequisite(s): STAT 601, OPIM 621. Crosslisted with LGST 806, MGMT 691.

Negotiation is the art and science of creating good agreements. This course develops managerial negotiation skills by mixing lectures and practice, using cases and exercises in which students negotiate with each other. The cases cover a wide range of problems and settings: one-shot deals between individuals, repeated negotiations, negotiations over several issues, negotiations among several parties (both within and between organizations), and cross-cultural issues. Performance in the negotiation's cases accounts for a significant portion of the course grade. OPIM 691 sections differ from LGST 806 and MGMT 691 sections in that OPIM 691 covers theoretical aspects of negotiation (including psychological theories of judgmental mistakes negotiators make) in a bit more depth, and covers fewer legal and dispute resolution issues. Students can take only one of the three courses.

697. (OPIM397) Retail Supply Chain Management. (C)

This course is highly recommended for students with an interest in pursuing careers in: (1) retailing and retail supply chains; (2)

businesses like banking, consulting, information technology, that provides services to retail firms; (3) manufacturing companies (e.g. P&G) that sell their products through retail firms. Retailing is a huge industry that has consistently been an incubator for new business concepts. This course will examine how retailers understand their customers' preferences and respond with appropriate products through effective supply chain management. Supply chain management is vitally important for retailers and has been noted as the source of success for many retailers such as Wal-mart and Home Depot, and as an inhibitor of success for e-tailers as they struggle with delivery reliability. See M. L. Fisher, A. Raman and A. McClelland, "Rocket Science Retailing is Coming - Are You Ready?," Harvard Business Review, July/August 2000 for related research.

698. (OPIM398) Value Networks. (M) Staff.

This is a project-based course run in a seminar format to explore current trends and opportunities for integration and coordination in IT-enabled value-chain networks. The curriculum is structured around a live case; students will work in teams to synthesize data from the live case and evaluate possible operational strategies and IT enablers in the context of a real, ongoing business restructuring decision. Students will review a set of operations strategies affecting production, fulfillment, procurement product design, and support that may prove relevant e.g. Postponement, Mass Customization, Customer Service Differentiation, Buyer/Supplier Coordination. We also consider functionality that underlies relevant information technologies like Enterprise Resource Planning (ERP) or Customer Relationship Management (CRM), e.g. data integration, information quality, and security. Finally, we invite different vendors into the class to provide students with the opportunity to compare and contrast state-of-the-art IT and Operations Management solutions.

761. (BPUB261, BPUB761, BPUB961, ESE 567, OPIM261) Risk Analysis and Environmental Management. (C) Staff. Cross listed with OPIM 261, BPUB 261, 761, 961, and ESE 567.

This course introduces students to the complexities of making decisions about threats to human health and the environment when people's perceptions of risks and their decision making processes differ from expert views. Recognizing the limitations of individuals in processing information the course explores the role of

techniques such as decision analysis, cost-benefit analysis, risk assessment and risk perception in structuring risk-management decisions. We will also examine policy tools such as risk communication, incentive systems, third party inspection, insurance and regulation in different problem contexts. A course project will enable students to apply the concepts discussed in the course to a concrete problem.

762. Environmental Sustainability and Value Creation. (C) Staff. MBA mini elective. This course is one of the set of mini-elective courses satisfying the core requirement.

This course approaches environmental issues from the standpoint of business. It emphasizes the trends in corporate practices and uses case studies to examine the interactions between the environment and the firm. 'Sustainable Development' and the role of regulatory agencies and NGOs are also highlighted. This course has four objectives: to increase environmental literacy; to ask questions about environmental issues as managers carry out their traditional business functions; to recognize environmental concerns as competitive opportunities; to teach students to think strategically and act entrepreneurially on environmental issues.

898. Advanced Topics. (M)

900. (PSYC608) Foundations of Decision Processes. (C) Staff. Prerequisite(s): STAT 510 or 550.

The course is an introduction to research on normative, descriptive and prescriptive models of judgement and choice under uncertainty. We will be studying the underlying theory of decision processes as well as applications in individual group and organizational choice. Guest speakers will relate the concepts of decision processes and behavioral economics to applied problems in their area of expertise. As part of the course there will be a theoretical or empirical term paper on the application of decision processes to each student's particular area of interest.

SM 904. Experimental Economics. (M) Staff. Prerequisite(s): OPIM900 or permission of the instructor.

Many theories in economics can be tested usefully in experiments in which researchers control parameters that are uncontrolled in natural settings. This course presents the theory of the experimental method and validity along with several examples of experimental testing: simple competitive equilibrium, intertemporal competitive equilibrium, asset markets,

futures markets, bargaining models, tournaments, reputation-building in repeated games, etc.

SM 906. Proseminar in Operations and Information Management. (M) Staff.

910. (ESE 504) Concepts of Math Programming. (A) Staff. Crosslisted w/ ESE 504.

Introduction to mathematical programming for PhD students who would like to be intelligent and sophisticated consumers of mathematical programming theory but do not plan to specialize in this area. Integer and nonlinear programming are covered, including the fundamentals of each area together with a sense of the state-of-the-art and expected directions of future progress.

913. Advanced Linear Programming. (M) Prerequisite(s): OPIM 910 or equivalent.

In-depth study of the theory and algorithms related to the solution of linear programming problems. Optimality conditions, duality and sensitivity analysis. Primal and dual simplex methods. Interior point methods. Large-scale optimization. Dantzig-Wolfe decomposition.

914. Advanced Non-Linear Programming. (M) Staff. Prerequisite(s): OPIM910 or equivalent.

Convex sets and functions. Tangent cones. Polar cones. Optimality conditions and duality theory. Methods for unconstrained and constrained optimization. Interior and exterior penalty methods. Lagrangean and augmented Lagrangean methods.

915. Advanced Graph Theory. (M) Staff.

Deals mainly with algorithmic and computational aspects of graph theory. Topics and problems include reachability and connectivity, setcovering, graph coloring, location of centers, location of medians, trees, shortest path, circuits, traveling salesman problem, network flows, matching, transportation, and assignment problems.

916. Advanced Integer Programming. (M) Staff. Prerequisite(s): OPIM 910 or equivalent.

In-depth review of solution methods: Lagrangean relaxation and column generation, Benders partitioning, cross-decomposition, surrogate relaxation, cutting planes and valid inequalities, logical processing, probing, branch-and-bound, branch-and-price. Study of special problems and applications: matching,

location, generalized assignment, traveling salesman, forest planning, production scheduling.

920. Empirical Research in Operations Management.

Empirical research in Operations Management has been repeatedly called for over the last 10-15 years, including calls made from the academic thought leaders in the field as well as by many of the editors of the top academic journals. Remarkably though, most researchers in the field would be pressed to name even three empirical papers published in such journals like Management Science or Operations Research. But, has there really been so little published related to empirical Operations Management (you might be surprised to learn that all five bullets listed above has been addressed by Management Science papers)? What types of problems in operations are interesting and worthwhile studying from an empirical viewpoint? How can one get started with an empirical research project in Operations Management? These are the questions that are at the heart of this course.

Specifically, the objective of this course is to (a) expose doctoral students to the existing empirical literature and (b) to provide them with the training required to engage in an empirical study themselves.

930. Stochastic Models. (C) Staff. Prerequisite(s): STAT510 or 550 or equivalent.

This course introduces mathematical models describing and analyzing the behavior of processes that exhibit random components. The theory of stochastic processes will be developed based on elementary probability theory and calculus. Topics include random walks, Poisson processes, Markov chains in discrete and continuous time, renewal theory, and martingales. Applications from the areas of inventory, production, finance, queueing and communication systems will be presented throughout the course.

931. (STAT901) Stochastic Processes II. (M) Staff. Prerequisite(s): OPIM930. Crosslisted with STAT 901.

Extension of the material presented in OPIM930 to include Markov decision processes, queueing theory, stochastic modeling and optimization.

932. Queuing Theory. (M) Staff. Prerequisite(s): OPIM 930 or equivalent.

Discrete-state stochastic processes: Markov chains, Markov processes, birth-death processes; M/M/1 queue and variants; M/G/1 queue and G/M/n queues; priority

queues: preemptive and non-preemptive; Networks of queues; Jackson networks, BMCP networks, Kelly networks; Little's formula; Dynamic optimization of queues.

934. Dynamic Programming and Stochastic Models. (M) Staff.

Reviews the theoretical foundations of dynamic programming, stochastic control, and Markov decision processes. Applications in the area of production and inventory, finance, and marketing will be explored. Course requirements include homework, exercises and a research paper.

940. Operations Management. (C) Staff. Crosslisted with ESE 620.

Concepts, models, and theories relevant to the management of the processes required to provide goods or services to consumers in both the public and private sectors. Includes production, inventory and distribution functions, scheduling of service or manufacturing activities, facility capacity planning and design, location analysis, product design and choice of technology. The methodological basis for the course includes management science, economic theory, organization theory, and management information system theory.

941. Distribution Systems Seminar. (B) Staff. Prerequisite(s): OPIM940.

Seminar on distribution systems models and theory. Reviews current research in the development and solution of models of distribution systems. Emphasizes multi-echelon inventory control, logistics management, network design, and competitive models.

943. Retail Operations.

950. Perspectives on Information Systems. (C) Staff.

Provides doctoral students in Operations and Information Management and other related fields with a perspective on modern information system methodologies, technologies, and practices. State-of-the-art research on frameworks for analysis, design, and implementation of various types of information systems is presented. Students successfully completing the course should have the skills necessary to specify and implement an information system to support a decision process.

SM 951. Seminar on Logic Modeling. (M) Staff. Prerequisite(s): Permission of the instructor and some prior knowledge of logic or Prolog.

Seminar on the elements of formal logic necessary to read and contribute to the Logic modeling literature, as well as the implementation principles for logic models. The primary topics include elements of sentence and predicate logic, elements of modal logics, elements of semantics, mechanical theorem proving, logic and database, nonmonotonic reasoning, planning and the frame problem, logic programming, and metainterpreters.

SM 952. Computational Game Theory. (M) Staff. Prerequisite(s): Permission of instructor and knowledge of logic and Prolog or Lisp.

Seminar on principles of knowledge-based systems including expert systems. Topics include basics of expert systems,

knowledge representation, meta-level reasoning, causal reasoning, truth maintenance systems, model management, planning systems and other applications.

960. Research Seminar in Information Technology - Economic Perspectives. (A)

Explores economic issues related to information technology, with emphasis on research in organizational or strategic settings. The course will follow a seminar format, with dynamically assigned readings and strong student contribution during class sessions (both as participant and, for one class, as moderator.)

961. Research Seminar in Information: Strategy, Systems and Economics.

This is the advanced doctoral-level research research in information strategy and economics that builds on the foundations developed in OPIM960. Much of the content will be focused on current research areas in information strategy such as the information and organizational economics, information technology and firm performance, search cost and pricing, information and incentives, coordination costs and the boundary of the firm, and the economics of information goods (including pricing and intellectual property protection). In addition, promising empirical approaches such as the use of intelligent agents for data collection or clickstream data analysis will be discussed.

ORGANIZATIONAL DYNAMICS (AS) {DYNM}

SM 501. Foundations of Organizational Dynamics. (C) Greco. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This is a foundations course intended for non-MSOD students and MSOD students at any point in the program, particularly in their first year, and for non-MSOD students. This course serves to elaborate on central themes of Organizational Dynamics and offers the specialties of several faculty members. Lectures, discussions, simulations, and experiential learning are used to build an informed grounding in the philosophy, theory and practice of Organizational Dynamics. The course requirements are active class participation, a midterm paper and a final paper. Undergraduates may enroll in 500-level courses ONLY WITH PERMISSION OF THE INSTRUCTOR.

SM 542. Theories & Model That Inform Coaching. (M) Orenstein. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This course will discuss the importance of theory in guiding the practice of coaching. Students will be introduced to a theory/model that explores a multiple-discipline approach to coaching in an organizational setting. With this framework as a basis, and a subsequent review of an array of theoretical orientations, students will select, research, apply and present a theoretical model of their own choosing. Their model will provide the framework that informs their coaching and/or use their thought and practice in their roles at work.

SM 600. Managing Diversity in the Workplace. (C) Anderson. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This seminar will focus on the social nature of race, ethnicity, and lifestyle relations in the workplace, assessing implications for the resulting organizational culture and management issues. The workplace is the intersection of many individual experiences and biases, particularly those surrounding the personal issues of race, ethnicity and

lifestyle. One's capability for managing and being managed are profoundly affected by how clearly one is able to understand one's own biases as well as those of others. A main objective of the seminar will be to increase one's ability to understand and manage diversity in the workplace by investigating: (1) how distinctions manifest themselves in organizations; (2) how the same behavior can be viewed differently, depending on experience and culture; (3) the meaning of dominant and minority groups; (4) the workplace as the same or different from society in general; (5) risks of assuming that differences are being understood, when they are not; (6) the nature of stigma and its implications for the workplace.

SM 601. Gender Issues in Organizational Leadership. (C) Vanderslice. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This seminar will explore the intersection of gender and organizational behavior as it has evolved and in the current social and economic context in this country. We will examine the social, cultural and structural dynamics within organizations that differentially affect women and men, as well as the gender-linked resources each brings to organizations. Topics that will be addressed include the debate over the current situation of women in the workforce; the social construction of gender; the relationship of gender and power in understanding gender dynamics in the workplace; the intersection of gender and class; gender issues in organizational leadership; policy and practice as reinforcers of gendered dynamics; the interaction of culture and organizational structure; and restructuring organizations to better meet the needs of women and men in today's culture. The course will 1) address the development of a theoretical framework for understanding gender issues in the workplace; 2) explore more specific ways in which policies and practices have different effects on employees and managers by virtue of gender and; 3) focus on alternative conceptualizations, structures, policies and practices that could make it possible for both men and women to be successful in the workplace and to avoid gender-based discrimination.

In this last section, we will specifically discuss various organizational change processes that address gender issues within organizations.

SM 602. Leader-Manager as Coach. (M) Russo. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

New work technologies, increased competition and employees' desire for more involvement in their work are changing the traditional role of the manager. Rather than directing, planning and controlling the work, managers and leaders are facilitating processes and coaching and developing their employees. Team based organizations are built on coaching as a core requirement of the team leader role. This course explores the theory and practices of individual coaching as leadership behavior. The focus is on helping managers develop their skills and improve their performances as coaches. We will examine the need to provide others with successful performance strategies, timely feedback on strengths and on development needs and growth opportunities in order to challenge others to reach their potential. We will explore workplace environments that foster the growth and achievement of those we lead.

SM 603. Administrative Decision Making and Problem Solving. (C) Starr. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

How do you make important decisions when confronted with organizational, social or personal problems? Is your primary approach to use a strategic process? How many strategies do you know and use? In this course we will review and discuss research and descriptions about how "normal" people solve problems and make administrative, ethical, and social decisions. We will evaluate situations and problems where quantitative methods can be applied in order to improve both the process and outcome of complex problems. Using readings and classroom case exercises, we will consider cognitive errors or biases, as well as personality and group dynamics forces that influence making choices. We will also consider how psychological stress, gender, and leadership apply to decision-making and problem solving in organizations. Most research readings and methods of analysis and evaluation are based on assumptions, theories, modes, and research conducted by psychologists and published in psychology journals. The underlying assumptions of the psychological approach to the topic will be presented and discussed.

Participants will learn to: understand and apply normative ("ideal") strategies for decision making/problem solving;

understand and use descriptive ("everyday") and prescriptive ("improved") strategies and processes for decision making/problem solving; understand the differences between individual and group decision making/problem solving; understand how conflict, leadership, and gender influence decision making/problem solving; write papers that demonstrate understanding and application of decision making and problem solving strategies.

SM 604. Organizational Risk

Management. (L) Combrinck-Graham.

For additional information, please see our website at:

<http://www.organizationaldynamics@upen.n.edu/od.cgi>.

We will examine our involvement in risk management in our organizations and discuss whether our organizations manage risk as they manage opportunity. The first half of the course will focus on risk management's decisional and managerial aspects. During the second half of the course, we will apply these concepts to case studies as preparation for your presentation on managing risk in your particular organization. This course should provide you with a framework for addressing risk in your organization and perhaps in your personal life. You will also strengthen your understanding of your appetite for risk and that of your organization under different circumstances.

Risk management is a function rather than a specific position. It should be practiced by many levels of management, with coordination and guidance from a senior level. Risk management is a planning and strategic function, not solely an assessment, financial or safety function. Risk management prepares for an uncertain tomorrow, just as long-range planning deals with the futurity of present decisions.

SM 605. (GAFL605) Managing Project Risk. (C) Hornbacher.

For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

This seminar will focus on the six stages of project risk management articulated in the best practices standard developed by the Project Management Institute. These include: (1) Risk Management Planning; (2) Risk Identification; (3) Qualitative Risk Analysis; (4) Quantitative Risk Analysis; (5) Risk Response Planning and (6) Risk Monitoring and Control. Although the management processes involved in some stages may appear easy to understand, their implementation always requires appreciation of and commitment to the complexities of risk management by the

leadership of the organization. Stages 2 and 4 concern qualitative assessment; Stages 4 and 6 are more analytic in nature and involve discussion and review of quantitative techniques. Class participants will be asked to find past or current projects in their own organizations that could have or currently can benefit from early identification of risk. Students will work in teams to identify the benefits of, and more importantly, the challenges and barriers to, establishing risk management processes in their enterprises.

SM 607. Psychodynamics of Organizations. (M) Hirschhorn.

For additional information, please see our website at:

<http://www.organizationaldynamics@upen.n.edu/od.cgi>.

As an area of study, the psychodynamics of organizations draws out attention to the tacit, implicit, and unconscious dimensions of organizational life. It presumes that a person takes up his or her role at work by drawing on both individual history and the organizational context that helps define a role, its boundary, and the resources available to take it up. In both these aspects, the organizational context, and one's individual biography, people are often unaware of the thoughts and feelings that animate their behavior.

The course will introduce students to some basic concepts of psychoanalysis, which focus on individual motivation, and systems psychodynamics, which focuses on group dynamics and group psychology. System psychodynamics also emphasizes how an organizational's primary task, or its "reason for being," influences individual experience. Readings include case studies as well as expositions of theory. The instructor will also draw on his own consulting cases.

SM 608. Organizational Dynamics of Working in a Global Marketplace. (M)

Tschoegl. For additional information,

please see our website at:

<http://www.organizationaldynamics@upen.n.edu/od.cgi>.

This course examines some of the sources of confusion, conflict, misperception and error that arise when representatives of U.S. organizations interact and work in the global marketplace. The aim is to heighten awareness, help avoid personal or professional pitfalls, and to more effectively manage some of the organizational and business challenges that arise when operating across dissimilar environments. We will focus on areas including: ethics, culture, language, ethnicity, religion, gender, the political and

legal systems, labor, corruption, and corporate organization. Each class session will begin with a short, interactive introductory lecture, followed by discussion around assigned readings and mini-cases.

SM 610. Knowing Yourself: The Coach as an Instrument of Change. (M)

Napier. For additional information,

please see our website at:

<http://www.organizationaldynamics@upen.n.edu/od.cgi>.

Note: This class is predicated on the assumption that prior to offering coaching assistance, a coach should have a deep understanding of his or her own behavior and its impact on a client. Utilizing validated tools and strategies available for coaches, the students practice sets of coaching skills on each other. This includes practice in interviewing and observational skills. In addition, students will have the opportunity to give and analyze 360 degree feedback data as well as use a variety of other instruments that can be foundational for a useful coaching experience. Premise: Coaching others is very serious business. Intrepid individuals willing to take on this responsibility should be willing to answer the following questions: 1) Who am I as a leader and helper? 2) What are the assets I bring to the coaching relationship? 3) What are my deficits, overused strengths, or underutilized skills and behaviors? 4) What historical influences from my family of origin influence my capacity to build a positive relationship with my coaching client? 5) Are there discrepancies in relation to my self-perceptions and those who know me well--family members, peers, colleagues, friends, boss and direct reports?

Similar to most traditional programs where the focus is on the management of change, the course is organized to: 1) A diagnostic phase in which the values, history, assumptions, and behaviors of the client will be assessed. In this case, the client will be the student/coach. 2) The applied phase in which analysis, interpretation, and formal learning will be the central focus. The end result will be individuals with a deep and abiding understanding of their own psychodynamics and their personal impact. Finally, by modeling many of the tools and strategies useful in any effective coaching effort and practicing them on themselves and their student peers, it is hoped that the experiential nature of the course will allow maximum transference to the real work of coaching.

SM 611. Strategic Perspectives on Coaching. (M) Volini. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This course will examine coaching in the organizational setting from the perspective of significant stakeholders in the coaching process. Coaching from the perspective of the client will explore the goals, issues, concerns, and outcome measures that are in the domain of the clients. Why do they want coaching to take place? How can they maximize return on their time and energy investments? Coaching from the perspective of HR within the sponsoring organization considers HR goals and needs, and attaining "success" through coaching. Also examined are confidentiality, the responsibilities of HR (finding coaching and approving coaches), and how the investment is defined and measured. Coaching from the perspective of the coach addresses metrics and evaluation by the coach. Determining excellence is no simple task. The issues/problems, barriers to success, and tools of the trade will be addressed.

Coaching from the perspective of the high impact group outside the organization acknowledges the systems perspective that people are connected to multiple organizations and that behavior, knowledge, and/or competency are interactive and co-producing.

SM 612. Mastering Organizational Politics and Power. (C) Eldred. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

The purpose of this course is to explore, enhance, and expand the participants' competence in organizational politics. Students will observe political dynamics as they occur in their own organizations and will interview senior managers in other organizations to learn how political realities vary from one organization to another. Theoretical ideas about a dimension of organizational politics of particular interest to each individual participant will be analyzed in a term paper. In addition, each participant will keep a personal diary of political dynamics in his or her own workplace. The course will also explore ways to master the political skills of networking, negotiating, influencing, leading, and following, as well as developing a political strategy.

SM 613. Is Bigger - Inevitable, Better or Worse in Organizations?. (C) Licht. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Is the modern large corporation alienating, inflexible, unproductive? Is the small organization or work team engaging, innovative or creative, productive? Has it always been this way in the U.S.? Is change possible? In this unique, informal, "turbo" seminar, we will examine the large corporation in terms of history, governance and control, and delivery of (office) work. We will consider whether "bigness" and bureaucracy are inevitable, and how organizations of the present, and probably the future, are affected by those of the past.

This seminar has been structured to cover a good deal of ground in a short time. The seminar will meet on six Saturdays. The subject matter of the seminar is the large-scale organization. Questions to be raised include: 1) Is the modern large corporation alienating, inflexible, unproductive? 2) Are bigness and bureaucracy inevitable? 3) Is the small organization or work team engaging, innovative, creative, productive? 4) What does the historical record for the United States reveal? 5) Are organizational alternatives and change possible?

SM 616. Globalization: World Politics, Social Order and Economic Impacts. (C) Teune. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

The purpose of this seminar is to provide analytical frameworks for understanding change in the world seen as a total system. The challenging question of our time is whether this and the next decades will be dominated by a backlash against globalization, including new forms of global war and local closure to trade and exchange, or if the world, despite setbacks, will continue to develop a new political, social and economic world order radically different from the traditional one of relations among nations. In either case, turbulence and volatility from the forces and counter-forces of globalization can be expected.

The contradictions of our era of globalization (beginning around 1975) are that while globalization appears to lead to uniformities everywhere (McDonaldization), nevertheless old and new differences and identities intensify. Also, globalization makes it nearly impossible to explain a particular change, for example, decline in voting in

elections in the U.S., in American political terms, when the same phenomenon happens in all established democracies. Regions separate, Europe and NAFTA, among them, while at the same time globalization proceeds to include all markets everywhere. Topics that will be covered, after discussions of the main issues of globalization and its consequences, include: economic integration, the future of the nation-state, a New Europe, a world of regions, global democracy, doing business globally, nationalism and religious fundamentalism, the global environment, global security, and human rights in a global society.

SM 617. Economics of Human Behavior and Organizational Life. (M) Handy. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

The primary goal of this course is an examination of the various aspects of human behavior in the context of organizational and institutional life from an economic perspective. We begin with an examination of how micro economists view the world, discussing concepts such as: efficiency; opportunity cost/marginalism; externalities; incentives; free-riding; rent-seeking; and transaction costs. We then focus on a rational choice analysis of family, the oldest and most fundamental institution in society. We examine marriage and divorce and the consequences from an economic standpoint for individuals and society. We then examine religious organizations and religion in terms of choices individuals make given costs and benefits of their actions while "producers" of religion compete for adherents. Before concluding the course with an economic analysis of democratic government, we will look at several topics such as: human capital and investment in education; law and enforcement; bribes and gifts, economics of information; property rights and externalities; and free-riding.

SM 619. Organizational Project Management. (M) Choukroun. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

The course provides an overview of the concepts, procedures and fundamental processes of project management for working professionals. Participants are introduced to the principles, tools and techniques of project management within an integrative framework. The course emphasizes that, for most organizations,

projects are the primary means for implementing strategic initiatives.

Course Objectives: 1) Understand and critically evaluate expectations, procedures and processes of project management as currently practiced in large for-profit enterprises. 2) Understand the content and processes and standards of practice as defined by the Project Management Institute (PMI). 3) Understand how to build and manage effective project teams. 4) Become familiar with the critical components of effective project plans.

SM 620. The Coach: Applying Tools and Skills in the Field. (M) Napier. For additional information, please see our website at: <http://www.organizationaldynamics@open.n.edu/od.cgi>.

Coaching insinuates change, and most meaningful change is, at some level, therapeutic. This course will explore the dynamics of change as a therapeutic process. Whenever individuals have the nerve to "help" others, self-understanding must come front and center. As a master coach once said, "Who in the hell do we think we are helping others unless we are willing to take a very hard look at ourselves-our behavior, our impact, our projections and biases?" Not only must we ask hard questions of ourselves and resolve our own issues that could corrupt our effectiveness, but we also need to model the most productive behaviors possible. The questions for students of this course include: 1) Are you willing to look? 2) Are you willing to be fiercely honest with yourself and with your fellow students? 3) Are you prepared for the responsibility that goes with mucking around in someone else's life? What makes this particular coaching course unique is that it affords students the opportunity to experience a full range of coaching practices in a relatively short amount of time. The expectation is that the students will have identified a potential client that will be discussed during the first class (although no firm agreement would have to be reached prior to that time).

The student/coach will be guided each step of the way through the coaching process which will include a) contracting with the client; b) engaging in a thorough diagnostic exercise for the client including interviews, observations and a complete 360 feedback cycle, c) analyzing the data, d) feeding the results back to the client, e) engaging the client in problem solving and an action plan designed to help increase the client's effectiveness.

SM 622. Building Effective Organizational Structures: Getting Things Done. (C) Barstow. For additional information, please see our website at: <http://www.organizationaldynamics@open.n.edu/od.cgi>.

This seminar attempts to penetrate many of the formal models of organizational planning, decision making and action to ask how things actually get done. Popular concepts such as participative management, teamwork and networking are often not practiced effectively. Attempts to bring about such political change in organizations often ignore the fluid, informal structures already in place. This seminar will explore structures and processes for redesigning an organization and empowering its members to work and manage effectively. This seminar is built around change projects designed and carried out by each participant over the term. Each participant will present and lead a discussion of their project during the course.

SM 624. Program Leadership. (M) Heaslip. For additional information, please see our website at: <http://www.organizationaldynamics@open.n.edu/od.cgi>.

The objective of Program Leadership Skills is to provide students with an understanding of current principles and best practices in the maturing field of Program Management. Students will investigate the relationships between Program Management, Project Management and Portfolio Management as separate but co-dependent disciplines, and examine the importance of each to the successful achievement of organizational goals. Focusing on Program Management, the course will examine the unique challenges that are faced when managing organizational activities that principally pursue strategic goals, and that must be responsive to outcomes of activities being pursued and changes in strategic direction. The course will provide a forum for discussing the various types of Programs that organizations pursue, and for understanding how Program Management best practices can be applied to each type of Program. The course will explore the need to adapt Program Management principals in a context-specific way to ensure that Programs deliver their expected organizational value. Moreover, it will examine how-despite qualitative differences between Programs-common approaches can be used to assess Program Management maturity and performance, and to define the skills required of a successful Program Leader.

At the conclusion of the course, students will be expected to understand current best practices in Program Management, and to determine how to initiate or improve upon Program Management practices in their own organizations. DYNM 624 will begin with an examination of the nature of Programs, and their unique role in delivering outcomes that support strategic goals. Drawing on student experience and knowledge, class members will each identify a program to examine and discuss as case studies during the class. The diversity of experience of the students will thus provide a rich environment for the study of programs of very different types. The course will then review the published standards and common practices of Program Management, comparing them with the examples presented by the case studies. Students will examine whether differences between case studies and the standards represent gaps in Program Management practices or acceptable context-specific differences in Program Management needs.

SM 625. Ethnography of Everyday Life. (M) Anderson. For additional information, please see our website at: <http://www.organizationaldynamics@open.n.edu/od.cgi>.

No organization in American can go about its business for very long without encountering the legal system and its cast of characters, from "black hat" lawyers to do-nothing judges. Even the "good guys" (your own legal team) are reviled by managers trying to "just run the business." Employment issues, product and environmental liability suits, regulatory approvals, proprietary rights issues - they all involve dispute resolution processes that, if not properly understood and managed, distract and detract from the mission of the organization. This workshop will explore issues of formal dispute resolution including the professionals involved, the processes and procedures, organizational impacts, planning for disputes, and related issues. Simulation exercises and group scenario development will be the primary learning methods employed. (This is NOT a business law course, and cases will be used only as examples of dispute resolution processes and not to learn particular legal rules or laws.) A wide variety of experts will serve as guest lecturers and consultants during class.

SM 626. Leading the Professional Service Organization. (M) Eldred. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

The purpose of this seminar is to understand appropriate leadership behaviors for professional services. Students will gain first hand exposure to prominent leaders of diverse service organizations, and will research how those leaders both develop and deploy their leadership agenda.

SM 627. Classics of Organizational Behavior. (C) Barstow. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

The purpose of this seminar is to critique the thought and practice of several "big names" in organizational behavior, while establishing the continuing relevance of their work to today's organizations. Federick Taylor (Scientific Management), The Hawthorne Studies (Human Relations), Kurt Lewin (group Dynamics), Eric Trist (Socio-Technical Systems) and others will be read in their primary sources, giving participants the opportunity to form their own opinion of these classic field studies.

Participants will read primary sources in the field as well as more recent critical scholarship. They will then present short papers to the class in the model of an academic conference, followed by discussion. Participants will debate their own views in this conference atmosphere as if both the founders and their critics were present. In addition to the readings and discussion, participants will view a taped oral-history interview with Eric Trist and a film of Kurt Lewin's famous experiment on leadership styles. Each participant will present two brief papers to the class and will submit a longer final paper.

SM 628. Organizational Diagnosis: Diagnostic Strategies for Enhancing Organizational Effectiveness. (C) Kaminstein. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This seminar is designed to help participants learn multiple approaches to diagnosing the complex ways in which issues and/or problems manifest themselves in organizations. Frequently, when organizations find themselves in trouble, i.e., there are rumblings in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to

frame the problem(s) simplistically and/or locate blame in a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help students understand how problems which appear at one level of the system (for example, at the personal or interpersonal level) often represent problems at other levels of the system (e.g., at the group and/or institutional level) or signify a range of inter-related issues. It will provide students with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationships between diagnosis, organizational reflection and appropriate action.

SM 629. Organizational Consulting: Proseminar in Organizational Development. (C) Starr. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This course describes and examines professional Organization Development (OD) competencies identified by the Academy of Management and professional OD societies. OD practitioners, theorists, and corporate officers visit class to describe - for example - establishing and managing organizational coaching programs; applying different models in large-scale organization change initiatives; managing change in virtual and global teams; and using change methodologies such as Appreciative Inquiry (a blend of positive psychology and systems thinking) to create idealized development and growth. MSOD or MPhil students interested in organization consulting and coaching should consider this course as a first step. Most research, readings and methods of analysis and evaluation are based on assumptions, theories, models and research conducted by psychologists and social scientists from the human relations tradition.

Students will learn to: 1) Understand and critically evaluate expectations, applications and outcomes of OD interventions and promoted by OD practitioners; 2) Understand how OD competencies are addressed by practitioners/consultants; 3) Understand how to establish an OD intervention.

SM 630. Business Process Excellence - From Vision to Reality. (M) Kirchmer. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Today's business environment is constantly changing. Enterprises need to be agile in order to be successful and survive on the long term. An effective business process management helps to overcome that challenge and achieve the necessary agility and innovation. In the 90's, organizations started to move from functional to process oriented organizational structures. A goal of this measure has been to increase customer and market orientation as well as flexibility of enterprises. In the 00's, more and more organizations extended their focus from intra-enterprise to inter-enterprise business processes. It has become crucial for organizations to achieve business processes excellence in order to keep and improve their competitive advantages. The management of business process has become a key element of enterprise management. This trend has even increased since new process execution approaches, like Service Oriented Architectures (SOA), event-driven software or "Web 2.0" have been available.

In this course framework, approaches, methods and software for achieving and maintaining business process excellence will be discussed using real live examples and case studies.

SM 631. Strategic Planning and the Process of Implementation and Success. (C) Tomazinis. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Entrepreneurship engenders the notions of innovation, organization, planning ahead, and above all, a determination to do something that has not been done before. Every successful entrepreneurial enterprise is a realization of strategy and planning. Participants in this seminar will discuss the techniques necessary to lead an entrepreneurial venture in the public and private sectors and within large and small organizations.

SM 634. Process Improvement Tools and Strategies. (C) Stankard. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Process improvement is a core capability of competitive and sustainable organizations such as Baptist Healthcare, Federal Express, Ritz Carlton, Toyota Motor Co.,

General Electric and Motorola for example. Ever rising customer expectations in markets with global competition, compel organizations to "adapt or die." Deming's warning that "There is no need to change; survival is not mandatory" is truer now than ever. Organizational survival and economic success depends upon effective development of smarter and better ways of working--processes--in an organizational context of leadership, learning and customer focus. This course is ideal for those who want to learn how to help organizations boost profitability and sustainability through systematic improvement of quality, through input, timeliness, economic value, employee and customer satisfaction.

Fifteen or more simple, powerful tools (such as brainstorming, affinity diagramming, process mapping, customer value analysis, the five whys of root cause analysis, process behavior and spider web diagrams, prioritization of the vital few versus the useful many, in-process and end-of-process metrics, etc.) by working through an in-class lean sigma improvement project on a simulated process. You will also learn to discuss problem solving and innovation in organizations using the point of view and language of process improvement. Two main strategies of process improvement - the Toyota Production system known as Lean Production, and of statistical approaches to designing and improving processes now referred to as six sigma approaches. How process improvement fits into a strategic organizational context by working on a team project to diagnose improvement opportunities and propose a program of action for a case study company. You will work as a member of a team on a final project for the case study organization (or with prior approval from the instructor) to conduct a live process improvement project in your home organizations. Class time is allocated for the instructor to coach your teams on each stage of your projects.

SM 635. Organizational Essentials for Leadership. (M) Choukroun. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Through presentations by expert speakers, case discussions, and participation in team projects, students will review and evaluate critical issues from across the frames of business, including general; human resource; marketing; information and stakeholder management; leadership; corporate culture; communications;

organizational behavior; sales, marketing and public relations; finance and financial reporting; ethics and social responsibility; unions and government relations; and business law. Each of these elements will be studied in light of changing environmental conditions, including the economy; society; consumer behavior; market trends; regulation; politics, unpredictable events such as 9/11; organizational change; history; and internationalism.

SM 636. 21st Century Leadership Development: Integrating Cultural Influences into Coaching Practice.

(C) Reyes. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Coaching has been used to support high-level leadership, to develop high potential talent, to overcome or remediate deficiencies or unproductive behaviors, and to support or manage performance during periods of change. As the use of organizational coaching has grown over the last decade, globalization of the economy has transformed organizational markets, operations, and workforces so that "culture" routinely influences interpersonal group and organizational interfaces. In this context, leadership requires an ability to recognize and leverage the "cultural diversity" inherent in teamwork, communication, collaboration, conflict and change. Coaching, as a leadership development practice, must help leaders grow in their ability to recognize and leverage the national, professional, functional and organizational cultures that influence workforce engagement, productivity, and satisfaction and innovation.

This course is intended for students with an interest in culturally complex leadership and organizational development. This course had a dual purpose. First, through reading, class discussion and written reflection, the course will enhance student understanding of coaching models, methods, and cases informed by cross-cultural psychology, intercultural communication, anthropology and international business disciplines. Secondly, through guided practice, students will develop their skills in coaching across cultural differences. Students will coach one another through a self-assessment, development planning process and initial movement toward their objectives using a global scorecard using Rosinski's global coaching process as one illustrative example of this kind of coaching.

SM 637. Coaching and Facilitating Teams. (C) Wilkinsky. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Highly productive teams plan well and execute against that plan. These teams have effective leadership which recognizes and fosters the development of the skills of the team's members. Tasks are accomplished in a cooperative and participative environment.

Accomplishments are recognized and, as appropriate, celebrated. Failures and disappointments are explored so that the lessons can be used to succeed in the future. Sadly, not all teams and work groups fit the above description. Too often goals are not met, participation is uneven, finger-pointing, CYA, and lack of motivation permeate the team.

In this course, we will explore the roles and functions of the coach and facilitator of organizational teams. This highly participative course will use both theory and practice to determine how to help teams avoid limiting pitfalls and increase their opportunity to become highly productive in the accomplishment of tasks and the professional and personal development of people.

SM 640. Virtual Forms of Collaboration. (M) Reyes. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

In many of today's organizations, the process of improving productivity and performance has become a big business. Quite apart from the myriad internal studies, task forces, reorganization efforts, re-engineering projects, and the like, there are countless external vendors and consultants who provide productivity and performance products and services to organizations of all types. Perhaps the best known are Business Process Re-engineering (BPR) and Business Process Engineering (BPE) which have been developed to tackle the needs for broader-scale improvements. The adoption of Enterprise-wide Resource Planning (ERP) systems based on BPE has been a significant development. Not only does ERP ordinarily constitute a major investment of resources, it requires the adoption of a reconfigured view of the organization and the processes used in its design, structure, and operations. In this seminar, the rationale for ERP will be discussed in terms of its effects and impacts on productivity and performance in organizations. In order to illustrate the factors and considerations used in

developing ERP systems, examples will be presented which employ SAP's R/3 system and the R/3 "Business Process Reference Models." In order to facilitate the review, additional examples will be presented.

SM 641. The Art and Science of Organizational Coaching. (C)

Wilkinsy. For additional information, please see our website at: <http://www.organizationaldynamics@open.n.edu/od.cgi>.

Coaching has become a primary tool for consultants, human resources professionals and administrators interested in promoting and sustaining leadership and executive development, behavioral change, and role transition. This course explores the theory and practices associated with organizational coaching. We examine and practice the steps of the normative coaching process, the issues and boundaries that affect coaching, and pitfalls to avoid.

Throughout the course, we will contrast what the theory says and what practitioners in the field have actually experienced. Major foci include the critical nature of gathering and using data, observation tools, internal versus external coaching, informal versus formal programs, and coaching for development versus for corrective action. Participants will engage in coaching processes in the classroom and in their own organizations.

SM 642. Allocating Resources: Economic, Technological & Human. (L)

Gale. For additional information, please see our website at: <http://www.organizationaldynamics@open.n.edu/od.cgi>.

Setting, monitoring, and controlling organizational plans and their implementation has become increasingly complex in modern organizations. Simple measures of bottom-line profitability by divisions, for example, often mask the processes required for intra- and inter-organizational coordination and effectiveness. Similarly, standard organization charts depict reporting responsibilities and authorities without tracing either the flow of communications or the financial impacts of change. As a means for illustrating alternative approaches to the management of organizations, selected models, methods and examples of organizational resource allocation and control will be reviewed, discussed and analyzed. In addition to the seminar discussions, participants in the course will also be expected to identify, develop, and analyze a resource allocation problem associated with an organization. (Typically, the organization selected is one

with which the participant is familiar or is interested in creating.) Selected examples of resource allocation strategies will be discussed during the first seminar. Each participant will be expected to prepare a paper on their problem and to make a brief presentation on the methods of analysis employed and the means for implementing the results.

The seminar will involve working both on individual projects and discussions of approaches and methods for the conceptualization and analysis of resource allocation problems. As such, the course will combine elements of a seminar and a workshop. Following the first session (which will cover introductions of the participants, a presentation of the objectives and design of the course, and a review of selected cases), each seminar will be devoted to a review of methods and discussions of the participants' cases.

SM 643. Overcoming Organizational Barriers to Success. (M)

Bayney. For additional information, please see our website at: <http://www.organizationaldynamics@open.n.edu/od.cgi>.

This course examines the fundamental *raison d'être* of Project Portfolio Management and its relationships with other organizational disciplines. It is not a course designed to teach individuals how to practice Project, Program or Portfolio Management. Rather, it is a course designed to place Project Portfolio Management front and center of organizational survival and to educate practitioners on how to create strategies for its long-term survival and institutionalization. In today's cost cutting and outsourcing environment, organizations are struggling to continue to grow and create value from declining resource constraints, whether human or budgetary in origin. This places a greater level of importance and burden on Project Portfolio Management but, in so doing, serves to threaten the traditional domains of more established functions that have carefully protected their influential territory for countless decades.

SM 648. Ethics and Leadership. (C)

Fielder. For additional information, please see our website at: <http://www.organizationaldynamics@open.n.edu/od.cgi>.

While Hitler and Gandhi were both successful leaders, Gandhi was a good leader, working for ethical goals and using ethical means. As we know from recent corporate scandals, leaders in contemporary organizations often encounter serious

conflicts between their ethical responsibilities and the demands and culture of their organization. How these conflicts are resolved defines who we are, what we stand for, and what we won't stand for, so it is important to deal with them effectively.

This course will examine significant questions of organization ethics and leadership. To clarify these questions and to seek appropriate solutions, we will use readings and case studies. The readings will analyze the major issues in ethical leadership, with particular attention paid to the organizational dynamics that shape the opportunities and constraints of the decision makers. They are drawn from sociology, history, health care, and contemporary accounts of ethical problems in organizations. The case studies, which apply to a wide range of organizations, issues and circumstances, will emphasize class discussion so that individual expertise and experience can deepen participants' understanding.

SM 650. The Psychology of Growth. (C)

Seltzer. The focus of this course is an examination of how, where, and when psychological growth may be fostered intra-personally, interpersonally (in self and with others), within groups, and on the organizational level. We investigate dynamics of psychological growth, individually and as a member of a group, as presented in representative theories of development and in literature on the psychodynamics of interpersonal relationships and individual differences. We examine the impact of rapidly occurring social change on growth potential in the major social institutions, including the organization.

We begin with alternative definitions and conceptions about what growth is, its course, the forms it might take, and the variety of settings and strategies connected with its transmission. Throughout the semester, we will try to answer questions such as: What is psychological growth? What are its forms and manifestations? How do we recognize growth and encourage or discourage it? Do we recognize similar and varying growth needs? Do we recognize our own differences and do we acknowledge and respect these differences in others? Participants are encouraged to address the issues through case examples from their own organizations.

SM 651. Group and Team Dynamics. (M) Kamenstein/Zane. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Although groups and teams are often lauded as the mechanisms that provide the competitive edge for organizations in today's challenging economic environment, there is often little attention paid to the deeper social and psychological currents influencing group and team dynamics. Organizational leaders and facilitators frequently lack an in-depth understanding of how work groups, multifunctional teams, and cross-national executive groups develop, operate, accomplish their goals-or not-and end. Team members often struggle to make meaning of the myriad spoken, as well as unexpressed, factors influencing the process and outcomes of the groups of which they are a part. This course, by emphasizing both theory and practice, provides students with a thorough grounding in the ways groups and teams develop and learn. The class will also examine approaches to building group and team competencies related to effective communication, conflict-resolution, and solving complex strategic problems as well as ways to manage the range of intentional and more hidden dynamics that both support and challenge high performance.

The course is designed to include seven 3-hour classroom meetings across the semester and two Saturday sessions that will afford students the opportunity to explore various theoretical frameworks. In addition to drawing on the extensive literature and research in group dynamics and team building, the class will rely on experiential methods to help students develop keener understanding and insight into the ways in which their own leadership and followership dynamics, as well as the dynamics of the group-as-a-whole, influence their team's ability to accomplish its tasks.

SM 652. Impact of Chess, Literature and Film on Organizational Dynamics. (M) Zubarev. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

In this course we present pragmatic reasons that support greater understanding and use of literature and art in organizational decision making and problem solving. We examine how styles and methods of decision making, as represented in the game of chess and as presented in selected works of literature and cinema, can be applied to help solve complicated organizational problems and to improve management

interactions. Our analysis will be informed by the contemporary theoretical tools elaborated by the late Dr. Aron Katsenelinboigen, Professor of Operations and Information Management in the Wharton School.

SM 653. Coaching Others to Manage Conflict. (C) Napier. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Not a day goes by when you or I or a person we are coaching is not faced with some tantalizing, challenging conflict. It may be with someone we love, a conflict in a team, a struggle between two direct reports, a difference with our boss or the challenge of a difficult, perhaps aggressive person in a meeting we facilitate. The problem is not that there is a conflict. The problem is that most of us have a very thin, often inadequate repertoire of responses to the conflicts that engage us on a daily basis. The result is that all too often we are predictable in our responses. Thus, if we take these same limited skills and attempt to provide them to a client in our role as a coach, the consequences will more than likely be similar.

This course is about expanding your repertoire of responses to a wide array of conflict situations. In the process, you will increase your understanding of the theoretical constructs that underlie successful conflict management. Not only will your strategies for managing a variety of conflicts expand, but you will be better able to design unique responses that relate to the particular situation with which your client is faced. How you translate these ideas to your clients and, in the process, provide them the confidence to use them, will be a central theme throughout the course. There is an attempt to provide a balance between intellectual theory, skills, and applied strategies along with the time to practice them.

SM 655. (GAFL655) Using the Political Process to Effect Organizational Change. (C) Gale. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

At one time or another, each of us has said something like, "I know what to do to make some really effective changes in this organization, but the politics make it almost impossible to get anything done." The sense is that although there are changes that should be made to improve organizational performance, politics (internal, external, or governmental) simply obstructs our ability

to make a difference. Frustrations notwithstanding, politics is anything but an impediment; it is the art and science of coordinating individuals, departments, management, markets - the entire organizational environment - to effect a balance of objectives and methods. Congressman Brady and Dr. Gale will explore and assess the foundations of organizational politics--change, exit, voice, loyalty, and valuation of relationships--and discuss the use of politics to promote effective change.

After reviewing organizational theory and the roles that political processes play in communications and decision-making, current cases will be presented that illustrate the contexts and conditions for effective political coordination. This course will focus on the current crises in the U.S. and global economies and the strategies and activities of the new Obama Administration. U.S. Congressman Robert Brady, who is deeply involved in the legislative process and in a unique position to discuss the implications of national policies, will share his views and experience.

SM 660. Mistakes and Errors, Accidents and Disasters. (C) Bosk. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

The purpose of DYNM 660 is to provide a basic understanding of some rather ubiquitous social phenomena: mistakes, errors, accidents, and disasters. We will look at these misfirings across a number of institutional domains: aviation, nuclear power plants, and medicine. Our goal is to understand how organizations "think" about these phenomena, how they develop strategies of prevention, how these strategies of prevention create new vulnerabilities to different sorts of mishaps, how organizations respond when things do go awry, and how they plan for disasters.

At the same time we will be concerned with certain tensions in the sociological view of accidents, errors, mistakes and disasters at the organizational level and at the level of the individual. Errors, accidents, mistakes and disasters are embedded in organizational complexities; as such, they are no one's fault. At the same time, as we seek explanations for these adverse events, we seek out whom to blame and whom to punish. We will explore throughout the semester the tension between a view that sees adverse events as the result of flawed organizational processes versus a view that sees these events as a result of flawed individuals.

SM 661. Organizational Culture Change: Theory and Practice. (C)

Vanderslice. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

The importance of organizational culture in defining organizations, and, often, in creating a competitive edge, has been regaining attention during the past few years. One of the central questions in the organizational culture debate is whether a culture, particularly of a large organization, really can be changed significantly. This course will begin by engaging the debate about how to define organizational culture and what key factors determine culture. We will explore different models of categorizing cultures and discuss the extent to which culture is really related to performance and what factors may modify the culture/performance relationship. We will also examine different methods of diagnosing cultures. During this section of the course we will describe, compare and contrast the cultures of different organizations—both those of the class participants and those of other organizations. We will begin the second section of the course by examining both the theoretical and applied literature on organizational culture change.

After developing a generic framework for the culture change process, we will read cases describing culture change efforts and hear from guest speakers who will discuss specific culture change efforts, successful and not. This section of the course will introduce students to specific organizational intervention strategies that can be used to facilitate culture change. In particular, we will discuss traditional top-down change strategies, Real Time Strategic Change, Appreciative Inquiry, and a customized approach to culture change in mergers and acquisitions. During the last section of the course, the class will discuss individual, personal change management as a major factor in successful organizational change; other factors that are essential in most successful culture change efforts; barriers that can be expected; predictable but unintended side-effects of culture change efforts; and strategies for overcoming barriers and managing side effects. Finally, students in this class will apply what they have learned about organizational culture change to their own organizations.

SM 662. Effective Leadership and Effective Entrepreneurship. (C)

Keech. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

This course is designed to provide an understanding of the importance of entrepreneurship and the role of leadership in today's economy. The course will discuss the nature of entrepreneurs, as well as the management, development of growth strategies and financing of entrepreneurial ventures. The course will stress entrepreneurship in early-stage ventures, while addressing the challenges of creating entrepreneurship in larger, established companies. The course will emphasize strategy development, strategy implementation and crisis management as part of the entrepreneurial process.

The course will examine a number of leadership topics. The course will address the role of the chief executive in leading entrepreneurship in large organizations and the role of the board of directors in providing corporate governance.

SM 664. Organizational Culture and Learning. (C)

Barstow. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

What is organizational culture? What is organizational learning? How do organizations learn effectively and change their culture? A learning organization is skilled at creating, acquiring, and transferring knowledge, and at modifying its behavior to reflect new knowledge (Garvin, 1993). According to Ray Stata, Chairman of Analog Devices, "The rate at which individuals and organizations learn may become the only sustainable competitive advantage." However we define and prioritize organizational learning, we must still struggle with how to do it. This is a tougher question. The thesis of this seminar is that an enriched understanding of culture can enhance organizational learning. Participants will explore the concept of culture, study the work of Chris Argyris, and discover practices and behaviors that promote organizational learning and culture change. The objective of this seminar is to help participants get beyond highly abstract philosophy and develop a deeper understanding and useful skills based on these concepts.

SM 667. Complexity, Sustainability and Systems Thinking. (C)

Barstow. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

This course focuses on an understanding of complexity, sustainability, and systems thinking and explores how these concepts and principles apply to organizations. We will use these concepts and principles to assess cases and current affairs from the micro-level of small groups, through macro-level organizations and associations, to global issues and events affecting the whole planet.

SM 668. Organizational Ethics and Integrity. (C)

Fielder. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

Recent scandals in business organizations have focused on individuals who made unethical and unlawful decisions. Equally, if not more important, is the role of ethically dysfunctional organizations which encourage unethical behavior. Integrity, not just in the narrow sense of being honest, but in the broader sense of adhering to ethical principles and seeking socially responsible goals, applies to organizations as well as individuals. Creating and sustaining organizational integrity is essential for both organizations and the people who work there to flourish and reach their full potential. Research has confirmed that people do their best work in an atmosphere of trust, responsibility and worthy organizational goals.

In this course we will examine cases and causes of failures of organizational integrity; study examples of how organizations create and sustain integrity; and apply these approaches to a range of actual case studies taken from health care, commerce, and non-profit organizations. The course will emphasize class discussion so that contributions from the individual expertise and experience of the participants can deepen our understanding of these complex ethical and organizational issues.

SM 669. Leadership in Organizations: Private and Public, Personal and Professional. (C)

Larkin. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

The most valuable resource of any organization is the people who work there; the human capital, if you will. This seminar will explore the issues of the leadership of this human capital to meet the goals of the organization and the personal

and professional goals of the people in the organization. We will read about and discuss issues such as: Crisis Periods of Leadership, Enhancing One's Leadership Capability, Conflicts Between the Organization's Leadership and One's Personal Leadership, and Strategies for Success in Leadership Positions.

Additional themes of power, authority and control will be examined in terms of the organization and the individual.

The seminar requires a considerable degree of participation from the students. Our explorations of leadership both begin and end with each of us individually. Therefore, the seminar will reflect both our common readings and our mutually uncommon (individual) lives as we all negotiate this interesting and challenging personal and professional journey.

SM 671. Ownership Matters. (M)

Lamas. For additional information, please see our website at:
<http://www.organizationaldynamics@upenn.edu/od.cgi>.

Who is going to own what we all have a part in creating? The history of American business is an evolving answer to the question of ownership. Of all the issues relevant to organizational dynamics, ownership is arguably the most important and least understood. Matters of ownership have also been and remain of intimate concern to ordinary Americans—the slave yearning to breathe free, the young couple with a dream of home ownership, the entrepreneur who wants to be his or her own boss, the consultant who wants to form a partnership with best friends, and the indebted, mid-level manager reviewing last year's 401(k) statement.

In this course, you will have an opportunity to examine ethical, religious, legal, technological and economic bases for different ownership systems from early human history through the 20th century; develop a theoretical framework for understanding ownership issues in the contemporary workplace; review social science concerning ownership and the related organizational issues of motivation, performance, productivity, profitability, culture, diversity and equity; analyze a variety of cases to measure ownership's effects across many industries and business situations; and utilize a diagnostic tool for assessing the ways in which your own organization's culture and business outcomes are impacted by the firm's ownership system.

SM 672. A Systems Approach to Crisis Preparation and Organizational Resilience. (M)

Freeman. For additional information, please see our website at:
<http://www.organizationaldynamics@upenn.edu/od.cgi>.

The principal purpose of this course is to prepare students so that they and the groups and organizations they lead can successfully weather organizational crises and adversities. In today's world the question is not whether they will experience crisis; it is only a matter of what type of crisis will occur, what form it will take, and how and when it will happen. We will adopt a systems lens, organizing our understanding of crises and adversity at the most general level of analysis and looking at problems and solutions comprehensively. The following are the course objectives: understanding crisis management and resilience; understanding models of resilience; how to audit crisis management strengths and vulnerabilities; what to do before a crisis, when a crisis hits, and after a crisis; how to build resilience into a system; how to inoculate oneself and one's organization to protect against depression and demise; and how to identify what is most important and how to safeguard it.

The course includes travel to New York and the World Trade Center site, and lectures at Columbia University to understand what can happen during and after a crisis.

SM 676. Human Rights and Global Order. (C)

Teune. For additional information, please see our website at:
<http://www.organizationaldynamics@upenn.edu/od.cgi>.

Human rights have assumed dominance as the ideology of globalization with aspirations to embrace principles and beliefs that can be shared by all people everywhere. Although challenged by a variety of traditions and religions, human rights remains a pillar of global order along with institutions of global governance. Since the Universal Declaration of Human Rights over 50 years ago and especially since the Helsinki Accords nearly 25 years ago, human rights continue to spread throughout the world, superseding national civil rights and extending to everyday conduct of respect of others and the rights to a life of dignity, safe working conditions, and a good environment. This seminar will discuss the origins and contested justifications of global human rights. It will look at group rights for women, minorities, and migrants; economic, social and political rights; and the new citizenships not only of individuals but also

of business organizations (the Global Compact). The evolution of human rights law, the emergence of global courts of human rights, and the imperatives of humanitarian interventions to enforce human rights will receive special attention.

SM 677. Human Capital and Human Nature: Sources of Creativity and Innovation. (M)

Bauer. Prerequisite(s):

DYNAM 666 The Art and Science of Negotiation.

Goal: To mine the resources within yourself, cultivate and engage others, and build with them. Every one of us is potentially wired for creativity, however, each of us is unique. How can we understand the research and use it to understand ourselves, our colleagues, and our world? How do we know what is real?

SM 683. Organizational Experience. (C)

Larkin. For additional information, please see our website at:
<http://www.organizationaldynamics@upenn.edu/od.cgi>.

In a time when corporate downsizing and restructuring are causing dislocation and change in middle management positions, new career opportunities and effective contribution to new organizations requires more than just technical knowledge to develop new tasks, skills and markets. By achieving greater insight into the historical forces that are causing change and into personal and professional initiatives and responses, participants can create opportunities for their own meaningful transformations. In this seminar, readings in a variety of literatures and selected films are used to explore a wide range of work and life experiences, looking at careers across centuries and social class. Participants will have the opportunity to consider (and indeed reconsider) their own work preferences and career choices as reflections of their early family, school and work experience. They will do this by researching and developing an autobiography that explores family history, educational history, and organizational work experience as a practicing professional.

The nature of the autobiographical work in this course is by definition personal. Participants should be willing to explore those themes that reside within their life experience and contribute to analytical and open discussion.

SM 692. Innovation in Organizations. (M) Freeman. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

In this course we will try to understand innovation through different levels of analysis including individual, team, network, organizational, and industrial. The primary goal of the course is to expose students to a variety of perspectives on innovation, while building on past work experiences and preparing for work experiences in the future. At each level of analysis, we will try to understand conditions under which innovation processes succeed and fail. The weekly readings consist of a mixture of book chapters, journal articles, and cases. An outline forum is planned for further discussion of the required readings outside of class, and as the basis for class discussion. Classes will employ reflection exercises and entail critical thinking about the topic for the week, case analyses completed in small groups, and other activities and lectures introducing material found both within and outside of the readings.

An overnight trip to Harvard University or MIT is being arranged to expose students to innovative practices and leading-edge thought at other research institutions.

SM 693. The Art and Science of Organizational Strategy and Planning. (C) Choukroun. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

There is no "best way" to create strategy nor is there one "best way" to plan and implement. Rather, quite different approaches will work in different contexts. In this seminar we will explore several approaches to understanding and formulating organizational strategy, emphasizing the complexity of the strategy formation, development process and its risk-taking implications. We will also examine several planning models together with the internal and external contents in which each may be most effective. The implications of the various approaches to strategy and planning models on organizational forms and structures will be discussed.

SM 694. Statistical Tools for Improving Organizational Effectiveness. (M) Allison. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Most contemporary organizations produce huge amounts of data. But they typically fall down in their ability to harness and exploit data in ways that lead to effective decision making. This course will focus on applications of linear regression analysis and logistic regression analysis. These methods are designed to reveal trends, explain known outcomes and identify factors that can secure a desired effect. The course will be taught using a minimum of mathematics, and no previous statistical training will be assumed. A major component of the course will be a series of case studies that illustrate all aspects of data analysis. Participants will also learn how to use the JMP statistical package to do their own analyses.

SM 705. Capstone Course. (C) Starr. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This course requires the student to study a topic of their own choice, discuss their progress with the class in regular meetings and to deliver a final paper that meets the following criteria: (1) Makes an argument, describes or summarizes a position that is unique, original, or which directly applies to the student; (2) Uses primary sources or applies to a primary organization as much as possible; (3) Conforms to the style and format of good academic writing and the MSOD Capstone Presentation Guidelines; (4) Allows a student to demonstrate competencies gained from the courses completed in the Organizational Dynamics program.

The Capstone Course professor will be available to act as a student's "primary" advisor and will read and grade the final document. If a student wishes to have a different "primary" advisor (and the designated person agrees), this is permitted. If a different "primary" advisor is selected, the student's paper will be read and graded by both the "primary" and the course advisor.

SM 720. Foundations of Executive Master of Coaching and Consulting. Napier. Corequisite(s): DYNM 722. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This introductory course builds an open, trusting and collaborative culture of shared learning that helps students and faculty to enter into a cohesive educational community. We address the fundamentals of team and group dynamics including power and authority, task and process, strategic thinking and planning, and motivation and productivity.

721. Field Study and Reflected Assessment. Orenstein. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This course discusses relevant research-based theories and models and the methodologies to apply knowledge to analysis and practice. Students will examine then evaluate models that are most appropriate to their own framework and system of thinking.

SM 722. Making Meaning from Experience and Establishing Frameworks. Orenstein. Corequisite(s): DYNM 720. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This course discusses relevant research-based theories and models and the methodologies to apply knowledge to analysis and practice. Students will examine then evaluate models that are most appropriate to their own framework and system of thinking.

SM 723. Coaching Process. Orenstein. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

This course requires each student to coach and to be coached in real time, and to share experiences in a critical format among the community of students and faculty.

SM 724. Building Consulting/Coaching Tools and Techniques. (L) Russo. Corequisite(s): DYNM725. For additional information, please see our website at: <http://www.organizationaldynamics@upenn.edu/od.cgi>.

Participants learn to be coaches by being coaches to one another. Over a two-month period, cohort members expand their

repertoire of skills and tools, share their experiences, and together scrutinize the client/coach relationship. Expanding their newly acquired skills, cohort members will build tools and techniques for effective consulting and coaching as a leadership competency within organizational settings. Participants learn the "how" and "why" as well as the "how" of implementing courses of action.

SM 725. Problem-Solving & Managing Conflict. Napier.

Corequisite(s): DYNM724. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

Participants explore sources of problems and conflicts, identify the range of choices for resolution, and spend time in the field identifying and resolving conflicts at the personal and team levels.

SM 729. Internship Field Experience.

Napier/Russo. Corequisite(s): DYNM 732. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

In this internship, participants are exposed to a variety of consulting and coaching opportunities designed to enable them to utilize their skills in multiple situations and contexts. Access to an advisor/coach during this period ensures that each participant's advanced learning will be provided in a timely and individualized manner.

SM 730. Portfolio Proposal and Preparation. Orenstein.

For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

This is the first of a two-part course in which students have the opportunity to demonstrate their consulting and coaching mastery. Throughout the program, participants will have systematically codified their learning experiences through the accumulation of various papers, project results, and other measures of performance. These will be contained in a Personal Portfolio which will include a record of understanding of the assigned literature and classroom-based theory and experiences. In addition, each individual's personal coaching philosophy will be framed in a theoretical model developed over the course of the program. Finally, personal reflections and insights will be an essential aspect of the ongoing record of learning.

SM 732. Field Experience.

Napier/Russo. Corequisite(s): DYNM 729. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

In this internship, participants are exposed to a variety of consulting and coaching opportunities designed to enable them to utilize their skills in multiple situations and contexts. Access to an advisor/coach during this period ensures that each participant's advanced learning will be provided in a timely and individualized manner.

SM 753. China in Transition: The Context and Consequences of Economic Reform and Opening to the Outside World. (M) deLisle.

Corequisite(s): DYNM 754. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

The course will focus on the reforms and international openness that have transformed China during the last quarter century, and their political, social and legal contexts and consequences. Several specific topics will receive detailed attention, including reforms to China's economy (including the creation of a market economy, and changes in enterprise ownership and management and financial institutions), the role of foreign trade and investment and other channels of external influence, rising affluence and inequality, political reform and liberalization, and the development of the legal system. Students will experience contemporary urban China firsthand and see important cultural and historical sites and artifacts, providing a basis for assessing the influence of Chinese traditions and legacies in the People's Republic today. In China, we will meet with foreign and Chinese business people, government officials, academics and others.

SM 754. China in Transition: The Context and Consequences of Economic Reform and Opening to the Outside World. (M) deLisle.

Corequisite(s): DYNM 753. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

The course will focus on the reforms and international openness that have transformed China during the last quarter century, and their political, social and legal contexts and consequences. Several specific topics will receive detailed attention, including reforms to China's economy (including the creation of a market economy, and changes in enterprise

ownership and management and financial institutions), the role of foreign trade and investments and other channels of external influence, rising affluence and inequality, political reform and liberalization, and the development of the legal system. Students will experience contemporary urban China firsthand and see important cultural and historical sites and artifacts, providing a basis for assessing the influence of Chinese traditions and legacies in the People's Republic today. In China, we will meet with foreign and Chinese business people, government officials, academics, and others.

SM 758. Sweden: Strategies for Thriving in the 21st Century. (L)

Barstow. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

Neutral during WWII, and claiming a "Middle Way" between east and west in the post-war twentieth century, Sweden - its people, institutions, and culture - has left its mark on our global society. In today's world, the influence of Swedish ideas and innovations can be seen in government structures, health and social policies, business organizations, working life, education, science, art, literature, and, of course, the design and style of many products and services which enjoy high demand. These are impressive impacts from a nation-state of only eight million people. What lessons are there for Americans and our institutions as we enter the twenty-first century where our leadership position, ability to determine the rules and control the agenda of world economic and political affairs is possibly diminished?

This course will include meetings with academics and leaders from industry, government, health care, science, media, arts and culture. Students will meet with and learn from these representatives in order to explore Swedish organizational dynamics, both in terms of its economic prosperity and the problems Swedish society faces today.

SM 759. Sweden: Sustainable Development & The Natural Step.

Barstow. For additional information, please see our website at: <http://www.organizationaldynamics@upen.n.edu/od.cgi>.

The focus of this seminar in Stockholm, Sweden is on The Natural Step framework for sustainable development. We will meet and work with members of the Natural Step Framework and explore how best to engage our own organizations and communities in

adopting sustainable development policies and practices. The Natural Step (TNS) is a framework grounded in natural science that serves as a guide for businesses, communities, educators, government entities, and individuals on the path toward sustainable development. The Natural Step framework encourages dialogue, consensus building, and systems thinking (key processes of organizational learning and creates the conditions for profound change to occur. It does not prescribe or condemn other approaches but rather introduces and expands on new possibilities. From a business perspective, The Natural Step framework enables corporations to intelligently, and profitably, integrate environmental considerations into strategic decisions and daily operations.

SM 766. Perspectives on Change in the Czech Republic. (L)

Steiner. For additional information, please see our website at:
<http://www.organizationaldynamics@upenn.edu/od.cgi>.

On May 1, 2004, the Czech Republic, together with nine other states (altogether about 70 million people), officially joined the European Union as full-fledged members. This new EU became the world's largest free trade zone, measured by the number of consumers, with a GDP comparable to our own. The challenge this poses for the US is twofold. On the one hand, the stronger new Europe will create a formidable competitor vying for the same customers, energy resources and political power. On the other hand, its huge market with considerable dynamic potential provides farsighted American entrepreneurs with an opportunity to partake--through investments, joint ventures, or trade--in the ebullient economic growth that the enlarged EU promises.

Because of its economic scope and the perceived encroachment on the sovereignty of so many nations, the enlargement was initially greeted with some skepticism by both the "old" and the "new" Europe. But a year later, it is viewed by most as a success story. According to the Economist, "the new central European members learned to stop worrying and love the European Union" (January 18, 2005) while the Westerners realized that their own misgivings (the capital outflow combined with the labor inflow) were largely imaginary. The process of bringing all European nations under one roof, however, is far from finished and there are many challenges lurking ahead. The lectures and discussions in Prague will highlight some of them.

SM 786. Multi-Organizational Project Management. (M)

Choukroun. For additional information, please see our website at:
<http://www.organizationaldynamics@upenn.edu/od.cgi>.

SM 788. The New Russia: Foe, Competitor or Ally. Steiner. Churchill's famous adagio about Russia being "a riddle wrapped in a mystery inside an enigma" seems as valid today as it was in 1939 when it was coined. From George W. Bush's looking into Vladimir Putin's eyes and getting a sense of his soul to Sarah Palin's seeing the same man as rearing his head and threatening the security of Alaska, US politicians seem to have a great deal of difficulties in calibrating their attitude toward the country which has ceased to be "the evil empire" already some fifteen years ago. Is the new Russia, seeking to extend its sphere of influence over the now independent former Soviet states, a military challenge to NATO? Is it an economic competitor in the global game in which the control of vital energy resources is at stake? Or is it an indispensable ally in "the war on terrorism" without whose support the world cannot become safe?.

A week-long seminar which will take place in Moscow in the first half of June, 2009, will attempt to answer these questions by inviting Russian academic experts, business leaders, politicians and journalists for an in-depth discussion of the following general topics: 1) Russia today (the post-Communist transformation; the current political climate; politics and business; the control of media). 2) Russia and the world (relations with the great powers: USA, the EU and China; relations with its immediate neighbors: Ukraine, Georgia, and the Baltic states). 3) Russia's energy sector (a role in the global energy market; security vs transparency; ecology and alternative fuels). 4) Russia's financial sector (stock market; stability of the ruble; oversight of the banking industry; foreign capital). 5) Russia tomorrow (educational system; demographic trends; aerospace industry; mineral wealth of Siberia and the Arctic).

**PATHOLOGY
(MD) {PATH}**

611. (VANB635) Biochemical Basis of Disease. (A) N. Avadhani.

Prerequisite(s): Basic biochemistry and some understanding of molecular biology.

The biochemical and molecular bases of diseases and diagnoses will be covered. Particular emphasis will be based on the most current knowledge of disease mechanisms. An in-depth biochemical examination of specific aspects of selective diseases of parasitology, cancer, endocrine glands, aging, inflammation, striated muscle, cardiovascularity, birth defects,

infertility, and bone are some of the expected topics for discussion.

The course includes 24-28 lectures and 12 hours of discussion of some of the recent papers on mechanisms of various metabolic and/or inherited diseases.

PHARMACOLOGY (MD) {PHRM}

510. (INSC596)

Neuropharm/Neurochem. (B) Staff.
Prerequisite(s): Permission of course director. Meets two times per week.

Neurochemistry and neuropharmacology of the central nervous system. Lectures cover the structure and properties of neurons, neurotransmitters and signal transduction. Students are expected to already have an understanding of the material in Cooper, Bloom and Roth, *THE BIOCHEMICAL BASIS OF NEUROPHARMACOLOGY*, or its equivalent. Course readings will be both primary and review articles.

531. (GCB 531) Intro to Genome Science.

532. (CAMB532) Human Physiology.

SM 542. (CAMB542) Topics in

Molecular Medicine. (A) Skip Brass, MD, PhD; Gary Koretzky, MD, PhD; Mark Kahn, MD. Prerequisite(s): Permission of the course directors. The course is designed primarily for combined degree (MD/PhD) students, but will be available to all medical and graduate students as space permits. Priority will be given to 2st and 2nd year combined degree students. The optimal class size will be 14. Tentatively, the course will meet for one hour from 4 - 5 pm on Wednesday afternoons with occasional double sessions that will be two hours long. TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery.

550. (INSC576, PSYC750) Advanced Topics in

Neuropsychopharmacology. (A) Lucki and staff. Prerequisite(s): Permission of instructor. Meets two times per week.

Biological issues relevant to neuropsychiatric illnesses are covered in detail in four sections. The first section covers clinical aspects of major psychiatric disorders and includes some contact with patients. The second section presents the neuroanatomy of the limbic system. In the third section, emphasis is on the mechanisms of action of psychotropic drugs, including antidepressants, antipsychotics, anxiolytics, and stimulants. The final section covers information

relevant to understanding biological processes that may be abnormal in neuropsychiatric illnesses, such as stress, sleep, and circadian rhythms, as well as quantitative genetics.

570. Principles of Cardiovascular

Biology. (B) Drs. Vladimir Muzykantov and Emer Smyth. Prerequisite(s): Permission of course director.

Lectures to be presented by various Medical School faculty members. Topics covered include: general principles of vascular biology and hemodynamics, endothelial cells and integral vascular functions, signaling in the cardiovascular system, angiogenesis, hemostasis and thrombosis, platelets, platelet/vascular interactions, vascular integrins and adhesion molecules, vascular inflammation and oxidative stress, white blood cells, vasoactive compounds and drugs, mechanisms of atherosclerosis, cholesterol and lipid metabolism, hypertension, novel vascular directed gene and enzyme therapies.

SM 580. Topics In

Pharmacogenetics. (B) DR. A. STEVEN WHITEHEAD. Prerequisite(s): Permission of course director.

This is a "literature-based" course (i.e. a seminar course/literature survey). It will survey the emerging technologies and computational advances that have permitted the field of pharmacogenetics to mature into a major biomedical discipline over the past few years. It will consider the likely impact on disease target identification, the development of new drugs for established and "niche" markets, the advent of "personalized medicine", including the selection of therapies that have maximum efficacy and minimum side-effect profiles. This course will also touch on some of the ethic issues associated with the routine genetic testing of patients to facilitate treatment choices and clinical monitoring.

590. Molecular Toxicology: Chemical and Biological Mechanisms. (B)

Dr. Trevor M. Penning. Prerequisite(s): Prerequisites: Must have taken or will take Fundamentals of Pharmacology concurrently. Undergraduate course work in biochemistry and chemistry essential. Exceptions allowed based on past course work. Please consult with Course Director. Students: All 1st and 2nd year GGPS, CAMB, Neuro and BSTA students with required prerequisites; residents in Environmental and Occupational Health, and professional masters students (MPH and MTR).

Course Goals: Exposures to foreign compounds (drugs, carcinogens, and pollutants) can disrupt normal cellular processes leading to toxicity. This course will focus on the molecular mechanisms by which environmental exposures lead to end-organ injury and to diseases of environmental etiology (neurodegenerative and lung diseases, reproduction disruption and cardiovascular injury). Students will learn the difficulties in modeling response to low-dose chronic exposures, how these exposures are influenced by metabolism and disposition, and how reactive intermediates alter the function of biomolecules. Mechanisms responsible for cellular damage, aberrant repair, and end-organ injury will be discussed. Students will learn about modern predictive molecular toxicology to classify toxicants, predict individual susceptibility and response to environmental triggers, and how to develop and validate biomarkers for diseases of environmental etiology. Students are expected to write a term paper on risk assessment on an environmental exposure using available TOXNET information.

600. Medical Pharmacology. Axelsen and staff. Prerequisite(s): Permission of the instructor. Class meets four days a week.

This course will review basic human physiology pertinent to drug action, and then focus on the mechanisms of action of the various classes of agents used in the therapy of human disease. It consists of lectures by an array of faculty with special interests and expertise in the topic being presented. Drug classes covered include: Neuropsychiatric drugs, cardiovascular and hematological drugs, anticancer drugs, antimicrobial drugs, endocrine and metabolic drugs.

623. Fundamentals of Pharmacology. (D) Dr. David Manning and staff. Prerequisite(s): Permission of course director. Meets three times per week.

This course is designed to introduce students to basic pharmacological concepts with special emphasis on the molecular actions of drugs. Subject matter includes use of microcomputers to analyze pharmacological data.

630. (BMB 700, CHEM700) Frontiers in Bioorganic and Medicinal Chemistry. (A) Dr. Ian Blair, Dr. Barry Cooperman, Dr. Dewey McCafferty. Prerequisite(s): Permission of the courses directors.

This advanced course for graduate students will be based primarily on didactic lectures from three Penn faculty. Permission for a student to participate should first be obtained from one of the participating faculty. A solid background in chemistry and biochemistry will be required. Overviews of current and emerging topics in bioorganic and medicinal chemistry will be presented. Students will be given short "take home" problem sets, two formal interim examinations, and a formal final examination during the semester. Topics that will be covered over the semester include: Mass spectrometry of DNA and DNA-adducts, Synthetic peptides/peptide mimics/proteins, including the expansion of the genetic code; methods of synthesis and applications, Synthetic RNAs, DNAs and nucleic acid mimics: methods of synthesis and applications, Synthetic oligosaccharides: methods of synthesis and applications, Combinatorial chemistry,

Enzymology of translation, Antibiotic biosynthesis, Introduction to drug metabolism, Characterization of drug metabolites, Characterization of reactive metabolites from drugs and endogenous molecules, DNA-adducts from drugs and endogenous molecules, Lipidomics in drug development.

632. (CAMB632) Cell Cont Sig Trans Path.

640. Topics in Cancer Pharmacology. (B) Dr. Judy Meinkoth and Dr. Wenchao Song. Prerequisite(s): permission of course directors. Class meets Wednesdays, 1:00 - 3:00; Fall semester.

Reviews of current literature on topics such as cancer cell signaling, cancer genetics, hormonal carcinogens, environmental carcinogens, chemo- and gene therapy of cancer, cancer epidemiology and prevention. New hypotheses in cancer etiology, prevention and treatment will be discussed as they appear in the literature. The aim of the course is to introduce the students to the latest development in the above areas related to cancer pharmacology.

660. Frontiers in Cancer Pharmacology. (A) Dr. Ian A. Blair. Prerequisite(s): Permission of the course director.

This advanced course for graduate students combines didactic lectures from Penn faculty with oral presentations and oral assignments from the students. Students should have either completed PHRM 560, Principles in Cancer Signaling and Therapeutics or PHRM 640, Topics in

Cancer Pharmacology or equivalent classes. The faculty will present overviews of current and emerging topics in cancer pharmacology. Emphasis of the presentations will be on the translation of basic science discoveries into therapeutic agents. Students will choose related topics to explore in more detail. In consultation with Dr. Blair, students will prepare a 45-minute presentation (using Power Point slides). Each student will give at least two presentations during the semester. The faculty teaching the course will be available for help with the presentations. The written assignment will involve a 10-page double spaced paper (exclusive of references) with a maximum of 25 references. The assignment will consist of a literature review in the area of one of the presentation topics chosen by the student. Additional information can be obtained from the Center for Cancer Pharmacology web site: <http://www.med.upenn.edu/ccp/>

699. Laboratory Rotation.

799. Independent Study. (C)

899. Pre-Dissertation Lab Rotation. (C)

999. Research in Pharmacology. (C) Prerequisite(s): Permission of staff member.

Independent or collaborative research in various fields of pharmacology arranged individually with members of the staff.

PHILOSOPHY (AS) {PHIL}

Introductory Courses

L/R 001. Introduction to Philosophy. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Detlefsen, Schneider. Also fulfills General Requirement in History & Tradition for Class of 2009 and prior. Freshman Seminar sections offered.

In this class we will reflect on the following fundamental questions: What is the nature of underlying reality? What are the scope and limits of human knowledge? Does God exist? What is the ultimate nature of persons? Do we have free will? These are questions which have been asked since ancient times. As we shall see, they do not have obvious or uncontroversial answers. Perhaps this is why they are still with us. We shall examine a range of answers to these questions, and students shall develop analytic thinking skills to defend and develop their own answers to these questions. This course is also offered as a freshman seminar.

L/R 002. Ethics. (C) Society Sector. All classes. S.Meyer, Tan, Martin.

How should we go about morally evaluating our actions? We will read, discuss, and critique historical and contemporary answers to this question. Some moral philosophers focus on evaluating our actions in terms of their consequences, while others believe the intentions motivating our actions are of crucial moral importance. Still others recommend that we attend to the meaning of our actions--what we say by acting as we do. We will also look at historical and contemporary theories that focus on evaluating ourselves rather than our actions. Readings in this class will concern both practical problems (such as cosmetic surgery, abortion, affirmative action, and war) and theoretical issues.

L/R 003. (CLST103) History of Ancient Philosophy. (A) History & Tradition Sector. All classes. Kahn, Meyer, S.

A survey of classical Greek approaches to questions about knowledge, the nature of the world, the soul, ethics, and politics. Will focus on Socrates, Plato, and Aristotle.

L/R 004. History of Modern Philosophy. (B) History & Tradition Sector. All classes. Guyer, Hatfield, Detlefsen.

In this course, we shall read and analyze some of the centrally important works of seventeenth- and eighteenth-century philosophy. Our readings will include writings from Descartes, Locke, Hume, and Kant. We shall focus on metaphysics (the fundamental nature of reality) and epistemology (theory of knowledge). Some of the metaphysical questions dealt with by these authors concern the existence and nature of mind, matter and God, and the problem of human freedom. Some of the epistemological questions dealt with by these authors concern how much and what kind of knowledge we gain by the senses and by pure reason, and the limits of the human intellect. While we shall read these authors in order to get a sense of their historical relations to each other, the aim of the course is not to provide a sweeping survey of philosophy from Descartes through Kant. Rather, the aim is to focus on a few seminal texts in the history of modern philosophy especially appropriate to the themes noted above.

005. (LGIC010, PHIL505) Formal Logic I. (C) Domotor, Weinstein.

This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.

006. (LGIC310, MATH570, PHIL506) Formal Logic II. (B) Weinstein.

An introduction to first-order including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel's incompleteness theorems.

007. Critical Thinking. (M) Staff.

This course will provide the student with informal techniques for identifying and analyzing arguments found in natural language. Special attention will be paid to developing the ability to assess the strength of natural language arguments, as well as statistical arguments.

L/R 008. (PPE 008) The Social Contract. (B) Society Sector. All classes. Freeman, Tan.

This course examines the history and significance of social contract doctrine for modern social and political thought. In particular, the works of Thomas Hobbes, John Locke, J.J. Rousseau, and John Rawls will be studied. We will also study the utilitarian critique of social contract doctrine and the utilitarian views of David

Hume, Adam Smith, J.S. Mill, and Karl Marx's criticism of liberal-democratic justice. This course is an introduction to many of the major figures in modern political philosophy.

015. Logic and Formal Reasoning. (B) Domotor.

This course offers an introduction to three major types of formal reasoning: deductive, inductive (probabilistic) and practical (also known as decision-making). First, and most centrally, we will be focusing on the logical structure of deductive arguments in the context of sentential and predicate logics, and their applications in scientific reasoning. Next, we turn to inductive arguments forms within the frameworks of elementary probability theory and statistics, with special regards to reasoning in experimental research. In the third (shortest) module, we introduce the basic principles of decision theory and practical reasoning. This course is designed for students with minimal background in Mathematics.

SM 018. The Idea of Nationalism. (M) Steinberg. Freshman Seminar.

Nationalism is one of, if not, the major geopolitical forces of the past two hundred years. Its continuing power has been amply demonstrated by recent events in Eastern Europe and the Soviet Union. This course will focus on the conceptual and theoretical issues raised by competing notions of nationalism, rather than on its history or expression in particular cultures.

L/R 025. (STSC025) Philosophy of Science. (C) Natural Science & Mathematics Sector. Class of 2010 and beyond. Weisberg.

An introductory course in the history and philosophy of science focused on the development of the modern, scientific view of the world. Starting with ancient Greek science, the course surveys the history of biology, chemistry, and physics examining the origin of concepts such as force, atom, evolution, species, and law of nature. The course also covers key issues in the philosophy of science including the relationship between theory and evidence, the nature of scientific explanation, and scientific realism. Readings will be drawn from the writings of Aristotle, Ptolemy, Copernicus, Descartes, Newton, Boyle, Dalton, Darwin, Mendeleev, and Einstein, as well as secondary sources.

026. (STSC026) Relativity and the Philosophy of Space and Time. (A)

Natural Science & Mathematics Sector. Class of 2010 and beyond. Domotor.

This course provides an introduction to the philosophy and intellectual history of space-time and cosmological models from ancient to modern times with special emphasis on paradigm shifts, leading to Einstein's theories of special and general relativity and cosmology. Other topics include Big Bang, black holes stellar structure, the metaphysics of substance, particles, fields, and superstrings, unification and grand unification of modern physical theories. No philosophy of physics background is presupposed.

L/R 027. (CHEM027, PHIL527) Origin and Meaning of Quantum Theory. (M)

Natural Science & Mathematics Sector. Class of 2010 and beyond. Hatfield, Fitts.

Quantum theory provides the fundamental underpinning of modern physical science, yet its philosophical implications are so shocking that Einstein could not accept them. By following the historical development of 20th century quantum science, the student should gain an appreciation of how a scientific theory grows and develops, and of the strong interplay between scientific observation and philosophical interpretation. Although students will not be expected to carry out mathematical derivations, they should gain an understanding of basic quantum findings.

SM 028. (GSOC028) Introduction to Feminist Philosophy. (M)

Meyer, M. Offered through the College of General Studies.

Feminist theory grows out of women's experience. In this course we will investigate how some contemporary feminist thinkers' consideration of women's experience has caused them to criticize society and philosophy. Traditional philosophical areas addressed may include ethics, social and political philosophy, aesthetics, philosophy of religion, and epistemology.

SM 032. Topics in Contemporary Philosophy. (M)

Varying instructors. Topics vary each semester. Course is sometimes part of the Benjamin Franklin Scholars Program.

Topics may include skepticism, perception, truth, representation, and ontology.

044. (CIS 140, COGS001, LING105, PSYC107) Introduction to Cognitive Science. (A)

Kearns, Liberman, Weinstein, Hatfield. Formal Reasoning Course. All Classes.

Scope and limits of computer representation of knowledge, belief and perception, and the nature of cognitive processes from a computational perspective.

050. (RELS155, RELS455, SAST150) Indian Philosophy: Themes, Methods, and Western Responses. (M)

History & Tradition Sector. All classes. Staff.

An introductory survey of the fundamentals of Hindu and Buddhist philosophy, the main patterns of Western response to it and some basic questions on "comparative philosophy".

054. Contemporary Continental Philosophy. (M)

Staff.

An introduction to 20th century continental European philosophy, focusing on the origins and development of phenomenology and existentialism and their influence on contemporary thought. The course will include an introduction to the phenomenology of Edmund Husserl and examine the subsequent development of modern philosophic existentialism by critics of Husserl, such as Martin Heidegger, Jean-Paul Sartre or Maurice Merleau-Ponty. Finally, the important influence of phenomenology and existentialism on contemporary trends in French, German, and American philosophy will be explored, including hermeneutics, deconstruction, post-modernism, and post-analytic philosophy. No previous study of philosophy is required.

L/R 055. Existentialism. (M)

Staff.

A critical examination of existentialist views of the nature of the moral life. Readings from both classical (Kierkegaard and Nietzsche) and modern existentialism (Sartre). Readings also include related literary works. Attention will be given to the conceptions of the self; the visions of personal ideals; and the treatment of the relation among different kinds of practical ideals.

067. (GRMN248) 19th Century Philosophy. (M)

Guyer, Jarosinski.

"God is dead." this famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine

both the "modernity" of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguable, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us "how to philosophize with a hammer." This will be our task throughout the course as we take his work into hand as a potentially powerful tool for thought.

L/R 072. (HSOC101, PPE 072) Biomedical Ethics. (M)

Society Sector. All classes. Staff.

A survey of moral problems in medicine and biomedical research. Problems discussed include: genetic manipulation, informed consent, infanticide, abortion, euthanasia, and the allocation of medical resources. Moral theory is presented with the aim of enabling students to think critically and analytically about moral issues. The need for setting biomedical issues in broader humanistic perspective is stressed.

SM 073. (ENVS073) Topics in Ethics. (M)

Meyer, M.

Topics vary each semester.

This is a CWiC-affiliated, critical speaking course. Through debates and presentations, students will learn basic lessons about public speaking.

Requirements will include: meetings with an speaking advisor and video-recordings of some presentations. A final project will deal with the ethical dimension of international policy on global warming. Previous experience in philosophy courses is not required.

L/R 076. Political Philosophy. (M)

Freeman.

An introduction to some central issues in social and political philosophy: liberty, equality, property, authority, distributive justice. Readings from Hobbes, Locke, Mill, Marx, Rawls, Nozick.

L/R 077. Philosophy of Law. (M)

Society Sector. All classes. Freeman, Ross, Tan.

This course is an introduction to some of the central philosophical problems in the

law. We will look at questions such as: What is the relationship between law and morality? Are we bound to obey laws that are immoral? What are the limits to liberty, and how can we balance liberty and equality? Are there limits to free speech and expression? Is affirmative action justifiable? Is capital punishment acceptable? To properly address these and other questions, we begin the course by looking at this fundamental question, "What is law?" We will read historical and contemporary philosophical writings about these issues, as well as some of the well-known court cases to motivate and to focus our discussion. Authors include Aquinas, Mill, Rawls, Hart, Dworkin and others.

L/R 080. Aesthetics. (M) Arts & Letters Sector. All Classes. Guyer, Camp.

Philosophy of Art: This course will investigate what art is and what role it plays in our lives. Is there some distinctive quality or function that all works of art have, which makes them art? Do works of art have a distinctive kind of meaning, which cannot be expressed in other terms? What criteria should we use in evaluating art: should art be beautiful, original, or morally uplifting? In exploring these issues, we will examine abstract philosophical theories, but we will also look at and listen to actual artworks. This class requires no previous background in philosophy.

155. Continental Philosophy. (M) Staff.

In this course we read various texts in the Enlightenment tradition and more recent ones critical of modern distortions of this tradition. We shall begin briefly with Kant and Marx, two exemplars of this tradition, and then we shall study in some detail the views of the Frankfurt School (especially the writing of Horkheimer and Adorno), Foucault, and Derrida. Background readings from Nietzsche and Saussure shall also be assigned to place the material from Foucault and Derrida in its proper context.

Intermediate Courses

SM 205. What is Meaning?. (M) Camp.

In this class we will explore the various kinds of things that get called "meaning," from the most basic informational correlations (as when we say that smoke means fire, or that the tree's having 30 rings means that it is 30 years old), to the conventional meaning of sentences in a language, and on to the most open-ended, complex forms of cultural significance (as when we talk about what a movie means to

us). What determines something's meaning: the creator or the recipient? Can all of these kinds of meaning be considered true or false? If something is meaningful, must there always be a determinate answer about what it means? This class should be accessible to anyone with a bit of background in philosophy, cognitive science, linguistics, literature or cultural criticism.

SM 209. Introduction to Plato. (M) Kahn, S.Meyer.

This course will involve an intensive reading of a number of Plato's dialogues. We will also pay attention to the background from which Plato's views emerged and ask what it is that makes Plato at least the first, if not also the greatest, philosopher of the western world. We will discuss the character of Socrates, through whom Plato usually expresses his own view, and examine the relations between Socrates and the Sophists with whom Plato constantly contrasts him. We will concentrate on Socrates' views on virtue and the good life, the possibility of teaching people to be good, Plato's theory of Forms as an answer to Socrates' questions and its relations to Parmenides and Plato's later modifications of that theory.

210. (CLST210) Introduction to Aristotle. (M) Kahn, S.Meyer.

Aristotle (384-323 BCE) was one of the most important philosophers in Classical Greece, and his legacy had unparalleled influence on the development of the Western philosophical thought through the medieval period. We will study a selection of his works in natural philosophy, metaphysics, epistemology, psychology, ethics and politics. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required.

L/R 211. (CLST211) Ancient Moral Philosophy. (M) Society Sector. All classes. Meyer, S.

A survey of the ethical theories debated by philosophers in Classical Greece and Rome. Plato, Aristotle, Stoics, Epicureans and Pyrrhonist Sceptics offer competing answers to the fundamental question raised by Socrates: How are we to live? That is, what is the best life for a human being? These philosophers generally agree that virtue is an important part of the best human life, but disagree about whether it is the greatest good (Epicurus, for example claims that pleasure is the highest good), or whether there are any other goods (for example, health, wealth, family). Much attention is paid in their theories to accounts of the virtues of character, and to

the place of wisdom in the best sort of human life.

SM 212. Greek Concepts of the Psyche. (M) Kahn.

The origins of psychological theory and concepts of psyche in Greek literature and philosophy. Readings will include Homer and other poets, as well as Heraclitus, Plato, Aristotle and Plotinus.

215. Probability and Statistical Reasoning. (M) Domotor.

This course provides a conceptual and calculational approach to scientific reasoning with special regards to hypothesis formation, design and analysis of experiments for students with little or no formal background in probability calculus or statistics. Experimental inquiry is viewed in terms of a series of models, each with different questions, stretching from low-level representations of data and experiment to higher level hypotheses and theories of interest.

SM 225. (COML224, STSC108) Introduction to Philosophy of Science. (C) Domotor, Akhundov.

A discussion of some philosophical questions that naturally arise in scientific research. Issues to be covered include: The nature of scientific explanation, the relation of theories to evidence, and the development of science (e.g., does science progress? Are earlier theories refuted or refined?).

226. (PHIL521, PPE 225, STSC128) Philosophy of Biology. (M) Natural Science & Mathematics Sector. Class of 2010 and beyond. Domotor, Weisberg.

This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues and may include discussions of adaptation, what constitutes a species, whether there is evolutionary progress, and the concept of fitness. We will also discuss the units of selection, the alleged reduction of classical genetics to molecular genetics, and the possibility of grounding ethics in evolutionary theory.

SM 227. Conceptions of the Self. (M) Staff.

Investigation of such topics as the unity of consciousness and personal identity. Some

attention will be given to the relations between conceptions of the self and conceptions of morality.

L/R 228. (PPE 204) Philosophy of Social Science. (M) Weisberg.

Prerequisite(s): PHIL 008 or PPE 008, ECON 001, and one other social science course.

This course is about the foundations of contemporary social science. It focuses on the nature of social systems, the similarities and differences between social and natural sciences, the construction, analysis, and confirmation of social theories, and the nature of social explanations. Specific topics may include structuralism and functional explanation, methodological individualism, qualitative vs. quantitative social theorizing, positivist and radical critiques of the social sciences, rational choice, game theory, evolutionary modeling, and agent-based modeling. In addition, the course will examine questions about objectivity in the social sciences. As part of this course, students will be expected to construct and analyze simple computational models of social phenomena. Prerequisites: PHIL 008 or PPE 008, ECON 001, and one other social science course.

SM 231. Epistemology. (M) Schneider.

The Nature of Knowledge: The central project of this class is to inquire into the scope and limits of human knowledge. What can we know, if anything? How should we define "knowledge"? We will begin by thinking about philosophical skepticism and related attempts to define knowledge. Then, we shall turn to epistemological issues concerning perception. Following this, we will ask methodological questions about epistemology and analytic philosophy more generally, such as whether epistemology should become a branch of cognitive science, and whether attempts to define ordinary language concepts, like "knowledge", will ever succeed.

SM 234. (RELS204) Philosophy of Religion. (M) Ross.

Systematic examinations of the nature of religious experiences; proofs of the existence of God; the problem of evil; the relationships of faith and reason; and the possibility of religious knowledge.

SM 242. Freedom of the Will. (M) Martin.

A discussion of various challenges to our self-understanding that arise from thinking about persons and their actions as part of the order of nature. Questions to be

considered include: what it is to be a free agent and what it means to have a free will, the degree to which our beliefs about physical causality undermine our beliefs about agency, the nature and importance of moral responsibility, and the relationship between freedom and responsibility. Readings are drawn from both historical and contemporary sources.

SM 243. Topics In Metaphysics. (M)

Domotor. Prerequisite(s): PHIL 001 or PHIL 003 or PHIL 004, or permission of instructor.

The concepts of being and existence are two core concepts of metaphysics. They serve as the basis for ontology. In this course, we will examine seminal accounts of existence from Plato to David Lewis.

L/R 244. (PPE 244, VLST244) Introduction to Philosophy of Mind. (C) Domotor, Camp.

This course investigates the nature of the human mind from a philosophical perspective. We will do this by contrasting human minds with computers and other animals. What is required for something to count as a thinker? What is the best model for understanding the representational contents and processes of thought? Do all minds have conscious experiences? Where are minds located: in the brain, the body, or extended into the world? Readings will be drawn from philosophy, cognitive science, and empirical psychology.

249. (EDUC576, GSOC249) Philosophy of Education. (M) Detlefsen.

This course has two components. The first component is an historical overview of some key figures in Western philosophy of education (including Plato, Locke, Rousseau, Wollstonecraft, Dewey, and du Bois). We will focus on aspects of these theorists' ideas that will inform the second component of the course, which is an examination of some of the most pressing problems in contemporary philosophy of education. These problems include: how much control over a child's education ought to be allocated to parents and how much to the state; what role, if any, ought religion to play in education; how race and gender impact individuals' educational experiences (and how such issues should be addressed in the classroom); what sort of (if any) civic education ought to be taught in schools (especially in wartime such as in the post 9-11 USA); and how schools should be funded. While the bulk of our readings will be philosophical texts, we will supplement these works with readings from other fields, such as psychology and sociology, in

order to provide empirical context to the theoretical problems facing education today.

SM 255. (RELS227) Topics in Continental Philosophy. (M) Staff.

Emmanuel Levinas (1906-1995) is considered by many to have been the greatest Jewish philosopher in the second half of the 20th century. Besides his philosophical writings, he also left a good many essays specifically on the Jewish tradition and on the Jewish situation in modernity. It is these latter writings, referred to as his Jewish writings, that we will be studying. They reveal his attitude on a multitude of topics: approaches to the Talmud and to the Bible, Jewish education, Jews and Israel, Jews and Christians, among others. We will study him primarily through a close reading of his own texts in translation but also, in the latter part of the course, in the context of a few other Jewish thinkers with whom he was contemporary or near contemporary.

SM 267. Kant and the 19th Century. (M) Staff. Prerequisite(s): PHIL 004.

After an orientation to Kant's philosophy, we will examine Hegel, Feuerbach, Marx, and Nietzsche.

L/R 277. (PPE 277) Justice, Law and Morality. (M) Allen.

In this course we will focus on the philosophical background to questions regarding the exercise of legitimate political power and individuals' rights under the U.S. Constitution, including 1st Amendment freedoms of religion, expression, and association; the 14th amendment guarantee of Due Process and the right of privacy, abortion, euthanasia, and the right to marry; the Equal Protection clause and its bearing on affirmative action and equal political rights, and the Takings and Contract clauses and their bearing on rights of private property and economic freedom. We will also discuss competing conceptions of democracy and their implications for the purported authority of courts to reverse democratically enacted decisions by a majority. In addition to Supreme Court decisions concerning these and other issues, we will read works by J.S. Mill, John Rawls, Ronald Dworkin, T.M. Scanlon, Martha Nussbaum, Thomas Nagel, Robert Nozick, and other contemporary philosophers.

278. (LAW 614) Comparative Law. (M) Ewald.

The course will be a basic introduction to the legal systems of continental Europe, with an emphasis on the historical and

philosophical developments that have shaped the modern civil law.

280. Topics in Aesthetics. (M) Staff.

The philosophy of music belongs to the most neglected parts of contemporary aesthetics. Nonetheless, it has a tradition as long as it is rich. This course will explore that tradition from Plato to Adorno, in order to develop categories which can structure our philosophical understanding of music.

299. Independent Study. (C) Staff.

Student arranges with a faculty member to pursue a program of reading and writing on a suitable topic.

301. Directed Honors Research. (C)

Open only to senior majors in philosophy. Student arranges with a faculty member to do an honors thesis on a suitable topic.

SM 325. Topics in Philosophy of Science. (C) Weisberg. Department Majors Only.

Topics will vary.

SM 330. Philosophy of Perception. (M) Hatfield. Department Majors Only.

A philosophical study of historical and contemporary theories of perception, using material drawn from both the philosophical and psychological literatures.

SM 331. Epistemology. (M) Schneider. Department Majors Only.

A seminar for philosophy majors on some main problems of contemporary epistemology, with readings on justification, contextualism, non-conceptual content, normativity of rationality, and related topics. Student presentations are required as are regular attendance and active participation. There are brief written assignments on the readings and a final term paper on a topic approved by the instructor.

SM 334. Philosophy of Religion. (M) Ross. Department Majors Only.

Systematic examinations of the nature of religious experiences; proofs of the existence of God; the problem of evil; the relationship of faith and reason; and the possibility of religious knowledge.

SM 342. Topics in Metaphysics. (M) Weisberg, Ross. Department Majors Only.

A critical discussion of some characteristic "contemporary" positions on "what there is", the problem of universals and properties, the individuation of concrete particulars, modality and possible worlds, causation, and time. Students will be

required to download and read articles from the web (e.g. philpapers) and from the Stanford Encyclopedia of Philosophy on the web, and various journals. Each student will make several classroom reports on the readings (which will be graded), submit 5 one page assignments and a final term paper about 10 pages. The class requires active and constant participation, regular attendance, and is primarily for philosophy majors, with others admitted with permission. Class maximum is 17.

SM 344. Wittgenstein: Mind and Language. (C) Staff. Department Majors Only.

A close study of central portions of part one of Philosophical Investigations with readings from other of Wittgenstein's later writings, from secondary literature on Wittgenstein, and from recent philosophy of mind.

SM 355. Heidegger. (M) Hindricks. Department Majors Only.

Martin Heidegger was one of the most influential, and most contested, philosophers of the twentieth century. His book "Being and Time" is a classic of contemporary thinking, and his critique of technology provided the conceptual foundations for a general critique of modernity. In this course, we will read and discuss large parts of "Being and Time" as well as several of the essays devoted to the problem of technology, with a special emphasis on the ontological, rather than the existentialist, strand in Heidegger's thinking.

SM 361. Ancient Philosophical Figures. (M) Kahn, S.Meyer.

Prerequisite(s): PHIL 003. Department Majors Only.

A study of selected topics, texts, and figures from classical Greek philosophy.

SM 362. Modern Philosophical Figures. (M) Hatfield, Guyer, Detlefsen.

Department Majors Only.

Topics vary each semester.

SM 367. Kant and Hegel. (M) Guyer. Department Majors Only.

We will examine the main theses of Kant's theoretical and practical philosophy and the role of Hegel's criticisms in them in the development of the latter's system of philosophy. Subjects will include Kant's theory of space, time, substance, and causation; his transcendental idealism; and his analysis of the fundamental principles of morality and his defense of freedom of the will. We will then examine Hegel's attempt to overcome the dichotomies of

Kant's theoretical philosophy in his objective idealism and his criticism of the formalism of Kant's practical philosophy.

SM 368. Topics in German Idealism. (M) Horstmann. Department Majors Only.

The course will start with a brief review of some features of Kant's philosophy, will focus on Fichte and Schelling, and will end with a discussion of the reaction to Idealism by Schopenhauer and Nietzsche.

SM 372. Topics in Ethics. (M) Freeman. Prerequisite(s): PHIL 002 (or consent of the instructor). Department Majors Only.

Fundamental issues in moral philosophy: for example, the objectivity of morality, the structure of moral theories, conflicts of values, personal and social ideals.

SM 376. Justice. (M) Freeman. Department Majors Only.

How are the claims of liberty to be reconciled with the claims of equality? What basic rights do individuals have? What are the requirements of economic justice? What is the common good? These are the basic questions of the democratic tradition in political philosophy. In this course we shall consider the differing responses given to these questions by several philosophical views, including Utilitarianism, Social Contract doctrines, Libertarianism, and Marxist conceptions of justice.

SM 377. (PPE 377) Philosophy and the Constitution. (C) Freeman. For Philosophy and Philosophy, Politics, and Economics Majors (PPE) Only.

The aim of this course is to investigate the philosophical background of our constitutional democracy. What is the appropriate role and limits of majority legislative rule? How are we to understand First Amendment protections of freedom of religion, speech, and assembly? What is the conception of equality that underlies the 14th Amendment's Equal Protection Clause? Is there a right of privacy implicit in the Constitution? Do rights of property deserve the same degree of protection as other constitutional rights? To investigate these and other constitutional issues, we will read from both Supreme Court opinions and relevant philosophical texts.

SM 379. Topics in Political Philosophy. (M) Freeman, Kahn, Tan. Department Majors Only.

Topics in Justice: This is a seminar course, and our discussions will draw on some of the basic questions of justice as these arise in both the domestic and global contexts. Questions such as: Does distributive

equality matter? Is distributive equality global in scope? To what subjects or entities do principles of justice apply? What are the limits of toleration? Students will be required to do regular class presentations. Authors we will read include John Rawls, Charles Beitz, G.A. Cohen, Thomas Pogge and others.

SM 380. Topics in Aesthetics. (M)
Guyer. Department Majors Only.

This course will study particular periods in the history of aesthetics and the philosophy of art or particular current problems in the field. Examples of the former would be ancient, eighteenth-century, nineteenth-century, or twentieth-century aesthetics; examples of the latter would be the definition of art, the nature of representation and/or expression in the arts, and art and morality.

Advanced Courses

403. (GREK409) PreSocratic Philosophers. (M) Kahn.

Close study of fragments and doxography for the earliest Greek philosophers in the original texts, including fragments of Heraclitus, Parmenides, Philolaus and Empedocles.

SM 405. Philosophy of Language. (M)
Staff. Prerequisite(s): PHIL 005/505 or permission of instructor.

In this course, we will ask how language works. How do speakers use sounds and shapes to make claims, promises, and threats? How do words and sentences connect to the world: what makes a word refer to an object or property, and what determines when a sentence is true or false? And how do speakers exploit conventional linguistic meaning for alternative ends, as in metaphor and sarcasm? We will approach these questions by reading classic texts by Frege, Russell, Austin, Grice, Searle, Kripke, Quine, Davidson, and others; but we will also apply these readings to actual, everyday linguistic contexts. Some comfort with basic first-order predicate logic will be required, but no previous experience with formal logic is assumed: I will explain all the relevant symbolism in class.

SM 406. (GREK409) Aristotle's Politics. (M) Kahn.

A close reading in Greek of selected texts from Aristotle's POLITICS, especially from Books I-III and VII-VIII, together with general discussions of Aristotle's political theory. Students will be expected to read the whole of the POLITICS in English, as

well as the CONSTITUTION OF ATHENS and relevant sections of the ETHICS. Attention will be paid both to mastery of Aristotle's Greek and to understanding of his political philosophy.

SM 407. Aristotle. (M) S.Meyer, Kahn.

A survey of some of Aristotle's major writings on language, ontology, epistemology, metaphysics, natural philosophy and psychology. Readings will include Categories, De Interpretatione, Posterior Analytics, Physics, Parts of Animals, On Generation and Corruption, Metaphysics, and On the Soul.

SM 409. (GREK409) Plato's Selected Dialogues. (M) Kahn.

The course will consist of a close reading of selected passages in Greek from Plato's Protagoras, Phaedo, and Republic, together with a complete reading of these dialogues in English translation. The primary goal of the course will be the understanding of the greek text and the appreciation of Plato's artistry in these three literary masterpieces. The secondary goal will be an initiation into Plato's philosophy, focusing on epistemology and metaphysics.

411. (CIS 571) Recursion Theory. (M)
Weinstein.

This course will deal with basic concepts and results in the theory of recursive functions and effective computability. Topics will include Turing machines, recursively unsolvable problems, degrees of unsolvability, inductive definability, hierarchies, and complexity of computation, as time permits.

SM 412. (CIS 518, LGIC320, LGIC499, MATH571, MATH670) Topics in Logic. (M) Weinstein.

This course will examine the expressive power of various logical languages over the class of finite structures. The course begins with an exposition of some fundamental results about first-order logic in the context of finite structures and then proceeds to consider various extensions of first-order logic including fixed-point operators, generalized quantifiers, infinitary languages, and higher-order languages. The expressive power of these extensions will be studied in detail and connections with the theory of computational complexity and with combinatorics will be explored.

SM 413. (CIS 572) Set Theory. (M)
Weinstein.

Topics will include ZF set theory, cardinal and ordinal numbers, constructible sets, inner model consistency proofs,

independence results, large cardinal axioms, and philosophical problems concerning set theoretical foundations of mathematics.

SM 414. Philosophy of Mathematics. (M) Weinstein, Ewald.

Topics will include formalism, intuitionism, and the foundations of set theory.

SM 416. (LGIC320, MATH670, PHIL516) Model Theory. (M)
Weinstein.

The course will cover the basic results and techniques of the model theory of first-order logic. Additional topics will include extensions of first-order logic and finite model theory.

SM 417. (PPE 417) Game Theory. (M)
Bicchieri.

The course will introduce students to non-cooperative game theory and experimental games. The first part of the course will focus on the basic elements of non-cooperative game theory. The second part will cover the experimental literature on social dilemmas, trust and ultimatum games. The format will consist of lectures, student presentations, and discussions.

SM 423. (VLST223) Philosophy and Visual Perception. (C) Hatfield.

The course will begin with a systematic overview of theories of visual perception and their relation to philosophy, from Ptolemy to Marr. It will then address selected philosophical themes, including the interaction between seeing and knowing (or believing), the metaphysics of seeing, and the role of imagery in thought.

SM 425. Philosophy of Science. (C)
Domotor. Prerequisite(s): Background in elementary logic and some rudiments of science.

Historically oriented survey and contemporary analysis of the basic concepts and arguments in philosophy of science. An in-depth examination of the nature of scientific theories, their confirmation and theory-world relations, laws of nature and their role in unification and explanation, causation, and teleology, reductionism and supervenience, values and objectivity. Additional topics covered include arguments concerning scientific realism, the ontological status of theoretical entities, the Quine-Duhem thesis, Kuhn's paradigm shifts, Bayesianism, and the success of science.

SM 426. (STSC426) Philosophy of Psychology. (M) Hatfield.

Is there a science of psychology distinct from physiology? If there is, what is its subject matter? What is the relationship between scientific psychology and traditional philosophical investigation of the mental? Examination of these questions is followed by analysis of some concepts employed in cognitive psychology and cognitive science, particularly in the fields of perception and cognition.

SM 427. Moral Psychology. (M) Staff.

A discussion of some topics in the philosophy of mind that have shaped questions in ethics. Among the issues discussed will be those surrounding the concepts of character, the self, integrity, responsibility, and freedom.

SM 428. Philosophy of Social Science. (M) Staff.

An examination of fundamental philosophical issues concerning forms of social organization. Consideration of philosophical critiques of society.

SM 429. (RELS437) Medieval Philosophy. (M) Ross.

Examination of texts from Augustine, Anselm and Aquinas and perhaps Duns Scotus that provide background for early modern philosophy. Regular attendance and class presentations of the assigned material required (and graded), as well as a final research term paper.

SM 430. Philosophy of Mind. (M) Schneider.

In this class we survey a host of central philosophical issues in cognitive science. We shall begin with key theories of the nature of consciousness by both philosophers and scientists. We shall then pursue the related issue: how can thought be computational? Here, we shall consider the extended mind program, especially in light of recent and anticipated work on brain-machine interfaces. We shall also consider the connectionist (neural network) approach to the computational basis of thought. We will also canvass the important issues of innateness, concepts and modularity. Using a blend of science fiction thought experiments and new scientific results, we shall begin to rethink the position that a cognitive science based approach to the brain suggests concerning the mind-body problem.

SM 431. Theory of Knowledge. (M) Domotor.

This course introduces students to the field of formal epistemology. Although some formal methods will be used, the principal objective is to explore various conceptual issues arising in modeling and representing knowledge. Topics include: bridging the gap between mainstream and formal epistemology by exploring various versions of the familiar tripartite definition of knowledge (knowledge as justified true belief) in light of folksy examples and counterexamples, basic logical and probabilistic models of knowledge (Hintikka, Aumann, and Bayesian) and their multi-agent variants, logical omniscience and other problems (including the epistemic closure principle), attempts at formalizing joint and common knowledge, resource-bounded knowledge, knowledge under limited logical powers, and empirical knowledge obstructed by system complexity. There are no prerequisites for this course, except some logical maturity.

SM 434. (RELS401) Philosophy of Religion. (M) Ross.

Systematic examinations of the nature of religious experiences; proofs of the existence of God; the problem of evil; the relationships of faith and reason; and the possibility of religious knowledge.

436. (CLST436) Hellenistic Philosophy. (M) S.Meyer.

Prerequisite(s): This course will be most suitable for advanced undergraduates and graduate students in Philosophy or Classics; others need instructor's permission.

Philosophy in the Hellenistic period (323-331 B.C.) is dominated by the debate between the Stoics and their various sceptical opponents. We will focus on how the Stoics try to construct their system (with special emphasis on their epistemology, physics and ethics), and on how the Academic and Pyrrhonian Sceptics argue against them. Readings will primarily be from Cicero, Diogenes, Laertius, Plutarch and Sextus Empiricus (all works to be read in translation!).

SM 442. Origins of Analytic Philosophy. (M) Staff. Prerequisite(s): PHIL 005 and one other philosophy course, or permission of instructor.

A study of the writings of Frege, Russell, and early Wittgenstein with special attention to their views on mathematics, metaphysics, language, and their relationships.

SM 443. Logical Positivism. (M) Staff. Prerequisite(s): PHIL 005.

A study of the sources, development, and criticism of Logical Positivism. Extensive treatment will be given to Rudolf Carnap and W.V. Quine.

SM 444. Wittgenstein. (M) Staff.

A study of the later philosophy of Ludwig Wittgenstein.

SM 445. Modal Logic. (M) Domotor. Prerequisite(s): PHIL 005.

Semi-formal examination of basic modalities and conditionals, including the varieties of necessity, possibility, counterfactuals, and causality. Special emphasis on applications to ontological proofs, deontic paradoxes, beliefs, and laws. Critical analysis of possible world and belief state semantics.

SM 448. 19th Century Philosophy. (M) Horstmann.

After an orientation to Kant's philosophy, we will examine Hegel, Feuerbach, Marx, and Nietzsche.

SM 460. Continental Rationalism. (M) Hatfield, Detlefsen. Prerequisite(s): PHIL 004 or permission of instructor.

A study of metaphysics and epistemology in the writing of Descartes, Spinoza, and Leibniz.

SM 463. British Philosophy I. (M) Guyer. Prerequisite(s): PHIL 004 or permission of instructor.

A study of epistemology and metaphysics in classical British philosophy. Authors studied included Bacon, Hobbes, Locke, Berkeley, Hume, Reid, and Mill.

SM 464. British Philosophy II. (M) Guyer. Prerequisite(s): PHIL 002 or PHIL 004 or permission of instructor.

A study of moral philosophy, political philosophy, and aesthetics in classical British philosophy. Authors studied include Hobbes, Locke, Hutcheson, Hume, Kames, Adam Smith, and Reid.

SM 465. (GRMN551) Kant I. (M) Guyer, Hatfield. Prerequisite(s): PHIL 004, one advanced Philosophy course, or permission of instructor.

A detailed study of Kant's theoretical philosophy as presented in the Critique of Pure Reason. Topics include our knowledge of space, time, causation, external objects, and self; the critique of traditional metaphysical arguments about the soul, the cosmos, and God; Kant's special version of idealism; and Kant's

theory of scientific inquiry. Written work will include several short papers and one term paper. PHILOSOPHY 004 and/or several prior courses in philosophy are strongly recommended.

SM 466. (GRMN552) Kant II. (M) Guyer. Prerequisite(s): PHIL 002, PHIL 004, or permission of instructor.

This course is a study of Kant's moral and political philosophy. The central theme of the course is Kant's conviction that freedom or "Autonomy" is our most basic value, and that the fundamental law of morality as well as the more particular principles of both justice and personal virtue are the means that are necessary in order to preserve and promote the existence and exercise of human freedom. Central questions will be how Kant attempts to motivate or prove the fundamental value of freedom and the connection between this normative issue and his metaphysics of free will. Texts will include Kant's Lectures on Ethics, Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and Metaphysics of Morals. Written work for the course will include one short paper and one term paper.

L/R 467. Topics in History of Philosophy: Science and Metaphysics in 17th Century. (M)

Hatfield, Detlefsen. Prerequisite(s): Previous course in Philosophy or History and Sociology of Science.

An examination of the interplay between the rise of modern natural science and the genesis of a new philosophy in the seventeenth century. Readings will be drawn from the works of Copernicus, Kepler, Galileo, Descartes, Bacon, Boyle, Locke, and Newton. Philosophical issues include the justification for a mathematical approach to nature, differing grounds for drawing a distinction between primary and secondary qualities, and contrasting conceptions of scientific method and of the role of sensory experience in attaining knowledge of nature.

SM 468. (GRMN583) Hegel. (M) Horstmann.

Hegel's Metaphysics: The purpose of the course is to discuss the basic metaphysical assumptions of Hegel's philosophy and to inquire to what extent these assumptions guide his conception of a 'system'. The seminar will focus primarily on some of Hegel's early Jena writings, his Phenomenology of Spirit and on passages from different versions of Hegel's Logic. Topics that are dealt with include: (1) Hegel's conception of philosophy, (2) the

development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel's criticism of traditional metaphysics, (5) his notion of a 'concept' (Begriff), his theory of the idea.

SM 471. Action Theory. (M) Finkelstein.

This course introduces students to the basic problems of the theory of action: What is an action? What makes actions different from (mere) events? How is the notion of action related to what people do intentionally? To what they intend to do? In addressing these questions, we will devote particular attention to the influential writings of Elizabeth Anscombe and Donald Davidson. In this connection we will consider the relation of these questions to the classic debate about whether reasons can be causes. As we shall see, Davidson transformed the theory of action with his suggestion that an event is an action just in case there is a true description of it under which it was someone's doing something for a reason.

SM 472. Survey of Ethical Theory. (M) Martin.

This class is a survey of 20th and 21st century metaethics--the metaphysics, epistemology, and psychology of morality. Beginning with G.E. Moore and working our way to the present day, we will read and discuss influential articles and book chapters addressing questions about the reality of values, our knowledge of them, and their motivational influence. All participants will be responsible for leading class discussion. All registered participants will also write several short response papers and either two 10-page papers or one 20-page paper.

SM 473. Topics in Ethics. (C) Staff.

In this course we will examine different contemporary positions in theoretical ethics, focussing on topics such as relativism, objectivity in ethics, practical reason, and rational motivation. Authors include B. Williams, G. Harman, T. Scanlon, C. Korsgaard, J. McDowell, C. Wright.

SM 475. (PPE 475) Political Philosophy. (M) Freeman.

An examination of basic theoretical problems of political science divided into three parts. First, specific features of social sciences will be examined and three most important general orientations of social sciences (analytical, interpretative and critical) will be compared and analyzed. Second, basic concepts of social and political sciences will be studied: social determination, rationality, social change,

politics, power, state, democracy. Third, the problem of value judgments will be considered: Is there a rational, objective method for the resolution of conflicts in value judgments? Is morality compatible with politics?

SM 478. (PSCI390) Ancient Political Philosophy. (M) Kahn.

The history of ancient political theory from early Greece to late antiquity. Primary focus will be on the political philosophies of Plato and Aristotle, but attention will also be given to the fifth-century sophists and to Roman and Hellenistic theories.

SM 479. Modern Political Philosophy. (M) Freeman.

A survey study of some of the main works by several major modern philosophers, including Thomas Hobbes's Leviathan; John Locke's Second Treatise on Government and Letter Concerning Toleration; Jean-Jacques Rousseau's Social Contract and Discourse on Inequality; John Stuart Mill's Utilitarianism, On Liberty, On Representative Government, and the Subjection of Women; and excerpts from Capital and other works by Karl Marx. Open to graduate students and upper level undergraduates. PRIOR COURSEWORK IN POLITICAL, MORAL, OR LEGAL PHILOSOPHY STRONGLY ADVISED.

SM 480. (COML582, GRMN580) Aesthetics. (M) Guyer.

A study of major authors and themes in eighteenth-century British and German aesthetics, culminating in a close study of Kant's "Critique of the Power of Judgment," which attempted to synthesize the two traditions. Themes will include the variety of aesthetic properties (the beautiful and the sublime), the aims of art, the relations between artistic creation and reception, the relations between art and nature, and the problem of taste. British authors may include Joseph Addison, Francis Hutcheson, David Hume, Edmund Burke, Alexander Gerard, Lord Kames, and James Beattie; German authors may include Alexander Baumgarten, Moses Mendelssohn, Gotthold Ephraim Lessing, Johann Georg Sulzer, Johann Gottfried Herder, and Kant. Written work will consist of one term paper.

SM 485. (GSOC425) Topics in Gender Theory. (M) Staff.

Topics will vary.

SM 488. The Idea of Nationalism. (M) Steinberg.

The course will explore--from a philosophical perspective--the nature of

national and group identity, the alleged right of every group to national self-determination, and the contemporary moral and ethnopolitical conflicts that these ideas shape. We will examine the beliefs of a variety of nationalist movements, both contemporary and historical, such as American, German, Jewish, Palestinian, Irish, and a variety of Third World nationalisms, to get a clearer idea of what the idea of nationalism is and why it so often gives rise to seemingly irresolvable conflicts.

Graduate Courses

505. (PHIL005) Formal Logic. (C)

Domotor, Weinstein. Undergraduates Need Permission.

This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.

506. (MATH570, PHIL006) Formal Logic II. (B) Weinstein. Undergraduates Need Permission.

An introduction to first-order logic including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel's incompleteness theorems. UNDERGRADUATES NEED PERMISSION

SM 507. (CLST507) Presocratic Philosophy. (M) Kahn. Undergraduates Need Permission.

A reading of greek of the fragments of the Presocratic philosophers, together with an introduction to the modern scholarship on the Presocratics. The course will begin with the mythopoetic worldview presented by Hesiod's Theogony, and follow its transformation above all in Heraclitus, Parmenides and Empedocles. UNDERGRADUATES NEED PERMISSION

SM 508. Early Plato. (M) Kahn. Undergraduates Need Permission.

A close study of selected dialogues from Plato's early period, against the background of what we know about Socratic dialogues composed by other authors. Questions of the historicity and literary status of Plato's account of Socrates will be discussed, but emphasis will be on Plato's use of the dialogue form for the expression and development of his own philosophical ideas.

SM 509. Middle Plato. (M) Kahn. Undergraduates Need Permission.

An examination of the metaphysics and epistemology of Plato's middle dialogues, particularly the theory of Forms, the distinction between knowledge and belief, and Plato's account of properties and predicates. We will discuss how Plato's views develop out of Socrates' dialectical concerns, and whether these views support Socrates' interests. We will read the MENO, the PHAEDO, the REPUBLIC and parts of the PARMENIDES.

SM 510. (CLST508) Late Plato. (M) Kahn. Undergraduates Need Permission.

An examination of the metaphysics, epistemology, and dialectical practice of Plato's late dialogues. We will begin with PARMENIDES and with its criticisms of the theory of forms. We will discuss parts of the PHAEDRUS, in which the method of collection and division is introduced, and proceed to the THEAETETUS, the SOPHIST, the PHILEBUS, and the TIMAEUS. We will consider whether Plato abandons or modifies the theory of forms he presents in his middle works. We will also ask if the new dialectical practice we can find in the late works is connected with Plato's possible disaffection with his middle metaphysics.

SM 511. Aristotle's Metaphysics. (M) Kahn, S.Meyer. Undergraduates Need Permission.

A study of the CATEGORIES, central books of METAPHYSICS and relevant portions of PHYSICS and DE ANIMA.

SM 512. Aristotle's Ethics. (M) Kahn, S.Meyer. Undergraduates Need Permission.

An examination of Aristotle's ethical theory, with focus on the Eudemian Ethics.

SM 513. Plotinus. (M) Kahn. Undergraduates Need Permission.

An introduction to the thought of the major philosopher of late antiquity, founder of Neo-Platonism. Readings will include generous selections from the Enneads.

SM 516. (MATH670, PHIL416) Model Theory. (M) Weinstein. Undergraduates Need Permission.

The course will cover the basic results and techniques of the model theory of first-order logic. Additional topics will include extensions of first-order logic and finite model theory.

SM 517. Computational Learning Theory. (M) Weinstein. Undergraduates Need Permission.

This course is an introduction to computational theory. The course will survey the results of research on three contemporary mathematical models of learning: identification in the limit, probably and approximately correct learning from queries. Applications of these models to questions about natural language acquisition, concept acquisition, the conduct of scientific inquiry, and epistemology will be considered.

SM 525. (COML525, HSSC527) Topics in the Philosophy of Science. (M) Weisberg, Bicchieri. Undergraduates Need Permission.

After a brief overview of the major issues in philosophy of biology, we will consider several issues that have been widely discussed in the recent literature. These topics may include the Major Transitions in Evolution, the the Origin of Life, the nature of inheritance, human cognitive evolution, biodiversity, and biological modeling.

SM 526. Philosophy of Psychology. (M) Hatfield. Undergraduates Need Permission.

The seminar will focus on the problem of the external world as examined by G.E.Moore and Bertrand Russell, with special attention to relations and distinctions between epistemology and psychology, and also to the background in nineteenth-century discussions, esp. by J.S. Mill and William Hamilton. UNDERGRADUATES NEED PERMISSION.

L/R 527. (PHIL027) Conceptual Foundations of Quantum Mechanics. (M) Hatfield. Undergraduates Need Permission.

Quantum theory provides the fundamental underpinning of modern physical science, yet its philosophical implications are so shocking that Einstein could not accept them. By following the historical development of 20th century quantum science, the student should gain an appreciation of how a scientific theory grows and develops, and of the strong interplay between scientific observation and philosophical interpretation. Although students will not be expected to carry out mathematical derivations, they should gain an understanding of basic quantum findings. Students enrolling in 527 must register for the recitation section that is reserved for that number, which is for graduate students.

SM 529. Medieval Philosophy. (M)

Ross. Undergraduates Need Permission.

Major Works of Arabic Philosophy in New English Translation: A critical discussion of classics of Arabic Philosophy, with particular attention to Ibn Sina (Avicenna) and to Al-Ghazali and Ibn Rushd (Averroes) on "The Incoherence of the Philosophers", and, others as well, on the relation of faith and reason, necessity in being and abstractive intellect. The texts are newly translated into English by Jon McGinnis and David Reisman (Hackett Publishing Company). Students will take part in weekly discussions and presentations and write a term paper on an additional major work of Arabic-Islamic philosophy. Students from History, Religious Studies, Near Eastern Studies and Classics are warmly welcomed.

SM 530. Philosophy of Mind. (M)

Hatfield. Undergraduates Need Permission.

Selected topics in philosophy of mind or philosophy of psychology. Particular topics will vary from year to year.

SM 536. Stoicism. (M)

S.Meyer. Undergraduates Need Permission.

A discussion of central texts and topics in Greek and Roman Stoicism, including epistemology, ethics, and natural philosophy. Readings (all in English translation) will be drawn from Cicero's *Academica*, *On the nature of the gods*, *On moral ends*, and *On duties*, as well as from Seneca's *Letters*, Epictetus' *Discourses*, and the accounts of Stoic doctrine in Diogenes Laertius and John Stobaeus.

SM 540. Topics in Philosophy of Language. (M)

Camp. Undergraduates Need Permission.

Expressivism: Emotions, Evaluations, and Linguistic Meaning: In this seminar, we will explore the virtues and drawbacks of expressivism, broadly construed. Most contemporary philosophers of language analyze meaning in terms of truth-conditional content: how the world would have to be for an assertion or other speech act to be satisfied. But in many cases, it's unclear just what ontologically respectable facts could make our utterances true. Further, much of our communicative activity appears to be aimed at affecting our interlocutors' hearts and actions as much as their minds. If some aspects of conventional linguistic meaning involve the expression of evaluative or emotional attitudes rather than (just) truth-conditional content, how should a theory of meaning analyze this? We'll begin with classic discussions of moral emotivism (e.g. Ayer, Hare) and more recent versions of

expressivism in ethics (e.g. Gibbard, Blackburn), paying special attention to the Frege-Geach problem. Next, we'll turn to recent discussions of epithets, especially racial slurs, in the philosophy of language (e.g. Williamson, Brandom, Hornsby), tracing out similarities and contrasts with moral expressivism.

UNDERGRADUATES NEED PERMISSION

SM 547. Leibniz/Locke. (M)

Detlefsen. Undergraduates Need Permission.

In this course, we will read some seminal texts in the transformation of natural philosophy (a predecessor to contemporary science) in Britain in the early modern period. Our thinkers will include (among others) Bacon, Boyle, Harvey and Newton. In addition to understanding some key features of these thinkers' natural philosophy, we will discuss the oft-mentioned (and recently much questioned) notion of the early modern Scientific Revolution: were these and other figures really part of a radical transformation in scientific thought in the seventeenth and eighteenth centuries? Related, we will look at the transformations occurring not just in what we would now call physics, but also in the life sciences.

SM 550. Topics in Philosophy of Education. (M)

Detlefsen. Undergraduates Need Permission.

Socio-Political Philosophy of Education: In this course, we will examine some of the most pressing problems in contemporary philosophy of education. These problems include: how much control over a child's education ought to be allocated to parents and how much to the state; what role, if any, ought religion to play in education; how race and gender impact individuals' educational experiences (and how such issues should be addressed in the classroom); what sort of (if any) civic education ought to be taught in schools (especially in wartime such as in the post 9-11 USA); and how schools should be funded. We will deal with a number of case studies, mostly recent, but some crucial historical cases as well. Our readings will be primarily philosophical texts, supplemented with those from other fields, such as psychology, history and sociology, in order to provide empirical context to the theoretical problems facing education today. As a seminar, the instructor welcomes student participation, including students bringing their own interests in educational theory to the classroom. At the same time, the instructor will lecture to the extent necessary to make classroom discussion especially rich.

SM 554. Contemporary Continental Philosophy. (M)

Staff.

Human beings live in a world permeated and defined by meanings. How we discover, create, communicate, and comprehend meaning has been one of the central questions of continental European philosophy over the past century. In this seminar course, designed for students with no previous background in philosophy, we will explore why meaning plays such a central role in all attempts to understand human consciousness, experience, behavior, and culture, and how this insight has profoundly influenced major trends in contemporary thought. Starting with an introduction to the phenomenology of Edmund Husserl and the subsequent development of modern philosophic existentialism by critics of Husserl such as Martin Heidegger, Jean-Paul Sartre, and Maurice Merleau-Ponty, we will examine the important influence of phenomenology and existentialism on contemporary trends in French, German and American philosophy, including hermeneutics, deconstruction, post-modernism, cognitive science, and post-analytic philosophy, as exhibited in works by Paul Ricoeur, Hans Georg Gadamer, Jacques Derrida, Richard Rorty, and others.

SM 560. Descartes. (M)

Hatfield. Undergraduates Need Permission.

A reading of the *MEDITATIONS* (including significant portions of the *Objections and Replies*) supplemented by other writings of the mature Descartes, including the *DISCOURSE* and selections from *PRINCIPLES* and *LETTERS*. The focus will be on the interplay among Descartes' conception of mind, matter, and God (including the doctrine of the creation of the eternal truths), and on the respective roles of reason and experience in Descartes' epistemology (especially in light of his project of founding a new physics).

SM 564. Post-Kantian Epistemology. (M)

Guyer. Undergraduates Need Permission.

This course will study the reception of Kant's theoretical philosophy in the twentieth century, particularly after 1950, when Kant came to be seen as central to the critique of the original project of analytic philosophy as exemplified by such figures as Russell, the early Wittgenstein, and Carnap. After a brief review of the beginnings of post-analytic philosophy in Quine's and White's rejection of the analytic/synthetic distinction, we will look at the appropriation of Kant in such figures as Peter Strawson, Wilfrid Sellars, Hilary Putnam, and John McDowell.

SM 565. Kant's Critique of Metaphysics. (M) Guyer. Prerequisite(s): PHIL 465 or permission of instructor. Undergraduates Need Permission.

A study of Kant's critique of metaphysics and theory of regulative ideas in the "Transcendental Dialectic" and related texts such as CRITIQUE OF JUDGEMENT, ONLY POSSIBLE PROOF OF THE EXISTENCE OF GOD, and LECTURES ON PHILOSOPHICAL THEOLOGY. Collateral readings in such authors as Descartes, Leibniz, Spinoza, Wolff, Baumgarten, Mendelssohn, Bayle, and Hume.

SM 566. (GRMN566) Kant's Moral Philosophy. (C) Guyer. Undergraduates Need Permission.

A study of Kant's moral philosophy, political philosophy, and aesthetics, focusing on his GROUNDWORK FOR THE METAPHYSICS OF MORALS, CRITIQUES OF PRACTICAL REASON, METAPHYSICS OF MORALS, and CRITIQUE OF JUDGMENT. Written work for the course will include two papers and a final examination.

SM 567. Development of German Idealism. (M) Horstmann. Undergraduates Need Permission.

This course will start with a brief review of some features of Kant's philosophy and will focus on Fichte and Schelling, and will end with a discussion of the reaction to Idealism by Schopenhauer and Nietzsche.

SM 568. (GRMN568) Hegel. (M) Horstmann, Hindrichs. Undergraduates Need Permission.

Hegel's "Lectures on Aesthetics" are a seminal work in the philosophy of art. They conceptualize the different kinds of art, and they understand art in the context of a philosophy of history that is centered on the concept of freedom. We will explore the intellectual background of Hegel's thinking, especially Kant, Schiller, and Schlegel, and investigate the conceptual articulation of art with which Hegel provides us.

SM 572. Contemporary Ethics. (M) Freeman, Martin. Undergraduates Need Permission.

In this class, we will read and discuss several recent books in moral philosophy. Likely authors include Tim Scanlon and Christine Korsgaard. All participants will be responsible for leading class discussion, and all registered participants will also produce an article-length paper.

SM 573. Conceptual Foundations of Bioethics. (M) Staff. Undergraduates Need Permission.

This course will focus on several conceptual issues in bioethics and philosophy of medicine. It is intended to be a graduate level seminar for students in bioethics, philosophy, medicine or related fields. Issues to be covered include: the role of underdetermination and incommensurability in medical science; the meaning and significance of the concepts of health and disease; the distinction between genetic and non-genetic diseases; and problems in genetic technology associated with reductionism and causality. This course will explore the intersection between philosophy of science and bioethics. Some of the most important ethical and social issues and even policy decisions hinge on often unexamined conceptual grounds. We will critically examine some of the crucial assumptions which underlie contemporary biomedical practice.

SM 574. (BIOH574) Topics in Bioethics. (M) Staff. Undergraduates Need Permission.

Focuses on one or more issues in bioethics. Particular topics to be covered include analysis of the meaning and significance of concepts of disease, health, medicine, therapy, and genetic trait. Other issues to be covered include reductionism in medicine and biology; the extent to which medicine is a science; and the epistemological differences which arise between different groups of practitioners. Particular topics and issues to be covered will vary from year to year.

SM 577. (LAW 799) Topics in Philosophy of Law. (M) Ross. Undergraduates Need Permission.

In recent years, scholars in many different fields have shifted their attention to the problem of the treatment of combatants and detainees in times of war. Revelations that the Bush Administration employed techniques against so-called "non-enemy combatants" that arguably violated the Geneva Conventions, as well as international and domestic laws against the use of torture, threw the legal community, as well as the public at large, into a heated debate about the permissible uses of torture in the war against terrorism and the efforts to enhance American security. This course will examine the problems of crimes of war, and more specifically torture, from a jurisprudential perspective. We will begin by considering the age-old debate in moral philosophy between the view that human beings have rights that cannot be

overridden, and the view that all legal rules, including those governing conduct in war, should seek to optimize social utility, and that this principally requires a balancing of the costs and benefits of various courses of action. After considering the foregoing general debate between "deontologists," as they are called, and "utilitarians," we will consider the growing literature on the clash of these perspectives that the Bush Administration faced in deciding whether to authorize harsh interrogation

techniques to assist in the global war against terror. In addition, we will consider such topics as the role of government lawyers in advising the government on the legality of its conduct. What is the role morality of a lawyer in this position? Does following the opinion of a government lawyer serve to immunize conduct of debatable legality? Should it, from a moral perspective? We will also look more generally at the role of international law in protecting human rights. One of the central arguments against the legality of torture bases itself on the idea that every human being has a set of rights with universal applicability, which rights are eo ipso violated when a human being, in whatever context, is made to suffer extreme physical and/or mental pain. Are there good philosophical arguments for the existence of such rights? If so, would the recognition of such rights provide a basis for universal prosecution for their violation? Finally, is prosecution of rights-violators the best way, and most compelling way, to protect individuals against violations of their rights, or would such prosecutions be both questionable from a legal standpoint and ill-advised from a global political perspective? In addition to the current debate about the techniques used in the Bush Administration's war on terror, we will consider a number of

historical examples, such as the prosecutions of Nuremberg, the prosecutions of the East German border guards, and the detention of Japanese-Americans during the Second World War.

SM 578. (LAW 946) Topics in Political Philosophy. (M) Freeman, Tan. Undergraduates Need Permission.

In this seminar course, entitled Political Authority and Political Obligation, we will be examining, from a philosophical perspective, the related questions of whether and under what circumstances the state possesses the legitimate moral authority to govern, and whether and under what circumstances citizens possess a general moral obligation to obey the law. Theorists often treat these two questions as though they are theoretically

interchangeable, but, as we shall see, there are good reasons to doubt that this is so. We will begin with Robert Paul Wolff's famous anarchist thesis that the state never has legitimate moral authority to govern, and, relatedly, that citizens never have a general obligation to obey the law. We will then examine a number of well-known theories that claim to show that, under certain circumstances, the state is capable of possessing at least partial moral authority to govern. We will look at, *inter alia*, A. John Simmons' version of the so-called principle of fair play, Joseph Raz's so-called service conception of authority, John Finnis "natural law" theory of political authority, Jeremy Waldron's version of John Rawls' theory of the duty to support just institutions, David Estlund's theory of democratic political authority, and, if there is time, Ronald Dworkin's theory of associative obligations. In addition to examining

these specific theories, we will also inquire into the more abstract set of conditions that any theory of legitimate political authority or legitimate political obligation must meet if it is to have any chance of being successful, either in whole or in part. In this regard, the work of Leslie Green and David Copp, among others will prove particularly helpful.

SM 581. (GRMN580) 18th Century Aesthetics. (M) Guyer. Undergraduates Need Permission.

A close study of major texts in aesthetics from Shaftesbury and Addison through Kant and Schiller. Other authors may include Hutcheson, Hume, Burke, Gerard, Kames, Alison, Baumgarten, Mendelssohn, Lessing, Diderot, and Rousseau. Issues can include the nature of aesthetic experience, the distinction between the beautiful and the sublime, the universality of taste, the ethical significance of the aesthetic, and the commonalities and differences among the arts. The course will be taught as a seminar, and students will be responsible for an oral presentation as well as a term paper.

SM 585. (COML598, WSTD585) Aesthetics: Emotion in the Arts. (M) Guyer, Camp. Undergraduates Need Permission.

This course will investigate historical and contemporary philosophical views on the role of the emotions in the arts. Do we have genuine emotional responses to works of art - to fiction? paintings? music? If so, what are the conditions under which we do and don't have such emotional responses? When are such responses appropriate? In particular, does an appropriate aesthetic

attitude require emotional distance from the object of the artwork? Is it inappropriate to respond emotionally to morally depraved artworks? How do formal devices induce, constrain, and otherwise alter our emotional responses to art? Readings will be drawn from philosophers including Jean-Baptiste Du Bos, David Hume, Edmund Burke, Moses Mendelssohn, Henry Home Lord Kames, Arthur Schopenhauer, Edward Bullough, R.G. Collingwood, Stanley Cavell, Tamar Szabo Gendler, Richard Moran, Kendall Walton, and others.

SM 600. Proseminar. (A) Staff.

An intensive seminar for first-year doctoral students. Readings will be drawn from key works of 20th and 21st century metaphysics and epistemology, with special emphasis on the aims and methods of philosophical analysis. Assignments will emphasize the development of philosophical research, writing and oral presentation skills.

601. Consortium Course. (C) Staff.

For graduate students taking courses at other institutions belonging to the Philadelphia area Philosophical Consortium.

SM 607. (CLST607) Presocratic Philosophy. (M) Kahn.

Close study of fragments and doxography for the earliest Greek philosophers in the original texts.

SM 609. (CLST609, COML609, GREK606) Plato's Republic. (M) Kahn.

A close reading and discussion of Plato's work. As much as possible of the text will be read in Greek.

SM 610. Plato's Symposium and Phaedrus. (M) Kahn.

A close reading and analysis of Plato's two major dialogues on love.

SM 611. Plato's Philebus. (M) Kahn.

A close reading of the text of one of Plato's latest and most difficult dialogues. Questions to be discussed include: the unity of the dialogue, relation to other late dialogues (such as the *TIMAEUS*), relation to the doctrine of Forms, relation to the "unwritten doctrines". Knowledge of Greek is not required.

SM 612. Topics in Hellenistic Philosophy. (M) S.Meyer.

Topics will vary.

SM 613. (LAW 618) Topics in Medieval Philosophy. (M) Ross.

Close reading of selected texts in medieval philosophy.

SM 625. Contemporary Metaphysical Problems. (M) Hatfield.

An examination of selected problems at the intersection of philosophy of psychology, philosophy of mind, and metaphysics.

SM 626. Topics in Philosophy of Psychology. (M) Hatfield.

We will investigate the notions of function, adaptation, and teleology as found in biology and as analyzed in the philosophy of biology; we will then apply these notions to selected problems in the philosophy of psychology pertaining to representation and content.

SM 630. Topics in Philosophy of Mind. (M) Hatfield.

Topics will vary, and may be historical or contemporary.

SM 633. (HIST610) Colloquium in American History. (M) Kuklick, B.

HIST 610 is a topics course. When the subject is appropriate, the course will be cross-listed with Philosophy. Please refer to the current timetable.

SM 642. Contemporary Metaphysics. (M) Ross.

This course will deal with the nature of necessity, essentialism, idealism and the concept of truth from a contemporary perspective.

SM 643. Carnap. (M) Staff.

A survey of Carnap's writings, with special attention to *The Logical Construction of the World* and *The Logical Syntax of Language*.

SM 644. Quine. (M) Staff.

A survey of Quine's philosophy with special attention to the critique of analyticity, truth and reference, indeterminacy of translations, ontological relativity, and physicalism.

SM 645. Reference. (M) Staff.

Contemporary discussions of reference with special attention to referential inscrutability, first person authority, and anti-individualism. Readings from Quine, Davidson, Putnam, Field, Wallace, Burge, and McDowell.

SM 646. Topics in Early Analytic Philosophy. (M) Staff.

Selected interpretive and philosophical issues from Frege, Russell, and early Wittgenstein.

SM 662. Hume's Philosophy of Mind. (M) Hatfield.

An examination of Hume's theory of mind, focusing on the Treatise and first Enquiry.

SM 665. Kant's Theoretical Philosophy. (M) Guyer.

This course will study not Kant's system of philosophy but his philosophy of system, that is, the role of the concept of systematicity throughout his philosophical work. Special topics will include the role of systematicity in empirical knowledge and science, practical reasoning, and metaphilosophy, where systematicity functions as the criterion of the adequacy of philosophical theories themselves. Some prior acquaintance with the main themes of Kant's theoretical and practical philosophy will be assumed.

SM 672. Topics in Ethics. (M) S.Meyer, Martin.

Phil 672 will be a workshop on writing papers for submission to either conferences or journals. Papers may address any topic in value theory, broadly construed, and some participants may choose to revise papers written for previous seminars. All participants will be responsible for generating short bibliographies and then leading class discussions on their topics, providing drafts of their papers for critique by the class, and presenting their papers to the class. Students who have passed their

prelims are encouraged to participate as auditors.

674. (BIOH574) Topics in Bioethics. (M) Staff.

Topics will vary.

SM 678. Advanced Topics in Political Philosophy. (M) Tan.

In this course, we will examine various problems and questions in political philosophy. The focus will be on contemporary topics. This is an advanced seminar for graduate students who want to develop a professional-level paper on a particular subject, and the course will consist of readings on selected topics (selected by students) and students presenting their own papers (in various stages) on these topics. For graduate students in Philosophy only.

SM 679. Liberalism and its Critics. (M) Guyer/Freeman.

This course will examine some of the fundamental these of liberalism and some of the criticisms they have encountered. In particular, we will examine the classical formulation of liberal theory in Immanuel Kant as well as his near-contemporaries Moses Mendelssohn and Wilhelm von Humboldt, and criticisms of this view by writers like G.W.F. Hegel and F.H. Bradley; we will then examine modern versions of liberalism in John Rawls and Ronald Dworkin, and its criticism, especially by "communitarians" like Michael Sandel, Charles Taylor, Alasdair MacIntyre, and Michael Walzer. We will be concerned with differences between the classical (Kantian) and contemporary

(Rawlsian) foundations of liberalism as well as with the validity of the criticisms which have been made of each.

SM 680. (COML681) History of Aesthetics. (M) Guyer.

A study of 18th century aesthetics focussing on Kant, his contemporaries, and successors.

699. Independent Study. (C) Staff.

Directed readings in consultation with individual faculty members.

SM 700. Dissertation Workshop. (E) Hatfield, Martin.

Registration required for all third-year doctoral students. Fourth year students and beyond attend and present their work. From time to time, topics pertaining to professional development and dissertation writing will be discussed.

990. Masters Thesis. (C) Staff.**995. Dissertation. (C)** Staff.

Ph.D. candidates, who have completed all course requirements and have an approved dissertation proposal, work on their dissertation under the guidance of their dissertation supervisor and other members of their dissertation committee.

998. Teaching Practicum (Independent Study). (C) Staff.

Supervised teaching experience. Four semesters are required of all Doctoral students in philosophy.

999. Independent Study. (C) Staff.

May be repeated for credit.

**PHILOSOPHY, POLITICS,
AND ECONOMICS
(AS) {PPE}**

Additional courses, fulfilling the distributional and level requirements of this major, are listed under Philosophy, Political Science, and Economics.

Introductory Courses

L/R 008. (PHIL008) The Social Contract. (B) Society Sector. All classes. Freeman, Tan.

This course examines the history and significance of social contract doctrine for modern social and political thought. In particular, the works of Thomas Hobbes, John Locke, J.J. Rousseau, and John Rawls will be studied. We also study the utilitarian critique of social contract doctrine and the utilitarian views of David Hume, Adam Smith, J.S. Mill, and Karl Marx's criticism of liberal-democratic justice. This course is an introduction to many of the major figures in modern political philosophy.

030. (ECON030) Public Policy Analysis. (C) Staff. Prerequisite(s): ECON 001 and 002 or ECON 010. Credit cannot be received for both ECON 030 and 231.

This course provides an introduction to the economic method for analyzing public policy questions. It develops the implications of this method for the role of government in a market economy and for the analysis of specific public projects.

033. (ECON033) Labor Economics. (B) Staff. Prerequisite(s): ECON 001 and 002. Credit cannot be received for both ECON 033 and 233.

The course begins with an extensive discussion of models of labor market demand and supply. The rest of the course addresses a variety of related topics including the school-to-work transition, job training, employee benefits, the role of labor, unions, discrimination, workforce diversity, poverty, and public policy.

034. (ECON034) Economics of Family & Gender. (A) Stein. Prerequisite(s): ECON 001, 002, and 103.

The course will use economic theory and econometric analysis to explore issues regarding decision making and allocation of resources within the family. The impact of gender roles and differences on economic outcomes will be discussed. We

will study some feminist criticism of the economic tools for understanding household allocations and gender differences. The US economy will serve as the reference point though developing countries will also be discussed.

035. (ECON035) Industrial Organization. (C) Staff. Prerequisite(s): ECON 001 and 002. Credit cannot be received for both ECON 035 and 235.

Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, moral hazard and adverse selection. These theories are then applied to the study of various industries, antitrust cases, and regulatory issues.

036. (ECON036) Law and Economics. (A) Staff. Prerequisite(s): ECON 001 and 002. Credit cannot be received for both ECON 036 and 234.

The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making.

L/R 072. (HSOC101, PHIL072) Biomedical Ethics. (M) Society Sector. All classes. Staff.

A survey of moral problems in medicine and biomedical research. Problems discussed include: genetic manipulation, informed consent, infanticide, abortion, euthanasia, and the allocation of medical resources. Moral theory is presented with the aim of enabling students to think critically and analytically about moral issues. The need for setting biomedical issues in broader humanistic perspective is stressed.

101. Nature of Reasoning. (C) Sillari.

This course aims to offer a historical overview about human reasoning, as well as to illustrate how logical reasoning can be treated in a rigorous way by formal means. In particular, we shall trace the attempts to provide an account of correct reasoning from Aristotle and Euclid, to the work of Boole and Frege in the 19th century. We shall then focus on deductively correct reasoning: those circumstances in which the truth of a conclusion is guaranteed by the truth and correctness of the premises and reasoning adopted to reach it. Our goal is to distinguish valid and invalid arguments by purely formal means. As opposed to the analysis of deductive reasoning carried out in the first part of the course, in the second part we shall concentrate on inductive reasoning. We

shall review the skeptic challenge to empirical knowledge, and examine some answers to such challenge. In this setting we shall consider the development of probability calculus and decision theory.

110. Introduction to Decision Theory. (C) Sen.

This course will provide an introduction to models of human decision making. One of the primary purposes of the course is to provide a set of basic tools that will help the student translate uncertainty into numbers. Rational choice under uncertainty is by far the most used theory of decision making, and its applications are widespread in economics, finance, political science, law, managerial decision making, the economics of health care, and artificial intelligence. The course will use examples from each of these fields (and also fun "paradoxes" such as the Monty Hall Puzzle) in providing an introduction to the basic foundations of decision making. We will also look at the shortcomings of the rational choice theory: both from intuitive and empirical perspectives. No mathematical prerequisites are necessary beyond high school algebra and arithmetic.

112. (CIS 112) Networked Life. (C) Staff.

How does google find what you're looking for? Why do real estate values rise or plummet in certain neighborhoods? Do people act rationally in economic and financial settings? Are you really only six friends away from Kevin Bacon? How does the stock market actually work? What do game theory and the Paris subway have to do with Internet routing? Networked Life will explore recent scientific efforts to explain social, economic and technological structures -- and the way these structures interact -- on many different scales, from the behavior of individuals or small groups to that of complex networks such as the Internet and global economy.

140. (CIS 140) Introduction to Cognitive Science. (A) Staff.

Prerequisite(s): An introductory course in Computer Science, Linguistics, Neuroscience, Philosophy or Psychology.

How do minds work? This course surveys a wide range of answers to this question from the disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, action, thought, learning, memory and social interaction.

153. (PSYC153) Judgments and Decisions. (C) Baron. An LPS section may be given.

Judgments, decisions under certainty and uncertainty, problem solving, logic, rationality, and moral thinking.

Intermediate Courses

201. (ECON013) Strategic Reasoning. (A) Dillenberger, D.

Prerequisite(s): Some high school algebra, ECON 001.

This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only pre-requisites are some high-school algebra and having taken Econ 1. However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective).

L/R 202. (PSCI138) The Public Policy Process. (A) Gasper. Prerequisite(s): ECON 001.

This course integrates economic, ethical and political perspectives. It examines competing theories, models, and analytical frameworks for understanding policymaking. The course will focus on: 1. How public problems are framed and described; 2. What criteria are useful in developing and assessing policy choices; and 3. How policy choices and outcomes are mediated and influenced by individuals, organizations and political institutions.

203. (PSYC165) Behavioral Econ & Psych. (C) Dana, J. Prerequisite(s): ECON 001.

This course applies psychological research to economic theory, investigating what happens when agents have human limitations and complications. The effects

of limited cognitive capacities, willpower, and self-interest will be considered.

L/R 204. (PHIL228) Philosophy of Social Science. (B) Weisberg, M. Prerequisite(s): ECON 001 and PHIL 008.

This course is about the foundations of contemporary social science. It focuses on the nature of social systems, the similarities and differences between social and natural sciences, the construction, analysis, and confirmation of social theories, and the nature of social explanations. Specific topics may include structuralism and functional explanation, methodological individualism, qualitative vs. quantitative social theorizing, positivist and radical critiques of the social sciences, rational choice, game theory, evolutionary modeling, and agent-based modeling. In addition, the course will examine questions about objectivity in the social sciences. As part of this course, students will be expected to construct and analyze simple computational models of social phenomena.

225. (PHIL226, PHIL521, STSC128) Philosophy of Biology. (M) Natural Science & Mathematics Sector. Class of 2010 and beyond. Domotor, Weisberg.

This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues and may include discussions of adaptation, what constitutes a species, whether there is evolutionary progress, and the concept of fitness. We will also discuss the units of selection, the alleged reduction of classical genetics to molecular genetics, and the possibility of grounding ethics in evolutionary theory.

SM 231. History of Economic Theory. (M) Staff.

The Course explores the development of economic theory for antiquity to the twentieth century. Students read and discuss a rich collection of writing from Aristotle and Aquinas to Marshall and Keynes, with special attention to Adam Smith, David Ricardo, and Karl Marx. The course pays special interdisciplinary attention to many historical (great events, social changes), political (governmental involvement in the economy, the process of democratization), and philosophical (theories of value, the notions of

freedom, equality, and fairness) factors that shaped economic thinking and economy. Many fascinating questions are discussed. What are the economic values and goods? How are those goods created? How do we value them? What is the role of labor in creating these goods? And what is the role of trade and money? What is the state's role? What is the role of freedom, equality, and other political values in the economic process? In the past, these questions were considered so important that the greatest thinkers and philosophers discussed them. The course attempts to illustrate that great tradition and attract students' attention to the fundamental economic concepts. In addition, the methodological evolution of the scientific status of economic theory is examined.

232. (ECON232) Political Economy. (B) Staff. Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended.

This course examines the political and economic determinants of government policies. The course presents economic arguments for government action in the private economy. How government decides policies via simple majority voting, representative legislatures, and executive veto and agenda-setting politics will be studied. Applications include government spending and redistributive policies.

L/R 244. (PHIL244) Introduction to Philosophy of Mind. (M) Domotor, Camp.

This course deals with several problems that lie at the interface among philosophy, logic, linguistics, psychology, and computer science.

L/R 270. (PSCI271) Constitutional Law. (C) Smith.

This course explores the role of the U.S. Supreme Court in political struggles over the distribution and uses of power in the U.S. constitutional system. Issues include the division of powers between the state and national governments, and the branches of the federal government; economic powers of private actors and governmental regulators; the authority of governments to enforce or transform racial and gender hierarchies; and the powers of individuals to make basic choices, such as a woman's power to have an abortion. We will pay special attention to how the tasks of justifying the Supreme Court's own power, and constitutionalism more broadly, contribute to logically debatable but politically powerful constitutional arguments. Readings include Supreme

Court decisions and background materials on their historical and political context.

SM 271. (PHIL271) Global Justice. (M) Tan.

This course is an introduction to some of the central problems in global justice. Some of the topics that we will examine include realism, human rights, sovereignty and intervention, economic justice, and war and morality. We will look at questions such as: Is it coherent to talk about global justice, or is the global arena essentially a Hobbesian state of nature? In what sense are human rights universal? Is the idea of universal rights compatible with the political sovereignty of states? What is a just war? What is terrorism, and what are the moral limits in combating terrorism? Can a state engage in military intervention to defend human rights in a foreign country? Readings will be drawn from contemporary authors such as Rawls, Walzer, and Sen, as well as historical figures like Kant and Hobbes.

SM 272. (PHIL272) Ethics and the Professions. (M) Staff. Prerequisite(s): At Least one of PHIL 002, 008, 009 or equivalent.

This course will examine the ethical issues and dilemmas that commonly arise in the professions, such as the law, medicine and health care, journalism, business, public and civil service, and ethnographical and archaeological research. The aim of this course is to introduce students to the moral issues and challenges that practitioners in different professions encounter and to study how moral reasoning can help us understand and confront these challenges. Some of the central organizing philosophical issues we will examine include that of collective responsibility, and the question of special or role obligation. Prerequisite: At least one of Phil 2, Phil 9, Phil 8 or equivalent

L/R 277. (PHIL277) Justice, Law and Morality. (M) S. Freeman.

In this course we will focus on the philosophical background to questions regarding the exercise of legitimate political power and individuals' rights under the U.S. Constitution, including 1st Amendment freedoms of religion, expression, and association, the 14th Amendment guarantee of due process and the right of privacy and abortion, the Equal Protection clause and its bearing on affirmative action and equal political rights, and the Takings and Contract clauses and their bearing on rights of private property and economic freedom. We will also discuss competing conceptions of

democracy and their implications for the purported authority of courts to reverse democratically enacted decisions by a majority. In addition to Supreme Court decisions concerning these and other issues, we will read works by J.S. Mill, John Rawls, Ronald Dworkin, T.M. Scanlon, Martha Nussbaum, Cass Sunstein, and other contemporary theorists.

299. Independent Study. (C) Staff.

Student arranges with a faculty member in Philosophy, Economics or Political Science to pursue a program of reading and writing on a suitable topic.

320. Agent-Based Modeling for the Social Sciences. (C) Gasper, J.

This is a discussion and project-based course that will provide you with a hands-on introduction to the field of agent-based modeling. An agent-based model is a tool used by social scientists to study how large-scale social dynamics result from micro-level individual behavior. In its basic form, a collection of individuals, or agents, are programmed into a computer, along with a simple behavioral algorithm describing how they act. The computer then allows the agents to interact (possibly in both space and time), and ultimately generates a social dynamic that can then be analyzed in terms of the behavioral rules.

In the social sciences many problems we are interested in involve group phenomena that may seem perplexing when viewed in the aggregate. Examples include fads, norms, segregation, stereotyping, and network formation. The goal of an agent-based model is to look at the micro-level decisions that people make - the decision to live close to a friend, slow down to take a look at an accident, arrive early to the theater to get a good seat, or return a phone call - and study how these "small" decisions may have large and unintended consequences for society as a whole.

Advanced Courses**301. Directed Honors Research. (C)** Staff. Open only to senior majors in PPE.

Student arranges with a faculty member in Philosophy, Economics or Political Science to do an honors thesis on a suitable topic.

SM 417. (PHIL417) Game Theory. (M) Bicchieri.

The course will cover non-cooperative game theory with special attention to its epistemological foundations, such as: conceptions of rationality, common knowledge and common belief, belief revision and the rationale for different

solution concepts. We will also cover behavioral game theory, and examine the alternative models of social preference that have been advanced to explain experimental data.

SM 421. (PHIL421) Philosophy of Biology. (M) Weisberg. Prerequisite(s): Either two philosophy courses or BIOL 101/102 (or equivalent).

This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theories of Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues and may include discussions of adaptation, what constitutes a species, evolutionary progress, the concept of fitness, the units of selection, the alleged reduction of classical genetics to molecular genetics, and the possibility of grounding ethics in evolutionary theory. The evolution of altruism will also be discussed, time permitting.

SM 475. (PHIL475, PSCI475, PSCI598, PSYC253, PSYC475) Philosophy, Politics and Economics. (C) Staff. PPE Capstone Seminar.

This is an integrative senior seminar. Prior to enrolling in this seminar, students should contact their respective PPE advisors in Philosophy, Economics or Political Science.

The following website will give descriptions of the specific capstone courses that will be offered each semester: <http://www.sas.upenn.edu/ppe/Courses/general>

SM 476. (PSCI418) Philosophy, Politics and Economics. (C) Staff. PPE Capstone Seminar.

This is an integrative senior seminar. Prior to enrolling in this seminar, students should contact their respective PPE advisors in Philosophy, Economics or Political Science.

The following website will give descriptions of the specific capstone courses that will be offered each semester: <http://www.sas.upenn.edu/ppe/Courses/general>

499. Advanced Research. (M) Staff.

This course may be taken by a PPE student for advanced research. Enrollment by permit only.

PHYSICS (AS) {PHYS}

005. The World of Physics. (M)

Physical World Sector. All classes.
Prerequisite(s): Entrance credit in algebra and trigonometry.

An introduction to the physical theories of the mechanical universe. The courses focuses on the development and principles of Newtonian mechanics, relativity and the relativistic mechanics of Einstein, and the quantum mechanics needed to describe atomic and nuclear phenomena. This course cannot be taken for credit by a student also receiving credit for PHYS 008, 009, or any physics course numbered 100 or greater.

008. Physics for Architects I. (I)

Physical World Sector. All classes.
Prerequisite(s): Entrance credit in algebra and trigonometry.

Introductory course for students in architecture stressing statics, but also covering such topics as fluid flow, waves, electricity, and energy. This course cannot be taken for credit by a student also receiving credit for any physics course numbered 100 or greater.

016. Energy, Oil, and Global

Warming. (C) Natural Science & Mathematics Sector. Class of 2010 and beyond. Prerequisite(s): Algebra and Trigonometry. May be counted as Science Studies for students in Class of 2009 and prior. Target audience: Non-science majors (although science/engineering students are welcome).

The developed world's dependence on fossil fuels for energy production has extremely undesirable economic, environmental, and political consequences, and is likely to be mankind's greatest challenge in the 21st century. We describe the physical principles of energy, its production and consumption, and environmental consequences, including the greenhouse effect. We will examine a number of alternative modes of energy generation - fossil fuels, biomass, wind, solar, hydro, and nuclear - and study the physical and technological aspects of each, and their societal, environmental and economic impacts over the construction and operational lifetimes. No previous study of physics is assumed.

021. Physics of Music. (M) Freshman seminar.

This seminar will be an experimental inquiry into physics of music. The concepts of simple harmonic oscillation, damping, coupling, resonance, and harmonic analysis will be applied to a laboratory study of selected musical instruments, the voice, and rooms. Attention will be given to driving mechanisms, instabilities, sound radiation, transients, harmonic series. This course cannot be taken for credit by a student who has already received credit for PHYS 008, 009, or any physics course numbered 100 or greater.

050. Physics Laboratory I. (C)

Prerequisite(s): AP score of 5 on the Physics B or Physics C - Mechanics exam, or transfer credit for PHYS 91 or PHYS 93. Course carries .5 course unit and student receives grade. Permit required. Experiments in classical mechanics.

051. Physics Laboratory II. (C)

Prerequisite(s): AP score of 5 on the Physics B or Physics C - Electricity and Magnetism exam, or transfer credit for PHYS 92 or PHYS 94. PHYS 050. Course carries .5 course unit and student receives grade. Permit required.

Experiments in electromagnetism and optics.

L/L 101. General Physics: Mechanics, Heat and Sound. (C) Physical World Sector. All classes. Prerequisite(s):

Entrance credit in algebra and trigonometry, and a background in calculus. Corequisite(s): PHYS 101 LAB. Credit is awarded for only one of the following courses: PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 101 will thereby surrender the AP or Transfer Credit.

An introduction to the classical laws of motion requiring a background in calculus. Suggested for students in a pre-health program.

L/L 102. General Physics: Electromagnetism, Optics, and Modern Physics. (C) Physical World Sector. All classes. Prerequisite(s): PHYS 101. Corequisite(s): PHYS 102 LAB.

Credit is awarded for only one of the following courses: PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 102 will thereby surrender the AP or Transfer Credit.

A continuation of PHYS 101 emphasizing an introduction to classical electricity and

magnetism, relativity theory, optics, and the quantum theory of matter, requiring a background in calculus. Suggested for students in a pre-health program.

137. Community Physics Initiative. (A)

This is an Academically Based Community Service Course (ABCS). It will be aligned to the Philadelphia School District curriculum in introductory physics at University City High School (UCHS). The UCHS curriculum roughly parallels the contents of first semester introductory physics (non-calculus) at Penn.

140. Principles of Physics I (without laboratory). (C) Corequisite(s): MATH 104. For Engineering students whose course of study does not require a physics laboratory course.

Classical laws of motions; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion.

141. Principles of Physics II (without laboratory). (C) Prerequisite(s): PHYS 140. Corequisite(s): MATH 114. For Engineering students whose course of study does not require a physics laboratory course.

Electric and magnetic fields; Coulomb's, Ampere's, and Faraday's laws; Maxwell's equations; emission, propagation, and absorption of electromagnetic radiation; interference, reflection, refraction, scattering, and diffraction phenomena.

L/L 150. Principles of Physics I: Mechanics and Wave Motion. (C)

Physical World Sector. All classes. Corequisite(s): MATH 104, PHYS 150 LAB. Credit is awarded for only one of the following courses: PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 150 will thereby surrender the AP or Transfer Credit.

Recommended for science majors and engineering students. Classical laws of motion; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion.

L/L 151. Principles of Physics II: Electromagnetism and Radiation. (C)

Physical World Sector. All classes.
Prerequisite(s): PHYS 150 or PHYS 170.
Corequisite(s): MATH 114, PHYS 151
LAB. Credit is awarded for only one of the following courses. PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 151 will thereby surrender the AP or Transfer Credit.

Electric and magnetic fields; Coulomb's, Ampere's, and Faraday's laws; Maxwell's equations; emission, propagation, and absorption of electromagnetic radiation; interference, reflection, refraction, scattering, and diffraction phenomena.

SM 170. Honors Physics I: Mechanics and Wave Motion. (A)

Physical World Sector. All classes.
Prerequisite(s): MATH 104 or permission of the instructor. Corequisite(s): MATH 114 or permission of instructor. Benjamin Franklin Seminar. Credit is awarded for only one of the following courses: PHYS 101, 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 170 will thereby surrender the AP or Transfer Credit.

This course parallels and extends the content of PHYS 150, at a significantly higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Classical laws of motion: interaction between particles; conservation laws and symmetry principles; rigid body motion; noninertial reference frames; oscillations.

SM 171. Honors Physics II: Electromagnetism and Radiation. (B)

Physical World Sector. All classes.
Prerequisite(s): MATH 114 and PHYS 150 or PHYS 170, or permission of instructor. Corequisite(s): MATH 240 or permission of instructor. Benjamin Franklin Seminar. Credit is awarded for only one of the following courses: PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 171 will thereby surrender the AP or Transfer Credit.

This course parallels and extends the content of PHYS 151, at a somewhat higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Electric and magnetic fields; Coulomb's, Ampere's, and Faraday's laws; special relativity; Maxwell's equations, electromagnetic radiation.

230. Principles of Physics III: Thermal Physics and Waves. (A)

Prerequisite(s): PHYS 150/151 or PHYS 170/171 and MATH 104, MATH 115.
Corequisite(s): MATH 240.

Elementary thermodynamics and statistical physics including heat engines and the Maxwell-Boltzmann distribution, independent and forced harmonic motion, coupled oscillators, normal modes, longitudinal and transverse sound and light waves, interference and diffraction, and elementary Fourier analysis and the uncertainty principle.

240. Principles IV: Modern Physics. (B)

Prerequisite(s): PHYS 151 or 171.
Corequisite(s): MATH 240.

Special relativity, an introduction to the principles of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei.

L/L 250. Principles of Physics III: Modern Physics. (B)

Prerequisite(s): PHYS 150/151 or PHYS 170/171.
Corequisite(s): MATH 240. PHYS 250 students take a two-hour lab.

Special relativity, an introduction to the principle of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei.

280. (BCHE280) Physical Models of Biological Systems. (A)

Prerequisite(s): PHYS 101 (or higher), MATH 104 and (MATH 114 or MATH 115).
Recommended: previous or concurrent PHYS 102; basic background in chemistry and biology.

Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of (1) making estimates, often based on dimensional analysis, (2) using them to figure out which physical variables and phenomena will be most relevant to a given system, and which may be disregarded, and (3) finding analogies to purely physical systems whose behavior is already known. The cases studied involve basic biological processes, mainly at the molecular and cellular level, in the light of ideas from physics. Topics may include entropic forces, free energy transduction at the molecular level, the structure of biopolymers, molecular motors, pattern formation (oscillation and morphogenesis), immune response, nerve impulses and

neural computing, and other forms of signal transduction.

295. Introduction to Research in Physics and Astronomy. (M)

Prerequisite(s): PHYS 150/151 or PHYS 170/171 or PHYS 101/102. Benjamin Franklin Seminar.

This course will provide an introduction to current research performed by faculty in the Department of Physics and Astronomy. It will be particularly appropriate for sophomore or junior physics majors interested in participating in physics research; it will also be of interest to other science- or engineering-oriented students who want to learn more about current topics in physics. Grading will be based on attendance at seminars presented by faculty, homework assignments, and a term paper.

298. Introduction to Research in Physics and Astronomy. Paul Heiney.

Prerequisite(s): PHYS 150/151 or PHYS 170/171 or PHYS 101/102.

This course will provide an introduction to current research performed by faculty in the Department of Physics and Astronomy. It will be particularly appropriate for sophomore or junior physics majors interested in participating in physics research; it will also be of interest to other science- or engineering-oriented students who want to learn more about current topics in physics. Grading will be based on attendance at seminars presented by faculty, homework assignments, and a term paper.

299. Independent Study. (C) Repetitive credit.

Special projects and independent study under the direction of faculty member.

351. Analytical Mechanics. (B)

Prerequisite(s): PHYS 150/151 or PHYS 170/171, MATH 104/114, and MATH 240, or permission of instructor.

An intermediate course in the statics and dynamics of particles and rigid bodies. Lagrangian dynamics, central forces, non-inertial reference frames, and rigid bodies.

361. (PHYS561) Electromagnetism I: Electricity and Potential Theory. (A)

Prerequisite(s): PHYS 151 or 171, and MATH 241.

An intermediate course. Electrostatic fields and potentials, dielectrics, and direct currents.

362. (PHYS562) Electromagnetism II: Magnetism, Maxwell's Equations, and Electromagnetic Waves. (B)

Prerequisite(s): PHYS 361.

A continuation of PHYS 361. Magnetic fields and potentials, electromagnetic induction, Maxwell's equations, electromagnetic waves, and radiation.

L/L 364. (PHYS564) Measurements Laboratory. (A) Prerequisite(s): PHYS 151 or 171.

Introduction to the electronic techniques of modern physical measurements. Recommended for undergraduates planning independent research projects in experimental physics.

392. (ASTR392) Nucleosynthesis, Supernovae, and Compact Objects. (C)

This is an advanced undergraduate course on the life and death of stars. The course will cover the structure of stellar interiors, nuclear reactions and the formation of elements, stellar evolution, supernovae, and the physics of white dwarfs, neutron stars, and black holes. We will approach these topics from both theoretical and observational perspectives.

401. (PHYS581) Thermodynamics and the Introduction to Statistical Mechanics and Kinetic Theory. (A)

Prerequisite(s): PHYS 240 or 250.

Temperature, entropy and generalized potentials, phase transitions, and introduction to ensemble theory and distribution functions.

411. (PHYS511) Introduction to Quantum Mechanics I. (A)

Prerequisite(s): PHYS 150 or 170, 240 or 250, and MATH 241.

An introduction to the principles of quantum mechanics designed for physics majors and graduate students in physics-related disciplines. The Schrodinger equation operator formalism, central field problem, angular momentum, and spin. Application to one-dimensional and central field problems.

412. (PHYS512) Introduction to Quantum Mechanics II. (B)

Prerequisite(s): PHYS 411.

Perturbation theory, variational principle, application of the quantum theory to atomic, molecular, and nuclear systems, and their interaction with radiation.

414. Laboratory in Modern Physics. (B) Prerequisite(s): PHYS 364 and 411.

Supervised experiments in modern physics.

421. (PHYS529) Modern Optics. (J)

Prerequisite(s): PHYS 240 or 250 and 362, or permission of instructor.

Interaction of light with matter. Interference and diffraction, absorption and dispersion, stimulated emission and coherence, spectroscopy, non-linear processes.

432. Introduction to Nuclear and Elementary Particle Physics. (M)

Prerequisite(s): PHYS 411 or permission of instructor.

An introduction to nuclear forces, the structure of atomic nuclei, nuclear reactions elementary particles (photons, leptons, hadrons, quarks) and their interactions, and the unification of the fundamental forces.

499. Senior Honor Thesis. (C)

Prerequisite(s): PHYS 412 and 414.

Experimental and theoretical research projects in various areas of physics planned by student in consultation with a member of faculty. A written thesis and an oral presentation and defense are required.

500. (MATH594) Mathematical Methods of Physics. (C)

A discussion of those concepts and techniques of classical analysis employed in physical theories. Topics include complex analysis. Fourier series and transforms, ordinary and partial equations, Hilbert spaces, among others.

501. Introduction to Research. (C)

Taken by all first-year graduate students. This is a required seminar that does not carry credit or a grade.

Introduction to research in particle, nuclear, condensed matter and astrophysics. Selected current topics from journals.

503. (ASTR525) General Relativity and Cosmology. (M)

This is a graduate level, introductory course in general relativity and modern cosmology. The basics of general relativity will be covered with a view to understanding cosmology and carrying out calculations relevant to the expanding universe and perturbations in it. Some of the key topics in modern cosmology will be covered -- these include the cosmic microwave background, large-scale structure, gravitational lensing and dark energy. The current cosmological model and open questions driving research will be discussed briefly in connection with these topics.

505. Introduction to Cosmology. (M)

Prerequisite(s): Graduate standing in physics or permission of instructor.

Introduction to physical cosmology emphasizing recent ideas on the very early evolution of the universe. The course will introduce standard big bang cosmology, new theories of the very early universe, and the key observations that have tested and will be testing these ideas. No prior knowledge of astrophysics, cosmology, general relativity, or particle physics will be assumed, although aspects of each will be introduced as part of the course. The course is intended for graduate students and advanced undergraduates.

514. Mechanics, Fluids, Chaos. (B)

A general introduction to linear and nonlinear dynamical systems with an emphasis on astrophysical systems. Lagrangian and Hamiltonian formulations. Celestial mechanics. Equilibria and stability. Orbits. Resonances. Galactic dynamics. Intended for graduate students and advanced undergraduates.

516. Electromagnetic Phenomena. (B) Nelson.

Survey of electrodynamics, focusing on applications to research done in the Department. Topics include mathematical structure and relativistic invariance properties of Maxwell equations, tensor methods, and the generation and scattering of radiation, in vacuum and in materials. Applications vary from year to year but include optical manipulation, astrophysical phenomena, and the generalizations from Maxwell's theory to those of other fundamental interactions (strong, electroweak, and gravitational forces).

517. Particle Cosmology. (C)

This introduction to cosmology will cover standard big bang cosmology, formation of large-scale structure, theories of the early universe and their observational predictions, and models of dark energy. It is intended for graduate students or advanced undergraduates. No prior knowledge of general relativity or field theory will be assumed, although aspects of each will be introduced as part of the course.

518. Introduction to Condensed Matter Physics. (B) Prerequisite(s):

Undergraduate training in quantum mechanics and statistical thermodynamics. An introduction to condensed matter physics designed primarily for advanced undergraduate and graduate students desiring a compact survey of the field. Band theory of solids, phonons, electrical

magnetic and optical properties of matter, and superconductivity.

521. Advanced Laboratory. (C)

Directed experiments in classical and modern physics designed to acquaint the student with modern laboratory instrumentation and techniques.

522. Introduction to Elementary Particle Physics. (M) Williams.

Prerequisite(s): Permission of instructor required.

An introduction to elementary particles (photons, leptons, hadrons, quarks), their interactions, and the unification of the fundamental forces.

525. Special Projects. (C) Repetitive credit.

Special projects under the direction of a faculty member.

526. Astrophysical Radiation. (M)

This is a course on the theory of the interaction of light and matter designed primarily for graduate and advanced undergraduate students to build the basic tools required to do research in astrophysics. Topics to be discussed include structure of single- and multi-electron atoms, radiative and collisional processes, spectral line formation, opacity, radiation transfer, analytical and numerical methods, and a selection of applications in astrophysics based on student research interest.

528. Introduction to Liquid Crystals. (C)

Overview of liquid crystalline phases, their elasticity, topology, and dynamics.

530. Modern Optical Physics and Spectroscopy. (K) Prerequisite(s):

Working knowledge of electricity and magnetism and quantum mechanics. Graduate level course designed for beginning or intermediate graduate students in physics, but it is likely to be of use to a broader community including beginning graduate students whose research involves light scattering in electrical engineering, chemistry, and biophysics, and advanced undergraduates.

Introduction to contemporary optics. Topics include propagation and guiding of light waves, interaction of electromagnetic radiation with matter, lasers, non-linear optics, coherent transient phenomena, photon correlation spectroscopies and photon diffusion.

531. Quantum Mechanics I. (A)

Prerequisite(s): A minimum of one semester of quantum mechanics at the advanced undergraduate level.

Wave mechanics, complementarity and correspondence principles, semi-classical (WKB) approximation, bound state techniques, periodic potentials, angular momentum, scattering theory, phase shift analysis, and resonance phenomena.

532. Quantum Mechanics II. (B)

Prerequisite(s): PHYS 531.

Spin and other two dimensional systems, matrix mechanics, rotation group, symmetries, time independent and time dependent perturbation theory, and atomic and molecular systems.

533. Topics in Cosmology. (M)

This course aims to survey three or four topics of current research interest in cosmology, mostly at the level of review articles. The topics will be covered in greater depth and with more connections to ongoing research than the introductory cosmology course, ASTR 525. The course will be largely accessible to first and second year graduate students. Some exposure to cosmology and general relativity will be helpful but the first two weeks will attempt to bridge that gap. The topic selection will be done in part with input from the students. For the Fall 2009 semester, Dark Energy will be the first topic, Nonlinear Dynamics the likely second topic and Gravitational Lensing (focus on strong lensing) is a possible third topic. A few short problem sets and a presentation/write-up on a topic of interest, based on a review article or selected papers, will make up the course requirement.

L/L 564. (PHYS364) Measurements Laboratory. (A)

Introduction to the electronic techniques of modern physical measurements. Recommended for undergraduates planning independent research projects in experimental physics.

580. (BCHE580, BMB 590) Biological Physics. (H) Prerequisite(s): PHYS 401 or CHEM 221-222 (may be taken

concurrently) or familiarity with basic statistical mechanics and thermodynamics. Recommended: Basic background in chemistry and biology.

A survey of basic biological processes at all levels of organization (molecule, cell, organism, population) in the light of simple ideas from physics. Both the most ancient and the most modern physics ideas can help explain emergent aspects of life, i.e., those which are largely independent of specific

details and cut across many different classes of organisms. Topics may include thermal physics, entropic forces, free energy transduction, structure of biopolymers, molecular motors, cell signaling and biochemical circuits, nerve impulses and neural computing, populations and evolution, and the origins of life on Earth and elsewhere.

581. (PHYS401) Thermodynamics. (A)

582. (BE 580) Medical Radiation Engineering. (M)

This course in medical radiation physics investigates electromagnetic and particulate radiation and its interaction with matter. The theory of radiation transport and the basic concept of dosimetry will be presented. The principles of radiation detectors and radiation protection will be discussed.

585. (BE 530, BIBB585, INSC594, PSYC539) Theoretical and Computational Neuroscience. (M) Balasubramanian.

This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.

601. Introduction to Field Theory. (A)

Elementary relativistic quantum field theory of scalar, fermion, and Abelian gauge fields. Feynman Diagrams.

611. Statistical Mechanics. (A)

Prerequisite(s): PHYS 401, 531, or equivalent.

Introduction to the canonical structure and formulation of modern statistical mechanics. The thermodynamic limit. Entropic and depletion forces. Gas and liquid theory. Phase transitions and critical phenomena. The virial expansion. Quantum statistics. Path integrals, the

Fokker-Planck equation and stochastic processes.

622. Introduction to Elementary Particle Physics. (M) Prerequisite(s): PHYS 601.

Introduction to the phenomenology of elementary particles, strong and weak interactions, symmetries.

632. Relativistic Quantum Field Theory. (M) Prerequisite(s): PHYS 601.

Advanced topics in field theory, including renormalization theory.

633. Relativistic Quantum Field Theory. (M) Prerequisite(s): PHYS 632.

A continuation of PHYS 632, dealing with non-Abelian gauge theories.

654. (MATH694) Anomalies in Quantum Field Theory and Superstrings: A Topological Approach. (M)

This course is designed for students in both the Physics and Mathematics Departments who are interested in mathematical physics, particularly as it applies to quantum field theory, relativity and superstrings. We will focus on the theory of anomalies from two distinct points of view.

655. (MATH695) Geometry and String Theory. (M)

The goal of the course is to introduce students, post-docs and faculty to the mathematics and physics associated with

the recent advances in field theory and superstring theory. We will introduce, and use, relatively sophisticated mathematical techniques, such as index theorems, elliptic fibrations and vector bundle theory. These will be applied to important physics topics such as anomalies and F-theory/M-theory duality, with the goal of giving the student high-level familiarity with formal superstring theory.

656. (MATH696) Topics in Mathematical Physics and String Theory. (M) Staff.

This interdisciplinary course discusses advanced topics in mathematical physics. Topics may include elliptic operators, heat kernels, complexes and the Atiyah-Singer index theorem, Feynman graphs and anomalies, computing Abelian and non-Abelian anomalies, and the relation of anomalies to the index theorem.

657. (MATH697) Topics in Mathematical Physics and String Theory. (M)

Continuation of PHYS 656. Topics may include the family index theorem, equivariant cohomology and loop spaces, the homological algebra of BRST invariance and the Wess-Zumino consistency condition, the descent equations, and worldsheet anomalies in string theory.

661. (CHEM522) Solid State Theory I. (M)

This course is intended to be an introductory graduate course on the physics of solids, crystals and liquid crystals. There will be a strong emphasis on the use and application of broken and unbroken symmetries in condensed matter physics. Topics covered include superconductivity and superfluidity.

662. Solid State Theory II. (M)

A continuation of PHYS 661.

682. Elementary Particle Theory. (M)

Gauge theories, the standard model of strong and electroweak interactions, extended electroweak models, unified theories and their theoretical, experimental, and cosmological implications. This course is intended to bring students to the level of current research in elementary particle physics.

696. Advanced Topics in Theoretical Physics. (M)

990. Masters Thesis. (C)

995. Dissertation. (C)

999. Independent Study. (C)

POLITICAL SCIENCE (AS) {PSCI}

SM 009. (WRIT076) Critical Writing Seminar in Political Science. (M) Staff.

This is a critical writing seminar. It fulfills the writing requirement for all undergraduates. As a discipline-based writing seminar, the course introduces students to a topic within its discipline but throughout emphasizes the development of critical thinking, analytical, and writing skills. For current listings and descriptions, visit the Critical Writing Program's website at <http://writing.upenn.edu/critical>.

SM 010. (AFRC010) Freshman Seminars. (C) Staff.

Freshmen seminars are small, substantive courses taught by members of the faculty and open only to freshmen. These seminars offer an excellent opportunity to explore areas not represented in high school curricula and to establish relationships with faculty members around areas of mutual interest. See www.college.upenn.edu/admissions/freshmen.php

L/R 105. The Study of Politics. (C) Society Sector. All classes. Staff.

This course introduces fundamental political questions, including the nature of political authority and political rights, the relationship between power and values, variation in the role and quality of government, origins of political institutions, and dynamics of international politics. Substantial consideration is given to contributions by classical political thinkers as well as contemporary political scientists. Attention is also paid to how the systematic study of politics -- American politics, comparative politics, international politics and political philosophy -- can deepen our understanding of complex public policy questions.

L/R 110. (PSCI412) Introduction to Comparative Politics. (C) Society Sector. All classes. Staff.

This course is designed to introduce students to comparative political analysis. How can the political behavior, circumstances, institutions, and dynamic patterns of change that people experience in very different societies be analyzed using the same set of concepts and theories? Key themes include nationalism, political culture, democratization, authoritarianism, and the nature of protracted conflict.

L/R 116. Political Change in the Third World. (C) Society Sector. All classes. Sil.

This course will provide an overview of politics and society in Asia, Africa, and Latin America. The first five weeks will focus on such questions as: What are the effects of the "colonial legacy" inherited by most countries in the "Third World?" Why have certain countries been able to maintain stable and effective government institutions while others have experienced revolutions, civil wars and rampant corruption? What are some of the obstacles to economic development? The second part of the course will focus on the experiences of several countries, including Brazil, India, Iran, and Nigeria. The last part of the course will attempt to locate politics and society in "Third World" countries within the context of larger global issues such as North-South relations, the recent waves of democratization and privatization, international environmental concerns, and the role of women in "Third World" development.

L/R 130. Introduction to American Politics. (C) Society Sector. All classes. Staff.

This course is intended to introduce students to the national institutions and political processes of American government. What are the historical and philosophical foundations of the American Republic? How does American public policy get made, who makes it, and who benefits? Is a constitutional fabric woven in 1787 good enough for today? How, if at all, should American government be changed, and why? What is politics and why bother to study it? If these sorts of questions interest you, then this course will be a congenial home. It is designed to explore such questions while teaching students the basics of American politics and government.

L/R 131. American Foreign Policy. (C) Horowitz, Vitalis.

This course analyzes the formation and conduct of foreign policy in the United State. The course combines three elements: a study of the history of American foreign relations; an analysis of the causes of American foreign policy such as the international system, public opinion, and the media; and a discussion of the major policy issues in contemporary U.S. foreign policy, including terrorism, civil wars, and economic policy.

134. United States Political Parties. (B) Teune.

This course is an analysis of parties in the United States, with special attention to

democratic theory, the electoral process, electronic media, as well as political organizations and their influence on government decisions.

SM 135. (GAFL135, HSOC135) The Politics of Food. (M) Summers.

This academically based community service seminar will explore the politics and institutions that have shaped - and continue to shape - food production and consumption. Students will use the readings, their community service, and ongoing "food events" at Penn to analyze the politics of food in many arenas: from farms, kitchens, supermarkets, schools, and communities of faith to corporations, research institutions, the media and international trade.

L/R 136. (URBS136) Urban Politics in the United States. (B) Society Sector. All classes. Reed.

This course focuses on political responses to urbanization in the United States. Topics include local government, national urban politics, and the changing nature of cities.

L/R 138. (GAFL490, PPE 202) THE PUBLIC POL PROCESS. (A) Staff.

This course is an opportunity for students to combine the major theoretical perspectives on the policy process with practical application to current policy issues. Students will gain the theoretical tools to explain policy change, a comprehensive understanding of the actors that influence policymaking and politics, an overview of the major policy issues being debated, and experience writing policy documents.

SM 139. (GAFL139, HSOC139, URBS137) Politics Of Poverty & Development. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Summers.

This academically based community service seminar will explore the ideas and theories, alliances and opposition that have shaped policy and organizing efforts addressed to the problems associated with urban poverty in the United States. There will be a special focus on the issues of increasing inequality, education, low wage work, health and nutrition, welfare reform and social security. Students will evaluate contemporary policy debates and programs in the light of selected case studies, readings, and their own experience working with community groups, institutions, and federal programs in West Philadelphia.

L/R 150. Introduction to International Relations. (C) Society Sector. All classes. Mansfield, Stanton.

This course is an introduction to the major theories and issues in international politics. The goals of the course are to give students a broad familiarity with the field of international relations, and to help them develop the analytical skills necessary to think critically about international politics. The course is divided into four parts: 1) Concepts and Theories of International Relations; 2) War and Security; 3) The Global Economy; and 4) Emerging Issues in International Relations.

L/R 151. International Security. (C) Goldstein.

This lecture course introduces students to the subfield of international security or strategic studies. In order to grasp the usefulness of the theoretical ideas presented in readings and lectures, abstract concepts are linked with a study of the national security policies states have adopted in the decades following World War II. Topics include current debates about nuclear proliferation, terrorism, the Iraq war, Europe's changing international role, the rise of China, Asian "flashpoints" (Korea, the Taiwan Strait), and US security policy for the 21st century - considering some of the main strategic alternatives to the US as well as their implications for the types of forces deployed (the impact of the "revolution in military affairs," the future of missile defense, and the economic burden to be shouldered).

L/R 152. International Political Economy. (M) Schulz.

This course examines the politics of international economic relations. The course will analyze the interplay between politics and economics in three broad areas: international trade, international finance, and economic development. In each section, we will first discuss economic theories that explain the causes and consequences of international commerce, capital flows, and economic growth. We will then explore how political interests, institutions, and ideas alter these predictions, examining both historical examples and current policy debates.

L/R 153. International Law & Institutions. (C) Stanton.

This lecture course examines the role that international law and institutions play in international relations. The course begins by exploring broad theoretical questions - questions about why states create international law and international institutions; how states design institutions;

the impact that institutional design may have on the effectiveness of international institutions; and the conditions under which states are likely to comply with the rules set out by international institutions and the dictates of international law. Specific topics include collective security institutions such as the League of Nations, the United Nations, and NATO; human rights law; the laws of war; international intervention and peacekeeping; international justice and the International Criminal Court; environmental law; international trade law and the World Trade Organization; economic development and the World Bank; and international finance and the role of the International Monetary Fund.

L/R 154. Politics of Global Environment. (C) Staff.

This course explores the emerging politics of global ecological decay and restoration occurring at the individual, local, nation-state, and international levels.

SM 156. Terrorism. (C) Gale.

This course is designed to stimulate an interest in the philosophy and methods of terrorism; to illustrate the varieties of conditions under which methods of terrorism are used; to outline the institutional conditions which permit and support the use of terrorism; and to understand the problems involved in "solving" the terrorism dilemma.

L/R 180. (CLST185) Ancient Political Thought. (M) History & Tradition Sector. All classes. Kennedy, Norton.

Through reading texts of Plato (Socrates), Aristotle, Augustine and Aquinas, the student encounters a range of political ideas deeply challenging to--and possibly corrosive of--today's dominant democratic liberalism. Can classical and medieval thinking offer insight into modern impasses in political morality? Is such ancient thinking plausible, useful, or dangerous?

L/R 181. (PSCI681) Modern Political Thought. (M) History & Tradition Sector. All classes. Hirschmann, Kennedy, Norton.

This course will provide an overview of major figures and themes of modern political thought. We will focus on themes and questions pertinent to political theory in the modern era, particularly focusing on the relationship of the individual to community, society, and state. Although the emergence of the individual as a central moral, political, and conceptual category arguably began in earlier eras, it is in the seventeenth century that it takes firm hold in defining the state, political institutions,

moral thinking, and social relations. The centrality of "the individual" has created difficulties, even paradoxes, for community and social relations, and political theorists have struggled to reconcile those throughout the modern era. We will consider the political forms that emerged out of those struggles, as well as the changed and distinctly "modern" conceptualizations of political theory such as freedom, responsibility, justice, rights and obligations, as central categories for organizing moral and political life.

L/R 182. Contemporary Political Thought. (A) Green, Hirschmann.

This course surveys some of the most influential and important contributions to political thought since 1900. We will study the work of such figures as Weber, Arendt, Schmitt, Dewey, Berlin, Habermas, Rawls, Foucault, and Derrida. Topics include the nature of the political and its difference from economics; a critical appraisal of liberal democracy, the reigning contemporary political ideal; and the problem of emergency powers, especially in light of the post-9/11 politics of security.

L/R 183. American Political Thought. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Norton.

Whether America begins with the Puritans and the Mayflower Compact, or with the Declaration of Independence and the Revolution, it is founded in resistance to empire. In the generations between, Americans have desired, dreaded and debated empire. This course will focus on empire and imperialism in American political thought. We will read primary texts addressing empire: from the departure and dissent of the Puritans, and Burke's Speech on Conciliation with the Colonies, to twentieth and twenty-first century debates over America's role in the world. These texts will include political pamphlets and speeches, poetry, novels, policy papers and film.

SM 198. Selected Topics in Political Science. (C) Staff.

Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: The Analysis of Presidential Elections, Conservative Political Economy, and Political Geography.

L/R 201. Politics, Society and Social Science. (A) DiIulio.

Everyday human behavior poses puzzles that political scientists, economists, sociologists, and other social scientists have attempted to answer. Often their respective

answers or "theories" differ widely; and sometimes even their most widely agreed-upon answers seem to defy common sense or ask us to believe in highly improbable findings. This new lecture course familiarizes students with different approaches to understanding politics, society, and social science in relation to everyday questions, intriguing puzzles, and improbable findings about human behavior. It focuses on contemporary American politics and society, and draws mainly on literatures featuring work by leading U.S. social scientists. In addition, the course explores the conceptual boundaries between the political, social, and economic domains in which people interact with one another; the differences among and between different much-acclaimed models for understanding human behavior; and the philosophical underpinnings and moral implications associated with schools of thought about how best to describe, analyze, and evaluate what people do--and why they do it!

L/R 204. Political Participation. (A)
Gillion.

The course offers a broad understanding of the political tactics citizens implement to voice their policy preferences to government. This course introduces students to the mode, scope, and theoretical perspectives of political engagement. Analyzing political behavior that ranges from voting behavior to political protest, the course will address a variety of questions: Who engages in politics and why? What are the individual factors that hinder or facilitate engagement in the political arena? How have citizens political actions changed over time? While the course will mainly focus on the United States setting, it does offer a comparative perspective by considering political engagement in non-democratic regimes.

**210. (AFRC257, AFST257)
Contemporary African Politics. (C)**
Staff.

A survey of politics in Africa focusing on the complex relationships between state, society, the economy, and external actors. It will cover colonial rule, the independence struggle, authoritarian and democratic statecraft, international debt, economic development, military rule, ethnicity, and class.

L/R 211. Politics in the Contemporary Middle East. (C) Vitalis or Lustick.

This course is an introduction to the most prominent historical, cultural, institutional, and ideological features of Middle Eastern

politics. Typical of the questions we shall address are why processes of modernization and economic change have not produced liberal democracies, why Islamic movements have gained enormous strength in some countries and not others, why conflicts in the region--between Israel and the Arabs, Iran and Iraq, or inside of Lebanon--have been so bitter and protracted; why the era of military coups was brought to an end but transitions to democracy have been difficult to achieve; why Arab unity has been so elusive and yet so insistent a theme; and why oil wealth in the Gulf, in the Arabian Peninsula, and in North Africa, has not produced industrialized or self-sustaining economic growth.

**L/R 212. (EALC159, EALC559,
PSCI512) Japanese Politics. (M)**
Amyx.

This course examines the politics and policies of contemporary Japan, applying a range of theoretical perspectives to analyze both recent history and current events. We will survey the core political institutions of the postwar era, examine patterns of political interaction, and investigate current debates over policy. The 1990s have been marked by political change at many different levels in Japan and the course will investigate the significance of these changes, as well as enduring continuities. Recent changes have included the introduction of a new electoral system, shift from one party rule to coalition government rule, breaking the bureaucracy, a financial crisis and prolonged economic stagnation. In the latter part of the course, we will focus in particular on the puzzle of how Japan's political economic structures and policies could have proven so successful for so long and yet so disastrous of late. Throughout the course, students will be encouraged to think about Japanese politics in a comparative context and to consider the functioning of the Japanese political system in the context of more theoretical debates in political science.

L/R 213. (LALS213) Latin American Politics. (C) Falletti.

This course examines the dynamics of political and economic change in twentieth century Latin America, with the goal of achieving an understanding of contemporary politics in the region. We will analyze topics such as the incorporation of the region to the international economy and the consolidation of oligarchic states (1880s to 1930s), corporatism, populism, and elit pacts (1930s and 1940s), social revolution, democratic breakdown, and military rule

(1960s and 1970s), transitions to democracy and human rights advocacy (1980s), market-oriented reforms (1990s), and the turn to the left of current governments (2000s). The course will draw primarily from the experiences of Argentina, Brazil, Colombia, Chile and Mexico. No prior knowledge of the region is required.

**L/R 214. (EALC104, EALC504,
PSCI514) Political Economy of East Asia. (M)** Amyx.

This course examines the interplay between politics and economics in East Asia. A major course objective is to reconcile the region's past success with the difficulties experienced in many of these countries more recently. Another primary objective is to consider in what ways and to what degree the growth experiences of the high-performing economies in East Asia shed light on the prospects for long-term success of reforms currently underway in China and Vietnam. The first half of the course begins by exploring the causes and consequences of the rise of industrial Asia. The second half of the course examines the challenges to sustained growth faced by many countries in this region in recent years. The course concludes by examining the challenges faced by China and Vietnam today in their attempt to embrace more market-oriented economic systems.

SM 215. (PSCI515) Political Institutions and Economic Performance. (M) Staff.

This course is a comparative study of whether and how political institutions (political regimes, constitutional rules, party and electoral systems) affect economic performance (economic growth, investment, income distribution).

216. Government and Politics of East Asia. (C) Staff.

The course will examine the relationship between culture, state, and economy of Japan, North Korea, and South Korea. It will also analyze the nature and workings of political institutions (including political parties and bureaucracy).

L/R 217. (PSCI517) Russian Politics. (B) Sil.

This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice

over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implications of economic reform, and prospects for Russia's future in the Putin and post-Putin era.

218. Politics of Post War Western Europe. (M) Lynch.

This course examines political institutions, processes and events in postwar Western Europe. The focus will be a comparative analysis of such topics as political parties and systems, electoral behavior, as well as social and economic policy. We will also examine the way in which domestic processes and policies interact with membership in the European Union.

L/R 219. Contemporary Chinese Politics. (C) Goldstein.

This lecture course introduces students to the politics of the Peoples Republic of China. Complementing offerings in other departments, this course emphasizes events in the period since the Chinese Communist Party established its regime in 1949. In addition to surveying the political history of contemporary China, we will assess the meaning of these events by drawing upon theories about the nature and significance of ideology and organization in communist regimes, factionalism and its relationship to policy formulation and implementation, and general issues of political and economic development. Although the principal focus is on the domestic politics of the PRC, the course includes several lectures examining China's international relations.

220. (SAST223) Comparative South Asian Politics. (M) Frankel.

The comparative study of South Asian politics begins with many antecedent questions. What are the reasons why a strong national political identity in the Indian subcontinent was no consolidated and territorial boundaries defined until the advent of the British Raj? Alternatively, given major regional diversities, why did the subcontinent not become differentiated

into a large number of national states on the model of Europe? To what extent was the movement toward a unified territorial state weakened by colonial policies that recast social groups in terms of new pan-Indian categories based on caste and religious identities? What factors led to the partition of the subcontinent at the time of independence on the basis of religion, and what consequences did partition have for the strategies adopted by each state to develop an overarching national identity and universal principles of legitimate state power? Although the greater part of the course will address these questions by analyzing the social and political dynamics of democracy in India, they are equally relevant for understanding the difficulties encountered by Pakistan in defining a core identity and a stable form of government.

L/R 231. (AFRC232) Race and Ethnic Politics. (M) Gillion.**232. (COMM226) Introduction to Political Communications. (M)** Jamieson.

This course is an introduction to the field of political communication, conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates' and office-holders' uses of news. The focus of this course is on the interplay in the U.S. between television and politics. The course includes a history of televised campaign practices from the 1952 presidential contest onward.

233. Introduction to African American Politics. (M) Reed.

This course is an historical survey of the main bases and substances of politics among black Americans and the relation of black politics to the American political order. Its two main objectives are: 1) to provide a general sense of pertinent historical issues and relations as a way of helping to make sense of the present and 2) to develop criteria for evaluating political scientists' and others' claims regarding the status and characteristics of black American political activity.

L/R 234. Civil Rights and Civil Liberties. (C) Smith.

By examining Supreme Court decisions in light of works on American history, politics, and political theory, we will explore legal, political, and philosophical debates on civil liberties today. Readings will consider litigation of the 1st, 2d, 4th, 5th, 8th, and 14th Amendments. Issues will include struggles over freedom of religion, speech, privacy, and property rights,

analyzed in the context of American cultural traditions and hierarchies; and conflicts over the rights of suspects, criminals and citizens, analyzed in the context of racial and class tensions, criminal violence, and anti-terrorist security concerns.

L/R 235. America and the World. (C)

Vitalis. Prerequisite(s): Recommended: PSCI 130, American Foreign Policy or PSCI 150, Introduction to International Relations.

This course is designed to develop your critical reading and writing skills in the areas of international relations and contemporary history. You are expected to take charge of your learning, engaging with each other and the instructor in a process of knowledge creation through practice, inquiry, deliberation, criticism, and problem solving. You will produce three pieces of analytical writing. These are complementary and cumulative assignments that, combined, will enhance your understanding of the nature, purpose, and future of U.S. hegemony or global dominance. This is the issue, arguably, at the core of debate today about US foreign policy or grand strategy.

236. State Politics & The American Federal System. (C) Staff.

This course provides a comparison of politics in the fifty states, examines changing federal-state relations, and provides students with an understanding of theories of federalism.

L/R 237. The American Presidency. (A) Gottschalk.

This course surveys the institutional development of the American presidency from the Constitutional convention through the current administration. It examines the politics of presidential leadership, and how the executive branch functions. An underlying theme of the course is the tensions between the presidency, leadership, and democracy.

L/R 238. Congress. (C) Lapinski.

This course is designed to introduce students to the study of Congress and of legislative behavior generally. The course will examine legislative procedures, congressional institutions (committees, subcommittees, leadership structure), campaigns and elections, legislative behavior (voting, constituency service, policy leadership), and the policymaking environment (interest groups, executive branch, media). Particular emphasis will be placed on consideration of whether and how electoral concerns affect legislative

behavior and the structure of congressional institutions. In addition, the course will consider congressional behavior within the broader context of representation. There are no prerequisites for this class, but students are expected to have at least a rudimentary understanding of American politics and government.

SM 240. (GAFL240) Religion and US Public Policy. DiIulio.

This seminar introduces students to the nation's trillion-dollar tax-exempt sector with a focus on religious nonprofit organizations including congregations and other so-called faith-based institutions. Among the topics it explores are new and old questions surrounding church-state relations, the role of religion in American politics, empirical "faith factor" research, and attempts to estimate the social costs and benefits associated with diverse religious nonprofit organizations.

251. (LALS251, PSCI551) Inter-American Relations. (C) Staff.

This course examines patterns of inter-American conflict and cooperation. The course examines United States-Latin American relations, regional organizations and subregional organizations. Specific topics include development, dependency, and security.

L/R 252. War, Strategy and Politics. (C) Horowitz.

This class examines the strategy and politics of warfare, focusing on the way actors plan military campaigns and the factors that are likely to lead to victory and defeat. The course readings center in particular on the factors driving changes in warfare and civil-military relations. The course will cover a wide range of topics from theories of war-fighting to historical military campaigns to insurgency warfare, terrorism, and the future of war.

L/R 253. (JWST253, PSCI553) International Politics of the Middle East. (B) Lustick.

This course will focus primarily on episodes of external intervention by Great Powers in the politics of Middle Eastern states. We shall begin by examining the emergence of the Middle Eastern state system after the disappearance of the Ottoman Empire in the early part of the 20th century. This discussion will provide opportunities to develop key concepts in the study of international politics and will serve as crucial historical background. We shall then turn our attention to the primary concern of the course - a systematic consideration of the motives, operational

results, and long-term implications of a number of important examples of intervention by Great Powers in the Middle East. Among the episodes to be considered will be British policies toward the end of World War I, in Palestine in the 1930s, and, along with the French, in Suez in 1956. Soviet intervention in the first Arab-Israeli war, in 1948, will be analyzed along with Soviet policies toward Egypt in the early 1970s. American intervention in Iran in 1953 and in the Gulf War in 1991 will also be examined.

254. Politics of the European Union. (M) Staff.

This course explores the political economy of European integration. It is organized in three parts: First, we analyze the political and economic forces that have driven the process of European integration since World War II. We review the milestones of European integration in historical perspective and discuss different theoretical perspectives explaining the path and outcome of European integration. Second, the course takes an in-depth look at the institutions and decision-making processes of the European Union (EU). It analyzes the structure and operation of the Council of Ministers, the European Commission, the European Parliament, and the European Court of Justice, and explores how these institutions interact to shape EU policy. Third, we examine EU policymaking in key policy areas, including regulatory policies, redistributive politics, economic and monetary affairs, and external relations.

L/R 255. The Causes of War & Peace. (C) Weisiger.

The existence and endurance of war provides one of the most important puzzles of politics: why is it that people keep making use of such a destructive and painful way of resolving their disputes? This course addresses this question and the related question of what factors contribute to peace, focusing on both academic and popular explanations for conflict, including among others anarchy, over-optimism, shifting power, diversionary war, the malevolent influence of war profiteers, and a variety of explanations grounded in culture, religion and other ideational variables. In this discussion, we will focus on both interstate and civil wars, and on both the onset and the eventual termination of war. At various points in the course we will discuss a wide range of historical and contemporary cases, including the World Wars, Vietnam, the Gulf War, the Iraq War, the various Arab-Israeli wars, the India-Pakistan rivalry, and a number of recent civil conflicts such as the wars in

Yugoslavia, Congo, and Sudan. The course concludes with a discussion of strategies for managing ongoing conflicts and for securing peace in post war settings.

256. (PSCI458, SAST284) International Relations of the United States and Asia. (C) Frankel.

This course is one of the first arising out of scholarship on cold war international history. It draws on declassified government documents and other archival records to provide a window into the world-view of decision-makers who need to make national security policy based on incomplete information about ambiguous threats. The materials reveal a great deal about the importance of divergent historical perspectives and strategic cultures in the foreign policy-making process. The main focus of the course is on the intersection of the cold war and the rise of Asian nationalism. At the core of the analysis is the clash between America's global strategy of military containment against the Soviet Union and the assertion of Indian, and Chinese nationalism, concerned with preventing the United States from succeeding to Great Britain's imperial rule. The course examines new patterns of power after the Cold War, especially the emergence of two major powers in Asia - China and India - and the issues raised by the U.S. unilateralist use of military power to preserve its predominant position.

257. (SAST256) International Relations of South Asia. (C) Frankel.

One of the great accidents of history is the Partition of the subcontinent into the two states of India and Pakistan, and the onset of the cold war as a global struggle between the United States and the Soviet Union. The major focus of the course is on the interaction between regional conflicts, the most enduring symbolized by the unresolved dispute between India and Pakistan over Kashmir, and the global strategies of rival great powers which sought to tip the balance of power in their favor by military and ideological influence over the "third world." These conflicts were exacerbated by the Indian leadership's commitment to an independent foreign policy of non-alignment, and its aspirations to leadership of newly independent states in Asia and Middle East, ranged against Pakistan's inability to establish a viable state without external support. The resulting alignments and alliances drew the subcontinent into the center of cold war rivalries. The last part of the course focuses on the changing security environment after the cold war, the rise of India and China as competitors for

influence; and problems posed by persisting mutual resentment and distrust in India and the United States, despite recognition on both sides of the need to cooperate and avoid China's domination of Asia.

258. Human Rights. (C) Teune.

The focus is human rights in global, political, and developmental contexts, especially since 1945. Human rights are part of a wide range of academic disciplines, engineering, history, law, philosophy, and religion being among the obvious. These disciplinary perspectives will be touched upon; politics will be the central one. Some of the main topics include justifications; cross-cultural perspectives; global and international institutional developments and foreign policy. Selected topics will include war, hunger, life, reproduction, servitude, consent, information and the environment.

L/R 271. (PPE 270) Constitutional Law. (C) Smith.

This course explores the role of the U.S. Supreme Court in political struggles over the distribution and uses of power in the American constitutional system. Issues include the division of powers between state and national governments, and the branches of the federal government; economic powers of private actors and governmental regulators; the authority of governments to enforce or transform racial and gender hierarchies; and the powers of individuals to make basic choices, such as a woman's power to have an abortion. We will pay special attention to how the tasks of justifying the Supreme Court's own power, and constitutionalism more broadly, contribute to logically debatable, but politically powerful constitutional arguments. Readings include Supreme Court decisions and background materials on their historical and political context.

L/R 275. (NELC282, RELS243) Muslim Political Thought. (M) Norton.

This seminar offers an introduction to Muslim political thought. Chronologically the course ranges from the medieval period to the present. Particular attention will be given in the later part of the course to the renaissance of Muslim political thought in recent years and to the development of political Islam, including the work of such thinkers as Said Qutb and Hasan Turabi. We will also study the roots of this renaissance in classical philosophy of the medieval period (Al Farabi, Al Ghazali, Ibn Khaldun, Ibn Tufayl) and the liberal age.

SM 280. (GSOC280) Feminist Political Thought. (M) Society Sector. All classes. Hirschmann.

This course is designed to provide an overview of the variety of ideas, approaches, and subfields within feminist political thought. Readings and divided into three sections: contemporary theorizing about the meaning of "feminism"; women in the history of Western political thought; and feminist theoretical approaches to practical political problems and issues, such as abortion and sexual assault.

285. Principles of the American Founding. (C) Staff.

What "first principles" if any, give form to--constitute, if you will--the American political order? What way of life or what vision of human character was or is our constitutionalism supposed to foster? And what relevance--more important, what authority--can such founding commitments or first principles have for us now?

294. Political Participation. (A) Nagel.

How do ordinary members of political systems influence policies, the election of leaders, and other outcomes? Examples of participation include voting, referendums, protest movements, direct and small-group democracy, citizen involvement in public administration, and workplace democracy. The course develops a general analysis that is applicable to politics in the US and other nations, nongovernmental associations, and students' personal political experience.

SM 298. (SOCI230) Selected Topics in Political Science. (C) Staff.

Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Leadership & Democracy; Conservative Regimes.

SM 312. (AFST312) Democracy in Africa. (M) Staff.

In this course, we will examine the impact of historical context, leadership, constitutionalism, political parties, civil society, economic reform, regime legitimacy, and the international community of the democratic transition process in sub-Saharan Africa. Specific country case studies will be examined both comparatively and regionally, given the increasingly interdependent nature of political and economic transition on the continent. The goal of the seminar is to provide students with the tools necessary to understand the democratic transition process in Africa in a way that is also relevant to other regions in the world.

SM 314. (LALS314) Transitions to Democracy. (C) Falletti.

This seminar is open to advanced undergraduates and graduate students. We will review and analyze the theoretical literatures on regime change and compare the experiences of countries emerging from bureaucratic authoritarianism, military rule, and socialism. How do previous regimes and economic systems, political culture, social structure and socio-economic development, and international pressures affect attempts to build democratic institutions? We will employ concepts drawn from comparative and theoretical writings to investigate cases of regime change in Europe and the former Soviet Union, as well as Latin America and other areas of the developing world.

320. (GAFL710, URBS320) Who Gets Elected and Why?. (C) Rendell.

Course participants will study the stages and strategies in running for public office and discuss the role of various influences on getting elected, including campaign finance and fundraising, demographics, polling, the media, staffing, economics, party organization, etc. The course will also examine how electoral politics varies by level -- city, state, national. Students will analyze campaign case studies and the career of the instructor himself. The instructor will also bring in speakers who can provide other perspectives on electoral politics. The instructor is the former Mayor of Philadelphia, Chair of the Democratic National Committee, and is currently the Governor of Pennsylvania.

SM 330. Politics, Power, and Policymaking in Washington. (C) Tenpas.

This seminar is taught in Washington D.C. for students enrolled in the Washington Semester Program. It includes an orientation to observation and research in the Washington Community and a major independent research project on the politics of governance.

SM 331. (LALS331) LATINO POLITICS.**SM 332. (COMM331) Discourse & American Politics. (M) Wooten.**

This course will provide an introduction to the role of political communication over the course of American history. We will consider the changing relationship between deliberation, discourse, and rhetoric over the course of American political development. Readings will incorporate a variety of theoretical, historical, and political perspectives to examine the role of

language and discourse in shaping political outcomes. This is a CWiC-affiliated course. The readings and assignments will allow us to engage with questions about the nature and development of political communication over the course of American history. We will also explore the significance of these developments in a variety of speaking assignments.

SM 338. STATISTICAL METHODS PSCI. (M)

358. International Law. (M) Staff.

This course intends to familiarize the student with the concept of "law", its use as a constitutive and regulative force in the international arena, and the expanding scope of international law through the inclusion of transnational law and human rights.

SM 397. Topics in International Politics. (C) Staff.

SM 398. Selected Topics in Political Science. (C) Staff.

Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Sustainable Environmental Policy & Global Politics; Shakespeare and Political Theory.

L/R 413. (LALS413) Current Topics in Latin American Politics. (C) Faletti.

This course examines the empirical and logical validity of main arguments that connect the economy and politics in Latin America. The focus will be on themes such as the agro-exporting economy, the oligarchic state, import-substitution industrialization, bureaucratic-authoritarian regimes, transition to and consolidation of democracy, and structural reforms.

SM 418. (PPE 476) Evolution, Politics and Computer Simulation. (C) Lustick.

In this course we shall explore how recent developments in evolutionary theory relate to larger questions raised by students of complexity and complex adaptive systems. We shall study how they together provide a basis for important critiques of standard approaches in political science and enable fascinating and powerful understandings of politics and political phenomena -- including national identity and identity change, state formation, revolution, globalization, and leadership. An important vehicle for the application of these insights for understanding politics is computer simulations featuring agent-based modeling. Students will use "PS-I" an agent based computer simulation platform,

to develop their own models, conduct experiments, test hypotheses, or produce existence proofs in relation to popular theoretical positions in contemporary political science. No knowledge of computer programming is required.

SM 419. (LALS419) DEMOC & CENTRALIZATION. (M)

L/R 432. Government and Business in the United States. (C) Gottschalk.

This is an advanced seminar that addresses the role of business in the U.S. political system, how that role has changed over time, and the relationship between business and other important political actors, including the executive branch, the legislature, organized labor, and public-interest groups, in the U.S. and other countries.

SM 437. (AFRC437) RACE & CRIMINAL JUSTICE. (M)

458. (PSCI256) International Relations of South Asia. (C) Frankel.

This course draws on declassified U.S. government documents, memoirs, cables and other records of cold war international history to open a window into the world-view of decision-makers who often need to make national security policy based on incomplete information about ambiguous threats. They reveal a great deal about the importance of divergent historical perspectives and strategic cultures in the formation of foreign policy. The major part of the course examines the intersection of the cold war and the rise of Asian nationalism, creating a clash between America's global strategy of military containment and the assertion of Indian and Chinese nationalism, concerned with preventing the United States from succeeding to Great Britain's imperial role. The later readings examine new patterns of power after the Cold War, especially the emergence of two major powers in Asia - China and India - and the issues raised by the U.S. unilateralist use of military power to preserve its predominant position.

SM 481. Political Theory & Public Policy. (M) Hirschmann.

This course will explore the relevance of canonical work in modern political theory - Locke, Kant, Mill, and Marx - to various public policy and practical political issues. We will consider what political philosophy has to contribute to practical issues: not only what philosophy can tell us about the ethics of practical issues, but also how public policy makers might utilize political philosophy to create better policy. We will

also explore whether and how reading political philosophy in light of specific concrete issues encourages us to look at both the theories and the policies differently than if each were considered on their own.

SM 497. Political Science Honors. (C) Staff.

The object of this seminar is to prepare eligible senior honors candidates in political science for the completion of a senior honors thesis. Students writing honors theses will also work simultaneously with an individual supervisor and, during the spring semester, will enroll in an independent study (PSCI 499) under that faculty member's guidance. See department for more details.

SM 498. Selected Topics in Political Science. (C) Staff.

Consult department for detailed descriptions. Recent topics include: Globalization; Race & Criminal Justice; Democracy & Markets in Postcommunist Europe.

SM 504. Urban Politics. (M) Staff.

The intention of this course is to prepare students for urban research in any setting. It is a graduate level course, which reviews the intellectual traditions of the field and endeavors to establish the present state of research. It is oriented to theory rather than case studies. It is comparative and international in perspective though many of the sources are American. The latter reflect the intellectual milieu of political science in the country where this University is located.

SM 505. The American Legislative Process. (M) Maddox.

The theory of legislative process with a focus on the American Congress and its antecedents. The evolution of legislative rules will be stressed. The evolution will be used to analyze Congressional "reform." The course format is a combination of lectures, discussions, and guest speakers.

SM 510. Electoral Systems. (M) Nagel.

This course examines alternative arrangements by which democracies choose leaders, representatives, and governments through competitive elections. Some of the material is also relevant to voting on policies in legislatures, committees, and referendums. The treatment is comparative and theoretical, but students may focus on particular systems through reports and papers.

SM 511. (SAST528) Society and Politics in India. (M) Frankel.

This course analyzes the changing relations between social dominance and state power from the time of colonial rule.

L/R 514. (EALC104, EALC504, PSCI214) Political Economy of East Asia. (M) Amyx.

This course begins by exploring the causes and consequences of the rise of industrial Asia, paying particular attention to the role played by political institutions. It then examines the political economic challenges faced in recent years by many countries in this region. What explanations may be given for the rapid growth experienced in the region? And, how can we reconcile the success of the past with the difficulties experienced in more recent years? The role of national financial systems in supporting or undermining growth and the politics of financial crisis management and financial system reform will be explored in depth.

SM 515. (PSCI215) Political Institutions and Economic Performances. (C) Staff. Fulfills

Quantitative Data Analysis requirement. Comparative study of whether and how political institutions (political regimes, constitutional rules, party and electoral systems) affect economic performance (economic growth, investment, income distribution). This course fulfills the University's quantitative skills requirement.

L/R 517. (PSCI217) Russian Politics. (B) Sil.

This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implications of economic reform,

and prospects for Russia's future in the post-Yeltsin era.

This course may also be taken as a graduate seminar (PSCI 517) with the permission of the instructor and the completion of additional requirements.

SM 521. Comparative Business-State Relations. (M) Staff.

History and theory of the state's role in formation of modern industrial capitalism. Comparative industrial policies, comparative industrial structure, business-state and state-labor relations, and foreign economic relations. Emphasis on Western Europe but includes the United States and East Asia.

522. Public Administration. (M) Nagel.

This course focuses on three principal functions of leaders in public organizations: establishing and instilling purpose, motivating cooperative effort, and making decisions based on undistorted communication.

SM 532. The Political Economy of North-South Relations. (M) Callaghy.

This course concerns the political economy of "North-South" relations. The seminar will investigate key concepts and perspectives about the political economy of North-South relations by examining a variety of attempts at economic transformation in Asia, Latin America, Africa, and Eastern Europe.

SM 533. Comparative Political and Economic Change. (M) Callaghy.

A comparative exploration of the politics and economics of the formation of states and the development of capitalism, both historical and contemporary, and an examination of contending theoretical perspectives about them. Examples will be taken from Europe since the sixteenth century, nineteenth and twentieth century Latin America and Asia, and contemporary Africa.

SM 552. Game Theory. (M) Weisiger.

This course provides an introduction to non-cooperative game theory and its applications to political science. The goal of the course is to provide students with the background and understanding necessary to read published game-theoretic work in political science journals. To that end, the course covers the basic concepts of game theory, including Nash equilibrium and its main refinements, simultaneous and sequential games, repeated games, evolutionary game theory, and games of incomplete and private information. In addition, we will cover some of the central

models used in political science, notably models of public choice (such as the median voter theorem) and models of bargaining.

556. (PSCI152) American Foreign Policy. (M) Staff.

A detailed study of our foreign policy issues with special emphasis on (1) the international realities of the 21st Century (2) the strategic challenges to our national security (3) the diplomatic options available for regional conflict and (4) the moral imperatives of our global leadership

SM 557. Politics of the Soviet Successor States and Eastern Europe. (M) Staff.

This course is an advanced research seminar on Soviet and post-Soviet politics. Students will be expected to develop and complete a substantial research paper. Class sessions will center on recent developments in the study of the politics of Russia and other Soviet successor states and on student presentations of research in progress.

SM 560. The Organization of World Politics. (M) Staff.

This course examines the organizational features of international life. Instead of focusing on one or several international organizations by means of an institutional analysis the scope of this course is more analytical; it explores the role of norms in structuring interactions (informal organizations) as well as the organizational designs of formal international organizations.

SM 566. Government and Politics of East Asia. (C) Staff.

This course will explore the changing character of the state in Japan and Korea (North and South), and its relationship with the society and economy. The nature of politics in these countries will be studied through political parties, pressure groups, and elections? Questions explored will include the following: "Who governs?" How does the state in Japan and Korea differ from those in Western nations? How did the state in these countries evolve and how did its relationship with the society evolve? What role did the state play in developing respective economies?

SM 567. East Asian International Relations. (C) Staff.

This course will begin with an examination of the changing context of East Asian International Relations & will survey the foreign policy strategies employed by the United States, the Soviet Union, China,

Japan and Korea since the turn of the century. This will be followed by analyses of interaction among these countries. What were the forces, assumptions and motives behind each strategy? Who chose the policy and why? How effective were various strategies? What are the problems underlying various sets of relationships now? Who makes the decisions, and under what domestic and foreign environment? What are the future prospects?

SM 568. Politics and Society in Modern India. (M) Frankel.

SM 580. Contemporary Political Philosophy. (M) Staff.

Significant contributions to political philosophy in the twentieth century. This course will alternate with PSCI 581.

SM 583. American Political Thought. (M) Staff.

A consideration of one or a few topics, individuals, or eras in American political thought.

SM 586. Justice. (M) Kennedy.

A consideration of a fundamental political concept, justice, in the works of selected political philosophers.

SM 590. The Nature of Political Science. (M) Teune.

The origins, development, and current status of the discipline and profession of political science.

SM 596. Hegel and Marx. (M) Kennedy.

SM 598. (PPE 475) Selected Topics. (C) Staff.

Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Race Development and American International Relations, Hegel and Marx, and Logic of the West.

SM 600. International Relations Theory. (M) Rousseau.

This purpose of this course is two-fold. First, the survey course is designed to introduce students to a wide range of theories of international politics. During the course of the semester we will examine neo-realism, power transition theory, hegemonic stability theory, the modern world system, international regimes and interdependence, the democratic peace, bureaucratic politics, organizational theory, constructivism, and decision making theory. Second, the course will sharpen students' research design skills. The

written assignments require students to take the often abstract theories presented in the readings and develop practical research designs for testing hypotheses derived from the theories. The papers will not include data collection or the execution of actual tests. Rather, they will focus on the conceptual problems of designing tests which eliminate competing hypotheses, operationalizing variables, and identifying potential sources of data. Student's grades will be based on five short research designs and discussion leadership.

SM 610. Comparative Political Analysis. (M) Sil.

This seminar is aimed primarily at graduate students planning to take doctoral exams in comparative politics. It provides a critical survey of the field of comparative politics, tracing the intellectual history of the field, examining shifts in conceptual frameworks and research traditions, and comparing alternative methodological approaches. The first half of the course generally examines how processes of political, economic, and social change have been theorized in the social sciences from the mid-19th century to the present. In this process, particular attention is paid to the bifurcation between theories that emphasize the "universal" (e.g. the homogenizing effects of specific processes or variables) and the "particular" (e.g. the persistence of distinctive historical legacies and trajectories). Since this bifurcation is reinforced by distinct styles and methods of research, the seminar also probes the recent battles between rational-choice, cultural, and structuralist scholars, while considering the trade-offs between varieties of formal, quantitative, and qualitative methods. In the second half, the focus shifts to the range of substantive problems investigated by scholars in the field of comparative politics.

These topics cover the complex relations among nations, states and societies; the origins, consolidation, and patterns of democratic governance; political economy in relation to development processes and social policies; the intersection of international/global economy and domestic politics; the dynamics of revolutions and social movements; and alternative problematiques constructed from the point of view of real actors such as workers, women, and local communities. In all cases, As a whole, the course is designed to provide an introduction to important issues and debates that comparativists have regularly engaged in; to help you understand the assumptions behind, and differences between, particular approaches, methods, and styles of research; to examine whether

current debates are spurring new or better research in a given field in light of past approaches; and to gauge whether there has been progress, fragmentation, or stagnation in the field of comparative politics as a whole.

SM 614. Political Identity & Political Institution. (M) Staff.

SM 615. Political Economy of Development. (M) Frankel.

This course examines the debate in development studies arising from recognition that economic models, theories, methods, and strategies abstracted from the specific experience of western societies and cultures do not have general applicability. A broader social science approach is adopted, one which emphasizes the need to understand the social structures and cultures of the developing countries, the capabilities of weak versus strong states, and the links with the international system that influence transformative processes to which industrializing economies are subjected. The readings offer an overview of the most influential theories of development and underdevelopment that structured debate from the 1960's through the 1990's, and focus on the elements of these approaches that advance understanding of development and stagnation in several key countries, including Brazil, Mexico, India and selected countries in East and Southeast Asia.

SM 616. Financial Statecraft. (M) Amyx.

This graduate level seminar explores the evolving political dynamics of 'FINANCIAL STATECRAFT'. We will examine the relationship between financial flows and traditional foreign policy concerns, seeking to understand why and how governments have attempted to harness or constrain financial markets and institutions in the service of foreign policy goals. Specific topics include the introduction of capital flow guarantees or restrictions, imposition of financial sanctions on non-state actors, underwriting of foreign debt in currency crises, currency unions and other forms of currency cooperation, and foreign exchange reserve management.

SM 618. International Political Economy. (M) Mansfield.

Examination of the relationship between the international, political, and economic systems from a variety of theoretical perspectives that have emerged in the postwar period, including liberalism,

transnationalism, statism, Marxism, and dependency.

SM 619. Strategic Studies Seminar. (M) Goldstein.

This seminar offers graduate students an introduction to the subfield of international relations labeled strategic studies (or security studies). In addition to exploring key theoretical issues, we consider their usefulness for understanding relevant events in international politics since World War II. Although the course emphasizes the distinctive features of great power strategy in the nuclear age, we also look at the continuing role of conventional forces, the strategic choices of lesser powers, and selected security problems in the post-Cold War world (e.g., proliferation, terrorism).

SM 621. Power and Resistance in the United States. (M) Staff.

SM 623. The Politics of Gender. (M) Norton.

This is a course on the categories and construction of gender, sex and sexuality. The literature is so vast, the debate so vigorous, and the changing shape of thought so rapid that the absurdity of the pretense to provide a "comprehensive" or a "definitive" account is more than usually evident. The course foregrounds works that put gender, sex and sexuality - and with them the subject - in question. One set of works is drawn from political and feminist theory and includes writings by Judith Butler, Jacques Lacan, Guy Hocquenham, Monique Wittig, and Nancy Fraser. Through the use of works from comparative politics and cultural studies, the interrogation of the sexual subject reveals itself as an interrogation of political economies and political institutions. This aspect of the course addresses the question of gender in relation to race, class, and diverse political situations, including those of colonialism and liberalism, welfare policy and immigration law.

SM 631. American Political Development. (C) Gottschalk.

Analyzes important patterns of continuity and change in American politics by examining the development of the American State from a comparative and historical perspective. Covers issues and debates central to not only the subfield of American politics, but also the discipline of political science more broadly. These include the role of the state, political culture, interests, ideas, and institutions in political development, and the role of history in political analysis. Open to advanced

undergraduates with the permission of the instructor.

SM 633. Hegemonic Analysis: Theories and Applications. (M) Lustick.

An important strain within contemporary political science has been the attempt to explain how power is exercised through the manipulation or exploitation of consciousness, habits, and cultural predispositions. One of the key concepts in the study of these issues is that of "hegemony" --the establishment of particular beliefs as commonsensical presumptions of political life. In this course that notion will be systematically explored. Of particular interest will be how authors who conduct hegemonic analysis cope with the problem of analyzing the effect of what the objects of their analysis, by definition, do not and, in some sense, cannot, think about. Illustrations of hegemonic phenomena and attempts to analyze them will be drawn from a variety of fields, such as political theory, historiography, comparative politics, American politics, rational choice theory, agent based modeling, and epistemology.

SM 635. (COMM615) EXP DESIGN & ISS CAUSAL.

SM 649. Chinese Politics. (M) Goldstein.

This course is designed to provide a high-level introduction to the study of Chinese politics. After surveying China's political history, we turn to a closer examination of several key issues in the contemporary study of Chinese politics. The themes we cover include issues of political legitimacy, political participation, policy formulation and implementation, revolutionary and reformist strategies of political change, and the domestic and international influences on a regime's foreign policy.

SM 650. Development of American Political Institutions. (M) Staff.

A political and historical interpretation of current American political institutions and practice focused on the federal system, the main national institutions, and various regime questions.

SM 652. American Politics. (M) Staff.

This seminar will survey the literature in a variety of subfields of American politics but will focus primarily on American political institutions. Emphasis will be on exposing graduate students in the seminar to the field of American politics, the methodologies employed in its study, the

work of leading scholars, and the topics currently being debated by those scholars. The course is also designed to lay the groundwork to enable students to conduct original research. As such, the preparation of a research design proposal will be a key part of the seminar.

SM 655. (LALS655) Democracy in Comparative Perspective. (M) Staff.

SM 670. Recent Democratic Theory. (M) Nagel.

This seminar explores a series of interrelated debates that have important implications for the design of democratic institutions, the expectations by which they are judged, and the spirit that animates actions within them. The course makes no attempt to survey a vast literature, but the principal readings have been selected because of their outstanding quality and influence.

SM 680. Constitutional Thought. (M) Harris.

A broadly theoretical approach to the constitutional dimension of the study of politics, with emphasis on the problems of constituting a political form, the nature and authority of a constitution, and systematic standards of interpretation, using the United States Constitution as an exemplar.

SM 690. The Logic of Social Inquiry. (M) Teune.

An introduction to the nature and development of theoretical knowledge in the social sciences with emphasis on political science.

SM 692. Advanced Statistical Analysis. (M) Staff.

SM 693. Research Methods in Political Science. (M) Staff.

An introduction to the design and execution of research to generate information about the nature and behavior of political actors, organizations and systems. Techniques covered include unobtrusive measures, case studies, direct observation, experimentation, content analysis and survey research. Historical and interpretive approaches may also be covered.

SM 694. Advanced Research Method. (C) Rousseau.

The purpose of this class is three-fold. First, the course is designed to introduce students to a wide range of statistical models (e.g., event count models, limited dependent variables, and survival analysis) as well as problems associated with

statistical research (e.g., heteroscedasticity, autocorrelation, and selection bias). Second, the course is designed to give students practical experience in data analysis. Students will complete a number of assignments using a wide variety of well know data sets (e.g., Polity III, World Value Systems, National Election Studies, Democratic and Local Governance, Correlates of War, Militarized Interstate Disputes, International Crisis Behavior,

Penn World Tables, General Social Survey, United Nations Crime Survey). Third, the course will explore the relationship between qualitative and quantitative analysis. Requirements will include weekly assignments, discussion leadership, and a final paper. While PSCI692 is not a prerequisite for this course, some prior exposure to statistical analysis (including regression) is recommended.

SM 798. (COMM798) Selected Topics in Political Science. (C) Staff.

Consult department for detailed descriptions. More than one section may be given in a semester. Recent titles have included: Interpreting the Canon; State, Self, & Society; U.S. Policy in Europe; and Dissertation Writing.

PSYCHOLOGY (AS) {PSYC}

PSYC 001 is the prerequisite for Psychology courses numbered 100 and above. Students who have received a 5 on the AP test in Psychology are encouraged to enroll in any 100-level course offered.

001. Introduction to Experimental Psychology. (C) Living World Sector. All classes. Staff. An LPS section of this course may also be offered. See current timetable.

Introduction to the basic topics of psychology, including learning, motivation, cognition, development, abnormal, physiological, social, and personality.

020. Probability and Statistics. (C) White. This is a Benjamin Franklin Scholars course.

An introduction to statistics, statistical methods, and probability theory. The course will cover: the nature of statistical data; estimation and hypothesis testing; concepts of statistical inference; measures of central tendency and variability; elementary probability; ANOVA; regression and correlation; non-parametric methods. Emphasis will be placed on application to research in the behavioral sciences. In addition, there will be an introduction to some of the most popular computer-based statistical programs.

107. (CIS 140, COGS001, LING105, PHIL044) Introduction to Cognitive Science. (A) Staff. Prerequisite(s): An Introductory Course in Computer Science, Linguistics, Neuroscience, Philosophy, or PSYC 001.

Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce undergraduates from many areas to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between such modules. The course shows how the different views from the parent disciplines interact, and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of

computation in such theories, and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.

L/L 109. (BIBB109, BIOL109) Introduction to Brain and Behavior. (C) Living World Sector. All classes. Staff. Prerequisite(s): PSYC 001.

Introduction to the structure and function of the vertebrate nervous system, including the physiological bases of sensory activity, perception, drive, motor control and higher mental processes. The course is intended for students interested in the neurobiology of behavior. Familiarity with elementary physics and chemistry will be helpful.

111. (VLST211) Perception. (C) Staff. Prerequisite(s): PSYC 001. An LPS section may be given.

How the individual acquires and is guided by knowledge about objects and events in their environment.

L/R 117. (BIBB217, VLST217) Visual Neuroscience. (B) Staff. Prerequisite(s): PSYC 001, PSYC/BIBB 109, COGS 101 or VLST 101.

An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.

121. Learning. (C) Rescorla. Prerequisite(s): PSYC 001. An LPS section may be given.

Changes in behavior resulting from past experience. The acquisition, maintenance, and elimination of behavior, and the effects of previous experience on responses to new situations.

125. (BIBB270) Drugs, Brain & Mind. (B) Staff. Prerequisite(s): BIBB 109/PSYC 109.

The course will begin with a review of basic concepts in pharmacology: routes of drug administration, drug metabolism, the dose response curve, tolerance and sensitization. Following a brief overview of cellular foundations of neuropharmacology (cell biology, synaptic and receptor function), the course will focus on various classes of drugs used to treat neuropsychiatric disorders including,

among others, depression, schizophrenia and anxiety. We will additionally consider mechanisms mediating the mind-altering, addictive and neurotoxic effects of abused drugs.

127. (BIBB227) Physiology of Motivated Behaviors. (C) Grill. Prerequisite(s): PSYC 001.

This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbook as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for: obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.

131. (BIBB231, BIOL231) Animal Behavior. (C) Seyfarth/Cheney/White. Prerequisite(s): PSYC 001 or BIOL 102.

The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.

135. (LING135) Psychology of Language. (C) Dahan. Prerequisite(s): PSYC 001 or LING 101.

This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. The course raises and discusses issues such as whether language ability is innate and unique to humans, whether there is a critical period for the acquisition of a language, and how linguistic and conceptual knowledge interact.

139. (BIBB260) Neuroendocrinology. (C) Staff. Prerequisite(s): BIBB 109, or PSYC 001.

This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We

will focus on sexual and parental behaviors, aggression and ingestion.

L/R 149. (BIBB249) Cognitive Neuroscience. (C) Living World Sector. All classes. Thompson-Schill/Epstein. Prerequisite(s): PSYC 001 or BIBB 109. An LPS section may be given. There is no recitation section for Dr. Epstein's lecture course. For Dr. Sharon Thompson-Schill's course there are two recitation section options to choose from (both meet at the same time and place) PSYC149-201 Regular recitation section. PSYC149-202 Writing intensive recitation. Students in the 149-202 section will develop a critical writing project on a specific topic in the field of Cognitive Neuroscience; this project will substitute for the course final exam.

The study of the neural systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.

151. Cognitive Psychology. (C) Trueswell. Prerequisite(s): PSYC 001. An LPS section may be given. A Benjamin Franklin Seminar version of this course may be offered. See current timetable. Analysis of mental processes in adult humans: Attention, Pattern recognition, Imagery, Memory, Action. Mental architecture.

153. (PPE 153) Judgment and Decisions. (C) Baron. Prerequisite(s): one semester of statistics OR microeconomics. An LPS section may be given.

Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases.

155. Attention and Memory. (C) Jha. Prerequisite(s): PSYC 001.

A study of topics in human memory and attention including an overview of current experiments investigating: multiple memory systems, attentional selection, the interrelationship between memory and attention, dysfunction due to disease states and aging, exceptional functioning, and strategies to improve memory and attentional processes. Particular emphasis is given to the neural basis of cognitive processes.

159. Human Memory. (C) Kahana. Prerequisite(s): PSYC 001.

An introduction to the scientific study of human memory, with a particular emphasis on the interplay between theory and experiment. Topics will include dual store

models and the debate over short-term memory, recognition memory for items and associations, the role of time and context in memory formation and retrieval, theories of association, memory for sequences, the influence of prior knowledge on new learning, spatial and navigational memory, perceptual learning, classification and function learning, memory disorders, and developmental changes in memory function.

160. Personality. (C) Kable. Prerequisite(s): PSYC 001. An LPS section may be given.

This course provides an introduction to the psychology of personality and individual differences. Many psychology courses focus on the mind or brain; in contrast to those approaches of studying people in general, the focus in this course is on the question "How are people different from each other?" It will highlight research that take a multidimensional approach to individual differences and attempts to integrate across the biological, cognitive-experimental, and social-cultural influences on personality.

162. Abnormal Psychology. (C) Staff. Prerequisite(s): PSYC 001. An LPS section may be given.

The concepts of normality, abnormality, and psychopathology; symptom syndromes; theory and research in psychopathology and psychotherapy.

170. Social Psychology. (C) Society Sector. All classes. Staff. Prerequisite(s): PSYC 001. An LPS section may be given.

An overview of theories and research across the range of social behavior from intra-individual to the group level including the effects of culture, social environment, and groups on social interaction.

180. Developmental Psychology. (C) Society Sector. All classes. Staff. Prerequisite(s): PSYC 001. An LPS section may be given.

A developmental perspective on the general empirical and theoretical psychology of perception, cognition, language, learning, comparative ethology, and socialization.

181. Cognitive Development. (C) Swingley. Prerequisite(s): PSYC 001.

What infants and young children come to know about the world, and how they learn it. Topics will include changes in children's thinking, perceptual development, language acquisition, and current theories of cognitive development

SM 411. Modeling Cognition and Perception. Mirman.

Advanced Courses

Topics covered in the 200 level courses will change from term to term. Not every course will be offered every term. Detailed course descriptions will be available from the undergraduate secretary before the preregistration period each semester.

SM 221. Special Topics in Learning. (C) Rescorla. Prerequisite(s): PSYC 121.

Advanced topics in elementary learning processes. The focus will be on two topics of particular interest to students interested in clinical psychology: avoidance learning and experimental extinction. Both have received substantial experimental and theoretical analysis in the animal laboratory. Both have important implications for the treatment of certain psychological disorders. Students will read the original literature for seminar discussion.

SM 249. S/T Cognitive Neuroscience. (C) Jha or Epstein. Prerequisite(s): PSYC 149 or PSYC 155.

Cognitive Neuroscience of Meditation(Jha) An ancient spiritual practice central to many religious traditions, meditation has recently been reported to result in improved psychological and physical health. Meditation is defined as paying attention in a particular way, on purpose, in the present moment, and non-judgmentally (Kabat-Zinn, 1994). In this course, we consider the hypothesis that mediations beneficial effects may be mediated by entraining the human attention system. We will read and discuss the cognitive neuroscience of attention and the neural bases of meditation. In addition, students will be introduced to mindfulness-based meditation techniques increasingly used in combination with traditional medical and psychotherapeutic interventions. Students are required to read journal articles and book chapters as well as participate in classroom discussions. Students are also required to write several short papers. This seminar course is only open to advanced psychology majors.

SM 251. Special Topics in Cognitive Psychology. (C) staff. Prerequisite(s): PSYC 151. Topics for this course vary each semester. Dept permission required.

SM 260. Special Topics in Personality. (C) Staff. Prerequisite(s): PSYC 160. Topics for this course vary each semester. Dept permission required.

SM 262. Special Topics in Abnormal Psychology. 262-301: Anxiety and the Brain; 262-302/303: Positive Interventions. (C) PSYC 262-301: Gillihan; PSYC 262-302: Schueller; PSYC 262-303: Parks. Prerequisite(s): PSYC 162. Special note: for PSYC 262-301, an additional course from the Neural Basis of Behavior list is required. Topics for this course vary each semester.

SM 270. Special Topics in Social Psychology. (C) Staff. Prerequisite(s): PSYC 170 or permission of instructor. Please note: for 270-304 (Aktipis-Warner) there is no prereq and no permit needed. Topics for this course vary each semester.

SM 280. Special Topics in Developmental Psychology. (C) Staff. Prerequisite(s): PSYC 181, PSYC 180, or instructor permission. Department permit required.

Topics for this course vary each semester.

SM 311. (VLST212) Research Experience in Perception. (C) Staff. Prerequisite(s): PSYC 111 and one semester of statistics. Dept permission required.

Experiments examining auditory and visual perceptual processing. Exercises examining stimulus and response measures, replications of classic perceptual experiments on contrast masking and pattern/object perception.

SM 321. Research Experience in Learning. (C) Rescorla. Prerequisite(s): PSYC 121 and one semester of statistics, or permission of instructor. Dept permission required.

Students will conduct research in elementary learning processes. Initially the class will meet as a whole to conduct some present experiments which provide an initial basis for a short report. Then students will work in small groups to formulate, conduct, and write up projects of their own.

SM 327. Research Experience in Behavioral Neuroscience. (C) Grill. Prerequisite(s): PSYC 127 and one semester of statistics. Dept permission required.

Students conduct supervised experiments on the physiological basis of motivation. Topics will be chosen from the intersection of issues in taste and nutrition, such as the ability of animals to take in specific food substances needed to maintain themselves. Class meets for lecture, discussion, and conduct of an experiment.

SM 331. Research Experience in Animal Behavior. (C) White. Prerequisite(s): Psychology 131 or BIBB 231 or BIOL 231 and one semester of statistics. Dept permission required.

Students will learn how to study scientifically the behavior of animals. We will take an evolutionary and ecological approach to studying several different types of behavior across different species in both laboratory and field environments. Students will gain experience designing and conducting animal behavior experiments as well as analyzing results and presenting their findings.

SM 335. Research Experience in Psycholinguistics. (C) Dahan. Prerequisite(s): PSYC 135 or PSYC 151, and one semester of statistics. Dept permit required.

This course will focus on how to conduct research in psycholinguistics, and more precisely, on the comprehension of spoken language, using behavioral methods such as the monitoring of eye movements during listening. Students will be involved in designing an experiment, constructing materials, testing, as well as analyzing the data.

349. Research Experience in Cognitive Neuroscience. (C) Staff. Prerequisite(s): PSYC 149 and one semester of statistics. Dept permission required.

Brain imaging, particularly functional magnetic resonance imaging (fMRI), is a promising state-of-the-art tool used to study specialized human brain regions that are involved in cognitive functions. In the first half of the course, we will review the basics of the fMRI technique, current experimental design and analysis strategies, and discuss the strengths and weaknesses of neuroimaging as a tool for cognitive neuroscientists. In the second half of the course, students will form into groups and propose a new experiment. As a team, you will program the experiment, acquire the fMRI data, and analyze your data. Each student will submit a paper describing the project and each group will give a presentation of their research.

SM 351. Research Experience in Cognitive Psychology. (C) Trueswell. Prerequisite(s): PSYC 151, and one semester of statistics. Dept permission required.

Students will explore topics in human memory, knowledge representation, attention, and language processing. Laboratory exercise will include replications of major experiments and

novel extensions permitting students to develop psychological hypotheses and the experimental rationale to test them.

SM 353. Research Experience in Decision Making. (C) Baron or Dana. Prerequisite(s): PSYC 153 or 165, and one semester of statistics. Dept permission required.

In this course students will, in consultation with the instructor, design, carry out, and write up original research on topics in judgment and decision making. The emphasis will be on describing systematic deviations of human behavior from theories of rational choice (decision theory and game theory). Topics include heuristics and biases in probability judgment, choice under uncertainty, and intertemporal choice.

SM 362. Research Experience in Abnormal Psychology. (C) (Parks): Psychological interventions for increasing happiness. (Hunt): Psychopathology. (Chambless): Close Relationships. Prerequisite(s): PSYC 162 and one semester of statistics. Open only to junior and senior psych majors. PSYC 362 with Hunt requires instructor permission and an application essay. Dept permission required. Topics will vary each semester.

SM 364. Research Experience on the Theory of Persons. (C) Duckworth. Prerequisite(s): PSYC 160, PSYC 166, or PSYC 170 and one semester of statistics. Dept permission required.

What predicts professional and academic success? In this course, students will work together in groups of 2 to 4 on research projects directed at this question. In particular, we will test the importance of personality, motivation, interest, and ability to achievement in high school, in college, and in business. The course members meet 6 hours per week (formally and informally); an additional 4 hours of work per week will be completed outside of the lab.

SM 370. Research Experience in Social Psychology. (C) Staff. Prerequisite(s): PSYC 170 and one semester of statistics. Dept permission required.

Students will design, conduct, and report on an empirical question in social psychology. The research may involve experiments, content analysis, cross-cultural comparison, interviewing, observations, or other methods. Class discussions will help students formulate their projects and provide an opportunity for reports.

SM 374. Research Experience in Evolutionary Psychology. (C)

Kurzban. Prerequisite(s): PSYC 170 and one semester of statistics. Dept permission required.

In this course students will in consultation with the instructor, develop hypotheses and then design, carry out, and write up original research in evolutionary psychology.

Topics will focus on adaptations for social life, including: social categorization, cooperation, social exclusion, mating, friendship, and so on.

SM 386. Research Experience in Developmental Psychology. (C)

Staff. Prerequisite(s): PSYC 181 and STAT 111 (or its equivalent), or instructor permission. Department permit required. Topics for this course vary each semester.

399. Individual Empirical Research. (C)

Dept permission required.

Individual research involving data collection. Students do independent empirical work under the supervision of a faculty member, leading to a written paper. Normally taken in the junior or senior year.

SM 400. Senior Honors Seminar in Psychology. (C)

Thompson-Schill. Prerequisite(s): acceptance into the Honors Program in Psychology. Dept permission required.

Open to senior honors candidates in psychology. A two-semester sequence supporting the preparation of an honors thesis in psychology. Students will present their work in progress and develop skills in written and oral communication of scientific ideas.

SM 407. (BIBB451) Behavioral Genetics. (C)

Price. Prerequisite(s): Basic statistics or permission of instructor.

This course will cover basic principles of human and animal behavior genetics, including the genetics of normal variation as well as extreme phenotypes represented by behavioral, psychiatric and neurologic disorders. The course will focus on methods necessary to critically evaluate research findings on normal and abnormal human behavior. Animal models will also be reviewed.

421. (BIOL442, INSC575) Neurobiological Basis of Learning and Memory. (C)

Abel/Muzzio. Prerequisite(s): PSYC 121.

This advanced course focuses on the current state of our knowledge about neurobiological basis of learning and memory. A combination of lectures

student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.

SM 431. (BIOL432) Topics in Animal Cognition. (C)

Seyfarth. Prerequisite(s): PSYC 131 or PSYC 133 or BIOL 321/BIBB 231. The aim of this course will be to provide advanced undergraduates with a detailed review of a number of research areas in behavioral ecology. Topics will change each year, and students will be able to take the course more than once.

SM 439. (BIBB460) Neuroendocrinology. (C)

Flangan-Cato. Prerequisite(s): PSYC 109. Formerly PSYC 139. This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.

SM 451. (BIBB431) Animal Communication. (C)

Seyfarth. Prerequisite(s): PSYC 131/BIBB 231/BIOL 231 or permission of the instructor.

This course will review recent research on communication of animals, with particular emphasis on the vocalizations of birds, dolphins, whales, monkeys, and apes. We will consider the neural mechanisms that underlie signals, the information they provide to listeners, and we will examine how communication functions in social interactions. We will also discuss the possible parallels that may exist between the communication and human language.

SM 459. Visual Cognition. (C)

Epstein. Prerequisite(s): PSYC 149 or PSYC 155.

This course examines the interaction of vision with higher-order cognitive processes. In plain terms: once the visual system has recovered a set of surfaces from the surrounding scene, what does the brain then do with that information to make it useful? Possible topics will include: object and face recognition, attention, awareness, mental imagery, spatial cognition, and action. Particular emphasis will be placed on cognitive neuroscientific work that addresses these topics.

SM 473. Neuroeconomics. (C)

Kable. Prerequisite(s): PSYC 149, 153, or 165.

This course will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. A particular focus will be on how evidence about the neural processes associated with choices might be used to constrain economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, reinforcement learning, strategic interactions and games, and social preferences.

474. Cooperation in Groups. (C)

Kurzban. Humans are unique in their abilities to cooperate in large groups of non-kin. In this course, we will explore the evolutionary origins of this phenomenon, and look at relevant theory research in social psychology, anthropology, and economics.

SM 475. (PPE 475) Philosophy, Politics and Economics: Behavioral Law and Economics (Baron). (C)

Baron or Dana. Prerequisite(s): PSYC 165 or PSYC 153 (PSYC 475-401 requires micro-economics in addition to PSYC 165 or 153).

Economic theory has invaded legal scholarship and law schools, in the form of "Law and economics." But the psychology of judgments and decisions has invaded economic theory, showing that people do not follow the classic model of economic rationality. Many legal scholars, such as Cass Sunstein, claim to have started a new field called "Behavioral law and economics," which explores the implications of psychology for legal theory. This seminar will review basic readings in law and economics and then the recent literature on the relevance of psychology. (Baron)

First-Year Graduate Courses**501. (COGS501, LING545) Mathematical Foundations for Language and Communication Science I. (D)**

Liberman. This two-semester sequence will provide basic mathematical modeling and algorithmic tools for interdisciplinary research in animal, human or machine communication, in association with the IRCS IGERT program. Topics include signal processing, statistical modeling and machine learning, information theory, game theory, and formal language theory. The courses will be taught in a laboratory

setting, and will emphasize practical skills as well as basic concepts.

502. (COGS502, LING546) Mathematical Foundations for Language and Communication Science II. (D) Liberman.

This two-semester sequence will provide basic mathematical modeling and algorithmic tools for interdisciplinary research in animal, human or machine communication, in association with the IRCS IGERT program. Topics include signal processing, statistical modeling and machine learning, information theory, game theory, and formal language theory. The courses will be taught in a laboratory setting, and will emphasize practical skills as well as basic concepts.

539. (BIBB585, INSC594, PHYS585) Theoretical and Computational Neuroscience. (M) Balasubramanian.

This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.

SM 600. Proseminar in General Psychology. (C) Staff. Dept permission required.

Choice of half or full course units each sem. covering a range of subjects and approaches in academic psychology.

SM 602. Neuroendocrinology and Neuroendocrine-immunology Proseminar. (K) Flanagan-Cato. Prerequisite(s): Permission of course director.

Neuroendocrine regulation and interactions with the immune function will be covered. The focus of the lectures will be on in-depth understanding of selected general areas rather than being an exhaustive but shallow overview. Included are core lectures on the neuroanatomy of the hypothalamus and basic concepts of immunology. There will also be group

discussions of groundbreaking, innovative approaches to these fields.

SM 603. (INSC595) Behavioral Neuroscience Prosem. (H) Grill. Fulfills the "Brain" requirement.

Current research on the neural basis of behavior is organized in six subsections: animal communication, sex behavior, circadian rhythms, variety energy and water balance, synaptic plasticity and learning, and communication, addiction. Topics are selected based on excitement surrounding recent research developments. Each topic is analyzed initially at thernal receptors behavioral level, followed by the systems and the cell and molecular control of levels. Throughout the course, attention is paid to the analysis of behavior interesting stereotyped behaviors, e.g., bird song, lordosis, licking,. whose description and neurology has provided insights into the neural basis systems that contribute to overall neural control of behavior. Attention is also paid to the development of understanding of the neuroanatomy of selected neural systems.

SM 604. (INSC592) Cognitive Neuroscience Proseminar. (C) Farah.

Review of what has been learned about the neural mechanisms underlying intelligent behavior in humans and animals. Traditional topic areas of cognitive science are covered, specifically: vision (early vision through object recognition), attention, learning and memory, motor control, planning and problem-solving, and language. Attempts are made to integrate results of different neuroscience approaches to each topic, including the study of human neurological patients, lesion studies in animals, single unit recordings, neural network modelling, and functional imaging techniques.

605. (INSC582, PHRM540) Behavioral Neuropharmacology Proseminar. (C) Lucki and Staff. Prerequisite(s): Permission of course director.

The effects of various drug classes on animal behavior are examined. Behavioral studies identifying the neurochemical mechanisms of action of psychotropic drugs are reviewed. Animal models of neurological and psychiatric illnesses are discussed.

608. (OPIM900) Judgment and Decisions. (C) Baron.

Thinking, judgment, decision making, beliefs, and probability, with emphasis on fallacies and errors.

SM 609. (INSC573) Systems and Integrative Neuroscience. (A) Staff. Fulfills the Brain requirement.

610. (STAT501) Mathematics for Psychologists. (M) Staff. A two-term course.

611. (BSTA550, STAT500) Statistics for Psychologists. (A) Staff.

612. (STAT501) Introduction to Nonparametric Methods and Log-linear Models. (B) Staff.

SM 630. (INSC630) Cognitive Neuroscience of Memory. (C) Staff. Fulfills the Brain requirement.

This course will review the neural mechanisms of learning and memory. Readings will include both seminal and cutting-edge papers on topics ranging from perceptual memory to higher order functions, including working memory, declarative memory, skill learning, and semantic memory. Within each topic we will attempt to integrate the results of different neuroscience approaches, including the study of human neurological patients, lesion studies and single unit recordings in animals, neural network modeling, event-related potentials, and functional imaging techniques.

631. (INSC631) Cognitive Neuroscience of Affect. (C) Farah.

We will survey, and as far as possible, synthesize, three bodies of literature on emotion and the brain, specifically: (1) neuroimaging and pharmacologic studies of emotion and the normal human brain; (2) the neuroscience of affective disorders in humans; and (3) relevant studies of reinforcement and learning in animals.

632. (INSC632) Cognitive Neuroscience of Vision. (C) Epstein.

This course will review the neural basis of visual cognition. Emphasis will be placed on linking cognitive theory to neuroscientific methods. Topics will include object and face recognition, scene perception, visual attention, mental imagery, and visual awareness.

699. Individual Research for First-Year Graduate Students. (E)

SM 705. (INSC705) Neuroethics. (C) Farah. Dept permission required.

Neuroscience is increasingly affecting all aspects of human life, from the relatively familiar medical applications in neurology and psychiatry, to new applications in

education, business, law, and the military. Today's neuroscience graduate students will be among the scientists, citizens, and policymakers who will lead society through the maze of decisions regarding the appropriate uses of neuroscience. This course provides a survey of the key ethical, legal, and social issues at the intersection of neuroscience and society. It will include a combination of traditional classroom lectures, discussion and debates, as well as an online component coordinated with a course at Wisconsin's Neuroscience and Public Policy graduate program.

SM 715. Teaching Seminar. (C) Rozin.
Prerequisite(s): For graduate students in Psychology.

This course is designed to aid graduate students in developing fundamental teaching skills. The focus will be on lecturing, applicable to job talks as well as classroom lectures, but there will also be some attention to discussion sections and handling of questions.

Seminars

SM 703. Special Topics in Psychology. (C) Staff.

SM 704. Research Methods and Statistical Procedures for Social and Clinical Sciences. (C) Staff.

This course has three primary objectives: 1) developing criteria and strategies for strong inference of causal relationships in social and clinical psychology research; 2) examining the array of research designs employed in the social/clinical sciences together with the threats to internal and external validity associated with each; 3) learning and applying statistical analytical methods appropriate for questions in the social/clinical sciences. The course will employ a seminar format and a project-oriented approach to learning. Students will be encouraged to utilize examples from their own research programs in applying the design and analysis concepts covered in the course.

SM 709. Special Topics in Clinical Psychology. (C) Staff.

In this seminar we will review current evidence regarding etiology of major psychosomatic disorders. We will pay specific attention to current explanatory models that invoke psychological contribution to disease.

SM 711. Basic Problems in Developmental II. (C) Staff.

SM 721. Special Topics in Learning. (C) Rescorla.

Advanced topics in elementary learning processes. The focus will be on two topics of particular interest to students interested in clinical psychology: avoidance learning and experimental extinction. Both have received substantial experimental and theoretical analysis in the animal laboratory. Both have important implications for the treatment of certain psychological disorders. Students will read the original literature for seminar discussion.

SM 727. (INSC727) Electronics for Scientists. (B) Andrews-Labenski.

Introductory electronics for scientists. A basic theory and practicum course covering the principles of direct and alternating current, test equipment, semiconductor devices, analog and digital circuits, computer interfacing, and signal processing.

SM 730. Special Topics in Motivation. (C) Staff.

SM 733. (INSC588) Special Topics in Vision. (C) Staff.

SM 736. Special Topics in Language. (C) Staff.

SM 739. Special Topics in Perception. (C) Staff.

SM 745. (INSC583) Special Topics in Cognitive Neuroscience. (C) Staff.

750. (INSC576, PHRM550) Special Topics in Neuropsychopharmacology. (C)

Lucki and Staff. Prerequisite(s): Permission of Instructor.

Biological issues relevant to neuropsychiatric illnesses are covered in detail in four sections. The first section covers clinical aspects of major psychiatric disorders and includes some contact with patients. The second section presents the neuroanatomy of the limbic system. In the third section, emphasis is on the mechanisms of action of psychotropic drugs, including antidepressants, antipsychotics, anxiolytics, and stimulants. The final section covers information relevant to understanding biological processes that may be abnormal in neuropsychiatric illnesses, such as stress, sleep, and circadian rhythms, as well as quantitative genetics.

SM 751. Special Topics in Cognitive Psychology. (C) Staff.

SM 757. Language and Communication Sciences Research Seminar. (M) Trueswell.

SM 769. Special Topics in Physiological Psychology. (C) Staff.

SM 770. (PSCI770) Special Topics in Social Psychology. (C) Staff.

SM 810. Psychodiagnostic Testing. (A) Staff.

SM 811. Psychodiagnostic Interviewing. (A) Staff.

SM 815. Introductory Practicum. (B) Staff.

SM 820. Advanced Practicum. (C) Staff.

Intensive studies of single individuals including interviews, tests, and experiments; also clinical experience at appropriate community agencies.

999. Individual Study and Research. (C)

PUBLIC HEALTH STUDIES (MD) {PUBH}

L/R 500. (NURS570) Introduction to Public Health. (A) Nguyen & Schmitz.

This course will provide a topical overview of the field of public health and provides grounding in the public health paradigm. Through a series of lectures, students will learn about the history of public health, about the core public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental health, policy and management as well as prevention of chronic and infectious diseases and injuries. Other lectures include ethics and law in public health, context analyses (specifically sociographic mapping and urban health), health promotion and disease prevention paradigms.

501. Introduction to Biostatistics. (A)

Grasso. This course is a series of lectures and sessions designed to provide a working knowledge of the fundamental concepts of biostatistics. Topics covered include probability, estimation, confidence intervals, hypothesis testing including nonparametric techniques, correlation, regression, analysis of variance, and analysis of covariance. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of statistical software as well as providetime for review of course material.

502. (NURS500) Introduction to the Principles and Methods of Epidemiology. (B) Schmitz.

Epidemiology is a combination of a subject matter science and research methodology. Introduction to Principles and Methods of Epidemiology focuses on the latter component. The course introduces study designs applied to human populations, including randomized trials and four types of observational studies (cohort, case-control, cross-sectional, ecological). Because cause- and-effect relations are at the heart of epidemiologic research, numerous related topics are taught, including causal inference, and bias.

503. Environmental and Occupational Health. (B) Emmett.

This course will provide a broad introduction to the scientific basis of occupational and environmental health. Content will address issues in the ambient, occupational and global environments as

well as the tools, concepts and methods used in environmental health.

504. Behavioral and Social Sciences in Public Health. (A) Blank.

This course provides students with a solid foundation in behavioral and social science theory, research, and interventions as they pertain to public health. Content will provide exposure to a broad range of theories, including the theoretical foundations of social science applications for help-seeking, gender, race, ethnicity and social class. These theories will be discussed using examples of their applications to numerous public health problems including HIV/AIDS, violence, cancer, cardiovascular diseases, obesity, and diabetes.

505. Public Health Policy and Administration. (A) Tsou.

This course is an introduction to health policy and management. It examines both the historical and current state of health policy in America and integrates these concepts within the context of public health practice. We will examine key concepts in understanding US health care organization, financing and delivery, our current political and economic debate on health care reform, examining the role and management issues of public health departments, and case studies in public health policy and management.

506. Methods for Public Health Practice. (B) Holmes.

This is a survey course whose objective is to provide students with greater familiarity in the range of methods essential to public health practice. The course will include data collection and evaluation topics that build upon basic knowledge in epidemiology and biostatistics to include qualitative research, principles and concepts of advocacy, uses of informatics in public health, among others. The course will pick up on emerging needs in public health.

The objectives of the course are: 1. integration and application of public health concepts into methods and practice; 2. exposure to methodological topics and resources not covered or only touched upon in other public health courses; 3. complement the capstone's hands-on approach to evidence-based public health.

507. Ethics, Law and Policy in Public Health. (B) Rosoff.

What is best - or, at least, seems best -- for the public's health is not always consistent with society's view of what is legal, ethical, or good policy. This course introduces key

concepts of legal, ethical, and policy analysis and attempts to demonstrate with current examples how these forces empower, guide, and constrain public health decision-making and actions. The course will combine lecture, Socratic dialogue, and group discussion in an informal setting. The course will feature guest lectures by several distinguished experts from Penn and from other universities.

508. Capstone Experience. (C) Cannuscio.

The Capstone is an integrating experience required for graduation in the Master of Public Health Program. In two Capstone seminars, students will have an opportunity to synthesize the knowledge and public health competencies they have developed through their coursework. Capstone students will apply their knowledge and skills to public health problems in a chosen area of interest. They will engage their peers in scholarly discussion, drawing from relevant scientific literature and public health experience in order to begin to develop a common grounding and identity as public health professionals. The Capstone Experience incorporates two semester-long seminars and a mentored project that involves fieldwork in a community setting. Over the course of the Capstone Experience, students will develop, propose, revise, implement, and present their projects. As their projects successfully come to fruition they will also advise their junior colleagues still in the proposal stage.

509. Injury and the Public's Health. (K) Branas.

This course will offer students an introduction to the relatively new field of injury and violence prevention. As a major cause of death and disability throughout the world, injury is a leading public health problem. Prominent types of injuries to be discussed include those relating to motor vehicles, falls, and firearms. Students will finish with a basic understanding of injuries and the many issues involved in preventing injuries.

512. Injury Mechanisms: Incorporating Injury Mechanics into Injury Control. (A) Winston.

An integrated approach to injury control research will be discussed. Basic biomechanical engineering principles important in trauma research will be presented by lecture, demonstration, video, and references. Methods for incorporating these concepts into injury epidemiological

studies will be discussed. References will be provided.

513. Applying Sociology to Public Health Research and Practice; Subtitle: Social Determinants of Public Health. (L) Morssink.

Public health research and practice can be greatly enhanced by using sociological perspectives when formulating questions, hypotheses, programs and policies. After an introductory lecture on some major analytical tools in sociology, the class will use the concept of "the sociological imagination" in five discussions, each addressing a topic that most public health workers and researchers face.

516. Public Health Genetics. (A) Hughes-Halbert.

This is a lecture course that will provide a topical overview of issues in public health genetics. The purpose of this course is to introduce students to the complex issues involved in applying and integrating genetic technology and information into public health. Through a series of lectures and observational experiences, students will learn about the history of public health genetics, the role that genetics play in public health, and issues involved in applying genetic technology in clinical and research settings. Lectures will also address the ethical, legal, and social implications of genetic testing in populations and research designed to identify susceptibility genes in diverse ethnic and racial groups.

517. (CPLN622) Introduction to the Epidemiologic Study of Geography and Health. (B) Wiebe.

This course will provide an introduction to GIS in public health research and practice. Through a series of lectures and labs students will explore theories linking health and the environment, spatial analysis and spatial epidemiology, and applications of GIS-related data collection and analysis.

L/R 519. Introduction to Global Health. (A) Nathanson. Prerequisite(s): Undergraduates must have completed HSOC-010-401.

This course presents an overview of issues in global health from the viewpoint of many different disciplines, with emphasis on economically less developed countries. Subjects include: millennium goals; measures of disease burden; population projections and control; environmental health and safe water; demography of disease and mortality; zoonotic infectious diseases; AIDS and HIV prevention; vaccine utilization and impact; eradication of polio virus; chronic diseases; tobacco-

associated disease and its control; nutritional challenges; social determinants of global health; harm reduction and behavioral modifications; women's reproductive rights; health economics and cost-effective interventions; health manpower and capacity development; bioethical issues in a global context.

520. Topics in Public Health Economics. (L) Kraut-Becher.

This course uses basic economic concepts, principles and theories to examine selected topics relevant to the public health sector of the United States. Issues pertinent to the government in its provision, financing and regulation of healthcare will be addressed. Economic evaluation techniques often used in public decision-making will be reviewed. In addition, infectious diseases and risky and addictive behaviors will be examined from an economics perspective. Discussions of economic theories and methods for exploring each topic will be accompanied by examples drawn from existing research literature.

521. Program Evaluation in Public Health. (A) Salzer.

This course introduces students to theoretical and practical aspects of program evaluation. Students learn about the application of data collection skills to all phases of developing a public health program or service innovation, from needs assessment to analysis of findings to implementation of changes based on results. Students learn to appreciate how these skills can be used as practical implementation, including taking a reflective practice approach, ensuring equity and fairness in program delivery (i.e., combating disparities), and generally promoting public health through effective and efficient programmatic efforts. This applied course provides students with practical data collection experiences as well as requiring an in-depth evaluation project and report.

522. Critical Appraisal of Occupational and Environmental Health Literature. (L) McKenzie.

This course provides a forum for the student to critically appraise the literature using a systematic approach to reading and critically evaluating journal articles from the occupational and environmental medicine as well as the public health literature. Through this process, elements such as study hypothesis, study design, selection of the study population, and evaluation of the internal and external validity of an article will be examined. Methods learned in this course can be used as a framework to critically evaluate medical research articles in other disciplines. At each session, the article, pre-approved by the course director, will be presented by a student (occupational medicine resident, master's student or doctoral student). The article will then be discussed by all members of the group. The session will be moderated by the course director and other faculty will be present to discuss the article. The course will allow discussions of methodological, regulatory, research, ethical, or health issues raised by the article presented and also allow the group to review statistical methods.

523. Disease Detectives and Social Engineers. (L) Cannuscio.

Our success as public health researchers, practitioners, and leaders often depends on our ability to think critically and act rapidly to address population health threats. This course will examine the fundamental challenges of public health action. Using a case-based method, the course will probe true public health emergencies, considering the information available to scientists; public access and reaction to that information; and the nature/scope/consequences of interventions levied to address the public health threat. The course will tackle cases from several areas of infectious and social epidemiology, such as the following: outbreak investigation (using a cholera example), lay epidemiology (examining cancer clusters), surveillance and rapid response (based on flu policy), and the difficulty of intervening to address social determinants of health (probably looking at poverty/SES and race/racism). Students in the class will develop key skills in critical epidemiological reasoning. In all cases, the emphasis will be on evaluating the empirical base for public health decision-making, with attention given to public health goals and metrics used to evaluate success in public health interventions.

524. Ameliorating Disparities in the Public's Health. Morssink.

This course is a follow-up on the provost-sponsored seminar series that ran from 2003 to 2006. The title of the first seminar in 2003, Ameliorating Health Disparities: An Exercise in Futility or a Tool for Real Social Change, captures the reason for providing this course. Health disparities are a fact of social and professional life. Addressing Health Disparities was the second overarching goal of Healthy People 2010. Most policy initiatives toward eliminating health disparities have failed to close these gaps in population health policies. Preparation work for Healthy People 2020 will highlight this problem. The course will provide the students with the tools necessary to make ameliorating health disparities part of their career, whether in advocacy, program management, scientific inquiry or education. The course covers methods, reasoning, problem definition, scope descriptions, lessons learned, and pathways for implementing better disparity outcomes in PH programs.

525. Developing Effective Public Health Programs Using a Human Rights Based Approach. Voet.

This course will engage students in discussion of how a human rights approach, informed by international human rights declarations and covenants as well as gender theory, can more comprehensively inform the development of a variety of public health programs. Specifically, the class will discuss how health policies, programs and practices can impact on human rights (e.g. mandatory reporting of certain communicable diseases, quarantine, accessibility of services, etc.); how violations of human rights affect health (e.g. torture, discrimination, etc.) and how health and human rights are ultimately inextricably linked and programming for public health must use a framework that ensures a balance of interests between the two disciplines.

526. Anthropology and Public Health. Frances Barg. Prerequisite(s):

PUBH 502. In this course, we examine three types of relationships between anthropology and public health. Anthropology and public health will examine complementary and competing concepts fundamental to each discipline and ways that these concepts make it essential and difficult for the disciplines to work together. Anthropology on public health takes a critical look at assumptions in public health praxis. Anthropology in public health will focus on ways that anthropology theory and methods inform the practice of public health. Using these three approaches, we will examine topics in public health such as mental health, health promotion/disease prevention communication, cancer disparities, reproductive health, violence and infectious disease. Students will learn and apply anthropologic research methods to these problems.

527. Media, Advocacy and Public Health. Stanback Stevens.

This course will examine the ways in which the media can be used as a tool to improve health. It will also investigate the ways in which the media has had a negative impact on health behaviors in the population. Looking at specific topics like tobacco, food and nutrition, and HIV/AIDS, we will explore the intersection of media, advocacy, advertising and entertainment and the impact of media broadly on health behavior and society. The course will also provide students the opportunity to practice strategically working with the media to address health problems.

SM 528. (ANTH623) Class, Inequality and Health: Ethnographic Perspectives. Philippe Bourgois.

This seminar examines anthropological approaches to the concept of class and social inequality through a close reading of a dozen ethnographies that deal with a broad definition of health, illness, and social suffering. Readings span many of the theoretical, political, sub-disciplinary and area studies debates in anthropology and the larger fields of poverty, social inequality, international development, violence studies, science studies, governmentality, and social policy interventions over the past century.

530. (NURS677) Environmental Toxicology: Risk Assessment and Health Effects. McCauley, L.

Undergrads need Permission.

This course presents general principals of toxicology and the disposition of toxins in

the body. Case studies of the effects of environmental and occupational toxins on individuals will be analyzed. This course is designed for students who desire a strong foundation in toxicological concepts and principals and provides an overview of major toxins in our environment and their association with human health.

532. (EPID803) Biostatistics in Practice. (B)**533. (NURS678) Exposure Assessment and Safety in the Workplace. (B)** McCauley, L.

This course is designed to present an overview of the interdisciplinary nature of monitoring and controlling workplace hazards. Didactic course content on the major factors contributing to occupational health hazards and safety will be presented along with discussion of regulatory and site-specific interventions to promote worker safety and health. Five site visits will be conducted to apply the principles of workplace assessment and to discuss strategies that are used for hazard recognition and evaluation in different work environments. Experts in workplace hazard recognition and control will share current challenges and priorities from their worksites.

SM 534. (CRIM415, CRIM615, HSOC471) Fatal Violence in the U.S. (M) Sorenson.

The purpose of this course is for students to gain an understanding of patterns of fatal violence and population and prevention approaches to violence. The course will focus on policies and regulations related to firearms, the primary mechanism by which violence-related fatalities occur in the U.S. We will address the life span of a gun, from design and manufacture through to use. In addition, we will address key aspects of the social context in which firearms exist and within which firearm policy is made. The course, by design, is inherently interactive. Students are expected to attend all class sessions, participate in discussions, and to question assumptions. Each class session will include discussion.

SM 535. (ANTH625) Urban Poverty and Violence. (M) Bourgois. This seminar examines anthropological approaches to poverty and violence through a close reading of eight ethnographies. Readings span many of the theoretical, political, sub-disciplinary and area studies debates in anthropology and the larger fields of poverty, social inequality, international development, and violence studies over the past century. My hope is to bring the subjects of urban poverty, violence, social suffering and a critique of neoliberal governmentality into the center of the disciplines of anthropology and public health specifically, and the social sciences, humanities and medicine more broadly. In the seminar we will be bringing students from anthropology, and other social science and humanities disciplines in dialogue with students in public health, science studies, and clinical medicine.

SM 536. (SWRK799) Mental Health Policy. Hadley, Evans. The focus of this course will be on policies and policy issues that define and influence the care and treatment of persons with mental illness from colonial times to the present. The course will examine the primary social, political, economic, legal and philosophical forces that have influenced mental health delivery in the United States over different time periods and the resulting organizational, financial, administrative, and management structures of mental health service delivery systems. The interface with other major service delivery systems, including welfare, criminal justice, primary health care, and social security will be addressed. Topics to be included will be deinstitutionalization, managed care, psychiatric rehabilitation, cultural issues and the disparities of care, children's treatment and services, professional certification and roles, and family and consumer advocacy. Major legal cases and legislation relevant to these topics will be covered. This will be an interdisciplinary course taught by faculty trained in psychology, social work, psychiatry, law, and health policy and management. It is open to masters and doctoral students.

537. (HPR 610) Evidenced-Based Health Pol.

597. History of Public Health. Barnes. This masters-level seminar examines the health of human populations and the science of improving it in historical perspective. Special attention is given to the city of Philadelphia as a living laboratory of public health in the past and present. Lectures, readings and discussions cover various societies' attempts to respond to and prevent disease since antiquity. Case studies focus on the roots of contemporary public health knowledge and policy in the nineteenth and twentieth centuries. Topics include responses to epidemics, the Bacteriological Revolution, racial and economic disparities in health, the development of policy infrastructures, and global health. Periodic field trips will be arranged to public health-related historical sites in Philadelphia and vicinity.

598. International Immersion Experience in Public Health. (L) Nguyen. This independent educational experience seeks to provide motivated students with the opportunity to expand their knowledge in global health through focused experiential learning at international sites that provide direct public health services. Such learning will allow students to gain real-world experience concerning the core competencies of public health (health policy, behavior/ social sciences, environmental health, epidemiology, or biostatistics).

599. Independent Study in Public Health. (C)

REAL ESTATE (WH) {REAL}

204. (LGST204, LGST804, REAL804) Real Estate Law. (C) Phillips.

This course examines the fundamentals of real estate finance and development from a legal perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments.

206. (BPUB206, BPUB772, REAL772, REAL972) Urban Public Policy & Private Economic Development. (B) Pack, Voith.

This course considers the pervasive interaction between real estate developers and government. Governments influence real estate development in many ways: through zoning laws, taxes, public expenditures, impact fees, infrastructure, building codes, environmental regulations, to name just a few. Much of the time in the course is spent understanding the effect on residential and commercial real estate development of these government interventions. There are lectures, formal class discussion, visitors from private developers and policy officials. Prerequisite: Microeconomics course with a grade of B or better.

209. (FNCE209) Real Estate Investment: Analysis and Financing. (C) Ferreira, Saiz, Sinai, Wong, Wong Bucchianeri. Prerequisite(s): FNCE 100 & STAT 101-102.

This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate

the impact of more complex financing and capital markets tools used in real estate. There are case studies and two midterms, (depending on instructor).

215. (REAL724) Urban Real Estate Economics. (C) Wachter. Prerequisite(s): FNCE 100 & 101.

Urban Real Estate Economics uses economic concepts to analyze real estate markets, values and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and an optional second exam.

230. (BPUB230, BPUB773, FNCE230, FNCE730, REAL730) Urban Fiscal Policy. (A) Inman. Prerequisite(s): FNCE 101.

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent financial crises, local services and taxes as important determinants of real estate prices, the infrastructure crises, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

236. (BPUB236) International Housing Comparisons. (B) Wachter. Prerequisite(s): ECON 1, ECON2, FNCE 101.

This course focuses on international comparisons of housing finance systems and housing market outcomes. This includes comparative analyses of the economic factors that underlay housing market differences and similarities. Changing housing market institutions and policies in previously socialist economies and newly emerging countries are examined. The course also addresses integration of global financial markets for national housing markets. International speakers present their views on institutional innovations and the policy setting process in their respective markets. Various

approaches to understanding these issues will be used, including readings, written assignments, and group projects.

240. (REAL840) Advanced Real Estate Investment and Analysis. (B) Gyourko. Prerequisite(s): REAL 209.

This course is designed for majors in Real Estate, but is also open to finance-oriented students who wish a deeper analysis of real estate investment and investment analysis issues than that offered in REAL/FNCE 209. The class will contain a mixture of lectures, guest speakers and case discussions. Academic research is paired with recent industry analysis of key issues in order to marry sound theory and empirical results with current events and practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lectures from industry professionals who will focus on a specific application of the principles introduced in the lectures.

321. (ARCH768, REAL821) Real Estate Development, (see REAL 821). (B)

399. Independent Study. (C) Staff.

All independent studies must be arranged and approved by a Real Estate department faculty member with the exception of the Seevak Research Competition.

Seevak Student Research Seminar:

This class meets in the Spring semester to analyze how to conduct research in the real estate market - where to find data; how to critique research; how to frame research questions; how to write a business research report; how to present a business research report. Topics are provided each year. For more information regarding the Seevak Competition see the Real Estate Department's website: <http://real.wharton.upenn.edu>

721. (FNCE721, FNCE944, REAL944) Real Estate Investment: Analysis and Financing. (C) Ferreira, Saiz, Sinai, Wong. Prerequisite(s): FNCE 601.

This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and

capital markets tools used in real estate. There are case studies and two mid-terms, (depending on instructor).

724. (REAL215) Urban Real Estate Economics. (C) Wachter. Prerequisite(s): MGEC 621, Managerial Economics.

Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam.

730. (BPUB230, BPUB773, FNCE230, FNCE730, REAL230) Urban Fiscal Policy. (A) Inman. Prerequisite(s): MGEC 621.

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crises, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

772. (BPUB206, BPUB772, REAL206, REAL972) Urban Public Policy & Private Economic Development. (B) Pack, Voith.

This course considers the pervasive interactions between real estate developers and government. Governments influence real estate development in many ways: through zoning laws, taxes, public expenditures, impact fees, infrastructure, building codes, environmental regulations, to name just a few. Much of the time in the course is spent understanding the effect on residential and commercial real estate development of these government interventions. There are lectures, formal class discussion, visitors from private developers and policy officials. Prerequisite: Microeconomics course with a grade of B or better.

804. (LGST204, LGST804, REAL204) Real Estate Law. (C) Phillips.

This course examines the fundamentals of real estate finance and development from a legal perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments.

821. (ARCH768, REAL321) Real Estate Development. (B) Nakahara. Prerequisite(s): REAL/FNCE 721 & REAL/LGST 804.

This course evaluates "ground-up" development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as "specialty" uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process.

840. (REAL240) Advanced Real Estate Investment and Analysis. (B) Gyourko. Prerequisite(s): REAL/FNCE721.

This course, is designed for majors in Real Estate, but is also open to finance-oriented students who wish a deeper analysis of real estate investment and investment analysis issues than that offered in REAL/FNCE 721. The class will contain a mixture of lectures, guest speakers and case discussions. Academic research is paired with recent industry analysis of key issues in order to marry sound theory and empirical results with current events and

practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lectures from industry professionals who will focus on a specific application of the principles introduced in the lectures.

SM 890. (REAL390) International Real Estate Comparisons (1/2 semester). (A) Linneman.

As a truly non-U.S. focused course, we explore the differences and similarities in real estate markets in a variety of countries. These real estate markets are examined against their investment structures, risk, financial markets, and economic, political, social and cultural backdrops. The course particularly explores international investment risks and opportunities. Countries examined include France, Germany, the United Kingdom, Latin America, Eastern Europe, Japan and Southeast Asia. Format: This course requires the interaction of faculty lectures, student presentations, case analyses, and leading industry speakers. Students must read the Economist each week and the Financial Times daily.

891. (REAL396) Real Estate Entrepreneurship (1/2 Semester). (A) Linneman.

Are you an entrepreneur? This half semester mini-course exposes MBA students (and approved undergraduates to this question). In addition, it evaluates entrepreneurial opportunities, structures, investment decision making, and risks which are present in commercial real estate markets. This course focuses on identifying realistic opportunities, how to develop the concept, identifying and mitigating risks, raising capital, and exiting. But most importantly, it allows for self-evaluation of the student's entrepreneurial tendencies.

The course consists of lectures by the professor, case discussions, and guest lectures by leading entrepreneurs.

899. Independent Study. (C) Staff.

All independent studies must be arranged and approved by a Real Estate Department faculty member with the exception of the Seevak Research Competition.

Seevak Student Research Seminar: This class meets in the Spring semester to analyze how to conduct research in the real estate market, where to find data, how to critique research, how to frame research questions, how to write a business research report, how to present a business research report. Topics are provided each year. For further information regarding the Annual

Seevak Research Competition see the Real Estate department's website:
<http://real.wharton.upenn.edu>

SM 900. Real Estate Proseminar. (C)
Staff.

Real estate is a rapidly changing and evolving field. Traditional course offerings are not always able to incorporate the most recent advances in the many areas that make up the field of real estate. In this course, the participants - both faculty and students - research and present current topics and recent advances in real estate. The content will vary depending on the participants' interests and areas of expertise, but will typically cover urban economics, spatial issues, the economics of housing and commercial real estate markets, and real estate finance and investment.

This course is intended to expand students' awareness of current topics in real estate and to prepare them to conduct their own academic quality research. The proseminar is organized as a series of lectures by faculty and students on topics of their own choosing. These lectures may involve well-known areas of knowledge, research, and methodology, as well as subjects currently under study. The main course requirements are preparing and presenting a series of lectures on a real estate topic (subject to the organizing faculty member's approval) and writing a research proposal that describes a workable project building upon or extending one of the topics covered in the course.

944. (FNCE721, FNCE944, REAL721) Real Estate Investment: Analysis and Financing. (C) Ferreira, Saiz, Sinai, Wong, Wong Bucchianeri. Prerequisite(s): FNCE 601.

This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format

with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two mid-terms, (depending on instructor).

All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.

945. Urban Real Estate Economics. (C) Ferreira. Prerequisite(s): MGEC 601.

See Applied Economics Ph.D. Program Prerequisites. This course covers fundamental and cutting-edge topics in urban economics and real estate as well as the most important econometric issues that arise in the estimation of urban economics and real estate models. The first part of the course focuses on the application of modern econometric methods to analyze empirical questions in the broad urban economics field, which includes topics from public economics and local finances, such as household sorting and valuation of public goods. This part of the course is especially concerned about dealing with non-experimental data, and also provides a guide for tools that are useful for applied research. The second and third parts of the course examine the economic modeling and intuition of a range of topics in urban economics and real estate, such as spatial equilibrium, supply and demand of space, housing prices and cycles. In addition, special emphasis is given to how the understanding of economic theory and institutions can help any empirical analysis. At the end of the course students should have a firm grasp of theory and econometric tools that lead to convincing empirical applications.

All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.

972. (BPUB206, BPUB772, REAL206, REAL772) Urban Public Policy & Private Economic Development. (B) Pack, Voith.

This course considers the pervasive interactions between real estate developers and government. Governments influence real estate development in many ways: through zoning laws, taxes, public expenditures, impact fees, infrastructure, building codes, environmental regulations, to name just a few. Much of the time in the course is spent understanding the effect on residential and commercial real estate development of these government interventions. There are lectures, formal class discussion, visitors from private developers and policy officials. Prerequisite: Microeconomics course with a grade of B or better.

All PhD students will be expected to complete a research paper in addition to the examination requirements.

973. Urban Fiscal Policy. (A) Inman. Prerequisite(s): MGEC 621.

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.

990. Masters Thesis. (C)

999. Independent Study. (C)

RELIGIOUS STUDIES (AS) {RELS}

The Study of Religion in General

L/R 001. Religions of Asia. (C) History & Tradition Sector. All classes. Fleming.

This course will introduce the major religions of South and East Asia, including Hinduism, Jainism, Confucianism, Shinto and Buddhism. We will focus on the emergence of these traditions and their interactions with one another, exploring their myths, rituals, art, poetry, and philosophy.

002. (JWST122) Religions of the West. (C) History & Tradition Sector. All classes. Staff.

Introduction to Judaism, Christianity, and Islam, the three major traditions that originated in the Middle East. Attention to sacred scriptures, historical development, and modern expressions.

L/R 003. (CLST242, COML242) Religion and Literature. (C) Arts & Letters Sector. All Classes. Matter.

A consideration of how great works of literature from different cultural traditions have reclaimed and reinterpreted compelling religious themes. One religious tradition will be emphasized each time the course is taught.

005. (FOLK029, GSOC109) Women and Religion. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Comeau.

This course will look at issues of gender in Hinduism, Islam, and Christianity. By using historical, psychoanalytical and anthropological tools, we will explore the various ways in which religion shapes gender roles and vice-versa. Aspects considered will include the representation of the divine, the role of women in religious institutions, and rules regarding the human body, marriage and sexuality. We will also take into consideration contemporary women's self-representation in religious literature, art, and film.

L/R 006. Religious Violence and Cults. (A) Society Sector. All classes. Staff.

Since September 11, 2001, America has become more aware than ever that there is a connection between religion and violence. But what is it? Why do religious people embrace violence? Are all cults prone to

violence? And do terrorists tend to belong to cults? This course will introduce students to representative terrorist groups from five different religious traditions and to cults that have taken the path of group suicide. We will examine a number of ways to understand religious terrorism, religious suicide, and cult affiliation in general.

007. (AFRC001, HIST007) Introduction to Africana Studies. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Staff.

The aim of this course is to provide an interdisciplinary examination of the complex array of African American and other African Diaspora social practices and experiences. This class will focus on both classic texts and modern works that provide an introduction to the dynamics of African American and African Diaspora thought and practice. Topics include: What is Afro-American Studies?; The History Before 1492; Creating the African Diaspora After 1500; The Challenge of Freedom; Race, Gender and Class in the 20th Century; From Black Studies to Africana Studies: The Future of Afro-American Studies.

SM 010. Religion in Public Life. (C) Staff.

This seminar is an introduction to several aspects of the hotly debated relation between religion and public life in America. In the first half of the course we will study two books by law professors, one Jewish and the other Christian. Their debate will introduce us to the legal and historical background, and to the continuing challenges of church-state separation in America. The second half of the course will examine the claim that we now live in a "new religious America," one in which the increasing presence of Hindus, Buddhists and Muslims has created a new pluralism and a new set of challenges. We will then consider the argument of one historian that diversity and difference have characterized religious groups in America since at least the 19th century, and that this has resulted in a number of paradoxical social situations. Finally, we will close with a brief look at the claim that there exists in America a "civil religion," one that unites all citizens despite their other religious differences.

014. (NELC046) Myths and Religions of the Ancient World. (B) History & Tradition Sector. All classes. Frame.

This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focussing on the key issues of concern to

humanity: creation, birth, the place of humans in the order of the universe, death and destruction. The course will cover not only the better known cultures from the area, such as Egypt and Mesopotamia, but also some lesser known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example the relationship between religion and magic, and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals and liturgies.

015. (ENGL033) The Bible as Literature. (M) Staff.

Successive generations have found the Bible to be a text which requires--even demands--extensive interpretation. This course explores the Bible as literature, considering such matters as the artistic arrangement and stylistic qualities of individual episodes as well as the larger thematic patterns of both the Old and New Testaments and the Apocrypha. A good part of the course is spent looking at the place of the Bible in cultural and literary history and the influence of such biblical figures as Adam and Eve, David, and Susanna on writers of poetry, drama, and fiction in the English and American literary traditions.

101. Religion and Psychology. (C) Staff.

An introduction to psychological interpretations of religious belief, experience, and behavior. Emphasis upon such major theorists as James, Freud, Jung and Allport. More recent investigations (e.g., psychohistory, stages of religious development, religious roots of psychoanalysis, transpersonal psychologies, parapsychological research) will occasionally be included. No prerequisites.

SM 102. Science and the Sacred. (C) Staff.

An exploration of differences, similarities, and intersections between science and religion. Focus on the relation between scientific paradigms and religious myths; comparison of types of experience in religion and science; critical investigation of efforts to synthesize science and religion in psychology, biology, and physics.

SM 103. Approaches to the Study of Mysticism. (C) Staff.

Introduction to "mysticism" as a subject of academic investigation and to selected representations in various religious traditions. Special attention to problems of definition and historical context.

105. (CINE105) Religion and Film. (C) Staff.

Introduction to different ways in which religion is represented in film. Emphasis upon religious themes, but some attention to cinematic devices and strategies. Although most films studied will deal with only one of the major historical religious traditions (Hinduism, Buddhism, Judaism, Christianity and Islam), the selection will always include at least two of those traditions.

106. Modern Religious Thought. (C) Staff.

Close examination of selected representative writings on religion by modern thinkers (such as Bertrand Russell, Erich Fromm, and Peter Berger), who have been influenced by major issues trends, and developments in twentieth-century philosophy and the social sciences.

SM 201. (SOC1239) Sociology of Religion. (M) Collins.

Classic theory of religion in Durkheim and Weber, as well as contemporary theories of religious movements. Topics include ritual, magic, and mystical experience; religious ethics and salvation beliefs; the dynamics of cults, sects and mainstream churches; origins, expansion and decline of religions; religions and social class; religions and politics. The spectrum of religions in the contemporary United States will be examined, as well as historical comparisons.

SM 202. Topics in Religion and Science. (M) Staff.

Examination of one or two of the areas of controversy in the religion and science debate: creation and evolution, religion and genetic research, creation and cosmology, theories of space and time, mysticism and mathematics, religion and medicine.

SM 204. (PHIL234) Philosophy of Religion. (M) Ross.

Systematic examinations of the nature of religious experiences; proofs of the existence of God; the problem of evil; the relationships of faith and reason; and the possibility of religious knowledge.

L/R 205. (ANTH205, FOLK201) American Folklore. (C) Staff.

American folklore encompasses an astonishing array of cultural groups and artistic forms: African-American oral poetry and Franco-American fiddle tunes, Irish-American songs and Italian-American food, Native American jokes and German-American quilts, ancient old-country recipes and the latest and most bizarre Urban Legend. In this course, we will survey some of the groups that we call "American" and some of the expressive traditions that we call "folklore." We will discuss how these traditions originate, how they develop over time, and especially how they become part of--or remain separate from--American popular culture. Along the way, we will raise important questions about the meanings that folklore holds for "Americans," for smaller cultural groups, and for individuals.

309. Honors Thesis Seminar. (B)

Required of honors majors who choose the research option.

399. Directed Reading. (C)

Students arrange with a faculty member to pursue a program of reading and writing on a suitable topic.

406. (FOLK406) Folklore and the Supernatural. (M) Staff.

Examination of folk beliefs, witchcraft, healing, divination, and spirit phenomena in the context of folkloristic, anthropological, psychological, and especially para-psychological explanations.

SM 500. (GRMN554) Theories of Religion. (M) Staff.

A study of the various ways of interpreting religion as a phenomenon in human life. Analysis of the presuppositions involved in psychological, sociological, and phenomenological approaches. Authors include James, Weber, Freud, Otto, Eliade, and contemporary writers offering historical, anthropological, and philosophical perspectives.

SM 502. Science and the Sacred. (M) Staff.

This course will be an intensive exploration of the differences, similarities, and intersections between science and religion.

SM 505. (FOLK533, HSSC533) Folk and Unorthodox Health Systems. (B) Hufford.

Examination of theories concerning the origin and function of folk beliefs, investigation of an expression of folk

beliefs in legend, folk art, om and ritual. and al is the focal genre for explanatory purposes, and introduction to custsocial symbolic approach to analysis and interpretation is primary for exploration and application.

SM 506. (ANTH505) Anthropology of Religion. (M) Staff.

A critical survey of anthropology studies of religion.

SM 507. (FOLK510, HSSC584) Ethnography of Belief. (B) Hufford.

This course will examine traditional systems of supernatural belief with an emphasis on the role of personal experience in their development and maintenance. The course will focus on subjects of belief generally conceived of as being "folk" in some sense (e.g., beliefs in ghosts), but will not exclude a consideration of popular and academic beliefs where appropriate (e.g., popular beliefs about UFO's and theological doctrines of the immortality of the soul). The course will be multidisciplinary in scope.

SM 510. (PSCI536) Civil Religion. (M) Linker.

In the first half of the course, we will examine the theoretical question of whether modern liberal societies need a civil religion - an idea first proposed in the late eighteenth century by writer who feared that without some unifying ideal or principle the centrifugal forces at work in modern societies would lead them to disintegrate. We will examine various authors who have defended the idea of civil religion in these terms (including J.J. Rousseau, J.G. Herder, and G.W.F.Hegel) as well as several who (implicitly or explicitly) have rejected the argument (Max Weber, Michael Oakeshott, Daniel Bell, and Niklas Luhmann). In the second half of the class, we will turn to the American context and explore the way these arguments have played themselves out from the time of the constitutional frames to today. In this part of the class, we will read and discuss excerpts from the Federalist Papers and Tocqueville's Democracy in America, selected presidential speeches, nineteenth- and twentieth-century debates surrounding Manifest Destiny and American Exceptionalism, John Dewey/Richard Rorty's proposal for a religion of democratic "common faith," and the neoconservative case for a civil religion of "national greatness."

Along the way we will also have occasion to examine sociological treatments of civil religion by such authors

as Emile Durkheim, Robert Bellah, and Seymour Martin Lipset.

SM 601. (SAST701) Seminar on Methodology. (C) Staff.

Careful examination of one topic (e.g., ritual) or thinker (e.g., Durkheim).

SM 603. (ANTH601, FOLK603) Food, Culture and Society. (C) Theophano.

Behind a simple proverb like "You are what you eat" lies a great deal of food for thought. Human beings have always elaborated on the biological necessity of eating, and this course will explore the myriad ways in which people work, think and communicate with food. The course will survey the major approaches from folklore, anthropology and related fields toward the role of food, cookery, feasting and fasting in culture. Among the topics to be addressed are gender roles and differences in foodways, the significance of food in historical transformations, the transmission of foodways in writing and publishing, the relationship of foodways to ethnicity and region, the intimate relationship between food and religion, and foodways in the global market place. Short exercises and a term project will provide students with opportunities to research and write about foodways from different angles.

SM 605. (COML662, FOLK629, NELC683) Theories of Myth. (B) Ben-Amos.

Theories of myth are the center of modern and post-modern, structural and post-structural thought. Myth has served as a vehicle and a metaphor for the formulation of a broad range of modern theories. In this course we will examine the theoretical foundations of these approaches to myth focusing on early thinkers such as Vico, and concluding with modern twentieth century scholars in several disciplines that make myth the central idea of their studies.

SM 609. (COML609, GREK609) Divination and Semiotics. (M) Struck.

This course will trace a history of signs, using Greek divination as the primary focus. We will explore ancient and contemporary sign theories and their usefulness in illuminating ancient practices of divination--or the reading of signs thought to be embedded in the world. Participants in the seminar will be expected to contribute an expertise in one (or more) of three general areas: Greek literature, Greek and Roman religions, and contemporary theory in the humanities. The course is open to graduate students without Greek as well as classicists--though please register appropriately. The

particular areas we cover will to some extent be determined by the interests of the participants, but will surely include: divination by dreams, entrails, and oracles as attested by literary and (to a lesser extent) archaeological evidence; Platonic, Aristotelian, Stoic and Neoplatonic theories of signs; and contemporary semiotics as articulated mainly by Saussure, Barthes, and Eco. Ancient authors will include: Homer, Xenophon, Sophocles, Cicero, Artemidorus, and Iamblichus.

999. Independent Study. (C) See department for section numbers.

Western Tradition in General, Religion in America

110. (ANCH110, ARTH110, CLST110) Greek and Roman Religion. (M) Staff.

A survey and analysis of the origins and development to ancient Greek and Roman religion from the Greek Bronze Age to the advent of Christianity. Students will read both primary and secondary literature.

SM 111. (AFRC111) Religion and Secular Values. (C) Staff.

This course deals with the ways in which current standards for social and public order have been influenced by the interaction between American Jewish and Christian values and American secular and civil values. Issues treated include: racial and ethnic attitudes, sexual equality/morality, pornography, abortion, euthanasia, capital punishment, mental health, economic justice, and environmental issues.

112. (AFRC115) Religious Ethics and Modern Society. (C) Staff.

This course is designed to discover Protestant, Catholic, and Jewish ethics, their contribution to the values and practices of the citizenry, as they relate in creative tension, competitive values, or conflicts of interest with contemporary medical, legal, educational, and social questions bearing upon such personal, interpersonal, and social issues as sex, abortion, euthanasia, marriage, divorce, child abuse, civil rights, care of the dying, fetal research, test tube babies, political conscience, war and peace. Students will be able to work through their own understanding of a critical issue through the development of a problem-oriented paper bearing upon the perspectives and teachings of Jewish ethics in relation to an ethical issue, or on an individual Judeo-Christian ethicist in relation to a moral problem.

SM 113. (AFRC113, GSOC113, JWST113) Major Western Religious Thinkers. (C) Staff.

Introduction to the writings of one or two significant western religious thinkers, designed for those who have no background in religious thought. Possible thinkers to be studied: Augustine, Maimonides, Spinoza, Luther, Teresa of Avila, Edwards, Mendelssohn, Kierkegaard, DuBois, Bonhoeffer, King.

114. (NELC166, NELC468) The Religion of Ancient Egypt. (M)

Silverman/Wegner.

Weekly lectures (some of which will be illustrated) and a field trip to the university Museum's Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic religious art and architecture, and the religion of daily life.

115. (COML053, MUSC053) Art and Archaeology in Greek and Roman Religion. (M) Muller.

Survey of the pagan religion of Greece and Rome in which the major expressions of cultic activity from Mycenaean-Minoan times (ca. 1600-1200 B.C.) until the establishment of Christianity (ca. A.D. 300) will be examined. Utilizing artifacts from the University of Pennsylvania Museum and elsewhere, the course will work with the mythological, literary and archaeological records for the cults of ancient Athens, Delphi, Olympia, Rome and other key centers. Participants will be introduced to the Museum's research and storage facilities normally not accessible to the public.

SM 116. (FOLK025, HIST025, HSOC025, STSC028) Science, Magic, and Religion, 1500 to the present. (C) History & Tradition Sector. All classes. Staff.

Throughout human history, the relationships of science and religion, as well as of science and magic, have been complex and often surprising. This course will cover topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.

117. (AFRC117) African American Religion. (C) Butler.

The unique history and experiences of African Americans can be traced through religion and belief. Through the mediums of literature, politics, music, and film, students will explore the religious experience of people of the African Diaspora within the context of the complex history of race

in American history. The course will cover a broad spectrum of African American religious experience including Black Nationalism, urban religions, the "black church" and African religious traditions such as Santeria and Rastafarianism. Special attention will be paid to the role of race, gender, sexuality, and popular culture in the African American religious experience.

118. (AFRC118) Black Sects and Cults. (C) Staff.

Examination of selected non-traditional Black American religious and secular movements, their founders and leaders with close consideration of the contrasts between these groups and more traditional movements. Examples include such cult leaders as "Daddy Grace," "Father Divine," and "The Reverend Ike" as compared with other religious and social leaders such as Martin Luther King and Jesse Jackson.

211. (AFST292) African Religion in America. (M) Staff.

This survey course focuses on African Religious culture in Nigeria and in the African Diaspora. Students will be introduced to the ritual and philosophical foundations of Yoruba religion and culture. This course emphasizes the incorporative nature and heterogeneity of problematize essentialisms and stereotypes about these religious systems by paying close attention to the ethnographic details, historical contexts, philosophical underpinnings, and political developments of each religion in their region. Traditions we will be exploring are: Ifa Divination in Nigeria and Benin; Santeria and Regla de Ocha in Cuba and the United States; Vodoun in Haiti; Shango in Trinidad; Candomble and Umbanda in Brazil; and the American Yoruba Movement in the United States. Course readings will provide a theoretical and informative basis for dealing with the concepts of syncretism, creolization, and ethnicity.

213. (FOLK223) Folk Religion. (M) Staff.

This introductory course examines some of the basic cultural forms and claims of folk religion as they are practiced and as they have been studied from various academic positions. This course will sample, critique, and practice approaches to the ethnography of belief and the analysis and interpretation of the resulting descriptions. After the development of some basic concepts the course will proceed through major topics in belief. The emphasis will be on belief traditions found in the West during recent and current times. Discussion

will be encouraged throughout the course, and in addition to lectures and the viewing of audio-visual materials, time will be set aside to discuss the assigned readings and students' own work.

215. (ANTH235, JWST251, NELC255) Archaeology and Society in the Holy Land 4,500 BCE - 500 BCE. (M) Staff.

This course will survey the archaeological history of the southern Levant (Israel, West Bank and Gaza, Jordan, southern Lebanon and Syria) from the early complex societies of the Chalcolithic through the demise of the biblical states of the Iron Age. It will focus in particular on the changing organization of society through time, using excavated evidence from burials, houses, temples and places to track changes in heterogeneity, hierarchy and identity. In following the general themes of this course, students will have opportunity to familiarize themselves with the geographic features, major sites and important historical events of the southern Levant. Class material will be presented in illustrated lectures and supplemented by the study of artifacts in the University Museum's collections. Anyone interested in a better understanding of the land that has given us both the "Old Testament"/TaNaK and so much of our daily news, should find much of interest in this course.

SM 310. (AFRC308, FOLK310) Religious Diversity in America. (M) Staff.

In the 1950's America seemed to be a land of Protestant, Catholic, and Jew. Now it is clearly also a land of Muslims and Hindus, Buddhists and Taoists, Rastafarians and Neo-pagans and many more religious groups. This course will focus upon a variety of topics: religious diversity in West Philadelphia, Philadelphia and beyond; the politics of religious diversity; religion in American schools and cities; and conflicts and cooperation among diverse religious groups.

SM 311. (JWST335, NELC335) Muslim, Christian, and Jewish Relations in the Middle East and North Africa. (M) Sharkey.

This class is a reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation,

or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers.

SM 318. Religion and Public Policy. (M) Staff.

This is a topics course focussing on the study of cultural institutions and practices.

SM 412. (AFRC412) African American Spiritual Autobiography. (M) Staff.

This seminar will engage works of autobiography in the African American tradition with particular attention to the spiritual and religious contexts of the authors. We will discuss recurring themes, scriptural motifs, and religious and social tensions expressed in the works. Gender, political ideology, social activism, and religious identification will also be explored.

SM 418. (COML556, JWST356, JWST555, NELC356) Ancient Interpretation of the Bible. (M) Stern.

The purpose of this course is two-fold: first, to study some of the more important ways in which the Bible was read and interpreted before the modern period; second, to consider the uses to which some contemporary literary theorists have put these ancient modes of interpretation as models and precursors for their own writing. The major portion of the course will be devoted to intensive readings of major ancient exegetes, Jewish and Christian, with a view to considering their exegetical approaches historically as well as from the perspective of contemporary critical and hermeneutical theory. Readings of primary sources will be accompanied by secondary readings that will be both historically oriented as well as theoretical with the latter including Hartman, Kermode, Todorov, and Bloom.

SM 419. (JWST419, NELC489) Jewish-Christian Relations Through the Ages. (M) Fishman.

This is a Bi-directional course which explores attitudes toward, and perceptions of, the religious "Other", in different periods of history. Themes include legislation regulating interactions with the Other, polemics, popular beliefs about the Other, divergent approaches to scriptural interpretation, and cross-cultural influences, witting and unwitting.

Different semesters may focus on Late Antiquity, the Middle Ages, Early Modern period, or contemporary times. May be repeated for credit.

SM 517. (AFRC518, FOLK517) Topics in American Religion. (M) Butler.

From Marvin Gaye, to Tammy Faye Baker, to Sarah Palin and James Baldwin, Pentecostalism has influenced many, including politicians, preachers, writers, and the media. One of the fastest growing religious movements in the world, Pentecostalism continues to have a profound effect on the religious landscape. Pentecostalism's unique blend of charismatic worship, religious practices, and flamboyant, media-savvy leadership, has drawn millions into this understudies and often controversial religious movement. This course will chronicle the inception and growth of Pentecostalism in the United States, giving particular attention to beliefs, practices, gender, ethnicity, and Global Pentecostalism.

519. (FOLK514, HSSC514) Human Diversity and the Cultures of Medicine. (M) Hufford.

Over the past decade there has been a growing awareness of the importance of such basic aspects of human diversity as culture, (religion, language), ethnicity, economic status, gender, age and disability in health care as in other areas of life. This course will deal with (1) the social and cultural foundations of health care in the modern world and (2) the ways that diversity affects and is affected by health care. Because simplistic views of diversity reinforce stereotypes, the course necessarily recognizes that each individual belongs to more than one group--each person has a cultural background, a gender, an age, may have one or more disabilities, and so forth. And even within groups, the experiences and needs of each individual are unique. For example, there is no such person as "the African-American patient" or "the female patient." Proper attention to diversity can enhance both cultural and individually appropriate care for all persons. By dealing with these political,

social and cultural aspects of diversity and health care, this course will introduce students to complex and basic issues of social construction ranging from cultural dimensions of medical ethics to the importance of differing health traditions (from folk medicine to foodways to such beliefs as the idea that AIDS is a genocidal government conspiracy).

SM 610. Religion in Public Life. (C) Staff.

This seminar is an introduction to six of the most debated areas involving religion in public life: diversity in American religions; church-state relations and the Constitution; issues in specific eastern and western religions; religious dimensions of contemporary ethical and social debates (abortion, euthanasia, minority and gender roles); religious symbolism in the public sphere; and the prevailing understandings of religion in the media and modern society. Teachers, school administrators, journalists, public policy specialists, social workers, lawyers, and health care professionals all encounter situations in which the religious sensitivities of "clients" (students, parents, readers, etc.) affect the ways in which they discharge their duties. This seminar serves as an introduction to the Religion in Public Life concentration within the Master of Liberal Arts Program, which is designed to provide professionals with an understanding of the many historical, social and legal issues that complicate discussions of religion in public situations.

611. Private vs. Public Religion in America. (M) Staff.

Many Americans hold that religion is properly a matter engaged in by individuals, families and congregations within the confines of their own homes and places of worship. For others, it is both a constitutionally protected right and a religious duty to give public voice to their religious faith and identity. This seminar focuses on the tension in contemporary America between private and public expressions of religious belief and sentiment. Our readings will cover the development of private spirituality since the 1950s, the continuing conviction of some that religion and sports are closely linked, one example of the burgeoning effort to bring religion into the workplace, a sociological study of the public portrayals and private hopes of those in the growing Evangelical movement, and an eminent historian's view of "the mixing of sacred and secular in American history."

615. (ANTH635) Archaeology and Society in the Holyland. (M) Staff.

This course will survey the archaeological history of the southern Levant (Israel, West Bank and Gaza, Jordan, southern Lebanon and Syria) from the early complex societies of the Chalcolithic through the demise of the biblical states of the Iron Age. It will focus in particular on the changing organization of society through time, using excavated evidence from burials, houses, temples and palaces to track changes in social heterogeneity, hierarchy and identity. In following the general themes of this course, students will have opportunity to familiarize themselves with the geographic features, major sites and important historical events of the southern Levant. Class material will be presented in illustrated lectures and supplemented by the study of artifacts in the University Museum's collections.

Jewish Studies

024. (ANTH124, JWST124, NELC155) Archaeology and the Bible; Conflict Insight Understanding. (M) Staff.

The Hebrew Bible (Tanak) and archaeological research provide distinct, and at times conflicting, accounts of the origins and development of ancient Israel and its neighbors. Religion, culture and politics ensures that such accounts of the past have significant implications for the world we live in today. In this course we will discuss the latest archaeological research from Israel, the Palestinian Territories and Jordan as it relates to the Bible, moving from Creation to the Babylonian Exile. Students will critically engage the best of both biblical and archaeological scholarship, while being exposed to the interpretive traditions of Anthropology as an alternative approach to the available evidence. Open discussions of the religious, social and political implications of the material covered will be an important aspect of the course.

SM 027. (COML057, JWST151, NELC156) Great Books of Judaism. (A) Stern.

The study of four paradigmatic classic Jewish texts so as to introduce students to the literature of classic Judaism. Each text will be studied historically--"excavated" for its sources and roots--and holistically, as a canonical document in Jewish tradition. While each text will inevitably raise its own set of issues, we will deal throughout the semester with two basic questions: What makes a "Jewish" text? And how do these texts represent different aspects of

Jewish identity? All readings will be in translation.

120. (HIST139, JWST156, NELC051, NELC451) History of Jewish Civilization I: From the Biblical Period to the Early Middle Ages. (B) History & Tradition Sector. All classes. Staff.

A broad introduction to the history of Jewish civilization from its Biblical beginnings until the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.

121. (HIST140, JWST157, NELC052, NELC452) History of Jewish Civilization II: From the Early Middle Ages to the 17th Century. (A) History & Tradition Sector. All classes. Ruderman.

A broad introduction to the history of Jewish civilization from the early Middle Ages to the 17th Century. An overview of Jewish society and culture in its medieval and Renaissance settings.

L/R 122. (HIST141, JWST158, NELC053, NELC453) History of Jewish Civilization III. From the 17th Century to the Present. (B) History & Tradition Sector. All classes. Wenger/Nathans.

This course offers an intensive survey of the major currents in Jewish life from the early modern period to the present. We will trace the process by which the Jews gradually ceased to be a society unto themselves and confronted the sweeping transformations of the modern era, from the Enlightenment and the rise of a bourgeois middle class to projects of nation-building and revolutionary socialism. Within the evolving forms of Jewish religious experience, culture, and identity, we will explore such topics as emancipation, Jewish-gentile relations, the emergence of distinct denominations within Judaism, and the reestablishment of political sovereignty in modern Israel. Weekly readings include broad historical interpretations as well as primary sources such as memoirs, petitions, folklore, and works of literature. Curiosity about Jewish history and a willingness to explore its drama and complexity are the only prerequisites for this course. No prior knowledge of the subject is assumed.

SM 123. (JWST123, NELC283) Introduction to Judaism. (M) Fishman. Focusing on the festivals of the Jewish calendar and on Jewish life-cycle events, this course examines primary sources from various periods and places that illuminate

changes in Jewish practice, in Jewish understandings of ritual, and in ritual's place in Jewish life.

124. (HIST150, JWST130) American Jewish Experience. (C) Wenger.

This course offers a comprehensive survey of American Jewish history from the colonial period to the present. It will cover the different waves of Jewish immigration to the United States and examine the construction of Jewish political, cultural, and religious life in America. Topics will include: American Judaism, the Jewish labor movement, Jewish politics and popular culture, and the responses of American Jews to the Holocaust and the State of Israel.

125. (JWST150, NELC150) Introduction to the Bible (Old Testament). (A) Humanities & Social Science Sector. Class of 2010 & beyond. Tigay.

An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.

126. (JWST126, NELC186) Jewish Mysticism. (M) Fishman.

Survey of major periods of development of mystical speculation and experience within Judaism. Mystical symbolism as a basis for theosophical interpretations of Torah, Immanentist theologies, mystical ethics. Types of experiences and practices which were cultivated by Jewish mystics in order to achieve intimate communion with the Divine and to facilitate a sacred transformation of themselves and the world. Includes "Riders of the Chariot," The Zohar (Book of Splendor), Lurianic Kabbalah, Hasidism.

SM 127. (JWST152, NELC152) Jewish Law and Ethics. (A) Staff.

An introduction to the literary and legal sources of Jewish law within an historical framework. Emphasis will be placed upon the development and dynamics of Jewish jurisprudence, and the relationship between Jewish law and social ethics.

128. (JWST128) Jews, Judaism, and Modernity. (M) Staff.

A survey of Jewish thinkers and movements of the modern period focusing on the historical, intellectual, and social foundations of modern Judaism. Through careful reading of primary sources in

translation, students will be exposed to seminal writings that respond both to new challenges and the broader issues of religious continuity and discontinuity.

SM 129. (JWST100, NELC252, NELC552) Themes in the Jewish Tradition. (C) History & Tradition Sector. All classes. Ben-Amos, Stern.

Course topics will vary; have included The Binding of Isaac, Responses to Catastrophes in Jewish History, and Concepts of Jewishness from Biblical Israel to the Modern State.

220. (COML228, HEBR250, JWST256) Studies in the Hebrew Bible. (B)

Tigay. Prerequisite(s): Knowledge of biblical Hebrew and prior experience studying the Hebrew text of the Bible. Knowledge of Greek is not required. Language of instruction is English.

The aim of this course is to introduce students to the critical methods and reference works used in the modern study of the Bible. To the extent possible, these methods will be illustrated as they apply to a single book of the Hebrew Bible that will serve as the main focus of the course.

221. (COML283, FOLK280, JWST260, NELC258) Jewish Folklore. (C) Ben-Amos.

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.

SM 223. (COML257, JWST153, NELC158, NELC458) Jewish Literature in the Middle Ages. (C) Stern.

An introduction to medieval Hebrew literature, with special attention to poetry, narrative, and the interpretation of the Bible, and to the varieties of Jewish experience that these literary works touch upon. All readings in translation.

SM 224. (COML380, JWST255, NELC250, NELC550) The Hebrew Bible in Translation. (C) Tigay.

Careful textual study of a book of the Hebrew Bible ("Old Testament") as a literary and religious work in the light of modern scholarship, ancient Near Eastern documents, and comparative literature and religion. The book varies from year to year.

SM 225. (JWST225, NELC251, NELC651) Introduction to the Dead Sea Scrolls. (M) Reed.

Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to other known Jewish groups at that time (the beginning of the common era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocrypha" and "pseudepigrapha," biblical texts and interpretations.

SM 226. (HEBR257, JWST257) Studies in Rabbinic Literature. (D)

Staff. Prerequisite(s): Students must be able to read an unpointed Hebrew text.

An introduction to the reading of classical Rabbinic literature. Focus will be on the Mishnah and Babylonian Talmud with parallel readings from Tosefta, Midreshei Halkhah, and the Palestinian Talmud. While traditional Rabbinic commentators will be utilized, the class will be introduced to modern methodologies of Talmudic textual research. Texts will be read mainly in Hebrew with supplementary English readings. Ability to read unvocalized Hebrew required.

SM 227. (JWST227) Modern Jewish Thought. (C) Staff.

Through a reading of such thinkers as Martin Buber, Gershom Scholem and Franz Rosenzweig, the course will address some of the fundamental issues in modern Jewish thought and experience.

320. (HIST380, JWST380) Modern Jewish Intellectual and Cultural History. (C) Ruderman.

An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialist thought, and

Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geiger, Hirsch, Herzl, Achad-ha-Am, Baeck, Buber, Kaplan, and others. No previous background is required.

327. (HEBR356, HEBR656) Talmudic/Midrashic Literature. (M) Stern.

An introduction to the reading of classical rabbinic literature. The topic will vary, ranging from Talmudic to Siddur. Readings will be in Hebrew with supplemental English works.

SM 426. (HEBR486, JWST426) Rabbinic Writers on Rabbinic Culture. (M) Fishman. Prerequisite(s): Reading knowledge of Hebrew.

This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period -- Midrash, Mishna, and Talmud -- and in later juridical genres -- Talmudic commentary, codes and responsa. Attention will be paid to the mechanics of different genres, the role of the underlying proof-text, the inclusion or exclusion of variant opinions, the presence of non-legal information, attitudes toward predecessors, balance between precedent and innovation.

SM 429. (COML584, GRMN581, HIST490, JWST490) Topics In Jewish History. (M) Staff.

Reading and discussion course on selected topics in Jewish history. The instructors are visiting scholars at the Center for Advanced Judaic Studies

SM 520. (JWST320, JWST520, NELC454, RELS321) Spirit and Law. (M) Fishman.

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

SM 521. (HEBR550, JWST550) A Book of the Bible. (C) Tigay.

Prerequisite(s): Knowledge of biblical Hebrew and prior experience studying the Hebrew text of the Bible. Knowledge of Greek is not required. May be repeated for credit. Language of instruction is English. Qualified undergraduates are welcome but need permission from the instructor.

The focus will be on the study of the Hebrew text of a book of the Bible. The book varies from year to year.

SM 523. (COML527, HEBR583, HIST523, JWST523) Studies in Medieval Jewish Culture. (C) Fishman.

Prerequisite(s): Reading knowledge of Hebrew.

Primary source readings from a broad array of medieval Jewish genres. Topic will vary from one semester to another, for example: custom, gender, dissent.

SM 525. (COML580, JWST525) Varieties of Judaism in the Greco-Roman Era. (H) Reed.

An examination of the varieties of Jewish Thought current from ca. 300 B.C.E. to ca. 200 C.E., and of the ways in which the early Christian church adapted and/or reacted to this Jewish heritage.

SM 529. (HIST550, JWST529) The Religious "Other" in Pre-Modern Jewish Culture. (M) Fishman.

This "bi-directional" course explores the presence of the religious Other as it is refracted in Jewish literature of a particular time and place, and the presence of Jews and Judaism in contemporaneous non-Jewish writings, whether Hellenistic, Christian or Muslim. Attention will be paid to ways in which the belief systems and religious practices of the Other are perceived and portrayed, to internal policies regulating interactions with the Other, and to cross-cultural influences, whether or not these are acknowledged. Primary source readings will be available in English translation.

SM 620. (HEBR556, JWST650) Seminar in Biblical Studies. (A) Tigay.

Prerequisite(s): Facility in Biblical Hebrew.

In-depth study of a special topic or problem in Biblical studies.

Christianity**SM 133. An Introduction to Christianity. (C) Matter.**

A survey of the classical Christian Traditions (Orthodoxy, Roman Catholicism, Protestant groups). The basic

perspective is phenomenological, but historical and folkloric considerations are also raised. Topics include the symbols of Christian faiths, perspectives on human nature, and views of evil.

135. Christian Origins. (C) Reed.

Christianity did not begin in a vacuum - indeed it emerged from the complex Jewish world of which we catch a glimpse in the "Dead Sea Scrolls" and it blossomed into various forms among the "mystery religions" of the Greco-Roman world around the Mediterranean Sea and farther east. In this course we will explore those developments in the first two centuries of the Common Era, with special focus on the evidence preserved in the earliest surviving Christian writings, including the "New Testament" collection. The goal of the course is neither conversion nor its opposite, but understanding as best we can from this chronological and geographical distance what the participants in the various developments thought was happening, and how they shaped and were shaped by their worlds. We will get very involved in discussing what can be known about the period, and how much we as interpreters contribute to any resulting "historical" picture.

136. (JWST136) Death and the Afterlife in Ancient Judaism and Christianity. (C) Reed.

This course surveys the development of concepts about death and the afterlife in Judaism and Christianity, exploring the cultural and socio-historical contexts of the formation of beliefs about heaven and hell, the end of the world, martyrdom, immortality, resurrection, and the problem of evil. Readings cover a broad range of ancient sources, including selections from the Hebrew Bible and New Testament, as well as other Jewish and Christian writings (e.g., "apocrypha," "pseudepigrapha," Dead Sea Scrolls, classical rabbinic literature, Church Fathers, "gnostic" and "magical" materials). In the process, this course introduces students to formative eras and ideas in the history of Judaism, Christianity, and Western culture

L/R 236. (COML241, GRMN256) The Devil's Pact in Literature, Music and Film. (C) Arts & Letters Sector. All Classes. Richter.

For centuries the pact with the devil has signified humankind's desire to surpass the limits of human knowledge and power. From the reformation chap book to the rock lyrics of Randy Newman's Faust, from Marlowe and Goethe to key Hollywood films, the legend of the devil's pact

continues to be useful for exploring our fascination with forbidden powers.

SM 239. Music in the History of Christianity. (M) Matter.

Selected periods of Christian history studies from the point of view of musical expression in Christian worship.

SM 432. (LATN409) Readings in Latin Literature. (M) Staff.

An advanced reading and discussion seminar on varying subjects in Latin literature: authors, genres or topics. Focus will vary each semester, and the course may be repeated for credit.

SM 433. Christian Thought From 200-1000. (M) Matter. Prerequisite(s): None--some background in European history helpful.

The development of the major Christian groups from the Central Middle Ages to the beginning of the modern era. Theology, worship, and community identification.

SM 434. Christian Thought From 1000-1800. (M) Matter. Prerequisite(s): None--some background in European history helpful.

This course will trace the development of Christian thought (including philosophy, theology, spirituality and mysticism) from the early Scholastic period to early Methodism. Readings will be from both primary and secondary sources. A research paper will be required of each student.

SM 435. Sources for the Life of Jesus. (M) Reed.

A critical assessment of early Christian traditions about Jesus (to ca. 200 CE), with special attention to methodology. Emphasis on applying consistent critical criteria in the analysis of ancient materials and traditions concerning Jesus, from whatever source (opponents, enthusiastic advocates, relatively uninvolved reporters). Problems encountered by any historian dealing with any subject of which the historian was not an eyewitness will be illustrated and elaborated in the investigation of what is known about Jesus.

SM 436. (COML591) The Life and Letters of Paul. (M) Reed.

The purpose of this course is to learn how to understand a noted author/thinker of the past on his own terms and in relationship to his own world. The specific subject matter is PAUL, a Jewish and Christian writer in the Greco-Roman world during the first century of the common era (c.e.). The larger historical context is Judaism and Christianity in the first two centuries c.e.

SM 437. (PHIL429) Medieval Philosophy. (M) Ross.

Critical and historical examination of writings of Augustine, Anselm, Aquinas, Scotus, Ockham, and others.

SM 438. (ARTH410, HIST410) Topics in Medieval History. (C) Peters.

The course deals with different topics whenever given and may be taken repeatedly for credit. Among recent and future topics are: The Popes, Rome, and the world; The Morning of the Magicians; Symbols and Realities of Power in Medieval Europe.

SM 439. (AFRC405, HIST405, URBS405) Religion, Social Justice & Urban Development. (B) Lamas.

Urban development has been influenced by religious conceptions of social justice. Progressive traditions within Judaism, Christianity, Islam, and Buddhism have yielded: (1) powerful critiques of oppression and hierarchy as well as (2) alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of urban development.

SM 530. (GSOC530) The Feminist Critique of Christianity. (C) Matter.

An overview of the past decades of feminist scholarship about Christian and post-Christian historians and theologians who offer a feminist perspective on traditional Christian theology and practice. This course is a critical overview of this material, presented with a summary of Christian biblical studies, history and theology, and with a special interest in constructive attempts at creating a spiritual tradition with women's experience at the center.

532. (ANTH594) World of the Latter Day Saints. (C) Hammarberg.

An ethnography of the Church of Jesus Christ of Latter-day Saints in its role today as an emerging world religion, and in its historical origins as an American revitalization movement. Considers world view, social organization, conversion, acculturation, life-course development, belief and disbelief, and the use of advanced technology in the administrative direction of the Church's culture. A research paper is required (20-25 page limit).

SM 533. (HIST533, JWST533) Ancient and Medieval Church History. (C)

Matter.

Selected topics in ancient and Medieval Christianity, for example, biblical interpretation, theological issues.

SM 535. (COML535) Varieties of Christian Thought before Irenaeus. (K)

Reed. A survey of the known groups and perspectives that emerged in the first 150 years or so of the development of "Christianity" from its roots in Judaism and the hellenistic world(s), with special attention to the primary sources (especially literary) and to modern attempts at historical synthesis.

SM 537. (GRMN510) Medieval Christian Mysticism. (C)

Matter. Selected topics in Christian mystical writings. Authors will be read in English translation. Knowledge of medieval languages is helpful, but not required.

SM 538. (COML544) Modern Christian Thinkers. (C)

Staff. Close study of selected texts dealing with the relation between Christian ideas and modern thought.

SM 539. (COML509) Kierkegaard. (C)

Staff. Critical examination of selected texts by Kierkegaard. Discussion of such issues as the pseudonymous writings and indirect communication, the theory of stages of religious development, the attack upon establishment religion, the psychological dimension of Kierkegaard's thought, and his relations to his predecessors, particularly Hegel.

SM 735. (CLST735, JWST735) Seminar in Judaism and/or Christianity in the Hellenistic Era. (F)

Reed. Knowledge of Greek Presupposed. Student may enter either term.

Selected topics from current research interests relating to early Judaism and early Christianity.

SM 736. (HIST736) Seminar in Medieval Religious Studies. (C)

Matter. Selected topics in medieval religious studies, especially biblical exegesis. Reading knowledge of medieval Latin required.

Islamic**142. (ANTH142, SAST141) Islam in South Asian Culture. (M)**

Spooner. Islam reached South Asia in the eighth century and Muslim rulers held sway over large parts of the Subcontinent for much of the period from the late 12th century until the colonial period. However, the majority of the population never converted to Islam, and since independence in 1947 Islam--its interpretation, realization, and influence--has been a major factor underlying many difficult political issues. This has been true not only in the largest country, India, where Muslims form 12% (unevenly distributed) of the population, but in Bangladesh and Pakistan where non-Muslims are relatively insignificant minorities. This course explores the realities and the perceptions related to Muslim identities and the Islamic heritage in the subcontinent, and sets it in global context by comparison with other parts of the world which share various aspects of the South Asian experience. The course will conclude with an assessment of the larger significance--social, economic and political, as well as cultural--of Islam in South Asia today.

143. (NELC136, SAST139) Introduction to Islam. (C)

Elias. This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

147. (HIST147, NELC030) Islamic History to 1517. (M)

Staff. The transformation of the Middle East into an Islamic civilization and its historical development from the time of Mohammed to the establishment of Ottoman, Savavid, and Mughal empires in the sixteenth century. Rise of Islam, the early Islamic empire, political fragmentation and cultural continuity in Muslim societies from Spain to North India. Within this wide

chronological and geographical framework we will focus on the role of Islamic thought, institutions, and identities in a limited number of particularly revealing historical contexts. Primary sources in translation complement the two course textbooks.

248. (NELC238) Introduction to Islamic Law. (A)

Lowry. This course will introduce students to classical Islamic law. Most of the readings will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Qur'an, humanities, and other selected topics.

249. Topics in Islamic Religion and Society. (C)

Staff. A course devoted to specific problems in the religion of Islam and Muslim societies. Each semester will focus on one of the following subjects: Muhammad, Women in Islam, Islamic Mysticism, or American Islam. No previous knowledge of Islam required.

SM 545. (NELC534) Topics in Islamic Religion. (C)

Elias. Prerequisite(s):

Reading knowledge of Arabic.

Selected topics, such as Sufi Texts or The Qur'an, in the study of Islamic religion.

SM 742. (NELC782, SAST763) Topics in Islam. (M)

Elias. Prerequisite(s): A reading knowledge of modern Persian (Farsi/Dari/Tajik) is required. Spring 2010 Topic: The Persian Intellectual Tradition - This seminar focuses on readings from a variety of sources from across the Persianate world with the aim of providing an advanced introduction to thought and history in some of the most influential societies of the Islamic World. The course will cover a variety of historical, theological, mystical and literary texts in prose as well as poetry.

Southern and Eastern Asia**155. (PHIL050, RELS455, SAST150) Introduction to Indian Philosophy. (C)**

History & Tradition Sector. All classes. Staff. The fundamentals of Hindu and Buddhist philosophy, the main patterns of Western response to it, and some basic questions of "comparative philosophy". Selected readings from classical Indian texts in English translation.

163. (RELS663, SAST140)

Introduction to Hinduism. (C) Staff.

Hindu religious beliefs and practices from the earliest period to the present, stressing contemporary religious thought, performances and institutions and their historical backgrounds. Basic human issues such as the origin and nature of the world and society, the meaning of personal existence, sex, birth, death, human responsibility, the family, and destiny-and the variety of Hindu understandings of them as revealed in myth, story, philosophy, and ritual will be the focus of this course. Readings will mostly be original sources in English translation.

173. (EALC015, SAST142)

Introduction to Buddhism. (C)

McDaniel.

This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture.

We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among aly communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as "Just-War," Women's Rights and Abortion.

While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vientiane, Laos.

L/R 184. (EALC034) What is Taoism?.

(M) Goldin.

Topical study of the Taoist religion and its relations through history to philosophical Taoism, popular religion, and science.

SM 263. Studies in Hinduism. (M)

Staff. Prerequisite(s): RELS 163/SARS 163 or SARS 101 or equivalent, or permission of instructor.

Religious experience and expression in Hindu India in their diversity and regional variations to the present. Intended as an intermediate/advanced course for students who already have an introductory knowledge of the subject, this course will examine relevant backgrounds and representative primary sources to assess continuity and change in learned and vernacular Hindu attitudes and practices.

276. (EALC265) Zen Buddhism. (C)

LaFleur.

This course examines the history, doctrines, and practices of Zen Buddhism in China, Japan and the West. Topics include the monastic life, notable Zen masters, Zen's cultural impact, and enlightenment.

455. (PHIL050, RELS155, SAST150)

Introduction to Indian Philosophy.

(A) Staff.

A survey of Indian philosophical thought from its Vedic beginnings to the early modern period. Fall: Hindu philosophy. Spring: Buddhist philosophy. Selected readings in English translation.

SM 461. (SAST310, SAST610)

Introduction to Tantra. (C) Staff.

SM 489. (EALC269, EALC669)

Japanese Buddhism. (C) LaFleur.

An introduction to the history and cultural role of Buddhism in Japan. Emphasis is on Buddhism as a component in the religious, intellectual, and cultural life of the Japanese, especially in poetry and the visual arts. Includes a short review of prior Buddhism in India and China.

552. (SAST552) Devotional

Literatures of North India. (C) Behl.

Readings of medieval devotional texts in the North Indian languages, such as the Ramcaritmanas of Tulsidas, Sufi narratives, medieval poetry in Hindi, Urdu, Dakkini, Bengali, etc.

SM 562. Religions of Southern India.

(M) Staff.

Critical examination of selected problem areas in the interpretation of religious texts,

traditions, institutions, and practices in South and Southeast Asia.

SM 571. (EALC718) Advanced Topics in Buddhism. (M) McDaniel.

Spring 2010: Buddhist Healing and Magic - Buddhist Studies is replete with controversies and contentious scholars. These intellectual arguments and debates emerge from textual variants, logical inconsistencies, spotty historical records, ethical conundrums, as well as the varied and many questions indigenous and foreign scholars have posed to themselves and the tradition. In this course, we will explore the intellectual history of some of these controversies not necessarily to solve problems, but to understand their permutations, motivations, and contingencies. This semester's theme will be Buddhist practices of magic and healing. We will read about this controversial issue in the study of Buddhism drawing on workin Japanese, Thai, Tibetan, Chinese, Lao, Burmese, Cambodian, Korean, and other Buddhist traditions. In general, this course will first review the intellectual history of the study of Buddhist magic and healing and compare and contrast that with the monastic practice and study of Buddhism in Asia. We ask: are the same debates that pervade the "Western" scholarly community reflective of centuries old monastic debates or is there a great "insider-outsider" divide?

Included in this historical approach will be a study of the influence of colonialism, globalism, and print and media technology on the study and reception of Buddhism locally and translocally. From three major debates are investigated and critically engaged with systematically. Scholars such as Schopen, Harrison, Payutto, Sivaraksa, Nattier, Skilling, Hirakawa, Hallisey, Satha-Anand, Trainor, Gombrich, Bizot, Obeyesekere, and Buddhadasa will be consulted. The primary objective of this course is to provide a sophisticated approach to the study of Buddhist magic and healing (and Buddhism in general) in light of larger intellectual debates in post-colonial, textual, anthropological, cultural, and gender studies.

593. (COML504, EALC513, CINE205, RELS193) Buddhism, Criticism and Film. (M) LaFleur.

This is the graduate level of Rels 193. See Rels 193 for description of the course.

ROMANCE LANGUAGES (AS) {ROML}

FRENCH (FREN)

Basic Language Courses

SM 110. Elementary French I. (C)

For students who have never studied French or who have had very little exposure to the language. Most students with previous French should be in French 121 (elementary French for "false beginners"). All students who have already studied French elsewhere are required to take the placement test. Class work emphasizes the development of speaking and listening comprehension, reinforced by work in reading and writing. Course includes an introduction to French and Francophone culture. Out-of-class homework requires work with workbook, audio materials, in addition to frequent writing practice.

SM 112. Accelerated Elementary French. (A)

An intensive two-credit course covering the first and second semester of the elementary year. See descriptions of French 110 and 120. Students must have departmental permit to register.

SM 116. Elementary Haitian Creole. (C) Contact the Penn Language Center.

SM 120. Elementary French II. (C)

Prerequisite(s): French 110.

The continuation of French 110.

SM 121. Elementary French for "False Beginners". (A)

An intensive one-semester language course for students who have had some French before but can benefit from a complete review of elementary French. The course will provide a re-introduction of the basic structures of French with intensive work on speaking, writing and listening designed to prepare students to take Intermediate French. Course includes an introduction to the culture of France and Francophone Europe. Out-of-class homework requires work with online, workbook, and audio materials, in addition to frequent writing practice.

SM 130. Intermediate French I. (C)

Prerequisite(s): Completion of French 120 or 121, or placement into third-semester French.

The first half of a two-semester intermediate sequence designed to help students attain a level of proficiency that should allow them to function comfortably in a French-speaking environment. Students are expected to have already learned the most basic grammatical structures in elementary French and will review these independently outside of class. This course will build on existing French skills and increase students' confidence and ability to read, write, speak and understand French. The course will additionally introduce students to more complex grammatical structures and more challenging cultural material. Out of class homework includes work with online, workbook and audio materials in addition to frequent writing practice.

SM 134. Accelerated Intermediate French. (B)

An intensive two-credit course covering the first and second semester of the intermediate year. See descriptions of French 130 and 140. Students must have departmental permit to register. Also offered in the summer Penn-in-Tours program in France.

SM 140. Intermediate French II. (C)

Prerequisite(s): Completion of French 130 or placement into fourth-semester French.

The second half of an intermediate-level sequence designed to develop functional competence in the four skills. Students are expected to have already learned the most basic grammatical structures in elementary French and will review these outside of class. The course focuses on the study and discussion of history and culture of the Francophone world through film, literature and music.

SM 180. Advanced French in

Residence. (E) Corequisite(s): Residence in Modern Language House.

Open only to residents in La Maison Francaise. Participants earn 1/2 c.u. per semester.

Undergraduate-Level Courses

SM 202. Advanced French. (C)

Prerequisite(s): Open to students who have completed the language requirement.

French 202 is a one-semester third-year level French course. It is designed to prepare students for subsequent study in upper-level courses in French and

francophone literature, linguistics, civilization, cinema, etc. It is also the appropriate course for those students who have time for only one more French course and wish to solidify their knowledge of the language by continuing to work on all four skills--speaking, listening, reading and writing. Students' work will be evaluated both in terms of progress in language skills and of ability to handle and engage in the content areas.

The class studies two thematic units dealing with a wide variety of magazine articles, literary texts, historical documents, movies, songs, etc. In the first dossier, students get a chance to expand their knowledge of French history, with one major focus on World War II and the German occupation of France. In the second dossier, students study youth-related issues (such as upbringing and education, television, unemployment, racism, etc.). The class touches upon issues of identity in France as well as in the Francophone world, in the context of immigration and colonization.

SM 211. French for the Professions I. (C)

Prerequisite(s): Intermediate-high/advanced level of French (French 202 highly recommended). No business background necessary.

This content-based language course, taught in French, introduces economic, business and professional terminology through the study of the following topics: financial institutions (banking, stock market and insurance); business practices (business letters and resumes); trade and advertising; the internal structure and legal forms of French companies. The course also emphasizes verbal communication through three components: 1) In-class activities such as problem-solving tasks, discussions and debates. 2) The study of authentic materials such as newspapers and magazines' articles, video clips, and radio shows. 3) A series of students' presentations.

Finally, in order to use and practice the new economic and business terminology studied in this course, and to also further explore the structure, the management, and the operations of the French companies, students will work in pairs on a research project about a major French company of their choice.

One of the other goals of this course is to also prepare the students to take one of the exams offered by the Paris Chamber of Commerce and Industry: the Diplome de Francais Professionnel, Affaires, C1. This exam will be held on campus in April.

SM 212. Advanced French Grammar and Composition. (C)

Intensive review of grammar integrated into writing practice. A good knowledge of basic French grammar is a prerequisite (French 202 or equivalent is recommended). Conducted entirely in French, the course will study selected grammatical difficulties of the French verbal and nominal systems including colloquial usage. Frequent oral and written assignments with opportunity for rewrites.

Articles from French newspapers and magazines, literary excerpts, and a novel or short stories will be used as supplementary materials in order to prepare students to take content courses in French in disciplines other than French.

SM 214. Advanced French Composition and Conversation. (C)

Prerequisite(s): French 212.

This is a course intended to improve speaking and writing skills by offering extensive practice in a variety of styles and forms. It will also help students better understand contemporary French culture, thought and mode of expression. Activities include the study, analysis and emulation of model texts, the discussion and debates about current events and social issues as covered by the French news media (television, print, Internet sources). Students will do oral presentations based on research, take part in class discussions and compile a writing portfolio (journal, essays, blog).

SM 217. French Phonetics. (C)

Designed to provide students with a solid foundation in French phonetics and phonology. Part of the course will be devoted to learning how to produce discourse with native-like French pronunciation, rhythm and intonation. The second half of the course will be devoted to improving aural comprehension by examining stylistic and dialectal differences in spoken French.

SM 221. (COLL221, COML218) Perspectives in French Literature. (A) Arts & Letters Sector. All Classes.

This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Students are expected to take an active part in class discussion in French. French 221 has as its theme the presentation of love and passion in French literature. Majors are required to take either French 221 or 222.

SM 222. (COLL221, COML219) Perspectives in French Literature. (A) Arts & Letters Sector. All Classes.

This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Special emphasis is placed on close reading of texts in order to familiarize students with major authors and their characteristics and with methods of interpretation. They are expected to take an active part in class discussion in French. French 222 has as its theme the Individual and Society. Majors are required to take either French 221 or 222, but students who have taken 221 may also take French 222 for credit.

SM 223. (FREN312) Modern France. (C)

Among the many dramatic transformations that have marked French culture and society since World War II, the emergence of *la jeunesse* will be our reference point to examine the major trends of the period. By means of films, short novel and a basic historical text, we will consider the shifts in lifestyle, values, and identity among youth at critical moments in the history of the last 50 years. Conducted entirely in French, this course requires the student to view 7 films outside of class, 1 written mid-term in class, reaction paragraphs for each film, 3 of which will be expanded to relate the films to the required readings of Francois Sagan, Georges Perec and Rachid Djaidani. Students will also present to the class their research upon some aspect of youth culture or identity of their choice. The written part of that presentation will be integrated into the final exam paper.

SM 226. French Civilization, from the Beginnings to 1789. (A) History & Tradition Sector. All classes.

An introduction to the social, political and historical institutions of France from the earliest times until the Revolution of 1789. Required for majors in French and also of particular interest to majors in history, international relations, Wharton students, etc.

L/R 227. Modern France, 1789-1944. (B) Humanities & Social Science Sector. Class of 2010 & beyond.

French political, cultural and social history from the Revolution of 1789 to the liberation of Paris in 1944. Readings in secondary and primary sources, including political documents and speeches or letters as well as significant short stories, etc.; a weekly audio-visual component concerning each period. Required for majors, also of

particular interest to majors in history, international relations, Wharton students, etc.

SM 228. Le Francais Dans Le Monde. (M) Distribution III. May be counted as a Distributional course in Arts & Letters.

The course focuses on the history of the French language within France. The first part will look at the development of French as a national language and examine the question of linguistic diversity in France today with a focus on the status of regional languages and dialects. The course will consider the current changing nature of the French language and will conclude with a look to the future and the role of French as a world language, particularly in the context of the European Union. Emphasis will be put on the role of language in cultural and social identity as well as in political power and conflict.

SM 229. Le Francais Dans Le Monde II. (M) Le Francais Dans Le Monde II.

An introduction to the role of the French language around the world. The course will explore the historical reasons for which French is spoken in many countries outside of France (including Europe, North America, the Caribbean, Africa, the Middle East and the Far East), and examine its current status in those regions. Emphasis will be put on the role of language in cultural and social identity as well as in political power and conflict. Of interest not only to majors but to students in international relations, Wharton, etc.

L/R 230. (CINE245) Masterpieces of French Cinema. (A)

This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the "auteur," film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g. "le realisme poetique," "la Nouvelle Vague," etc.), their "auteurs," the nature of the French star system, the role of the other arts, as well to the critical debates they have sparked among critics and historians. Students will acquire the analytical tools in French to discuss films as artistic and as cultural texts.

SM 231. (AFRC231, AFST231, CINE246) Cinema Africain Francophone. (M)

This course will introduce students to recent films by major directors from

Francophone Africa. While attention will be given to aesthetic aspects and individual creativity, the viewing and discussions will be mostly organized around a variety of (overlapping) themes: History; Tradition/Modernity; Urban Life; Gender and Sexuality; Politics. Class conducted in French.

SM 290. The French Short Story. (M)

SM 301. (CINE345) French Identity in the Twentieth Century. (C)

The purpose of this course will be to explore the following issues: What is the specificity of women in French society--what distinguishes the "education" --both familial and institutional--which contributes to the formation of a distinctly feminine sense and self? How has this specificity contributed to the roles and functions played by women over the course of the century? And finally, how have women--individually and collectively--become aware of these forces, and sought to modify them in order to devise introduction to French culture and society. Authors include: de Beauvoir, Carles, Djébar, Duras, Ernaux, Kofman, Weil.

SM 313. French for the Professions II. (B) Prerequisite(s): An intermediate high to advanced level of French. French for the Professions I (211) highly advisable. No business background necessary.

The course, conducted entirely in French, emphasizes verbal communication in business professional situations through three components. First, a series of student's presentations ,in-class activities (using newspapers' articles, technical readings, radio shows and films), and debates on the following topics (list not exhaustive) related to France's economy and society: The role of the State in France's economy; the French fiscal system; Labor (impact of the 35-hour work week, "conges," women in the workplace, etc.); Regions of France (production); major French industries/companies/brands; France's major imports/exports; "Green business"; Business of pop culture.

Second, as effective communication is based not only on linguistic proficiency but also on cultural proficiency, cultural differences mostly between Americans and French will be explored.

Finally, throughout the semester, students will work in groups on the creation of their own business, association, or other organization and will be invited to present their project to the class at the end of the semester. On completion of the course, students will also have the opportunity to take the Diplome de Francais

Professionnel-DFP Affaires (C1) administered by the Paris Chamber of Commerce and Industry.

SM 322. France and the European Union. (B)

After a brief history of European integration and a description of the Community's institutions, common programs, and single market, a series of debates on the following topics will be addressed: Federal Europe vs. Europe of Nations; A wider vs. a deeper Community; From an economic and monetary community to a political community? Relations between France, Europe, and NATO (Eurocentrism vs. Atlantism); The cultural and social European Model and its future vs. American liberalism (the unemployment problem); Is there a European citizen? (education and training); Europe and its relations with the rest of the world (Euro vs. dollar and yen). After a video presentation of each topic, two students will lead the discussion. The rest of the students will contribute to the debate by preparing question and comments.

SM 325. (COML324) Advanced French Translation. (M) Prerequisite(s): French 212 and 214 or equivalent.

This course is designed to help foster an awareness of the differences between French and English syntactical and lexical patterns. It will introduce students to some of the theoretical problems of translation although the primary emphasis will be on improving the students' mastery of French. Both literary and non-literary texts will be included.

SM 330. Medieval Literature. (M)

An introductory course to the literature of the French Middle Ages. French literature began in the 11th and 12th centuries. This course examines the extraordinary period during which the French literary tradition was first established by looking at a number of key generative themes: Identity, Heroism, Love, Gender. All readings and discussions in French.

SM 340. French Renaissance Literature. (C)

This course introduces a diverse and fascinating era, which marks the beginning of the early modern period. It examines the political, historical, and social context of France and investigates how contemporary writers and poets translated the discoveries of Humanism into their works. Authors to be studied include the poets Clement Marot, Maurice Sceve, Louise Labe, Pernette Du Guillet, Ronsard and Du Bellay. In addition, a number of stories

from Marguerite de Navarre's rewriting of the "Decameron" (L'Heptameron), as well as Rabelais's comic work "Pantagruel" and some essays of Montaigne will be analyzed.

SM 350. 17th Century French Literature. (C)

We will read a number of the masterpieces of the Golden Age of French literature, including works by Moliere, Racine, Lafayette, and La Fontaine. We will place special emphasis on the social and political context of their creation (the court of Versailles and the most brilliant years of Louis XIV's reign).

SM 360. (FREN250, GSOC360) French Literature of the 18th Century. (M)

Throughout the 18th Century, the novel was consistently chosen by the philosophes as a forum in which to present political ideas to a broad audience. French novels of the Enlightenment are therefore often hybrid works in which fictional plots, even love stories, co-exist with philosophical dialogue and with more or less fictionalized discussions of recent political events or debates. We will read novels by all the major intellectual figures of the 18th century -- for example, Montesquieu's "Lettres Persanes," "Contes" by Voltaire, Diderot's "Le Neveu De Rameau"-- in order to examine the controversial subject matter they chose to explore in a fictional format and to analyze the effects on novelistic structure of this invasion of the political. We will also read works, most notably Laclos' "Les Liaisons Dangereuses," that today are generally thought to reflect the socio-political climate of the decades that prepared the French Revolution of 1789. In all our discussion, we will be asking ourselves why and how, for the only time in the history of the genre, the novel could have been, in large part and for most of the century, partially diverted from fictional concerns and chosen as a political vehicle.

SM 370. French Literature of the 19th Century. (M)

Topic changes each semester.

SM 379. Short Narratives in Fantastic Literature. (M)

This course will explore fantasy and the fantastic in short tales of 19th and 20th century French literature. A variety of approaches - thematic, psychoanalytic, cultural, narratological - will be used in an attempt to define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the "real," making visible

the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other, will be considered.

Readings usually include "recits fantastiques" by Merimee, Gautier, Nerval, Villiers de l'Isle-Adam, Maupassant, Breton, Jean Ray, Mandiargues and others.

SM 380. (COML381) Literature of the Twentieth Century. (M)

This course, the theme of which changes from semester to semester, provides an introduction to important trends in twentieth century literature.

L/R 382. (CINE382, COML372) Horror Cinema. (C)

The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionists masterworks of the silent era, the Universal classics of the 30's and the low-budget horror films produced by Val Lewton in the 40's for RKO in the US, the 1950's color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60's, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics,...).

SM 384. The French Novel of the Twentieth Century. (M)

SM 385. Modern French Theater. (M)

A study of major movements and major dramatists from Giraudoux and Sartre to the theater of the absurd and its aftermath.

SM 389. France and Its Others. (M)

A historical appreciation of the impact of the exploration, colonization, and immigration of other peoples on French national consciousness, from the 16th century to the present. Emphasis is on the role of the Other in fostering critiques of French culture and society. Readings include travel literature, anthropological treatises, novels, and historical documents. Oral presentations and several short papers are included in the course.

SM 390. (AFRC391, AFST390) Survey Francophone Literature. (M)

A brief introduction about the stages of French colonialism and its continuing political and cultural consequences, and then reading in various major works -- novels, plays, poems -- in French by authors from Quebec, the Caribbean, Africa (including the Maghreb), etc. Of interest to majors in International Relations, Anthropology and African Studies as well as majors in French.

SM 393. (COML393) Africa & African Diaspora. (M) Taught in English.

This course will take the form of an introductory seminar designed to provide undergraduate students an overview of significant themes and issues focusing on the historical, political and cultural relationships between Africans and their descendants abroad. It will encompass: a review of different historical periods and geographical locations, from Ancient Egypt to modern American, Caribbean and African states; a critical evaluation of social movements and theories that have developed in the nineteenth and twentieth centuries among scholars of different origins in their attempt to reconstruct Africa as a center and the Diaspora as a specific cultural space; and, an exploration of representations of Africa and the Diaspora in canonical literary works and other forms of fiction like the visual arts.

SM 394. (AFRC293) Topics in Caribbean Literature. (M)

This course will introduce students to the literature of the French-speaking Caribbean (West Indian Literature) in the context of literary history and modern culture. Select works will be examined individually and in relation to each other. We will explore the themes that link these works, comparisons and contrasts in literary techniques, and approaches to language.

SM 395. Topics in African Literature. (M)

Topics vary from semester to semester.

398. Honors Thesis. (C)

399. Independent Study. (C)

See instructor for permission.

Graduate Level Courses

SM 500. Proseminar. (M)

This course will provide a forum for collective preparation for the Master's exam.

SM 512. History of Literary Theory. (M)

An exploration of literary theory centering on a few concepts (tradition, textuality, interpretation, ideology, authority) and problematizing the ways in which we read literature.

SM 573. (ARTH573, CINE515, COML570, ENGL573, GRMN573) Studies in Romanticism. (M)

SM 580. Studies in 20th-Century French Literature. (M)

SM 582. (COML589) Fantastic Literature 19th/20th Centuries. (M)

This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches -- thematic, psychoanalytic, cultural, narratological -- will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the "real," making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include "recits fantastiques" by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.

SM 593. (AFRC593, AFST593) Studies in Francophone African Literature. (M)

Topics will vary. Seminar will focus on one area, author, or "problematique" in Francophone studies. Examples of an area-focused seminar: The African Contemporary novel or Francophone Caribbean writers. Example of a single-author Seminar: The Poetry and Drama of Aime Cesaire: Examples of a thematic approach: writing and national identity, postcolonial conditions, autobiography.

SM 595. Travel Literature. (M)

Within the context of the ill-defined, heterogeneous genre of the travelogue and of today's age of globalization, CNN and the Internet, this seminar will examine the poetics of travel writing based largely albeit not exclusively on travel notebooks, or journaux/carnets de voyage, spanning the XXth century from beginning to end. One of the principal specificities of the texts studied is that they all evince to a lesser or greater degree a paradoxical resistance both to the very idea of travel(ing) as such and to the mimetic rhetoric of traditional travel narratives. We will therefore look at how

modern or postmodern texts question, revisit, subvert or reject such key notions of travel literature as exoticism, nostalgia, exile, nomadism, otherness or foreignness vs. selfhood, ethnology and autobiography, etc.

Authors considered will include Segalen, Morand, Michaux, Leiris, Levi-Strauss, Butor, Le Clezio, Baudrillard, Bouvier, Jouanard, Leuwers.

SM 600. Old French. (B)

A systematic study of the structure of Old French including phonology, morphology, syntax, and lexicon as well as intensive practice in reading Old French texts with an emphasis on 12th- and 13th-century texts. By the end of the semester, students should be able to read works in Old French with the aid of a dictionary. Attention will be paid to the chronological differences between earlier and later Old French as well as to the major dialectal differences. Students will also be familiarized with the major research tools, dictionaries and grammars for working on Old French.

SM 609. (COML604) France and Its Others. (M)

The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of "ethnosurrealism" in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of "anthropology as cultural critique in the United States." Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.

SM 619. (COML701) Poétique du Recit. (M)

SM 620. Reading History in Literature. (A)

SM 630. (COML630, ITAL630) Introduction to Medieval French Literature: The Grail and the Rose. (M)

Topics vary. Previous topics include The Grail and the Rose, Literary Genres and Transformations, and Readings in Old French Texts.

SM 631. Epic and Romance. (M)

Topics will vary from semester to semester.

SM 634. Le Roman de la Rose. (M)

SM 635. (COML714) Late Medieval Literature. (M)

One possible topic is "History and Allegory: Problems of Representation." Considers several privileged cases of the relationship between the contemporary historical subject (dangerous, unstable) and the allegorical mode of representation (literary-philosophical, distancing, cerebrally interpretive). Texts to be studied include the "Roman de Fauvel" (and the spectacular corruption of Philippe le Bel's court in early 13th-century Paris); Christine de Pizan's "Epistre d'Othea" and "Jehan de l'Arc" (and mythographic-allegorical treatments of the "crisis of the Hundred Years War" in the late 14th and early 15th centuries); as well as Froissart and de la Sale.

SM 638. (COML638, MUSC710) Medieval Culture. (M) Faculty. Topics will vary each term.

SM 640. Studies in the Renaissance. (M)

Topics vary. Previous topics have included Rabelais and M. de Navarre, Montaigne, and Renaissance and Counter-Renaissance.

SM 650. (COML651, GRMN651, HIST651) Studies in the 17th Century. (M)

Topics of discussion will vary from semester to semester. One possible topic is "The Royal Machine: Louis XIV and the Versailles Era." We will examine certain key texts of what is known as the Golden Age of French literature in tandem with a number of recent theoretical texts that could be described as historical. Our goal will be to explore the basis of "the new historicism," a term that is designed to cover a variety of critical systems that try to account for the historical specificity and referentiality of literary texts.

SM 652. (COML652, GSOC652) Women's Writing in Early Modern France. (M)

Topics of discussion will vary from semester to semester. One possible topic is: "The Female Tradition and the Development of the Modern Novel." We will discuss the most important women writers--from Scudery to Lafayette--of the golden age of French women writers. We will be particularly concerned with the ways in which they were responsible for generic innovations and in particular with the ways in which they shaped the development of the modern novel.

SM 654. (COML658, ENGL730, GRMN665, MUSC654) Early Modern Seminar. (M)

SM 660. (COML620, ENGL748, GSOC748) Studies in the Eighteenth Century. (M)

Topics of discussion will vary from semester to semester. One possible topic is "Masterpieces of the Enlightenment." We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment--for example, the meditations on freedom of religious expression that Voltaire contributed to "affaires" such as the "affaire Calas." We will also discuss different monuments of the spirit of the age--its corruption (Les Liaisons dangereuses), its libertine excesses and philosophy (La Philosophie dans le boudoir). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment?

SM 662. The Epistolary Novel. (M)

From the Regency to the Revolution, the French 18th century was obsessed with the present moment. In literature, this obsession manifests itself most clearly in the epistolary novel, which became the privileged form of expression chosen by all the major authors of the age. Because of the rise of epistolarity, the art of "writing to the moment," in Richardson's memorable formulation, must be seen as one of the Enlightenment's principal voices. And, for the first time, the letter became a highly valued means of communication, in both the private and the public domains.

We will read most of the major epistolary novels beginning with the genre's first classic, "Lettres portugaises," and ending with its masterpiece, "Liaisons dangereuses." We will consider some real correspondences--for example, Sevigne's and Diderot's--to see how the urge to turn them into novels proved irresistible, to

editors and authors alike. Finally, we will read several examples of what was known as the "public" letter, philosophical texts that used the epistolary form (for example, Diderot's "Lettre sur les aveugles"), to see how the techniques of epistolarity survived the transition into the realm of the polemical.

SM 670. (COML669) Studies in 19th-Century Literature. (M)

Topics vary. One possible topic is "Decadence." We'll try to understand just what is meant by this concept as a designation for much of the literature of the fin de siècle. The notion of decadence will be explored historically and conceptually, analyzing similarities with closely related movements, such as naturalism and symbolism. After reading some theoretical texts by Baudelaire, Schopenhauer, Nietzsche, Wilde, and Bourget, we will discuss works by Villiers, Huysmans, Rachilde, Louys, Mirbeau, and Lorrain. To help in our understanding of the thematics of decadence, we will also look at paintings by Moreau, Rops, and other painters of the period. Influential notions of decadence and degeneration in criminology and medicine will also be discussed.

SM 671. Studies in 19th-Century Poetry. (M)

Topics of discussion will vary from semester to semester. A representative description follows: Rimbaud, Lautreamont, Mallarmé. One half of the course will be devoted to Rimbaud and Lautreamont, the second half to Mallarmé. We will attempt to focus on such points as the revolution in poetic language, the textual body, the (en)gendering of the subject. Students will be required to read critical and theoretical writings on these questions, and discuss them in class presentations.

SM 674. The 19th-Century French Novel. (M)

The development of the French novel in the 19th-century: structure and theory, ideological and historical questions. Focus may vary.

SM 680. (CINE680, COML595) Studies in the 20th Century. (M)

An analysis of narrative as theme with a focus on the theme's elaboration in modern French fiction.

SM 681. Studies in Modern French Poetry. (M)

How does one approach the modern poetic text which ever since the Mallarmean "crise de vers" appears to have cut loose from all

referential anchoring and traditional markers (prosody, versification, etc.)? This course will present an array of possible methodological answers to this question, focusing on poetic forms and manifestations of brevity and fragmentation. In addition to being submitted to precise formal and textual inquiries, each text or work will be the point of departure for the analysis of a specific theoretical issue and/or an original practice - e.g., genetic criticism, translation theory, the poetic "diary", aphoristic modes of writing, quoting and rewriting practices, etc. Texts by key modern poets (Ponge, Chazal, Du Bouchet, Jourdan, Jabes, Michaux).

SM 684. The French Novel of the 20th Century. (M)**SM 685. Modern French Theater. (M)****SM 687. Studies in French Cinema. (M)**

Topics will vary.

SM 693. (AFST693) Africa Looks to Europe. (M)**SM 695. Forms of Violence. (M)****SM 701. Topics In African Literature. (M)****851. Dissertation Proposal. (M)****999. Independent Study. (C)**

Designed to allow students to pursue a particular research topic under the close supervision of an instructor.

ITALIAN (ITAL)*Basic Language Courses***SM 110. Elementary Italian I. (C)**

A first semester elementary language course for students who have never studied Italian or who have had very little exposure to the language. Students who have previously studied Italian are required to take the placement test. Class work emphasizes the development of the oral-aural skills, speaking and listening. Readings on topics in Italian culture as well as frequent writing practice are also included. Out-of-class homework requires work with the Internet, audio and video materials.

SM 112. Accelerated Elementary Italian. (C) Prerequisite(s): Proficiency in another foreign language.

An intensive two-credit course covering the first and second semester of the elementary year for students who have never studied Italian before but have already fulfilled the language requirement in another modern language, preferably a romance language. Students who have fulfilled the language requirement in a language other than a romance language will be considered on an individual basis. All students must have departmental permission to register.

Class work emphasizes the development of the oral-aural skills, speaking and listening. Readings on topics in Italian culture as well as frequent writing practice are also included. Out-of-class homework requires work with the Internet, audio and video materials.

SM 120. Elementary Italian II. (C)

Prerequisite(s): Completion of Italian 110 or placement into 2nd semester Italian.

This course is the continuation of the elementary level sequence designed to develop functional competence in the four skills. Class work emphasizes the further development of the oral-aural skills, speaking and listening. Readings on topics in Italian culture as well as frequent writing practice are also included. Out-of-class homework requires work with the Internet, audio and video materials.

SM 130. Intermediate Italian I. (C)

Prerequisite(s): Completion of Italian 120 at Penn or a placement score between 450 and 540 on the Achievement Exam (SAT II).

Italian 130 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these. The course textbook, together with all supplementary materials, will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.

SM 134. Accelerated Intermediate Italian. (C) Prerequisite(s): Italian 112 or departmental permit; proficiency in another foreign language.

Italian 134 is the intensive and accelerated course that combines in one semester the intermediate sequence (130 and 140). It will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these on your own. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.

SM 140. Intermediate Italian II. (C) Prerequisite(s): Completion of Italian 130 at Penn or placement into Italian 140.

Italian 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these on your own. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of analogies and differences between your native culture and the Italian world. The course will move beyond stereotypical presentations of Italy and its people to concentrate on specific social issues together with cultural topics.

SM 180. Italian Conversation in Residence. (E) Must be resident of the Modern Language House.

Undergraduate-Level Courses

SM 080. (COML080) Introduction to Italian Cinema. (C) Arts & Letters Sector. All Classes.

Italian national cinema from the Golden Age of silent film and classics of Neorealism to present, covering work of a dozen major directors. Films discussed in

context of history from the Unification, national vs. regional identity, gender roles, contemporary politics. Readings in Italian history, Italian film history, and theory of cinema. Taught in English.

SM 100. (CINE140, COML107) Topics: Freshman Seminar. (C)

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of current offerings.

SM 200. Medieval Culture. (M)

Topics will vary.

SM 202. Advanced Italian. (C)

Prerequisite(s): Open to students who have completed the language requirement. This course aims at developing and deepening language abilities acquired in the first two years of study; it also prepares students for upper-level courses in literature, culture or cinema. Students will increase their vocabulary and speaking skills through the reading, analysis and discussion of Niccolo Amanniti's best-selling novel *Io non ho paura*. Other reading materials will open windows onto aspects of contemporary Italian culture and society. We will place special emphasis on a thorough review of advanced grammar. Short weekly compositions and a final project will develop writing skills. This course is a prerequisite for other 200-level courses.

SM 203. (COLL228, COML203) Introduction to Italian Literature and Culture. (C) Arts & Letters Sector. All Classes. Prerequisite(s): Italian 202 (may be taken concurrently).

Readings and reflections on significant texts of the Italian literary and artistic tradition exploring a wide range of genres, themes, cultural debates by analyzing texts in sociopolitical contexts. Readings and discussions in Italian.

SM 204. (CINE240) Italian History on Screen: How Movies Tell the Story of Italy. (C)

Italian civilization in its encyclopedic sweep, from ancient Rome to the Middle Ages, Renaissance, Risorgimento, Fascism, World War II, and the contemporary scene, in compared perspective, through the historian's eye and the film maker's lens. Course taught in English; films in Italian with English subtitles, readings in English.

SM 205. Italia Viva Voce. (A)

Prerequisite(s): Italian 202 (may be taken concurrently).

In this advanced conversation course taught exclusively in Italian, students will perfect their communication skills and learn to use the most appropriate register in a variety of formal and informal situations while exploring significant aspects of contemporary Italian culture. Listening and speaking activities--role plays, discussions, oral presentations, internet forums, etc.--will be based on audio-visual material (songs, pictures, audio and video clips) and written texts (newspaper articles, literary texts) provided by the instructor and/or proposed by the students themselves based on their explorations of the Italian web. Linguistic structures will be revised as needed. Some writing will also be required.

SM 208. Business Italian I. (M)

Prerequisite(s): Ital 202.

The major purpose of the course, which is conducted entirely in Italian and therefore requires an intermediate/high, to advanced level of the language, is to enable students to acquire language proficiency in the area of the current Italian labor world, so that they can read and comprehend business publications, write and compose business texts, and participate in business-related conversations. Business terminology will be placed within the framework of many different international work situations and practices, such as industry, trade, insurance, banking, agriculture, communications, etc. Classes will also include lectures on current political, economic, and labor developments in Italy as well as an examination of various Italian views on the creation of the European Internal Market. The course will emphasize, through Italian newspapers and magazine articles, the differences between Italian and American business practices and cultural differences, such as the attitude of the Italian towards money, work, leisure, and consumerism, which will help students to understand the specific nature of the Italian world.

SM 213. (CINE240, COML214) Contemporary Italy Through Film. (M) Arts & Letters Sector. All Classes.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of current offerings.

SM 215. Interdisciplinary Approaches to Literature and Cinema. (C)

Prerequisite(s): Italian 140 or Proficiency. Topics vary. See the Romance Languages Department's website at

<http://ccat.sas.upenn.edu/roml> for a description of current offerings.

SM 220. Cultura E Letteratura. (C)

Taught in Florence.

SM 222. Topics in Italian Cinema. (C)

Topics vary. See the Romance Languages Department's website at

<http://ccat.sas.upenn.edu/roml> for a description of current offerings.

SM 226. SA: Culture and Literature. (C)

Topics vary.

SM 232. (COML234) The World of Dante. (M)

Dante's masterpiece in context of 14th century culture. Selected cantos will connect with such topics as books and readers in the manuscript era, life in society dominated by the Catholic church (sinners vs. saints, Christian pilgrimage routes, the great Franciscan and Dominican orders), Dante's politics as a Florentine exile (power struggles between Pope and Emperor), his classical and Biblical literary models, his genius as a poet in the medieval structures of allegory, symbolism, and numerology. Field trip to University of Pennsylvania Rare Book Collection. Text in Italian with facing English translation.

SM 260. Worldviews in Collision. (M)

This course explores the radical conflicts that developed in the 16th and 17th century Europe when Protestant reformers, scientific discoveries, and geographical explorations challenged a long-held Medieval worldview and the authority of the Roman Catholic Church. These historical developments will be studied in comparison with parallel modern issues, such as Darwinism, separation of church and state, multicultural religious conflicts. Historical readings: Machiavelli's comic play *Mandragola*, the vitriolic polemic involving Martin Luther, Thomas More, and King Henry VII; Thomas Campanella's Utopian dialogue *The City of the Sun*, selections from the scientists Copernicus and Galileo, and from *The History of the Council of Trent* by the Venetian Paolo Sarpi. Modern texts: Osborne's *Luther*, Brecht's *Galileo*, and a classic Hollywood film *Utopia*, Frank Capra's *Lost Horizon*. In introductory and final units, we shall consider how 16th and 17th century poetry and visual arts mirrored their turbulent times, with an attention to the Petrarchan tradition (Vittoria Colonna, Marino) and stylistic changes in Italian painting, sculpture, and architecture from Renaissance to Mannerist to Baroque.

SM 267. (HIST181) SA: The Medici. (L)

Taught in Florence. Topics vary.

SM 280. Films From Literature. (M)

Topics vary.

SM 288. (CINE240) Modern Italian Culture. (M)

Topics will vary.

SM 300. (ARTH251, CINE340, COML300, HIST180) Topics in Italian History, Literature, and Culture. (M)

Topics will vary.

SM 310. (COML310, GSOC310) The Medieval Reader. (M)

Through a range of authors including Augustine, Dante, Petrarch, Galileo, and Umberto Eco, this course will explore the world of the book in the manuscript era. We will consider 1) readers in fiction-male and female, good and bad; 2) books as material objects produced in monasteries and their subsequent role in the rise of the universities; 3) medieval women readers and writers; 4) medieval ideas of the book as a symbol (e.g., the notion of the world as God's book); 5) changes in book culture brought about by printing and electronic media. Lectures with discussion in English, to be supplemented by visual presentations and a visit to the Rare Book Room in Van Pelt Library. No prerequisites.

SM 322. (CINE240, COML280) Italian Cinema. (M)

The course will consist of a broad and varied sampling of classic Italian films from WWII to the present. The curriculum will be divided into four units: (1) The Neorealist Revolution, (2) Metacinema, (3) Fascism and War Revisited, and (4) Postmodernism or the Death of the Cinema. One of the aims of the course will be to develop a sense of "cinematic literacy"--to develop critical techniques that will make us active interpreters of the cinematic image by challenging the expectations that Hollywood has implanted in us: that films be action-packed wish-fulfillment fantasies. Italian cinema will invite us to re-examine and revise the very narrow conception that we Americans have of the medium. We will also use the films as a means to explore the postwar Italian culture so powerfully reflected, and in turn, shaped, by its national cinema. Classes will include close visual analysis of films using video clips and slides. The films will be in Italian with English subtitles and will include works of Fellini, Antonioni, De Sica,

Visconti, Pasolini, Wertuller, Rossellini, Rossellini, Bertolucci and Moretti.

Students will be asked actively to participate in class discussion, and to write a series of critical papers keyed to the units around which the course will be organized. Substantial Writing Component.

SM 333. (COML333, ENGL223, ENGL323) Dante's Divine Comedy. (M)

Prerequisite(s): Proficiency in Italian. When crosslisted with ENGL 332, this is a Benjamin Franklin Seminar.

In this course we will read the *Inferno*, the *Purgatorio* and the *Paradiso*, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the *Commedia* presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's *Aeneid* and selections from Ovid's *Metamorphoses*. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian text the original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required.

SM 335. Medieval and Renaissance Literature. (M)

Taught in Florence.

This course will involve close study of the two major narrative works to emerge from medieval Florence. We will take advantage of the study-abroad experience to relate our readings closely to the city and region in which we are living, with visits to neighborhoods and monuments important to the authors or illustrative of the cultural forces that shaped their texts, as well as to the Casa di Dante in central Florence, and the residence of Boccaccio in the Tuscan hill-town of Certaldo. The classes will be dedicated to in-depth interpretation of Dante's "*Inferno*", of Boccaccio's "*Decameron*", and the relationship between their vastly different, yet kindred views of the human condition. The course will be given in English. This course may be taken for Italian language credit provided students do reading and writing assignments in Italian. It may also be taken for graduate credit, but additional work and meetings with instructors will be required.

SM 340. (HIST338) Topics in the Renaissance. (M)

Content Varies. Possible contents may be: Renaissance Women Writers, Love and Sexuality in the Renaissance.

SM 351. Mad Love. (M)

The history of an emotion and how it emerges in Italian literature, music and film.

SM 360. (COML363) Semiotics and Rhetoric. (M)

A survey of major currents in the modern theory of signs and languages, ranging from linguistics through the perspectives of semiotics, rhetoric and hermeneutics. Readings from modern works on semiotical and rhetorical theory as well as analysis of primary texts in Italian literature from Dante to Svevo, as well as other forms of communication including advertising, journalism, film and television. All readings in English.

SM 380. (CINE340, COML382) Italian Literature of the 20th Century. (M)

Topics vary, covering a range of genres and authors.

The reading material and the bibliographical references will be provided in a course reader. Further material will be presented in class. Requirements include class attendance, preparation, and participation, a series of oral responses, and a final oral presentation.

SM 383. 20th-Century Italian Novel. (M)

SM 385. Modern Theater. (M)

A study of theater in Italian, beginning with Pirandello.

398. Honors Thesis. (C)

399. Independent Study. (C)

499. Independent Study. (A)

Graduate-Level Courses

SM 501. (COML503) Italian Literary Theory. (M) Taught occasionally. This requirement is normally satisfied by taking the Comparative Literature course in literary theory.

Basic issues in literary theory.

SM 520. (COML520) Medieval "Autobiography": Augustine to Petrarch. (M) Brownlee.

The development of a new authorial subject in Medieval and Early Modern first-person narrative.

SM 530. (COML531) Medieval Italian Literature. (M)

Medieval Italian society, art, intellectual and political history.

SM 531. (COML533, ITAL333) Divina Commedia I. (M) This course may sometimes be taught as the first part of a two-semester sequence.

"Divine Comedy" in the context of Dante's medieval worldview and culture.

SM 532. (COML532) Divina Commedia II. (M) Prerequisite(s): Italian 531.

"Divine Comedy" in the context of Dante's medieval worldview and culture.

SM 534. (COML534, GSOC534) Women in Poetry. (M) Prerequisite(s): Reading knowledge of Italian.

SM 535. (COML524) Petrarch. (M)

Petrarch's life and work in the context of Italian and European culture and society.

SM 537. (COML521, GSOC537) Boccaccio. (M) Kirkham.

Boccaccio's life and work in the context of Italian and European culture and society.

SM 539. (COML548) Cracking the Code: Numerology and Literature. (M)

In English. This course reconstructs traditions of Western number symbolism from antiquity (Plato, the Pythagoreans) to the early modern period with readings both in encyclopedic treatises on Arithmetic (Macrobius, Martianus Capella, Rhabanus Maurus) and in literary texts that are numerical compositions (Augustine's Confessions, Petrarch's epistle on the ascent of Mt. Ventoux, Dante's Vita Nuova and Commedia, Boccaccio's Diana's Hunt, the Old French Vie de St. Alexis, and Umberto Eco's The Name of the Rose). Discussion will focus on numerology as it relates to the medieval esthetic of order, the literary text as microcosmic counterpart to God's macrocosm, veiled meaning, and "difficult" poetics. We shall also consider the end of the tradition and what changes in science and culture brought about the disappearance of number symbolism in literature, except for a few moderns (e. g. Thomas Mann). Cross-listed with COML 539.

SM 540. (COML540, ENGL540, SPAN540) Topics: Renaissance Culture. (M)

Renaissance Italian society, art, intellectual and political history.

SM 562. (COML508) World Views in Collision. (M)

The impact of paradigm shifts on Italian and European culture.

SM 584. (CINE584) 20th-Century Italian Novel and Film. (M)

The course will involve an exploration of a number of works of prose fiction and, when possible, the screening of their filmic adaptations. We will consider such genres as the historical novel (Tomasi di Lampedusa's *Il gattopardo*), biography (Dacia Mariani's *La lunga vita di Marianna Ucrìa*), autobiography (Gavino Ledda's *Padre padrone*), the mystery novel (Leonardo Sciascia's *A ciascuno il suo*), the epistolary novel (Oriana Fallaci's *Lettera ad un bambino mai nato*), the political thriller (Antonio Tabucchi's *Sostiene Pereira*), "anthropological" memoir (Carlo Levi's *Christ Stopped at Eboli*), the psycho-political case study (Alberto Moravia's *Il conformista*) and the regional short story (selections from Luigi Pirandello's *Novelle per un anno*). The class will be conducted as a seminar requiring a great deal of student participation.

SM 586. (CINE548) Italian Women Directors.

In Peter Bondanella's book, "Italian Cinema, from Neorealism to the Present," only two Italian women directors are mentioned: Lina Wertmuller and Liliانا Cavani. However, in recent years, the Italian cinema has generated a new wave of Italian women directors who have significantly made their mark on the national cinematic imagination. Francesca Archibugi, Roberta Torre, Cristina e Francesca Comencini, Antonietta De Lillo, Fiorella Infascelli, Anna Negri, Laura Muscardin among otheestablished themselves as important voices of the last generation of Italian filmmakers in feature films, Angela Ricci Lucchi in the realm of non-fiction films and Alina Marazzi in the realm of documentary. In this course, we are going to explore their films, in connection to feminist and post-feminist culture in Italy, examining the originality of their approach and their relationships to the challenges offered by the advent of new technologies. The course will be taught in Italian.

SM 588. (CINE548, COML587) Cinema and the Sister Arts. (M)

Cinema as a pan-generic system constructed of other art forms, including fiction, theater, painting, photography, music and dance.

SM 601. Time and Literature. (M)

The perceptions of Time differ according to various societies, conceptions of history, religious and literary traditions. Literature not only inhabits Time, but forges it. The course will focus on representations and elaborations of time throughout the Italian culture from Dante to the XX Century. We will deal also with the theoretical issues connected with the relation between time and history. The course will be taught in Italian. Undergraduates need permission.

SM 602. Tools of the Trade. (M)

Theoretical and practical aspects of academic research.

SM 630. (COML630, FREN630) Medieval Italian Literature. (M)

Medieval Italian society, art, intellectual and political history. Advanced level course.

SM 631. (COML632) Dante's Commedia. (M)

"Divine Comedy" in the context of Dante's medieval worldview and culture. Advanced level course.

SM 634. Woman's Place. (M)

Poetry by women and about women. Advanced level course.

SM 640. (COML641) Studies in the Italian Renaissance. (M)

Renaissance Italian society, art, intellectual and political history. Advanced level course.

SM 660. 18th Century Italian Culture. (M)

18th century Italian society, art, intellectual and political history.

SM 672. Narrativa '800-'900. (M)

Modern and contemporary Italian fiction.

SM 684. (CINE684) 20th-Century Novel. (M)

Contemporary Italian fiction

990. Masters Thesis. (C)

995. Dissertation. (C)

998. Tutorial. (C)

999. Independent Study. (C)

PORTUGUESE (PRTG)

Basic Language Courses

SM 110. Elementary Portuguese I. (A)

This is a beginning level Portuguese course for students with little or no previous knowledge of the language. This class gives an introduction to the basic structures of reading, writing, speaking, and listening skills. Class work emphasizes development of speaking and listening comprehension through practical, engaging dialogues and lively role-playing activities. A Brazilian movie is presented and discussed in small groups. Daily homework assignments involve writing exercises, short compositions, and group projects.

SM 114. Portuguese for Spanish Speakers. (C)

SM 120. Elementary Portuguese II. (B) Prerequisite(s): PRTG 110 or equivalent.

This class continues the development of a basic proficiency that will help reinforce the student's abilities and confidence. A broad range of lively, high-interest readings such as newspaper and magazine articles in current events on Brazilian culture will allow the student to gain a genuine sense of current usage. A Brazilian movie is presented and discussed in groups. Daily homework assignments involve writing exercises, short compositions and group projects.

SM 130. Intermediate Portuguese I. (A) Prerequisite(s): PRTG 120, PRTG 112 or equivalent.

SM 140. Intermediate Portuguese II. (B) Prerequisite(s): PRTG 130 or equivalent.

Undergraduate-Level Courses

SM 202. Advanced Portuguese. (M)

This course is designed for students who wish to master the Portuguese language beyond the intermediate proficiency level. Brazilian culture will be studied through film, literature, art and music. Movies and documentaries will be used to stimulate discussion and debate. Advanced grammatical structures will be studied within a cultural context. Classes will focus on learning how to express opinions, make comparisons, hypothesize and compose using more complex structures

and sophisticated vocabulary. The class will be conducted entirely in Portuguese.

SM 209. Business Portuguese II. (A)

In this course students will develop their Portuguese writing and speaking skills related to business. A cultural and economic context will provide the frame for the discussion of political, economic and geographical current issues in relation to the Lusophone World. The course will also focus on giving presentations and producing different texts, including essays and summaries based on the course readings.

SM 212. Advanced Portuguese I. (A)

SM 215. Portuguese for the Professions. (D) Prerequisite(s): Permission of the instructor.

Portuguese for the Professions is designed for advanced-level students to develop their ability to use a wide technical vocabulary. The course will cover an array of topics in the areas of Economy, Politics, Science and Technology and other themes as they pertain to the societies and cultures of the Lusophone countries, with particular emphasis placed on Brazil. Through readings, movies, discussions, essays and presentations, students will enhance their ability to write about and discuss these topics while employing the appropriate technical vocabulary. Instructor's permission required.

SM 216. Business Portuguese I. (A)

SM 217. Business Portuguese II. (B) Prerequisite(s): PRTG 216 or permission of the instructor.

SM 221. (LALS231) Topics in Brazilian Culture. (M) Mercia Flannery. Prerequisite(s): Taught in Portuguese.

SM 222. (CINE224, LALS220) Perspectives in Luso-Brazilian Literature. (M) Prerequisite(s): PRTG 221.

SM 240. (CINE232, COLL223, LALS240, SPAN223) Topics in Brazilian Culture. (C)

**ROMANCE LANGUAGES
(ROML)**
Undergraduate Level Courses
**SM 390. (COML360, ENGL394)
Introduction to Literary Theory. (M)**

Topics vary.

Graduate Level Courses
**SM 512. (CLST511, COML501,
ENGL571, GRMN534, SLAV500)
History of Literary Theory. (M)**
**SM 690. (FREN690, ITAL690,
SPAN609) Applied Linguistics and
Language Teaching. (M)**

This is a year long course required of all first-year Teaching Assistants in French and Italian. It is designed to provide new instructors with the necessary practical support to carry out their teaching responsibilities effectively. It will also introduce students to various approaches to foreign language teaching as well as to current issues in second language acquisition.

**SM 691. (EDUC673, GRMN517)
Technology and Foreign Languages.
(M) Prerequisite(s): Romance Languages
690 or its equivalent.**

This course will introduce participants to the field of technology and foreign language teaching and learning. It will review the pertinent theoretical underpinnings for the pedagogically-sound use of technology in the teaching of languages starting with a brief overview of the historical development of the field. Students will learn to evaluate existing programs and applications with a critical eye through a systematic examination of projects which have been implemented both here at Penn and elsewhere. The course will also have weekly hands-on workshops to introduce participants to the design and development of multimedia materials, including image, video and sound editing. The focus will be primarily on Web-based design and delivery. All participants will select a project to work on during the course of the semester; in addition they develop an online teaching portfolio.

SPANISH (SPAN)
Basic Language Courses
SM 110. Elementary Spanish I. (A)

Prerequisite(s): A score below 380 on the SAT II or below 285 on the online placement examination.

Spanish 110 is a first-semester elementary language course designed for students who have not previously studied Spanish. This course emphasizes the development of foundational reading, writing, listening, and speaking skills while exploring the rich cultural mosaic of the Spanish-speaking world. Students will participate in pair, small-group and whole-class activities that focus on meaningful and accurate communication skills in the target language.

Students who have previously studied Spanish must take the online placement examination.

**SM 112. Elementary Spanish I and II:
Accelerated. (A) Prerequisite(s): Permit
required from the course coordinator.**

Spanish 112 is an intensive course designed for students who have already satisfied the language requirement in another language and have not previously studied Spanish. By combining the curriculum of Spanish 110 and 120, Spanish 112 seeks to develop students' reading, writing, listening and speaking abilities while exploring the rich cultural mosaic of the Spanish-speaking world. Students will participate in pair, small-group and whole-class activities that focus on meaningful and accurate communication skills in the target language.

**SM 115. Spanish for the Medical
Professions, Elementary I. (A)**

Prerequisite(s): A score below 380 on the SAT II or below 285 on the online placement examination. Offered through the Penn Language Center.

Spanish 115 is a first-semester elementary medical Spanish language course and the first in the Spanish for the Medical Professions sequence. It is designed for students with no prior coursework in Spanish. This course teaches beginning students the fundamentals of practical Spanish with an emphasis on medical situations and basic medical terminology. In this course, particular attention will be given to developing speaking and listening skills, as well as cultural awareness. It incorporates activities, vocabulary, and readings of particular interest to healthcare practitioners, while adhering to the goals

and scope of Spanish 110, the first-semester Spanish language course.

Students who have previously studied Spanish must take the online placement examination.

SM 120. Elementary Spanish II. (B)

Prerequisite(s): Successful completion of Spanish 110 or permission of the course coordinator.

The continuation of Spanish 110, Spanish 120 is a second-semester elementary language course. See the description of Spanish 110.

**SM 121. Elementary Spanish I and II:
Advanced Beginners. (C)**

Prerequisite(s): A score of 380-440 on the SAT II or 285-383 on the online placement examination.

Spanish 121 is designed for students who have some prior experience in Spanish. This course provides a quick-paced review of material normally covered in a first-semester Spanish course and then proceeds to introduce new material so students will be prepared to take Spanish 130 during the subsequent semester.

As in other Spanish courses, Spanish 121 emphasizes the development of foundational reading, writing, listening, and speaking skills while exploring the rich cultural mosaic of the Spanish-speaking world. Students will participate in pair, small-group and whole-class activities that focus on meaningful and accurate communication skills in the target language.

**SM 125. Spanish for the Medical
Professions, Elementary II. (B)**

Prerequisite(s): Successful completion of Spanish 110 or 115 or a score of 380-440 on the SAT II or 285-383 on the online placement examination. Offered through the Penn Language Center.

The continuation of Spanish 115, Spanish 125 is a second-semester elementary medical Spanish language course. See the description of Spanish 115.

SM 130. Intermediate Spanish I. (C)

Prerequisite(s): Successful completion of Spanish 112, 120, 121 or 125 or a score of 450-540 on the SAT II or 384-453 on the online placement examination.

Spanish 130 is a first-semester intermediate-level language course that emphasizes the development of the four basic skills (reading, writing, listening and speaking skills) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will

participate in pair, small-group and whole-class activities to practice linguistics skills in meaningful contexts. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense, and the development of writing skills at a paragraph level with transitions.

SM 134. Intermediate Spanish I and II: Accelerated. (B) Prerequisite(s): Spring semester prerequisites: Permit required from the course coordinator
Summer prerequisites: Successful completion of Spanish 112, 120, 121 or 125 or a score of 450-540 on the SAT II or 384-453 on the online placement examination.

Spanish 134 is an intensive intermediate-level language course that covers the material presented in Spanish 130 and Spanish 140. The course emphasizes the development of the four canonical skills (reading, writing, listening and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will participate in pair, small-group and whole-class activities to practice linguistics skills in a meaningful context. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense and major uses of the subjunctive, and the development of writing skills.

During the spring semester, Spanish 134 is limited to those students who have satisfied the language requirement in another language. During the summer, the course is open to all students who meet placement requirements.

SM 135. Spanish for the Medical Professions, Intermediate I. (A) Prerequisite(s): Successful completion of Spanish 112, 120, 121 or 125 or a score of 450-540 on the SAT II or 384-453 on the online placement examination. Offered through the Penn Language Center.

Spanish 135 is a first-semester intermediate-level medical Spanish language course that emphasizes the development of the four basic skills, reading, writing, listening, and speaking, and the acquisition of medical terminology. Students will be expected to participate in classroom activities such as role-plays based on typical office and emergency procedures in order to develop meaningful and accurate communication skills in the target language. Students will also review and acquire forms and structures useful both inside and outside the medical field.

SM 140. Intermediate Spanish II. (C) Prerequisite(s): Successful completion of Spanish 130 or 135 or a score of 550-640 on the SAT II or 454-546 on the online placement examination.

Spanish 140, the continuation of Spanish 130, is a fourth-semester language course that offers students the opportunity to acquire communicative skills (reading, writing, listening and speaking) while developing their awareness and appreciation of the Spanish-speaking world. Topics studied may include the environment, the arts, social relations, and conflict and violence.

SM 145. Spanish for the Medical Professions, Intermediate II. (C)

Prerequisite(s): Successful completion of Spanish 130 or 135 or a score of 550-640 on the SAT II or 454-546 on the online placement examination. Offered through the Penn Language Center.

The continuation of Spanish 135, Spanish 145 is a second-semester intermediate-level medical Spanish language course. See the description of Spanish 135.

This course satisfies the language requirement in Spanish.

Undergraduate-Level Courses

SM 180. Spanish Conversation. (E)

Prerequisite(s): Residence in Modern Language House.

Must be a resident of the Modern Language College House.

SM 202. Advanced Spanish. (C)

Prerequisite(s): Successful completion of Spanish 140 or equivalent.

The purpose of this course is twofold: (a) to develop students' communicative abilities in Spanish, that is, speaking, listening, reading and writing, and (b) to increase their awareness and understanding of Hispanic cultures and societies. Homework and classroom activities are designed to help students build their oral proficiency, expand and perfect their knowledge of vocabulary and grammatical structures, improve their reading and writing skills, and develop their critical thinking abilities. The material for this class includes short stories, newspaper articles, poems, songs, cartoons, video clips and a novel, such as Cesar Aira's *La Villa*. At the completion of this course students will feel confident discussing and debating a variety of contemporary issues (cultural and religious practices, family relationships, gender stereotypes, political events, immigration to the USA, etc.).

SM 208. Business Spanish I. (C)

Prerequisite(s): Successful completion of Spanish 140 or equivalent.

Spanish for Business I provides advanced-level language students with technical vocabulary and communicative skills covering business concepts as they apply to the corporate dynamics of the Spanish-speaking world, with a special emphasis on Latin America. Through readings, presentations, discussions, and video materials, we shall analyze those cultural aspects that characterize the business environment in the region as well as focus on economies and markets in light of their history, politics, resources and pressing international concerns.

SM 209. Business Spanish II. (A)

Prerequisite(s): Permission from the instructor.

Business Spanish II, Advanced Spanish for Business, is specifically designed for advanced speakers of Spanish (e.g., native speakers, heritage speakers, students who have studied in a Spanish-speaking country for at least one semester, and those who have attained an equivalent level of linguistic competency). Students will take an in-depth look at the corporate dynamics of a number of countries in Latin America, focusing on their economies and markets, as well as on the cultural and business protocols of each region. Through the creation of an entrepreneurial project and the writing of a business plan, students will enhance their business and language skills.

SM 212. Advanced Spanish

Grammar. (C) Prerequisite(s): Spanish 202 or equivalent.

Spanish 212 is an advanced grammar course that emphasizes the acquisition of a solid knowledge of those major points of Spanish grammar. Through discussion and correction of assigned exercises, analysis of authentic readings, and contrastive study of Spanish and English syntax and lexicon, students will develop an awareness of the norms of standard Spanish with the aim of incorporating these features into their own oral and written linguistic production.

SM 215. Spanish for the Professions

I. (C) Prerequisite(s): Spanish 202 or equivalent.

Spanish for the Professions is designed to provide advanced-level language students with a wide-ranging technical vocabulary and the enhancement of solid communicative skills within the cultural context of several developing Latin American countries. Focusing on topics such as politics, economy, society, health, environment, education, science and

technology, the class will explore the realities and underlying challenges facing Latin America. Through essays, papers, articles, research, discussions, case studies, and videotapes, we shall take an in-depth look at the dynamics of Latin American societies. The course will focus on—but not be restricted to—Mexico, Cuba and Argentina.

SM 219. Hispanic Texts and Contexts. (C) Prerequisite(s): Spanish 212.

The primary aim of this course is to develop students' knowledge of the geographical, historical and cultural contexts of the Spanish-speaking world. At the same time that they are introduced to research techniques and materials available in Spanish, students strengthen their language skills through reading, oral presentations, video viewing, and regular writing assignments. The course is designed to give students a broad understanding of Hispanic culture that will prepare them for upper-level course work.

SM 223. (CINE232, COLL223, COML226, LALS240, PRTG240) Perspectives in Spanish American Literature I. (C) Arts & Letters Sector. All Classes.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 225. (SPAN525) El español en el mundo. (M) Prerequisite(s): Spanish 219.

This course will explore the social aspects of the Spanish language in the world. It will principally deal with the position of Spanish in Spain, in Spanish-speaking America, and in the United States. We will deal with the unity and diversity of Spanish and its speakers in topics such as dialect varieties, regional languages, linguistic identity, languages in contact etc. The class will be conducted in Spanish, with readings in both Spanish and English.

SM 250. (COML252, LALS252) Major Works of Spanish and Latin American Literature. (C) Arts & Letters Sector. All Classes.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of current offerings.

SM 317. Spanish Phonetics and Morphology. (M) Prerequisite(s): Spanish 219.

An introduction to articulatory phonetics designed to give the student a practical

knowledge of the Spanish sound system as compared with English. Also some work in acoustic phonetics. Students learn to use the phonetic alphabet. Basic work is followed by an introduction to the linguistic analysis of sound systems, with concentration on Spanish and English phonology. Some introductory work on regional and social variations of pronunciation in the Spanish-speaking world. Lastly, an introduction to morphological analysis of language, with particular attention to the structure of the Spanish verb and word formation. Lectures and discussion of readings.

SM 319. History of the Spanish Language. (M) Prerequisite(s): Spanish 219.

A survey treatment of the development of Latin to modern Spanish, with emphasis on relations between external history and the development of grammatical structure and vocabulary, and major sound shifts. Lectures and discussions of reading.

SM 330. Medieval Literature. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 337. The Medieval Iberian Text. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 348. Don Quijote. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 350. (LALS350) Spanish Literature of the Golden Age. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 355. (LALS355) Topics in Spanish Drama. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 373. Spanish Romanticism, 1770-1870. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 380. (LALS380) Contemporary Spanish Literature. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 381. (CINE381) Contemporary Spanish Poetry. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 382. Literature of the Generation of 98. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 384. Spanish Novel Since 1939. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 386. (CINE385, GSOC386, LALS386) Studies in Spanish Culture. (C) Staff. Prerequisite(s): SPAN 219.

This course covers topics in contemporary Spanish Culture, its specific emphasis varying with the instructor.

SM 390. (CINE390, COML390, LALS396) Introduction to Spanish American Literature. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 391. (LALS391) Spanish American Poetry. (M) Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 392. (LALS392) Colonial Latin American Literature. (M)

Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 393. Spanish American Essay. (M)

Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 394. (LALS394) Spanish American Fiction. (M)

Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 395. (LALS395) Hispanic Theater. (M)

Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 396. (CINE396, GSOC396, LALS397) Studies in Spanish American Culture. (M)

Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 397. (LALS398) History of Spanish American Culture. (M)

Prerequisite(s): Spanish 219.

Topics vary. See the Romance Languages Department's website at <http://ccat.sas.upenn.edu/roml> for a description of the current offerings.

SM 400. Conference Course for Majors. (A)

Permission required.

Graduate-Level Courses

SM 512. (COML501) History of Literary Theory. (M)

SM 525. (SPAN225) Spanish in the World. (M)

Prerequisite(s): Spanish 219 or equivalent.

SM 548. Cervantes. (M)

This course examines fundamental issues staged by Cervantes's prose writing--from

the function of literature in a newly-constituted print-culture, to the representation of the Early Modern subject and its consequences for the emergence of the novel.

SM 573. 19th-Century Romanticism. (M)

A one-semester panorama of verse, theater, and prose representing the world view, major themes, and original techniques of Spanish Romanticism during the 19th century.

SM 574. Realismo. (M)

A study of Spanish Realism of the 19th century (Alarcon, Pereda, Valera, Galdos, Clarin, Pardo Bazan, Palacio Valdes, Picon, and Ortega Munilla).

SM 576. The Novels of Galdos, 1872-1887. (M)

SM 580. Contemporary Spanish Literature. (M)

SM 583. 20th-Century Novel Through 1940. (M)

A study of the major developments in the modern (1900-1940) Spanish novel.

SM 596. Spanish American Modernism. (M)

A study of the cultural and aesthetic motives of Modernist poetry and prose in Spanish America from 1880 to 1920.

SM 600. History of the Spanish Language. (M)

The development of the Ibero-Romance dialects from late Latin to medieval times.

SM 624. The Spanish Picaresque Novel. (M)

Origin and development of the picaresque novel in Spain.

SM 630. (COML628) Studies in the Spanish Middle Ages. (M)

By focusing on canonical and non-canonical texts chosen from the 13th to the 15th centuries, this course considers such seminal topics as: cultural representation in terms of history, politics and gender, the nature and function of the literary text, and the writer's place in society.

SM 631. Medieval Spanish Epic to Romance. (M)

Analysis of the Spanish epic from its origins to its prosification in chronicles, later manifestations, and relationship to the prose romance.

SM 640. (COML640) Studies in the Spanish Renaissance. (M)

Topics of discussion will vary from semester to semester. Selections from the works of Santillana, Mena, Rojas, Garcilaso, Juan and Alfonso del Valdes, Leon Hebreo, Juan de la Cruz, Luis de Leon, and the "preceptistas."

SM 648. The Novelist Cervantes. (M)

The narrative works of Cervantes with special attention to DON QUIJOTE. Reading of LA GALATEA, NOVELAS EJEMPLARES, parts of PERSILES Y SEGISMUNDO, and DON QUIJOTE.

SM 682. (COML682, ENGL571) Seminar on Literary Theory. (M)

This course begins with an overview of major statements on poetics and literary theory from Plato to the 20th century. We will then study in detail more contemporary theoretical statements with a view to acquiring a broad knowledge of modern literary criticism. Throughout the semester we will attempt to identify topics and issues that are of particular relevance to students working within the Hispanic literary and critical tradition. Among the authors studied will be Plato, Aristotle, Longinus, Dante, Castelvetro, Lessing, Arnold, Taine, Saussure, Barthes, Derrida, de Man, Althusser, Butler and Latour.

SM 684. La Novela Realista. (M)

SM 687. (COML687, ENGL539) The Spanish Avant-Garde. (M)

SM 690. (COML691, LALS690) Studies in 19th- and 20th-Century Spanish American Literature. (M)

Topics vary. Previous topics have included Latin American Narrative and Art in Times of Globalization, Modernismo / fin de siglo, Art, Literature, and Society in Latin America at the End of the 20th Century.

SM 692. (COML692, LALS692) Colonial Literature of Spanish America. (M)

Study of the historical context of the colonial period in Spanish America and of major works in prose and poetry.

Topics vary.

SM 693. Vanguardias culturales hispanoamericanas. (M)

SM 694. (CINE694) Modern Spanish American Narrative. (M)

This seminar will address the specificity and uniqueness of Spanish America's cultural production, that is, those elements

that make the Spanish American case differ from the paradigmatic postcolonial situation, and which make recent developments in postcolonial studies not fully applicable to it. We will explore these issues in the context of the literary production of the twentieth century in Spanish America from roughly the twenties to the present, that is, the epoch encompassing the larger metropolitan cultural phenomena of Modernism and Postmodernism.

SM 697. (COML697) Studies in Latin American Culture. (M)

The course will be an investigation of the most influential styles of conceptualizing

the relationship between artistic or literary productions and political practices in Latin America between the 1950s and the present.

SM 698. Workshop on Scholarly Writing. (M)

This course aims to develop awareness about what constitutes effective scholarly prose in Spanish. It proposes to hone the student's handling of writing as a vehicle for the expression of intellectual thought, but also to develop a consciousness of the rhetorical strategies that can be used to advance a critical argument effectively. Extensive writing exercises will be assigned; these will be followed by intense

and multiple redactions of the work originally produced. The ultimate goal is to make students develop precision, correctness, and elegance in written Spanish. Students will also work on a class paper written previously, with a view to learning the process of transforming a short, limited expression of an argument into a publishable article.

999. Independent Study. (C)

SLAVIC LANGUAGES (AS) {SLAV}

RUSSIAN (RUSS)

194. (MUSC194) Russian Music: Concert Hall to Dance Club. (M) Amico.

Russia's history has been one not only of violent wars and turbulent revolutions, but also one of a vibrant cultural creation. In this course we will examine Russian music from an ethnomusicological perspective, in relation to these historical, social and cultural contexts. Our studies will take us from the nineteenth century to the present, and from the elite music of the concert hall, to the various rural sites of music making, up to the contemporary urban dance club. Among the topics to be considered: the relationships between art music and movements in both literature and the visual arts; how music supports, subverts or simply "avoids" contributing to political life; how gender is performed in music; and how globalization, technological advances, and piracy change the ways music is created and used.

SM 203. (LAW 967) Legal Imagination: Criminals and Justice Across Literature. (M) Vinitsky. Ben Franklin Seminar. This class will be taught for both SAS and Penn Law School students: 12 students from each side.

This seminar will focus on the legal, moral, religious, social, psychological, and political dimensions of crime, blame, shame, and punishment as discussed in great works of literature. The first part of the course will compare and contrast visions of justice in Eastern and Western Europe and emphases on divine versus human justice. The second part will move to the psychology of the individual person, the criminal. Part three of the course will focus on the state institutions of criminal justice. Readings include Hawthorne's *Scarlet Letter*, Dickens' *Oliver Twist*, Tolstoy's *Resurrection*, Kafka's *The Trial*, and especially Dostoyevsky's *Crime and Punishment* and selection from *The Brothers Karamazov*.

418. Russian Culture and Society Now. (L) Shardakova. Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, while surveying main social, political and cultural

developments in Russia since 1991. In these two turbulent decades Russia has undergone colossal changes ranging from disintegration of the Soviet Empire to the rapid development of new gastronomical tastes and new trends in literature and culture. The course will explore diverse and often conflicting cultural sensibilities in contemporary Russian fiction, poetry, journalism, scholarly writing, performance art, as well as in pop-culture and film. Topics under consideration will include reassessing Russia's luminous cultural heritage as well as traumatic periods in Soviet history; search for identity and the recent drift towards neo-nationalism; gender issues and the contemporary focus on fatherlessness; changing attitudes towards former cultural taboos; dealing with Russia's current political and cultural dilemmas. The course also incorporates two advanced Russian colloquiums with guest appearances of Prof. Kevin Platt and Ilya Vinitsky.

Introductory Russian Language (001-004)

001. (RUSS501) Elementary Russian I. (A) Staff.

This course develops elementary skills in reading, speaking, understanding and writing the Russian language. We will work with an exciting range of authentic written materials, the Internet, videos and recordings relating to the dynamic scene of Russia today. At the end of the course students will be comfortable with the Russian alphabet and will be able to read simplified literary, commercial, and other types of texts (signs, menus, short news articles, short stories) and participate in elementary conversations about daily life (who you are, what you do every day, where you are from, likes and dislikes).

002. (RUSS502) Elementary Russian II. (B) Staff. Prerequisite(s): RUSS 001 or equivalent.

Continuation of RUSS001. Further work developing basic language skills using exciting authentic materials about life in present-day Russia. At the conclusion of the course, students will be prepared to negotiate most basic communication needs in Russia (getting around town, ordering a meal, buying goods and services, polite conversation about topics of interest) and to comprehend most texts and spoken material at a basic level.

003. (RUSS503) Intermediate Russian I. (A) Staff. Prerequisite(s): RUSS 001 and 002 or placement exam.

This course will develop your ability to use the Russian language in the context of typical everyday situations, including university life, family, shopping, entertainment, etc. Role-playing, skits, short readings from literature and the current press, and video clips will be used to help students improve their language skills and their understanding of Russian culture. At the end of the semester you will be able to read and write short texts about your daily schedule and interests, to understand brief newspaper articles, films and short literary texts, and to express your opinions in Russian. In combination with RUSS 004, this course prepares students to satisfy the language competency requirement.

004. (RUSS504) Intermediate Russian II. (B) Staff. Prerequisite(s): RUSS 003 or placement exam.

A continuation of RUSS003. This course will further develop your ability to use the Russian language in the context of everyday situations (including relationships, travel and geography, leisure activities) and also through reading and discussion of elementary facts about Russian history, excerpts from classic literature and the contemporary press and film excerpts. At the end of the course you will be able to negotiate most daily situations, to comprehend most spoken and written Russian, to state and defend your point of view. Successful completion of the course prepares students to satisfy the language competency requirement.

SM 107. Russian Outside the Classroom I. (C) Yakubova. Prerequisite(s): At least four semesters of Russian.

The goal of RUSS107 is to provide students of Russian language and students who spoke Russian at home with formalized opportunities to improve their conversation and comprehension skills while experiencing various aspects of Russian culture. There will be no weekly assignments or readings, but all students will be expected to contribute at a level equivalent to their Russian-speaking abilities both in class and on the newsletter final project. The course consists of attending regular conversation hours in addition to a tea-drinking hour in the department (F 4-5pm), film viewings, and a single outside cultural event (e.g., a concert of Russian music at the Kimmel Center).

SM 108. Russian Outside the Classroom II. (C) Yakubova.

Prerequisite(s): At least four semesters of Russian, and RUSS107. Continuation of RUSS107.

This is a half-credit course that consists of a variety of fun and entertaining non-classroom Russian language activities. Students who have taken at least one semester of Russian will take part in: 1. Russian lunch and dinner table; 2. Russian Tea and conversation, featuring cartoons, poetry readings, music listening, news broadcast, games, cooking lessons, and informal visits by guests; 3. The Russian Film Series; 4. field trips to Russian cultural events in the area (symphony, drama, film, etc.); 5. other Russian Program events.

Introductory/Survey Russian Courses (010 - 199)

048. (HIST048) The Rise and Fall of the Russian Empire, 1552-1917. (C)

History & Tradition Sector. All classes. Nathans/Holquist.

How and why did Russia become the center of the world's largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

L/R 049. (HIST049) The Soviet Century, 1917-1991. (B) History & Tradition Sector. All classes. Nathans/Holquist.

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world's first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR's sudden implosion in 1991. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the

ruled (peasants, workers, and intellectuals; Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

100. Once Upon a Fairytale: Introduction to Russian Culture. (M) Verkholtantsev.

The course provides an introduction to Russian culture and society through the prism of fairy tale narratives. We will approach Russian culture by studying how classic tales have been retold in a variety of contexts: folklore, literature, art, music, opera, ballet, film, political propaganda, etc. The appeal of fairy tales is universal. Do they seduce our imagination through magic and the pleasure of escapism, or do they fulfill some important social function, reflecting the national psyche and giving it shape? Are they an escape from reality or a fundamental part of it? The course also provides a general introduction to the study of folklore, fairy tales and mythology from a variety of theoretical and comparative perspectives.

We will begin with the study of the classic Russian fairy tales and the examination of the religious background of Russian culture. We will then study how the Russian classic authors in the nineteenth century incorporated and enriched these tales and legends. Finally, we will learn how the genre of fairy tale was used in the twentieth century, both by the Soviet authorities in their efforts to educate the masses, and by critical and dissident voices who turned these "innocent" stories into tools for disguised criticism and satire. Like Russians, we will "read between the lines" of a thought-provoking history of fairy tales, fantastic stories, legends and myths as we will learn about cultural and social values of the society that created them.

125. (CINE125, COML127, GSOC125) The Adultery Novel In and Out of Russia. (C) Arts & Letters Sector. All Classes. Platt. All readings and lectures in English.

The course examines a series of 19C and 20C novels (and a few short stories) about adultery, film adaptations of several of these novels, and several original adultery films in their own right. Our reading will teach us about novelistic traditions of the period in question, about the relationship of Russian literature to the European models to which it responded, as well as about adaptation and the implications of filmic vs. literary representation.

Course readings may include: Laclos' *Dangerous Liaisons*, Flaubert's *Madame Bovary*, Tolstoy's *Anna Karenina*, Milan

Kundera's *The Unbearable Lightness of Being*, and other works. Films may include: Frears' *Dangerous Liaisons*, Vadim's *Dangerous Liaisons*, Nichols' *The Graduate*, Mikhalkov's *Dark Eyes*, and others. Students will apply various critical approaches in order to place adultery into its aesthetic, social and cultural context, including: sociological descriptions of modernity, Marxist examinations of family as a social and economic institution, Freudian/ Psychoanalytic interpretations of family life and transgressive sexuality, and Feminist work on the construction of gender.

SM 130. Russian Ghost Stories. (C) Vinitky.

In this course, we will read and discuss ghost stories written by some of the most well-known Russian writers. The goal of the course is threefold: to familiarize the students with brilliant and thrilling texts which represent various periods of Russian literature; to examine the artistic features of ghost stories and to explore their ideological implications. With attention to relevant scholarship (Freud, Todorov, Derrida, Greenblatt), we will pose questions about the role of the storyteller in ghost stories, and about horror and the fantastic. We will also ponder gender and class, controversy over sense and sensation, spiritual significance and major changes in attitudes toward the supernatural.

We will consider the concept of the apparition as a peculiar cultural myth, which tells us about the "dark side" of the Russian literary imagination and about the historical and political conflicts which have haunted Russian minds in previous centuries. Readings will include literary works by Pushkin, Gogol, Dostoevsky, Turgenyev, Chekhov, and Bulgakov, as well as works by some lesser, yet extremely interesting, authors. We will also read excerpts from major treatises regarding spiritualism, including Swedenborg, Kant, Arthur Conan Doyle, and Mme Blavatsky. The course consists of 28 sessions ("nights") and includes film presentations and horrifying slides.

136. (HIST047) Portraits of Russian Society: Art, Fiction, Drama. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Platt. No prior language experience required.

This course covers 19C Russian cultural and social history. Each week-long unit is organized around a single medium-length text (novella, play, memoir) which opens up a single scene of social history: birth, death, duel, courtship, tsar, and so on. Each of these main texts is accompanied by

a set of supplementary materials paintings, historical readings, cultural-analytical readings, excerpts from other literary works, etc. The object of the course is to understand the social codes and rituals that informed nineteenth-century Russian life, and to apply this knowledge in interpreting literary texts, other cultural objects, and even historical and social documents (letters, memoranda, etc.). We will attempt to understand social history and literary interpretation as separate disciplines yet also as disciplines that can inform one another. In short: we will read the social history through the text, and read the text against the social history.

145. Russian Literature to the 1870s.

(A) Arts & Letters Sector. All Classes. Steiner.

Major Russian writers in English translation: Pushkin, Gogol, Turgenev, early Tolstoy, and early Dostoevsky.

155. Russian Literature after 1870s.

(B) Arts & Letters Sector. All Classes. Steiner.

Major Russian writers in English translation: Tolstoy, Chekhov, Pasternak, Babel, Solzhenitsyn, and others.

165. (CINE165, SLAV165) Russian and East European Film After WWII. (M) Todorov.

This course examines the Russian and East European contribution to world cinema after WWII - Stalinist aesthetics and desalinization, WWII in film, the installation of totalitarianism in Eastern Europe and the Cold War in film, the fall of the Berlin Wall, the collapse of the Soviet Union and the post-soviet condition, cinematic representations of Yugoslavia's violent breakup; the new Romanian waive. Major filmmakers in discussion include Kalatozov, Tarkovsky, Wajda, Polanski, Forman, Mentzel, Sabo, Kusturitsa, Konchalovsky, Mikhalkov and others.

190. Terrorism: Russian Origins and 21st Century Methods. (M) Todorov.

This course studies the emergence of organized terrorism in nineteenth-century Russia. It examines the philosophy of the terrorist struggle through its methods, causes, various codes, and manifestoes that defined its nature for the times to come. We critique intellectual movements such as nihilism, anarchism, and populism that inspired terrorism defining the political violence and disorder as beneficial acts. The issue of policing terrorism becomes central when we study a police experiment to infiltrate, delegitimize and ultimately

neutralize terrorist networks in late imperial Russia.

The discussions draw on the ideology and political efficacy of the conspiratorial mode of operation, terrorist tactics such as assassination and hostage-taking, the cell structure of the groups and underground incognito of the strikers, their maniacal self-denial, revolutionary asceticism, underground mentality, faceless omnipotence, and other attributes-intensifiers of its mystique.

We analyze the technology and phenomenology of terror that generate asymmetrical disorganizing threats to any organized form of government and reveal the terrorist act as a sublime end as well as a lever for achieving practical causes. Our study traces the rapid proliferation of terrorism in the twentieth century and its impact on the public life in Western Europe, the Balkans, and America.

193. (COML150, HIST149) War and its Representation in Russia, Europe and the US. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Platt.

Representations of war have been created for as many reasons as wars are fought: to legitimate conflict, to celebrate military glory, to critique brutality, to vilify an enemy, to mobilize popular support, to generate national pride, etc. In this course we will examine a series of representations of war drawn from the literature, film, state propaganda, memoirs, visual art, etc. of Russia, Europe and the United States of the twentieth century.

The course will be conducted largely as a seminar. There will also be occasional lectures on specified topics (especially, on the historical groundwork necessary to understand our largely literary readings). A common place of critical discussions of war concerns the impossibility of the adequate representation of experience that in many ways defies understanding or even recall.

In this connection, we will be developing a vocabulary of aesthetic and psycho logical terms relevant to the task of reflecting the impossibilities of life and death in wartime. The goal of the course is to acquire knowledge of literary and cultural history in social and historical context, and to acquire critical skills for analysis of rhetorical and visual representations.

196. Russian Short Story. (M) Todorov.

This course studies the development of 19th and 20th century Russian literature through one of its most distinct and highly recognized genres the short story. The

readings include great masters of fiction such as Pushkin, Gogol, Dostoevsky, Tolstoy, Chekhov, Solzhenitsyn, and others. The course presents the best works of short fiction and situates them in a literary process that contributes to the history of a larger cultural-political context.

Students will learn about the historical formation, poetic virtue, and thematic characteristics of major narrative modes such as romanticism, utopia, realism, modernism, socialist realism, and post-modernism. We critique the strategic use of various devices of literary representation such as irony, absurd, satire, grotesque, anecdote, etc. Some of the main topics and issues include: culture of the duel; the role of chance; the riddle of death; anatomy of madness; imprisonment and survival; the pathologies of St. Petersburg; terror and homo sovieticus.

197. (COML197) Madness and Madmen in Russian Culture. (M)

Humanities & Social Science Sector. Class of 2010 & beyond. Vinitzky.

This course will explore the theme of madness in Russian literature and arts from the medieval period through the October Revolution of 1917. The discussion will include formative masterpieces by Russian writers (Pushkin, Dostoevsky, Tolstoy, Chekhov, and Bulgakov), painters (Repin, Vrubel, Filonov), composers (Mussorgsky, Tchaikovsky, and Stravinsky), and film-directors (Protazanov, Eisenstein), as well as non-fictional documents such as Russian medical, judicial, political, and philosophical treatises and essays on madness.

Intermediate/Seminar Courses (200 - 299)

SM 201. Dostoevsky and His Legacy. (A) Vinitzky.

This course explores the ways Fyodor Dostoevsky (1821-1881) portrays the "inner world(s)" of his characters. Dostoevsky's psychological method will be considered against the historical, ideological, and literary contexts of middle to late nineteenth-century Russia. The course consists of three parts External World (the contexts of Dostoevsky), "Inside" Dostoevsky's World (the author's technique and ideas) and The World of Text (close reading of Crime and Punishment and The Brothers Karamazov). Students will write three essays on various aspects of Dostoevsky's "spiritual realism."

SM 202. Tolstoy. (B) Vinitzky. Ben Franklin Seminar.

This course consists of three parts. The first, *How to read Tolstoy?* deals with Tolstoy's artistic stimuli, favorite devices, and narrative strategies. The second, *Tolstoy at War*, explores the authors' provocative visions of war, gender, sex, art, social institutions, death, and religion. The emphasis is placed here on the role of a written word in Tolstoy's search for truth and power. The third and the largest section is a close reading of Tolstoy's masterwork *The War and Peace* (1863-68) a quintessence of both his artistic method and philosophical insights.

SM 213. (COML213, RELS218) Saints and Devils in Russian Literature and Tradition. (M) Arts & Letters Sector. All Classes. Verkhohantsev.

This course is about Russian literature, which is populated with saints and devils, believers and religious rebels, holy men and sinners. In Russia, where peoples' frame of mind had been formed by a mix of Eastern Orthodox Christianity and earlier folk beliefs, the quest for faith, spirituality and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Is humility the way to salvation? Should one live for God or for the people? Does God even exist?

In *Saints and Devils*, we will examine Russian literature concerning the holy and the demonic as representations of good and evil, and we will learn about the historic trends that have filled Russia's national character with religious and supernatural spirit. In the course of this semester we will talk about ancient cultural traditions, remarkable works of art and the great artists who created them. All readings and films are in English. Our primary focus will be on works by Pushkin, Gogol, Lermontov, Dostoevsky, Chekhov, Tolstoy, and Bulgakov.

SM 220. (COML220, HIST220) From the Other Shore: Russia and the West. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Vinitzky.

This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life: Revolutions, educational system, public executions, resorts, etc. within the context of Russian intellectual history. We will examine how images of the West reflect Russia's own cultural concerns, anticipations, and biases,

as well as aesthetic preoccupations and interests of Russian writers.

The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers' letters, diaries, and historiographical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late Nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussion, short writing assignments, and two in-class tests.

234. (COML235, HIST219, SLAV517) Medieval Russia: Origins of Russian Cultural Identity. (M) Verkhohantsev.

This course offers an overview of the cultural history of Rus from its origins to the eighteenth century, a period which laid the foundation for the Russian Empire. The course takes an interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodoxy viewed in a broader European context. Although this course is historical in content, it is also about modern Russia. The legacy of Medieval Rus is still referenced, often allegorically, in contemporary social and cultural discourse as the Russian, Ukrainian and Belarusian societies attempt to reconstruct and reinterpret their histories. In this course, students learn that the study of the medieval cultural and political history explains many aspects of modern Russian society, its culture and mentality.

SM 260. (HIST413) USSR after Stalin. (M) Platt & Nathans.

How are human behaviors and attitudes shaped in a socialist society? What forms do conformity and dissent take under a revolutionary regime? This course will explore the cultural history of the Soviet Union from the end of the Second World War to the collapse of communism in 1991. We will investigate a variety of strategies of resistance to state power as well as the sources of communism's enduring legitimacy for millions of Soviet citizens. Above all, we will be concerned with the power of the word and image in Soviet public and private life. Assigned texts will include memoirs, manifestos, underground and officially approved fiction & poetry, films, works of art, and secondary literature.

275. (CINE275) Russian History in Film. (M) Todorov.

This course draws on fictional, dramatic and cinematic representations of Russian history based on Russian as well as non-

Russian sources and interpretations. The analysis targets major modes of imagining, such as narrating, showing and reenacting historical events, personae and epochs justified by different, historically mutating ideological postulates and forms of national self-consciousness. Common stereotypes of picturing Russia from "foreign" perspectives draw special attention. The discussion involves the following themes and outstanding figures: the mighty autocrats Ivan the Terrible, Peter the Great, and Catherine the Great; the tragic ruler Boris Godunov; the brazen rebel and royal impostor Pugachev; the notorious Rasputin, his uncanny powers, sex-appeal, and court machinations; Lenin and the October Revolution; images of war; times of construction and times of collapse of the Soviet Colossus.

299. Independent Study. (C) Staff.

Advanced Russian Language Courses

311. (RUSS511) Russian Conversation and Composition. (A) Shardakova. Prerequisite(s): RUSS 004 or placement exam.

This course develops students' skills in speaking and writing about topics in Russian literature, contemporary society, politics, and everyday life. Topics include women, work and family; sexuality; the economic situation; environmental problems; and life values. Materials include selected short stories by 19th and 20th century Russian authors, video-clips of interviews, excerpts from films, and articles from the Russian media. Continued work on grammar and vocabulary building.

312. (RUSS512) Russian Conversation and Composition II. (B) Shardakova. Prerequisite(s): RUSS 311.

Primary emphasis on speaking, writing, and listening. Development of advanced conversational skills needed to carry a discussion or to deliver a complex narrative. This course will be based on a wide variety of topics from everyday life to the discussion of political and cultural events. Russian culture and history surveyed briefly. Materials include Russian TV broadcast, newspapers, Internet, selected short stories by contemporary Russian writers. Offered each spring.

360. Literacy in Russian for Russian Speakers I. (C) Korshunova. Previous language experience required.

This course is intended for students who have spoken Russian at home and seek to

achieve proficiency in the language. Topics will include an intensive introduction to the Russian writing system and grammar, focusing on exciting materials and examples drawn from classic and contemporary Russian culture and social life. Students who complete this course in combination with RUSS361 satisfy the Penn Language Requirement.

361. Literacy in Russian for Russian Speakers II. (B) Korshunova.

Prerequisite(s): Prerequisites: Russian 360 or at least three and no more than six years of Russian formal schooling, or instructor's permission.

This course is a continuation of RUSS360. In some cases, students who did not take RUSS360 but have basic reading and writing skills may be permitted to enroll with the instructor's permission. Students who complete RUSS361 with a passing grade will satisfy the Penn Language Requirement.

399. Supervised Work. (C)

Hours and credits on an individual basis.

Advanced Courses (400 to 425) in History, Literature and Culture. Taught in

Russian.

412. Nineteenth-Century Russian Literature and Culture: Romantics and Realists. (M) Verkholtantsev.

Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, and combines advanced study of the Russian language with an examination of the fundamental literary movements and figures of nineteenth-century Russian literature and culture. Course materials include prosaic and poetic texts by Pushkin, Gogol', Lermontov, Dostoevsky, Tolstoy, Chekhov, as well as films and art. Language work will be devoted to writing, syntactical and stylistic analysis, vocabulary, academic speech, and listening comprehension.

413. Twentieth-Century Russian Literature, Film and Culture: Utopia, Revolution and Dissent. (M)

Bourlatskaya. Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, and introduces students to major movements and figures of twentieth-century Russian literature and culture. We will read the works of modern

Russian writers, and watch and discuss feature films. The course will introduce the first Soviet films and works of the poets of the Silver Age and beginning of the Soviet era as well as the works from later periods up to the Perestroika and Glasnost periods (the late 1980s).

SM 416. Business and Democracy in the New Russia. (M) Bourlatskaya.

Prerequisite(s): RUSS 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, and is designed to familiarize students with contemporary Russian society, its historical background and its present political and economic structure, and to develop functional proficiency in speaking, writing, reading and listening. The course will focus on a variety of issues central to Russian society since the fall of the Soviet Union, including changing values, political parties and movements, the business climate and businessmen, various nationalities within Russia, women in the family and at work. Course materials will include interviews, articles, essays by leading Russian journalists and statesmen, and contemporary Russian movies.

417. Russian Modernism: Literature, Music & Visual Arts. (J) Shardakova.

Prerequisite(s): RUSS312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, while closely studying a representative selection of texts from the modernist period. The course will explore central issues of the period, such as the relationship between literature and revolution, reconceptualizations of society, history and the self. Of particular interest will be authors' experimentation in form and language in order to present afresh the experience of life. Textual study is combined with a general overview of the period, including reference to parallel trends in the visual arts, architecture and music, as well as contemporary intellectual movements. Principal writers studied will include Belyi, Sologub, Remizov, Andreev, Artsybashev, Gorky, Zamiatin, Pilnyak, Platonov, Zoshchenko, Babel, Olesha, and Kharms.

SM 419. Russian Song and Folklore. (M) Verkholtantsev.

Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian. Song and, in particular, folk song is an essential and exciting component of Russian culture and social life, and an important language

learning tool. The course offers a general introduction to the history of Russian folklore, song and musical culture. Students will explore the historical trajectory of Russian song and its various genres (from folk to the modern Estrada), examine the poetic and literary principles of song, discuss its aesthetic properties, and analyze the educational, community-building and ideological roles of song in Russian society.

420. Contemporary Russia Through Film. (C) Bourlatskaya.

Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian and offers intensive study of Russian film, arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia's transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russia society.

SM 505. (COML401) Russian Poetics. (A) Steiner.

Prerequisite(s): RUSS312, RUSS361 or comparable language competence. This course is open to all advanced students of Russian (including students who speak Russian at home).

Introduction to the analysis of poetic texts, based on the works of Batyushkov, Lermontov, Tyutchev, Fet, Mandelstam, and others.

Advanced Courses Taught in English (426 - 449)

SM 426. (CINE365) Chekhov: Stage & Screen. (M) Zubarev.

Forms a part of the CGS Masters in Liberal Arts Program. What's so funny, Mr. Chekhov? This question is often asked by critics and directors who still are puzzled with Chekhov's definition of his four major plays as comedies. Traditionally, all of them are staged and directed as dramas, melodramas, or tragedies. Should we cry or should we laugh at Chekhovian characters who commit suicide, or are killed, or simply cannot move to a better place of living? Is the laughable synonymous to comedy and the comic? Should any fatal outcome be

considered tragic? All these and other questions will be discussed during the course. The course is intended to provide the participants with a concept of dramatic genre that will assist them in approaching Chekhov's plays as comedies. In addition to reading Chekhov's works, Russian and western productions and film adaptations of Chekhov's works will be screened. Among them are, *Vanya on 42nd Street* with Andre Gregory, and *Four Funny Families*. Those who are interested will be welcome to perform and/or direct excerpts from Chekhov's works.

SM 430. (CINE430) Nationalism and Ethnic Conflict in Film. (M) Todorov. Forms a part of the CGS Masters in Liberal Arts Program.

This course studies the cinematic representation of civil wars, ethnic conflicts, nationalistic doctrines, and genocidal policies. The focus is on the violent developments that took place in Russia and on the Balkans after the collapse of the Soviet Bloc and were conditioned by the new geopolitical dynamics that the fall of communism had already created. We study media broadcasts, documentaries, feature films representing the Eastern, as well as the Western perspective. The films include masterpieces such as "Time of the Gypsies", "Underground", "Prisoner of the Mountains", "Before the Rain", "Behind Enemy Lines", and others.

SM 432. (CINE432, COML196) Fate and Chance in Literature and Film. (M) Zubarev. Forms a part of the CGS Masters in Liberal Arts Program.

Be a winner manage all your situations and don't let a pure chance to govern your life! With a chain of literary characters as a vivid illustration, you will explore a mysterious world of fate and chance and learn about various interpretations of the forces ruling human life. Slavic and Greek mythology, as well as folklore and modern literary works of Russian and Western writers and cinematographers will assist you in your journey to the world of supernatural. Screenings will include Zeffirelli's and Luhrmans *Romeo and Juliet*. In *Fate and Chance in Literature and Film*, we will explore these two interrelated concepts in comparative perspective over a broad historical range. Analysis will be informed by classical and contemporary theoretical tools (from Aristotle to Upenn's own Prof. Aron Kastenelinboigen). Our investigations will lead ultimately to analytical insight into major works of the Western literary, dramatic and filmic canon.

434. Media and Terrorism. (M) Todorov. Forms a part of the CGS Masters in Liberal Arts Program.

This course draws on fictional, cinematic and mass-media representation of terrorism based on Russian as well as Western examples. We study how the magnitude of the political impact of terrorism relates to the historically changing means of production of its striking iconology. The course exposes students to major modes of imagining, narrating, showing, reenacting terrorism and forging its mystique. We examine the emergence of organized terrorism in nineteenth-century Russia as an original political-cultural phenomenon. We trace its rapid expansion and influence on the public life in the West, and on the Balkans.

Historical, political, and aesthetic approaches converge in a discussion of several case studies related to intellectual and spiritual movements such as nihilism, anarchism, populism, religious fundamentalism, and others. The public appearance of the terrorist activism and its major attributes are viewed as powerful intensifiers of its political effect: self-denial, ascetic aura, and stratagem of mystification, underground mentality, and martyrdom. The pedagogical goal of this course is to promote and cultivate critical view and analytical skills that will enable students to deal with different historical as well as cultural modes of (self-)representation of terrorism. Students are expected to learn and be able to deal with a large body of historical-factual and creative-interpreted information.

436. (CINE436) Film and Art of the Russian Revolution. (M) Todorov. Forms a part of the CGS Masters in Liberal Arts Program.

This course examines cutting edge trends and artistic experimentation in Russian film, theater, visual arts, and architecture in the context of the October Revolution (1917). Themes include: inventing the Kino-eye; reflexology, bio-mechanics and performance theory; staging the revolution; proletarian culture and sexuality; social engineering of the new man; bodies and machines; cosmism, rocketry and the emergence of the Soviet outer-space doctrine; city planning and constructivist design of the new social condensers; Lenin's mummy and the communist psyche; the Mausoleum and symbolic system of the Red Square.

Courses in Literature, Culture, and History for Russian Speakers (450 - 499)

460. Post-Soviet Russia in Film. (C) Bourlatskaya. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Film is arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia's transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russia society.

SM 461. 20th Century Russian Literature: Fiction and Reality. (M) Bourlatskaya. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Russian 461 introduces the major movements and figures of twentieth-century Russian literature and culture, works of modern Russian writers, and feature films. In studying the poetry of Mayakovsky, Blok, and Pasternak, students will become familiar with the important literary movements of the Silver Age. The reality of the Soviet era will be examined in the works of Zamyatin, Babel, and Zoshchenko. There will be a brief survey of the development of Soviet cinema, including films of Eisenstein, Tarkovsky, and Mikhalkov. Literary trends in the later Soviet period will be seen in war stories, prison-camp literature, village prose, and the writings of female authors of that time.

SM 464. Russian Humor. (M) Korshunova. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

One of the most fascinating and most difficult things for a student of foreign culture is to understand national humor, as it is presented in various stories and films,

jokes and shows. To an extent, humor is a gateway to national mentality. In the present course we will examine Russian cultural history, from the sixteenth through the twenty-first centuries, through the vehicle of Russian humor. How does Russian humor depend on religion and history? What was considered funny in various cultural trends? What are the peculiarities of Russian humorist tradition? Students will be familiarized with different Russian theories of humor (Bakhtin, Likhachev, Panchenko, Tynianov, etc.) and, of course, with a variety of works by Russian kings of humor Pushkin and Gogol, Chekhov and Zoshchenko, Bulgakov and Ilf and Petrov, Erofeev and Kibirov, etc. Class lectures will be supplemented by frequent video and musical presentations ranging from contemporary cartoons to high comedies and from comic songs (Chaliapin's *The Flea*) to the music of Shostakovich (*The Nose*).

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language.

465. Singing in the Snow: The History of Russian Song. (M)

Verkholantsev. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Song is an essential and exciting component of Russian culture and social life, and an important language learning tool. The course offers a general introduction to the history of Russian song. Students will explore the historical trajectory of Russian song and its various genres (from folk to the modern Estrada), examine the poetic and literary principles of song, discuss its aesthetic properties, and analyze the educational, community-building and ideological roles of song in Russian society. Among the wide-ranging topics and genres that we will discuss and work with are lyrics of folk songs, romances, Soviet and patriotic songs, Anti-Soviet songs, Russian/Soviet anthems, bard song, film and theater songs, childrens songs, Soviet and Russian Rock and Pop.

467. Classic Russian Literature Today. (M)

Korshunova. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and

professional uses of the Russian language. A study of classic Russian literature in the original. Readings will consist of some of the greatest works of 19th and 20th-century authors, such as Pushkin, Gogol, Tolstoy, Dostoevsky, and Bulgakov. Students will examine various forms and genres of literature, learn basic techniques of literary criticism, and explore the way literature is translated into film and other media. An additional focus of the course will be on examining the uses and interpretations of classic literature and elitist culture in contemporary Russian society. Observing the interplay of the "high" and "low" in Russian cultural tradition, students will develop methodology of cultural analysis.

468. Post-Soviet Russian Society: People, Business, Democracy. (M)

Bourlatskaya. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. It offers an introduction to contemporary Russian society, its historical background and its present political and economic structure. The course will focus on the political, economic and sociological developments in Russia from Perestroika (late 1980s) to Putin. The course will discuss the society's changing values, older and younger generations, political parties and movements, elections, the business community and its relations with the government, common perceptions of Westerners and Western society, and the role of women in the family and at work. Emphasis will be placed on the examination, interpretation and explanation of peoples behavior and their perception of democracy and reforms, facilitating comparison of Western and Russian social experience.

SM 469. Russian Utopia in Literature, Film, and Politics. (M)

Korshunova. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. In this course we will undertake a fascinating journey to the Dreamland of Russian culture. Students will read and discuss Russian utopian imagination as presented in a variety of literary texts, paintings, musical works, films, as well as philosophical texts and economic theories. Topics for discussion will include Russian

fairy tales and legends, religious prophecies and communist projects, history and imagination, technological and patriarchal utopias.

*Graduate Courses***SM 506. Pushkin. (B)**

Steiner. Prerequisite(s): RUSS312, RUSS361 or comparable language competence. This course is open to all students of Russian (including students who speak Russian at home).

The writer's lyrics, narrative poems, and drama.

SM 508. Advanced Russian for Business. (M)

Bourlatskaya. Prerequisite(s): At least one RUSS400-level course or comparable language competence.

This advanced language course focuses on developing effective oral and written communication skills for working in a Russian-speaking business environment. Students will discuss major aspects of Russian business today and learn about various Russian companies using material from the current Russian business press. In addition, students will be engaged in a number of creative projects, such as business negotiation simulations, and simulation of creating a company in Russia.

SM 544. (COML541) Haunted House: Russian Realism in European Context. (M)

Vinitsky. In this class we will examine works of major Russian Realist writers, painters, and composers considering them within Western ideological contexts of the 1850-1880s: positivism, materialism, behaviorism, spiritualism, etc. We will focus on Russian Realists ideological and aesthetic struggle against Romantic values and on an unpredicted result of this struggle -- a final spectralization of social and political realities they claimed to mirror in their works. Paradoxically, Russian Realism contributed to the creation of the image of Russia as a house haunted by numerous apparitions: nihilism and revolution, afflicted peasants and perfidious Jews, secret societies and religious sects. The spectro-poetics (Derrida) of Russian Realism will be examined through works of Dostoevsky, Tolstoy, Turgenev, Leskov, Chekhov, as well as paintings by Ilya Repin and operas by Mussorgsky and Tchaikovsky. Requirements include one oral presentation, mid-term theoretical survey essay, and a final paper. Relevant theories include M.H. Abrams, Brookes, Levine, Greenblatt, Castle, and Derrida.

SLAVIC (SLAV)

100. (HIST231, RUSS103) Slavic Civilization. (I) History & Tradition Sector. All classes. Verkholtantsev.

This introductory course examines selected topics in the cultural and political history of Slavic peoples. Topics include: the origins and pre-history of the Slavs, Slavic languages and literary culture, religions of the Slavs (Orthodoxy, Catholicism, Protestantism, Islam), the origins of Slavic nationalism and Pan-Slavism and the formation of Eastern/Central Europe. The course combines lectures with discussions of literary texts in translation, film, music and art.

109. Central European Culture and Civilization. (M) Steiner. This is Penn-in-Prague course.

This course is normally offered through Penn-in-Prague during summer. The reappearance of the concept of Central Europe is one of the most fascinating results of the collapse of the Soviet empire. The course will provide an introduction into the study of this region based on the commonalities and differences between Austria, Czechoslovakia, Hungary, Poland and Germany. The topics will include the history of arts and literature, as well as broader cultural and historical patterns characteristic of this part of Europe.

164. (CINE164, RUSS164) Russ & Euro Film 1900-1945. (M)

220. (HIST218) Poets, Priests and Politicians: An Intellectual History of Modern Ukraine. (M) Rudnytzky.

The course is a one-semester survey of literary, philosophical, political and socio-religious issues in Ukraine from the end of the 18th to the beginning of the 21st century. Its goal is to introduce students to an understanding of individual and collective thought in Ukrainian history and enable them to determine Ukraine's role in the making of contemporary Europe. Interdisciplinary in nature and comparative in methodology, the survey focuses on the principal works of imaginative literature and philosophical writings.

Following a theoretical and historical introduction and placing the subject matter within the European context, selected works of Ukrainian classicism and romanticism will be analyzed and interpreted as roots of modern Ukrainian identity. An attempt will be made to point out the elective affinities of Ukrainian intellectuals with their European counterparts and to demonstrate the organic unity of Ukraine's culture with that of Western Europe. The survey will conclude with an analysis of post-modernistic intellectual currents and intellectual life in Ukraine following the Orange Revolution of 2004/05.

399. Independent Study. (C) May be repeated for credit.

499. Independent Study. (C)

SM 500. (CLST511, COML501, ENGL571, GRMN534, ROML512) History of Literary Theory. (M) Copeland/Platt.

Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing and often confrontational dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the /professional /study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the

Examination List in Comparative Literature we will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism.

There will be no examinations.

Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be an annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor; it will typically include three or four books and six to eight articles or their equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare position notes each week, which will either be posted on a weblog or circulated in class.

SM 526. (COML526, ENGL705, HIST526) In Defiance of Babel: the Quest for a Universal Language. (M) Verkholtantsev.

The course explores the historical trajectory from antiquity to the present day of the idea of discovering or creating an ideal universal language as a medium for explaining the essence of human experience and a means for universal communication. The possibility of universal communication has been as vital and thought-provoking a question throughout the history of humanity as it is at the present. Particularly, the idea that the language spoken in the Garden of Eden was a language which perfectly expressed the essence of all possible objects and concepts has occupied the minds of scholars for at least two millennia. In defiance of the myth of the Tower of Babel and the confusion of languages, there have been numerous attempts to overcome divine punishment and discover the path back to harmonious existence. Theologians longed for a direct experience of the divine, philosophers strived to understand the laws of nature, mystic-cabalists searched for hidden knowledge. Today, this idea still continues to provoke scholars and it echoes in the modern theories of universal grammar and underlying linguistic structures, as well as in various attempts to create artificial languages, starting with Esperanto and ending with a language for cosmic intercourse.

SM 610. Topics in Second Language Acquisition. (M) Shardakova.

SM 620. Europe: From Idea to Union. (M) Steiner.

SM 623. (HIST620) Historiography of Imperial and Soviet Russia. (A) Platt. Prerequisite(s): At least advanced reading knowledge of Russian. Seminar discussion will be conducted in English, but a fair amount of reading will be assigned in Russian.

We will cover the development of Russian historical research and writing from the start of the eighteenth century to the present, focusing on major texts, schools and figures. Alongside this traditional historiographical architecture, segments of the course will be devoted as well to a variety of theoretical models and approaches to research, including: institutional history, cultural history, poetics of history, philosophy of history, "invention of tradition," trauma studies, and others.

SM 651. (COML650) Theories of Representation. (M) Steiner.

The course will examine major Western theories of sign and representation from Socrates to Derrida. Primary focus will be on twentieth-century trends including phenomenology, structuralism, and Marxism. Readings will include: Plato, St. Augustine, Pierce, Husserl, Jakobson, Bakhtin, Voloshinov, Eco, Derrida and others.

SM 655. (COML654, HIST656) History, Memory, Trauma. (M) Platt. All readings and lectures in English.

This course will be devoted to study of the theory and practice of representation of the past in major European traditions during the modern era, with special emphasis on three topics of broad concern: revolution, genocide, and national becoming. The object of inquiry will be construed broadly, to include all manner of historiographic, artistic, filmic, literary and rhetorical representation of the past. Each of the three segments of the course will begin with examination of important theoretical readings in conjunction with case studies in major European traditions that have been among the central foci of this theoretical work (French Revolutionary history, Holocaust, English nationalism). Next we will add analogous Russian cases to the picture (Russian Revolution, Gulag memory, Ivan the Terrible and Peter the Great as national myths). Finally, at the conclusion of each segment students will bring theoretical tools to bear on the national traditions and contexts relevant to their own work. Our readings in the theory and philosophy of history and

historiography will include works by: Anderson, Caruth, Guha, Hegel, LaCapra, Putnam, Ricoeur, White and others.

SM 657. (COML657) Formalism, Bakhtin et al. (M) Steiner.

This course deals in depth with the three seminal literary-theoretical trends in Slavic philology during the inter war and the early post-war periods. It starts with Russian Formalism, a school striving to pin down what differentiates literary discourse from all other forms of language and continues with the Prague Structuralism that redefined the tenets of Formalisms from a semiotic perspective. Finally, the Bakhtin circle's key concepts meta-linguistics, dialogue and carnivals are discussed. All readings are in English.

999. Independent Study. (C)

POLISH

501. Elementary Polish I. (D) Wolski-Moskoff. Prerequisite(s): No prerequisite. Offered through the Penn Language Center.

This course is for students who want to acquire the linguistic skills necessary for communication in everyday situations and that would constitute a solid base for further study of the Polish language. In addition students will become acquainted with various aspects of Polish culture (including Polish films), history and contemporary affairs. Students will learn through classroom exercises based on a modern textbook, completion of individual and group assignments and work with various audio and video materials. The textbook Hurra - Po Polsku 1 is written in the spirit of the communicative approach, which makes it possible to communicate from the very beginning of the learning process. The special attention, however, will be paid on systematic development of all language skills: listening, reading, speaking and writing.

502. Elementary Polish II. (D) Wolski-Moskoff. Prerequisite(s): SLAV 501 or Instructor's permission. Offered through the Penn Language Center.

This course is a continuation of the SLAV501 680. This is for students who want to acquire the linguistic skills necessary for communication in everyday situations and that would constitute a solid base for further study of the Polish language. In addition students will become acquainted with various aspects of Polish culture (including Polish films), history and contemporary affairs. Students will learn through classroom exercises based on a

modern textbook, completion of individual and group assignments and work with various audio and video materials. The textbook Hurra - Po Polsku 1 is written in the spirit of the communicative approach, which makes it possible to communicate from the very beginning of the learning process. The special attention, however, will be paid on systematic development of all language skills: listening, reading, speaking and writing.

503. (SLAV103) Intermediate Polish I. (D) Wolski-Moskoff. Prerequisite(s): SLAV 502 or placement exam. Offered through the Penn Language Center.

This is a first-semester intermediate -level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will learn through classroom exercises based on a modern textbook: Hurra Po Polsku 2, completion of individual and group assignments and work with various audio and video materials. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the Polish cases; the aspect of the verbs, the development of writing skills.

504. Intermediate Polish II. (D) Wolski-Moskoff. Prerequisite(s): SLAV 503 or placement. Offered through the Penn Language Center.

This course is a continuation of the SLAV503 680. This is a second-semester intermediate -level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will learn through classroom exercises based on a modern textbook: Hurra Po Polsku 2, completion of individual and group assignments and work with various audio and video materials. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the Polish cases; the aspect of the verbs, the development of writing skills.

505. Polish for heritage speakers I. (M) Wolski-Moskoff. Prerequisite(s): Instructor permission required. STUDENTS WHO COMPLETE TWO SEMESTERS OF THIS COURSE SATISFY THE PENN LANGUAGE REQUIREMENT. Polish is used exclusively in the classroom.

The course is addressed to students who have spoken Polish at home and seek to achieve proficiency in the language. The main goal of this course is to provide instruction directed at students continued development of existing competencies in the Polish language. Students will acquire skills that range from learning grammar and spelling, and developing vocabulary, to interpretation and analysis of different literary genres. Students will explore a broad variety of cultural themes. Topics will include: Polish literature - classic and modern, social life, contemporary affairs and films.

Upon completion of the Polish for Heritage Speakers course, students are expected to confidently understand, read, write and speak Polish with an increased vocabulary and a better command of Polish grammar. They will increase their reading skills through interpretation and analysis of different Polish literary genres. Students will be able to organize their thoughts and write in a coherent manner. They will increase their writing skills by writing personal essays, compositions and others. Students will further their knowledge of the Polish language and will engage in class discussion on various topics. Students will gain a better understanding of the Polish culture.

506. Polish for Heritage Speakers II. (M) Wolski-Moskoff. Prerequisite(s): SLAV505 or placement test. Continuation of SLAV505

EAST EUROPEAN (EEUR)

121. Elementary Hungarian I. (D) Mizsei. Offered through Penn Language Center.

An introduction to the fundamentals of the Hungarian language, acquisition of conversational, readings and writing skills.

122. Elementary Hungarian II. (D) Mizsei. Prerequisite(s): EEUR 121 or placement. Offered through Penn Language Center.

Continuation of EEUR 121

123. Intermediate Hungarian I. (D) Mizsei. Prerequisite(s): EEUR 121-122 or placement. Offered through the Penn Language Center.

Emphasis on vocabulary building, conversation and reading skills. Grammar review.

124. Intermediate Hungarian II. (D) Mizsei. Prerequisite(s): EEUR 121-123 or placement. Offered through Penn Language Center.

Continuation of EEUR123.

125. Advanced Hungarian I. (M) Staff. Offered through the Penn Language Center.

The basic aim is to enable students, independently or under the guidance of the teacher, to communicate in Hungarian and express their thoughts (orally or in writing) at an advanced level.

126. Advanced Hungarian II. (M) Staff. Offered through the Penn Language Center.

A continuation of Advanced Hungarian I

199. Independent Study. (C)

399. Supervised Work in a Language of Eastern Europe. (M)

Hours and credits on an individual basis.

CZECH (SLAV)

530. Elementary Czech I. (D) Stejskal. Offered through the Penn Language Center.

An introduction to the fundamentals of the Czech language, acquisition of conversational, reading and writing skills.

531. Elementary Czech II. (D) Stejskal. Prerequisite(s): SLAV 530 or Placement. Offered through the Penn Language Center. Continuation of SLAV 530

532. Intermediate Czech I. (D) Stejskal. Prerequisite(s): SLAV 531 or Placement. Offered through the Penn Language Center. Emphasis on vocabulary building, conversation and reading skills. Grammar review.

533. Intermediate Czech II. (D) Stejskal. Prerequisite(s): SLAV 532 or Placement. Offered through the Penn Language Center. Continuation of SLAV 532

534. Advanced Czech I. (D) Stejskal. Prerequisite(s): Two years of Czech or placement. Offered through the Penn Language Center.

Emphasis on advanced vocabulary building, conversation and reading skills. Advanced grammar review.

535. Advanced Czech II. (D) Stejskal. Prerequisite(s): SLAV 534 or placement. Offered Through the Penn Language Center.

Continuation of SLAV 534

UKRAINIAN (SLAV)

590. Elementary Ukrainian I. (D) Rudnytzky. Offered through the Penn Language Center.

An introduction to the fundamentals of the Ukrainian language, acquisition of conversational, reading and writing skills.

591. Elementary Ukrainian II. (D) Rudnytzky. Prerequisite(s): SLAV 590 or Placement. Offered through the Penn Language Center.

Continuation of SLAV 590

592. Intermediate Ukrainian I. (D) Rudnytzky. Prerequisite(s): SLAV 591 or placement test. Offered through the Penn Language Center.

Emphasis on vocabulary building, conversation and reading skills. Grammar review.

593. Intermediate Ukrainian II. (D) Rudnytzky. Prerequisite(s): SLAV 592 or Placement. Offered through the Penn Language Center.

Continuation of SLAV 592

594. Advanced Ukrainian I. (D) Rudnytzky. Prerequisite(s): SLAV 593 or Placement. Offered through the Penn Language Center.

Emphasis on advanced vocabulary building, conversation and reading skills. Advanced grammar review.

595. Advanced Ukrainian II. (D) Rudnytzky. Prerequisite(s): SLAV 594 or Placement. Offered through the Penn Language Center.

Continuation of SLAV 594

SOCIAL POLICY & PRACTICE (SW) {SWRK}

701. LEAD'SHIP IN NONPFT WRLD.

SOCIAL WORK

601. History and Philosophy of Social Work and Social Welfare. 1 c.u. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building.

This course offers a historical perspective for understanding current issues of social welfare and social work. It examines the social, racial, political, and economic forces that explain the development of social welfare and social work in the United States. Particular emphasis is placed on the role of gender and race in shaping social policy. Programs, policies, and issues are analyzed as responses to long-term changes in social and economic conditions in the United States and the needs and demands of oppressed groups for full participation in the life of the country.

602. Human Behavior in the Social Environment I. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building.

This course introduces the student to the individual and family components of social interaction in a variety of different milieus. Theories of self and personality are studied, along with theories related to traditional and nontraditional family styles, different social and ethnic groups, and of assimilation and acculturation. Emphasis is given to the impact of different cultures and traditions on individual functioning. Additional attention is given to selected social characteristics of the larger society, such as factors of socio-economic class which influence individual and family behavior and functioning.

604. Foundations of Social Work Practice. May be taken by undergraduate seniors in sub-matriculation program. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building.

This is a first of a four course sequence designed to help students develop a

professional stance and evidence-based framework for social work services to individuals, groups, families, and communities. It integrates the student's theoretical learning with the experience in the field placement agency. The student is introduced to a holistic process-oriented approach to social work practice and to methods for implementation. The course emphasizes the social context for practice with special attention to agency purpose, functions and structure; the client system and its perceptions of need; goals and resources and the social worker as a facilitator of change.

611. Contemporary Social Policy. Prerequisite(s): SWRK601.

This course introduces students to the analysis of contemporary social welfare policy. Several social welfare policy areas, including social inequality, poverty, health care, and housing are examined. Each topic area is also used to illustrate a component of the policy analysis process, including the analysis of ideologies and values as they shape policy formulation, the process by which legislation is proposed and enacted, the roles of advocacy and lobbying organizations, and the challenges of policy implementation and evaluation.

612. Group, Organization, and Communities in the Social Environment. Prerequisite(s): SWRK602.

The focus of this course is on developing an understanding of how human behavior occurs to the context of group, organizational, and community relations. The dynamic nature of how groups, organizations and communities come into being, are nourished and change over time and impact upon client systems will be fully explored.

613. Understanding Social Change and Issues of Race and Gender. SWRK603. Prerequisite(s): SWRK603.

This course builds upon the foundation of historical, psychological, sociological, economic, political, and personal knowledge about institutionalized forms of racism and discrimination developed in SWRK603, American Racism and Social Work Practice. The course uses understanding elements of oppression to critically examine strategies for addressing racism and sexism in organizations and communities through systematic assessment and planning for social change. The course examines change at three levels: organizations, communities, and social movements.

614. Social Work Practice. Prerequisite(s): SWRK604.

This is the second in a four course sequence and continues the examination and use of practice frameworks and methods for service delivery in working with individuals, groups, families and communities. It emphasizes the eradication of institutional racism and other forms of oppression along with the integration of a culturally sensitive approach to social work practice. Attention is given to understanding client problems in the context of different social work practice approaches and service requirements and to increased use of professional values to guide and inform practice.

701. Health and Mental Health Policy. (C) Free Elective.

This course provides an overall view of the historical, social and economic dimensions of the health care delivery system: how health policies are developed and implemented, and how such policies influence social work practice, program planning, and research. Key health policy issues such as financing, cost, access, and the allocation of resources are explored in the context of health reform proposals. Students investigate how health policy affects specific population groups such as women and children, persons with chronic mental illnesses, persons with AIDS, older adults, and minorities.

702. Social Work Practice in Health Care. (C) Direct Practice Elective.

This course focuses on key issues in social work practice in health care settings. Social aspects of health and illness, including cultural variations, health beliefs and behavior, and the impact of illness on the patient and the family, are examined and their relevance for practice is discussed. Appropriate theoretical models for practice are identified and applied to practice in the areas of prevention, primary care, chronic and long-term care. New roles for social work in varied health delivery systems and inter-professional collaboration are explored.

703. Impacting Government Policy in Pennsylvania. Macro Practice Elective.

This course focuses on social changes in health care as it impacts the lives of older people and their families. Using Pennsylvania as a model, we will focus on the administrative and legislative systems. Topics will include the recent controversial changes to Medicare, re-balancing of the long-term care system and efficacy of behavioral health treatment programs. Students will learn how to impact social

change at the policy level by planning a social marketing campaign. They will develop materials to influence consumer understanding and behavior, such as editorial and legislative briefings. Students will have the opportunity to interact with officials, legislators, and advocates as they build the framework to support a social change agenda.

704. Advanced Clinical Social Work Practice I. (A) Required for Direct Practice Concentration.

Building on the foundation established in the foundation social work practice courses, this course introduces advanced theoretical frameworks for clinical practice from which students build conceptual practice frameworks. The course helps students choose and learn the components of a practice approach in the context of social assessment, agency auspices, and the student's developing theoretical framework.

706. Policies for Children and Their Families. (C) Free Elective.

This course examines policies for children and their families with a specific focus on child welfare policy. The course examines the interrelationship between: the knowledge base on child abuse and neglect; evaluations of interventions; programs and policies designed to protect maltreated children; and child welfare policy at the state and national level. The course also examines federal and state laws that govern the funding and operation of child welfare systems; the history of child welfare policies; the operation of child welfare systems; and the legal, political and social forces that influence the structure and function of child welfare systems in the United States.

708. Advanced Macro Social Work Practice I. (A) Required for Macro Practice Concentration.

Advanced Macro Social Work practice builds on the foundation social work practice courses and is composed of three interrelated disciplines: community organization, planning, and administration. In Macro Practice courses, the student develops knowledge and skills for practice in communities, organizations, and/or other social systems. This course, the first of two Macro Practice courses, begins by developing a theoretical framework for macro practice. Knowledge and skill development focuses primarily on social work practice within communities and on the planning of service delivery at the community level. Students learn how to identify community-based social problems, organize and build relationships with

communities, and develop programs. Specific skill development includes learning how to conduct needs assessments, staff committees, run meetings, and write grants. The content is integrated with fieldwork and is specific to the service needs of the populations with whom students are working in their field agencies.

709. Heterosexism and Social Work. (C) Free Elective.

This course builds on the foundation year focus on institutional oppression by applying this model to the status of lesbian, gay, bisexual, and transgender people in U.S. society and in social welfare systems. The course assesses the relationship of heterosexism and homophobia to other forms of institutional oppression, including racism and sexism. The course includes an overview of the treatment of sexual minorities in the U.S. and in the social work profession with a focus on issues related to lesbian, gay, bisexual; and transgender clients as an under-served and mis-served population. The intersection of racism and heterosexism is a focal point to explore the concerns and needs of LGBTQ people of color. Current theoretical frameworks for understanding sexual identity and the unique situations of lesbian, gay, bisexual, transgender and questioning people throughout the life cycle will be identified.

714. Advanced Direct Social Work Practice II. Prerequisite(s): SWRK704 Required for Direct Practice Concentration.

The focus of learning in this semester is differential intervention and the expansion of the professional role and repertoire. Students extend and refine their practice knowledge and skills and learn to intervene with group systems and selected problems. Students consolidate their identification as professionals and learn to constructively use environment to affect systems change.

715. Introduction to Social Work Research. Required Course.

This course presents the broad range of research tools that social workers can use to improve the effectiveness and efficiency of their practice. The course emphasizes the process of theory development, conceptualization, and hypothesis formulation across a broad spectrum of social work practice situations. The course includes methodological considerations relating to concept operationalization; research design (experimental, survey, and field), sampling instrumentation, methods of data collection and analysis, and report preparation and dissemination. The course also emphasizes how social work research

can help professionals better understand and more effectively impact problems of racism and sexism in contemporary American society.

718. Advanced Macro Social Work Practice II. (B) Prerequisite(s): SWRK708 Required for Macro Practice Concentration.

This course, the second of two Macro Practice courses, helps students develop the knowledge and skills required to become an effective and creative social work manager. Management and behavioral science theories and concepts, as well as techniques and methods, are introduced. Students also learn how to strategically plan programs at the organizational level and explore how public policy influences service delivery. Students learn to utilize administrative skills to promote social change within a variety of systems that influence the lives of client populations. Students have the opportunity to apply this administrative content to their field agency.

719. Prenatal and Early Childhood Development. Free Elective. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B22, School of Social Work, Caster Building.

This course presents a coherent portrait of the development that transforms a person from the prenatal period to infancy to young childhood. The course bridges standard theories of development with new approaches such as social learning, cognitive development, developmental psychobiology, and other psychological theories used to understand the child. Integration of different perspectives on development is geared to demonstrate the interrelated nature of growth in cognition, learning, language, emotions, personality, physical growth and social behaviors. Students research areas of individual interest. Free Elective

720. Middle Childhood and Adolescence. Free Elective.

This course focuses initially on growth and behavior in the often overshadowed period of middle childhood, and in greater depth on the adolescent period. Change in the psychological, physical, cognitive and social domains of growth is examined and is related to changing relationships and overt behaviors. The influence of social factors is a continuing theme. Concepts like "adolescent rebellion" are questioned and re-evaluated. Connections between uneven development and social problem behavior are examined. Knowledge is

salient to school social work as well as to other practice domains. Students research areas of individual interest. Free elective.

722. Practice with Children and Adolescence. Direct Practice Elective.

This course provides a foundation for social work practice with children and adolescents. Beginning with an overview of normative child and adolescent development and psychosocial developmental theory, the course covers various methods for helping at-risk children and adolescents and their families. Emphasizing the complex interplay between children and adolescents and their social environments, consideration will be given to biological, temperamental, and developmental status; the familial/cultural context; the school context; and other aspects of the physical and social environment. Particular attention is paid to working with socially, emotionally, financially, and physically challenged and deprived children and adolescents and their families. Direct Practice Elective

724. Developmental Disabilities. Direct Practice Elective.

This course enhances the students' ability to practice social work with and on behalf of people with developmental disabilities and their families. The course provides a base of knowledge about developmental disabilities and differences, their causes and characteristics. Students learn how disabilities and learning differences impact personal, familial, educational, social, and economic dimensions for the individual, family and society, with attention to the person's special life cycle needs and characteristics. The course also emphasizes legislative, programmatic, political, economic, and theoretical formulations fundamental to service delivery.

726. Brief Treatment and Crisis Intervention. Direct Practice Elective.

This course focuses on theory and practice of planned brief treatment in social work practice, primarily with individuals but with attention to couples, families and other groupings. The course covers the history of and different approaches to brief treatment. Topics include treatment issues such as criteria for selection of clients, understanding the importance of time in the treatment relationship, the use of history, the importance of focusing, the process of termination and other issues related to brief interventions. Particular attention will be paid to the use of brief treatment approaches in crisis situations. The course presents various methods of assessing an individual's crisis and of helping clients

mobilize their strengths to utilize customary methods of coping and learn newer ways of coping.

727. Practice with Families. Direct Practice Elective.

This course provides students with assessment and intervention skills for social work practice with varied family/partner configurations. The course begins with a grounding in family systems theory and proceeds to explore patterns of interaction in terms of the wide range of problems that families and partners bring to social agencies. Emphasis is given to exploring ways of supporting change in interaction patterns. Readings are augmented by videotapes of family sessions and simulations of clinical situations from students' field practice.

728. Ethnicity in Contemporary America. Free Elective.

This course focuses on major ethnic groups in America as a way of exploring cultural differences, ethnic retention, and the nature of pluralism in our society. Students examine family patterns, religion, educational institutions and other factors that transmit and maintain cultural and ethnic differences. Students define and develop the implications of these social factors for use in social work practice.

729. Social Statistics. Research Option.

This course provides students with a broad range of statistical methods and applications. It introduces social work students to the use of quantitative data for planning and evaluating social programs and social policy. Course topics include conceptualization and measurement of variables and basic techniques and concepts for exploring and categorizing data, for generalizing research findings and testing hypotheses, and for statistical data processing. Students will gain experience in using a Windows-based statistical software package on personal computers. Emphasis is placed on the practical application of data to address social policy and social work practice issues. Students have the opportunity to critique the application of data analysis and presentation in technical reports and professional journals.

730. Community Mapping. (M) Macro Practice Elective.

This macro practice elective course is intended to teach graduate social work students how to use mapping as a tool for understanding, organizing, and serving communities. Students will learn how to use quantitative data and geographic information systems (GIS) within a

conceptual framework focused on how the environment influences individual and group outcomes. Building on the content of the advanced macro practice curricula (SWRK708 and SWRK718), this class will use readings, discussions, and assignments to teach students how mapping can be used to assess needs and assets, develop, implement and evaluate programs, and build community.

731. Sociology of the American Jewish Community. (A) Prerequisite(s): Free Elective/Certificate in Jewish Communal Services course. Must be enrolled in Joint MSW/Jewish Communal Studies Program. Must be enrolled in Joint MSW/Jewish Communal Studies Program.

This course is an overview of the sociology of the American Jewish Community in the context of the social history of American Jewry. Students will become familiar with the demography and social characteristics of the community as well as its social structure and institutions. The Jewish family, synagogue and communal organizations will be seen through the sociological perspective which will enhance and broaden the analysis of the familiar. Conflict between institutions and patterns of innovation will also be explored along with the educational structures necessary for the continuity of minority identity and leadership into the next generation.

732. The Jewish Family: Institution in Transition. (B) Prerequisite(s): Free Elective/Certificate in Jewish Communal Services course. Must be enrolled in Joint MSW/Jewish Communal Studies Program.

This course is designed to give a sociological overview of the contemporary Jewish family in the context of Jewish history and tradition. The traditional Jewish family, the role of the single-parent family, dual-career families, the impact of divorce, and devising a policy to support Jewish family life within the current institutional structures and alternative ones are considered.

733. Catholic Social Thought and the American Catholic. Prerequisite(s): Free Elective/Certificate in Catholic Social Ministry course. Must be enrolled in MSW/Catholic Social Ministry Certificate program.

This course examines the increasing gap between the nation's and the Church's challenge to American Catholics. Racial intolerance and poverty in our own country are considered. Peace and disarmament teaching are examined for their

implications for spiritual living, teaching, and preaching.

734. History of the Catholic Church in America. Prerequisite(s): Free Elective/Certificate in Catholic Social Ministry course. Must be enrolled in MSW/Catholic Social Ministry Certificate Program.

This course provides a historical survey of the Catholic Church in the United States from the beginning to the present, with special emphasis on the church in Philadelphia, PA.

735. Social and Economic Development. Macro Practice Elective.

Social Policy reflects the dominant political and economic ideologies of societies at distinctive moments in their social histories. This course focuses on the evolving nature of the socio-economic policy development process in economically advanced countries, but especially that of the United States. The course helps students draw on their current practice experiences to identify the unique contributions made by social workers to social and economic development (SED) policy development. Particular attention will be given to the range of SED policy "actors" and the dominant sectors of SED activity in development-oriented social work practice (e.g. housing, health care, income security, community development, etc.)

736. Building Community Capacity. Macro Practice Elective.

This course provides an introduction to community organization and community capacity building. The course encompasses strategies, models, and techniques for the creation of organizations, the formation of federations of existing organizations; and coalition-building, all designed to address problems requiring institutional or policy changes or reallocation of resources to shift power and responsibility to those most negatively affected by current socio-economic and cultural arrangements. The course emphasizes development of strategies and techniques to organize low-income minority residents of urban neighborhoods, and to organize disenfranchised groups across geographic boundaries as the first required steps in an empowerment process.

738. Anxiety and Depression. Direct Practice Elective.

Anxiety and depression are two of the most common mental disorders seen in social work clients, and frequently they occur concurrently. This course describes the

medical and "physical" concomitants and psychosocial factors associated with both conditions and introduces diagnostic and assessment procedures and methods of intervention that social workers use in working with clients with these conditions. The course also considers how culture, social class, gender, and other social differences affect the expression of these disorders and their concomitant treatment.

740. Strategic Planning and Resource Development for Public and Nonprofit Organizations. Macro Practice Elective.

Resilient organizations engage in a continuous process of self-review and refocusing. Referred to as "strategic planning," this process requires the active participation of a broad range of agency "stakeholders" who, in their work together, seek to realign the organization's goals, structures, and programs to make them more responsive to the changing needs of their service populations. Building on the content of foundation practice courses, this course strengthens the student's capacity to engage in strategic planning and resource development with nonprofit organizations. The importance of organizational flexibility, innovation, and the creation of public-private partnerships is emphasized throughout the course.

742. Practice with At-Risk Youth. Direct and Macro Practice Elective.

The discourse on juvenile justice in the United States, once driven by themes of treatment and rehabilitation, has been dominated in recent years by vocabularies of punishment and incapacitation. The juvenile court, an enterprise founded by social reformers and the social work profession at the turn of the century to "save children," is now under severe political and legislative pressure to impose harsher penalties on younger and younger offenders who are increasingly portrayed as violent "super-predators," while its most vulnerable segments, children and youth, stand in greatest need of what a social service system can offer. Not surprisingly, those most likely to wind up under supervision are economically poor, under-educated, disproportionately of color and disproportionately at-risk to become victims of violent crimes. How does the profession situate itself in this discourse and what are individual social workers to do?

743. Action Research. Prerequisite(s): SWRK715. Research Option.

Action research is a form of social research that combines research with intervention.

It is characterized by a collaborative relationship between the researcher and a client organization that is in an immediate problematic situation. The research process is directed toward addressing the problem situation and producing knowledge that contributes to the goals of social science. Action research is compatible with many of the values and principles of social work. This course also addresses issues of social work ethics and values encountered by the action researcher.

744. Direct Practice Research. Prerequisite(s): SWRK715. Research Option.

This course provides graduate social work students with research knowledge and skills aimed at enhancing their direct practice with clients. The course examines methods of assessment, methods for choosing and evaluating techniques of intervention, methods for determining the effectiveness of practice and the use of research in social work decision-making. A successful outcome of the course will be that students perceive a more positive relationship between research and social work practice and possess a set of tools that they will be able to utilize in their future careers as social workers. The course starts from an assumption that students have some familiarity with research and are primarily engaged in direct practice with individuals, families or groups.

745. Policy Research. Prerequisite(s): SWRK715. Research Option.

This course introduces the process of policy analysis, stressing the joint use of qualitative and quantitative methods. Targeted to both the social work activist and the social worker within the agency, the course first explores how and why policy analyses are used and then introduces specific techniques. Methods will be illustrated through examples of policy research. These examples improve students' skills in understanding how policy analyses may directly impact who they serve and the resources available to those they serve. Assignments develop research skills while allowing students to use methods most suited to their interests. Specific techniques discussed include interviewing, observation, descriptive data analysis, researching the legislative process, cost-benefit analysis, and simple quantitative models. Combining techniques allows for more complete discussions of process evaluation, social experiments, and discriminating between alternative policies.

746. Political Social Work. Macro Practice Elective.

This course focuses on the role of social workers and the social work profession in advocacy and the political arena. It examines the methods of advocacy (e.g., case, class, and legislative) and political action through which social workers can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative social work roles in the facilitation of purposive change efforts. Topics include individual and group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action.

747. (URBS456) Social Planning and Community Organization. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building.

This course explores the theory and methodology of social planning community development and social action. The student is expected to be able to demonstrate basic competence in social planning/community organization through a practical application in a field setting.

748. (GSOC548) Women's Voices in Social Work and Social Welfare. Free Elective.

This course offers students a feminist lens through which to think about and examine constructions of gender that affect social work practice and social welfare policies. The course enhances students' knowledge of women's contributions to the field of social work, feminist theories, women's "ways of knowing," and feminist practice approaches as they apply to selected arenas of social work. Special attention is given to economic, psychological, and social risks faced by women and ways in which social workers can better understand, validate, and empower women clients and transform social services to promote human well-being. The course is predicated on the idea that women are diverse and that gender intersects with other "isms," including racism, ageism, heterosexism, ableism, and classism.

749. Welfare and Economics. FREE ELECTIVE - May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B22, School of Social Work, Caster Building.

This course examines the social welfare aspects of major economic decisions in the United States. Particular attention is paid to exploring the implications of social choices in relation to the following goals: the achievement of increased equality in the distribution of income and power, the elimination of unemployment, and the control of inflation. The growth of public welfare programs and the base of funding for social services are examined in terms of the nation's economic and political objectives. Free Elective

750. (SWRK965) Comparative Studies in Social Welfare.

Prerequisite(s): SWRK 715.

Social Work and social welfare are major institutional vehicles through which societies assure a minimal level of living for all their citizens. The content of this course focuses on achieving a fuller understanding of the social, political, and economic dynamics of contemporary welfare development in the United States and other countries. The multi-faceted contributions of social work, the social services, and social welfare to national and international social development within rich and poor countries will receive special attention. Students will be expected to demonstrate beginning skill in the use of comparative methods to analyze cross-national welfare dilemmas of particular interest to them.

752. Welfare Politics. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building. FREE ELECTIVE.

This course examines the impact of the political environment on the formulation and implementation of social welfare policy. It examines the structure of the American federal system: the division of power between federal, state and local governments and among executive, legislative, and judicial branches. Particular attention will be paid to the role of special-interest groups in achieving social welfare goals within the system. In addition, the role of protest and insurgent political movements in transforming the welfare system is addressed. Free Elective

754. Fiscal Management and Management Information Systems for Nonprofit Organizations. Macro Practice Elective.

Effective fiscal management and the development of integrated management information systems are two of the leadership responsibilities shared by senior administrators of all not-for-profit organizations. Building on the content of both the foundational (including SWRK715) and advanced macro practice curricula (SWRK708&SWRK718), this course will introduce students to the stewardship responsibilities incumbent on administrators of not-for-profit organizations in allocating and accounting for the use of all fiscal, human and other resources under their control. Special emphasis in this course will be placed on identifying principles of financial planning and accountability, the development of effective electronic systems for tracking and monitoring the use of financial resources, the integration of agency-specific financial information into larger reporting and accountability systems, and the application of these principles to enhancing organizational effectiveness and efficiency. Attention also will be given to identifying and resolving ethical dilemmas confronted by organizational managers as they seek to optimize use of the fiscal and other resources for which they are responsible.

756. Human Sexuality. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building. FREE ELECTIVE.

The aim of this course is to increase students' ability to deal more comfortably with the sexual aspect of human functioning. Readings, written assignments, and classroom presentations are directed to realizing the diversity, complexity, and range of human sexual expression. Current information about sexuality from the biological and physiological sciences is reviewed to increase comfort and skill in discussion and handling of sex-related behavior, personal and societal attitudes will be explored. A variety of sex-related social problems encountered by social workers in family, education, health, and criminal justice settings are discussed. Diagnostic interviewing and treatment methods are presented in role play, group exercises and case studies. FREE ELECTIVE

757. Loss through the Life Cycle.

Clinical Practice Elective.

This course considers loss as a central theme throughout the life cycle. Content focuses on the physical, psychosocial, spiritual, and cultural aspects of loss, dying and bereavement processes and the interaction among individuals, families and professionals. Students examine historical trends of family, community, and institutional support for the terminally ill and those experiencing traumatic loss and learn ways to advocate for a system of services that supports full decision-making on the part of the client. Course materials, journals, and special projects identify how self and other factors impact service delivery to individuals, families, and communities experiencing loss, including ethical considerations prompted by cost, technology, and end of life issues. DIRECT PRACTICE ELECTIVE.

758. Faith-Based Practice and Management. Clinical and Macro Practice Elective.

This course prepares students to work to existing and newly formed faith-based social service agencies. It also serves as a national laboratory to extract new knowledge of best practices and the variability of managing and practicing in faith-based social service agencies.

759. Substance Abuse Interventions. Clinical Practice Elective.

This course addresses intervention approaches used in social work practice with individuals, families, and groups who misuse addictive substances themselves or are affected by another's misuse. Students learn about addictive substances, models of intervention, how to engage and assess clients, and how to intervene and evaluate the effectiveness of their interventions. The course incorporates theory and research findings on various strategies of intervention. DIRECT PRACTICE ELECTIVE

760. Mental Health Diagnostics. FREE ELECTIVE.

This course familiarizes students with mental health and mental disorders within the context of the life cycle, viewed from a biopsychosocial perspective. Prevalent categories of psychiatric disorders are considered with respect to their differentiating characteristics, explanatory theories, and relevance for social work practice, according to the DSM and other diagnostic tools. The course includes biological information and addresses the impact of race, ethnicity, social class, age,

gender, and other sociocultural variables on diagnostic processes. Free Elective

761. Spirituality and Social Work Practice. Clinical Practice Elective.

This course strives to seek a balance in exploring the universalistic as well as the pluralistic in relationship to spirituality. Some pluralistic religious and/or spiritual traditions are studied as they exemplify commitments of spirituality and as they intersect with a more universalistic spirituality. The course considers how spiritual and religious systems are related to diversity, including gender, social class, ethnicity and culture, and sexual orientation. Clinical Practice Elective

765. Human Resource Development and Supervision. (B) Clinical & Macro Practice Elective.

This course builds on social work knowledge, values, and skills gained in foundation practice courses and links them to the roles and functions of social workers as supervisors and managers in human service organizations. Course focus is on providing students with an overview of basic supervisory and human resource development concepts so they may be better prepared as professional social workers to enter agencies and provide direct reports (supervisees) with meaningful and appropriate direction, support, and motivation. DIRECT AND MACRO PRACTICE ELECTIVE

766. Organizational Politics and the Dynamics of Change. (C) May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building. FREE ELECTIVE.

This course explores how and when organizational change is possible. It is based on two bodies of thought: (1) the behavior of individuals within groups and the behavior of groups within organizations, and (2) the ways conflicts emerge and develop a "life of their own" within human systems. The dilemmas associated with changing human systems are investigated using a paradoxical lens, spotlighting counterintuitive ideas such as "to change, preserve the status quo," and "to grow, cutback." The effectiveness of the change strategies adopted by the "powerful," "the powerless," and those caught "in the middle" is examined. FREE ELECTIVE

768. Social Policy Through Literature. (A) FREE ELECTIVE.

This course uses works of fiction that pertain to a specific social issue in order to examine the effect these issues have in human terms on the individual, the family, and the community. Through appreciation of the human condition as portrayed in literature, students learn to frame issues more precisely and present arguments in compelling and convincing ways, thus enhancing the role of social worker as advocate for policy change. FREE ELECTIVE

769. Economic and Social Policies of Aging. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary, Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building. Macro Practice Elective.

This course examines the economic problems of older people and an aging society. Specifically, it examines both individual and family aging, and discusses their relevance to the financial aspects of the "graying of America." It also (1) analyzes the basic elements of retirement income security in America, including Social security, employer pensions, and Medicare, as well as health and long term care costs, and (2) addresses issues of public responsibility versus individual responsibility for financial security. Finally, the course reviews and evaluates connections among financial and gerontological concepts, public policy issues, and social work practice. MACRO PRACTICE ELECTIVE

770. Social Welfare and the Law. FREE ELECTIVE.

This course helps students understand the ideal and real functions of the law and recognize the influence of behaviors on the law, and of the law on behaviors. Students have the opportunity to evaluate strengths and limitations of law for empowering historically disadvantaged populations.

771. Social Work Values and Ethics. FREE ELECTIVE.

This course is concerned with the influence of ideology, values, and ethics on the development of social welfare policies and social work practice. Particular emphasis is given to the impact of such concepts as freedom, equality, and justice on the creation and implementation of social service programs and on the underlying value structure of alternative modes of social intervention. The course also provides students with a framework to understand and apply ethical concepts such

as confidentiality, self-determination, truth-telling, paternalism, conflict of duties, and "whistleblowing," in the daily realities of professional practice. These concepts and their relationship to terminal values are taught through the analysis of cases from the changing environment of policy and practice in the United States.

773. Mental Health Challenges in Childhood and Adolescence. Free Elective.

This course will be an opportunity for the student and the instructor to explore the concept "psychopathology" as it has been and is applied to childhood and adolescence. There are some psychopathological challenges that are unique to childhood and some which can manifest themselves throughout childhood into adolescence and adulthood. The social worker/practitioner will encounter a wide range of symptomatic presentations among his/her clients. At this time in the fields of clinical social work, psychology, psychiatry, and psychotherapy there are numerous frameworks available to the practitioner to aid in an understanding of symptoms in children and adolescents. This is a "free elective" that builds on knowledge of human behavior over the life cycle gleaned from the two HBSE courses, SWRK602 and SWRK612 and the foundation practice courses, SWRK604 and SWRK614. It continues to sensitize students to populations at risk and those affected by racism, sexism, and other forms of oppression learned across the foundation curriculum. It informs social work practice with children and adolescents in a variety of settings and practice roles.

774. Program Evaluations.

Prerequisite(s): SWRK 715. (PREREQUISITE SWRK 715)-RESEARCH OPTION.

This course introduces students to theoretical and practical aspects of social service program evaluation. Students learn about the design and implementation of all phases of an evaluation, from needs assessment to analysis of findings. Skills such as survey construction and budgeting are introduced. Intensive analysis of existing studies illustrates how evaluations are designed and how findings affect social programs and policy.

775. (GSOC775) Intimate Violence. Free Elective.

The purpose of this course is to familiarize students with the definition, theories, causes, processes, consequences, and social interventions in intimate violence. The course will attempt to provide insight on

the phenomenon of intimate violence by examining the ways in which it affects survivors, perpetrators, and their children. This will be accomplished by reviewing the current research as well as by exploring how intimate violence is constructed by the participants on the personal, interpersonal, and social structural level. Free elective

776. Community and Economic Development.

This course examines the evolution, practice, and strategies of community economic development (CED) in the United States. The definition of and the history behind community economic development and its relationship to traditional economic development and community organizing are explored. Critical analyses of CED and examination of development strategies that seek to respond to these critiques are considered. The course focuses on the identification and development of skills employed in community economic development. Strategies for community economic development including housing development and rehabilitation, microenterprises and small business development, job training and workforce development, and promotion of the arts are examined. MACRO PRACTICE ELECTIVE

777. Cognitive Behavioral Treatment with Children and Adults.

Clinical Practice Elective This clinical practice elective course builds on the content on direct social work practice with individuals, families and groups learned in SWRK604 and SWRK614; theoretical knowledge about human behavior learned in SWRK602 and SWRK612; awareness of racism and other forms of discrimination learned in SWRK603; and social work policy learned in 601 and 611. It complements the advanced year clinical practice course SWRK704, where students learn about CBT but not with the depth of this elective. As an evidence based intervention, this course also complements the research course SWRK715.

This course is designed to provide students with the skills and techniques to be able to practice cognitive treatment when working with adults, adolescents and children. The course begins with grounding in the cognitive therapy diagnostic assessment process. Students will be instructed how to use the various cognitive treatment psychological testing scales. Emphasis is then placed on learning to use the cognitive treatment model to treat mood, anxiety, substance abuse, sexual dysfunction and eating disorders. Students will be

instructed on how to use the CBT model with couples and families in social work practice. The course also includes information on use of the model with diverse client populations such as GLBT clients, impoverished clients, racially diverse clients, high risk urban youth areas, etc. Staying current with the growth of Cognitive Treatment students will be trained in Schema focused treatment. Mindfulness interventions and Dialectical Behavior Treatment (DBT). Both approaches have strong links to Cognitive Treatment. Students will be taught how to apply cognitive treatment techniques in both psychotherapy practice, as well as in other social work settings such as child welfare, schools, foster care, case management, aging, and hospital social work.

781. Qualitative Research. (C)

Prerequisite(s): SWRK715. Research Option.

Qualitative research is particularly attuned to the perspectives of vulnerable, oppressed individuals whose voices are often muffled. This course introduces students to research approaches that help one attain a deep understanding of persons, groups, settings, processes, and problems. It explains philosophic issues guiding qualitative research and addresses research design, data collection methods, data analysis, and methods of presentation. Particular attention is given to the study of individual narratives, ethnographic field methods, and focus groups. This course shows how qualitative research approaches can be used to develop social service programs, assess programs, and to evaluate practice. Students will have the opportunity to use qualitative research strategies in class and in assignments. Prerequisite SWRK715

782. Christian Social Ethics.

Prerequisite(s): Free Elective/Certificate in Lutheran or Christian Social Ministry course. Must be enrolled in Certificate program.

This course examines the church's historic teachings and current understanding of sexuality, marriage, and family, and of controversial issues in this area through the use of theology, fiction, and films.

783. Alienation and Reconciliation.

Prerequisite(s): Free Elective/Certificate in Lutheran or Christian Social Ministry course.

This course examines alienation from a theological perspective and then shifts focus to a sociological look at how alienation operates in society, particularly

around the dynamics of economics, color, and gender.

794. (NURS514) Aging. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building.

This course is offered as an interdisciplinary course with the School of Nursing. It emphasizes the physiological, psychological, social, economic and political factors accompanying and shaping the process of aging. Students examine normal and pathological changes in physical, mental and social functioning associated with aging. Course material addresses the implications for the well-being of older persons of such factors as ageism, economic deprivation, exits from social roles and various forms of "minority status," including being gay or female. Students examine the nature of interdisciplinary roles and practice.

796. Poverty, Welfare and Work. May be taken by undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building FREE ELECTIVE.

This course examines the impact of work and nonwork on the individual and society. Special emphasis is placed on examining the roles of government, voluntary agencies, management and labor in defining the purposes of social policy. Topics include: the history and philosophy of work, health issues in the workplace, women and work, labor-management relations, the democratization of the workplace, and racial and sexual discrimination in employment. FREE ELECTIVE

SM 799. (AFRC798) Advanced Topics. Staff.

804. Methods of Inquiry:Quantitative Research Methods. Prerequisite(s): Must be enrolled in D.S.W. program.

The purpose of this course is to teach the basics of practice research, with an emphasis on intervention research. This course will focus on research ethics, building a conceptual framework, source credibility, question and hypothesis formulation, design, sampling, measurement, and scale construction and selection. Special emphasis will be placed on the development of designing feasible and practical research studies to answer questions of importance to social work practice. The course will emphasize the

selection and development of outcome measures, intervention manuals, and fidelity measures. It will closely examine the use and development of practice guidelines, evidence-based practice and meta-analytic procedures.

805. Methods of Inquiry:Qualitative Research Methods. Prerequisite(s): SWRK804-001. Must be enrolled in D.S.W. program.

This course will cover the essentials of qualitative research. Students will learn how to "situate themselves" in the research process so as to best capture the lived experience of the subjects under investigation. The course will explore the appropriate use of intensive interviews, grounded theory and ethnography. Mixed methods that employ both qualitative and quantitative approaches, will also be covered.

812. Clinical Theory I. Prerequisite(s): Enrolled in D.S.W. program.

The purpose of this course is to broaden and deepen participants' mastery of several theories of development, personality, and behavior that have contributed to social work's knowledge base across the decades and continue to inform clinical social work epistemology today. Drawing primarily from original sources, we will consider key assumptions, constructs, and propositions of each theory in terms of its congruence with social work's principles, values, and mission and in relation to the profession's person-in-environment perspective. In this first semester, we will study the evolution of theories central to psychodynamic thought, from Freud's early biological model of the mind, through various relational perspectives, to contemporary work in the fields of attachment and interpersonal neurobiology. This examination will constitute a case study of the manner in which theories are socially constructed and will lay the foundation for critical inquiry into the social and political biases inherent in the Western European intellectual tradition from which most theories of human behavior have emerged.

813. Clinical Theory II. Prerequisite(s): SWRK812. Must be enrolled in D.S.W. program.

This course will cover a number of new therapeutic approaches and the theories and evidence that support them. For heuristic purposes, the theories considered will be divided between "Theories of Explanation," which help us to understand our clients better, and "Theories of Intervention," which help us to understand the various helping processes. Particular attention will be paid

to the processes of how intervention theories and models are developed. Some specific examples, such as cognitive-behavioral, dialectical behavior therapy, existential and other approaches will be examined. The specific orientations to intervention will also, as much as possible, be influenced by student choices and input.

899. Independent Study.

Independent studies may be arranged on an individual or small group basis between students and a faculty member. The learning objectives associated with independent studies are highly specialized and must relate directly to the student's individualized educational plan. Students, with the faculty member, share responsibility for the design, structure and content of an independent study. No more than two independent studies may be arranged for an individual student.

NONPROFIT/NGO LEADERSHIP

787. Leadership and Capacity Building. Prerequisite(s): Enrolled in NPLD program or permission of instructor. Corequisite(s): MSW program free elective.

Governance, Legal Structures, Organizational Behavior and Ethics. Given the growing concern regarding leadership of for profit, nonprofit/NGO governmental organizations that has led to increased public scrutiny and legal regulation, this course focuses on governance in the social service sector.

788. Envisioning and Realizing Possibility. Prerequisite(s): Enrolled in NPLD program or permission of instructor. Corequisite(s): MSW program macro practice elective.

Strategic Planning, Resource Development, Communication and Social Marketing. Critical to the success of any nonprofit organization is the development and execution of a strategic plan leading to a business plan, which is effectively marketed to potential investors/donors. This course will examine the dynamic relationship between planning, resource development and social marketing.

789. Action and Efficacy. Prerequisite(s): Enrolled in NPLD program or permission of instructor.

Program Design, Implementation, Evaluation and Social Statistics. This course examines how an organization designs, carries out and evaluates its programs to best implement its mission

statement within the context of organizational and financial constraints.

790. Value Creation and Stewardship. Prerequisite(s): Enrolled in NPLD program or permission of instructor.

Financial Management, Budgeting and Accounting. This course focuses on managing the financial and human resources of an organization and conceptualizes value creation and organizational stewardship in broad, enervating and creative ways.

791. Transformational Reasoning.

Prerequisite(s): Must be enrolled in Master's Program in Nonprofit/NGO Leadership or permission of instructor.

Critical Thinking, Social Entrepreneurship, Innovation, Social Movements, and Social Change. This course, which runs across two semesters, provides the architecture for the program as a whole, infuses critical and innovative thinking into all aspects of learning and functions as an integrative device for the complete curriculum. (Year-long seminar)

792. Transformational Reasoning.

Prerequisite(s): Enrolled in NPLD program or permission of instructor.

Critical Thinking, Social Entrepreneurship, Innovation, Social Movements and Social Change. This course, which runs across two semesters, provides the architecture for the program as a whole, infuses critical and innovative thinking into all aspects of learning and functions as an integrative device for the complete curriculum. (Year-long Seminar)

793. New Leadership Frontier.

Faculty. This course is a .50 credit unit course. Permission of instructor.

NPLD793 is a two semester course especially designed for Wharton graduate students interested in "social impact" and the ways private, public and nonprofit organizations partner to address major socio-economic/political challenges. Students with such a passion and vision will apply to become Wharton-Nonprofit Leadership Fellows (or Associates) through a process to be managed by the Wharton Graduate Leadership Program. A small number of first year Wharton graduate students will be accepted into this program. All participants will enroll in both semesters of NPLD793 and NPLD794. During the first semester, Wharton students and NPL students are integrated into a cohort working jointly on projects and assignments. In the second semester, Wharton students work in smaller units on

projects that speak to their vision of incorporating their business training with their interest in nonprofit/nongovernmental organizations.

794. The New Leadership Frontier II.

Prerequisite(s): NPLD793.

NPLD794 is the second part of a year long course especially designed for Wharton graduate students interested in social impact and the way private, public and nonprofit organizations partner to address major socio-economic and political challenges. Students with such a passion and vision will apply to become Wharton-NonProfit Leadership Fellows (or Associates) through a process to be managed by the Wharton Graduate Leadership Program. In the fall semester, Wharton students work in smaller units on projects that speak to their vision of incorporating their business training with their interest in nonprofit organizations or nongovernmental organizations (NGO's). This course is offered in the fall semester and is .50 credits.

795. Non-Profit Leadership. Faculty.

Prerequisite(s): Permission of Director of NPL program needed to register for course.

This course consists of several, two-day (Friday-Saturday) workshops that are conducted in the spring semester. The workshops, taught by faculty from around the University (Law School, School of Arts & Sciences, Wharton, School of Social Policy & Practice) on themes such as creating digital videos for social change; social entrepreneurship; topics in nonprofit law; advocacy and lobbying for mission driven nonprofits; negotiation and strategic planning; and social accounting provide an opportunity for hands-on, practical skill-development, relevant to people with managerial or leadership aspirations/responsibilities in the nonprofit world. NPLD students enrolling in this elective select three (3) Friday-Saturday workshops, which together constitutes 1.0 graduate credit. Students from programs like the graduate MBA program that have fractional credits may, after all students taking it for a full credit have been placed, take a single workshop for .33 credit. This course is open to graduate students in all graduate and professional schools within Penn with the permission of the director of the NPL program.

796. Non-Profit Leadership.

799. Advanced Topic. Faculty.

900. Field Study. Non-credit course.

Field study is intended to provide the doctoral student with an opportunity to explore the implications of practice for further theory development in the profession. Each field study program is developed in accordance with the student's track identification and his or her individual needs. Concurrently with field study, the student takes a track process seminar. One term as arranged.

SOCIAL WELFARE (PhD)

803. History and Philosophy of Social Welfare.

This seminar traces the evolution of social welfare from ancient to modern times focusing on its implications for the development of contemporary social welfare in the United States. The course examines the development of social welfare systems and the underlying philosophies in the context of the social, economic, political, and cultural environments in which they emerged. Topics include the evolution of modern conceptions of the "welfare state," the role of public, private and voluntary sectors in the social services, trends in social and family history and their relationship to social welfare, the professionalization of social work, and methods of historical and social policy analysis.

810. Geographic Information Systems and Environmental Planning. Tomlin.

Introduction to the use of geographic information systems (GIS) in urban and regional planning. Reviews the conceptual foundations of GIS. Students achieve proficiency in Arc View.

811. Social Theory. (C)

Course reading consists of the original works of theorists who offer classical, contemporary and postmodern perspectives on social thought, social interaction and issues germane to social welfare. Through intensive examination of multiple theoretical frameworks, students are expected to increase their analytical and critical orientation to theory. This nuanced understanding about epistemology, underlying assumptions, and theory construction can then be used to inform the student's substantive field of study and methodological orientation to research. This course is conducted in mixed lecture-seminar format. Students have the opportunity to practice pedagogical techniques and exercise class leadership.

852. Introduction to Social Work Research. (A) Prerequisite(s):

Completion of concurrent enrollment in a course on introductory Social Statistics.

This is the foundation course in social work research. It deals with the nature of scientific inquiry; theory and its relation to research design and hypothesis testing; and various models of data collection, sampling, and analysis of research and is supported in following personal interests within the structure of ethical scientific research. Each student prepares an original study which demonstrates integration of the semesters work. Students learn to work on their own. At the end of SWRK 852, they are prepared for more advanced coursework in research.

853. Qualitative Research. (B)

Prerequisite(s): SWRK 852 or an equivalent.

The methodology of accountability research in human service programs will be studied. Emphasis will be placed on social program evaluation, idiographic research, and secondary data analysis in policy research as specialized methods of social work research. Attention will be given to the social, political and fiscal issues typical of evaluation studies conducted within agency settings. Students will undertake a laboratory experience in an ongoing program evaluation project.

855. Advanced Research Methods. (B)

Prerequisite(s): SWRK852 and Introduction to Statistics.

The methodology of accountability research in human service programs is studied. Emphasis is placed on social program evaluation, idiographic research, and secondary data analysis in policy research as specialized methods of social work research. Students undertake a laboratory experience in an ongoing program evaluation project.

861. Policy Analysis. (B)

This course examines alternative models of policy development and applies them to current issues in social welfare. It emphasizes frameworks for policy research and secondary analysis of governmental data. Topics include: race, class, and sex in policy outcomes; major social welfare programs; and the design, implementation, and evaluation of social service systems.

903. Integrative Seminar I. (B)

Prerequisite(s): Completion of all core courses.

The goal of this seminar is to provide a forum for testing new ideas within a scholarly and professional framework in

order to assist with the development of a dissertation proposal. Specific objectives include: 1) identifying a research area of interest, 2) increased skill in developing a literature search, 3) developing a capacity to create operational hypotheses or questions, 4) developing a research design, and 5) designing a data analysis and interpretation plan.

904. Integrative Seminar II.

Prerequisite(s): Completion of all core courses.

The goal of this two-semester course is to provide a forum for testing new ideas within a scholarly and professional framework in order to assist with the development of a dissertation proposal. Specific objectives include 1) identifying a research area of interest. 2) increased skill in conducting a literature search, 3) developing a capacity to create operational hypotheses or questions, 4) developing a research design, and 5) designing a data analysis and interpretation plan.

965. (SWRK750) Research Seminar in International Social Work.

Prerequisite(s): SWRK 852 or an equivalent course.

Empirical tests of prevailing theories of International Social Welfare development are reviewed critically. Students will learn how to construct and interpret welfare-relevant social indicators and will be expected to acquire skills in computer-based simulations and model building. Students will work together in conducting analyses of social welfare patterns in variety of rich and developing nations.

966. The Politics of Welfare.

This course examines the impact of the political environment on the formulation and implementation of social welfare policy. It examines the structure of the American federal system--the division of power between federal, state, and local governments and between executive, legislative, and judicial branches. Particular attention will be paid to the role of special-interest groups in achieving social welfare goals within the system. In addition, the role of protest and insurgent political movements in transforming the welfare system will be addressed.

968. Social Welfare and Social Economics.

This course examines the social welfare aspects of major economic decisions in the United States. Particular attention is paid to exploring the implications of social choices in relation to the goals of the achievement of increased equity and equality in the

distribution of income and power, the elimination of unemployment, and the control of inflation. The growth of public welfare programs and the base of funding for social services are examined in terms of the nation's economic and political objectives.

995. Doctoral Dissertation.

Doctoral Dissertation

MASTERS IN SOCIAL POLICY

628. Social Policy Analysis - Part I.

(C) Prerequisite(s): Enrolled in MSSP program or permission of instructor.

Understanding the development and implementation of legislation is critical to the policy analysis process. This work occurs in a political context. Thus, a social problem analysis framework will be the lens through which issues and policy initiatives will be critiqued. By reviewing both contemporary and historical social policy initiatives, this course will provide students with an understanding of the structure, function and processes of the legislative and executive branches, including the establishment of a legislative sanction, the role of the regulatory process, appropriations, methods of financing as well as strategies to effect social policy change.

629. Research and Evaluation Design.

Prerequisite(s): Enrolled in MSSP program or permission of instructor.

Research and Evaluation Design introduces social research methods in the context of social policy and program evaluation. The course provides a conceptual and practical understanding in the design of experimental, quasi-experimental, and non-experimental research and in the application of quantitative and qualitative methods. Students learn about the application of the research process and skills in all phases of assessing a social policy and developing a social program, including needs assessment, implementation analysis, and evaluation of policy or program effectiveness. Students learn to be critical and informed consumers of research and to apply guidelines of research ethics in social policy settings.

630. Quantitative Reasoning.

Prerequisite(s): Enrolled in MSSP program or permission of instructor.

Quantitative Reasoning is designed to provide students with a broad range of quantitative methods and applications. The course provides a conceptual understanding of inferential statistics including probability

theory, confidence intervals, and hypothesis testing. Topics covered are: operationalization and measurement of variables; exploration and categorization of quantitative data; generalization of research findings from samples to populations; and statistical data processing and analysis. Students will have hands-on-experience in applying quantitative reasoning to address social policy issues and program evaluation using existing datasets. Students will have the opportunity to present data in different formats and to critique the application of quantitative data in technical reports and professional journals.

631. Social Policy Analysis Part 2.

Prerequisite(s): Must be registered in Masters in Social Policy program or permission of instructor. This course introduces students to the structure of policy making in the U.S. in particular policy made via the judicial branch of government. The course will focus on a concrete understanding of the elements of case law including legal research and writing, judicial jurisdiction and forms of authority, the organizational flow of federal and state courts and other legal concepts. This course will help students to understand and interpret case law using a social problem analysis framework which critically evaluates the social and cultural contexts of such law. Students will also learn strategies to effect social policy change on the judicial side, including writing legal briefs, legal advocacy, and case vs. class action law suits.

632. Capstone Seminar.

Prerequisite(s): Enrolled in MSSP program. The focus of the Capstone Seminar is three-fold: 1) to help students integrate the theory and practice of social policy analysis; 2) to help students formulate a manageable plan for conducting a graduate-level analysis of a social policy issue, problem or dilemma of special interest to the student; and 3) to facilitate the student's work in preparing the required policy analysis thesis. When appropriate, the Capstone Seminar also will assist students in bridging their experiences in the social policy field research internship with those of completing work on the thesis.

633. Capston Seminar II.

798. Women Leaders and Policy.

799. Independent Study.

899. Independent Study.

**SOCIOLOGY
(AS) {SOCL}**

L/R 001. (AFRC002) Introduction to Sociology. (C) Society Sector. All classes. Lareau, Zuberi.

Sociology provides a unique way to look at human behavior and the world. Sociology is the systematic study of the groups and societies in which people live. In this introductory course, we examine and analyze how social structures and cultures are created, maintained, and most importantly, how they affect behavior. The course deconstructs our taken for granted world of social interactions and behaviors and examines what theory and research can tell about human social behavior.

SM 002. Social Problems and Public Policy. (M) Bosk, Jacobs.

This course approaches some of today's important social and political issues from a sociological vantage point. The course begins by asking where social problems come from. The main sociological perspectives of Marx, Weber and Durkheim are developed in connection with the issues of inequality, social conflict and community. We then turn to the social construction of social problems by examining how various issues become defined as social problems. This involves a consideration of the role of the media, social experts and social movements. The last section of the course considers how social problems are addressed. Here we discuss the relative strengths and weaknesses of government programs and regulations versus market-based approaches. We also discuss the role of philanthropy and volunteerism. Finally, we consider the risk of unanticipated consequences of reforms. Along the way, we will consider a variety of social issues and social and social problems, including poverty, immigration, crime, global warming, and education.

L/R 003. Deviance and Social Control. (C) Society Sector. All classes. Bosk.

A sociological analysis of the origins, development, and reactions surrounding deviance in contemporary society. Topics include labeling theory, stigma, social organization, tradition, social power, crime, sexual deviance, drug use, and racism. Theoretical and methodological issues will be discussed and evaluated.

L/R 004. (GSOC004) The Family. (C) Society Sector. All classes. Harknett.

This introduction to the sociology of the family explores historical, economic, and cultural changes that have shaped the past and present form of the American kinship system. It will also compare demographic and social trends and consequences of the family patterns across societies, providing perspective on differences and similarities between the U.S. family system and other nations. Students will have an opportunity to engage in research on topics of special interest.

L/R 005. American Society. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Bosk. Also fulfills General Requirement in Society for Class of 2009 and prior.

What is American Society? The literary critic, Leslie Fielder once wrote, "...to be and American...precisely to imagine a destiny rather than to inherit one; since we have always been, insofar as we are Americans at all, inhabitants of myth rather than history..." The myths that we inherit form the basis of American civil religion. In this course we will explore the elements of the myth that form the basis of the civil religion as well as the facts on the ground that contradict our conceptions of American Society: Examples of mythic elements and their contradiction that we will explore are: A nation founded to pursue liberty and freedom yet allowed slavery, equality of opportunity and persistent structural inequality, and a welcoming of the Immigrant coupled with a suspicion of the outsider.

L/R 006. (AFRC006, ASAM006, URBS160) Race and Ethnic Relations. (C) Charles, Kao, Zuberi.

The course will examine how social networks, neighborhood context, culture, and notions of race affect inequality and ethnic relations. The course reviews the studies of ethnic entrepreneurship, urban segregation, labor force participation, and assimilation processes. The course emphasizes how inequality affects ethnic relations as well as the economic and social integration of different groups in society.

007. (URBS265, GSOC007) Population and Society. (C) Society Sector. All classes. Flippen, Harknett, Kohler, Zuberi.

The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political

implications of current trends, including: population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.

SM 008. Introduction to Political Sociology. (M) Zuberi.

This course will introduce students to sociological approaches to politics, broadly understood. The class will begin by discussing the nature of power and authority, the rise of the nation-state and the significance of nationalism. Later topics will include social movements, urban political regimes, globalization and transnationalism, citizenship, revolutions, and the rise (and fall?) of welfare states.

010. Social Stratification. (M) Society Sector. All classes. Jacobs.

The American Dream highlights opportunity for individuals to achieve success based on their own ability and initiative. How well does our society live up to this ideal? Who gets ahead, and who falls behind? Topics include factors that affect life chances in contemporary society: education, social class, race, ethnicity and gender.

SM 011. (AFRC011, URBS112) Urban Sociology. (M) Flippen.

This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed counties.

027. (AFRC001) Introduction to Africana Studies. (D) Humanities & Social Science Sector. Class of 2010 & beyond. Charles.

The aim of this course is to provide an interdisciplinary examination of the complex array of African American and other African Diaspora social practices and experiences. This class will focus on both classic texts and modern works that provide an introduction to the dynamics of African American and African Diaspora thought and practice. Topics covered will include: What is Afro-American Studies?; The History Before 1492; Creating the African

Diaspora After 1500; The Challenge of Freedom; Race and Class in the 20th Century; From Black Studies to Africana Studies: The Future of Afro-American Studies.

033. (STSC003) Technology & Society. (C) Society Sector. All classes. Ensmenger.

From the colonial period to the present, Americans have relied on technology to shape their lives, landscapes and society. This unique, abiding and often tumultuous relationship is one of the defining elements of the American experience. From factory floor to suburban kitchens, from eccentric inventors to student demonstrators, from Model T to iMacs, the diversity of american technological developments reflects -- and has helped define -- the most crucial developments in American history. This course will provide an historical understanding of the role that technology has played in American society from the late 19th century to the present day. The underlying assumptions is that technology is simultaneously a reflection and cultural values, and a factor (one of many) in shaping the continuous development of those values.

SM 041. (AFRC041, EALC014, GSOC041, URBS010) Topics in Sociology. (D) Bosk, Hannum, Jacobs.

Freshman Seminars. Topics vary from semester to semester. Past offerings include Society and History; The 1960's: Preludes and Postludes; Mistakes, Errors, Accidents & Disasters; Urban Analysis with Computers; Race and Public Policy; Perspectives on Inequality, Homelessness and the Urban Crisis.

L/R 100. (HSOC100) Introduction to Sociological Research. (C) Gibson, Harknett, Koppel, Park, Smith.

This course provides a board overview of how sociologists gather and analyze information to generate and test hypotheses about the social world. We begin by covering key building blocks of sociological research: theory, measurement, and sampling. Then, we review a variety of research designs and analytic approaches. Finally, we take a critical perspective on social research discussing topics of research ethics, objectivity, and whether research findings should be used to inform policy. The emphasis in the course will be on training students to develop a healthy skepticism and to be intelligent consumers, and we will regularly discuss and evaluate research examples found in mainstream news sources. Students will also gain hands on experience with survey and

qualitative research through course research products.

L/R 101. (HSOC102) Bioethics. (C) Moreno.

Bioethical conundrums such as cloning, stem cells, transplantation, the use of psychopharmaceuticals, end of life technologies, preimplantation diagnosis of embryos, artificial reproductive technologies, and the genetic manipulation of life will challenge policy-makers and moral thinkers throughout the twenty-first century. In this course, a philosopher and a sociologist team up to frame and explore these important issues. Guest lecturers, multimedia presentations, and spirited debate will allow the students to understand the science, the social implications, and the philosophical, ethical, and religious implications of the coming biotechnological revolution.

103. (ASAM001) Asian Americans In Contemporary Society. (M) Kao.

This class will introduce you to sociological research of Asian Americans and engage in the "model minority" stereotype. We begin by a brief introduction to U.S. immigration history and sociological theories about assimilation and racial stratification. The class will also cover research on racial and ethnic identity, educational stratification, mass media images, interracial marriage, multiracials, transracial adoption, and the viability of an Asian American panethnic identity. We will also examine the similarities and differences of Asian Americans relative to other minority groups.

104. (GSOC104) Sociology of Sex: Comparative Study. (M) Collins.

Social scientists have argued that sexuality is not an unchanging biological reality or universal natural force, but a cultural construct, shaped by economical, social, and political processes and therefore, like society itself, historical, that is, variable in both time and space. This seminar follows this approach by exploring cultural construction of sexuality as it evolved from Greek antiquity to contemporary U.S.A., and its relationship to gender, class, political hierarchies, religion, ideology, and science. How the meanings of sexuality, codes of sexual regulation and sexual politics have varied over time with changing circumstances?

110. The Rich and The Poor. (M) Lareau.

This course examines the opposite ends of the economic spectrum in order to gain a fuller understanding of what social class is

and how it affects individuals and society. Who is rich? Who is poor? How does wealth and income (or the lack of it) affect all aspects of life, from the obvious (access to health care, good schools, etc.) to the not-so-obvious (quality of romantic life and family relationships). We will also examine cultural aspects of social class (tastes and lifestyles), across generations. There will be a midterm and final exam, as well as several short research/reflection papers due throughout the course.

111. (HSOC111) Health of Populations. (C) Kohler.

This course develops some of the major measures used to assess the health of populations and uses those measures to consider the major factors that determine levels of health in large aggregates. These factors include disease environment, medical technology, public health initiatives, and personal behaviors. The approach is comparative and historical and includes attention to differences in health levels among major social groups.

112. (AFRC112, GSOC114, URBS114) Discrimination: Sexual and Racial Conflict. (M) Society Sector. All classes. Madden.

This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination in the United States. The central focus of the course is on employment discrimination by race and gender. After a comprehensive overview of the structures of labor markets and of nondiscriminatory reasons for the existence of group differentials in employment and wages, various theories of the sources of discrimination are reviewed and evaluated. Actual governmental policies and alternative policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

117. (GSOC117) Sociology of Work. (M) Leidner.

The material world is shaped and maintained through work, but so is the social world. How work is organized, allocated, and rewarded determines the opportunities people have for developing their own capacities, the kinds of ties they will have with others, and how much control they will have over their own lives. We will consider various sociological perspectives on work and compare alternative ways of organizing work, with a focus on the contemporary United States.

118. (HSOC118) Sociology of Bioethics. (C) Staff.

The Sociology of Bioethics explores the sociological approach to bioethics. The Sociology of Bioethics is not a course in bioethics itself; rather than discussing the merits of a position (Is assisted suicide ethical?), we will ask how the debate has been framed, who is promoting which arguments, why the debate has arisen now, and how the issue is reflected in policy. In order to do so we will make use of social science research, along with philosophical treatises, legislation, and the popular media. The course is also not designed as a comprehensive treatment of the field; it will focus instead on choice topics that we will explore in depth. Our goal is to understand the nature of the bioethics profession and its modes of argumentation, and to explore the cultural, social, political, and professional underpinnings of bioethical debates.

L/R 120. (AFRC120) Social Statistics. (C) Allison, Charles, Guillot, Park, Parrado.

This course offers a basic introduction to the application/interpretation of statistical analysis in sociology. Upon completion, you should be familiar with a variety of basic statistical techniques that allow examination of interesting social questions. We begin by learning to describe the characteristics of groups, followed by a discussion of how to examine and generalize about relationships between the characteristics of groups. Emphasis is placed on the understanding/interpretation of statistics used to describe and make generalizations about group characteristics. In addition to hand calculations, you will also become familiar with using PCs to run statistical tests.

122. (GSOC122) The Sociology of Gender. (C) Society Sector. All classes. Leidner.

Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people's lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives

or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality--race and class--interact with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.

125. (SOC1525) Classical Sociological Theory. (C) Collins.

This course will cover the founding classics of the sociological tradition including works of Tocqueville, Marx and Engels, Weber, Durkheim, Mauss, Simmel, and G.H.Mead. We will also examine how the major traditions have continued and transformed into theories of conflict, domination, resistance and social change; social solidarity, ritual and symbolism; symbolic interactionist and phenomenological theory of discourse, self and mind.

126. Contemporary Sociological Theory. (C) Collins, Gibson.

A review of theoretical perspectives developed since the second half of the 20th century. Includes micro-sociological perspectives of phenomenology, ethnomethodology, symbolic interactionism, and neo-Durkheimian interaction ritual theory; social behaviorism and exchange theory; neo-Weberian and neo-Marxian perspectives on power, conflict, and class; and attempts at synthesis by Havermas, Luhmann and Giddens. Recurring themes include the micro-macro connection, the relationship between subjectivity and behavior, and the structure-agency problem.

128. Introduction to Demographic Methods. (C) Elo, Hannum .

This course provides an introduction to basic demographic concepts, data, indicators, and techniques. The course emphasizes hands-on applications of these techniques in the analysis of population dynamics in the U.S. and elsewhere. Students will learn about the main sources of demographic data, including censuses, surveys, and vital statistics, and methods to estimate demographic processes (e.g., country, city). Students will leave the course with a solid grounding in population composition, and how to apply these measures to study demographic structure and change in human populations.

SM 130. Special Topics in Sociology. (M) Staff.

Topics vary from semester to semester. Some which have been offered in the past include Race in the City; African Urbanization; Sociology of Jewry; Law & Social Change; Tourism, Culture & Society.

134. (NURS134) Health and Social Policy. (M) Society Sector. All classes. Aiken, Lake.

Health and Social Policy is an interdisciplinary course examining health care and social policy from domestic and international perspectives. The course is designed to engage students in critical thinking about social determinants of health, the organization and outcomes of health care systems and institutions, global health priorities and challenges, and the implications for public policy. Topics include the social inequalities and health; how organizational context of health care impacts outcomes; management of human resources in health nationally and globally; analysis of medical error, its causes, and consequences; review and critique of public policies in U.S. health care; and global health priorities and international health policy. Issues of current public debate in health and health care will provide a context for learning. There are no prerequisites. The course is intended for generalists as well as for those planning careers in health care.

135. (AFRC135) Law and Society. (C) Bosk, Fetni. Recommended for sophomores, juniors, and seniors.

After introducing students to the major theoretical concepts concerning law and society, significant controversial societal issues that deal with law and the legal systems both domestically and internationally will be examined. Class discussions will focus on issues involving civil liberties, the organization of courts, legislatures, the legal profession and administrative agencies. Although the focus will be on law in the United States, law and society in other countries of Africa, Asia, Europe and Latin America will be covered in a comparative context. Readings included research reports, statutes and cases.

L/R 137. (FOLK137) The Sociology of Media and Popular Culture. (C)

Society Sector. All classes. Grazian, Wilde. Also fulfills General Requirement in Arts & Letters for Class of 2009 and prior.

This course relies on a variety of sociological perspectives to examine the role of the media and popular culture in

everyday life, with a particular emphasis on the organization of the mass media industry, the relationship between cultural consumption and status, and the social significance of leisure activities from sports to shopping. Specific course topics include the marketing of Disney, Nike and Starbucks; how consumers experience nightlife in the city; and the rise of new media technologies in the digital age.

SM 140. Social Conflict. (M) Collins.

General theory of social conflict, with an emphasis on violent conflict. Specific applications include fights, riots, combat, and gang violence; tribal and modern war; abuse of the weak; domestic conflict; sexual conflict and rape; homicide; social movements and moral crusades; conflict management and social control; state breakdowns and revolutions; ethnic conflict and genocide.

161. (STSC160) Information Age. (C)**199. Directed Readings and Research. (C)** Various Faculty.

Permission of Instructor needed.

Directed reading and research in areas of sociology not listed elsewhere in the undergraduate offerings of this department.

200. (CRIM200) Criminal Justice. (C) Society Sector. All classes. MacDonald.

This course examines the causes and consequences of the millions of decisions made annually by the legally empowered decision-makers of the criminal justice system. The course places students in the role of one decision-maker after another, emphasizing the decisions they would make with all the scientific research on these decisions at their disposal. Research on 15 different decision-makers is examined, from crime victims to police, prosecutors, jurors, judges, wardens, probation and parole officers. Using a medical model of evidence-based practice, the course asks students to consider how the results of criminal justice could more effectively reduce the sum of human misery.

SM 221. Sample Survey Methods. (M) Hannum, Parrado.

This course introduces students to the theory and practice of survey research. Students will learn about questionnaire design and formatting; sample design and selection; interviewing techniques; data base design and data entry; and elementary data analysis and report preparation. These objectives will be achieved through student involvement in the design of a sample of the connection between migration and

health. We will also examine and discuss general sample surveys widely used in the social and biomedical sciences. This course will address three fundamental issues in sample survey design: validity, reliability, and representativeness. In addition, this course will enhance students' analytical skills and prepare them for conducting quantitative analyses.

222. Field Methods of Sociological Research. (M) Koppel.

This class is intended as an introduction to the field methods of sociological research, with a focus on ethnographic observation and interviewing. The beginning of the course will emphasize the history and current status of these methods in the discipline of sociology, while at the same time preparing students for their own field studies. Students will conduct a piece of original research as part of the course, from data collection through analysis and written results. Along the way, we will discuss issues such as the social role of the field researcher, the ethics of field research, and the strengths and limitations of field methods.

SM 230. (AFRC230, EALC083, LALS235, PSCI298, SOCI530) Special Topics in Sociology. (C) Park, Zuberi.

Topics vary from semester to semester. Some which have been offered in the past include: Media, Culture & Society; Biotechnology, Bioethics and the Body; African Urbanization, and Urban Families; Schools and Neighborhoods; Research and Service/Learning.

SM 231. (GSOC231, URBS266) Special Topics in Sociology. (M) Staff.

Courses which have been offered in the past have included: Advanced Topics: Persp. on American Poverty. Topics vary from semester to semester.

233. (CRIM100) Criminology. (C) Society Sector. All classes. Adler, Laufer.

This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories explaining where, when, by whom and against whom crimes happen. Police, courts, prisons, and other institutions are also critically examined. This course meets the general distribution requirement.

235. (AFRC235) Law and Social Change. (C) Fetni.

Beginning with discussion of various perspectives on social change and law, this course then examines in detail the

interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, the laws of the United States and other countries as well as international law, will be studied. Throughout the course, discussions will include legal controversies relevant to social change such as civil liberties, human rights gender and the law, and issues of nation-building. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.

SM 239. (RELS201) Sociology of Religion. (M) Collins, Wilde.

Classic theory of religion in Durkheim and Weber, as well as contemporary theories of religious movements. Topics include ritual, magic, and mystical experience; religious ethics and salvation beliefs; the dynamics of cults, sects and mainstream churches; origins, expansion and decline of religions; religions and social class; religions and politics. The spectrum of religions in the contemporary United States will be examined, as well as historical comparisons.

SM 254. (URBS253) Cities, Suburbs, and Their Regions. (M) Black.

This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows and develops. Specific topics to be discussed include the factors that make a region competitive, the city's changing role in the region, evolving regional housing markets, and the impacts of the recent global financial crisis on American markets, regions, institutions, and neighborhoods.

SM 260. (STSC260) Cyberculture. (M) Ensmenger.

Free speech, free software, MOOS, MUDs, anime and cyberpunk. All of these are elements of a broad set of social, technical and political phenomena generally associated with the emergence of a nascent "cyberculture". In this seminar we explore the ways in which recent developments in information technology -- the computer and the Internet in particular -- related to changing contemporary notions of community, identity, property and gender. By looking at an eclectic collection of

popular and scholarly resources including film, fiction and the World Wide Web, we will situate the development of cyberculture in the larger history of the complex relationship between technology and Western society.

SM 264. (URBS264) Poverty Race And Health. (M) Elo.

This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions. We will meet only once a week. It is important that students attend seminars regularly and actively participate in class discussions. There are four short assignments designed around the topics covered in class and students will be required to present data/information, pose questions and lead class discussions appropriate for each topic. There will be one in-class exam towards the end of the course. In addition, students are required to write a research paper (12-15 pages), which will consist of a health profile of a race/ethnic group of a student's choice and its possible explanations. There are no prerequisites, although a prior sociology course and familiarity with a spreadsheet program would be useful.

266. (LALS235) LATINOS IN UNITED STATES. (C)

SM 270. (URBS270) The Immigrant City. (M) Society Sector. All classes. Vitiello.

Immigration is a controversial issue, dividing Americans from Congress to big cities to small towns. What's at stake in these debates? What does immigration mean for cities and regions? And what roles should policy makers, planners, and community organizations play in shaping migration and its impacts? This course examines these questions in the context of immigrant, refugee, and receiving communities in the United States. It surveys public policy and community and economic development practices related to migration, at the local, regional, and transnational scale. Class readings, discussions, and regular visits to a variety of Philadelphia's immigrant neighborhoods

explore themes including labor markets, political mobilization, social and cultural policy, and the built environment.

The first half of the course surveys migration and community development among a broad range of ethnic groups in different parts of the city and suburbs; the second half focuses on specific policy and development initiatives. Assignments include an opportunity to work with immigrant-serving organizations.

273. (HSOC273) Law, Medicine and Public Policy. (C) Bosk.

First the course will develop a perspective for viewing social problems drawn largely on my own work as well as that of Gusfelds and Edelman. Next we will explore the domains to which a Physician's expertise is limited using Weber, Rosenberg and others. We will then develop a perspective from anthropological and sociological literature on the courts as public arenas for articulating Durkheimian collective conscience. All of this theory building is in the first half of the seminar. The second half of the course will involve an intensive case study of a few dilemmas which have wended their way through the courts. I intend to look at "Baby Doe Regulations" and the Intensive Care Nursery; the problem of the cessation of life-supporting treatment; the legitimacy of mass screening - be it for genetic defects or substance abuse; and the propriety of surrogate motherhood.

275. (HSOC275) Medical Sociology. (C) Schnittker.

This course will give the student an introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. Although we will not explore everything, we will attempt to cover as much of the field as possible through four thematic units: (1) the organization and development of the profession of medicine, (2) the delivery of health-care, especially doctor-patient interaction, (3) the social and cultural factors that affect how illness is defined, and (4) the social causes of illness. The class will emphasize empirical research especially but not only quantitative research.

277. (HSOC277) Mental Illness. (C) Schnittker.

This course will review how sociologists study mental health and illness. We will describe the contributions of sociologists and explore how these contributions differ

from those of other disciplines, including psychology, psychiatry, and social work. The course is arranged in three parts: we will discuss (1) what "mental illness" is, (2) how social factors shape mental illness, and (3) how we as a society respond to and treat the mentally ill.

280. (EALC048, SOCI580) Social Issues in Contemporary China. (C) Hannum.

China's transition to a market-oriented society has effected fundamental changes in the lives of citizens. This class will consider pressing social concerns that China must struggle to address as it continues down the path of market reforms. Using topical problems to illustrate broader issues of social inequality along lines of gender, ethnicity, residence status, and poverty status, we will consider questions such as the following: How are women and men faring differently in China's new labor market and workplaces? Are rural peasants and the emerging underclass of urban laid-off workers being left behind by market transition? How are minorities faring in China's transition? How does the emerging digital divide play into the dichotomies of east-west and urban-rural in China? What is the plight of millions of "floaters" migrating into China's cities, with minimal legal rights and protections? Can China's rapidly-changing public health system handle emerging diseases such as SARS and AIDS? How has the one-child policy affected women, children, and society in China? Who are the "missing girls" of China, and what are the social implications of their disappearance? How was the welfare of children and adolescents changed with market reforms? The class will combine lectures, academic readings, case studies, films, and discussions.

SM 282. (STSC288) Urban Social Structure. (C) Kuklick.

This course focuses on science in various institutional contexts and discusses situations ranging widely over time and place. We consider examples drawn from the seventeenth century to the present, the social settings in which science is found (e.g. the prince's court, the society of amateurs, the university, the academic laboratory, and in the field, outdoors), and the effects of changes in publishing and patronage. For comparative purposes, we also consider such phenomena as the symphony orchestra, the art market, motion pictures, and literature. Assigned authors range from time-honored authorities, such as Robert Merton, to science writers for The New Yorker.

299. Independent Study. (C) Staff.

Directed readings and research in areas of sociology. Permission of instructor needed.

SM 300. (AFRC300, ASAM300, NURS261) Senior Research Workshop. (C) Bosk, Charles, Elo, Grazian, Leidner, Schnittker.

Prerequisite(s): SOCI 100.

The purpose of this course is to guide senior sociology majors in writing a research proposal for a senior honors thesis. Students will learn about various research approaches, how to write a focused literature review, and kinds of data necessary to answer a wide variety of research questions, including their own. Throughout the course, students will work on designing a research question, generation researchable hypotheses, and coming up with a design for their proposed study. The final paper for this course will be a research proposal that is the basis for students' independent research project. This course satisfies the research requirement for sociology majors and is designed primarily for seniors who are planning to write an honors thesis.

301. Independent Study in Major Concentration. (C) Bosk, Furstenberg, Grazian, Schnittker.

Permission of instructor needed.

334. (NURS334) Health and Social Policy. (M) Society Sector. All classes. Aiken, Lake.

Health and Social Policy is an interdisciplinary course examining health care and social policy from domestic and international perspectives. The course is designed to engage students in critical thinking about social determinants of health, the organization and outcomes of health care systems and institutions, global health priorities and challenges, and the implications for public policy. Topics include the social inequalities and health; how organizational context of health care impacts outcomes; management of human resources in health nationally and globally; analysis of medical error, its causes, and consequences; review and critique of public policies in U.S. health care; and global health priorities and international health policy. Issues of current public debate in health and health care will provide a context for learning. There are no prerequisites. The course is intended for generalists as well as for those planning careers in health care.

SM 380. (CRIM280) Neighborhood Dynamics of Crime. (B) MacDonald.

Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.

399. Senior Thesis. (C) Staff.

Senior Thesis is for senior sociology majors only. Students are assigned advisors with assistance from Undergraduate Chair.

SM 410. (CRIM410) Research Seminar on Experiments in Restorative Justice. Strang, Angel.

This seminar focuses on the ongoing data collection of Penn's Jerry Lee Program of Randomized Controlled Trials in Restorative Justice, the largest program of field experiments in the history of criminology. Since 1995, this research program has randomly assigned over 3400 victims and offenders to either conventional justice or restorative conferences of victims, offenders and their families, in Canberra (Australia), London, Northumbria and Thames Valley (all in UK). The offenders have all been willing to acknowledge their guilt to their victims (or the community), and to try to repair the harm they have caused. The seminar's purpose is to introduce students to the theory and practice of RJ, to discuss findings emerging from the Jerry Lee Program, and to provide students with a major, supervised research experience using extensive observational, interview and criminal offending (self-report) data. Students will learn how to analyze survey data in the context of randomized experiments in justice, as well to understand the conceptual and methodological issues central to experimental criminology.

SM 411. (CRIM411) Field Observations in Criminal Courts. (C) Rock.

The course will serve as an introduction both to qualitative research and to an understanding of the routine workings of the courts in Philadelphia. After a brief discussion of the theoretical underpinnings and practical techniques of ethnography, students will undertake supervised field projects leading to the writing of 5000 words long, examined research reports about different aspects of the social organization of the courthouse and court room.

SM 420. (URBS420) Perspectives on Urban Poverty. (C) Funke, Wolfson.

This course provides an interdisciplinary introduction to various perspectives and philosophies that have dominated the discourse on urban poverty throughout history. The course is primarily concerned with the ways in which historical, cultural, political, racial, social, geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing knowledge systems and their respective implications in terms of the questions of "what can be known" about urban poverty in the contexts of policy circles, academic literature, and the broader social imaginary. We will critically analyze a wide body of literature seeking to theorize urban poverty, ranging from sociological; anthropological/ethnographic; geographical; Marxist; historical; social welfare; and cultural analyses. Primacy will be granted to critical analysis of course readings, particularly with regard to the ways in which various knowledge systems - or "regimes of truth" - create, sustain, and constrict meaning in reference to urban poverty.

SM 425. (GSOC431) Women And Political Activism. (M) Leidner.

This seminar will explore the conditions under which women become politically active and the relevance of gender to forms of activism, organizational practices, and choice of issues. Using contemporary and historical case studies, we will examine women's activism in feminist and anti-feminist movements and organizations; in single-sex organizations devoted to a broad range of goals; and in mixed-gender movements, including civil rights and trade unions.

SM 430. (AFRC431, AFRC630, COMM496, SOCI630, URBS403) Advanced Topics in Sociology. (M) Bosk, Charles, Furstenberg, Hannum, Zuberi.

Upper level special topics.

SM 435. (URBS457) Globalization & Comparative Urban Development. (C) Hill, Von Mahs.

This seminar will explore the impact of economic globalization on welfare states in North American and Europe. Specifically, this course will provide a systematized account of how different welfare regimes respond to global economic restructuring processes and thereby produce different outcomes in the protection of their citizens against social risks. This course has four major objectives: 1) to critically examine the concept of "globalization" 2) to show how global economics restructuring processes affect urban areas in different countries in similar ways, 3) to introduce the differences between various welfare regimes in Europe and North America as well as the nature and extent of social service provision, and 4) to examine the outcomes of different welfare policies for residents in different nation-states focusing on urban problems such as unemployment or underemployment, poverty, racial/ethnic inequalities, immigration, housing shortages and homelessness. This comparative analysis of social policy in the context of economic globalization will enable students to reassess the function, opportunities, and limitations of different types of welfare policies in order to find ways to rethink current social policy approaches in the United States and to envision more productive alternatives.

SM 437. (ANTH437, HSOC437) Cultural Models & Health. (C) Barg.

There is a great deal of variation among population groups in the incidence of and mortality from most major diseases. Biological and social factors can account for some of this variation. However, there is increasing evidence that behavior- and the cultural models that are linked to health behavior- play an important role too. Cognitive anthropology is the study of how people in social groups conceive of objects and events in their world. It provides a framework for understanding how members of different groups categorize illness and treatment. It also helps to explain why risk perception, helpseeking behavior, and decision making styles vary to the extent they do. This seminar will explore the history of cognitive anthropology, schema theory, connectionism, the role of cultural models, and factors affecting health

decision making. Methods for identifying cultural models will be discussed and practiced. Implications for health communication will be discussed.

SM 453. (CPLN545, URBS453) Metropolitan Growth and Poverty. (C) Madden.

This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how metropolitan change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.

SM 473. (URBS473) Community Organizing: History and Theory. (M) Staff.

Power is an ability to create change. Without access to power that might otherwise come from political, financial or personal networks, community organizing can often serve as the only viable source of power for the oppressed. Whereas organizing has unfortunately become a partisan buzzword during the 2008 presidential campaign, it has played a central role in US history since the Populist movement of the late 19th century, most notably as the foundation of the Civil Rights movement. This course will integrate the history and theories of community organizing in order to develop a praxis for each student to create change in their own communities. Focused analysis of several key texts, inquiry and problem-posing methods rooted in the student's own context will serve as the primary means of study.

SM 501. Contemporary Sociological Theory. (M) Collins, Gibson.

This course will survey the state of contemporary theory from 1945 to the present, using seminal theoretical works and empirical studies they have generated. Part I will focus on American theoretical traditions, including functionalism, symbolic interactionism, network theory and conflict theory. Part II will examine European theorists including Bourdieu, Foucault, Anthony Giddens, and Habermas. Additional sessions will examine post modernism, theories of globalization, and

recent developments in anthropological theory.

SM 514. Medicine and the Body. (M) Sivin.

Until very recently no society's physicians, seeking to understand the contents of the living human body, could do better than construct a disciplined fantasy. The raw materials of this fantasy were what experts knew about the insides of cadavers, what people felt going on inside them and, equally important, each culture's notions of order and process in the world of Nature and in society. The results were remarkably diverse, as we learn not only from comparing the medicine of different times in the same culture. In each case we can reconstruct the relations between the lay imagination, medicine, cosmology, and values. We will draw on tools that many disciplines--from literary analysis to social theory to history of Chinese medicine--apply to the study of the body.

SM 515. (DEMG515) Family Research Workshop. (M) Furstenberg.

This course is designed to provide acquaintence with relevant scholarship and current research for students engaged in empirical work on the sociology of the family, gender studies, and public policy research related to children, youth and families. The class will be devoted to helping students papers and thesis work in this area. Students should come to the class with a research topic in mind. Permission of Instructor Required.

517. Sociology of Work. (M) Leidner.

The material world is shaped and maintained through work, but so is the social world. How work is organized, allocated, and rewarded determines the opportunities people have for developing their own capacities, the kinds of ties they will have with others, and how much control they will have over their own lives. We will consider various sociological perspectives on work and compare alternative ways of organizing work, with a focus on the contemporary United States.

SM 524. (DEMG524) Advanced Topics in the Sociology of the Family. (M) Furstenberg.

The course will review a series of theoretical issues in the sociology of the family and examine major empirical studies in which theoretical advances have been made. Special attention will be given to work that has a historical and comparative perspective. Opportunities will be provided for original research on the family.

SM 530. (EALC083, SOCI230, URBS506) Advanced Selected Topics. (C) Furstenberg, Wolpe, Zuberi.

Topics vary from semester to semester. Courses offered in the past were Social Movements and Social Change; Critical Race Theory; Conducting Family Research; Mistakes, Errors, Accidents and Disasters; Sociology of Jewish Bioethics.

L/R 535. (DEMG535) Quantitative Methods in Sociology I. (A) Allison, Smith. Prerequisite(s): Basic algebra.

This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and--with the permission of the instructor--advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory "lab."

L/R 536. (DEMG536) Quantitative Methods in Sociology II. (B) Allison, Kohler, Smith. Prerequisite(s): SOCI 535 or permission of instructor.

A course in applied linear modeling. Emphasis on the theory and practice of multiple regression and analysis of variance, with extensions to path analysis and other simultaneous equation methods. Some data manipulation will require the use of a statistical computer "package," "SAS" but the greater emphasis of the course will be on conceptualization and the ability to manipulate these new ideas both with and without access to statistical software.

SM 540. Introduction to Economic and Network Analysis. (M) Collins.

Economic sociology examines the production and exchange of goods and services from the viewpoint of the social relationships in which economic activities are embedded, the social conditions for economic change, and the effects of these arrangements upon social inequality and well-being. Topics include historical theories of capitalism; socialist economies and transitions; the global economy; institutions and cultures underpinning various kinds of market and nonmarket exchanges. Network analysis has been on the forefront of new models of how economic exchange is structured. This course surveys network theories of Harrison White, Burt, Zelizer and others, as well as related analyses of network effects

upon careers, power, conflict, and social movements.

SM 541. (DEMG541, GSOC532) Gender, The Labor Force and Labor Markets. (M) Madden.

Drawing from sociology, economics and demography, this course examines the causes and effects of gender differences in labor force participation, earnings and occupation in the United States and in the rest of the developed and developing world. Differences by race, ethnicity and sexual preference are also considered. Theories of labor supply, marriage, human capital and discrimination are explored as explanations for the observed trends. Finally, the course reviews current labor market policies and uses the theories of labor supply, marriage, human capital and discrimination to evaluate their effects on women and men.

SM 542. (GSOC542) Work and Gender. (M) Leidner.

This seminar examines the relevance of gender to the organization and experience of paid and unpaid work. Combining materialist and social constructionist approaches, we will consider occupational segregation, the relation of work and family, gender and class solidarity, the construction of gender through work, race and class variation in work experiences, and related topics.

SM 545. (HIST544) Historical Sociology. (M) Staff.

Some of the most important theoretical questions of the social sciences have been posed by scholars pursuing investigations at the intersections of sociology and history. How are these questions formulated and answered? How important is a consideration of the temporal nature of human actions and social structures and what are its consequences for our understanding of social life? How does the past "matter" to the present? The seminar addresses these questions and reviews methods and research designs of some of the most important works in historical sociology.

SM 546. (GSOC546) Feminist Theory. (M) Leidner.

Feminist activists and academics have posed fundamental challenges to existing approaches to social theory. This seminar explores the development of feminist theory since the 1960s, focusing on approaches that have the most relevance for social science. The relations among feminist theorizing, research, and activism will be emphasized.

SM 550. (DEMG550) Social Inequality. (M) Jacobs.

This course will study social stratification primarily in contemporary societies. We will examine both the distribution of social rewards as well as process for the allocation of these rewards. Stratification theory and research on social mobility will be considered. Topics include the influence of education, race and gender, and structural and organizational factors on individual success. Acquaintance with stratification theory and quantitative methods would be helpful but not required.

SM 553. (URBS553) Field Methods in Qualitative Research. (E) Grazian, Lareau.

This course is designed to introduce graduate students to basic concepts and skills in ethnographic field research in the social sciences, including participant observation, interviewing, field documentation, and the scholarly presentation of qualitative data. Students will learn to apply these concepts and skills through a regularly assigned set of field exercises, and will be expected to complete a semester-long project based on intensive fieldwork at a research site of their choosing. In addition, we will examine both classic and contemporary exemplars of fieldwork in the sociological discipline, and address contemporary issues in ethnographic research, including the role of global and comparative ethnography, reflexivity and self-presentation in ethnographic writing, and the role of culture in organizing social life in both urban and institutional settings.

SM 555. Pro-Seminar in Sociological Research. (A) Jacob, Kao, Leidner.

This graduate seminar for first-year graduate students will be a two-semester course covering the major subfields of sociology -- their classical and contemporary theories, current methods and substance.

SM 556. Pro-Seminar in Sociological Research II. (C) Collins, Hannum, Park, Schnittker, Smith, Wilde.

This graduate seminar for first-year graduate students is a two-semester course. Soci 556 is a continuation of Soci 555 and treats general issues of theory and research in sociology and related social sciences. It continues to be organized around the theme of social stratification.

SM 559. Theories of Religious Behavior. (M) Wilde.

What role does religion play in society? Is religion and religiosity decreasing,

increasing, or just changing? How does religion relate to other important institutions in society, such as politics, race, gender and sexuality? How can we understand variation in religious participation and belief? When, why and how does religious change happen? These are some of the questions we will be addressing this semester. The course begins with classical theories in the sociology of religion, and then turns to an overview of the current theories and empirical realities of religion in the U.S. today.

SM 567. (URBS567) Urban Sociology. (M) Grazian.

This course will examine the urban structures and processes which characterize the social and cultural milieu of the contemporary American city. Specific course topics will include the social organization of local urban subcultures and neighborhood communities, the cultural consequences of gentrification and racial segregation, the reputation of cities in the public imagination, and the commodification of the urban landscape.

SM 568. (ANTH661, COMM841) Audience Ethnography: From Response to Media Practices. Bird.

This class will discuss ethnographic and qualitative approaches to studying media audiences, moving from classic cultural studies to contemporary approaches that see "audience" activity as less about responding to media texts, and more about developing multiple interactive practices that are inspired by and linked with media. Special reference will be made to recent anthropological work on media practices in a global context.

572. Health Care and Social Policy. (M) Aiken.

This course is an area study or survey of social policy issues in contemporary health care. Topics include social contexts of health care and health policy; the organization and financing of health services; the health professions; health and illness over the life cycle; achieving equitable access to health services; the interface between health and social services. Health problems of national significance will be addressed including infant mortality, teenage pregnancy, AIDS, the chronically mentally ill and homeless, and health impaired elderly.

SM 577. Professions and Society. (M) Jacobs.

This course will examine the role of the professions in contemporary society. The

first third of the class will cover classic studies of professional autonomy, self-regulation and professional power. In the middle third we will read and discuss studies of the transformation of the professions over the last 30 years. The final third of the class will focus on issues of access to the professions by women and minorities, and individuals from working class and poor backgrounds. Requirements: active participation in class, three memos and a term paper.

580. (EALC048, SOCI280) Social issues in Contemporary China. (C) Hannum.

China's transition to a market-oriented society has effected fundamental changes in the lives of citizens. This class will consider pressing social concerns that China must struggle to address as it continues down the path of market reforms. Using topical problems to illustrate broader issues of social inequality along lines of gender, ethnicity, residence status, and poverty status, we will consider questions such as the following: How are women and men faring differently in China's new labor market and workplaces? Are rural peasants and the emerging underclass of urban laid-off workers being left behind by market transition? How are minorities faring in China's transition? How does the emerging digital divide play into the dichotomies of east-west and urban-rural in China? What is the plight of millions of "floaters" migrating into China's cities, with minimal legal rights and protections? Can China's rapidly-changing public health system handle emerging diseases such as SARS and AIDS? How has the one-child policy affected women, children, and society in China? Who are the "missing girls" of China, and what are the social implications of their disappearance? How was the welfare of children and adolescents changed with market reforms? The class will combine lectures, academic readings, case studies, films, and discussions.

SM 583. (DEMG583, HSSC583) Sociology of Medicine. (M) Bosk.

Health and illness, and medical care, education, and research are examined in a social, cultural and cross-cultural perspective, with special attention to present-day American society. The course is developed around lectures and class discussion.

SM 591. Racial Justice and the Sociology of the Law I. (M) Staff.

A critical examination of the law in perpetuating and eradicating racial injustice. The semester covers the period

from the inception and rise of slavery during the colonial period through the Civil War.

SM 595. (AFRC595) Media, Culture, and Society. (M) Staff.

This course will begin by surveying approaches to culture that are characteristic of general theory in sociology. We will then deal in depth with theories of recorded culture that have developed within the sociology of culture and related disciplines, including the role of the media in constructing social reality, the interpretation and reception of texts, recorded culture and the creation of symbolic boundaries, the social construction of art, the organization of cultural industries, sacred symbols and political integration, and the relationship between culture and the state.

SM 596. (ASAM590, SOCI496) Sociology of Education. (M) Kao.

This graduate seminar will introduce students to some of the key theoretical and empirical work in the sociology of education. We will focus around the question of stratification and how systems of schooling maintain or alleviate inequality. The class will examine classical approaches to schooling, schools as organizations, schools and their effects on social mobility, (class, race, and gender) stratification in achievement and attainment, tracking/ability grouping, theories and empirical work on social and cultural capital, school choice, and cross-national expansion of education.

SM 601. Contemporary Social Theory. (M) Collins, Gibson.

This is a graduate-level seminar structured around the main theoretical debates of contemporary sociology, including the interplay of rationality and emotion, the relationship between structure and agency, the nature of power, and the role of chance and contingency. In considering alternative positions on these debates, we will encounter the major theorists of the past fifty years, including Parsons, Merton, Goffman, Homans, Schutz, Coleman, Bourdieu, Luhmann, Habermas, Collins, and Giddens. Requirements include intensive primary source reading, writing, and participation. The course assumes, and does not provide, prior familiarity with the main theoretical perspectives, and thus does not substitute for the undergraduate theory course (Soci 126)

SM 602. (COML610) Proseminar in Classical Sociology. (C) Collins.

An overview of the German, French and Anglophone traditions in sociological theory. The major focus will be on the works of Marx and Engels, Weber, Simmel, Durkheim, Mead, and on subsequent developments in these classic schools of theory and research.

SM 603. (DEMG707) Master's Research in Sociology. (C) Bosk, Grazian, Jacobs, Leidner, Schnittker.

This course is intended to hone the skills and judgment required in order to conduct independent research in sociology. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers are written. This is a required course for second year graduate students in Sociology.

604. (DEMG604) Methodology of Social Research. (C) Wilde.

This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers' claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper. The course is required and restricted to second year students in sociology and demography.

607. (DEMG607) Introduction to Demography. (M) Staff.

A nontechnical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors.

609. (DEMG609) Basic Methods of Demography. (C) Elo, Guillot, Smith.

The course is designed to introduce students to basic concepts of demographic

measurement and modeling used to study changes in population size and composition. The course covers basic measures of mortality, fertility and migration; life table construction; multiple decrement life tables; stable populations; population projections; and age patterns of vital events. Students will learn to apply demographic methods through a series of weekly problem sets.

SM 611. Structural Equation Models. (M) Allison. Prerequisite(s): SOCI 536 or permission of the instructor.

Part 1 covers linear models with multiple equations and measurement error. The emphasis will be on LISREL-type models with multiple indicators of latent variables. Topics include classical test theory, path analysis with unmeasured variables, introduction to matrix algebra, confirmatory factor analysis, and the analysis of covariance structures. Part 2 covers multilevel methods for longitudinal and clustered data. Topics include fixed-effects models, random effects and mixed effects and mixed models, GEE estimation, random coefficients models, and models for discrete data.

612. Categorical Data Analysis. (M) Allison, Smith.

This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyzedata provided by the instructor.

613. Event History. (M) Allison. Prerequisite(s): SOCI 536 or equivalent.

An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, completing risks, repeated events, unobserved heterogeneity, discrete-time methods.

SM 617. (AFRC617) Theories of Racial and Ethnic Differentiation. (M) Charles.

This course provides an overview of prominent theories and theorists of race and ethnicity, and is concerned with: 1) Understanding the nature and persistence of race and ethnicity as meaningful social groupings in contemporary American society, and 2) Explaining the social significance of these group identities--that is, how these groupings are related to social stratification, to socio-cultural relations, and to the political and economic dynamics in our society.

SM 619. Doctoral Seminar in Sociological Research I. (C) Grazian, Jacobs, Schnittker.

The primary goal of this course is to aid sociology graduate students in the framing, writing and revising of their dissertation proposals, as well as provide a forum for the presentation of their research progress. In the first semester, we will focus on the development of a topic of study and a central set of research questions, with emphasis given to the set of theoretical issues relevant to the selected topic. In the second semester, emphasis will shift to the selection of data and methods necessary for addressing these questions. A second goal of this course is to assist in the acquisition of professional skills necessary for success in the academic world. In both semesters, attention will be given to a number of practical issues confronting advanced graduate students, including: 1) completing field examinations; 2) submitting manuscripts for conferences, journals and book publishers; 3) preparing a curriculum vitae; 4) job search strategies; and 5) preparing for effective professional presentations. It is expected that third year graduate students in Sociology will enroll in 619 in the Fall semester, followed by 620 in the Spring.

SM 620. Doctoral Seminar in Sociological Research II. (C) Grazian, Jacobs, Schnittker, Wilde. Prerequisite(s): Third year graduate students.

This course is intended to aid in the selection, framing, writing and revising of sociological dissertation proposals. It is also intended to provide a forum for the presentation of dissertation research in progress. The goal is to provide a forum for the acquisition of professional socialization in sociology. We will discuss the framing of research questions, the design of research strategies, and the writing of dissertation proposals. We will discuss the process of submitting manuscripts for conferences and journals,

preparing a curriculum vitae, job search strategies, and preparing for effective colloquium presentations. We will also review articles currently under review at the American Sociological Review. It is expected that third year graduate students in Sociology will enroll in this class.

621. (DEMG621) Mortality. (M) Elo, Kohler.

The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race, etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.

SM 622. (DEMG622) Fertility. (M) Kohler, Smith.

The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.

SM 623. (AFRC623, URBS623) Workshop in Urban Ethnography. (M) Staff.

The ethnographic and sociological interpretation of urban life. Conceptual and methodological issues will be thoroughly discussed. Ongoing projects of participants will be presented in a "workshop" format, thus providing participants the opportunity of learning from and contributing ethnographic work in progress. Selected ethnographic works will be read and assessed.

SM 624. (AFRC624, URBS624) Race Relations in American Cities. (M) Staff.

The ethnographic study of race relations in the United States. The social life and culture of urban race relations in the United States will be emphasized, stressing conceptual and Methodological issues. Selected ethnographic literature will be read and discussed. Students will be expected to carry out an ethnographic site study.

SM 630. (AFRC431, AFRC630, DEMG630, SOC1430) Advanced Special Topics. (C) Bosk, Charles, Collins, Elo, Zuberi.

Topics vary from semester to semester. Course titles include: Race, Colonialism & Methods; Mistakes, Errors, Accidents & Disasters, Graduate Research Practicum.

SM 633. (DEMG633) Population Processes I. (A) Elo, Kohler, Schnittker.

Population Processes I and II make up a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, population aging, and/or migration) and recent developments in the field. PPI is designed as a survey course to introduce students to a broad set of issues in health and mortality, and individual population aging. The course covers topics in demography and social perspectives on health and mortality in developed and developing countries and topics in population aging, such as global trends in disease, disability, and aging, biologic and social aspects of aging, and health inequalities at older ages. The course format consists of lectures and class discussions. The two course sequence is required of Ph.D. students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.

SM 634. (DEMG634) Population Processes II. (B) Harknett, Kohler, Parrado, Smith.

Population Processes (PP) II is a part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, migration, and population aging) and recent developments in the field. PP II focuses on biological, social, and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility transition in developed and developing countries. In addition the course covers topics in family demography. The course format consists of lectures and class discussions. The two course sequence is required of Ph.D. students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.

640. (NURS640) Global Health and Health Policy. (M) Aiken.

This participatory interdisciplinary seminar course examines contemporary issues in public health policy and global health. The organizing framework is social

determinants of health. We consider evidence that inequalities in education, income, and occupation influence health status, and the policy dilemma that broad interventions to improve population health may increase health disparities. We critically examine whether prevention is always better than cure, and what modern medicine has to offer in terms of health. We explore the public policy process in health using the "tobacco wars" as a case example, of how politics, policy, law, commercial interests, and research intersect to affect the public's health. We examine whether global health is in a state of decline, and the extent to which failures in public health, public policy, and foreign policy have contributed to increasing threats to world health. Likewise we will examine the potential for greater integration of health into foreign policy to create global infrastructure upon which to advance health. We will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.

There are no prerequisites. The course is designed for graduate students in the social and behavioral sciences, health professions, public health, business and law. Advanced undergraduate students will be admitted with permission.

643. Social Stratification. (M) Jacobs, Park.

This is an advanced level graduate seminar where we will review contemporary research on social stratification and mobility. We will examine empirical and theoretical studies not only in the US but also in other countries to address how the pattern of social stratification varies across societies and over time. The main topics to be discussed are social mobility, occupational attainment, educational inequality, gender and race, and family processes and stratification. We will also examine studies that address how national contexts mediate social stratification. Advanced undergraduate students will be admitted with permission. Prerequisite: at least one prior course on social stratification.

644. (BIOE604) Empirical Methods in Bioethics. (M) Bosk.

This course provides an introduction to social science research design and methods for students interested in conducting research on issues in bioethics. The course is appropriate for students who, rather than conducting research themselves, will use research findings to make or challenge arguments in policy statements or other

writings. Emphasis is placed on the logic of research design as the way to relate topic of inquiry with methods so that evidence produced is pertinent and useful. Students will design research projects and explore a variety of methods available to conduct research. Students will also integrate research ethics into the formulation and design of their inquiries.

SM 650. Social Inequality. (M) Jacobs.

This course will study social inequality primarily in contemporary societies. We will examine both the distribution of social rewards as well as processes for the allocation of these rewards. Stratification theory and research on social mobility will be considered. Topics include the influence of education, race and gender, and structural and organizational factors on individual success. We will also discuss how societies' stratification systems vary across time and place. Acquaintance with stratification theory and quantitative methods would be helpful but not required.

SM 660. (AFRC420, AFRC620, SOCI460) Advanced Topics in Africana Studies. (C) Charles, Zuberi.

Advanced Topics in Africana Studies: The Sociology of W E B Du Bois; GIS for Social Science Research

SM 667. Social Interaction. (M) Collins.

The dynamics of interpersonal interaction, especially in face-to-face encounters over limited periods of time. Topics include: theory of interaction ritual deriving from Durkheim, Mauss, Goffman and their contemporary followers, ethnomethodology and conversation analysis, including micro-ethnographic studies of non-verbal bases of conversational analysis, interaction; sociology of emotions, including theories of Scheff, Katz, Kemper, Hochschild and Collins; symbolic interactionist theory and contemporary research on the social nature of mind, cognition, and the self; relationship between micro and macro levels of analysis.

SM 670. (DEMG670) Family Data. (C) Harknett.

This two semester course will engage each graduate student in an analysis project with qualitative and quantitative components, using a linked qualitative longitudinal data set. Students will use survey data from the baseline and 12 month wave of the Fragile Families study (described at <http://crcw.princeton.edu/fragilefamilies/>), a national survey of unwed and married parents who have just had a child (with unmarried parents over sampled) They will also use transcripts and coded data from the

TLC3 study, which involved qualitative couple and individual interviews conducted with a subset of 75 of the couples in the FF survey in 3 waves: about 3 months after the birth and then again 12 and 24 months after the birth. Most of these are low-income, unmarried, cohabiting parents. The goal of the course is for each student to use these two data sets, and the analytic techniques and literature covered in the course, to write a paper that can be submitted for publication. The spring will also include lots of tips on how to construct a publishable paper. Students should only enroll in this course if they plan to take the spring sequel course as well.

SM 677. (DEMG677) International Migration. (M) Staff.

A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory, and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course concludes with an evaluation of immigration policies in the United States.

SM 680. (CRIM600) Pro seminar in Criminology. (C) Rock.

This course explores the basic scope, mission and methods of the science of criminology. The course proceeds to cover the current state of theory, research, and accomplishments in both knowledge and policy about criminality and criminal events. Students will read widely and report to the seminar on their readings, as well as assessing key readings and central ideas for their potential guidance of future research. The course focuses primarily on criminology of criminal events, including law-making and law-breaking. The criminology of reactions to crime is covered in the second semester pro-seminar in criminal justice, CRIM 601/SOCI 681.

SM 681. (CRIM601) Pro-seminar in Criminal Justice. (C) MacDonald.

A wide-ranging introduction to theory and research on responses to crime under the rubric of criminal law. Theories of deterrence, procedural justice, reintegrative shaming, defiance and other interactions between legal sanctions and legal conduct will be examined in light of the most recent research. Issues of discrimination, disparity, and fairness in the operation of criminal law will be

considered with evidence from around the world. Patterns, causes, and consequences of legal sanctioning patterns will be systematically documented, and major gaps in knowledge will be identified.

SM 702. (AFRC702, AFRC710, AFST702, ENGL572, LALS702) Political Economy Social History of Africa/African Diaspora. (M) Zuberi.

The topic of this course will be Africa and the African Diaspora. The emphasis will be on readings, class discussions, and seminars to reflect the ongoing discussions in the field. We will provide a series of readings for background to each section.

SM 707. (DEMG707) Seminar in Demographic Research I. (C) Elo.

This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers and second year research papers are written. This is a required course for second year graduate students in Sociology and Demography.

SM 708. (DEMG708) Seminar: Demographic Research II. (C) Elo, Hannum, Harknett.

A second semester of an intensive course in preparing a major independent research paper. This is a required course for second year demography students.

SM 731. (DEMG731) Advanced Demographic Methods. (M) Guillot.
Prerequisite(s): SOCI 609 or permission of the instructor.

This course considers a variety of procedures for measuring and modeling demographic processes. These include increment/decrement tables, generalizations of stable population relations, two-sex models, and indirect estimation procedures.

SM 777. (DEMG777) Special Topics in Demography. (M) Soldo.

Biodemography: Biodemography is a relatively new and interdisciplinary field that integrates theory and methods from the fields of demography, anthropology, sociology, evolutionary biology, molecular biology and population biology in order to understand demographic behaviors and outcomes. This course contains an

introduction to the theory, methods, and literature of biodemographic research. It examines the biological and ecological mechanisms contributing to aging, mortality, fertility, and population growth and decline, and the life history implications of these patterns. The course focuses on modern human populations, but includes also examples from pre-historic and historic populations, as well as non-human model systems (e.g. non-human primates, fruit flies, nematode worms, etc.).

796. (DEMG796, ECON791) Demographic, Economic, and Social Interrelations. (M) Madden, Kohler.

The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and bequests? How can economic and sociological approaches be combined in explanatory models of demography change? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women's participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development in Third World countries? In addition to these topics, the course also covers selected methods not included in Dem/Soc 535/536 and 609.

SM 821. (NURS821) Proseminar in Health Outcomes Research. (M)

Aiken, Lake. Prerequisite(s): Prior coursework at undergraduate or masters level in statistics and quantitative methods. This course is designed for doctoral students interested in conducting health outcomes research. The course focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research. Penn faculty researchers will use their ongoing

studies to illustrate how study design, sampling, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research.

822. (NURS822) Applications of Health Outcome Research. (C) Aiken.

Prerequisite(s): Prior coursework at undergraduate or masters level in statistics and quantitative methods, Nursing 821/Sociology 821 is preferred.

This the second of a two-course sequence designed for doctoral students interested in conducting health outcomes research. The first course (821) focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research; the second course (822) focuses on applying health outcomes research through the development and implementation of a research project. In the first course Penn faculty researchers will use their ongoing studies to illustrate how sampling, study design, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research. In the second course, students will design and implement a health outcomes research project.

SM 836. (COMM836) Culture, Communication, Rights: Inter-Asian Translations. (C) Nguyet Erni.

This course attempts to explore this question: in the (re)turn to both distributive and recognition justice, how will cultural studies and communication critically articulate with human rights as a global professional, interdisciplinary, and humanitarian practice? In this course, we shall consider the conditions of possibility, theoretically as well as strategically, for overcoming the apparent non-correspondence between culture/communication and rights, or between culture/communication and the law. Special attention will be made to the rigorous development of cultural studies in the "inter-Asian" context over the past dozen years. The contested particularisms associated with inter-Asia with respect to the study of rights will raise crucial questions about the geopolitics of the

circulation of rights discourse in global terms.

SM 896. (COMM896) Journalism, Entertainment and Society. (M) Curran.

The course begins by considering alternative normative approaches to understanding the role of the media in society, as suggested in history, sociology, culture studies and democratic theory. It then considers what influences journalism, and how recent changes in the organisation and practice of journalism are affecting the welfare of society. This is followed by an equivalent examination of what influences television drama and film. The implications of recent developments are explored through two case studies: first, /Sex and the City/, examined partly in relation to debates within feminism and post-feminism, and second, the/Sopranos/, assessed in relation to competing interpretations of cultural value. The course's conspectus is then broadened to take account of the way in which different countries organise their media systems, and the underlying objectives and assumptions that inform national media policies. This leads, in turn, to a discussion of media globalisation, cultural imperialism' and international media regulation; and of the policy choices posed by the rise of new media.

998. Independent readings and research. (C) Staff.

For advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.

999. Directed Readings and Research. (C) Staff.

Primarily for advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.

SOUTH ASIA STUDIES (AS) {SAST}

L/R 063. *East & West: A Hitchhiker's Guide to the Cultural History of the Modern World.* (C) Mitchell.

Sugar and Spices. Tea and Coffee. Opium and Oil. Hop aboard the Dutch schooners, Indian Ocean dhows, Chinese junks, and British and American clipper ships that made possible the rise of global capitalism. How have desires to possess and consume particular commodities shaped cultures and the course of Modern History? This class introduces students to the history of the modern world by tracing connections between East and West, South and North. Following the circulation of commodities and the development of modern capitalism, the course examines the impact of global exchange on interactions and relationships between regions, nations, and peoples, including the role of slavery, colonial and imperial relations, and struggles for economic and political independence. From the role of spices in the formation of European joint stock companies circa 1600 to contemporary conflicts over oil, the course's use of both primary and secondary source readings will enable particular attention to the ways that global trade has impacted social, cultural, and political formations and practices throughout the world.

Foundational Courses

001. (HIST089) *Intro to Modern India.* (C) History & Tradition Sector. All classes. Rawat.

This introductory course will provide an outline of major events and themes in Indian history, from the Mughal Empire in the 16th century to the re-emergence of India as a global player in the 21st century. The course will discuss the following themes: society and economy in Mughal India; global trade between India and the West in the 17th century; the rise of the English East India Company's control over Indian subcontinent in the 18th century; its emergence and transformation of India into a colonial economy; social and religious reform movements in the 19th century; the emergence of elite and popular anti-colonial nationalisms; independence and the partition of the subcontinent; the emergence of the world's largest democracy; the making of an Indian middle class; and the nuclearization of South Asia.

002. (ANTH107, URBS122) *The City in South Asia.* (C) Society Sector. All classes. Mitchell.

This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia (India, Pakistan, Bangladesh, Sri Lanka, and Nepal) by focusing on significant South Asian cities. With one-fifth of the world population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research urban studies, architecture, political science, and history, as well as fiction and film. Cities of particular focus may include Bangalore, Chandigarh, Chennai, Colombo, Delhi, Dhaka, Hyderabad, Kathmandu, Karachi, Kolkata, Lahore, and Mumbai. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality and the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, cultural and linguistic identities, differences and violence in South Asia's urban environments.

This course is appropriate for students with no background in South Asia, or for those seeking to better understand South Asia's urban environments in the context of recent globalization and rapid historical changes.

003. (HIST086, RELS164) *History, Culture, Religion in Early India.* (C) History & Tradition Sector. All classes. Ali.

This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the Aryan invasion and vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings

students will read select primary sources on the history religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India's early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

004. (COML005) *India's Literature: Love, War, Wisdom and Humor.* (C) Arts & Letters Sector. All Classes. Patel.

This course introduces students to the extraordinary quality of literary production during the past four millennia of South Asian civilization. We will read texts in translation from all parts of South Asia up to the sixteenth century. Our semester covers seminal genres that also serve as the organizing principles for the course: the hymn, the lyric, the epic, the gnomic, the dramatic, the political, the prosaic, the tragic and the comedic. No background in South Asia studies or South Asian languages is required for this course.

005. (MUSC165) *Performing Arts in South Asia.* (C) Arts & Letters Sector. All Classes. Miner.

This course is a survey of selected traditions of theater, music, and dance in India and surrounding regions. Topics include ritual practices, theater, classical dance, classical music, devotional music, regional genres, and contemporary popular musics. Readings and lectures are supplemented by audio and visual materials and live performances. The aim of the course is to expose students to a variety of performance practices from this part of the world and to situate the performing arts in their social and cultural contexts. The course has no prerequisites.

SM 006. (RELS066) *Hindu Mythology.* (C) Arts & Letters Sector. All Classes. Gambhir, S.

Premodern India produced some of the world's greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of

these stories in India's vernacular languages as well as in the modern world.

008. (RELS068) India: Culture and Society. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Viswanath.

What makes India INDIA? Religion and Philosophy? Architectural splendor? Kingdoms? Caste? The position of women? This course will introduce students to India by studying a range of social and cultural institutions that have historically assumed to be definitive India. Through primary texts, novels and historical sociological analysis, we will ask how these institutions have been reproduced and transformed, and assess their significance for contemporary Indian society.

Freshman Seminars

SM 052. (ASAM012) Indians Overseas: A Global View. (C) Gambhir.

This course is about the history of Indian emigration. The course will consist of readings, discussions, observations, data collection and analysis. The topics will include cultural preservation and cultural change among East Indian immigrants especially in North America, the Caribbean area, the United Kingdom, the African continent, and some other countries in the Pacific Ocean. The course will encourage organized thinking, observations and analysis of components of the culture that immigrant communities are able to preserve and components that change or get reinterpreted.

SM 053. (ENGL016) Literature and National Trauma: Partition and Independence in South Asia. (C) Kaul.

This course will examine the way in which imaginative literature and film have addressed the difficult socio-political issues leading up to, and following from, the independence and partition of British India. Pakistan and India came into being as nation-states in moments of great national trauma: historians have long argued over the process that led up to Partition, and we will study some of these debates, but for the most part we will examine novels, short stories, poetry, and some films to think about the impact of Partition and Independence on communities and individuals in South Asia. In doing so, we will recognize the continuing role played by these events and experiences in shaping the cultural, social, and political realities of

contemporary South Asia. We will also learn about the crucial role played by literary and creative texts in making available to us the full dimensions of human tragedy, especially those precipitated when the imperatives of nation-formation redefine the lives of individuals or of sub-national communities.

SM 054. Material Culture of South Asia. (C) Gangulee.

India has been described as a palimpsest of cultures as well as a land of a million mutinies. Material bases of any culture rest on its ideas of itself, its innovations, what it produces and consumes, its ideas of social organization and political governance. In this course we shall examine the material bases of South Asian culture, its mode of production, consumption and distribution of surplus product and how over the last five thousand years, the ideas behind these modes have been put forward, contested and negotiated for acceptance. Some of these ideas have come from emigration and immigration, some from invasion and some have simply sprung up. We will begin by looking at the Indian materiality in language, rituals, spatial analyses of towns, weights and measures. We will go on to the rituals and materiality of the Indo-Aryans, the political thought that evolved, to the scientific thinking and technological innovations, the Grand Mughals, the European colonial period, Nehru's independent India, the liberalized economy of India in 1991 and end with the present.

SM 057. Planning to be Off-shore?. (C) Gangulee.

In this course we will trace the economic development of India from 1947 to the present. Independent India started out as a centrally planned economy in 1949 but in 1991 decided to reduce its public sector and allow, indeed encourage, foreign investors to come in. The Planning Commission of India still exists but has lost much of its power. Many in the U.S. complain of American jobs draining off to India, call centers in India taking care of American customer complaints, American patient histories being documented in India, etc. At the same time, the U.S. government encourages highly trained Indians to be in the U.S.

Students are expected to write four one-page response papers and one final paper. Twenty percent of the final grade will be based on class participation, 20 percent on the four response papers and 60 percent on the final paper.

The Arts, Media, and Performance

104. (MUSC060) Beginning Tabla I. (A) Bhatti.

An introduction to the tabla, the premier drum of north Indian and Pakistani classical music traditions.

105. (MUSC062) Beginning Tabla II. (B) Bhatti.

A continuation of Tabla I, also open to beginning students.

106. (MUSC061) Beginning Sitar I. (A) Miner.

This course is an introduction to the repertoire and performance practices of the North Indian sitar. Fundamentals of sitar technique, composition, and improvisation are presented and practiced in class. Class lectures and discussions, audio and video material, and reading and listening assignments on selected topics supplement practice, to provide an overview of the social and historical context and the formal structures of North Indian music in general. There are no prerequisites for the course, but some experience with instrumental or vocal music is suggested. Each student is expected to put in two hours of individual practice per week, and complete reading, audio, and written assignments. The class gives a group performance at the end of the semester.

107. (MUSC063) Beginning Sitar II. (B) Miner.

This is the second semester of a performance course in the North Indian sitar. Students who have not taken the first semester but play any musical instrument are permitted to join. Principles of composition and improvisation will be explored in practice and supplemented by readings and listening. The class gives a group performance at the end of the semester.

108. (MUSC161) Intermediate Sitar I. (C) Miner.

This is a performance course open to students who have completed both semesters of Beginning Sitar, or to others by permission from the instructor. Students will work with right and left-hand techniques, study three ragas in depth, learn the contours of several other ragas, and work with concepts of tala, composition, and improvisation. Assigned readings and listenings will complement the performed material. A group performance will be given at the end of the semester.

109. (MUSC162) Intermediate Sitar II. (C) Miner.

This is a continuation of an intermediate performance course in the North Indian sitar. It is open to students by permission of the instructor. Students who play other instruments and have had at least a beginning level of training in Hindustani music may also join, with the permission of the instructor.

115. (MUSC164) India's Classical Musics. (C) Miner.

Hindustani and Karnatak music are among the great classical music systems of the world. Developed in temple, shrine, court, and concert stage environments in North and South India, they have a strong contemporary following in urban South Asia and a significant international presence. This course is an introduction to theory, structures, instruments, and aesthetics. We will work with primary and secondary texts, recordings, videos, and live performances. Topics will cover selected aspects of raga, tala, composition, improvisation and social contexts. The course aims to give students analytical and listening skills with which to approach and appreciate India's classical music. No prior music training is required.

116. (MUSC466) Music Cultures of North India and Pakistan. (C) Miner.

A great variety of song and instrumental genres have thrived in the Hindu and Muslim milieus of North India and Pakistan. In this course we examine a selection of urban and rural musics, such as instrumental music in Baluchistan, qawwali in Delhi, the garba of Gujarat, ballad singing of Rajasthan and the urban music of Calcutta. We will explore the sounds, poetry, historical, and social contexts of chosen genres and trace aspects of continuity and adaptation in the changing environment of contemporary South Asia. Readings are supplemented by audio-visual material and live performances.

200. (ARTH104, SAST500) Introduction to Art in South Asia. (C) Arts & Letters Sector. All Classes. Meister/Staff.

This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as 'traditional' or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe, and as diverse.

This course attempts to introduce the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.

213. (CINE215, GSOC213, GSOC513, SAST513) Indian Cinema and Society. (C) Joshi.P.

Screenings will be held.

500. (ARTH104, SAST200) Introduction to Art in South Asia. (M) Meister/Staff.

This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as 'traditional' or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe, as diverse. This course attempts to introduce the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.

SM 502. (ARTH501) Proseminar in Indian Art. (C) Meister.

SM 505. (ARTH514) Aspects of Indian Art. (C) Meister.

Aspects of sculpture, painting, iconography, or architecture in the Indian sub-continent. Topic varies.

513. (CINE215, GSOC513, SAST213) Indian Cinema and Society. (C) Staff.

This course will meet for three hours to view and discuss a variety of films/videos in Hindi, Tamil, Bengali, Urdu (with English subtitles), and English, which bring up issues of social, political, and cultural significance. Readings for the course will include articles in various fields ranging from film studies and communication to sociolinguistics and women's studies. Discussions will focus on cinema as a means of expression and as an instrument for social change, examining the various ways in which films both reflect and influence contemporary culture.

524. (SAST224) Growing up Funny: Nation and Identity in South Asian Writing. (C) Loomba.

It is a curious fact that some of the most compelling fiction about and by South Asians features the coming of age of a child protagonist. This body of writing appropriates and reshapes the classic

European Bildungsroman, but it also uses narrative traditions from South Asia in order to tell the story of the postcolonial nation, and to chart the contours of contemporary South Asian identity and sexuality. In this course, we will read novels, short stories and plays--some well known and others less so, some now considered 'classics' and others very recent, produced from within the Indian subcontinent as well as from the West. All of these speak of the excitement and trauma of growing up 'Indian'. Through them, we will discuss key features of the political and social upheavals of the Indian subcontinent, as well as the dynamics of the family, gender relations, sexual identities and cultural belonging. The course will include writings by Rudyard Kipling, Salman Rushdie, Bapsi Sidhwa, Amitav Ghosh, Mahasweta Devi, Hanif Kureishi, Anjana Appachana, Arundhati Roy, Meera Sanyal, Sara Suleri, Shyam Selvadurai, and Mahesh Dattani.

SM 610. (ASAM510, CINE793, COML653, ENGL591, SAST310) Topics in South Asian Cinema. (C) Majithia.

In this course we will focus on post colonial global modernity as they are imaged through cinema. Foregrounding the concept of affect, we will consider topics such as: the role of mass affect and mass culture; nationalism, community, sentimentality and nostalgia; film technology and film industry development as productive of a history of the senses; affect and the (gendered and racialized) subject and body, film genres and development of post colonial modernism; style; cinephilia and production of publics; representations of popular religiosity; and the relationship between feeling and ideology. We will examine films that suggest particular affective states. Our study will be interdisciplinary and readings will draw on fields of cinema, area studies as well as anthropology, philosophy and history.

Literature and Linguistics

122. (RELS008) Indian Epics. (C) Staff.

In this course we will explore the two Indian epic masterpieces, the Ramayana and the Mahabharata, poems that are among the most important pieces of imaginative writing in world history. By examining these, both through translation of their Sanskrit originals as well as reworkings in text and performance (including film and other media), we'll try

to understand the fundamental claims made by the epics about family and political life, the ethics of violence, and the status of gender. The epics present startling and contrasting understandings of the social world in its ideal state as well as in its destruction, and these visions of order and chaos will be our recurrent themes throughout. This course is introductory and assumes no previous knowledge.

124. (COML077, ENGL077) Literature and Empire. (C) Loomba.

Since the sixteenth century English has been, among other things, an imperial language, and ideas about empire and imperialism have shaped not only many of English literature's central texts but also the development of English literary study as a discipline. This course is an introduction to the way imperial contact and changing ideas about empire and decolonization have shaped literature in English from the sixteenth to the twentieth centuries. We will consider historical and cultural materials to offer contexts for literary production of texts from the sixteenth to the twentieth centuries. The course also will serve as a comprehensive introduction to the way literary and cultural representations of Europe have been influenced by changing ideas about empire and imperialism. Different versions of the course will vary in the historical and cultural material they cover as they offer a context for literary production.

SM 224. (ENGL293, SAST524) Growing up Funny: Nation and Identity in South Asian Writing. (C) Loomba.

It is a curious fact that some of the most compelling fiction about and by South Asians features the coming of age of a child protagonist. This body of writing appropriates and reshapes the classic European Bildungsroman, but it also uses narrative traditions from South Asia in order to tell the story of the postcolonial nation, and to chart the contours of contemporary South Asian identity and sexuality. In this course, we will read novels, short stories and plays--some well known and others less so, some now considered 'classics' and others very recent, produced from within the Indian subcontinent as well as from the West. All of these speak of the excitement and trauma of growing up 'Indian'. Through them, we will discuss key features of the political and social upheavals of the Indian subcontinent, as well as the dynamics of the family, gender relations, sexual identities and cultural belonging. The course will include writings by Rudyard Kipling, Salman

Rushdie, Bapsi Sidhwa, Amitav Ghosh, Mahasweta Devi, Hanif Kureishi, Anjana Appachana, Arundhati Roy, Meera Sayal, Sara Suleri, Shyam Selvadurai, and Mahesh Dattani.

Religion and Philosophy

139. (RELS143) Introduction to Islam. (C) Elias.

This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

140. (RELS163) Introduction to Hinduism. (C) Staff.

Hindu religious beliefs and practices from the earliest period to the present, stressing contemporary religious thought, performances, and institutions and their historical backgrounds. Basic human issues such as the origin and nature of the world and society, the meaning of personal existence, sex, birth, death, human responsibility, the family, destiny, and the variety of Hindu understandings of them as revealed in myth, story, philosophy, and ritual will be the focus of this course. Readings will mostly be original sources in English translation.

141. (ANTH142, RELS142) Islam in South Asian Culture. (C) Spooner.

Islam reached South Asia in the eighth century and Muslim rulers held sway over large parts of the Subcontinent for much of the period from the late 12th century until the colonial period. However, the majority of the population never converted to Islam, and since independence in 1947 Islam--its interpretation, realization, and influence--has been a major factor underlying many difficult political issues. This has been true not only in the largest country, India, where Muslims form 12% (unevenly distributed) of the population, but in Bangladesh and Pakistan where non-Muslims are relatively

insignificant minorities. This course explores the realities and the perceptions related to Muslim identities and the Islamic heritage in the Subcontinent, and sets it in global context by comparison with other parts of the world which share various aspects of the South Asian experience. The course will conclude with an assessment of the larger significance--social, economic and political, as well as cultural--of Islam in South Asia today.

142. (RELS173) Introduction to Buddhism. (C) Staff.

An examination of the fundamentals of Buddhist thought and practice. In addition to reading and discussing selected primary Buddhist sources (in English Translation), we shall review the history and development of Buddhism from its Indian origins through its spread to Southeast Asia, Central Asia, Tibet, China, Korea, and Japan. Primary sources and historical materials will be supplemented by some ethnographic readings dealing with the actualities of Buddhist life in contemporary Southeast and East Asia. This course provides basic background for more advanced courses on Buddhism.

350. (RELS360, SAST650) Themes in Indian Philosophy. (C) Sharma.

Topics vary. When the topic is Yoga philosophy, the following applies. Yoga is a classical school of Indian philosophy that consists of a unique metaphysics epistemology, and ethics. Yoga in the contemporary context usually refers to a system of physical and spiritual exercises that draw from this philosophy. In this course, we will read the Yoga Sutras of Patanjali in English translation from the original Sanskrit, with commentary. We will go over all central concepts, technical terms, and historical developments in the philosophy of Yoga. We will also discuss the philosophy of Hatha Yoga in the context of its historical and practical developments. No prior knowledge of Indian philosophy is required for this course.

650. (SAST350) Themes in Indian Philosophy. (C) Staff.

Topics vary. When the topic is Yoga philosophy, the following applies. Yoga is a classical school of Indian philosophy that consists of a unique metaphysics epistemology, and ethics. Yoga in the contemporary context usually refers to a system of physical and spiritual exercises that draw from this philosophy. In this course, we will read the Yoga Sutras of Patanjali in English translation from the original Sanskrit, with commentary. We

will go over all central concepts, technical terms, and historical developments in the philosophy of Yoga. We will also discuss the philosophy of Hatha Yoga in the context of its historical and practical developments. No prior knowledge of Indian philosophy is required for this course.

History, Anthropology, and Archaeology

SM 260. (HIST384, SAST560) Modern History of Afghanistan and Pakistan. (C) Caron.

This course is designed as an introduction to the contemporary history of Afghanistan and Pakistan, with an emphasis on the intertwined history of both countries; their other regional neighbors; and global politics. The course focuses on global trends such as empire, nationalism, the Cold War, superpower competition, and transnational Islamism. At the same time, participants will explore how local people viewed their lives amidst these trends, and how local dynamics on this northwestern fringe of the Subcontinent changed the face of global politics. The readings supplement political and economic history with primary sources drawn from popular poetry, oral narrative, and memoir. Finally, we'll be following current events in the region, and placing them in their sociohistorical context. Therefore, there are two main goals for this course: (1) to introduce the specific history of Afghanistan and Pakistan up to present, and (2) to introduce typologies of social institutions and events, assisting class participants to develop their own frameworks for interpreting current events in the region after the end of the course.

262. (SAST562) The Making of Medieval India. (C) Ali.

This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period--from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia's history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation.

One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural world views.

Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations.

SM 560. (HIST384, SAST260) Modern History of Afghanistan and Pakistan. (C) Staff.

An overview of the shared and conflicting legacy of history between the two countries; their role in shaping the contours of global politics in that region. Social, ethnic, religious, and sectarian discourses with power politics, the rise of religious militancy, Taliban, their predecessors and potential successors will also be discussed.

562. (SAST262) The Making of Medieval India. (C) Ali.

This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period--from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia's history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural worldviews.

Special themes of discussion may include violence and manners, material

cultures, religious conflict, devotional religion and gender relations.

Politics, Economics, Health and Society

166. (ANTH166) Democracy in India and South Asia. (C) Mitchell.

This course will examine the histories, actors, and practices that have shaped the world's largest democracy. What historical and socio-cultural forces have made Indian democracy unique in the modern world, and distinctive from other South Asian nations that have faced similar colonial history? What conditions have enabled some South Asian nations to embrace democracy and prevented others from doing so? Using primary and secondary historical sources and ethnographic studies of everyday political life in South Asia, this course will focus on political organizations, movements, individuals, and practices that have played a decisive role in establishing and uniquely shaping democracy in South Asian subcontinent. We will pay close attention to the role of individual leaders and charismatic figures, including key women and minority leaders, and trace the development of "dynasties" within electoral politics. The course will also examine the history of public space as a forum for some of the distinctive practices that have most defined democracy in South Asia, including bandhs(strikes), rasta rokos (road closures), processions, and other non-violent and sometimes violent forms of action.

We will trace pre-colonial, colonial, and contemporary influences, and pay particular attention to ideological role of Gandhian principles, including ahimsa (non-violence) and satyagraha (passive resistance), in establishing popular forms of political practice that continue to be widely utilized in contemporary Indian and South Asian politics.

256. (PSCI257) International Relations of South Asia. (C) Frankel.

One of the great accidents of history is the Partition of the subcontinent into the two states of India and Pakistan, and the onset of the cold war as a global struggle between the United States and the Soviet Union. The major focus of the course is on the interaction between regional conflicts, the most enduring symbolized by the unresolved dispute between India and Pakistan over Kashmir, and the global strategies of rival great powers which sought to tip the balance of power in their favor by military and ideological influence over the "third world." These conflicts were

exacerbated by the Indian leadership's commitment to an independent foreign policy of non-alignment, and its aspirations to leadership of newly independent states in Asia and Middle East, ranged against Pakistan's inability to establish a viable state without external support. The resulting alignments and alliances drew the subcontinent into the center of cold war rivalries. The last part of the course focuses on the changing security environment after the cold war, the rise of India and China as competitors for influence; and problems posed by persisting mutual resentment and distrust in India and the United States, despite recognition on both sides of the need to cooperate and avoid China's domination of Asia.

SM 280. Rivals In a Rising Asia. (C)
Gangulee.

Just the thought of almost 4 billion people rising out of poverty and a billion of them them expected to be millionaires is exhilarating and daunting. But there is no single blue print for economic development, at least not yet. Given its natural resources, ideology, politics and cultural sensibilities, each nation experiments with various strategies of development. All we know at this point is that land reform, education, good governance, health, an access to technology and an open economy contribute heavily towards development. This course will offer the history and implications of socio-economic development in Asia. We will look at the theories of development, their applications and the results on the various nations in China and South Asia. Managing development is also a critical issue. We will examine if social development is a linear outcome of economic growth. We will also analyze topics such as democracy, equity, education, micro-finance, poverty, religions and value systems, sustainable development, intellectual property rights, issues of public health including pandemics and the effect of a rising Asia on the Asian Diaspora, especially on the Asian Americans. In the course of a socio-economic development, China and India are bidding for a world seat.

Though India and Pakistan talk of an attitudinal shift towards each other they still have armies facing one another across Kashmir. Bangladesh has severe economic and political problems that affect its policies regarding India and Pakistan. And, each of these nations have internal problems of their own. There are no pre-requisite courses for this class but we will

require an open mind, a liking for critical analysis and developmental issues.

284. (PSCI256, SAST584)
International Relations of the United States and Asia. (C) Frankel.

This course is one of the first arising out of scholarship on cold war international history. It draws on declassified government documents and other archival records to provide a window into the world-view of decision-makers who need to make national security policy based on incomplete information about ambiguous threats. The materials reveal a great deal about the importance of divergent historical perspectives and strategic cultures in the foreign policy-making process. The main focus of the course is on the intersection of the cold war and the rise of Asian nationalism. At the core of the analysis is the clash between America's global strategy of military containment against the Soviet Union and the assertion of Indian, and Chinese nationalism, concerned with preventing the United States from succeeding to Great Britain's imperial rule. The course examines new patterns of US-India and US-China relations in the post-cold war period. This is primarily a lecture course, but the course web is a critical element of class work.

SM 285. (HSOC305, SAST585) Health and Society in South Asia. (C) Staff.

The countries of South Asia have large and diverse populations in need of public, preventative, and curative health services relevant to the health and disease problems of the region. This course will consider the historic origins of health services in South Asia, beginning with a focus on health needs and health services development in the 19th century through the mid-20th century. In a context influenced by politics, economics, and socio-cultural factors, biomedical health services and education emerged as the dominant health system. Yet this system remains tied to foreign health models and contends with the socio-cultural competition of traditional medical systems. Through lectures, discussion, and assignments, this course will explore the historic and contemporary complexity of the health care systems in South Asian countries as they attempt to deliver health care to populations with wide disparities in income, education, health problems and needs. Selected comparative experiences of Asian health care systems, such as Chinese, will be discussed.

288. (ANTH289, RELS260) Body, Power, Society in Early India. (M) Ali.

The course will focus on the social history of the body, widely conceived, in early Indian society. Doctrines of the body will be placed against the context of wider traditions of thinking about ethics and selfhood and viewed in both cultural and historical contexts. Themes will include the evolution of religious doctrines and rituals, the history of emotions and interpersonal relations, the evolution of state and society, and urban and rural cultures. Specific topics treated will include theories of physiology, health, and illness; gesture and movement; sartorial codes, sumptuary regulations, and 'body culture'; gender and sexuality; and the representation of the body in art and literature. In addition to contextual and thematic readings, the course will expose students to a wide variety of primary sources (translated from Sanskrit, Pali and Tamil), including religious and ritual texts courtly literature, art (painting, sculpture, material culture), as well as inscriptions and normative treatises.

SM 289. (HSOC226, STSC226)
Science, Medicine and Technology in South Asia. (M) Petrie.

This course examines the history of science, technology and medicine in the Indian subcontinent from ca. 1750 to the present. The first half of the semester will focus on the period of British dominance, considering such topics as: the role of science, medicine and technology in colonial rule and anti-colonial nationalism; Western understandings of and impacts upon Indian environments; the relationship between Western and indigenous forms of knowledge. The second half of the course will examine the post-colonial period, with a particular focus on development and environmental issues and the policies of the governments of India, Pakistan and Bangladesh.

290. (ASAM209, SAST590) South Asians in the United States. (B) Staff.

This course begins with a historical survey of South Asian immigration in the United States. It continues with a broad look at cultural, social, and political issues which confront the South Asian American community today, issues such as citizenship and transnationality, minoritization, economic opportunity, cultural and religious maintenance and adaptation, changes in family structure and gender roles, and generational shifts. It concludes with an examination of the emergence of a body of creative writings by South Asians in America as an

expatriate Indian literature of exile and as American immigrant and ethnic literature.

293. (SAST593) Caste & Class in South Asia. (C) Staff.

This course will explore the reality of caste and class in South Asian society, and the theories, classical and modern, that attempt to explain it. We shall survey a wide sweep of sources, from the earliest evidence for a division into caste-classes in the Rig-Veda to reports in modern media of caste-related social problems; from orthodox Hindu normative texts justifying and upholding a rigid hierarchical division of society to voices, in Sanskrit and in vernaculars, criticizing the caste system. Our goal is to gain a nuanced and many-sided insight into a deeply pervasive phenomenon that has shaped South Asian society and culture from ancient times up to the twenty-first century.

SM 294. (ANTH281, ANTH581, HIST383, SAST594) Language, Race, and Ethnicity in South Asia: History and the Politics of Culture. (C) Mitchell.

How has India maintained itself as a nation containing 1/6 of the world's population by recognizing 22 official languages and scores of mother tongues? Why have other South Asian countries broken into conflict over linguistic differences? This course examines the shaping of ethnic, racial, and linguistic categories of identity in modern South Asia, and explores the socio-political movements that have emerged in conjunction with these categories. Topics include colonial administrative practices such as the decennial censuses and the Linguistic Survey of India; the rise of regional linguistic movements; the relationships between language, ethnicity, and the writing of history in the context of ethnic conflicts in Sri Lanka; the Dravidian, Non-Brahmin, Adi-Dravida, and anti-Hindi movements in southern India; the creation of Pakistan and Bangladesh; and recent debates over the origins of the Aryans.

380. (PSCI511, SAST680) Society & Politics in India. (C) Frankel.

This course analyzes the changing relations between social dominance and state power from the time of colonial rule. Special emphasis is placed on ways in which the historical-social context of India at Independence shaped the democratic institutions introduced, and reciprocally, how social hierarchy and preferences for group rights have been affected by egalitarian and liberal principles of governance. Within this analytical framework, religion, caste, class and

ethnicity are examined as process and as social formation leading to the emergence of new identities and conflicting ideas of political community associated with them.

387. (HSOC412, SAST687) Traditional Medicine in South Asia: Historic Origins and Contemporary Use. (C) Sharma.

In South Asia, traditional medical systems (Ayurveda, Unani, and Siddha) have deep affiliation with the scientific, philosophical, religious, and cultural systems. This course will examine the historic origins and socio-cultural dimensions of these systems. Topics will include the encounter between traditional and Western medicine in the nineteenth century; twentieth century revival and professionalizing activities in the traditional systems; state a central government support for education, services, and research in traditional medicine; their role in the overall health care system; and their use by patients in urban and rural areas. The world-wide interest in complementary and alternative medicine as it relates to the Indian medical systems will be considered.

SM 528. (PSCI511) Society & Politics in India. (M) Frankel.

This course analyzes the changing relations between social dominance and state power from the time of colonial rule.

584. (SAST284) International Relations of the United States and Asia. (C) Frankel.

This course is one of the first arising out of scholarship on cold war international history. It draws on declassified government documents and other archival records to provide a window into the world-view of decision-makers who need to make national security policy based on incomplete information about ambiguous threats. The materials reveal a great deal about the importance of divergent historical perspectives and strategic cultures in the foreign policy-making process. The main focus of the course is on the intersection of the cold war and the rise of Asian nationalism. At the core of the analysis is the clash between America's global strategy of military containment against the Soviet Union and the assertion of Indian, and Chinese nationalism, concerned with preventing the United States from succeeding to Great Britain's imperial rule. The course examines new patterns of US-India and US-China relations in the post-cold war period. This is primarily a lecture course, but the course web is a critical element of class work.

585. (SAST285) Health and Society in South Asia. (C) Staff.

The countries of South Asia have large and diverse populations in need of public, preventative, and curative health services relevant to the health and disease problems of the region. This course will consider the historic origins of health services in South Asia, beginning with a focus on health needs and health services' development in the 19th century through the mid-20th century. In a context influenced by politics, economics, and socio-cultural factors, biomedical health services and education emerged as the dominant health system. Yet this system remains tied to foreign health models and contends with the socio-cultural competition of traditional medical systems. Through lectures, discussion, and assignments, this course will explore the historic and contemporary complexity of the health care systems in South Asian countries as they attempt to deliver health care to populations with wide disparities in income, education, health problems and needs. Selected comparative experiences of Asian health care systems, such as Chinese, will be discussed.

SM 594. (SAST294) Language, Race, and Ethnicity in South Asia: History and the Politics of Culture. (C) Mitchell.

How has India maintained itself as a nation containing 1/6 of the world's population by recognizing 22 official languages and scores of mother tongues? Why have other South Asian countries broken into conflict over linguistic differences? This course examines the shaping of ethnic, racial, and linguistic categories of identity in modern South Asia, and explores the socio-political movements that have emerged in conjunction with these categories. Topics include colonial administrative practices such as the decennial censuses and the Linguistic Survey of India; the rise of regional linguistic movements; the relationships between language, ethnicity, and the writing of history in the context of ethnic conflicts in Lanka; the Dravidian, Non-Brahmin, Adi-Dravida, and anti-Hindi movements in southern India; the creation of Pakistan and Bangladesh; and recent debates over the origins of the Aryans.

680. (PSCI511, SAST380) Society & Politics in India. (C) Frankel.

This course analyzes the changing relations between social dominance and state power from the time of colonial rule. Special emphasis is placed on ways in which the historical-social context of India at Independence shaped the democratic institutions introduced, and reciprocally,

how social hierarchy and preferences for group rights have been affected by egalitarian and liberal principles of governance. Within this analytical framework, religion, caste, class and ethnicity are examined as process and as social formation leading to the emergence of new identities and conflicting ideas of political community associated with them.

687. (SAST387) Traditional Medicine in South Asia: Historic Orgins and Contemporary Use. (C) Sharma.

In South Asia, traditional medical systems (Ayurveda, Unani, and Siddha) have deep affiliation with the scientific, philosophical, religious, and cultural systems. This course will examine the historic origins and socio-cultural dimensions of these systems. Topics will include the encounter between traditional and Western medicine in the nineteenth century; twentieth century revival and professionalizing activities in the traditional systems; state a central government support for education, services, and research in traditional medicine; their role in the overall health care system; and their use by patients in urban and rural areas. The world-wide interest in complementary and alternative medicine as it relates to the Indian medical systems will be considered.

Language Courses

BENGALI (BENG)

403. Beginning Bengali. (E) Banerjee. This is a two-semester course offered through the Penn Language Center.

This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.

423. Intermediate Bengali. (E) Banerjee. This is a two-semester course offered through the Penn Language Center. This course develops the student's prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that

they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.

443. Advanced Bengali II. (B) Staff.

Topics may include Bengali Popular Culture. This course aims to use as its content, different aspects of popular Bengali culture as they are represented in media (film, television, magazines, newspapers) and arts (fashion, local and regional art, music). Students will be expected to develop their linguistic skills (description, narration, supporting opinion) and socio-cultural awareness while interacting with these varied types of texts. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project.

Spring: Bengali Popular Culture- This course aims to use as its content, different aspects of popular Bengali culture as they are represented in media (film, television, magazines, newspapers) and arts (fashion, local and regional art, music). Students will be expected to develop their linguistic skills (description, narration, supporting opinion) and socio-cultural awareness while interacting with these varied types of texts. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course.

GUJARATI (GUJR)

402. Beginning Gujarati. (E) Suthar. This is a two-semester course offered through the Penn Language Center.

During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.

422. Intermediate Gujarati. (E) Suthar. This is a two-semester course offered through the Penn Language Center.

This course is designed as a continuation of beginning Gujarati. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its

usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.

HINDI (HIND)

400. Beginning Hindi. (E) Gambhir, S. This is a two-semester course.

The course aims at developing an interactive speaking ability on everyday topics. At this stage there is less emphasis on developing reading and writing skills. The target language is presented in its sociocultural context including body language. For achieving a meaningful and operational control of the language, students acquire basic rules of the language and its use, and a basic vocabulary of about 1200 words. In addition, students learn two scripts: Devanagari script for Hindi in Fall and Nastaliq script for Urdu in Spring. Authentic and simulated video materials are used to bring the South Asian culture live to the classroom. Class activities include watching videos, singing, role-playing, language games and group work.

420. Intermediate Hindi. (E) Gambhir, V. This is a two-semester course.

In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations--through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.

430. Advanced Hindi. (A) Gahunia. Advanced Hindi aims at systematically developing higher level linguistic functions and cultural nuances. Students learn to

describe, narrate and support opinions in informal and formal styles. The objective of the course is to promote a meaningful interaction with written literature and with native speakers in a socially acceptable manner in a variety of simple and complicated situations. A variety of authentic materials are used, such as short stories, plays, newspapers, magazines, videos, television and radio broadcasts, and interviews. Every semester the course materials and foci vary depending on the needs and interests of students in the class.

460. Business Hindi. (C) Gambhir, V.

This course will advance students' bilingual and bicultural competence to enhance their knowledge and ability to work in the Indian business context. As part of the course the students will learn about the content and culture of Indian business as it operates nationally and internationally. They will get exposed to issues relevant to conducting business in or with India and learn about diverse cultural nuances (such as rural-urban perspectives) that impact marketing strategies by analyzing Hindi advertisements. Also, students will engage with the content and language through guest lectures, print and audio-video texts gathered from national and international media, such as VOA, BBC, and Business Standard. By the end of the semester, students are expected to enhance their knowledge about Indian business, gain linguistic competence (lexical, socio-cultural and pragmatic) to increase their confidence and comfort level in business domains, and access culturally embedded viewpoints about local and global business issues. In order to demonstrate the above, students will engage in projects that will require them to do research, conduct interviews and make presentations of their findings.

*MALAYALAM (MLYM)***408. Beginning Malayalam. (E)**

Kurichi. This is a two-semester course offered through the Penn Language Center. This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.

428. Intermediate Malayalam. (E)

Kurichi. This is a two-semester course offered through the Penn Language Center. This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.

*PANJABI (PUNJ)***404. Beginning Panjabi. (E)** Gahunia.

This is a two-semester course offered through the Penn Language Center. This course emphasizes speaking and reading skills in Punjabi. Upon completion of this course, students should be able to interact meaningfully and in a socially acceptable manner in a variety of simple situations involving everyday conversational topics. Further, students should be able to read and understand the main idea and most details of simple connected texts. This course will utilize authentic printed, audio, and video materials and will provide opportunities for natural communication both within and outside the classroom.

424. Intermediate Panjabi. (E)

Gahunia. This is a two-semester course offered through the Penn Language Center. This course is designed as a continuation of Beginning Punjabi, but can also be taken by anyone who can demonstrate a similar level in proficiency of the language. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar review and comprehension exercises. A special emphasis will also be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of the spoken and written language.

434. Advanced Punjabi. (A) Gahunia.

This course is offered through the Penn Language Center. The objective of the course is to improve proficiency in speaking, listening, reading and writing. This course addresses the individual needs of learners. The focus of the course will be to study the interpretation of written and oral materials on social, political and contemporary cultural topics from modern literature,

television, internet, magazines, newspaper, music and film. Weekly written compositions and oral presentations will be assigned. Grading will be based on this.

*SANSKRIT (SKRT)***460. Sanskrit: 1st Year. (E)** Patel.

Students will learn the entire Sanskrit grammar by the end of the first year. They will be able to read Sanskrit texts and compose Sanskrit sentences in addition to carrying out simple conversation. During the year we will also read simple inscriptions and sections from texts like the Ramayana, the Mahabharata, the Bhagavad Gita, Pancatantra, and Yoga Sutra. Throughout the semester, we will also discuss selected readings and visual materials that introduce students to the broad contours of Sanskrit culture.

470. Sanskrit: 2nd Year. (G) Ali.

Prerequisite(s): SKRT 460.

This course will lead students to consolidate their knowledge of Sanskrit grammar and increase their familiarity with Sanskrit literature of all kinds, including epic, literary, philosophical, and narrative genres of texts. It will also introduce students to the study and reading of inscriptional materials.

*TAMIL (TAML)***406. Beginning Tamil. (E)** Renganathan.

This is a two-semester course offered through the Penn Language Center. This course introduces students to colloquial Tamil and formal written Tamil. A balance between production skills, viz. writing and speaking, and comprehension skills, viz. reading and listening, will be maintained throughout the course. Reading materials will introduce students to customs and habits of the Tamil speakers in Tamil Nadu, Sri Lanka, Malaysia, and Singapore. Lessons in the class will be based on a set of Tamil learning software made available at the MMETS Server. This software will be customized to the needs of students.

426. Intermediate Tamil. (E)

Renganathan. This is a two-semester course offered through the Penn Language Center. This course develops the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil. The emphasis will be on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and video facilities will be used extensively to

provide students an exposure to the Tamil culture and customs. Besides improving their speech and writing, students will also be introduced gradually to Tamil literature, which has two thousand years of literary history. The learning process in this course will be facilitated by appropriate software equipped with multimedia facilities.

436. Advanced Tamil. (A) Renganathan. V.

This course is intended for learners with a high degree of proficiency in most of the skills. The course is designed to meet the specific needs of the learners. Reading materials for this course can be either classical Tamil texts or modern Tamil prose texts.

TELUGU (TELU)

409. Beginning Telugu. (G) Magier. This is a two-semester course offered through the Penn Language Center.

This course introduces students to the basic Telugu language skills, with an emphasis on practice for listening comprehension, and speaking Telugu. Combined with exposure to Andhra culture, the classroom and online work in this course will enable interested students to pursue further language study in Telugu at the intermediate level, to carry out field research in Andhra Pradesh, or to prepare them to advanced work in Telugu Studies. An introduction to Telugu like this will also be useful for students who just want to acquire basic Telugu language skills for learning a new language or being able to communicate with Telugu speaking family and friends or to enjoy Telugu music and films.

429. Intermediate Telugu. (E) Magier. This is a two-semester course offered through the Penn Language Center.

This course is designed to expand the students' basic language skills in Telugu in order to allow them to function adequately in a Telugu-speaking environment, to immerse themselves in the rich Andhra culture, and to accomplish a more advanced competency in an interesting foreign language. This course is also aimed at students planning to conduct scholarly research in Telugu history, literature or society, or humanities or social science fieldwork in Telugu speaking areas.

URDU (URDU)

401. (NELC401) Beginning Urdu. (E) Qureshi. This is a two-semester course offered through the Penn Language Center.

This is a systematic introduction to Urdu language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Urdu script is introduced from the beginning. The target language is presented in its total socio cultural context for achieving a meaningful and operational control of languages. Students acquire basic rules for structural and socio-cultural appropriateness. Students are expected to learn a vocabulary of about 1200 words during the semester. The final evaluation will be based on class participation, performance in quizzes and tests and completed assignments.

421. (NELC421) Intermediate Urdu. (E) Qureshi. This is a two-semester course offered through the Penn Language Center.

In Intermediate Urdu, the curriculum focuses on the development of reading, listening and speaking skills. Although there are short assignments for writing in Urdu, the emphasis on developing writing as a skill is not part of the course objectives. Authentic texts in the three skills include conversations, short stories, current events, articles, films and plays. There is a continuous emphasis on vocabulary development and students are expected to add about five hundred new words to their active vocabulary per semester. The rules of grammar for structural accuracy and socialcultural propriety are parts of the regular curriculum. Class activities include students' short presentations, role-plays, singing and conversations. There are weekly assignments and quizzes, a mid-term and a final examination. The final evaluation will rest on class participation, performance in quizzes and tests, and completed assignments. This is a two-semester course.

431. (NELC431) Advanced Urdu. (A) Qureshi.

Other Languages. Pashtu, Kannada, and Marathi are under (SAST)

405. (PERS111, PERS511) Beginning Pashtu. (G) Staff. Prerequisite(s): For advanced students. Offered through Penn Language Center.

407. Beginning Kannada. (E) Rajagopalan. Offered through Penn Language Center. This is a two-semester course.

410. Beginning Marathi. (E) Ranade. Offered through Penn Language Center. This is a two-semester course.

The first year course in Marathi begins with learning the Devnagari script which is common for other important languages like Hindi and Nepali. With proper emphasis on grammar, vocabulary, and phonetics, the syllabus will see the student becoming able to speak conversational Marathi, read Marathi data from the Internet, and compose simple short essays on selected topics.

411. Intermediate Marathi. (E) Ranade. Offered through Penn Language Center. This is a two-semester course.

425. (PERS113) Intermediate Pashtu. (G) Staff. Offered through Penn Language Center.

427. Intermediate Kannada. (E) Rajagopalan. Offered through Penn Language Center. This is a two-semester course.

435. (PERS115, PERS515) Advanced Pashtu: Pop Romances. (G) Staff. Offered through Penn Language Center.

445. (PERS116, PERS516) Advanced Pashtu Prose Literature. (C) Staff. Offered through Penn Language Center.

447. Advanced Kannada: Selected Topics. (C) Rajagopalan.

494. Early Marathi. (C) Staff. Offered through Penn Language Center.

Independent and Directed Study

199. Independent Study. (C) Staff. Directed Study for Undergraduates

299. Independent Study. (C) Staff.

300. Directed Study. (C) Staff.

This course is required for all senior honors majors, and open to senior majors. Honors majors must, in addition, prepare a research paper.

999. Independent Study. (C) Staff. Directed Study for Graduates

Graduate Methodology Courses

SM 700. Proseminar in South Asia: History & Society. (M) Ali & Viswanath.

This course provides an overview of select but formative themes in the historiography and anthropology of South Asia. Students will read key texts and debates that have shaped the study of South Asian history and society. Themes may vary, but the syllabus will focus on both analysis and interpretation as well as the treatment of sources and data. The course will emphasize the connection of the study of South Asia to wider developments in historiography and social science, and will include select readings beyond the regional

focus on South Asia. The overall goal of the course will be to familiarize students with some of the most influential intellectual formations in the field and to provide a context for the development of their own research problems.

Graduate Advanced Seminars

SM 710. Seminar Classical Indian Studies. (D) Staff. Prerequisite(s): Two years of Sanskrit is required.

SM 711. (ARTH711) Seminar in Indian Art. (C) Meister.

Research seminar. Topics change.

SM 712. Seminar in Indian Philosophy. (C) Staff.

SM 760. Seminar in Modern South Asian History. (C) Staff.

Centered on major recent work and on writing by class participants, this seminar is primarily for Ph.D candidates doing research on South Asia. Each week we read the equivalent of one book and meet to discuss its contribution to South Asian historiography. Each participant will submit a major piece of writing for discussion and will assign auxiliary readings to be read with their own work for one class meeting.

STATISTICS (WH) {STAT}

101. Introductory Business

Statistics. (C) Staff. Prerequisite(s): MATH 104 or equivalent; successful completion of STAT 101 is prerequisite to STAT 102.

Data summaries and descriptive statistics; introduction to a statistical computer package; Probability: distributions, expectation, variance, covariance, portfolios, central limit theorem; statistical inference of univariate data; Statistical inference for bivariate data: inference for intrinsically linear simple regression models. This course will have a business focus, but is not inappropriate for students in the college.

102. Introductory Business

Statistics. (C) Shaman, Staff. Prerequisite(s): STAT 101.

Continuation of STAT 101. A thorough treatment of multiple regression, model selection, analysis of variance, linear logistic regression; introduction to time series. Business applications.

L/R 111. Introductory Statistics. (C)

Staff. Prerequisite(s): High school algebra.

Basic ideas of probability and statistics. Statistical methods for the behavioral sciences, especially psychology. Topics include probability, estimation, hypothesis testing, regression.

112. Introductory Statistics. (C) Staff.

Prerequisite(s): STAT 111.

Basic ideas of probability and statistics. Statistical methods for the behavioral sciences, especially psychology. Continuation of STAT 111. Topics are: regression, analysis of variance, experimental design, analysis of covariance.

430. (BSTA620, STAT510)

Probability. (C) Staff. Prerequisite(s): MATH 114 or equivalent.

Discrete and continuous sample spaces and probability; random variables, distributions, independence; expectation and generating functions; Markov chains and recurrence theory.

431. Statistical Inference. (C) Staff.

Prerequisite(s): STAT 430.

Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-

squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course. This course does not have business applications but has significant overlap with STAT 101 and 102.

432. (BSTA621, STAT512)

Mathematical Statistics. (B) Staff. Prerequisite(s): STAT 430 or 510 or equivalent.

An introductory course in the mathematical theory of statistics. Topics include estimation, confidence intervals, hypothesis testing, decision theory models for discrete data, and nonparametric statistics.

433. Stochastic Processes. (C) Foster.

Prerequisite(s): STAT 430, or permission of instructor.

This course is to be a basic introduction to stochastic processes. The primary focus will be on Markov chains both in discrete time and in continuous time. By focusing attention on Markov chain, we can discuss many interesting models (from physics to economics). Topics covered include: stable distributions, birth-death processes, Poisson processes, time reversibility, random walks, Brownian motion and Black-Scholes.

434. Financial and Economic Time

Series. (A) Steele. Prerequisite(s): STAT 101 - 102 or 431. Familiarity with linear algebra.

This course will introduce students to the time series methods and practices which are most relevant to the analysis of financial and economic data. After an introduction to the statistical programming language S-Plus the course develops an autoregressive models, moving average models, and their generalizations. The course then develops models that are closely focused on particular features of financial series such as the challenges of time dependent volatility.

435. (STAT711) Forecasting Methods for Management. (B) Shaman.

Prerequisite(s): STAT 102 or 112 or 431.

This course provides an introduction to the wide range of techniques available for statistical forecasting. Qualitative techniques, smoothing and decomposition of time series, regression, adaptive methods, autoregressive-moving average modeling, and ARCH and GARCH formulations will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations.

471. (STAT701) Intermediate

Statistics. (B) Foster. Prerequisite(s): STAT 102 or 112 or 431.

This is a course in modern methods in statistics. It will focus on regression, time series, data mining and machine learning. The regression module will extend your knowledge of building multiple regressions. The time series module will introduce you to some ideas in finance and forecasting. The last two modules will show how these ideas can be applied to large data sets that are more frequently found in the modern age. Throughout the class databased on finance, retail credit, global warming, and the "wikipedia" will be discussed.

472. (STAT712) Decision Making under Uncertainty. (M) Stine.

Prerequisite(s): STAT 102 or 112 or 431.

Fundamentals of modern decision analysis with emphasis on managerial decision making under uncertainty and risk. The basic topics of decision analysis are examined. These include payoffs and losses, utility and subjective probability, the value of information, Bayesian analysis, inference and decision making. Examples are presented to illustrate the ideas and methods. Some of these involve: choices among investment alternatives; marketing a new product; health care decisions; and costs, benefits, and sample size in surveys.

473. (STAT953) Bioinformatics. (B)

Ewens. Prerequisite(s): Good background in probability and statistics at the approximate level of STAT 430 and STAT 431. The material will follow the class textbook, Ewens and Grant "Statistical Models in Bioinformatics", Springer, second edition, 2005.

An introduction to the use of statistical methods in the increasingly important scientific areas of genomics and bioinformatics. The topics to be covered will be decided in detail after the initial class meeting, but will be taken from the following: - background probability theory of one and many random variables and of events; background statistical inference theory, classical and Bayesian; Poisson processes and Markov chain; the analysis of one and many DNA sequences, in particular shotgun sequencing, pattern analysis and motifs; substitution matrices, general random walk theory, advanced statistical inference, the theory of BLAST, hidden Markov models, microarray analysis, evolutionary models.

475. (BSTA775, STAT920) Sample Survey Design. (M) Staff.

Prerequisite(s): STAT 102 or 112 or 431.

An overview of survey design and methodology. Topics include questionnaire design, effects of question wording on responses, the sampling frame, simple random sampling, stratified sampling, longitudinal designs and panel methods, data collection, nonresponse bias and missing data, and applications.

476. (MKTG476, MKTG776) Applied Probability Models in Marketing. (C)

Fader. Prerequisite(s): High comfort level with basic integral calculus, and recent exposure to a formal course in probability and statistics such as STAT 430 is strongly recommended.

This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of customer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques.

500. (BSTA550, PSYC611) Applied Regression and Analysis of Variance. (A) Rosenbaum.

Prerequisite(s): STAT 102 or 112 or equivalent.

An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences.

501. (PSYC612) Introduction to Nonparametric Methods and Log-linear Models. (B) Rosenbaum.

Prerequisite(s): STAT 102 or 112 or equivalent.

An applied graduate level course for students who have completed an undergraduate course in basic statistical methods. Covers two unrelated topics: loglinear and logit models for discrete data and nonparametric methods for nonnormal data. Emphasis is on practical methods of data analysis and their interpretation. Primarily for doctoral students in the managerial, behavioral, social and health

sciences. May be taken before STAT 500 with permission of instructor.

502. (EDUC683) Survey Methods and Design. (B) Boruch. Prerequisite(s):

STAT 520 or equivalent. Methods and design of field surveys in education, the social sciences, criminal justice research, and other areas. It treats methods of eliciting information through household, mail, telephone surveys, methods of assuring privacy, enhancing cooperation rates and related matters. Fundamentals of statistical sampling and sample design are covered. Much of the course is based on contemporary surveys sponsored by the National Center for Education Statistics and other federal, state, and local agencies.

510. (BSTA620, STAT430) Probability. (A) Foster. Prerequisite(s):

A one year course in calculus.

Elements of matrix algebra. Discrete and continuous random variables and their distributions. Moments and moment generating functions. Joint distributions. Functions and transformations of random variables. Law of large numbers and the central limit theorem. Point estimation: sufficiency, maximum likelihood, minimum variance. Confidence intervals.

512. (BSTA621, STAT432) Mathematical Statistics. (B) Staff.

Prerequisite(s): STAT 430 or 510 or equivalent.

An introductory course in the mathematical theory of statistics. Topics include estimation, confidence intervals, hypothesis testing, decision theory models for discrete data, and nonparametric statistics.

520. Applied Econometrics I. (A)

Zhao. Prerequisite(s): MATH 114 or equivalent and an undergraduate introduction to probability and statistics.

This is primarily a statistical methodology course. Regression based techniques dominate the course, including the simple linear model, multiple regression, ANOVA and ANCOVA, and related models for discrete choice data, including logistic regression. Regression techniques for Panel Data will also be presented. Real data sets will be used to demonstrate the methods and clarify the use of the techniques. At the end of the semester students are expected to be able to analyze a data set (quantitative or qualitative) wisely and conclude correctly. We will start the course with a very quick introductory review of basic statistical techniques needed such as the central limit theorem, confidence intervals and

hypotheses tests. R and JMP will be used throughout the lectures.

521. Applied Econometrics II. (B) Small. Prerequisite(s): STAT 520.

This is a graduate course in econometrics for applied economics graduate students. The goal of the course is to prepare students for empirical research by investigating several important econometric methods.

530. (MATH546) Probability. (A) Pemantle. Prerequisite(s): STAT 430 or 510 or equivalent.

Measure theory and foundations of Probability theory. Zero-one Laws. Probability inequalities. Weak and strong laws of large numbers. Central limit theorems and the use of characteristic functions. Rates of convergence. Introduction to Martingales and random walk.

531. (MATH547) Stochastic Processes. (B) Pemantle. Prerequisite(s): STAT 530.

Markov chains, Markov processes, and their limit theory. Renewal theory. Martingales and optimal stopping. Stable laws and processes with independent increments. Brownian motion and the theory of weak convergence. Point processes.

541. Statistical Methods. (A) Buja. Prerequisite(s): STAT 431 or 520 or equivalent.

Multiple linear regression, logit and probit regression, analysis of variance, experimental design, log-linear models, goodness-of-fit.

542. Bayesian Methods and Computation. (B) Jensen.

Prerequisite(s): STAT 430 or 510 or equivalent or permission of instructor.

Sophisticated tools for probability modeling and data analysis from the Bayesian perspective. Hierarchical models, optimization algorithms and Monte Carlo simulation techniques.

550. (BSTA622) Mathematical Statistics. (A) Small. Prerequisite(s): STAT 431 or 520 or equivalent.

Decision theory and statistical optimality criteria, sufficiency, invariance, estimation and hypothesis testing theory, large sample theory, information theory.

551. Introduction to Linear Statistical Models. (B) Brown. Prerequisite(s): STAT 550.

Properties of the multivariate and spherical normal distributions, quadratic forms, estimation and testing in the linear model with applications to analysis of variance and regression models, generalized inverses, and simultaneous inference.

552. (BSTA820) Advanced Topics in Mathematical Statistics. (A) Staff. Prerequisite(s): STAT 550 and 551.

A continuation of STAT 550.

553. Machine Learning. (B) Traskin. Prerequisite(s): STAT 510 and 512 or equivalent.

This course gives a broad overview of the machine learning and statistical pattern recognition. Some topics will be rather glanced over while others will be considered in-depth. Topics include supervised learning (generative/discriminative models, parametric/nonparametric, neural networks, support vector machines, boosting, bagging, random forests), online learning (prediction with expert advice), learning theory (VC dimension, generalization bounds, bias/variance trade-off), unsupervised learning (clustering, k-means, PCA, ICA). Most of the course concentrates on the supervised and online learning.

701. (STAT471) Advanced Statistics for Management. (B) Foster.

Prerequisite(s): STAT 621 or equivalent.

This is a course in modern methods in statistics. It will focus on regression, time series, data mining and machine learning. The regression module will extend your knowledge of building multiple regressions. The time series module will introduce you to some ideas in finance and forecasting. The last two modules will show how these ideas can be applied to large data sets that are more frequently found in the modern age. Throughout the class data based on finance, retail credit, global warming, and the "wikipedia" will be discussed.

711. (STAT435) Forecasting Methods for Management. (B) Shaman.

Prerequisite(s): STAT 621 or equivalent.

This course provides an introduction to the wide range of techniques available for statistical forecasting. Qualitative techniques, smoothing and decomposition of time series, regression, adaptive methods, autoregressive-moving average modeling, and ARCH and GARCH formulations will be surveyed. The

emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations.

712. (STAT472) Decision Making Under Uncertainty. (M) Stine.

Prerequisite(s): STAT 520 or STAT 621 or equivalent.

Fundamentals of modern decision analysis with emphasis on managerial decision making under uncertainty and risk. The basic topics of decision analysis are examined. These include payoffs and losses, utility and subjective probability, the value of information, Bayesian analysis, inference and decision making. Examples are presented to illustrate the ideas and methods. Some of these involve: choices among investment alternatives; marketing a new product; health care decisions; and costs, benefits, and sample size in surveys.

900. Advanced Probability. (M) Staff.

Prerequisite(s): STAT 531 or equivalent.

The topics covered will change from year to year. Typical topics include the theory of large deviations, percolation theory, particle systems, and probabilistic learning theory.

901. (OPIM931) Stochastic Processes II. (M) Staff.

Prerequisite(s): OPIM 930 or equivalent.

Martingales, optimal stopping, Wald's lemma, age-dependent branching processes, stochastic integration, Ito's lemma.

910. (BSTA852) Forecasting and Time Series Analysis. (K) Stine.

Prerequisite(s): STAT 520 or 541 or equivalent.

Fourier analysis of data, stationary time series, properties of autoregressive moving average models and estimation of their parameters, spectral analysis, forecasting. Discussion of applications to problems in economics, engineering, physical science, and life science.

915. Nonparametric Inference. (M)

Staff. Prerequisite(s): STAT 520 or equivalent.

Statistical inference when the functional form of the distribution is not specified. Nonparametric function estimation, density estimation, survival analysis, contingency tables, association, and efficiency.

920. (BSTA775, STAT475) Sample Survey Methods. (M) Staff.

Prerequisite(s): STAT 520 or equivalent with permission of instructor.

This course will cover the design and analysis of sample surveys. The focus of attention will be on the latter, specifically, classical analyses of random sampling, stratified sampling, cluster sampling, large sample results, and other topics as time permits and students' interests dictate.

921. Observational Studies. (A) Small.

Prerequisite(s): STAT 541 or 550 or permission of instructor.

This course will cover statistical methods for the design and analysis of observational studies. Topics will include the potential outcomes framework for causal inference; randomized experiments; matching, propensity score and regression methods for controlling confounding in observational studies; tests of hidden bias; sensitivity analysis; and instrumental variables.

924. Advanced Experimental Design. (M) Staff. Prerequisite(s): STAT 552.

Factorial designs, confounding, incomplete blocks, fractional factorials, random and mixed models, response surfaces.

925. Multivariate Analysis: Methods. (M) Staff. Prerequisite(s): STAT 520 or equivalent.

Tests on mean vector, discriminant analysis, multivariate analysis of variance, canonical correlation, principal components, and factor analysis.

926. Multivariate Analysis: Theory. (M) Staff. Prerequisite(s): STAT 551 and 925.

Wishart distribution, classification theory, Bayesian inference, and the multivariate general linear model.

927. (BSTA854) Bayesian Statistical Theory and Methods. (M) Zhao.

Prerequisite(s): STAT 551.

A course in Bayesian statistical theory and methods. Axiomatic developments of utility theory and subjective probability, and elements of Bayesian theory.

932. (BSTA653) Survival Models and Analysis Methods for Medical and Biological Data. (M) Zhao.

Prerequisite(s): STAT 551.

Parametric models, nonparametric methods for one- and two-sample problems, proportional hazards model, inference based on ranks. Problems will be considered from clinical trials, toxicology

and tumorigenicity studies, and epidemiological studies.

933. Analysis of Categorical Data. (M) Rosenbaum. Prerequisite(s): STAT 541 and 551.

Likelihood equations for log-linear models, properties of maximum likelihood estimates, exact and approximate conditional inference, computing algorithms, weighted least squares methods, and conditional independence and log-linear models. Applied topics, including interpretation of log-linear and logit model parameters, smoothing of tables, goodness-of-fit, and incomplete contingency tables.

940. Advanced Inference I. (M) Staff. Prerequisite(s): STAT 551.

The topics covered will change from year to year. Typical topics include sequential analysis, nonparametric function estimation, robustness, bootstrapping and applications decision theory, likelihood methods, and mixture models.

941. Advanced Inference II. (M) Staff. Prerequisite(s): STAT 940.

A continuation of STAT 940.

SM 950. (STAT951) Statistical Practice I. (M) Staff. Prerequisite(s): STAT 540, 541, 550, and 551.

Students will be exposed to the conceptual and practical difficulties of actual statistical practice. Each student will be assigned to work on one or more applied problems

arising in the Statistical Consulting Laboratory.

SM 951. (STAT950) Statistical Practice II. (M) Staff. Prerequisite(s): STAT 540, 541, 550 and 551.

A continuation of STAT 950.

953. (STAT473) Bioinformatics. (B) Ewens. Prerequisite(s): Good background in probability and statistics at the approximate level of STAT 430 and STAT 431. The material will follow the class textbook, Ewens and Grant "Statistical Models in Bioinformatics", Springer, second edition, 2005.

An introduction to the use of statistical methods in the increasingly important scientific areas of genomics and bioinformatics. The topics to be covered will be decided in detail after the initial class meeting, but will be taken from the following: - background probability theory of one and many random variables and of events; background statistical inference theory, classical and Bayesian; Poisson processes and Markov chain; the analysis of one and many DNA sequences, in particular shotgun sequencing, pattern analysis and motifs; substitution matrices, general random walk theory, advanced statistical inference, the theory of BLAST, hidden Markov models, microarray analysis, evolutionary models.

955. Stochastic Calculus and Financial Applications. (A) Steele. Prerequisite(s): STAT 900.

Selected topics in the theory of probability and stochastic processes.

956. Financial and Economic Time Series. (B) Steele. Prerequisite(s): A graduate course in statistics or econometrics. Familiarity with linear algebra.

This graduate course introduces students to the time series methods and practices which are most relevant to the analysis of financial and economic data. The course will address both theoretical and empirical issues. Extensive use will be made of the S-Plus Statistical Language, but no previous experience of S-Plus will be required. The course begins with a quick review of ARIMA models. Most of the course is devoted to ARCH, GARCH, threshold, switching Markov, state space, and nonlinear models.

SM 957. Seminar in Data Analysis. (M) Staff. Prerequisite(s): STAT 541, 551, 552, 925, or equivalents; permission of instructor.

Survey of methods for the analysis of large unstructured data sets: detection of outliers, Winsorizing, graphical techniques, robust estimators, multivariate problems.

SM 991. Seminar in Advanced Application of Statistics. (C) Staff.

This seminar will be taken by doctoral candidates after the completion of most of their coursework. Topics vary from year to year and are chosen from advance probability, statistical inference, robust methods, and decision theory with principal emphasis on applications.

TELECOMMUNICATIONS (EG) {TCOM}

500. Introduction to Networks and Protocols. (A) Prerequisite(s):

Undergraduate probability and analysis. Course open to Juniors, Seniors and Graduate Students in SEAS and Wharton. All others need permission of the instructor. Students who have taken ESE 404 may not take TCOM 500.

This is an introductory course on packet networks, protocols and technologies, with a particular emphasis on IP based networks such as the Internet. The course introduces the various design and implementation choices that are behind the development of modern networks, and emphasizes basic analytical understanding in motivating those choices. Topics are covered in a mostly "bottom-up" approach, starting with a brief review of physical layer issues such as digital transmission, compression and information theory, error correction and error recovery strategies. This is then followed by a discussion on how to move from bits to packets and various issues associated with successfully transmitting packets. The course then undergoes a brief digression aimed at exposing students to basic modeling tools useful in the analysis of communications systems, and then proceeds to explore approaches used to allow multiple users to share local communication resources, e.g., multiple access control (MAC) strategies and local area networks. Network layer solutions (IP addressing, naming, and routing) that scale beyond local resources are covered next, before exploring end-to-end mechanisms such as TCP. Finally, the building blocks needed to offer advanced functionality such as quality-of-service and network security are examined.

501. (ESE 501) Networking - Theory and Fundamentals. (B) Prerequisite(s): ESE 530 or STAT 530 or equivalent.

Networks constitute an important component of modern technology and society. Networks have traditionally dominated communication technology in form of communication networks, distribution of energy in form of power grid networks, and have more recently emerged as a tool for social connectivity in form of social networks. In this course, we will study mathematical techniques that are key to the design and analysis of different kinds of networks. First, we will investigate techniques for modeling evolution of networks. Specifically, we will consider

random graphs (all or none connectivity, size of components, diameters under random connectivity), small world problem, network formation and the role of topology in the evolution of networks. Next, we will investigate different kinds of stochastic processes that model the flow of information in networks. Specifically, we will develop the theory of markov processes, renewal processes, and basic queueing, diffusion models, epidemics and rumor spreading in networks.

502. Advanced Networking Protocols. (B) Prerequisite(s): TCOM 500 or equivalent.

The course delves into the details of the many protocols whose combined operation is behind the Internet. It starts with reviewing issues associated with naming and addressing, and in particular solutions that work at the Internet scale. This is followed by an in-depth review of the Internet's "control plane," namely the different routing protocols that govern packet forwarding decisions, including unicast (RIP2, EIGRP, OSPF, BGP, etc.) and multicast (DVMRP, CBT, PIM, etc.) routing protocols. The challenges associated with implementing efficient packet forwarding decisions are then discussed and illustrated through several representative techniques and algorithms. Next, the course introduces technologies that implement advanced functionality over IP networks, including signaling protocols, e.g., RSVP, used to request resources from the network, and protocols such as MPLS and MP-BGP that enable the efficient deployment of virtual private networks and traffic engineering solutions. If time permits, topics related to service classes and traffic management may also be covered.

503. (ESE 509) Waves, Fibers and Antennas for Telecommunications. (A) Faculty.

This course is designed to provide an understanding of the physical aspects of telecommunications systems. This includes an understanding of waves and wave propagation, basic optics, the operation of optical fibers and fiber communication systems, an introduction to optical networks, free-space optical communications, and an understanding of simple antennas and arrays and their use in wireless communications.

510. Wireless Networking. (B) Prerequisite(s): TCOM 500 or TCOM 512.

This course provides a basic introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design,

performance analysis and protocols. The topics covered include: an introduction to wireless networking, digital cellular, next generation PCS, wireless LANs, wireless ATM, mobile IP.

511. (ESE 575) Wireless Systems. (A) Prerequisite(s): Undergraduate linear systems and elementary probability theory.

System/Network Design, cellular concepts, resource management, radio management, radio channel propagation fundamentals, modulation, fading countermeasure, diversity, coding, spread spectrum, multiple access techniques.

512. (CIS 553) Application and Transport Protocols. (C)

Prerequisite(s): TCOM 370 (prerequisite) or TCOM 500 (can be corequisite), and sufficient programming knowledge to edit, write, and debug programs in C, and basic undergraduate mathematical background including elementary probability.

This course covers the design, analysis, and implementation of application- and transport-level protocols. We teach basic techniques of framing, error recovery, reliable delivery, flow control, adaptation to congestion, presentation (and representation) of data, authentication and security, as applied to conversational, transactional, and dissemination-oriented transport and application level protocols. In addition to hands-on experience designing and implementing network protocols in C using the BSD socket interface, we also teach elementary modeling (through both simulation and analytic models) and measurement of network protocols.

514. Web Technologies, Architecture and Integration. (C) Prerequisite(s): TCOM 500 and knowledge of object oriented programming (Java preferred).

This course introduces the main concepts of Web technologies with special emphasis on modern architecture and integration issues. The topics continually evolve as new Web technologies and protocols emerge. The course starts with an overview of key Web software technologies (Web clients, Web proxies, Web servers, Web gateways) and a discussion of HTTP protocol design and its interaction with TCP/IP. The second part of the course concentrates on Semantic Web, XML and its variants, Semantic Web 2.0, Web Services, and Next Generation Web. This part of the course emphasizes the emergent technologies needed in web engineering projects. The course concludes with a focus on Web-based architecture and integration issues. The emphasis of this part is on emerging approaches to architect

Web applications by using Services Oriented Architecture (SOA). Discussion also include real-time business activity monitoring, Web traffic measurements, Web caching, multimedia over Web, wireless Web, Web security, and Web mining. The course stresses, through examples and case studies, the role of the most recent Web technology protocols, and standards and their applications in the telecom industry. Students are given opportunities to work with various Web tools, evaluate architectural configurations, and investigate special areas of interest to

515. Optical Networking. (B)

Prerequisite(s): Requires undergraduate-level knowledge of complex variables, vector calculus and random processes.

This graduate level course explores several important topics related to the analysis and design of optical transport networks. Topics covered include the propagation of signals in optical fiber, optical components, signal rates and formats, transmission engineering, time-division multiplexing (TDM), wavelength division multiplexing (WDM), layered network architectures, virtual topology design, network survivability and network management.

551. (CIS 551) Computer and Network Security. (B)

This is an introduction to topics in the security of computer systems and communication on networks of computers. The course covers four major areas:

fundamentals of cryptography, security for communication protocols, security for operating systems and mobile programs, and security for electronic commerce. Sample specific topics include: passwords and offline attacks, DES, RSA, DSA, SHA, SSL, CBC, IPSec, SET, DDoS attacks, biometric authentication, PKI smart cards, S/MIME, privacy on the Web, viruses, security models, wireless security, and sandboxing. Students will be expected to display knowledge of both theory and practice through written examinations and programming assignments.

601. Advanced Networking Modeling and Analysis. (C)

Traffic management and call admission: traffic characterization traffic shaping, admission control, statistical multiplexing, effective bandwidth. Scheduling: fair queuing, rate-controlled service disciplines. Buffer management: pushout, threshold, random early detection, sharing mechanisms (complete partitioning, complete sharing, hybrids), coupling buffer management and scheduling. Markov decision process and application in resource allocation (memory, bandwidth allocation). Switching: input queuing, output queuing, shared memory, combined input/output queuing. Maximum throughput in input queued switches, emulating output queuing with input queuing via speedup. Building larger switches: Clos networks, banyan networks, etc. TCP modeling.

SM 670. Telecommunications

Seminar. (A) Prerequisite(s): TCOM 500 or permission of the instructor. Undergraduates require instructor permission.

This discussion-oriented seminar covers topics ranging from the study of residential broadband delivery architectures to the economic, legal and regulatory issues affecting the design and deployment of converged networks. Areas covered in the past include fiber to the home/node (FTTH/FTTN) architecture, IPTV deployment, IPv6 migration, the design and impact of P2P, quality of service, privacy, global cellular evolution, how different laws are shaping the internet, and the impact of regulation on telecommunication architecture in general. Students will be asked to critically evaluate published papers and discuss them in class, as well as to pick topics for individual research. Guest speakers from industry will be invited to present real-world views of the material. Grading is based on class preparation, paper reviews and presentation/paper on selected topics. Papers and research topics covered in the previous class are available on line at www.seas.upenn.edu/~tcom670/papers.html

899. Independent Study.

990. Masters Thesis.

999. Master Thesis Research. (C)

THEATRE ARTS (AS) {THAR}

100. Introduction to Theatre Arts. (C) Arts & Letters Sector. All Classes. Malague.

An introduction to different approaches to understanding and analyzing performance, representational theatre, and non-representational theatre, using as test cases both dramatic scripts and live performance. Different aspects of theatre art and theatrical process (acting, design, audience, musical theatre) will be taught by guest lecturers drawn from the Theatre Arts faculty and local professionals.

110. (COML110, ENGL087, HIST246, URBS212) Theatre, History, Culture I: Classical Athens to Elizabethan London. (B) Arts & Letters Sector. All Classes. Schlatter. Required of all Theatre Arts Majors.

This course will explore the forms of public performance, most specifically theatre, as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their anthropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on the development of theatre practice in both Western and non-Western cultures as it intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions, and acting methods, this course will investigate, where appropriate, social and political history, the arts, civic ceremonies and the dramaturgic structures of urban living.

111. (COML111, ENGL097) Theatre, History, Culture II: Cities at Play from the Renaissance to the Rise of Realism. (C) Arts & Letters Sector. All Classes. Ferguson.

This course examines theatre and performance in the context of the broader urban, artistic and political cultures housing them from the Renaissance to the mid-19th century. Encompassing multiple cultures and traditions, it will draw on a variety of readings and viewings designed to locate the play, playwright, trend or concept under discussion within a specific socio-historical context. The evolution of written and performed drama, theatre architecture, and scenography will be examined in tandem

with the evolution of various nationalisms, population shifts, and other commercial and material forces on theatrical entertainments. Readings consequently will be drawn not only from plays and other contemporary documents, but also from selected works on the history, theory, design, technology, art, politics or society of the period under discussion.

112. (COML112, ENGL098) Theatre, History, Culture III: Modernism to Post Modernism. (C) Arts & Letters Sector. All Classes. Mazer.

This course will examine the interplay of theatrical theory, theatrical practice, and dramatic writing, in relation to contemporaneous societies and cultures, from the first experiments in penetrating the boundaries of "realism" at the end of the nineteenth century, through the present day. Areas of exploration include the invention of the avant garde, the rise of the auteur-director, political theatre, competing theories about the actor's body and the actor's emotions, performance art, feminist theatre, queer theatre, and the integration of non-western theatre into shared theatre practice in the colonial and post-colonial world.

SM 114. (ENGL114) Playwriting Workshop. (B) Staff. This course is not open to freshmen.

This course is designed as a hands-on workshop in the art and craft of dramatic writing. It involves the study of existing plays, the systematic exploration of such elements as storymaking, plot, structure, theme, character, dialogue, setting, etc.; and most importantly, the development of students' own plays through a series of written assignments and in-class exercises. Since a great deal of this work takes place in class -- through lectures, discussions, spontaneous writing exercises, and the reading of student work -- weekly attendance and active participation is crucial.

SM 120. Introduction to Acting. (C) Ferguson, Malague, Schlatter, and Staff. Required of all Theatre Arts Majors.

Rooted in the system devised by Constantine Stanislavsky, this course takes students step by step through the practical work an actor must do to live and behave truthfully on-stage. Beginning with relaxation and physical exercise, interactive games, and ensemble building, students then learn and put into practice basic acting techniques, including sensory work, the principles of action, objectives, given circumstances, etc. The semester culminates in the performance of a scene or scenes, most

often from a modern American play. This course strongly stresses a commitment to actor work and responsibility to one's fellow actors. Practical work is supplemented by readings from Stanislavsky and a variety of other acting theorists that may include Uta Hagen, Robert Cohen, Stella Adler, among others. Students are required to submit short essays over the course of the semester in response to the readings and in preparation for their final scene project.

SM 121. Introduction to Directing. (C) Ferguson, Malague, Mazer, Schlatter. Required of all Theatre Arts Majors.

The aim of this course is to provide students with a basic knowledge of directing through an introduction to the functional tools of the craft. Classes provide lectures and practical work in dealing with topics such as the function of the director, analyzing a script, visual composition, blocking, stage business, and working with actors. This course is a prerequisite for Advanced Directing.

125. The Play: Structure, Style, Meaning. (C) Malague. Pending Curriculum Committee Approval.

How does one read a play? Theatre, as a discipline, focuses on the traditions of live performance. In those traditions, a play text must be read not only as a piece of literature, but as a kind of "blueprint" from which productions are built. This course will introduce students to a variety of approaches to reading plays and performance pieces. Drawing on a wide range of dramatic texts from different periods and places, we will examine how plays are made, considering issues such as structure, genre, style, character, and language, as well as the use of time, space, and theatrical effects. Although the course is devoted to the reading and analysis of plays, we will also view selected live and/or filmed versions of several of the scripts we study, assessing their translation from page to stage.

SM 130. Introduction to Light, Set, and Costume Design. (C) Baratta. Required of all Theatre Arts Majors.

This course will introduce students to the traditional elements of scenic composition, including stage scenery and props, lighting, costume and sound design. Students will gain an appreciation for the breadth of historic scenic convention as well as an understanding of the roles played by historic convention in modern stagecraft. Theatrical relationships between actor/audience/setting/text will be examined using the analysis of play scripts,

theatre history, theoretical writings, illustrations and other media as a series of case studies. Emphasis will be given to an understanding of the role of design and technology in the transformational event of the theatre production, and the various contextual approaches that inform the design process, including the role of the theatre designer/technician as artist and collaborator within the framework of the production team. Project work in this course includes design studies, research and critical writing, project presentation, and a practicum project associated with the Theatre Arts Program production schedule.

SM 131. Concepts of Lighting. (C)

Whinnery. Recommended for majors. Non-majors need permission of instructor. An introduction to the nature and value of lighting in the theatre, emphasizing its functions, history, resources, techniques, and design.

SM 132. Costume. (B) Staff.

Costume history and design provides a framework for organized study and practice in this particular facet of theatre production. It is a one-semester course, scheduled to meet once a week for a three hour session.

SM 133. Concepts of Stage Design. (A)

Whinnery. Non-majors need permission of instructor.

A history of the development of twentieth-century stage design and the exploration of the design process. Project work in the realization of stage designs through drafting, rendering, and model building.

SM 140. (COML265) Topics in Theatre History. (B) Mazer.

The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place.

141. (CLST141, COML264) Classical Theatre. (C) Staff.

Development of the history and practice of Greek and Roman theatre from antiquity to the Middle Ages is treated through reading English translations of tragedy and comedy and examination of the physical setting and staging of drama. Attention is paid to the drama's relation to religion, the role of the audience in theatre, popular stage performances other than plays, public spectacles, and the medieval attitude towards drama.

SM 171. Movement for the Actor. (B)

Fishbeck. Primarily for majors. Non-majors need permission of the instructor. The study of the art of bodily expression throughout history in theory and practice, from Classical and Oriental forms to the contemporary theatre.

SM 220. Advanced Acting. (M)

Ferguson, Malague. Prerequisite(s): THAR 120 or by special permission of the instructor.

This course continues the work begun in the Introduction to Acting class. The specific focus of the course will be on helping students to connect more deeply and truthfully with each other on stage, freeing up the body of the actor to fulfill the physical demands of characterization, and analyzing the dramatic text to clarify objectives and focus action through unit breakdown. Attention will also be given to helping students work through specific problems and personal, creative obstacles. The basis of the course will be scene work taken from the twentieth-century repertoire (realist and non-realist plays), a classical monologue, and exercises taken from a variety of performance traditions. The course also includes readings from modern theorists and practitioners.

SM 221. Advanced Directing. (M)

Schlatter. Prerequisite(s): THAR 121.

The primary goal of this course is to develop students' practical skills and methods as stage directors. The course continues the work of Introduction to Directing, focusing on effective text analysis, communicating with actors, and use of theatrical space and movement to tell the story of the play. The course is structured as a workshop, with students presenting and discussing each other's scene work in class. Students are responsible for three large projects, and each project is presented and discussed twice, first in its workshop and then in its final stage of development. The final project involves minimally staging a one-act play for an audience. Course work is

supplemented by readings on the work of major modern directors, and by viewing and writing critiques of selected theatre performances.

SM 236. (ENGL236, GSOC233) Topics in Renaissance Drama: Acting Shakespeare. (M) Mazer.

Prerequisite(s): THAR 120 or 121 or their equivalent. This course is not open to freshmen.

Through specialized readings, writing assignments, and in-class acting exercises, the class will develop methods of interpreting Shakespeare's plays through theatrical practice. Topics include Shakespeare's use of soliloquy, two and three person scenes, the dramatic presentation of narrative source material, modes of defining and presenting the "worlds" of the plays, and the use of theatrical practice to establish authoritative text.

SM 250. (AFRC309, GSOC251, URBS256) Theatre Workshop. (M)

Various Theatre Professionals.

Prerequisite(s): THAR 120, THAR 121. Cross-listings are contingent upon topics offered. For the current topics contact the Theatre Arts office.

This course will examine a specific aspect of theatrical practice, taught by a visiting professional theatre artist. The course, with different topics, may be repeated for credit. Recent topics have included performance art, Jacques LeCoq technique, Suzuki, and Viewpoints.

SM 270. (ENGL256) Acting American Drama: Players and Playwrights. (M) Malague.

This course will investigate the interrelationship between American drama and American acting techniques. Connections to be considered include: The Group Theatre and Clifford Odets; The Actors Studio and Tennessee Williams; The Meisner Technique and David Mamet. We will also view the work of individual actors in filmed and live versions of the plays we study, examining the many ways in which actors collaborate with playwrights by creating roles and reinterpreting them. Readings will include the acting texts of American master teachers such as Lee Strasberg, Stella Adler, Sanford Meisner, and Uta Hagen, as well as a number of American plays. This course will include acting exercises and scene work.

SM 271. (CINE271, ENGL274) American Musical Theatre. (M) Fox.

The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.

272. Twentieth Century American Theatre and Drama. (M) Schlatter.

This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O'Neil, Arthur Miller, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off-Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre.

SM 273. (CINE225, ENGL292) Dark Comedy. (M) Ferguson.

From Plautus to Ionesco, dark comedies explore concepts and ideas seemingly at odds with comic traditions and structures they employ. This class uses the study of theory, history, plays and theatrical technique to explore the significance and effect of tragicomedies. Students will acquire an understanding of the genre's unique characteristics through textual and practical work and through viewing pertinent films. In addition to reading and discussing plays and criticism, students will be required to perform a scene from a tragicomic play, experimenting with and creating tragicomic effect through performance. This course will be roughly organized into three sections: historic precedents (Plautus, Shakespeare, Moliere), 19th century transitional dramas (Chekhov, Ibsen) and 20th century tragicomedies, in which the bulk of the course readings will

be done (Beckett, Ionesco, Pinter, Stoppard, Henley, etc.).

SM 274. (ENGL256) Dramaturgy. (M) Mazer.

This course will examine the functions and methods of the dramaturg--the person in the theatrical process who advises the artistic collaborators on (among other things) new play development, the structure of the script, the playwright's biography and other writings, the play's first production and its subsequent production history, and the historical and regional details of the period depicted in the plays action. We will study the history of the dramaturg in the American theatre and discuss contemporary issues relating to the dramaturg's contribution to the theatrical production (including the legal debates about the dramaturg's contribution to the creation of RENT). And, in creative teams, the class will create dramaturgical portfolios for a season of imaginary (and, potentially, a few actual) theatrical productions.

SM 275. (AFRC275, CINE225, CLST315, COML267, ENGL256) Advanced Topics in Theatre. (M) Fox, Ferguson, Malague, Mazer, Schlatter. This course, with different topics, may be repeated for credit.

This course will combine an intensive practical and intellectual investigation of some area of the making of theatre: performance techniques, theatrical styles, a particular period of theatre history. For the current topics contact the Theatre Arts office.

One section of 275 every other Spring will consist of a small number of Theatre Arts majors selected by the faculty to become members of "the Edinburgh Project." This ensemble will mount a production that will be performed at the Edinburgh Festival Fringe in August. Many of the readings and exercises in this course will be geared to prepare for production; rehearsals for the project will continue after the exam period at the end of the semester.

SM 276. Theatre Criticism. (M) Mazer.

This course is both a practical writing course, and an examination of the role of the various kinds of theatre criticism and their relation to contemporary theatrical art and the theatre industry. Students (and faculty) will write (and rewrite) one theatre review a week, based on a theatre event everyone will see. Additional readings will be drawn from theatre critics and reviewers through history (Hazlitt, Shaw, Beerbohm, Agate, Clurman, Brustein, Rich, Wardle, Nightingale, Billington, and others).

SM 277. 20th Century Acting Theory and Practice. (M) Malague.

This course examines the making of theatre from the actor's perspective, focusing on major twentieth century forms and the acting techniques constructed to produce them. Through an investigation of theories of such practitioners as Stanislavsky, Brecht, and Grotowski, the class will consider contrasting models for their actor's work, and such issues as the actor's relationship to the audience, director, playwright, and text. The course will include practical performance exercises and an exploration of representative play scripts.

SM 278. Variety Arts. (M) Fox.

This course examines a series of "variety arts" movements -- theatre in which striking visual and auditory elements are even more important than the traditional story and script. Topics generally include: Grand Guignol, the French "theatre of fear and terror," where shocking images are used to stimulate and frighten the audience; tableaux vivant, in which actors create stage pictures based on famous paintings and other visual icons; concert song and ballad, where performers interpret character and story through vocal means; American musical theatre, in which music and dance become the highest form of expression; German cabarets, where artists use a combination of song and text to create politically and culturally controversial theatre; contemporary performance art, a genre that mixes comedy, the visual arts, dance, music and text.; and more. The course also explores how these visual and auditory elements might be used by actors, directors, and designers to enhance and enrich our more traditional, text-based theatre.

SM 279. (ENGL256, GSOC279) Women in Theatre and Performance. (M) Malague.

Theatre began as a form that excluded women entirely. The plays of ancient Greece and Elizabethan England were written and performed only by men, beginning a long tradition of theatre that represented women only from male perspectives. Has that tradition been so dominant for so long that women's voices on stage are still a novelty? This course focuses on a wide range of plays and performances by and about women; the work we read (and view) will evidence artistic attempts to represent women's lives, experiences and perspectives on the stage. Among the issues encountered and examined in these works are the roles of love, sexuality, friendship, career,

community, marriage, motherhood, family, and feminism in women's lives - as well as the economic and political position(s) of women in society. The course will also offer contextual background on feminist theatre history, theory, and literature, as well as the diverse (and divergent) creative efforts of female artists to use live performance as a means of creating social and political change.

SM 290. (GRMN310, GSOC491, HIST491) Topics in Dance History. (C) Arts & Letters Sector. All Classes. Kant. This course, with different topics, may be repeated for credit.

Topics in Dance History examines the development of theatrical dance and performance through the ages. It offers several courses that look at the way in which new languages of the body were articulated. The changes of aesthetic values of movement and dance will be placed within their social development and examined through historical inquiry. Dance as a social activity that reflects and acts upon the societies in which it grows, is understood in a broad context. Therefore

students will work with writings, designs, videos and other material to understand the relationship between ideas and artistic expressions. Students will also be introduced to music, literature, theater and fine arts and asked to consider their relationship to dance. The courses range from analyses of 15th century dance treatises to 20th century movement performances.

SM 320. Scene Study. (A) Malague. Prerequisite(s): THAR 220.

Scene Study is the third level acting class, open by permission to those students who have successfully completed Introduction to Acting and Advanced Acting. Building on the work of those courses, Scene Study proceeds with an increased emphasis on the analysis and performance of the playscript. Students are given the opportunity to identify individual goals and to work on material which challenges them; they will also be encouraged to work from the circumstances of the text, to make strong character choices, and to interact in-the-moment with scene partner(s).

350. (ENGL256) Rehearsal and Performance. (C) Ferguson, Fox, Malague, Mazer and Schlatter.

Theatre Rehearsal and Performance provides students with deep intellectual and artistic immersion in the theatrical process through intensive research, rehearsal, and performance of a full-length stage piece. Students may enroll in this course as actors (by audition only) or as assistant directors, stage managers, dramaturgs, or designers (by permission of the instructor). Each semester, the play will be featured in the Theatre Arts Program production season; the class meeting times will vary, but will typically consist of 16-20 hours per week in the evening hours.

SM 485. (COML385, EALC255, FOLK485) Japanese Theatre. (C) Kano.

Japan has an enormously rich and varied theatrical tradition. In this course, we will examine Japanese theatre in historical and comparative contexts.

**URBAN DESIGN
(FA) {UDES}**

**723. (CPLN723, HSPV671) Law of
Planning and Urban Development.
(B) Pritchett/Wendell.**

Overview of the constitutional and legal principles framing planning and urban development.

**751. (CPLN767, URBS767) Theory
and Principles of Urban Design. (A)
Barnett.**

Introduction to the theoretical basis for beliefs and practices in city and environmental design, including the relation of the built environment to the natural environment, the organization of groups of buildings, the use and meaning of public places, and the relation of technology to land use and community.

**752. (ARCH752, CPLN760) Case
Studies in Urban Design. (B) Hack.**

Through three case studies and a final project this course explains several fundamentally different ways in which the urban design process is realized in this country: The campus as historical prototype and contemporary paradigm; the new community both modernist and neo-traditionalist; expansion/re-location of the CBD; and urban/suburban in-fill. Particular emphasis is placed on the roles of planning, historic preservation and landscape architecture in the practice of urban design.

URBAN STUDIES (AS) {URBS}

SM 010. (AFRC041, SOCI041) Homelessness and Urban Inequality. (A) Culhane.

This freshman seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation's history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.

SM 011. Crime and Punishment. (M) Schneider. Previously URBS 110.

How have definitions of crime and forms of punishment changed over time? What have been the uses and legacy of extra-legal violence? How have the forms of crime and punishment reflected the structure of American society? Using both historical and contemporary texts, this freshman seminar will explore these and other questions and in the process analyze the development of juvenile justice, the organization of corrections, the application of the death penalty, and the rise of the drug economy.

SM 012. The History and Politics of Space. (B) Schneider.

How do we understand the places in which we live? How do we "read" a city? What is the relationship between workplace and

home, downtown and suburb, inner city and gated communities, department store and mall, row house and ranch house? How are our lives defined by place, and how do we function as both the producers and products of place? The city is a social and a spatial system, and its organization both reflects and reproduces social categories of race, class, and gender. The current city is also the product of past decisions about where to locate communities and how to allocate resources. Through reading sociological, historical, theoretical, and primary texts, through studying maps and photographs, and through your ethnographic explorations, we will explore the presence of the past in the city around us, the evolution of different kinds of urban and suburban places, and the encoding of wealth and power as well as inequality and poverty in the urban landscape.

SM 103. (HIST209) Industrial Metropolis. (A) Vitiello.

Although most U.S. cities are no longer thought of as "industrial cities," metropolitan areas today are all products of industrial economies, technologies, and social systems. This course explores the ways in which industrialization and deindustrialization have shaped North American cities over the past two centuries. Major themes include economic geography, ecology, labor and production, suburbanization, outsourcing, energy, and cities' place in the world economy. The class will take regular walking tours of Philadelphia neighborhoods.

104. (HIST153) Urban Crisis: American Cities Since World War II. (B) Society Sector. All classes. Stern; Katz.

The course traces the economic, social, and political history of American cities after World War II. It focuses on how the economic problems of the industrial city were compounded by the racial conflicts of the 1950s and 1960s and the fiscal crises of the 1970s. The last part of the course examines the forces that led to the revitalization of cities in recent years.

SM 112. (AFRC011, SOCI011) Urban Sociology. (M) Staff.

This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories of urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization

and the process of urbanization in less developed countries.

121. (NELC103) The Origin & Culture of Cities. (A) History & Tradition Sector. All classes. Zettler. Previously URBS 101.

The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.

122. (ANTH107, SAST002) The City in South Asia. (C) Society Sector. All classes. Cunha.

This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia (India, Pakistan, Bangladesh, Sri Lanka, and Nepal) by focusing on significant South Asian cities. With one-fifth of the world population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research urban studies, architecture, political science, and history, as well as fiction and film. Cities of particular focus may include Bangalore, Chandigarh, Chennai, Colombo, Delhi, Dhaka, Hyderabad, Kathmandu, Karachi, Kolkata, Lahore, and Mumbai. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality and the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, cultural and linguistic identities, differences and violence in South Asia's urban environments.

L/R 136. (AFRC136, PSCI136) Urban Politics in the United States. (B)

Society Sector. All classes. Reed.

This course explores the political character of contemporary urban American life. It seeks to familiarize students with the structural and ideological factors (e.g., dynamics of political economy, race, ethnicity, pluralism and gender) that constrain the policy context and define the urban environment as a terrain for commingling, competition, and conflict over uses of space. It makes considerable use of case studies to throw into relief the complex and sometimes subtle processes that shape urban life.

SM 137. (PSCI139) Politics of Poverty and Development. (M) Humanities & Social Science Sector. Class of 2010 & beyond.

This academically based community service seminar will explore the ideas and theories, alliances and opposition that have shaped policy and organizing efforts addressed to the problems associated with urban poverty in the United States. There will be a special focus on the issues of increasing inequality, education, low wage work, health and nutrition, welfare reform and social security. Students will evaluate contemporary policy debates and programs in the light of selected case studies, readings, and their own experience working with community groups, institutions, and federal programs in West Philadelphia.

139. (ANTH139, NELC182) Ancient Civilizations of the World. (M) History & Tradition Sector. All classes. Zettler.

The archaeology of the complex societies of the Old and New Worlds from the end of the paleolithic up to and including the earliest civilizations.

L/R 160. (AFRC006, ASAM006, SOCI006) Race & Ethnic Relations. (C) Charles, Kao, Zuberi. Previously URBS 214.

The course will examine how social networks, neighborhood context, culture, and notions of race affect inequality and ethnic relations. The course reviews the studies of ethnic entrepreneurship, urban segregation, labor force participation, and assimilation processes. The course emphasizes how inequality affects ethnic relations as well as the economic and social integration of different groups in society.

SM 178. (AFRC078) Urban-University Community Relations: Faculty-Student Collaborative Action Seminar. (C) Harkavy. previously URBS 078; Benjamin Franklin Seminar.

One of the seminar's aims is to help students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom and in the West Philadelphia community. Students work as members of research teams to help solve universal problems (e.g., poverty, poor schooling, inadequate health care, etc.) as they are manifested in Penn's local geographic community of West Philadelphia. The seminar currently focuses on improving education, specifically college and career readiness and pathways. Specifically, students focus their problem-solving research at Sayre High School in West Philadelphia, which functions as the real-world site for the seminar's activities. Students are typically engaged in academically based service-learning at the Sayre School, primarily on Mondays from 3 to 5. Other arrangements can be made at the school if needed. Another goal of the seminar is to help students develop proposals as to how a Penn undergraduate education might better empower students to produce, rather than simply "consume," societally useful knowledge, as well as function as life-long societally useful citizens.

SM 200. Urban Research Methods. (C) Goldstein; Stern. Fulfills Quantitative Data Analysis Requirement.

This course will examine different ways of undertaking urban research. The goal will be to link substantive research questions to appropriate research methods. Micro-computer based quantitative methods, demographic techniques, and ethnographic approaches will be the primary foci of the course. In addition to classroom assignments, students will have the opportunity to undertake their own research involving micro-based statistical analysis of data files which address relevant and timely public policy issues.

SM 202. (EDUC202) Urban Education. (C) Staff.

This course is an introduction to many of the key issues confronting urban public schools in America. We will examine some of the historical, social, and cultural contexts of urban education, as well as look at issues and events directly affecting the Philadelphia public schools. This class will enable students to gain a multifaceted understanding of urban education through the integration of direct observation and participation in Philadelphia public schools

with class readings and discussions. We will also examine and critique recent reforms and policies, which have been designed to remedy the urban public school "crisis." This course will enable students to gain a critical framework for perceiving urban education as they develop a sensitive understanding of the complex issues confronting urban schools.

SM 203. Introduction to City Planning: Planning Urban Spaces. (L) Gorostiza.

This course will provide a general introduction to the concepts and practice of city planning. Topics to be discussed include: the process and nature of planning - theories, methods and roles as manifested in practice; history and trends in city planning; functional planning practice; planning within constraints--a field project; planning in the international arena; present crisis in planning.

204. Urban Law. (A) Keene.

This course will focus on selected aspects of urban law that are particularly relevant to areas of high population density. After an introduction to the American judicial system it will examine the governance of urban areas (state and local government law) and the management of urban growth (land use controls and other techniques for regulating new development).

SM 205. Introduction to Environmental Design: People and Design. (B) Berman.

The built environment of a city is more than a mere backdrop; the design can affect people's experiences. Environmental design focuses on the relationship between people and the built environment. It also looks at how the built environment interacts with the natural one. This course will allow students to gain a deeper understanding of how people create, perceive, and use the designed environment. We'll approach these concepts by analyzing design at a variety of scales, from products to interior design to architecture. Finally, using that knowledge, we'll conclude by analyzing urban spaces of the city.

SM 206. (CPLN672, URBS506) Public Environment of Cities: An Introduction to the Urban Landscape. (B) Nairn.

The Public Environment of Cities explores urbanism - the study of the environmental, political, economic, socio-cultural, historical, and aesthetic conditions affecting urban life and culture. At the heart of urbanism is our public environment

- the parks, squares, and sidewalks in and upon which our public life is played out. The course will explore the city through the examination of three broad themes: Democracy, Diversity, and Design. We examine in detail how contemporary issues affect our perceptions, use, and inhabitation of the public environment and how the open spaces of the city provide frameworks for the daily social life and commerce as well as the important ceremonies, celebrations, and festivities of its inhabitants.

SM 210. (HIST210) The City. (B)
Humanities & Social Science Sector. Class of 2010 & beyond. Staff. Also fulfills General Requirement in Society for Class of 2009 and prior.

This course is an introduction to major forces that shape urban life in the United States from the eighteenth century to the present, with a focus on Philadelphia. Through weekly assignments and discussions, students will examine the physical formation and historical development of cities and learn to "read" the sociological and geographic organization of the contemporary city. Prominent themes include urban growth, decline, and restructuring; the ecological bases of urban life; race, class, and gender relations in urban space; and the formation and re-formation of neighborhoods, downtowns, and suburbs.

212. (COML110, HIST246, THAR110) Theatre, History, Culture I: Classical Athens to Elizabethan London. (M)
Arts & Letters Sector. All Classes. Schlatter.

This course will explore the forms of public performance - most specifically theatre - as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their anthropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on the development of theatre practice in both Western and non-Western cultures intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions, and acting methods, this course will investigate, where appropriate, social and political history, the arts, civic ceremonies and the dramaturgic structures of urban living.

215. (ASAM150) ETH ECON & GLOBALIZATION. (M)

SM 220. (HIST214) Current Topics in Urban Studies. (M) Staff.

Topics vary; see department for current course description.

SM 226. (FNAR226, FNAR626) The Photography of Urban Space. (A)

Staff. Prerequisite(s): FNAR 271 or permission of the instructor.

This is a non-studio course in the photography of buildings, streetscapes, and cities. It is designed for photographers interested in the built environment as subject matter, as well as for architecture and planning students. We will hone practical skills in perspective control, lighting, and photographic interpretation of space, so that photographers, architects, and planners can better photograph precedents and their own projects, and better evaluate the use of professional architectural photography for promotion and education.

SM 235. (ARTH305, CINE305) Film and the City. (M) Charney.

Romance and sex. Paranoia and violence. Energy and fun. Cynicism and danger. Every emotion, every social upheaval, every class, racial, and sexual struggle of three centuries has been channeled, by now, through the city on film. In fact, cities and cinema were partners from the start. Early films first emerged from 19th century Paris and other world capitals (New York, Berlin, Paris, Moscow), which figured prominently in cinema's early years. Since then, cities have been regularly at the center of major films and film movements - gangster movies in the 1930s; film noir in the 1940s; MGM musicals in the 1950s; French New Wave in the 1960s; Woody Allen and Martin Scorsese in the 1970s; Stephen Frears, Hanif Kureishi, Spike Lee, and Mike Leigh in the 1980s; and DIY, indie, and "mumblecore" movements today.

This special, one-time-only course, offered as part of Penn's Arts & The City Year, will examine both cities and cinema, including a wide range of movies, from all different countries and periods; theories and histories of urban planning and urban experience (from the Frankfurt School to Richard Florida) and film culture, resources, and events in Philadelphia, New York, and elsewhere.

All students will make a short film in Philadelphia as a final class project. Other required work will include screenings, readings, class participation, and writing assignments.

236. (ANTH236, NELC241) Mesopotamia: Heartland of Cities and Empires. (M) Zettler.

This course surveys the cultural traditions of ancient Mesopotamia, the land between the Tigris and Euphrates Rivers, a region commonly dubbed "cradle of civilization" or "heartland of cities," from an archaeological perspective. It will investigate the emergence of sedentism and agriculture; early villages and increasingly complex Neolithic and Chalcolithic cultures; the evolution of urban, literate societies in the late 4th millennium; the city-states and incipient supra-regional polities of the third and second millennium; the gradual emergence of the Assyrian and Babylonian "world empires," well-known from historical books of the Bible, in the first millennium; and the cultural mix of Mesopotamia under the successive domination of Greeks, Persians and Arabs. The course seeks to foster an appreciation of the rich cultural heritage of ancient Mesopotamia, an understanding of cultural continuities in the Middle East and a sense of the ancient Near Eastern underpinnings of western civilization. No Prerequisite.

L/R 237. (GRMN237) Berlin: History, Politics, Culture. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Weissberg. All readings and lectures in English.

What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koeln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, its transformation into an industrial city in the late nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin. Indeed, Berlin will be a specific example to explore German history and cultural life of the last 300 years.

The course will be interdisciplinary with the fields of German Studies, history, history of art, and urban studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

240. (EDUC240) Education in American Culture. (A) Staff.

This course explores the relationships between forms of cultural production and transmission (schooling, family and community socialization, peer group subcultures and media representations) and relations of inequality in American society. Working with a broad definition of "education" as varied forms of social learning, we will concentrate particularly on the cultural processes that produce as well as potentially transform class, race, ethnic and gender differences and identities. From this vantage point, we will then consider the role that schools can and/or should play in challenging inequalities in America.

L/R 244. (COML254, GRMN244) Metropolis: Culture of the City. (M) Arts & Letters Sector. All Classes. Macleod. All lectures and readings in English.

An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by Dickens, Poe, Baudelaire, Rilke, Doebelin, Marx, Engels, Benjamin, Kracauer, among others. Films include Fritz Lang's *Metropolis* and Tom Tykwer's *Run Lola Run*.

SM 245. (ANTH253, EDUC245) Topics in Urban Education. (M) Staff.

Topics vary; contact department for current course offering

SM 250. Urban Public Policy: Contemporary Philadelphia: A Case Study. (B) Hershberg.

An introduction to a broad range of substantive policy areas affecting the city and an exploration into the complexities of policy formulation and implementation in a large and pluralistic metropolitan setting. The course subtitle, "Contemporary Philadelphia: A Case Study," describes our approach.

SM 252. Urban Journalism. (B) Rubin.

This course will examine the state of urban journalism today with special emphasis on how large newspapers are redefining themselves, and the news, in an era of dwindling readership and growing financial pressures. The course will look at online journalism, ethics, and alternative sources of news, and will explore the techniques journalists use in reporting the news. Students will report and write four pieces of their own about Philadelphia and its environs. The course is taught by Dan Rubin, metro columnist and former foreign correspondent for the Philadelphia Inquirer.

The course is taught by Dan Rubin, metro columnist and former foreign correspondent for the Philadelphia Inquirer.

SM 253. (SOC1254) Cities, Suburbs, and Their Regions. (J) Black.

This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows and develops. Specific topics to be discussed include the factors that make a region competitive, the city's changing role in the region, evolving regional housing markets, and the impacts of the recent global financial crisis on American markets, regions, institutions, and neighborhoods.

SM 255. (AFRC255, HIST255) Urban Neighborhoods. (L) Staff.

The last several decades have witnessed a dramatic acceleration in the interconnection of cities around the world. The globalization of the economy, the spread of communications technology, major migrations between urban locations, increasing disparities between rich and poor, the dramatic growth of the "culture industries", and the increasingly popular quest for "place making" through urban design have all contributed to this process.

This course will examine urban neighborhoods in the United States and elsewhere in the world. In particular, class readings and discussions will explore the wide range of ways (political, social, cultural; organized and informal) that individuals and institutions in urban neighborhoods have reacted to global transformations and what effects and consequences those reactions have precipitated.

SM 259. Understanding the Post Industrial City: Media City - New Lifestyles, New Forms. (B) Thomas, Snyder. Previously URBS 429.

Urban lifestyles have a reciprocal relationship with urban form. While lifestyle might have been once determined by the circumstances of birth, limited horizons, and a hierarchical society, today social and physical mobility combined with increasing affluence makes lifestyle yet another choice in the construction of a modern identity. Lifestyle choices have become an engine of urban growth and are instrumental in the transformation of urban life and form of the city.

SM 260. (EALC141, HIST233) World Cities. (M) Staff.

Topics vary; the title for fall 2009 is *Cities in Chinese History*. This seminar will study the development of Chinese cities over the past two millennia with respect to their spatial structure, social constitution, economic system, political functions, and cultural representation (including cityscape paintings, maps and films). As China transitioned from a collection of city-states to a united empire to nation state, Chinese urbanism underwent transformation as drastic as those of the country itself. Cities, which serve as a critical mechanism for the operation of a vast agrarian empire/nation like China, offer a unique vantage point for us to observe and analyze the continuities and discontinuities between dynastic empires as well as the radical transition from empire to modern nation state.

Topics include the city-state system in ancient China, the creation and evolution of imperial capitals, the medieval urban revolution and the subsequent collapse of classic city plans, the development of urban public sphere/public space in late imperial China, the rise of commercial power in urban politics, the negotiation of urban class and gender relations via cultural consumption, the role of cities in the building of a modern Chinese nation state, the anti-city experiment under the communist regime, urban citizenship in the reform era, as well as the expanding urbanization and shifting urbanism of Greater China as reflected in cinematic representation of Shanghai, Hong Kong and Taipei.

SM 264. (SOC1264) Poverty, Race, and Health. (M) Elo.

This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner

city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions. We will meet only once a week. It is important that students attend seminars regularly and actively participate in class discussions. There are four short assignments designed around the topics covered in class and students will be required to present data/information, pose questions, and lead class discussions as appropriate for each topic. There will be one in-class exam towards the end of the course. In addition, students are required to write a research paper (12-15 pages), which will consist of a health profile of a race/ethnic group of a student's choice and its possible explanations. There are no prerequisites, although a prior sociology course and familiarity with a spreadsheet program would be useful.

265. (GSOC007, SOCI007) Population and Society. (C) Society Sector. All classes. Flippen; Harknett; Kohler; Zuberi. The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political implications of current trends, including population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.

SM 270. (AFRC272, CPLN676, SOCI270, URBS670) Ethnicity: The Immigrant City. (B) Society Sector. All classes. Vitiello.

Immigration is a controversial issue, dividing Americans from Congress to big cities to small towns. What's at stake in these debates? What does immigration mean for cities and regions? And what roles should policy makers, planners, and community organizations play in shaping migration and its impacts? This course examines these questions in the context of immigrant, refugee, and receiving communities in the United States. It surveys public policy and community and economic development practices related to migration, at the local, regional, and transnational scale. Class readings, discussions,

and regular visits to a variety of Philadelphia's immigrant neighborhoods explore themes including labor markets, political mobilization, social and cultural policy, and the built environment.

The first half of the course surveys migration and community development among a broad range of ethnic groups in different parts of the city and suburbs; the second half focuses on specific policy and development initiatives. Assignments include an opportunity to work with immigrant-serving organizations.

SM 272. Architecture, Location, and Class in Philadelphia, 1780-1930. (A) Thomas.

This course studies the architecture of Philadelphia from the perspectives of aesthetic and social history. Relationships between architectural patronage, design and location, and community values will be examined and their implications for understanding the built environment will be analyzed.

SM 273. (AFRC145, ENGL145) Current Topics in Urban Literature. (M) Staff.

Topics vary. The current topic is "Writing in Concert." The class comprises two parts: teaching a common text and writing about the experience using memoir, reportage, and criticism. Students will learn the common text in close reading, discussion, and preliminary essay exercises. The idea is to develop an intimate relationship with a text, learn about yourself as a writer from your responses to it, and then, by creating a mini-course syllabus with lesson plans, learn how to help readers at different stages in life and literacy find their own ways to enter the text. Learning the work takes three to four weeks; teaching requires four to six, with some overlap. Students teach in several urban learning sites, each with its own challenges and charisma: high school English classes, a church-based book group, adult education centers, a recovery house, and homeless shelters. In April, students attend a reading by Sonia Sanchez at Art Sanctuary, a North Philadelphia arts organization at the Church of the Advocate.

SM 290. Metropolitan Nature: Urban Sustainability. (A) Nairn.

Metropolitan Nature begins with the premise that in order to understand the complex and skewed relationship between nature and its natural resource base, we must examine different scales simultaneously. The course explores a variety of issues concerning nature's role in the contemporary urban world with a focus on urban sustainability. At its core,

sustainability is a radical concept. Co-opted by marketing slogans, stripped of meaning and context, it has become vague and pliable. It does, however, have a real meaning, which will form the basis for examining nature in the city. Sustainability demands a systems view of both the economy and environment and understanding the management of their interactions. The course focuses on the ecological aspects of the emerging field of ecological economics fostering an understanding of the ecological principles of urban sustainability.

SM 300. Fieldwork Seminar. (B) Staff. Urban Studies majors and minors only.

Students work 15-20 hours per week in field placement and meet weekly with class and instructors. The class is intended to help students reflect from a variety of perspectives on the work that they are doing in their placement organizations. The class format is primarily discussion. Students are required to complete assigned readings, prepare written and oral presentations, and submit a final project.

SM 312. (ANTH312, HSOC321) Health in Urban Communities. (A) Johnston.

This course will introduce students to anthropological approaches to health and to theories of participatory action research. This combined theoretical perspective will then be put into practice using West Philadelphia community schools as a case study. Students will become involved in design and implementation of health-related projects at an urban elementary or middle school. As one of the course requirements, students will be expected to produce a detailed research proposal for future implementation.

320. (GAFL710, PSCI320) Who Gets Elected and Why: The Science of Politics. (A) Rendell.

Course participants will study the stages and strategies in running for public office and discuss the role of various influences on getting elected, including campaign finance and fundraising, demographics, polling, the media, staffing, economics, party organization, etc. The course will also examine how electoral politics varies by level- city, state, national. Students will analyze campaign case studies and the career of the instructor himself. The instructor will also bring in speakers who can provide other perspectives on electoral politics. The instructor is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and the current Governor of Pennsylvania.

322. (FNAR222, FNAR622) The Big Picture: Mural Arts in Philadelphia. (C) Golden/Walinsky/Gensler. Previously URBS 222.

The history and practice of the contemporary mural movement couples step-by-step analysis of the process of designing with painting a mural. In addition, students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The instructor, Jane Golden, is the founder and Director of the Philadelphia Mural Arts Program.

SM 323. (EDUC323) Tutoring in Urban Public Schools: Theory and Practice. (A) Staff.

This course represents an opportunity for undergraduate students to participate in academically based community service involving tutoring in a West Philadelphia public school. This course will serve a need for those students who are already tutoring through the West Philadelphia Tutoring Project or other campus tutoring, and it will also be available to individuals who are interested in tutoring for the first time.

SM 326. (EDUC326) Tutoring in Urban Public Elementary Schools: A Child Development Perspective. (B) Fantuzzo.

The course provides an opportunity for undergraduate students to participate in academically based community service learning. Student will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active

consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.

SM 327. (EDUC410) Topics in Academically Based Community Service: Schools and Community Development. (C) Puckett/Simon. First class meeting is January 14 from 12:30-3:30 in McNeil 130. Subsequent classes will meet at West Philadelphia High School; transportation will be provided.

The current course is "Schools and Community Development: A Collaboration with West Philadelphia High School Urban Leadership Academy." This seminar engages Penn undergraduates with West Philadelphia High School teachers and students to assist in planning an urban studies academy at both the existing and the proposed new high school. This planning includes developing curricular activities, mapping institutional resources to support curriculum development, and designing school-based public-works projects.

First class meeting is January 14 from 12:30-3:30 in McNeil 130. Subsequent classes will meet at West Philadelphia High School; transportation will be provided.

SM 330. (URBS530) GIS Applications in Social Science. (A) Hillier. Previously URBS 230; Fulfills the Qualitative Data Analysis Requirement.

This course will introduce students to the principles behind Geographic Information Science and applications of (GIS) in the social sciences. Examples of GIS applications in social services, public health, criminology, real estate, environmental justice, education, history, and urban studies will be used to illustrate how GIS integrates, displays, and facilitates analysis of spatial data through maps and descriptive statistics. Students will learn to create data sets through primary and secondary data collection, map their own data, and create maps to answer research questions. The course will consist of a combination of lecture and lab.

L/R 367. (HIST367, SOCI367) Philadelphia, 1700-2000. (M) Sugrue.

Using Philadelphia as a lens, this course will examine the transformation of American cities from the colonial period to the present. Through readings, lectures, and tours, we will consider urbanization and suburbanization, race, class, and ethnicity, economic development, poverty and inequality, housing and neighborhood

change, urban institutions, and politics and public policy.

SM 390. Urban Agriculture. (L) Nairn.

Urban Agriculture is a growing global trend. This course examines urban agriculture as an issue of sustainability, social justice, public health, and vacant land. It explores the potential of urban agriculture in both the Global North and South to provide a safe and secure source of food to city residents. Major topics include sustainable agricultural practices, operational and spatial requirements, distribution systems, and access to fresh food. Using Philadelphia as a laboratory, the course explores its robust agricultural scene of community gardens, guerilla gardens, and entrepreneurial farms, as well as its distribution system including programs such as City Harvest, the emerging Common Market, and established farmers' markets. The course will integrate lectures about sustainable agricultural practices with field trips to and hands-on work at community gardens and farms.

SM 400. Senior Seminar. (A) Schneider/Simon. Prerequisite(s): URBS 200; URBS 300.

Senior research project.

SM 403. (CPLN506, ENGL429, GAFL472, SOCI430, SOCI530) Special Topics in Urban Studies. (M) Staff.

Topics vary each semester; The current title is The Social Life of Urban Spaces. The purpose of this ABCS course is to examine everyday behavior and public life in the urban environment, with a particular emphasis on understanding face-to-face social interactions among members of the University of Pennsylvania community and local neighborhood residents. Through assigned readings, intensive classroom discussions, and numerous fieldwork projects, students will explore a range of relevant topics: the uses of small urban spaces, including sidewalks, parks, plazas, and commercial hangouts; local security strategies and the role of the police; and the daily rounds of nightshift workers, the homeless, and the working poor. In addition, students will conduct several hours per week of service work at the Foundation at the Rotunda, a local nonprofit community arts and performance space that aims to facilitate the growth of meaningful partnerships between the University and the surrounding West Philadelphia community.

SM 404. Philanthropy & The City. (A) Goldman/Bauer.

This course will focus on how cities are shaped by the nonprofit sector and the philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on two important questions: (1) Whose responsibility is the public good? and (2) Given that responsibility for the public good in which individuals and groups make the decisions about how to serve the public good, how are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary nonprofit sector.

SM 405. (AFRC405, HIST405, RELS439) Religion, Social Justice and Urban Development. (B) Lamas.

Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, and Humanism have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of urban development.

SM 409. (ANTH305, ANTH609) Anthropology and Policy: History, Theory, Practice. (B) Sabloff.

From the inception of the discipline, anthropologists have applied their ethnographic and theoretical knowledge to policy issues concerning the alleviation of practical human problems. This approach has not only benefited peoples in need, but it has also enriched the discipline, providing anthropologists with the opportunity to develop new theories and methodologies from a problem-centered approach. This class will examine the connection between anthropology and policy, theory and practice (or "praxis"), research, and application. We will study these connections by reading about historical and current projects. As an academically based research course,

students will also volunteer in a volunteer organization of their choice in the Philadelphia area, conduct anthropological research on the organization, and suggest ways that the anthropological approach might support the efforts of the organization.

SM 410. (FNAR201, SWRK510, URBS510) Urban Communities and the Arts: Research & Policy. (M)

Stern. This course may not be counted as a required studio course for Fine Arts major and minor.

This course will explore methods for examining the role that arts and cultural activities play in urban communities and its implications for urban policy. The course will focus on: 1) examining theories of culture's social impact and how they might be used to formulate research; 2) methods for conducting research on arts and culture; and 3) how cultural research is relevant for various spheres of urban policy, including community development, urban economies, and the needs of children and youth. The major project for the course will require students to collaborate with community resources in studying the connection of theory, research, and policy.

412. Building Non-Profits from the Ground Up. (L) Guard, Gehrig.

This course, taught by The Philadelphia Award winner (2005), will cover the basic elements of building and growing a non-profit organization, including the development of the mission and the board; needs assessment, program design, development, and management; financial management, contract compliance and understanding an audit; fundraising, public, foundation, corporate, and individual; communication and marketing; organizational administration (including staff and volunteer selection, management and development); public policy, research and advocacy. Students will engage in field assignments and role play, in addition to research and writing.

SM 415. Urban Real Estate Markets. (B) Kozloff.

Cities evolve over time, comprised of various inputs of different sizes at different sizes at different stages of urban evolution. However, as cities continue to densify and navigate real estate market cycles, opportunities to redefine the urban context, while promoting the individual brand, become ever more sensitive. Projects are getting increasingly complex, often involving multiple partnerships among private developers, public agencies, non-profits, and community groups. Today's

development professionals need to be well-versed across a variety of disciplines and property types to effectively execute in an urban environment. As such, this course will provide the underpinnings for critical decision-making in markets that change frequently and often unevenly - whether for financing, investing, development, public policy formulation, or asset management/disposition.

416. (CPLN621) Metropolitan Food Systems. (M) Vitiello. Prerequisite(s):

Undergraduates must have some background working in planning and community development and/or food systems.

This course introduces students to the planning and development of metropolitan food systems. Major topics include regional planning and policy, sustainable agriculture, food access and distribution, and markets. The class includes a mix of lectures, discussion, and field trips; students will work on real-world projects in Philadelphia. Ultimately, the course aims to develop students' broad knowledge of food systems planning in the global North and South, with an emphasis on community and economic development strategies for sustainable food systems and food security.

The course is divided into four units, covering: 1) an introduction to food systems (industrial, organic, local), related ecological theory, and traditional planning institutions' roles in shaping food systems; 2) community food security, hunger, and related public policy; 3) community and economic development strategies and techniques for promoting local food economies and community food security; and 4) sustainable agriculture and food distribution systems at the site, neighborhood, and city scale.

For undergraduates, this course is by permission of instructor only. Students interested in taking the course should ideally have some background working in planning and community development and/or food systems. Undergraduates must submit a one-paragraph statement explaining their preparation and interest in the topic by January 12 to urbs@sas.upenn.edu. Students will be notified of enrollment by the first class meeting in January.

SM 420. (SOCI420) Perspectives on Urban Poverty. (C) Staff.

This course provides an interdisciplinary introduction to various perspectives and philosophies that have dominated the discourse on urban poverty throughout history. The course is primarily concerned with the ways in which historical, cultural,

political, racial, social, geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing knowledge systems and their respective implications in terms of the questions of what can be known about urban poverty in the contexts of policy circles, academic literature, and the broader social imaginary. We will critically analyze a wide body of literature seeking to theorize urban poverty, ranging from sociological, anthropological/ethnographic, geographical, Marxist, historical, social welfare, and cultural analyses. Primacy will be granted to critical analysis of course readings, particularly with regard to the ways in which various knowledge systems - or "regimes of truth" - create, sustain, and constrict meaning in reference to urban poverty.

SM 428. (CPLN528) Research Seminar in 21st Century Urbanism. (B)

A seminar run in conjunction with the Institute for Urban Research at Penn, students will learn about the range of cutting-edge topics in urbanism that Penn faculty are working on and work closely with a faculty member on current research. Students will learn about new topics and methods in interdisciplinary urban research, and get first hand experience collecting urban data under the close supervision of an experienced researcher. Students and faculty jointly will present their findings for discussion. This course is a good introduction for how to frame and conduct an urban research project.

L/R 440. (CPLN500) Introduction to City Planning: Past, Present, and Future. (A) Staff.

Orientation to the profession, tracing the evolution of city and regional planning from its late nineteenth century roots to its twentieth century expression. Field trips included.

SM 448. (AFRC448) Neighborhood Displacement and Community Power. (B) Palmer.

This course uses the history of black displacement to examine community power and advocacy. It examines the methods of advocacy (e.g. case, class, and legislative) and political action through which community activists can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative roles in the group advocacy, lobbying,

public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action. Case studies of neighborhood displacement serve as central means of examining course topics.

SM 450. Urban Redevelopment. (B) Gorostiza.

This course is designed to acquaint students with the fundamental skills and techniques of real estate property development. It is designed as a first course for anyone interested in how to be a developer, and as a foundation for further courses in urban development and real estate.

451. (GAFI569) The Politics of Housing & Community Development. (A) Kromer.

This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban downtowns and neighborhoods. A special emphasis this year will be the Obama Administration's response to the foreclosure crisis and the implementation of neighborhood reinvestment strategies by state and local governments.

SM 452. Community Economic Development. (A) Lamas.

Community economic development concerns the revitalization of impoverished communities. As with all things economic, poor and working people may be the subjects or the objects of development. We will utilize case studies from Philadelphia and around the world in an exploration of various models of economic justice and sustainable development.

SM 453. (CPLN545, SOCI453, URBS543) Metropolitan Growth & Urban Poverty. (M) Madden.

This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how metropolitan change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.

SM 454. (CPLN559, SWRK712, URBS554) City Limits: The Impact of Urban Policy. (B) Goldstein, Stern.

Prerequisite(s): Student must have taken an introduction to research methods course.

This course assesses the changing role of public policy in American cities. In the past, government often believed that it could direct urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - 'player' in a more complete, transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens.

This seminar uses a case-study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region, including Philadelphia's Neighborhood Transformations Initiative and New Jersey's Camden Revitalization plans.

SM 456. Economics & Urban Affairs. (A) Angelides.

This course discusses contemporary urban issues from an economics perspective, with the dual goal of illuminating the economic foundations of civic affairs and enhancing a student's economic literacy through the use of everyday examples. The first part of the course discusses the broad theory of urban economics by focusing on individual decision makers, both households and businesses, and the incentives they face as the key to understanding how cities operate economically. Significant topics include economic development, zoning, and land use. The second part of the course discusses several topics in detail, including transportation, government taxation and

spending, housing, education, and cost-benefit analysis.

We will use current local issues as examples in the course. These issues will include tax reform, the development of the Delaware riverfront, casino locations, the ten-year tax abatements for new construction and rehabilitation, the real estate "bubble," and tax increment financing. At the conclusion of the course the student will be able to apply economic thinking to the analysis of civic issues, understand how economic forces shaped and continue to shape the urban environment, and appreciate the role of government as an enabler or a hindrance.

The emphasis of the course is on the usefulness of economic thought and, as such, focuses more on policy implications than abstract economic modeling. The course will teach any necessary economic tools, though an introductory course in microeconomics is helpful.

SM 457. (SOCI435) Globalization and Comparative Urban Development. (M) Von Mahs; Hill.

This seminar title varies depending on which term it is being offered. The title in the summer term is "Globalization and the Welfare State." During the academic year, the title is "Globalization and the City." Check the Urban Studies program for corresponding descriptions.

SM 460. (AFRC460, EDUC545, URBS560) School Reform and Public Policy. (A)

This course will examine how changes in the global economy require America's schools to educate all students to new and demanding standards, and will review the arguments why the current school system, designed for a different economy and a different century, must be fundamentally reorganized if the nation is to succeed in meeting its human capital development challenge. Topics covered will include school funding and governance, the precedent-breaking federal legislation, No Child Left Behind, and charter schools and the voucher movement. Students can effect real-world change through research designed to elaborate the comprehensive school-reform model developed at Penn's Operation Public Education, which is now being piloted in some of the nation's schools.

SM 463. (ENVS463, URBS663) Brownfield Remediation: The Historical, Scientific, and Policy Dimensions of "Brownfields" in Old Industrial Cities. (M) Keene.

This course gives an overview of the genesis of the so-called "Brownfield" problem and of the various efforts that our society is taking to try to solve, or at least ameliorate it. The course will place the "Brownfield" problem in the broader context of the growth and decline of industrial base cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by federal and state governments to address remediation and redevelopment of abandoned industrial sites. In addition, the course will explore environmental equity issues.

SM 467. (CPLN467) Global Cities in the 21st Century. (B) Birch.

A survey of worldwide urbanization, focusing on development disparities among cities in the Global North and Global South and within each area, with special attention to the provision of housing, basic infrastructure (water, sanitation, transportation) and social and health services.

SM 472. (AFRC472) Race and the City: The Origins & Prospects of the Black Underclass. (M) Hershberg.

This course focuses on the origins and prospects of the black underclass and the competing public policies proposed to bring this group into the economic mainstream. The course is particularly concerned with understanding the separate effects on the underclass of racial discrimination and recent structural changes in the economy, transportation, and housing, which have shaped central cities and their regions.

SM 473. (SOCI473) Community Organizing: History and Theory. (M) Staff.

Power is an ability to create change. Without access to power that might otherwise come from political, financial or personal networks, community organizing can often serve as the only viable source of power for the oppressed. Although organizing became a partisan buzzword during the 2008 presidential campaign, it is firmly rooted in the democratic tradition. Organizing campaigns have played a central role in US history, most notably as

the foundation of the Civil Rights movement. This course will integrate the history and theories of community organizing so that each student will have the foundation to develop a transformational praxis to create change in their own communities. Focused analysis of the course material, case study reviews, guest speaker presentations, inquiry-based assessments and problem-posing methods rooted in the student's own context will serve as the primary means of development.

SM 480. (AFRC480) Liberation and Ownership. (A) Lamas.

Who is going to own what we all have a part in creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about the ties that bind and those that separate, the creation of community and the imposition of hierarchies, the dream of home ownership and ecological despoliation, dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, and economic injustice, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives, and by focusing on particular global sites, students will assess and refine their views regarding ownership in light of their own social, political, religious, and/or ethical commitments.

SM 489. (AFRC488, AFST489, HIST489) Africans Abroad: Philadelphia's Muslim African Immigrants. (M) Cassanelli, Babou, Dinar.

This seminar will examine the experiences of recent Muslim emigrants and refugees from Africa, focusing on those now living in the city of Philadelphia and the surrounding region. In addition to reading historical and comparative literature on migration, ethnic diasporas, and transnationalism, students will have the opportunity to conduct research on specific African communities in Philadelphia and possibly other cities in our region. African emigres' relations with both their home and host societies will be explored and compared with the experience of other immigrant groups, both Muslim and non-Muslim, over the past century. Topics include reasons for leaving Africa, patterns of economic and educational adaptation abroad, changes in gender and generational roles, issues of cultural and religious identity, and the impact of national immigration policies. Students will have the opportunity to help create an archive of

Muslim immigrant literature and music and to contribute to a documentary video, with support from a grant from the SSRC's "Academia in the Public Sphere" Program.

SM 506. (CPLN672, URBS206) Advanced Topics in Urban Studies. (M) Staff.

Urban Studies offers various seminars under this course number. These courses explore current urban issues.

SM 510. (FNAR201, SWRK510, URBS410) Urban Communities & The Arts. (M) Stern.

This course will explore methods for examining the role that arts and cultural activities play in urban communities and its implications for urban policy. The course will focus on: 1) examining theories of culture's social impact and how they might be used to formulate research; 2) methods for conducting research on arts and culture; and 3) how cultural research is relevant for various spheres of urban policy, including community development, urban economies, and the needs of children and youth. The major project for the course will require students to collaborate with community resources in studying the connection of theory, research, and policy.

SM 516. (ANTH516) Public Interest Workshop. (A) Sanday.

This is an interdisciplinary workshop sponsored by Peggy Reeves Sanday (Dept. of Anthropology) with guest speakers from Communication Studies and other fields. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann's call for interdisciplinary cooperation across the University and to the Dept. of Anthropology's commitment to developing public-interest research and practice as a disciplinary theme. The workshop will be run as an open interdisciplinary forum on framing a public-interest social science that ties theory and action. Students are encouraged to apply the framing model to a public-interest research and action topic of their choice. Examples of public interest topics to be discussed in class and through outside speakers include the meaning of "public interest," the ways in which the public interest is/is not addressed in the academy, and the relationship between studying the public interest and promoting social justice. This is an academically based community-service (ABCS) course.

SM 530. (URBS330) GIS Applications in Social Science. (A) Hillier.

This course will introduce students to the principles behind Geographic Information

Science and applications of (GIS) in the social sciences. Examples of GIS applications in social services, public health, criminology, real estate, environmental justice, education, history, and urban studies will be used to illustrate how GIS integrates, displays, and facilitates analysis of spatial data through maps and descriptive statistics. Students will learn to create data sets, through primary and secondary data collection, map their own data, and create maps to answer research questions. The course will consist of a combination of lecture and lab.

547. (ANTH547, EDUC547) Anthropology & Education. (C) Lukose, Hall.

An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.

SM 553. (SOC1553) Field Methods in Qualitative Research. (E) Grazian.

This course is designed to introduce graduate students to basic concepts and skills in ethnographic field research in the social sciences, including participant observation, interviewing, field documentation, and the scholarly presentation of qualitative data. Students will learn to apply these concepts and skills through a regularly assigned set of field exercises, and will be expected to complete a semester-long project based on intensive fieldwork at a research site of their choosing. In addition, we will examine both classic and contemporary exemplars of fieldwork in the sociological discipline, and address contemporary issues in ethnographic research, including the role of global and comparative ethnography, reflexivity, and self-presentation in ethnographic writing, and the role of culture in organizing social life in both urban and institutional settings.

SM 554. (CPLN559, SWRK712, URBS454) City Limits: The Impact of Urban Policy. (B) Goldstein, Stern.

Prerequisite(s): Student must have taken a research methods course.

This course assesses the changing role of public policy in American cities. In the past, government often believed that it could direct urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - 'player' in a more complete,

transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens.

This seminar uses a case study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region - including Philadelphia's Neighborhood Transformations Initiative and New Jersey's Camden Revitalization plans.

SM 560. (URBS460) School Reform and Public Policy. (A) Hershberg.

This course will examine how changes in the global economy require America's schools to educate all students to new and demanding standards, and will review the arguments why the current school system, designed for a different economy and a different century, must be fundamentally reorganized if the nation is to succeed in meeting its human capital development challenge. Topics covered will include school funding and governance, the precedent-breaking federal legislation, No Child Left Behind, and charter schools and the voucher movement. Students can effect real-world change through research designed to elaborate the comprehensive school-reform model developed at Penn's Operation Public Education, which is now being piloted in some of the nation's schools.

566. (EDUC566) Cross Cultural Awareness. (C)

This course provides students experiential and cognitive awareness through affective exercises and readings. It explores issues of living in a diverse society through a variety of educational strategies including workshops, small group process, guest lectures, etc. It represents the seminar portion of P.A.C.E. (Programs for

Awareness in Cultural Education): An "Educating the Peer Educator" Program.

SM 567. (SOCI567) Urban Sociology. (M) Grazian.

This course will examine the urban structures and processes that characterize the social and cultural milieu of the contemporary American city. Specific course topics will include the social organization of local urban subcultures and neighborhood communities, the cultural consequences of gentrification and racial segregation, the reputation of cities in the public imagination, and the commodification of the urban landscape.

SM 608. (HIST608, SOCI608) Proseminar in Urban Studies. (E) Katz.

This seminar is required for students in the Urban Studies Graduate Certificate Program. They will be given preference for enrollment, which is limited to 15. The course is designed for Ph.D. students who intend to do urban-related research. It is not open to undergraduates. Master's Degree students will be allowed to enroll only in special circumstances and with the permission of the instructor. To earn credit for the Graduate Certificate Program, students must enroll for both fall and spring semesters. Other students may take only the fall semester. Enrollment for the spring semester alone is not permitted. In the fall, the seminar will focus on interdisciplinary readings concerned with the history of American cities in the twentieth century. In the spring, students will write a major research paper and meet with scholars and practitioners who exemplify a variety of careers in urban research.

619. (EDUC619) Critical Perspectives in Contemporary Urban Education. (C) Schultz.

The focus of this course is the conditions for teaching and learning in urban public schools, current theories of pedagogy in urban education, and perspectives on urban reform efforts.

SM 623. (AFRC623, GAFL620, SOCI623) Workshop in Urban Ethnography. (M) Staff.

The ethnographic and sociological interpretation of urban life. Conceptual and methodological issues will be thoroughly discussed. Ongoing projects of participants

will be presented in a "workshop" format, thus providing participants the opportunity of learning from and contributing to ethnographic work in progress. Selected ethnographic works will be read and assessed.

SM 624. (SOCI624) Race Relations in American Cities. (M) Staff.

The ethnographic study of race relations in the United States. The social life and culture of urban race relations in the United States will be emphasized, stressing conceptual and methodological issues. Selected ethnographic literature will be read and discussed. Students will be expected to carry out an ethnographic site study.

SM 663. (ENVS463, ENVS663, URBS463) Brownfield Remediation: The Historical, Scientific, and Policy Dimensions of Brownfields in Old Industrial Cities. (M) Keene.

This course gives an overview of the genesis of the so-called "Brownfield" problem and of the various efforts that our society is taking to try to solve, or at least ameliorate it. The course will place the "Brownfield" problem in the broader context of the growth and decline of the industrial base of cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by federal and state governments to address remediation and redevelopment of abandoned industrial sites. In addition, the course will explore environmental equity issues.

SM 670. (CPLN676, URBS270) Ethnicity: The Immigrant City. (B)

Immigration is a controversial issue, dividing Americans from Congress to big cities to small towns. What's at stake in these debates? What does immigration mean for cities and regions? And what roles should policy makers, planners, and community organizations play in shaping migration and its impacts? This course examines these questions in the context of immigrant, refugee, and receiving communities in the United States. It surveys public policy and community and economic development practices related to

migration, at the local, regional, and transnational scale. Class readings, discussions, and regular visits to a variety of Philadelphia's immigrant neighborhoods explore themes including labor markets, political mobilization, social and cultural policy, and the built environment.

The first half of the course surveys migration and community development among a broad range of ethnic groups in different parts of the city and suburbs; the second half focuses on specific policy and development initiatives. Assignments include an opportunity to work with immigrant-serving organizations.

672. (EDUC672, FOLK672) Introduction to Ethnographic and Qualitative Research in Education. (C) Hall, Wortham.

A first course in ethnographic participant observational research, its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course.

706. (ANTH704, COML706, EDUC706, FOLK706) Culture/Power/Identities. (C) Lukose, Hall. Prerequisite(s): EDUC/URBS 547.

This course will introduce students to a conceptual language and the theoretical tools to analyze the complex dynamics of racial, ethnic, gender, sexual, and class differences. The students will critically examine the interrelationships between culture, power, and identities through the recent contributions in cultural studies, critical pedagogy and post-structuralist theory and will explore the usefulness of these ideas for improving their own work as researchers and as practitioners.

714. (CPLN714) Policy Analysis & Program Evaluation for Planning. (A) Wong.

Exploration of the intended and unintended consequences of public policy pertaining to land use, transportation, housing, education, growth management and economic development.

VISUAL STUDIES (AS) {VLST}

We live in an increasingly visual culture. New technologies and philosophies of vision influence how we see ourselves and our world, and how we think about seeing itself. Students can engage these developments through a multidisciplinary course of study, connecting the theory, practice, and culture of seeing.

L/R 101. Eye, Mind, and Image. (C)

May be counted toward the Hum/SocSci or NatSci/Math Sectors. Class of 2010. Holod, Brainard. Also fulfills General Education in Sectors IV (Humanities and Social Sciences) and VII (Natural Science and Mathematics) for Class of 2010 and beyond.

Visual Studies 101 provides an introduction to a variety of approaches to understanding the nature of seeing, with attention to its physiological, environmental and cultural bases. As part of this introduction, the course will attempt to compare and contrast to the way that artists, art historians, philosophers, and scientists consider the same broad set of issues. The course will typically be co-taught by two faculty whose expertise represents two of these different approaches, and whose lectures will attempt to make explicit connections between different styles of intellectual endeavor. In this sense, the course is a microcosm of the visual studies major.

The topics include - The eye, light and visual system, including both our modern understanding and a discussion of how this understanding developed over time. - The eye and culture, with particular emphasis on artistic depictions and concepts of the role of vision in society. - How perceptual abilities are measured in the lab, and the relationship between seeing and measurement and science. Perception and depiction of scenes, including depth, color, and motion. - How culture endows visual attributes (e.g. color) with meaning. - Depicting the body; seeing the self. - Visual memory and visual cognition. - Philosophy of seeing and science. What does it mean to see? How do we know what we see? Is seeing believing?

102. 2 Dimensions: Forms and Meanings. (C) Tilestone, Copeland.

This course will introduce students to the basic concepts of two dimensional studio practice and visual communication. Materials will range from traditional drawing materials such as charcoal and pencil to digital photography, and will explore the use of diverse visual languages. Emphasis will be on both formal and conceptual issues, such as developing meaning through imagery, narrative, metaphor, and visual modes in contemporary culture. Projects will be structured to deal with basic concepts and techniques, and prepare students to use the studio practice as a form of participation in contemporary culture. Assorted readings will accompany the studio projects each week, covering topics ranging from color theory to critical and theoretical issues in Visual Culture.

103. 3 Dimensions: Time and Space. (C) Kaczynski, Copeland.

This course will cover the basic concepts of three dimensional design and sculpture such as volume and mass, scale, materiality, form and meaning, context, organic vs. geometric, etc. Students will also be introduced to more contemporary areas of artmaking such as conceptual art, installation, and video and other time based arts. Projects will use both traditional sculptural materials as well as some "non-art" materials.

SM 271. (FNAR271, FNAR571)

Introduction to Photography. (C)
Rodewald/Martinez/Diamond/Pfister/Bryant. Lab fee: \$50.00.

This course will introduce students to the basic concepts, processes and techniques used in black and white photography, including camera operation, exposure, darkroom procedures, basic lighting, and their controlled applications. Introduction to Photography is designed to provide beginners with an introduction into the proper methods for creating black and white photographic images. Students will learn how to fully use and understand their SLR 35mm camera in order to successfully expose black and white film. Students will then learn how to professionally process their film and print their negatives onto

photographic paper. This course begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of the medium. A brief introduction into the realm of digital imaging is also incorporated into this course; this includes scanning black and white negatives and the basics of Photoshop image adjustments. No previous experience necessary. Although it is recommended that students purchase their own 35mm SLR cameras for this course, cameras will be available throughout the semester for reservation and checkout from the photography equipment room. Lab fee: \$50.00

SM 301. (ARTH301) What is Visual Studies?. (C) Staff.

Visual Studies 301 is a seminar-format course that challenges students to develop independent ideas about how the eye, the mind and the image that is created therein, all work together to inform our conception of the world at large. Rather than present a unified viewpoint, the course asks the question, "What is visual studies?" by examining parallel and sometimes antagonistic approaches to the ways that human beings understand sight and the concept of visibility. Over the course of the semester, students will discuss and write about various approaches to vision, examining this contested field through the lenses of several disciplines -- including psychology, philosophy, and art history. By parsing and assimilating diverse ideas, students will decide for themselves what are the most pertinent and relevant approaches to the various avenues of research that present themselves in the emerging interdisciplinary field of Visual Studies.

SM 395. Senior Project. (E)

Prerequisite(s): Permission of Instructor Required. See department for appropriate section numbers. See department for appropriate section numbers.

399. Independent Study. Staff. See department for appropriate section numbers.

WOMEN'S STUDIES (AS) {WSTD}

Courses in the Women's Studies Program are offered under GSOC - Gender, Culture & Society.

Gender, Culture and Society (GSOC)

002. Gender and Society. (C) Society Sector. All classes. Lundeen. Requirement for Women's Studies majors.

This course examines the impact of sex and gender roles on contemporary American society. Differentiation by sex is the central organizing principle of nearly every human society. How can we understand the relationship between biological sex and socially constructed gender? How do maleness and femaleness affect the balance of power and resources in our society? How much has changed since the beginning of the Women's Movement of the 1960's? The course will examine key issues of gender difference and inequality including family life, paid work, economic status, violence, body image, sexuality, and reproduction. The course will examine men's roles and women's roles, treating gender as an interactive and dynamic concept.

L/R 004. (SOC1004) The Family. (C) Society Sector. All classes. Furstenburg, Harknett.

Historical and cultural development of the family, analysis of sexual codes; discussion of role difference between men and women; factors involved in mate selection and marital adjustment; analysis of family disorganization with both individual and societal implications.

007. (SOC1007) Population and Society. (C) Society Sector. All classes. Harknett, Kohler, Zuberi.

The course covers selected aspects of population and the study of demography, including social, economic, and political issues: population explosion, baby bust, population aging, abortion, teenage pregnancy, illegal aliens, racial classification and population and development.

L/R 008. (BIOL008) Biology of Human Reproduction and Sex Differences Human Reproduction and Sex Differences. (A) Living World Sector. All classes. Waldron. May not be used in Biology Major. Students who have completed Biol 006 or Biol 102 are not eligible to take Biol 008.

This course will discuss human reproduction, including anatomy, physiology, hormonal control, genetics, development, infertility, contraception, sexual behavior, sexually transmitted diseases such as AIDS, and relevant basic molecular and cellular biology. In addition, this course will discuss sex differences and similarities in health and mortality, including relevant basic biology of the cardiovascular system and cancer.

SM 009. Critical Writing Seminar In Women's Studies. (C) Staff.

This is a critical writing seminar. It fulfills the writing requirement for all undergraduates. As a discipline-based writing seminar, the course introduces students to a topic within its discipline but throughout emphasizes the development of critical thinking, analytical, and writing skills. For current listings and descriptions, visit the Critical Writing Program's website at www.writing.upenn.edu/critical.

SM 016. (AFRC016, CINE016, ENGL016) Topics in Literature. (C) Staff. Freshman Seminar.

Freshman Seminars under the title "Topics in Literature." When the course content includes women, gender and sexuality this course will be cross listed with Women's Studies. Freshman seminar under this title will afford the entering student the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. Consult Program for detailed descriptions.

SM 028. (COML028, PHIL028) Introduction to Feminist Philosophy. (M) M. Meyer.

Feminist theory grows out of women's experiences. In this course we will investigate how some contemporary feminist thinkers' consideration of women's experience has caused them to criticize society and philosophy. Traditional philosophical areas addressed may include ethics, social and political philosophy,

aesthetics, philosophy of religion, and epistemology.

SM 041. (SOC1041) Topics in Sociology. (C) Bosk, Hannum, Jacobs.

Freshman Seminars. Topics vary from semester to semester. Past offerings include Society and History; The 1960's: Preludes and Postludes; Mistakes, Errors, Accidents & Disasters; Urban Analysis with Computers; Race and Public Policy; Perspectives on Inequality; Homelessness and the Urban Crisis.

045. (ENGL045) 18th-Century Novel. (C) Staff.

This survey of the novel addresses key questions about the novel's "rise" in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent "rise" of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did the institutions like literary reviews, libraries, and the church play in the novel's early reception? While reading will vary from course to course, students should expect to read such authors as Austen, Behn, Brockden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett.

This course will be cross-listed with GSOC when the course content includes women, gender and sexuality.

055. (COML055, ENGL055) Nineteenth-Century Novel. (M) Auerbach/Laws. Fulfills Arts & Letters Distribution.

During the nineteenth century the novel became the dominant literary form of its day, supplanting poetry and drama on both sides of the Atlantic. In this introduction to the novelists of the period, we will read the writers who secured the novel's cultural respectability and economic prominence. Likely authors will include Austen, the Brontes, Collins, Dickens, Eliot, Hardy, Hawthorne, Melville, Poe, Thackeray, Scott, and Stowe. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself.

060. (ENGL070, LALS060) Intro to Latina/o Literature: Beginnings to 1898. (M) Padilla.

A survey of cultural productions by Latinas/os (i.e. people of Latin American descent who have been raised in the U.S.)

that usually will focus on the twentieth century, but might at times examine earlier periods instead. The course will take a culturally and historically informed approach to a wide range of novels, poems, plays, and films, and will sometimes include visual art and music. Writers and artists might include Am_rico Paredes, Piri Thomas, Cherrie Moraga, Sandra Cisneros, Julia Alvarez, Junot Diaz, Cristina Garcia, El Teatro Campesino, John Leguizamo, Carmen Lomas Garza, the Hernandez Brothers, and Los Tigres del Norte.

075. (FOLK075, MUSC075) Jazz Style and History. (M) Ramsey.

This course examines jazz performance as a twentieth century American musical discourse, one that covers and critiques the standard textbook/mediated narratives of jazz history. One goal of the course is to think about how our knowledge of jazz might be reshaped by including women musicians and gender in the narrative. Another is to begin to think about jazz as a musical language that reaches far beyond the borders of the United States, largely through the networks of the entertainment industry.

SM 082. (FOLK082) Ritual in American Life. (M) Paxton. Freshman Seminar.

Starting with birth and working chronologically through a series of case studies, this course invites students to examine the centrality of rituals that celebrate the human lifecycle as well as overtly competitive sporting and political rituals. We will explore rituals that unfold at the local level as well as those that most Americans experience only via the media. Rituals under examination include birthday parties, Bat Mitzvahs, Halloween, Quinceaneras, Proms, graduations, rodeos, Homecomings, weddings, Greek initiations, beauty pageants, reunions, and funerals. Students will be encouraged to critically examine their own ritual beliefs and practices and to consider these and other theoretical questions: What is the status of ritual in post-industrial culture? What distinguishes popular culture from official ritual and secular from religious ritual? How do sociological variables such as race, class, gender, sexuality, and religion shape people's understanding of, and participation in, modern family life? How do contemporary rituals bond Americans at the local and/or national level? All students will be expected to conduct original research on a ritual of their own.

090. (AFRC090, COML090, ENGL090) Women and Literature. (C) Staff.

Focusing on literature by and/or about women, this course examines women as readers, writers, and subjects of literature. Works studied vary considerably from semester to semester and may include a wide range of works from various countries and in various genres, often selected to allow for examination of theoretical issues such as feminist humor, feminist literary theory, women and popular culture, and the place of women in the literary mainstream. Often special attention is paid to the experience of minority women.

093. (AFRC093, AFST093, COML093, ENGL093) Topic: Introduction to Postcolonial Literature. (M) Staff.

English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non-fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender.

096. (COML096, ENGL096) Theories of Gender and Sexuality. (M)

Humanities & Social Science Sector. Class of 2010 & beyond. Love.

What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality -- a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherr_e Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker.

L/R 101. (CINE115, ENGL101) Study of an Author. (C) Arts & Letters Sector. All Classes. Staff.

This is an introduction to literary study through the works of a single author--often Shakespeare, but some versions of this course will feature other writers. (For

offerings in a given semester, please see the on-line coursecal descriptions on the English Department website.) We will read several works and approach them--both in discussion and in writing--from a range of critical perspectives. The author's relation to his or her time, to literary history generally, and to the problems of performance, are likely to be emphasized. This course is designed for the General Requirement; it is also intended to serve as a first or second course for prospective English majors.

104. (SOC1104) Sociology of Sex: Comparative Approach. (M) Collins.

Social scientists have argued that sexuality is not an unchanging biological reality or universal natural force, but a cultural construct, shaped by economical, social, and political processes and therefore, like society itself, historical, that is, variable in both time and space. This seminar follows this approach by exploring cultural construction of sexuality as it evolved from Greek antiquity to contemporary U.S.A., and its relationship to gender, class, political hierarchies, religion, ideology, and science. How have the meanings of sexuality, codes of sexual regulation and sexual politics have varied over time with changing circumstances?

109. (FOLK029, RELS005) Women and Religion. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Staff.

This course will investigate women's religious practices and beliefs in a number of established religions. We will pay attention to such topics as theological explanations of women's role in creation, the relationship between women and evil, the position of women in religious hierarchies, and the impact of social change on women's roles in established religions. Traditional religions considered will include Judaism, Christianity, Islam, and Buddhism. Issues raised will include the impact of the women's movement and feminist thought on women and religion, and the development of contemporary woman-oriented spiritual movements and religious practices.

SM 113. (JWST113, RELS113) Major Western Religious Thinkers. (M)

Staff. This course is crosslisted with RELS 113, a topics course, when the subject matter is appropriate to Women's Studies. See current timetable.

Introduction to the writings of one or two significant western religious thinkers, designed for those who have no background in religious thought. Possible

thinkers to be studied: Augustine, Maimonides, Spinoza, Luther, Teresa of Avila, Edwards, Mendelssohn, Kierkegaard, DuBois, Bonhoeffer, King.

114. (AFRC112, SOCI112, URBS114) Discrimination: Sexual and Racial Conflict. (M) Society Sector. All classes. Madden.

This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination in the United States. The central focus of the course is on employment discrimination by race and gender. After a comprehensive overview of the structures of labor markets and of nondiscriminatory reasons for the existence of group differentials in employment and wages, various theories of the sources of discrimination are reviewed and evaluated. Actual governmental policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

117. (SOCI117) Sociology of Work. (M) Leidner.

The material world is shaped and maintained through work, but so is the social world. How work is organized, allocated, and rewarded determines the opportunities people have for developing their own capacities, the kinds of ties they will have with others, and how much control they will have over their own lives. We will consider various sociological perspectives on work and compare alternative ways of organizing work, with a focus on the contemporary United States.

118. (CINE118, COML118, GSOC418, NELC118) Iranian Cinema: Gender, Politics and Religion. (M) Minuchehr.

Post-Revolutionary Iranian cinema has gained exceptional international reception in the past two decades. In most major national and international festivals, Iranian films have taken numerous prizes for their outstanding representation of life and society, and their courage in defying censorship barriers. In this course, we will examine the distinct characteristics of the post-revolutionary Iranian cinema. Discussion will revolve around themes such as gender politics, family relationships and women's social, economic and political roles, as well as the levels of representation and criticism of modern Iran's political and religious structure within the current boundaries. There will be a total of 12 films shown and will include works by Kiarostami, Makhmalbaf, Beizai, Milani, Bani-Etemad and Panahi, among others.

SM 120. (CLST121) Sex and Gender in Ancient Greek Culture. (M) Staff.

An interdisciplinary study of ancient Greek attitudes to gender as reflected in the legal, social, and religious roles of women; conceptions of the family and its place in the city; biological and evolutionary speculation about sexual difference; the representation of sexuality and gender relations in mythology, lyric poetry, and drama.

122. (SOCI122) The Sociology of Gender. (C) Society Sector. All classes. Leidner.

The assignment of gender roles and the creation of gender identities has profound consequences for women and men at every level of society: from their intimate relations, how they manage and participate in the institutions of society, their place in society's stratification systems. This course examines four aspects of gender relations: historical and cross-cultural examples of gender roles; gender relations in contemporary American institutions; theories of sex differences and gender inequality; and movements and policies for gender equality. Some specific topics to be covered are: Women and the economy, women and the professions, working class women, minority women, violence against women, changing male identities, the nature of male power, and women's liberation movement.

125. (CINE125, COML127, RUSS125) The Adultery Novel In and Out of Russia. (C) Arts & Letters Sector. All Classes. Platt. All readings and lectures in English.

The object of the course is to analyze a series of 19C and 20C novels (and a few short stories) about adultery. Our reading will teach us about novelistic traditions of the period in question and about the relationship of Russian literature to the European models to which it responded. The course begins with a novel not about families falling apart, but about families coming together - Jane Austen's *Pride and Prejudice*. We then will turn to what is arguably the most well-known adultery novel ever written, Flaubert's *Madame Bovary*. Following this, we investigate a series of Russian revisions of the same thematic territory that range from "great literature" to pulp fiction, including Tolstoy's *Anna Karenina* and other works by Tolstoy, Chekhov, Leskov, and Nagrodskaja. As something of an epilogue to the course, we will read Milan Kundera's backward glance at this same tradition in nineteenth-century writing, *The Unbearable Lightness of Being*. In our coursework we

will apply various critical approaches in order to place adultery into its social and cultural context, including: sociological descriptions of modernity, Marxist examinations of family as a social and economic institution, Freudian/Psychoanalytic interpretations of family life and transgressive sexuality, Feminist work on the construction of gender.

142. (HIST142) Women in American History, 1500-1865. (C) Brown.

From the sixteenth century, when Native American populations flourished on the North American continent, to the Civil War, when North and South collided over the question of slavery, women have played a critical role in American society. This course traces the history of women and gender in America during this period with special emphasis on the importance of women's reproductive and economic roles to the emergence of ethnic, racial, regional, and socio-economic categories in the United States. Slides, lectures, and readings drawn from primary documents introduce students to the conditions of women's lives during the colonial and revolutionary periods and to the rise of women's activism in the nineteenth century. In addition, we will consider how dramatic changes in housework, wage labor, female access to public forms of power, and ideas about female sexuality make it difficult to generalize about what is commonly thought of as women's "traditional" or "natural" role.

143. (HIST143) Women in American History, 1865-Present. (C) Peiss.

This course explores how immigration, industrialization, racial segregation, and the growing authority of science transformed the fundamental conditions of women's lives in the late nineteenth and early twentieth centuries. Building on previous efforts by female reformers to perfect society, women at the turn of the century organized large social movements dedicated to improving the lives of women and children and gaining public access to political power. We will examine the fruits of this activism as well as the consequences of subsequent events for the rise of several important social movements in the latter half of the century -- including civil rights, women's liberation, and gay rights -- in which women played a vital role. The course concludes with an assessment of feminism in the present day, with special emphasis on the responses of younger women to its legacy.

SM 146. (AFRC146, ANTH146)

Writing Multiculturalism. (M) Sanday.

Diversity is a fact of life, characteristic not only of the US national culture but of the global culture as well. This course introduces anthropological theories of culture and multiculturalism and the method of ethnography. Students will read and report on selected classic readings. After learning the basic concepts, students will be introduced to the method of ethnography. The core of the course will revolve around "doing ethnography" by writing ethnographic fieldnotes on participant/observation of multiculturalism. Students can use their life experience, home communities, or Penn as their field of observation. The goal of the course is to introduce beginning students to public interest anthropology. No background in anthropology is required.

SM 149. Law and Social Policy on Sexuality and Reproduction. (C)

Tracy.

This course will examine how statutory law, court decisions and other forms of social policy encourage or discourage various forms of sexuality, reproduction and parenting. Such issues as contraception, abortion, gay and lesbian rights, reproductive technology, family violence, and welfare and family policies will be covered.

162. (GRMN262, JWST102, NELC154) Women in Jewish Literature. (C) Arts & Letters Sector. All Classes. Hellerstein.

This course will introduce Penn students of literature, women's studies, and Jewish studies -- both undergraduates and graduates -- to the long tradition of women as readers, writers, and subjects in Jewish literature (in translation from Yiddish, Hebrew, and in English). By examining the interaction of culture, gender, and religion in a variety of literary works by Jewish authors, from the seventeenth century to the present, the course will argue for the importance of Jewish women's writing. Authors include Glikl of Hameln, Cynthia Ozick, Anzia Yezierska, Kadya Molodowsky, Esther Raab, Anne Frank, and others.

"Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890)

168. (AFST168, NELC168) Women in Ancient Egypt. (M) Houser.

This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of

famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.

182. (STSC182) Social Science and American Culture. (A) Staff.

This course examines the role of social science in the United States during the 20th century. There have been popular social scientific theories since the early 19th century, when the craze spread for interpreting individuals' character by feeling the bumps on their heads. But popular social science is really a 20th century phenomenon. And popular culture influenced academic research. Our coverage cannot be comprehensive. We have insufficient time to treat all human sciences equally. For example, there is enormous popular interest in paleoanthropology and archaeology, but we will not discuss these in class--although you might choose to write your research paper for the course on a specific aspect of one of these disciplines.

186. (EALC166, EALC566, GSOC586) Gender and Sexuality in Japan. (M) Kano.

This seminar deals with issues which such as the cultural and historical constructions of femininity and masculinity; gendered division of education and labor; representation of gender and sexuality in literature, theater, and popular culture; and forms of activism for the rights of women and sexual minorities. This course will use films, videos, and manga, as well as readings from anthropological, historical, literary, and theoretical texts. All readings will be in English, but Japanese materials will be available to those interested.

187. (COML187, EALC017) Possessing Women. (M) Chance, L.

A man from Tennessee writes *Memoirs of a Geisha*. A Japanese novelist tells the story of the "comfort women" who served the Japanese army. A tenth century courtier poses as woman writing the first woman's diary. Poets from Byron to Robert Lowell, through Ezra Pound to Li Po, have written as though, they were women, decrying their painful situations. Is something wrong with this picture, or is

"woman" such a fascinating position from which to speak that writers can hardly help trying it on for size? In this course we will look at male literary impersonators of women, as well as women writers. Our questions will include who speaks in literature for prostitutes--whose bodies are in some sense the property of men--and what happens when women inhabit the bodies of other women via spirit possession. Readings will draw on the Japanese tradition, which is especially rich in such cases, and will also include Western and Chinese literature, anthropological work on possession, legal treatments of prostitution, and film. Participants will keep a reading journal and write a paper of their own choosing.

199. Independent Study. (C)

SM 203. (HIST203, HSOC204) Major Seminar in History: America Before 1800. (M) Staff.

This course is for history majors. This course will be cross-listed with GSOC when the course topic includes women, gender, and sexuality.

SM 204. (HIST204) Major Seminar in History: America After 1800. (C) Staff.

This is a topics course in history. When the course content covers topics on women, gender and sexuality it will be cross-listed with the Women's Studies major/minor in Gender, Culture and Society (GSOC).

SM 206. (HIST206, LALS206) History of Sexuality and Reproduction. (C) Staff.

The course will explore the history of sexual and reproductive behavior in the U.S.; the various ways sexuality was constructed; and the role sexuality played in the construction of gender and the deployment of power. Not only will the course address differences between men and women, it will also deal, in particular, with the comparison of sexual behavior and identity across class, racial and ethnic lines.

L/R 213. (CINE215, SAST213) Indian Cinema and Society. (B) Majithia.

This course will meet for three hours to view and discuss a variety of films/videos in Hindi, Tamil, Bengali, Urdu (with English subtitles), and English, which bring up issues of social, political, and cultural significance. Readings for the course will include articles in various fields ranging from film studies and communication to sociolinguistics and women's studies. Discussions will focus on cinema as a means of expression and as an instrument for social change, examining the various

ways in which films both reflect and influence contemporary culture.

SM 214. (HIST214) America after 1800: Advanced Benjamin Franklin Seminar. (M) Staff.

This seminar examines the economic, demographic, and spatial transformations of American cities since World War II. Topics for analysis include the impact of deindustrialization and the emergence of an information-service economy, in migration and immigration, ghetto creation, the origin and history of suburbs, and levers of change - politics, policy, social movements, and social reform. Assignments include one book per week, short commentary papers, discussion leadership, and a final essay.

SM 221. (COML222, ENGL222) Topics in Romance. (A) Staff.

This seminar explores an aspect of epic or romance intensively; specific course topics will vary from year to year.

SM 223. (COML354, ENGL221) Topics in Medieval Literature. (M) Staff.

This seminar explores an aspect of medieval literature intensively; specific course topics will vary from year to year. Topics in the past have included the medieval performance, medieval women, and medieval law and literature. The course will be cross-listed with GSOC when the subject matter includes gender, women, and sexuality.

SM 234. (CINE208) Topics in Gender and Cinema. (M) Beckman.

This topic course explores aspects of Gender in Film intensively. The course will be cross-listed with GSOC when the course contents includes women, gender and sexuality in film. Specific course topics vary from year to year. See the Cinema Studies website at <<http://cinemastudies.sas.upenn.edu/>> for a description of the current offerings.

235. (EDUC235) Psychology of Women. (C) Staff.

Critical analyses of the psychological theories of female development, and introduction to feminist scholarship on gender development and sexuality.

SM 240. (HIST240) Gender and Athletics. (M) Miller.

Have women started to "play hardball" on a "level playing field" in the American sporting culture? From the commercial successes of the WNBA and World Cup Soccer to new studies that document the positive effects of athletics on girls' self-esteem, women finally seem to be turning

the American obsession with sports to their own advantage. This course will examine how physical fitness and organized athletics for men and women have both reflected and helped to create norms of masculinity and femininity over the past one hundred and fifty years.

SM 241. (ASAM241, COML239, ENGL241) Topics in Eighteenth Century British Literature. (M) Staff.

Space will be reserved for English majors. This is a topics course. If the topic is appropriate, the course is cross-listed with ENGL 241. This course explores an aspect of 18th-century literature intensively; specific course topics will vary from year to year.

SM 245. (ENGL245) Images of Women and Men in Contemporary Fiction. (M) Brodkey.

This course focuses on ways in which the Civil Rights movement, the student rebellions, and the women's movement have influenced readers' expectations of a writer's ability to represent gender in fiction.

249. (EDUC576, PHIL249) Philosophy of Education. (M) Detlefsen.

This course covers a variety of philosophical questions surrounding education. These may include questions in epistemology, human nature, philosophy of psychology, ethics, and social-political philosophy.

SM 250. (CINE251, COML249, ENGL251) 19th Century Literature. (M) Staff.

This course explores an aspect of 19th-century literature intensively; specific course topics will vary from year to year.

SM 251. (AFRC309, THAR250) Theatre Workshop. (M) Ingram.

This course will examine a specific aspect of theatrical practice, taught by a visiting professional theatre artist. The course, with different topics, may be repeated for credit.

L/R 252. (COML253, GRMN253, HSOC253, STSC253) Freud. (M) Humanities & Social Science Sector. Class of 2010 & beyond. Weissberg.

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today.

253. (AFRC253, AFST253, FOLK253, MUSC253) Music and Performance of Africa. (M) Muller.

This class provides an overview of the most popular musical styles, and discussion of the cultural and political contexts in which they emerged in contemporary Africa. We will cover sub-Saharan and North Africa, with a strong focus on southern Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required, though completion of Music 50 is recommended.

SM 255. (COML261, ENGL255) Topics in the 19th-Century Novel. (M) Staff.

This course explores an aspect of the 19th-century novel intensively; specific course topics will vary from year to year.

257. (CINE222, COML256, EALC257) Contemporary Fiction and Film in Japan. (M) Kano.

This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, magazines, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujiro, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

SM 260. (AFRC262, AFST260, COML262, ENGL260, LALS260) Advanced Topics in Narrative. (M) Staff.

This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. Specific course topics will vary from year to year.

265. (ANTH265) Sex and Reproduction in Humans: a Biocultural Approach. (A) Valeggia.
Prerequisite(s): ANTH 003.

An exploration of human reproduction from an evolutionary and biosocial perspective. Focuses on physiological, ecological, and social aspects of human reproduction with a life cycle approach. Also explores human reproductive strategies in a variety of cultural settings. Topics include cognitive and behavioural differences between men and women and male and female reproductive strategies. Examples are drawn primarily from traditional and modern human societies; data from studies of non-human primates are also considered.

SM 266. (COML263, ENGL261) Topics in Modern British Novels. (C)
Mahaffey.

The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year.

268. (AFST268) Women and Human Rights in Africa. (M) Staff.

Is violence against women a violation of human rights regardless of whether this occurs in the private or public spheres? Should rape and sexual violence against women and girls in situations of armed conflict be considered as war crimes? As gender issues have become central to the development dialogue, the linkages between human rights, gender and development have become increasingly apparent and especially relevant for the African continent. A primary goal of the course will be to reveal the gendered nature of human rights issues and the current application of human rights concepts in Africa. It will also illuminate issues affecting women in all facets of life including rape and forced pregnancy during war time and expanding definitions of torture, freedom of expression, violence, internal displacement and refugees as stated in the Universal Declaration of Human Rights. Class assignments will be designed to craft a vision and application of human rights that are truly relevant to women and men alike.

270. (FOLK270) Folklore and Sexuality. (M) Azzolina.

Sexuality is not only a biological act or fact, it also has a creative and aesthetic element. This course examines the folklore elements of sexuality and includes historical readings such as the Bible and the Decameron as well as a contemporary look at topics such as body art and clothing choice. A field-based paper will be

required and a final examination will be given on class discussions and readings.

SM 275. (CINE225, THAR275) Advanced Topics in Theatre. (A)
Malague, Lafferty.

This course will combine an intensive practical and intellectual investigation of some area of the making of theatre: performance techniques, theatrical styles, a particular period of theatre history.

One section of 275 in the Spring will include six Theatre Arts students, who will have been selected by the Theatre Arts faculty to participate in the annual "Edinburgh Project," and will form an ensemble to mount a production that will travel to the Edinburgh Fringe Festival in August. Many of the readings and exercises in this course will be geared to preparing the ensemble for rehearsals for this production, which will not formally begin until after the exam period. Students enrolled in the course who are NOT part of the Edinburgh ensemble will be invited to participate in creating the piece that will be taken by the ensemble to Edinburgh.

SM 279. (THAR279) Women in Theatre and Performance. (M)
Malague.

Theatre began as a form that excluded women entirely. The plays of ancient Greece and Elizabethan England were written and performed only by men, beginning a long tradition of theatre that represented women only from male perspectives. Has that tradition been so dominant for so long that women's voices on stage are still a novelty? This course focuses on a wide range of plays and performances by and about women; the work we read (and view) will evidence artistic attempts to represent women's lives, experiences and perspectives on the stage. Among the issues encountered and examined in these works are the roles of love, sexuality, friendship, career, community, marriage, motherhood, family, and feminism in women's lives - as well as the economic and political position(s) of women in society. The course will also offer contextual background on feminist theatre history, theory, and literature, the diverse (and divergent) creative efforts of female artists to use live performance as a means of creating social and political change.

280. (PSCI280) Feminist Political Thought. (M) Society Sector. All classes.
Hirschmann.

This course is designed to provide an overview of the variety of ideas, approaches, and subfields within feminist

political thought. Readings and divided into three sections: contemporary theorizing about the meaning of "feminism"; women in the history of Western political thought; and feminist theoretical approaches to practical political problems and issues, such as abortion and sexual assault.

SM 281. (AFRC281, COML325, ENGL281) Topics in African-American Literature. (M) Staff. This course is not open to freshmen.

In the past this course has addressed itself to topics as diverse as "Afro-American Autobiography" and "Backgrounds of Afro-American Literature", including examination of oral narratives, Black Christianity, and Afro-American music: and "Black Narratives", beginning with eighteenth-century slave narratives and working toward contemporary literature.

SM 282. (HIST282) Globalization in a Gender Perspective. (M) Staff.

This interdisciplinary seminar will explore theories and practices of globalization. The process of globalization raises many questions that scholars are attempting to answer. What are its historical roots? Why has it seen such rapid growth? Is globalization predominantly an economic, cultural or ideological issue? Has it affected women and men equally? The seminar will consider present discussions on globalization, provide tools to analyze this concept critically, and introduce examples taken from the Third World, Europe, and the United States. Students will be expected to write several short papers and take an active part in class discussions. The final exam will consist of an extended essay on topics dealt with in class.

SM 284. (AFRC263, ENGL253) Topics in American Literature. (M) Staff.

Focusing on some well-defined aspect of nineteenth-century American literature, this course has included sections on Melville, nineteenth-century American shortfiction and literature and the visual arts.

SM 287. (AFRC287, CINE286) Topics in Africana Studies. (C) Gilliam.

The course begins by grounding students in "bodies of work" by 14 contemporary artists. In addition to investigating these artists for the multiple mediums and languages they create in, we will also be using their works to address recent theorizations of the black female body in relationship to a diverse set of sub-themes including: Diasporic notions of beauty, violence, religion, labor, immigration,

aesthetics, pleasure, movement, hip-hop, and health. From there we will in turn develop our own critiques of how we, as individuals and members of various collectives, fashion our own bodies in our contemporary world, allowing students to become more aware of their racialized and gendered selves. This course combines weekly seminar and studio classes. In lieu of more traditional, weekly response papers, the students will be trained in the studio classes, to develop their own creative responses, using the genre/medium of the artist that is being studied in that week's seminar. The midterm paper and final film screenplay will be responses to both one or more of the 14 artists we will discuss, and the work the students create in the studio exercises.

SM 290. (AFRC290, ENGL290) Topics in Women and Literature. (C) Staff. This course is not open to freshman.

The advanced women's studies course in the department, focusing on a particular aspect of literature by and about women. Topics might include: "Victorian Literary Women"; "Women, Politics, and Literature"; "Feminist Literary Theory"; and similar foci.

SM 310. (COML310, ITAL310) The Medieval Reader. (M) Kirkham. All Readings and Lecture in English.

Through a range of authors including Augustine, Dante, Petrarch, Galileo, and Umberto Eco, this course will explore the world of the book in the manuscript era. We will consider 1)readers in fiction-male and female, good and bad; 2)books as material objects produced in monasteries and their subsequent role in the rise of the universities; 3)medieval women readers and writers; 4)medieval ideas of the book as a symbol (e.g., the notion of the world as God's book; 5)changes in book culture brought about by printing and electronic media. Lectures with discussion in English, to be supplemented by slide presentations and a field trip to the Rare Book Room in Van Pelt Library. No prerequisites. Readings available either in Italian or English. Satisfies General Requirement in Arts and Letters.

SM 318. (HSOC341, NURS318) Race, Gender, Class and the History of American Health Care. (C) Fairman.

This multidisciplinary course surveys the history of American health care through the multiple perspectives of race, gender, and class, and grounds the discussions in contemporary health issues. It emphasizes the links between the past and present, using not only primary documents but

materials from disciplines such as literature, art, sociology, and feminist studies that relate both closely and tangentially to the health professions and health care issues. Discussions will surround gender, class-based, ethnic, and racial ideas about the construction of disease, health and illness; the development of health care institutions; the interplay between religion and science; the experiences of patients and providers; and the response to disasters and epidemics.

SM 320. Contemporary Feminist Thought. (A) Kurz. Prerequisite(s): One prior women's studies course.

This course covers a broad range of feminist writers, from the pioneer thinkers of the 18th century to current feminists who focus on globalization. After examining how and why feminist thought developed, we will explore how different feminists perspectives explain gender inequality both in the US and in contemporary global contexts. Readings will also focus on how gender issues interact with race, ethnicity, sexuality, and social class. We will also focus on how feminist theory informs current social movements for gender equality.

SM 324. (HSOC324, NURS324) Children's Health in the United States, 1800-2000. (C) Connolly. For Benjamin Franklin Scholars & Nursing Honors Students.

This course explores the impact of historical ideas, events, and actors pertaining to the history of children's health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children's health care policy and the delivery of care.

SM 325. (HSOC216) Women and Health. (M) Staff.

Health, illness and healing systems are deeply connected to the organization of gender relations. This course introduces students to sociological perspectives on the intersection between gender and health in the nineteenth and twentieth century United States. We will examine sex differences in disease distribution and health service use, the effect of women's poverty on health status, women's roles as health care providers, and the historical development of health issues and medical fields directly relevant to women's health (e.g. menstruation, menopause, birth control, obstetrics, pediatrics, and psychiatry).

SM 330. (STSC329) Gender and Science. (M) Lindee.

This course explores the gendered nature of science as social endeavor, intellectual construct and political resource. We consider the rise of gentlemanly science, masculinity and the arms race, the notion of a "Successor science" grounded in feminist theory, and the historical role of gender in defining who can do science and what counts as scientific data. We also explore how science has interpreted male-female differences. Our goal is to understand the profound impact of social place in the history of science, and thereby to understand the social nature of scientific knowledge.

SM 338. (HSOC338, NURS338) "Sweet Little Old Ladies and Sandwiched Daughters": Social Images and Issues in our Aging Society. (B) Kagan.

This course is an intensive and focused introduction to social gerontology as a trans-disciplinary lens through which to examine aspects of social structure, actions, and consequences in an aging society. A variety of sources are employed to introduce students from any field focused on human behavior and interaction to classical notions of social gerontology and current scholarly inquiry in gerontology. Field work in the tradition of thick description creates a mechanism to engage students in newly gerontological understandings of their life worlds and daily interactions. Weekly field work, observing aspects of age and representations of aging and being old in every day experiences forms, is juxtaposed against close critical readings of classical works in social gerontology and current research literature as well as viewings of film and readings of popular literature as the basis for student analysis. Student participation in the seminar demands careful scrutiny and critical synthesis of disparate intellectual, cultural, and social perspectives using readings and field work and creation of oral and written arguments that extend understandings of the issues at hand in new and substantive ways. Emphasis is placed on analysis of field work and literature through a series of media reports and a final term paper.

SM 341. (ENGL341) Topics in 18th Century Literature. (M) staff.

This course explores an aspect of 18th-century British literature intensively; specific course topics will vary from year to year. When the course topic includes gender, women, and sexuality it will be cross-listed with the Women's Studies

major in Gender, Culture and Society (GSOC).

344. (EDUC345) Psychology of Personal Growth. (C) Staff.

Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master's Degree program.

349. (HIST349) History of Sexuality in the U.S. (C) Peiss.

This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identity and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many themes with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.

SM 350. (COML350) Theory of Literature. (M) Staff.

This course includes both a general survey of classic writings in Western aesthetics as well as readings on the major trends in literary criticism in the twentieth century. A recurring theme will be the literary canon and how it reflects or influences values and interpretative strategies. Among the topics covered are feminist literary criticism, structuralism and poststructuralism, Marxist criticism, and psychological criticism. Authors include Plato, Aristotle, Hume, Kant, Hegel, T.S. Eliot, Bakhtin, Sontag, Barthes, Foucault, Derrida, Virginia Woolf, de Beauvoir, Showalter, Cixous, Gilbert and Guber, Kolodny, Marx, Benjamin, and Freud.

SM 356. (COML356, FREN356) Early Modern Women's Writing: Italy, England, France. (M) DeJean.

We will compare the three powerful traditions of women's writing that developed in the 16th and 17th centuries: in Italy, in England, and in France. We will

read works by Franco, Moderata Fonte, Aphra Behn, Margaret Cavendish, Marie-Madeleine de Lafayette, and Madeleine de Scudery. We will concentrate on works in prose and, in particular, on the two genres whose development was shaped by women writers: novels and treatises defending women's rights. We will think about what it meant to be a woman writer in these countries and at this period. We will also try to understand the conditions that made it possible for these traditions to develop. French and Italian works will be read in translation.

SM 360. (FREN360) French Literature of the 18th Century. (M) Staff.

Throughout the 18th Century, the novel was consistently chosen by the PHILOSOPHES as a forum in which to present political ideas to a broad audience. French novels of the Enlightenment are therefore often hybrid works in which fictional plots, even love stories, co-exist with philosophical dialogue and with more or less fictionalized discussions of recent political events or debates. We will read novels by all the major intellectual figures of the 18th century -- for example, Montesquieu's LETTRES PERSANES, CONTES by Voltaire, Diderot's LE NEVEU DE RAMEAU -- in order to examine the controversial subject matter they chose to explore in a fictional format and to analyze the effects on novelistic structure of this invasion of the political. We will also read works, most notably Laclos' LES LIAISONS DANGEREUSES, that today are generally thought to reflect the socio-political climate of the decades that prepared the French Revolution of 1789. In all our discussion, we will be asking ourselves why and how, for the only time in the history of the genre, the novel could have been, in large part and for most of the century, partially diverted from fictional concerns and chosen as a political vehicle.

SM 371. (ENGL356, THAR375) Topics in Drama. (M) Staff. When crosslisted with ENGL 356, this is a Benjamin Franklin Seminar.

What is feminist theatre? This course will explore that deceptively simple but hotly debated question by focusing on the creative and political efforts of female playwrights and performers. Our readings will provide background on feminist theatre history and theory, from which we will examine diverse and divergent approaches to feminist playwriting, acting, and directing. We will consider a wide range of artists from the Pulitzer prize-winning Wendy Wasserstein to the NEA grant-

losing Holly Hughes, we will also examine the recent phenomenon of Eve Ensler's THE VAGINA MONOLOGUES. The course will be conducted in seminar format with heavy emphasis on discussion; readings will be supplemented by shared viewing of live and video performances.

SM 381. (HSOC381, STSC381) Nonstranger Violence. (A) Sorenson.

The purpose of this course is for students to learn about the definitions, conceptual frameworks, myths, processes, consequences and societal interventions regarding violence in relationships. Using a life course perspective, addressing abuse from childhood through late life, the course will examine how gender and generational differences in resource distribution, role expectations, etc. shape the occurrence, experience and response to violence in relationships.

SM 390. (ENGL390) Topics in Women and Literature. (M) Staff. Benjamin Franklin Seminar.

Attitudes toward and visions of womanhood and manhood in fiction of the last hundred years. Is a person's gender the most important fact shaping her or his lifetime? Does it have to be?

SM 393. (ENGL393) Topics in Literature and Society. (M) Staff. Benjamin Franklin Seminar.

This course is cross-listed with ENGL 393 (Topics in Postcolonial Literature and Society) when the course content is related to women and gender issues. Topics vary. Consult the Program for a detailed course description.

SM 400. Senior Seminar. (E) Kurz.

This course is for senior undergraduate Women's Studies majors who will be completing their thesis. The seminar helps students decide on the most appropriate methodologies to use and topics to include in their thesis. Other topics include thesis organization and drawing conclusions from primary and secondary sources of data.

SM 405. (COML405, COML502, ENGL490) Topics in Women and Literature. (M) Shawcross.

This course will consider issues relating to the documentation and interpretation of women's lives. Through research in the personal papers of various women who lived in the late nineteenth and early twentieth centuries, the class will focus on the following questions: what documents survive and why (and what don't survive and why); how do published texts on the subject compare to unpublished ones and

why; and to what extent, if any, did gender inhibit or facilitate the fulfillment of aspirations or vocations of these women and why. Course requirements comprise participation in weekly class sessions on the progress of one's research and difficulties and discoveries therein and a paper of journal-length size relating to a subject in which primary source materials have been extensively consulted. The paper should include a bibliography of published accounts and a critical evaluation of surviving papers. A list of possible subjects compiled by the professor will draw on resources available in several Penn repositories, including the Department of Special Collections, the University Archives and Records Center, and the Center for the Study of History or in other special libraries in the Philadelphia area.

SM 414. Family Ties: Function and Ideology. (M) Rabberman.

Families serve as the basic building blocks of societies. Besides helping to distribute economic resources within a society, families reflect societies' values, norms, tensions and power dynamics through their structure. Furthermore, changes in the family's values, functions and structures mirror changes in women's roles and experiences, both inside and outside the home. Finally, families also serve as the repository for memories from generation to generation.

In this course, we will explore some central debates and issues in the history of the family by focusing on case studies from England, France, Germany, and the United States from the medieval through the modern periods. How are families created and dissolved over time, and how did changes in these practices come about? How did people make the decision to get married, and how important were affective ties and material considerations in this process? How did past societies treat their children, and did love for children increase over time? Which people, inside and outside families, exerted power over family members? How did political and economic developments influence families' structure, function, and ideology? What do the changing structure and purpose of families in the West tell us about changes in the role of the individual and the relationship between public and private in the West? What do recent family histories tell us about the relationship between the past and the present, between individuals and ancestors, at the end of the twentieth century?

Class requirements will include participation in class discussion, in-class presentations, two short papers, and a 15-20

page paper based on primary sources. Class readings will draw on works from women's studies, historical anthropology, social history, legal history, material culture, sociology, and literature, and will include both primary and secondary sources.

420. Witchcraft and Gender in the Early Modern World. (M) Rabberman. Master in Liberal Arts course.

From the 15th century through the 18th century, social tensions erupted in Europe and the colonies in the witch craze, a period when intense cultural concern over witchcraft was expressed through religious treatises and sermons, popular literature like pamphlets and broadsides, legal accusations, trials, and, in some cases, executions. Although scholars argue vehemently about the total number of people executed during the witch-hunts, their importance in understanding early modern beliefs and responses to social tensions is clear. In this class, we will explore historians' understandings of the causes underlying this cultural phenomenon. With special attention to gender, social position, and religious belief, we will join academic debates about the causes of these persecutions. We will also read some primary sources from the medieval through the early modern periods, including trial transcripts, sermons, and pamphlets. Were women the main target of witchcraft accusations and executions, and if so, was misogyny their most important cause? What role did sexual norms and beliefs have in the way that accusations were framed? Were there different patterns of accusation and executions across time and region, and if so, what social and cultural factors might explain them?

SM 422. History of Sexuality. (M) Rabberman. Master in Liberal Arts course.

In this course, we will explore some of the most pressing, controversial, and intriguing questions that historians of sexuality have debated in the past few decades. Rather than simply debating changes in sexual practices over time, we will discuss the ways in which different societies in the past and present constructed sexual norms and understood normality and deviance in sexual terms. We will focus special attention on the following questions: To what extent are sexual identities constructed by different cultures, rather than simply being determined biologically? What influence do social, economic, and political conditions have on social constructions of sexuality? How have different societies used sexual norms to mark "natural" practices from "deviant"

ones, and how are these norms connected to societies' power structures? We will explore case studies from Classical Greece through the contemporary United States. Our readings will explore topics such as medieval and modern views of the body, gender, sexuality, and science; prostitutes in medieval and Victorian England; same-sex relationships from classical Greece to medieval Europe to the contemporary United States; expectations for sexuality within and outside marriage; hermaphrodites; and sexual deviants, among others.

Students will be expected to participate actively in class discussions, and to complete short response papers and a longer research paper.

SM 425. (PHIL485) Topics in Gender Theory. (M) Staff. Master in Liberal Arts course.

Do, or can, feminist theories have political effects in transforming the social and economic forms of women's subordination? This course will focus on the debate within feminist theory between a politics of claiming identity or essentialism versus a politics of subverting gender norms. We will show how gendered bodies and sexual differences are constructed through various social practices and discourses. We will examine what kinds of resistance can be mounted against the forces that maintain gender oppression. For example, what are the effects of new reproductive technologies on a woman's freedom to control her body or on her continued subordination? Lastly, by claiming sexual differences we will discuss how we will need to revise our concepts of justice, community, and rights.

SM 430. (CINE492, COMM430) Lesbian, Gay, Bisexual, and Transgender Representation. (A)

Staff. Prerequisite(s): Sophomore standing or permission of instructor.

An examination of the role of cultural institutions in shaping the images and self-images of homosexuals in Western culture. Because of their "invisibility", sexual minorities provide a unique example of the role of cultural stereotypes in socialization and identity shaping and can thus illuminate these basic communicational processes. Definitions and images to be analyzed (within a historical and cross-cultural context) are drawn from religious, medical, and social scientific sources, as well as elite and popular culture.

SM 431. (SOC1425) Women and Political Activism. (M) Leidner.

This seminar explores the conditions under which women become politically active and the relevance of gender to forms of activism, organizational practices, and choice of issues. Contemporary and historical case studies will examine women's activism in feminist and anti-feminist movements and organizations, in single sex-organizations devoted to a broad range of goals, and mixed-gender movements, including civil rights and trade unions.

SM 432. Family Dramas, Family Players. (M) Burnham.

Though families have been the subject of literary scrutiny at least since Oedipus Rexm Eugene O'Neil's magisterial Loong Day's Journey Into Night was arguably the first American work to look unflinchingly at the darker side of family life. In this course, we will read twentieth century novels, plays stories and poems (as well as some nonliterary theoretical works on gender) that show the family as a whole, albeit a fragmented whole. We will read stories by the Irish writers William Trevor and Edna O'Brien who show marriage in various stages of decay, as well as two short novels by the American Jane Smiley whose family survives their crises. We'll look at the relationship of neighborhood and family through stories by the African-American writers John Edgar Wideman and Toni Cade Bambara. Arthur Miller's "Death of a Saleman" and poems from Life Studies by Robert Lowell will let us examine family through the lens of America's obsession with success. Finally, we'll look at families with traditional homes, through Barbara Kingsolver's "The Bean Trees" and Marilynne Robinson's "Housekeeping." Several of the works on the list have been made into excellent films, and we will watch at least two. Brief weekly response papers will encourage all to participate in discussion. There will be a final comparative paper, and no exam.

SM 447. (ANTH447) Human Reproductive Ecology. (J) Valeggia. Prerequisite(s): ANTH 003.

A seminar-style graduate and advanced undergraduate course designed to provide an overview of the latest advances in human reproductive ecology and the mechanics of writing a proposal. We will discuss readings and exchange ideas on the different directions that this relatively new discipline may take. As a way of reviewing the material and train ourselves to present our ideas to a funding agency, we will write individual research proposals.

SM 449. (ANTH449, LALS449) Globalized Women: Domestic and Factory Workers in the Global Economy. (M) Diggs-Thompson.

On the surface, domestic and factory workers appear to perform radically different tasks. However, if we explore the conditions surrounding their employment, we see that globally, women in these occupations share some very important characteristics. These include similar household status, similar economic motivation and financial goals, and, similar placement on the occupational ladder. Many domestic and factory workers are also migrants, and although they are often better educated than women of previous generations, the vast majority are underemployed. This course examines how new forms of production and the spread of global capitalism have impacted the lives of women. The course will also examine and critique previous and current theoretical constructs that have attempted to describe and explain the phenomenon. By also evaluating women in relation to their country or region of origin, we will compare how global economic, social, and political forces have created new and renewed forms of womens oppression. Through group projects and individual projects, we will research and evaluate the conditions of women engaged in domestic and factory labor, and look at how past, present and future global conditions affect women associated with and employed in these categories of work.

499. Independent Study. (C)**503. MLA: Love, Politics and Myth in Popular Cinema. (M)** Mackey-Kallis. Master in Liberal Arts course.

Looking at such popular English language films as Titanic, The Piano, Reds, Cold Mountain, Gone with the Wind, and others, this course explores images of romantic love set against the background of often turbulent political times. Using Homer's the Iliad and the Oddysey and Dante's The Divine Comedy as a classical and medieval frame, respectively, for romantic love in a "dangerous time," and the writings of Carl Jung, Joseph Campbell, Carl Kerenyi, Luce Irigary, and others, the course explores the relationships among romantic love, spiritual transformation, individuation and cultural and political evolution.

SM 507. (COML507) Feminist Theory. (M) Staff.

The course has four foci: I. The French intellectual background of the 1960's and how feminists theory in Europe and America has appropriated, criticized and

reinterpreted the prevailing trends of the period. II. The contention that each gender possesses psychological characteristics traditionally considered as the prerogative of the opposite gender. III. The emphasis on a female specificity. IV. The emphasis on cultural determinism, an endeavor which usually involves a criticism of III, whose various manifestations are sometimes hastily lumped together under the term "neo-essentialism".

SM 511. (ANTH411) Anthropology of Sex and Gender. (M) Sanday.

Prerequisite(s): ANTH 002.

This course surveys psychoanalytic and social theories of sex and gender. We begin with the social organization and construction of sexual expression and engendered subjectivity. The social ordering of power through the mechanisms of sexual behavior and engendered subjectivity is considered next. In addition to reading anthropological analyses of sex and gender in specific ethnographic contexts, students will become familiar with relevant theorists such as Belsey, Strathern, de Lauretis, Foucault, Freud and Lacan. Short papers will be assigned in which students apply specific theories to interpret case material. Advanced undergraduates and graduate students are welcome.

513. (CINE215, SAST213, SAST513) Indian Cinema & Society. (B) Majithia.

This course will meet for three hours to view and discuss a variety of films/videos in Hindi, Tamil, Bengali, Urdu (with English subtitles), and English, which bring up issues of social, political, and cultural significance. Readings for the course will include articles in various fields ranging from film studies and communication to sociolinguistics and women's studies. Discussions will focus on cinema as a means of expression and as an instrument for social change, examining the various ways in which films both reflect and influence contemporary culture.

SM 516. (ANTH516) Public Interest Workshop. (M) Sanday.

This is an interdisciplinary workshop sponsored by Peggy Reeves Sanday (Dept of Anthropology), Michael Delli Carpini (Dean of Annenberg), and Ira Harkavy (Director, Center for Community Partnerships). Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann's call for interdisciplinary cooperation across the University and to the Dept. of Anthropology's commitment to developing public interest research and practice as a

disciplinary theme. The workshop will be run as an open interdisciplinary forum on framing a public interest social science that ties theory and action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. Examples of public interest topics to be discussed in class and through outside speakers include how education and the media reify public interests, the conflation of race and racism in the public sphere, the role of diversity, community action and service learning in higher education, and the contradictory relationship between individual and ethnic identity.

518. (NURS518) Nursing, Health and Illness in the U.S., 1860-1985. (B)

D'Antonio, Buhler-Wilkerson. Summer Session II.

Reviews the main events and ideas influencing health care since the Civil War changing ideas of health, the developing professions of nursing and medicine, institutions, the influence of religion and science, voluntary and tax supported health initiatives.

SM 528. (HSSC528) Gender and Science. (M) Lindee.

With a special focus on methods, this course explores the rich literature on gender and technical knowledge.

SM 532. (DEMG541, SOCI541) Gender, the Labor Force and Labor Markets. (M) Madden.

Drawing from sociology, economics and demography, this course examines the causes and effects of gender differences in labor force participation, earnings and occupation in the United States and in the rest of the developed world. Differences by race and ethnicity are also considered. Theories of labor supply, marriage, human capital and discrimination are explored as explanations for the observed trends. Finally, the course reviews current labor market policies and uses the marriage, theories of labor supply, marriage, human capital and discrimination to men. evaluate their effects on women and men.

SM 534. (COML534, ITAL534) Woman in Poetry: From the Troubadours to the Petrarchans. (M) Kirkham.

Conducted in English, undergraduates by permission only.

The course explores female voices in medieval and early modern literature from Italy and France. We shall begin with the foundations of the "courtly" lyric tradition, reading the "trobairitz" (female

troubadours). Next we shall turn to early Italian texts in which woman is the object of a male gaze. We shall consider both the classical "high" style that idolizes woman (Petrarch) and programmatic departures from it (Dante's "Stony Rhymes," satirical dialogues, and humorous misogyny). Our point of arrival will be the Petrarchan poetesses of 16th-century Europe, with an emphasis on the Italians (Vittoria Colonna, Gaspara Stampa, Laura Battiferra degli Ammannati). What were the literary and philosophical traditions that shaped notions of female identity? How do women establish their own textual space when appropriating a genre that had been the vehicle for a masculine first-person voice? How do the images of women as scripted by men, or staged through male cross-voicing, differ from those in poetry written by women? What are problems and issues in constructing a national history of women poets?

Course conducted in English, with texts available both in English and in the original. Undergraduates by permission. Requirements: class participation; a final oral presentation on a woman poet of the student's choice, and a term paper of not more than 20 pp. or a take-home final.

SM 537. (COML521, ITAL537)**Boccaccio. (M) Kirkham.**

Boccaccio's life and work in the context of Italian and European culture and society.

SM 540. (ANTH544, FOLK540) Masculinities in Narrative and Performance. (M) Dautcher.

In this seminar we will read and discuss fieldwork-centered approaches to understanding the individual and collective lives of men in communities around the world. Through a perspective that emphasizes masculinity as performed and narrated in everyday life, we will seek to integrate concepts of: (1) the self - the experiencing and embodiment of personhood, subjectivity, and emotion; (2) spatiality and power - public and private forms of masculine self-presentation such as bodily disciplines, sporting events, leisure spaces; and (3) the state - relations between gender ideology, governmentality and power in political theatre, media control, warfare and military memorials. Familiarity with theoretical works on performance and narrative approaches to the study of everyday life will be addressed through additional recommended readings.

SM 542. (SOCI542) Work and Gender. (M) Leidner.

This seminar examines the relevance of gender to the organization and experience

of paid and unpaid work. Combining materialist and social constructionist approaches, we will consider occupational segregation, the relation of work and family, gender and class solidarity, the construction of gender through work, race and class variation in work experiences, and related topics.

SM 546. (SOCI546) Feminist Theory. (M) Leidner.

Feminist activists and academics have posed fundamental challenges to existing approaches to social theory. This seminar explores the development of feminist theory since the 1960s, focusing on approaches that have the most relevance for social science. The relations among feminist theorizing, research, and activism will be emphasized.

SM 550. (COML550, ENGL550) Topics: Women & Literature. (M) Staff.

This class explores the cultural context in which the so-called Romantic Movement prospered, paying special attention to the relationship between the most notorious popular genres of the period (gothic fiction and drama) and the poetic production of both canonical and emerging poets.

SM 553. (COML554, ENGL553) British Women Writers. (M) Bowers.

A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825.

555. (NURS555) Women and Incarceration. (A) Brown, K.; Guidera; Durain.

This elective course will afford students the opportunity to participate in service learning and health education in the Philadelphia prison system, in particular to incarcerated women. Students will explore the social and historical framework and trends in the incarceration of women and the health status of incarcerated women. During seminar discussions with experts in the criminal justice system and with staff and inmates at Riverside, the Philadelphia women's jail, students will explore the health, health care and health care needs of incarcerated women and identify specific areas in need of attention, especially with regard to health education. In collaboration with Philadelphia jail staff and female inmates, students will design and implement a health education project.

SM 556. (CINE556, COML557, ENGL556) Topics in Nineteenth Century Literature. (M) Staff.

This course covers topics in nineteenth-century literature, their specific emphases varying with instructor.

SM 566. (COML566, ENGL566) Topics in Literature and the Law. (M) Gamer.

This seminar will explore the relationship between two of our most powerful forms of social discourse, literature and the law.

The two share conspicuous similarities: a tendency to represent, interpret, and criticize flesh-and-blood interactions; a reliance on story-telling; a fondness for precedent, evidence, and testimony. Yet the two are perhaps even more frequently in conflict with one another, particularly over questions fundamental to both -- how language works, what constitutes evidence and truth, and what kinds of advocacy and representation are desirable or harmful. Readings will begin in the ancient world and move forward chronologically to the present day. For the first weeks of the course, we'll explore the literary and legal bases of the ancient and medieval world in authors like Homer, Aquinas, Dante, and Machiavelli. How did these writers define fundamental terms like authority and jurisdiction? How did their different legal codes conceptualize issues still controversial today, like habeas corpus, trial, and torture? Around week five or six we'll move from these foundational texts forward in time to that most powerful legal and literary fiction, that underwrites our sense both of an independent judiciary and what we most often call "the public sphere" or "the court of public opinion."

SM 569. (AFRC569, COML569, ENGL569) Topics in American Literature. (M) Staff.

This is a topics course where the primary is English. When the topic is Gay/Lesbian/Queer Studies and 19th Century American Literature or African American and Chicana Feminism, this course will be cross listed with women's studies.

SM 571. (ENGL571) Literary Theory and Gender. (M) Staff.

This course is usually offered in the fall as a general introduction to literary and cultural theory, covering a wide range of thinkers and approaches. It is also sometimes offered in the spring as a concentrated exploration of a particular problem or school of thought.

572. (EDUC572) Language and Gender. (B) Pomerantz.

A critical investigation of the relationship between language, gender, and social structure which addresses the role of language in reflecting and perpetuating gender divisions. Students' ongoing discourse analytic projects are integral to our exploration of issues related to sexism in and through language. Implications for individual and social change are discussed.

581. (EDUC581) Advanced Psychology of Women. (L) Stanley.

Prerequisite(s): A course in general psychology.

A critical analysis of psychological theories about women and sex differences, a thorough examination of "psychology of women" research articles, and class-initiated research. Among the issues to be covered are: sex role socialization; class, race and gender connections; women and work; employment discrimination, assertiveness training; women's responses to injustice: domestic violence, rape, discrimination; the family and the "new right"; perceptions of women; sexuality, disability and objectification; reproductive rights, sex roles, androgyny and new role prescriptions; mental health and aging.

588. (NURS588) The Politics of Women's Health Care. (B) Durain, McCool.

This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health.

590. (EDUC590) Gender and Education (ELD). (B) Schultz; Kuriloff.

This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on

gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.

SM 591. (COML588, ENGL591) Modernism. (M) Staff.

This course can take up any issue in modernism, but has usually focused on American modernists. One recent version of the course treated the work of William Carlos Williams; another dealt with the relations between modernism, mass culture, and such quintessentially "modern" experiences as assembly-line production and "urban shock".

SM 592. (COML592, ENGL592, ITAL592) Women in 20th Century Italian Literature. (M) Staff.

This seminar, with readings and discussion in English, will bring recent American, French and Italian feminist theories to bear on the literary production of Italian women in this century. Similarities and disjunctions between and among these feminisms will be explored, and the literary-theoretical directions taken by them will be used to analyze this century's Italian fiction and poetry primarily, although not exclusively by women. Some few male writers whose work speaks to the issue of the "voce femminile/debole" or "weakened" feminine voice will also be studied. Throughout, a balance of theory and practice will be sought, as feminist critical perspectives and literary texts alike are scrutinized.

SM 594. (ARTH590, CINE590, COML599) Women's Cinema, World Cinema. (M) Staff.

The concept of women's cinema, with its ambiguities--by women, or for women? popular or feminist?--has been debated within feminist film scholarship for three decades. The concept of world cinema--curricular component, brand, or transnational formation?--currently undergoing an intensified interrogation. With a focus on internationally circulating films directed by from the global North and South, this course looks at authorship and aesthetics, film policy and financing, festival and art-house programming, and questions of national identity and human rights as they intersect with feminist theory and practice.

599. Independent Study. (C) Staff.

SM 610. (COML610, HIST610) Colloquium in American History. (A) Staff.

This is a topics course. If the topic is "Differences: Theory and Construction" it will be cross-listed with HIST 610/COML 610 and the following description applies. This course explores differences and theoretical perspectives on difference as related to gender, race, class, and sexuality. We will examine, in addition to the work of historians, historical studies of social diversity in America developed by scholars of race, gender, philosophy, literary theory, black studies and feminist studies.

612. (EDUC612) Sex and Gender in Ancient Greece: Ancient Practices, Modern Constructs. (L) Murnaghan.

A study of how sexuality and sexual difference figured in the social practices and representations of the ancient Greek world. Topics for discussion include medical constructions of the male and female bodies, the politics of prostitution, the intersections of gender and slavery, depictions of sexuality in lyric poetry, drama, philosophy, legal discourse, and the novel, and the cultural significance of same-sex sexual realtions. Emphasis will be placed on the role of ancient gender arrangements and sexual practices in contemporary discussions, such as the feminist rediscovery of ancient matriarchies, Foucault's reconstructions of ancient models of the self, and the recent debates about the Colorado Amendment 2 Case. The course is open to interested graduate students in all fields, and no knowledge of Greek is required.

SM 620. (HIST620, JWST620, RELS621) Colloquim in European History. (A) Staff.

This course will focus on problems in European political, social, cultural, and economic development from 1750 to the close of the second World War. Readings will include major works in the different fields of European historical scholarship, ranging from family to diplomatic history and covering a wide variety of methodological approaches.

SM 642. (AFRC642, ANTH642) Multiculturalism: Fieldwork and Theory. (M) Sanday.

This is primarily a fieldwork, methods, and theory course for students working in multicultural settings or on topics involving the representation of cultural difference in popular culture. This seminar course is built around student projects. Each student will write a final paper for the course based on their fieldwork. Another important

component of the course is the theoretical grounding of the fieldwork. Readings will be on multicultural theory and ethnographic methods in multicultural settings. The primary ethnographic site will be on the U.S., but students working in other multicultural settings are invited to enroll.

SM 652. (COML652, FREN652) Women's Writing in Early Modern France. (M) Staff.

Topics of discussion will vary from semester to semester. One possible topic is: "The Female Tradition and the Development of the Modern Novel." We will discuss the most important women writers--from Scudery to Lafayette--of the golden age of French women writers. We will be particularly concerned with the ways in which they were responsible for generic innovations and in particular with the ways in which they shaped the development of the modern novel.

SM 676. (COML676, GRMN676) Readings in Feminist Theory. (I) Weissberg.

The seminar will provide a survey of recent feminist theories, and a discussion of literary texts focusing on issues of gender, race, and class. The reading list will include essays by French, English, and American theorists as well as novels by Bachmann, Wolf, and Jelinek.

SM 683. (ENGL769, PSCI683) Gender, Power, and Feminist Theory. (M) Hirschmann.

This seminar will examine the theme of power as it engages questions of sex and gender. Subsidiary themes that will be developed over the course of the semester include: the modernism/postmodernism debate as it particularly relates to feminism; the intersectionality of race, gender, sexuality and class and how feminists can and do talk about "women"; the relevance of feminist theory to policy issues, and which theoretical approaches are the most appropriate or have the most powerful potential. The readings represent some of the newest scholarship as well as several more familiar texts to provide understanding of how some of the latest developments in feminist theory have come to pass. In the first 5 weeks we will explore general issues of power and then turn to works that attempt to grapple with more specific political issues in which power is expressed.

SM 705. (AFST705, ANTH705, COML715, FOLK715, MUSC705) Seminar in Ethnomusicology. (A) Staff.

This seminar will take an interdisciplinary approach to the study of women in jazz performance. We will define "jazz" quite broadly to include contemporary musicians in the world music market, and consider the works of and about women from Africa, Europe, and the U.S. Students will be required to read materials written by and about women in jazz, as well as listen to recordings made by the women studied.

SM 735. (COML637, ENGL735) Shakespeare. (M) Staff.

This seminar focuses on some aspect of Shakespeare's work, the context of its production, or its critical reception. A recent version examined Shakespeare's English history plays in the context of the Renaissance revolution in historiography

SM 748. (COML748, ENGL748, FREN660) Eighteenth-Century Literature. (M) Staff.

This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology.

SM 750. (ENGL750) Topics: Romanticism. (M) Staff.

This course is an advanced seminar on writings of the Romantic period, not restricted to English Romanticism. This is a topics course and the content may vary.

SM 751. (ENGL751) British Women Poets. (M) Staff.

An advanced seminar in British poetry by women. This course has generally focused on the period from 1770-1830 when more than 300 women published at least one volume of poetry.

SM 769. (COML769, ENGL769) Feminist Theory. (M) Staff.

This course is designed as an introduction to theories of subjectivity in post-structuralist analysis and "dissident" sexualities as they have been inscribed in cultural/textual representations from the late 19th century to the present. Feminist critiques of sexual difference, especially as they have been informed by psychoanalysis, will be our primary methodology. We will be especially concerned with the construction of lesbian

and gay "identities" and the politics of visibility for subcultural sexual minorities as they intersect historically with class, race, and gender formations.

**SM 773. (AFRC773, ENGL773)
Feminist Introduction to Literary
Modernism. (M)** Mahaffey.

This is an English topics course. When the title is "Feminist Introduction to Literary Modernism" the course will be cross-listed with Gender Culture and Society (GSOC).

**SM 778. (COML778, ENGL778)
Twentieth-Century Aesthetics. (M)**
Steiner.

This course explores notions that have conditioned twentieth-century attitudes toward beauty: among them, ornament, form, fetish, and the artifact "women". The moves to twentieth-century fiction, art, manifestos, theory, and such phenomena as beauty contests and art adjudications.

**SM 787. (ARTH787) Seminar in
Contemporary Art. (C)** Staff.

Topics vary, when the course description includes women, gender and sexuality the it will be will cross-listed with GSOC.

**SM 790. (COML790, ENGL790)
Critical Theory. (M)** Staff.

Course varies with instructor. Recent versions have been "Critical Theory: Legacies of the Frankfurt School" and "Auteurism and Artificiality in Film Studies".

**SM 806. (COMM806) Gender,
Globalization and Media. (M)**
Parameswaran.

This seminar creates a forum for debate over the ways in which the cultural politics of gender structure the historical, economic and social landscapes of media globalization Media culture, as the course readings seek to show, provides a fertile site to examine how globalized media practices articulate gendered imaginations. Adopting a transnational feminist perspective, the seminar specifically address between and among media technologies, representations, and institutions and the complex scripting of gendered meanings and subject positions in multiple locations in the global public sphere. Course topics include globalization and transnational and postcolonial feminist theories; gender, sexuality, and media; gender and labor in globalized media industries; femininity, consumerism, and global advertising; gender, global media, and morality; tourism, gender, and media economies; and gender, religion, and popular culture. For the major assignment,

students will be expected to produce a research paper that focuses on one of the following: a critical review of a set of theories or a body of empirical work in a specific region; textual analysis of media with special attention to influences of globalization; political-economic analysis of media institutions and corporate practices.
