This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student's aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making. This course is primarily for freshman and sophomores.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

222. (FNAR622, URBS322) The Big Picture: Mural Arts in Philadelphia. (C)
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.

227. Writing with Pictures: Children's Picture Books. (C) Edgerton.
A children's picture book is a unique book form in that it is written with pictures. Words, if used at all, serve to illustrate what the picture cannot say. In this course students will learn the complexities of designing what looks to be, a simple picture book for children. Visualizing the story begins with both writing and drawing prompts, image collecting, and exposure to a range of children's literature. Students will learn to sequence a main character and
an environment into a storyboard through stages of changes towards a resolution. By the end of the semester students will have a good understanding of how a picture book works, with a personal "dummy" book well on its way. This course will include two guest artists.

231. (FNAR531) Painting Practices. (C) Prerequisite(s): FNAR 123.

Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student's ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.

232. (FNAR532) Painting Studio. (C) Prerequisite(s): FNAR 231. This course can be continued by registering for FNAR 333 Painting Studio (III), and FNAR 334 Painting Studio (IV).

Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.

233. (FNAR633) Digital Illustration. (C) Prerequisite(s): FNAR 264 and FNAR 123. Course Fee $75.00.

Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and plan creatively and skillfully execute finished artwork.

234. (FNAR634) Art of the Web: Interactive Concepts for Art & Design. (C) Prerequisite(s): FNAR 264. Course Fee $75.00.

Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives to us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical and conceptual skills and foster creative thinking.

235. (FNAR635) 3-D Computer Modeling. (C) Prerequisite(s): FNAR 123 and FNAR 264. Course Fee $75.00.

Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.

236. (FNAR536) Digital Figure Modeling. (B) Prerequisite(s): FNAR 235. Course Fee $75.00.

This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution renderings, and rapid prototyping.

SM 238. (FNAR538) Open Book. (A) Course Fee $75.00.
"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.

SM 239. Photographic Thinking.

This course will explore the vitality and range of photography as a discursive practice by analyzing the way images are structured and deployed in contemporary art and wider media culture. Students will be introduced to the key issues surrounding photography now- led through these questions by lectures, readings, group discussion and project-based work. A series of photo-assignments challenge the students to integrate critical thought with practice, exploring a range of formal strategies and thematic frameworks that affect the meaning of their images. Students should have a strong interest in philosophy and art histories (especially the history of photography.) They should be motivated to work independently & experiment creatively. There are no prerequisites for this course. It is intended for all different levels of technical experience, but the minimum requirements are a digital camera, a basic familiarity with Photoshop and access to a computer with imaging software.

241. (FNAR541) Hand-Drawn Computer Animation. (M) Prerequisite(s): FNAR 264. Course Fee $75.00.

Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.

243. (FNAR543) Figure Sculpture I. (B) Course Fee $75.00.
An introduction of modeling the human figure in clay. Students will work from the
245. (FNAR645) Book and Publication Design. (A) Hyland. Prerequisite(s): FNAR 264 or permission from the instructor.

Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books—literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions—discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout students will examine paratextual elements (title page, practices of pagination and other internal structuring, content lists and indexes, colophons, notes and marginalia, end-leaves, binding, etc.).

247. (FNAR547) Environmental Animation. (B) Landau. Prerequisite(s): Experience in landscape architecture, architecture, animation, programming, film, Photoshop, or graphic design is strongly encouraged but not required. This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the refiguring of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry points for students of different disciplines and skill levels. Projects will range in scope from animated GIFs to animated shorts.

This course embraces a spirit of invention, collaborative learning, and interdisciplinary cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walk-through, data-visualization, as well as filmmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily be using 3D Studio Max and After Effects with support from Next Engine 3D Scanner, Rhino, and Grasshopper. Scripting will be included in most assignments to enhance artistic control of the software.

250. (FNAR550, VLST250) Introduction to Printmaking. (B) Course Fee $75.00. The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

251. (FNAR551) Printmaking: Etching. (C) Course Fee $75.00. The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole', Spit-Biting, Sugar Lift, Color Printing and Viscosity printing.

252. (FNAR552) Printmaking: Relief & Screen Printing. (C) Course Fee $75.00. This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.

253. (FNAR553) Advanced Projects in Printmaking. (B) Prerequisite(s): FNAR 252 or FNAR 257 and FNAR 251. Course Fee $75.00. This course will concentrate on expanding imagery in print media. The course requires the proposal of a directed final project to be developed during the semester. Three initial exploratory projects will culminate in the final. Projects are open to all print media, but there will be an emphasis on screen printing. Techniques will be addressed as they serve the needs of ideas rather than a set technical procedure. Through individual consultation, scheduled class critiques, and field trips, attention will be given to studio work in and out of printmaking so that the technical and conceptual strengths of print media can serve as a worthwhile adjunct to an overall studio practice.

254. (FNAR564) Printmaking & Publications: Intro to Independent Publishing and Artists' Publications. (B) Romberger. This course introduces students to independent publishing and artists' publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists' zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists' work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City's Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists' books, where students will be encouraged to submit a publication by semester's end.

257. (FNAR557) Printmaking: Mixed Media. (C) Course Fee $75.00. This course will explore the interplay of analog and digital processes and products of printing through various media,
technology and conceptual approaches. In this changing world of communication, explore the intersection of old and new media to fabricate new and experimental design for print media. Using the printshop, the computer, and the equipment in the fabrication lab as our interface for exploration, we will focus on text and image relationships by integrating design, typography, print, and digital systems in a printing workshop environment. This course begins with an exploration of processes and experimentation, resulting in the creation of an edition that is conceptually centered on individual interests that engage the senses, the imagination, and the intellect.

258. (FNAR558) Introduction to Clay: the Potter's Wheel and Beyond. (C) FNAR Faculty. Course Fee $75.00.

130this introductory clay class, students will learn all the fundamental skills needed to create three-dimensional forms in clay using a variety of methods: wheel throwing, handbuilding (such as coil building and slab construction), and press molding. Whether creating utilitarian forms or creating sculpture, projects are designed to strengthen both craftsmanship and individual creativity. In addition to developing a working knowledge of the ceramic process, including surface treatments and glazing, students will also be introduced to design issues as well as contemporary art/ceramics topics that influence our aesthetic sensibilities. No prerequisites.

259. (FNAR559) Beginning Clay: Handbuilding and Casting Techniques. (C) FNAR Faculty. Course Fee $75.00.

Modeling and casting are fundamental methods of object-making. Students will learn basic handbuilding techniques such as coil building, slab construction, and mold making through assignments that incorporate conceptual and technical issues. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts, and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilene, paper pulp, cardboard, and tar paper will be explored. No prerequisites.

263. (FNAR563) Advanced Wheel Studio. (C) Prerequisite(s): FNAR 261. Course Fee $75.00.

This course teaches students more advanced wheel throwing techniques while helping to develop their critical skills in other areas of ceramic work. Students will learn to throw, employing larger masses of clay, and to increase the complexity of their work by combining and altering thrown parts. There will be an emphasis on experimentation in surface treatment and design, the goal of which is to expand a student's ability to create more complicated and personalized clay works. In addition to learning the technical knowledge, there will be critical discussions of contemporary ceramics issues through image presentations, reading materials and field trips.

264. (FNAR636, VLST264) Art, Design and Digital Culture. (C) Course Fee $75.00.

This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

266. (FNAR566) Graphic Design with Creative Technologies. (C)

Prerequisite(s): FNAR 264/636. Course Fee $75.00.

The aim of this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and data-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.

267. (CIMS267, FNAR567) Computer Animation. (C) Prerequisite(s): FNAR 264. Course Fee $75.00.

Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.

268. (FNAR568, IPD 568) Integrative Design Studio: Biological Design. (C) Prerequisite(s): FNAR 264. Course Fee $75.00.

This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2017.

269. (FNAR569) Typography. (C)

Prerequisite(s): FNAR 264. Course Fee $75.00.

The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.

270. (FNAR570) Graphic Design Practicum. (C) Prerequisite(s): FNAR 266 or FNAR 269. Course Fee $75.00.

Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit
interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.

271. (FNAR571, VLST251) Introduction to Photography. (C) Prerequisite(s): None. Course Fee $75.00.
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

SM 272. (FNAR572) Advanced Photography: Integrated Techniques and Strategies. (C) Prerequisite(s): FNAR 271 or Permission From Instructor. Course Fee $75.00.
This studio course seeks to broaden each student's skills by experimenting with a wide range of photographic media. Advanced analog, digital and experimental lens-based techniques will be covered, as well as larger camera formats to expand their vocabulary as image-makers. Emphasis will be on an integrated experience of the photographic medium and the development of a body of work that is both theoretically and historically informed. The course will be a means to view and discuss various strategies of important contemporary photographers. Focused assignments, readings, slide lectures and gallery visits will supplement each student's artistic practice and research.

SM 274. (FNAR574) Reconfiguring Portraiture. (B) Prerequisite(s): FNAR 271 or FNAR 340 or Permission of Instructor. Course Fee $75.00.
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time.

SM 278. (FNAR578) Documentary Strategies. (C) Prerequisite(s): FNAR 271 or FNAR 340 or Permission from Instructor. Course Fee $75.00.
This course offers a context for photographers to develop a documentary project - either within a traditional photojournalistic framework or one that challenges these traditions. The aim is to understand documentary as an evolving practice and to develop an artistic response when depicting our social reality - from everyday experience to the events that shape the world. An important aspect of the class will be examining the diversity of ways that journalists and artists have used the camera to extend and question the power of photography as document. The class will address key questions of media and mediation, the nature and status of documentary in the context of globalizing media and how traditional documentary work has been affected by video, performance, conceptual art and activism.

279. (FNAR679) Studio Lighting. (B) Wahl. Prerequisite(s): FNAR 271 or Permission of Instructor. Course Fee $75.00.
The necessity of light and how light is rendered in relationship to what is seen and understood, is often a key ingredient in the portrayal of a subject. The origin of the still life can be found in images as far back as antiquity and has dealt with notions of death, science, class, social customs and even sex. Photography picked up on the tradition in 1827 and has not only made use of the form, but has expanded the topic into very unique territories. Contemporary artists have re-invented and re-invigorated the still life, formalism & abstract photography. As a framework for exploring ‘hands-on’ lighting techniques, students will creatively grapple with the photography of objects in the studio. Working with the physical, symbolic, and conceptual ramifications of depicting specific forms in an image, teamed with the discussion of key texts, critiques, and studio lighting seminars, each student will create a considered and unique portfolio of images.

280. (FNAR580) Figure Drawing I. (C) Prerequisite(s): FNAR 123. Course Fee $75.00.
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.

281. (FNAR581) Figure Drawing II. (C) Prerequisite(s): FNAR 280. Course Fee $75.00.
Figure Drawing II is an advanced class designed to further develop the student's skill and facility in capturing the human form. Content and conceptual issues will be explored through individualized projects concentrating on the figure. Students will also expand on their knowledge of drawing media and application.

SM 282. (FNAR582) Advanced Topics in Photography: Site, Space and Documentation. (A) Prerequisite(s): FNAR 271 or FNAR 340 or Permission from Instructor. Course Fee $75.00.
This course will challenge students to create immersive environments and activated spaces through interdisciplinary means. Students will be working on individual as well as collaborative projects; they will be encouraged to incorporate different media with photography and explore the various methods and materials of installation. They will learn how to develop and present professional proposals and experiment with different modes of documentation. We will examine the history of Installation Art with an emphasis on contemporary trends and important emerging artists. Topics of discussion will range from site-specificity/architecture, Social Practice models and performance-
oriented residue. The course culminates with a public presentation-an exhibition of student projects created for specific sites on campus.

284. (FNAR684) Photography and Fashion. Prerequisite(s): FNAR 271 or FNAR 340 or Permission from Instructor. Course Fee $75.00.

Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocations. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair, make-up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.

285. (FNAR685) Photography and Fiction. (B) Diamond. Prerequisite(s): FNAR 271 or FNAR 340 or Permission from the Instructor.

In spite of photography’s traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.

Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization.

Visual Narrative focuses on traditional as well as emerging modes of production and distribution for documentary, visual storytelling, and photojournalism, exploring new aesthetics and the social impact of visual narratives.

Visual Narrative immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers. Students will work within and across disciplines of art, design, and visual journalism, exploring topics including context, cause and effect, time, space, flow, picture-to-picture relationships, sequence, visual hierarchy, and linearity. Study of non-narrative systems - categorical, rhetorical, abstract, and associational forms - as well as interactive narratives will also be included.

289. (CIMS289, FNAR589) Mixed Media Animation. (C) Prerequisite(s): FNAR 123 and FNAR 264. Course Fee $75.00.

Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multilayer collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.

Perspectives on Critical Issues aims to engage students in an ongoing and informed study of both historical and contemporary issues in a spirit of curiosity and critique. We will investigate how these concepts can clarify and complicate our creative practice and our understanding of the contemporary art world. This seminar will explore the shifts in artistic production, theory and criticism and topics will range from traditional investigations of aesthetics, Modernism, Post-Modernism and contemporary themes.

Through discussions of assigned readings, class presentations, films, lectures, and field trips, this seminar will help establish a critical and theoretical foundation where your own beliefs and doubts about art and culture will be called into question and will provoke an ongoing inquiry into how you understand art, your own creative process, and the relationship of art and artists to society and creative culture.

SM 315. (ENGL119, FNAR615) Across Forms: Art and Writing. (A) Hayes and Zolf.

What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance—or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.

SM 320. (ARTH301, CIMS320, CIMS393, ENGL291) Topics in Animation. (A) Staff.

This course will look at animation as an art form, a technology and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions shape the development of animation and in turn, how animation impacts viewers. Topics will include trends in animation and their relation to contemporary popular culture, issues of art versus commerce in the creation of cartoons, the intersection of animation and politics, and shifts in style and technique throughout the years. We will look at the figures who have shaped the art forms and continue to influence it, the rise in animation's popularity, and
current day applications of animate imagery.

SM 325. Drawing Seminar. (A) Matt Neff. Prerequisite(s): FNAR 123 or permission by instructor.
This seminar explores drawing practices as both a concrete and metaphorical, as space for conversation and questioning, and as a way to expand the boundaries of drawing. Using readings, films, class trips, independent research, and discussions, students will learn about themes in contemporary art relating to drawing, and its historically close relationship with interdisciplinary studio practices. Through studio-based projects, students will explore drawing’s varied forms: perceptual, digital, time-based, performative, schematic, sculptural, and interactive. These projects will build on perceptual drawing skills and explore a wide use of traditional and non-traditional methods, tools, and materials.

The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geo-physical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

331. (FNAR631) Interdisciplinary Studio: Sites of Convergence and Hybridity. (B) Tileston. Prerequisite(s): One previous studio course (such as FNAR 123, FNAR145, FNAR150, FNAR 231 or FNAR 264) or permission from the instructor.
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture interseat, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.

333. (FNAR333) Painting Studio. (C) Prerequisite(s): FNAR 123 and FNAR 333. Painting Studio IV focuses on continuing the student's exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting I/III students may be involved in), the emphasis is on the investigation of the student's own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.

334. (FNAR534) Painting Studio. (C) Prerequisite(s): FNAR 123 and FNAR 333. Painting Studio IV focuses on continuing the student's exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting I/III students may be involved in), the emphasis is on the investigation of the student's own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.

337. (FNAR637) Information Design and Visualization. (C) Prerequisite(s): FNAR 264. Course Fee $75.00.
Information Design and Visualization is an introductory course that explores the structures of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.

SM 338. (FNAR638) Creative Research. (A) Telhan. Course Fee $75.00.
This seminar explores what it means to do research in creative and critical practices. Students learn about different research methods from design, engineering, humanities and sciences; utilize them for developing and evaluating their individual creative work as cultural producers. This is an interdisciplinary course that encourages students to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and criticize; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time to develop their work from different perspectives.

340. (FNAR640, VLST265) Digital Photography. (C) Course Fee $75.00.
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department.

If you need assistance registering for a closed section, please email the department at fnaru@design.upenn.edu

SM 343. (FNAR643) Language of Design. (B)
The course will explore the changing relationship during the modern era between design(structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design -as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal visual language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the
publication process). Students can suggest additional topics related to their field of study.

347. (FNAR647) Expanded Documentary. (B) Davenport. Prerequisite(s): FNAR-061 or FNAR-271 or FNAR-340 or permission from instructor. Course Fee $75.00.

The sites and situations of documentary in our culture have exploded exponentially - from standardized formulas (like reality tv), to social media and cross-platform journalism. In contemporary art, documentary practice has also significantly expanded and diversified. Since the early 2000's, with several influential exhibitions following Documenta XI, a new generation of artists have taken up the ambition of depicting our social reality, and have done so by re-engaging and re-inventing the documentary mode. This intermediate course will examine this vital contemporary field and will also offer students a comprehensive introduction to the history of documentary practice. We will investigate a series of key questions regarding the relation between politics and aesthetics, mediums and mobility, how documents function to both approximate and deny a sense of ‘reality’ and perhaps most importantly - what kinds of social, political or personal realities you want to propose in your artwork. The class will be driven by a series of studio assignments and practical experimentation. Although there will be an emphasis on photography and video, students will also explore a multiplicity of strategies and forms (including archival display, essayistic installation, image-text relationships, and the documentation of performance.)

348. (FNAR648) Counter the Land: Photography and the Landscape. (A) Wahl. Prerequisite(s): FNAR 271 or FNAR 340 or with permission from the instructor.

Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrew Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition.

Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.

349. (FNAR649) Advanced Digital Photography. (C) Prerequisite(s): FNAR 340. Course Fee $75.00.

In this studio course, students will become proficient in advanced techniques of image production while expanding their artistic process and refining their photographic work. With an emphasis on self-directed projects and research, students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end equipment and develop professional printing skills. Class discussion, lectures and assigned readings will address the critical issues in contemporary art, media and photographic culture. Emphasis will be on integrating practice and critical dialogue.

350. (FNAR650) Shared Culture: New Strategies for Artists in the Digital Age. (B) Goldsmith. Fine Arts Majors or MFA students ONLY or permission of instructor.

Our digital world has forced us to entirely rethink what it means to be an artist in the digital age, socially, economically, and politically. Ideas that have long been stable - including originality, creativity, and genius - are ripe for reexamination and redefinition in the twenty-first century. When the entire internet is copy-and-pasteable - and distribution moves swiftly - is anything off limits for the artist? Can we imagine our artistic production mimicking the meme, rippling through the networks for a day, then disappearing forever? Are we doomed to make works that are supposed to live for eternity or, in the face of environmental meltdowns and collapsing financial markets, can we instead move our production toward the ephemeral? What would this look like? Can our output be steered toward the political? Can we frame these ideas as acts of resistance? Or compliance? Is there an inside? Is there an outside?

353. (CIMS353, FNAR653) Advanced Projects in Animation. (B) Prerequisite(s): FNAR 235 and FNAR 267, or Instructor Permission.

Students will explore facial animation at great depth. Investigating both skeletal and muscular anatomy, students will implement their knowledge in the creation of facial rigs and realistic animation of 3D computer characters. Strong emphasis will be placed on drawing and acting skills to achieve a successful working knowledge of both form and function. As an advanced seminar course, students are expected and encouraged to work and explore topics outside of the classroom.

366. (FNAR646) Advanced 3-D Modeling. (C) Prerequisite(s): FNAR 235/365 or FNAR 236/536. Course Fee $75.00.

Advanced 3-D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting and rendering with an emphasis on the evolution of ideas through constant revision based on class critique. Students will use a variety of industry standard software packages, including, but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content within a simulated production environment.

370. (FNAR670) Advanced Graphic Design and Typography. (A) Prerequisite(s): FNAR 266 and FNAR 269 or Permission of Instructor. Course Fee $75.00.

This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.

378. (FNAR678) Interfacing Cultures: Designing for Mobile, Web and Public Media. (B) Prerequisite(s): FNAR 234. Course Fee $75.00.

This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phones applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as such as online-gaming, viral communication, interface culture, networked environments, internet of things
and discuss their artistic, social, and cultural implications to the public domain.

399. Independent Study. (C)
Prerequisite(s): See Department for section number. A minimum three-page proposal must be submitted and approved by both the Instructor and the Undergraduate Director.

SM 488. Senior Seminar and Project (Fall Semester). (A) Prerequisite(s): Fine Arts Majors in Senior Year only.
This rigorous pair of courses, one offered in the Fall and one offered in the Spring semester, are designed as the capstone of the Fine Arts major and are required for all graduating fine arts seniors. They can only be taken in the senior year. Students work in individual studio spaces provided by the department and then meet with faculty for seminar, critique, and professional practice exercises. Through individual and group critiques, students begin to conceptualize their final thesis exhibition or project. The senior seminar allows students to create lasting professional relationships with the fine arts faculty and visiting lecturers. The fall semester culminates in a group exhibition of senior student work paired with final semester critiques.

SM 489. Senior Seminar Project. (B) Prerequisite(s): FNAR 488; Fine Arts Majors in Senior Year only.
The Spring semester seminar culminates in a senior thesis exhibition for each graduating student. These exhibitions have traditionally been held as a small group exhibition featuring a few students in one group, or as a larger end of semester exhibition with each student installing a series of works. The format of the exhibition will be determined during the fall semester by the senior faculty. The process of preparing, installing, and promoting the thesis exhibition is covered in detail throughout the semester. Students will work in their on-campus studio spaces to produce dynamic, thoughtful and well-crafted work that will serve as their final portfolio. They will present their portfolio of work during a final critique before graduation.

501. Graduate Studio I. (A) Lum/Freedman/Mosley/Tileston.
First year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual arts disciplines.

502. Graduate Studio II. (B) Adkins/Davenport/Freedman/Mosley/Telston.
Second year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.

515. Photography Studio Abroad. (K) Prerequisite(s): Permission of Instructor Required - Competitive Application Process Only.
This Traveling Studio is offered every other spring term to upper level photography & related media students. It is a cross-cultural visual investigation, exploring the contradictions and significance of the chosen city. This course incorporates multi-disciplinary research in preparation for the trip; exploring various fields of knowledge production such as art, history, social sciences, markets and governance. Class discussion, readings and individual research will be focused towards the development of each student's photo/media project, which will be realized while abroad. After returning to Philadelphia, students will develop and refine their work; the remaining classes will emphasize critique, editing, printing and presentation options. The final projects will be included in a group exhibition at the end of the semester. Admission to the course is on a competitive basis.

523. (FNAR123, VLST253) Drawing I. (C)
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

524. (FNAR124) Drawing Investigations. (C) Prerequisite(s): FNAR 523.
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problemsolving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.

526. (FNAR126) Sequential Drawing. (B) Prerequisite(s): FNAR 523.
Sequential drawing instructs in the visualization of story telling through the exploration of visual narrative components (visual iconography, panel- to-panel transition types, picture/word relations) and their application to a narrative through the use of formal drawing techniques (composition, color, perspective, line, form). The class begins with various exercises in paneling, pacing and style development, and concludes with the student applying the concepts and techniques they've acquired to the creation of a graphic novel.

The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geographical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a
society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot be pondered.

531. (FNAR231) Painting Practices. (C) Prerequisite(s): FNAR 523.
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student's ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedents in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.

532. (FNAR232) Painting Studio. (C)
Prerequisite(s): FNAR 531. This course can be continued by registering for FNAR 533 Painting Studio (III), and FNAR 534 Painting Studio (IV).
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.

534. (FNAR334) Painting Studio. (C)
Prerequisite(s): FNAR 523 and FNAR 533. Painting Studio IV focuses on continuing the student's exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), the emphasis is on the investigation of the student's own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.

536. (FNAR236) Digital Figure Modeling. (B) Prerequisite(s): FNAR 635; Recommended FNAR 543 or FNAR 580. Course Fee $75.00.
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution renderings, and rapid prototyping.

SM 538. (FNAR238) Open Book. (A)
Course Fee $75.00.
"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.

541. (FNAR241) Hand-Drawn Computer Animation. (M) Prerequisite(s): FNAR 636. Course Fee $75.00.
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.

542. (FNAR142) 3-D Design. (C)
Students will make work that draws from and interacts with the three-dimensional world we live in. Formal strategies will explore principles of organization. Planar construction, modeling and assemblage methods will be used for investigations spanning from bas-relief to environmental art. This is a "learn by doing" process with no prerequisites.

543. (FNAR243) Figure Sculpture I. (C) Course Fee $75.00.
An introduction of modeling the human figure in clay. Students will work from the live model, acquainting themselves with issues of basic anatomy, form and function, and clay modeling. No previous experience is required; drawing experience a plus.

545. (FNAR145, VLST252) Sculpture Practices. (C)
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu.

547. (FNAR247) Environmental Animation. (B) Landau. Prerequisite(s): Experience in landscape architecture, architecture, animation, programming, film, Photoshop, or graphic design is strongly encouraged but not required.
This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the refuging of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry point for students of different disciplines and skill levels. Projects will range in
scope from animated GIFs to animated shorts.

This course embraces a spirit of invention, collaborative learning, and interdisciplinary cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walk-through, data-visualization, as well as filmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily be using 3D Studio Max and After Effects with support from Next Engine 3D Scanner, Rhino, and Grasshopper. Scripting will be included in most assignments to enhance artistic control of the software.

550. (FNAR250, VLST250) Introduction to Printmaking. (B) Course Fee $75.00.
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.

551. (FNAR251) Printmaking: Etching. (C) Course Fee $75.00.
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole', Spit-Biting, Sugar Lift, Color Printing and Viscosity printing.

552. (FNAR252) Printmaking: Relief & Screen Printing. (C) Course Fee $75.00.
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.

553. (FNAR253) Advanced Projects in Printmaking. (B) Prerequisite(s): FNAR 551 and FNAR 552 or FNAR 557. Course Fee $75.00.
This course will concentrate on expanding imagery in print media. The course requires the proposal of a directed final project to be developed during the semester. Three initial exploratory projects will culminate in the final. Projects are open to all print media, but there will be an emphasis on screen printing. Techniques will be addressed as they serve the needs of ideas rather than a set technical procedure. Through individual consultation, scheduled class critiques, and field trips, attention will be given to studio work in and out of printmaking so that the technical and conceptual strengths of print media can serve as a worthwhile adjunct to an overall studio practice.

554. Graduate Printmaking I. (G) Adkins. Course Fee $75.00.
This course will cover the traditional print processes while offering a chance to develop visual skills. The processes covered in class will include monoprinting (one of a kind prints), relief printing and a variety of etching techniques. Demonstrations will be offered to introduce more advanced processes like lithography and silkscreening. This class is an excellent introduction to the visual arts because the though process as well as the development of the image can be recorded.
$40 Studio Fee.

557. (FNAR257) Printmaking: Mixed Media. (C) Course Fee $75.00.
This course will explore the interplay of analog and digital processes and products of printing through various media, technology and conceptual approaches. In this changing world of communication, explore the intersection of old and new media to fabricate new and experimental design for print media. Using the printshop, the computer, and the equipment in the fabrication lab as our interface for exploration, we will focus on text and image relationships by integrating design, typography, print, and digital systems in a printing workshop environment. This course begins with an exploration of processes and experimentation, resulting in the creation of an edition that is conceptually centered on individual interests that engage the senses, the imagination, and the intellect.

558. (FNAR258) Introduction to Clay: the Potter's Wheel and Beyond. (C) FNAR Faculty. Course Fee $75.00.
In this introductory clay class, students will learn all the fundamental skills needed to create three-dimensional forms in clay using a variety of methods: wheel throwing, handbuilding (such as coil building and slab construction), and press molding. Whether creating utilitarian forms or creating sculpture, projects are designed to strengthen both craftsmanship and individual creativity. In addition to developing a working knowledge of the ceramic process, including surface treatments and glazing, students will also be introduced to design issues as well as contemporary art/ceramics topics that influence our aesthetic sensibilities. No prerequisites.

559. (FNAR259) Beginning Clay: Handbuilding and Casting Techniques. (C) FNAR Faculty. Course Fee $75.00.
Modeling and casting are fundamental methods of object-making. Students will learn basic handbuilding techniques such as coil building, slab construction, and mold making through assignments that incorporate conceptual and technical issues. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts, and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilene, paper pulp, cardboard, and tar paper will be explored. No prerequisites.

563. (FNAR263) Advanced Wheel Studio. (C) Prerequisite(s): FNAR 561. Course Fee $75.00.
This course teaches students more advanced wheel throwing techniques while helping to develop their critical skills in other areas of ceramic work. Students will learn to throw, employing larger masses of clay, and to increase the complexity of their work by combining and altering thrown parts. There will be an emphasis on experimentation in surface treatment and design, the goal of which is to expand a student's ability to create more complicated and personalized clay works. In addition to learning the technical knowledge, there will be critical discussions of contemporary ceramics issues through image presentations, reading materials and field trips.
566. (FNAR266) Graphic Design with Creative Technologies. (C)
Prerequisite(s): FNAR 636. Course Fee $75.00.
The aim of this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and data-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. Course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.

567. (FNAR267) Computer Animation. (C) Course Fee $75.00.
Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.

568. (FNAR268, IPD 568) Interactive Design Studio: Biological Design. (C) Course Fee $75.00.
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2017.

569. (FNAR269) Typography. (B) Prerequisite(s): FNAR 636. Course Fee $75.00.
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.

570. (FNAR270) Graphic Design Practicum. (C) Prerequisite(s): FNAR 566 or FNAR 569. Course Fee $75.00.
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.

571. (FNAR271, VLST251) Introduction to Photography. (C) Course Fee $75.00.
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room.

If you need assistance registering for a closed section, please email the department at fnaru@design.upenn.edu

572. (FNAR272) Advanced Photography: Integrated Techniques and Strategies. (C) Prerequisite(s): FNAR 571 or Permission of Instructor. Course Fee $75.00.
This studio course seeks to broaden each student's skills by experimenting with a wide range of photographic media. Advanced analog, digital and experimental lens-based techniques will be covered, as well as larger camera formats to expand their vocabulary as image-makers. Emphasis will be on an integrated experience of the photographic medium and the development of a body of work that is both theoretically and historically informed. The course will be a means to view and discuss various strategies of important contemporary photographers. Focused assignments, readings, slide lectures and gallery visits will supplement each student's artistic practice and research.

SM 574. (FNAR274) Reconfiguring Portraiture. (B) Prerequisite(s): FNAR 571 or FNAR 640 or Instructor Permission. Course Fee $75.00.
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time.

SM 575. Graduate Drawing Seminar. (B) Tileston/Freedman.
This seminar examines the essential nature drawing has in an artist's process. Direct visual perception, self-referential mark making, the viability of space and understanding it, and drawing from one's own work are some of the drawing experiences encountered in the course. There are regular critiques and discussions based on the work and readings.

This seminar investigates issues concerning visual artists. Part one begins with Plato and Kant and progresses through a history of ideas in art, exploring the questions which concern artists today, including Modernism, post-modernism, abstraction
and representation, appropriation, context, art and politics, identity, and the artist's relationship to these subjects. Part two of the course will focus on current texts in contemporary art, the current dialogue(s), and issues specific to our time and place as artists. The seminar engages contemporary issues in a spirit of curiosity and critique, and relates them to our studio practice.

SM 578. (FNAR278) Documentary Strategies. (C) Prerequisite(s): FNAR 571 or FNAR 640 or Permission from Instructor. Course Fee $75.00.

This course offers a context for photographers to develop a documentary project - either within a traditional photojournalistic framework or one that challenges these traditions. The aim is to understand documentary as an evolving practice and to develop an artistic response when depicting our social reality - from everyday experience to the events that shape the world. An important aspect of the class will be examining the diversity of ways that journalists and artists have used the camera to extend and question the power of photography as document. The class will address key questions of media and mediation, the nature and status of documentary in the context of globalizing media and how traditional documentary work has been affected by video, performance, conceptual art and activism.

580. (FNAR280) Figure Drawing I. (C) Prerequisite(s): FNAR 523. Course Fee $75.00.

Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.

581. (FNAR281) Figure Drawing II. (C) Prerequisite(s): FNAR 580. Course Fee $75.00.

Figure Drawing II is an advanced class designed to further develop the student's skill and facility in capturing the human form. Content and conceptual issues will be explored through individualized projects concentrating on the figure. Students will also expand on their knowledge of drawing media and application.

SM 582. (FNAR282) Advanced Topics in Photography: Site, Space and Documentation. (A) Prerequisite(s): FNAR 571 or FNAR 640 or Permission from Instructor. Course Fee $75.00.

This course will challenge students to create immersive environments and activated spaces through interdisciplinary means. Students will be working on individual as well as collaborative projects; they will be encouraged to incorporate different media with photography and explore the various methods and materials of installation. They will learn how to develop and present professional proposals and experiment with different modes of documentation. We will examine the history of Installation Art with an emphasis on contemporary trends and important emerging artists. Topics of discussion will range from site-specificity/architecture, Social Practice models and performance-oriented residue. The course culminates with a public presentation-an exhibition of student projects created for specific sites on campus.

585. (FNAR085) Performance Studio. (B) Hayes. Prerequisite(s): One previous studio course (such as FNAR523, FNAR545, FNAR640, OR FNAR661) or permission from the instructor. Course Fee $75.00.

This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.

589. (CIMS289, FNAR289) Mixed Media Animation. (B) Prerequisite(s): FNAR 523 and FNAR 636. Course Fee $75.00.

Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.

SM 591. The Body and Photography. (B) Prerequisite(s): FNAR 271 or FNAR 340 and Instructor Permission Required. Course Fee $75.00.

The last few decades have introduced dramatic changes in the way we interact with each other, the way we communicate, the way we date, watch porn, etc. Ethical concerns have arisen with scientific advances such as stem cell research, fertility drugs, Botox, cloning and erectile dysfunction. This studio course will investigate the myriad ways in which the corporeal is addressed and manipulated in contemporary art, science, religion, pop culture and media. Students will develop photographic projects related to updated questions concerning gender, sexuality and social issues. Lectures, readings and class discussion will focus and inform their individual work.

This seminar will examine contemporary issues in photography from the point of view of the practicing artist. Students will meet with visiting critics during the semester, the course will also include student presentations, weekly discussions and group critiques, visits to artists' studios and gallery and museum exhibitions. Texts for the seminar will be drawn from contemporary critical theory in art, philosophy, history and popular culture. Required for all graduate photographers.

SM 598. Grad Sculpture Seminar. (B) Staff.

Sculpture instructor (to be announced) will lead this studio course based on improvisational approaches to developing individually made sculptural works, as well as works that are made in collaboration with others. As in Music or Theater, these works involve the collaboration of others, yet they are equally initiated by small thoughts, and carry those thoughts into a more public and interactive format of installation.

601. Graduate Studio III. (A) Lumn/Freedman/Mosley/Tellman/Tileston.

First year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.
602. Graduate Studio IV. (B)
Adkins/Davenport/Freedman/Mosley/Telhashman/Tileston.
Second year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.

SM 615. (ENGL119, FNAR315) Across Forms: Art and Writing. (A) Hayes and Zolf.
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance—or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.

This studio course introduces students to the world of printmaking and circulation through techniques in letterpress and Risograph (a high-speed digital printing system developed in Japan in the 1980s), in addition to Xerox, laser, inkjet, and off-set printing, focusing particularly on the format of prints, artists' ephemera, and the role of ephemera in understanding culture. Studnets will create their own broadsides, flyers, announcement cards, and independent publications throughout the course, exploring ways in which artists, designers, musicians, and activists make or have made use of the print to disseminate information; initiate happenings; advertise events; or format change. Studnets will learn about some of the most significant producers working within this realm - from Conceptualists to punk bands - and develop skills in page layout, typography, and design; mechanized and hand-pulled press operations; and digital to analog pre-press and post-print production methods.
This course is designed for highly motivated students and requires out-of-class time commitment. However, no prior coursework is required. Students from all levels and backgrounds are encouraged to register. The course employs combined collaborative / self-directed approaches to learning to enhance students' understandings of ways in which print media and multiples serve as vital conduits for disseminating ideas involving visual art, popular culture, literature, politics, performance and many other topics students will wish to explore.

SM 622. (FNAR222, URBS322) The Big Picture: Mural Arts in Philadelphia. (C)
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.

630. (FNAR331) Interdisciplinary Studio: Sites of Convergence and Hybridity. (B) Tileston. Prerequisite(s): One previous studio course (such as FNAR 523, FNAR545, FNAR640, FNAR 531 or FNAR 636 or Penn Design course) or permission from the instructor.
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.

632. (FNAR233) Digital Illustration. (C) Prerequisite(s): FNAR 636 and FNAR 523. Course Fee $75.00.
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and plan creatively and skillfully execute finished artwork.

634. (FNAR234) Art of the Web: Interactive Concepts for Art & Design. (C) Prerequisite(s): FNAR 636. Course Fee $75.00.
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives to us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical and conceptual skills and foster creative thinking.

635. (FNAR235) 3-D Computer Modeling. (C) Prerequisite(s): FNAR 523 and FNAR 636. Course Fee $75.00.
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.

636. (FNAR264, VLST264) Art, Design and Digital Culture. (C) Course Fee $75.00.
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the ways artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on
building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

637. (FNAR337) Information Design and Visualization. (C) Prerequisite(s): FNAR 636. Course Fee $75.00.

Information design and visualization is an introductory course that explores the structure of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.

SM 638. (FNAR338) Creative Research. (A) Telhan. Course Fee $75.00.

This seminar explores what it means to do research in creative and critical practices. Students learn about different research methods from design, engineering, humanities and sciences; utilize them for developing and evaluating their individual creative work as cultural producers. This is an interdisciplinary course that encourages students to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and criticize; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time to develop their work from different perspectives.

640. (FNAR340, VLST265) Digital Photography. (C) Course Fee $75.00.

This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

SM 643. (FNAR343) LANGUAGE OF DESIGN. (B)

The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal visual language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.

645. (FNAR245) Book and Publication Design. (A) Hyland. Prerequisite(s): FNAR 636 is strongly suggested but not required.

Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books-literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions-discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout students will examine paratextual elements (title page, pages of pagination and other internal structuring, content lists and indexes, colophons, notes and marginalia, end-leaves, binding, etc.).

646. (FNAR366) ADVANCED 3D MODELING. (C) Prerequisite(s): FNAR 235/635 or FNAR 236/536. Course Fee $75.00.

647. (FNAR347) Expanded Documentary. (B) Davenport. Prerequisite(s): FNAR-571 or FNAR-640 or FNAR-661 or permission from instructor. Course Fee $75.00.

The sites and situations of documentary in our culture have exploded exponentially from standardized formulas (like reality tv), to social media and cross-platform journalism. In contemporary art, documentary practice has also significantly expanded and diversified. Since the early 2000’s, with several influential exhibitions following Documenta XI, a new generation of artists have taken up the ambition of depicting our social reality, and have done so by re-engaging and re-inventing the documentary mode. This intermediate course will examine this vital contemporary field and will also offer students a comprehensive introduction to the history of documentary practice. We will investigate a series of key questions regarding the relation between politics and aesthetics, mediums and mobility, how documents function to both approximate and deny a sense of reality and perhaps most importantly - what kinds of social, political or personal realities you want to propose in your artwork. The class will be driven by a series of studio assignments and practical experimentation. Although there will be an emphasis on photography and video, students will also explore a multiplicity of strategies and forms (including archival display, essayistic installation, image-text relationships, and the documentation of performance.)

648. (FNAR348) Counter the Land: Photography and the Landscape. (A) Wahl. Prerequisite(s): FNAR 571 or FNAR 640 or with permission of the instructor.

Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the
present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition.

Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.

649. (FNAR349) Advanced Digital Photography. (C) Prerequisite(s): FNAR 640. Course Fee $75.00.

In this studio course, students will become proficient in advanced techniques of image production while expanding their artistic process and refining their photographic work. With an emphasis on self-directed projects and research, students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end equipment and develop professional printing skills. Class discussion, lectures and assigned readings will address the critical issues in contemporary art, media and photographic culture. Emphasis will be on integrating practice and critical dialogue.

650. (FNAR350) Shared Culture: New Strategies for Artists in the Digital Age. (B) Goldsmith. Fine Arts Majors or MFA students ONLY or permission of instructor.

Our digital world has forced us to entirely rethink what it means to be an artist in the digital age, socially, economically, and politically. Ideas that have long been stable - including originality, creativity, and genius - are ripe for reexamination and redefinition in the twenty-first century. When the entire internet is copy-and-pasteable - and distribution moves swiftly - is anything off limits for the artist? Can we imagine our artistic production mimicking the meme, rippling through the networks for a day, then disappearing forever? Are we doomed to make works that are supposed to live for eternity or, in the face of environmental meltdown and collapsing financial markets, can we instead move our production toward the ephemeral? What would this look like? Can our output be steered toward the political? Can we frame these ideas as acts of resistance? Or compliance? Is there an inside? Is there an outside?

This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City’s Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.

661. (CIMS061, FNAR061, VLST261) Video I. (C) Course Fee $75.00.

In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices.

If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

SM 662. (CIMS062, FNAR062) Video II. (C) Prerequisite(s): FNAR 661. Course Fee $75.00.

Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.

SM 663. (FNAR063) Documentary Video. (A) Prerequisite(s): FNAR 661. Course Fee $75.00.

Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.

SM 665. (FNAR065) Cinema Production. (A) Prerequisite(s): FNAR 661. Course Fee $75.00.

This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.
SM 667. (CIM5067, FNAR067) Advanced Video Projects. (M)
Prerequisite(s): FNAR 662.
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one on one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students' past history as well as technical, theoretical, and aesthetic interests. Course approval will be based on application prior to the beginning of the semester.

SM 668. (CIM5068, FNAR068) Cinematography. (B) Prerequisite(s): FNAR 661.
This course will be a technical, practical and aesthetic exploration of the art of cinematography as it pertains to film and digital video. Through screenings, in-class exercises and assignments, students will increase their Video I skills in lighting and cinematography as a form of visual expression. Topics covered include shot composition, camera movement, lenses, filtration and color, exposure, lighting techniques, location shooting and how to use grip equipment. Discussions, demos and lectures will include relevant and illustrative historical motion picture photography, current digital video technology, and examples that explore interactions between film and video.

SM 670. (FNAR070) Advanced Graphic Design and Typography. (A)
Prerequisite(s): FNAR 566 AND FNAR 569 or Permission of Instructor. Course Fee $75.00.
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.

SM 671. (FNAR070) Film Sound: History, Aesthetics and Subversion. (A) Novack. Course Fee $75.00.
Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio's gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical ronp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.

Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l'usine Lumiere de Lyon by Auguste and Louis Lumiere we see a didactic presentation of film titles as workers from the Lumiere brother's factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of urban development to documentarians researching the pathologies of neoliberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.

674. (FNAR074) A Virus in the Culture: Social Critique in Media Arts. (A) David Hartt and Mark Owens. Prerequisite(s): FNAR 661 or permission from instructor.
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we'll think through and develop responses to some of the most pressing issues facing us today. We'll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker's film Le Fond de L'Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We'll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we'll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.

SM 675. (CIM5075, FNAR075) Image and Sound Editing. (B) Prerequisite(s): FNAR 661. Course Fee $75.00.
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX,
dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.

678. (FNAR378) Interfacing Culture: Designing for Mobile, Web and Public Media. (B) Prerequisite(s): FNAR 634. Course Fee $75.00.
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phone applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as such as online-gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.

679. (FNAR279) Studio Lighting. (B)
Wahl. Prerequisite(s): FNAR 571 or Permission of Instructor. Course Fee $75.00.
The necessity of light and how light is rendered in relationship to what is seen and understood, is often a key ingredient in the portrayal of a subject. The origin of the still life can be found in images as far back as antiquity and has dealt with notions of death, science, class, social customs and even sex. Photography picked up on the tradition in 1827 and has not only made use of the form, but has expanded the topic into very unique territories. Contemporary artists have re-invented and re-invigorated the still life, formalism & abstract photography. As a framework for exploring 'hands-on' lighting techniques, students will creatively grapple with the photography of objects in the studio. Working with the physical, symbolic, and conceptual ramifications of depicting specific forms in an image, teamed with the discussion of key texts, critiques, and studio lighting seminars, each student will create a considered and unique portfolio of images.

684. (FNAR284) PHOTOGRAPHY & FASHION. Prerequisite(s): FNAR 571 or FNAR 640 or Permission from Instructor. Course Fee $75.00.
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.

685. (FNAR285) Photography and Fiction. (B)
Diamond. Prerequisite(s): FNAR 271 or FNAR 640 or Permission of the Instructor.
In spite of photography's traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.

686. (FNAR286) Visual Narrative. (A)
Comberg and Diamond.
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. It proposes that studying and making sequential images and visual essays in a wide range of media - comics and graphic novels, propaganda, environments and installations, social media, animation, video, and digital media are critical to understanding culture. The course immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers.

In this joint seminar between Architecture and Fine Arts, we investigate the alternative modes of diagrammatic thinking that are influencing art and design disciplines. The course provides a historical perspective on the evolution of visual epistemologies from late 1950s and reviews its current state from the lens of contemporary representation theory, computation, fabrication and information technologies. The goal is to gain both theoretical and hands-on experience with the contemporary diagramming techniques in order to advance both designs and the thinking behind them.

999. Independent Study. Staff.
Prerequisite(s): See Graduate Program Coordinator for section numbers. Hours and credits arranged.
FOLKLORE
(AS) {FOLK}

This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways--particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

SM 025. (HIST025, RELS116, STSC028) Western Science, Magic and Religion 1600 to the present. (C) History & Tradition Sector. All classes. Kuklick.

Throughout human history, the relationships of science and religion, as well as of science and magic, have been complex and often surprising. This course will cover topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.

029. (GSWS010, RELS005) Women and Religion. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Staff.

Introduction to the role of women in major religious traditions, focusing on the relationship between religion and culture. Attention to views of women in sacred texts, and to recent feminist responses.

Starting with birth and working chronologically through a series of case studies, this course invites students to examine the centrality of rituals that celebrate the human lifecycle as well as overtly competitive sporting an political rituals. We will explore rituals that unfold at the local level a well as those that most Americans experience only via the media. Rituals under examination include birthday parties, Bat Mitzvahs, Halloweens, Quinceaneras, Proms, graduations, rodeos, Homecomings, weddings, Greek initiations, beauty pageants, reunions, and funerals. Students will be encouraged to critically examine their own ritual beliefs and practices and consider these and other theoretical questions: What is the status of ritual in post-industrial culture? What distinguishes popular culture from officia ritual and secular from religious ritual? How do sociological variables such as race, class, gender, sexuality, and religion shape people's understanding of, and participation in, modern family life? How do contemporary rituals bond Americans at the local and/or national level? All students will be expected to conduct original research on a ritual of their own.

103. (COML103, HIST093, THAR103) Performing History. (M) St. George.

From medieval processions to the Mummer's Parade, from military reenactments to Mardi Gras, communities do more than "write" or "read" history in order to feel its power and shape their futures. Drawing upon traditions in theater, spectacle, religion, and marketing, they also perform their history--by replaying particular characters, restaging pivotal events and sometimes even changing their outcomes--in order to test its relevance to contemporary life and to both mark and contest ritual points in the annual cycle. This course will explore diverse ways of "performing history" in different cultures, including royal passages, civic parades, historical reenactments, community festivals, and film.

This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Beginning with the African legacy, we situate the conceptual approaches of African American music within the larger African Diaspora. The course provides a foundation for the advanced study of the various strains of black musics to appear in the United States. Covering the 19th and 20th centuries, we explore the socio-political contexts and cultural imperatives of black music from a multidisciplinary perspective (musicology, ethnomusicology, linguistics, African-American literary criticism, cultural studies, history, anthropology). The range of genres, styles, idioms, and time periods include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways in which black music generates "meaning" and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments.

L/R 137. (SOCI137) Sociology of Media and Popular Culture. (C) Society Sector. All classes. Grazian. Also fulfills General Requirement in Arts & Letters for Class of 2009 and prior.

This course relies on a variety of sociological approaches to media and popular, with a particular emphasis on the importance of the organization of the culture industries, the relationship between cultural consumption and status, and the social significance of leisure activities from sports to shopping. Specific course topics include the branding of Disney, Nike and Starbucks; the globalization of popular culture; the blurring of entertainment and politics; and the rise of new media technologies in the digital age.

158. (AFRC158, LALS158, MUSC158) Musics of Latin America, the Caribbean, and Hispanics in the U.S. (M) Rommen.

This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertoires of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American
contexts of music consumption and production.

201. (ANTH205, RELS205) American Folklore. (C) Staff.
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore; body art and adornment; contemporary (urban) legends and beliefs; public celebrations and rituals; and the adaptation and commodification of folk culture in popular media.

203. (AFRC203, AFST213) Afro-American Folklore. (C) Staff.
An overview of the major forms of expressive culture developed by Afro-Americans. The course focuses on the continuous development of black cultural expression from slavery to the present, emphasizing the socio-historical context in which they are to be understood and interpreted.

229. (ANTH226, COML357, NELC249) Myth in Society. (C) Ben-Amos.
In this course we will explore the mythologies of selected peoples in the Ancient Near East, Africa, Asia, and Native North and South America and examine how the gods function in the life and belief of each society. The study of mythological texts will be accompanied, as much as possible, by illustrative slides that will show the images of these deities in art and ritual.

The course will explore the history and practice of popular culture and culture studies in the United States. We will begin by challenging the concepts of "folk," "mass" and "popular" as well as "American" and "culture." Furthermore, we will interrogate various media such as television, film, music, comics and popular romances to gain insights into the conditions for the reproduction of social relations. Through an analysis of audience response to performed or viewed events we will explore how and why people actively negotiate and interpret popular materials.

This class will attempt to situate popular culture within a larger social, cultural and political framework. Some areas of popular culture we may investigate include MTV, talk shows, fashion, club cultures, rap and other musics, snaps, pro-wrestling, professional sports, Hollywood movies, advertising, McDonald's and there will be room to explore other areas students may find interesting. We will end by looking into the exportation of American popular culture and its reception, interpretation, adaptation and consumption around the world.

233. (AFST233) African Folklore. (M) Staff.
"Despite the overwhelming reality of economic decline; despite unimaginable poverty; despite wars, malnutrition, disease and political instability, African cultural productivity grows apace: popular literatures, oral narrative and poetry, dance, drama, and visual art all thrive."— Kwame Anthony Appiah from In My Father's House
What role(s) does folklore play in the lives of Africans today? How has folklore adapted to the realities of contemporary urban Africa? This course will investigate the continuation of traditional elements produced in diverse media and circumstances in a modern, largely urban, Africa. Although traditional African culture has been transformed and changed in the face of rapid urbanization and modernity, it continues to provide a means through which people enjoy themselves and comment on a wide range of issues affecting their lives. Issues such as identity, difference, and diversity; tradition and history; modernity and development; wealth and power; politics and political change; and gender relations.

240. (COML240, ENGL290) Fairy Tale Studies. (M) Staff.
This course surveys the fairy tale (M rchen) as an oral narrative genre, and in its transformations as literature, sequential art, and film. Topics include classic and contemporary collections from Europe, the United States, and beyond; issues of “authenticity” and the ownership of tales; fairy tales as folk performance, post-modern pastiche, and material culture; and the genre’s relationship to geography, gender, power, and desire. This course will serve as a scholarly introduction to the field of Fairy-Tale Studies. And it may examine works from Matthew Bright, Angela Carter, Emma Donoghue, Guillermo Del Toro, Neil Gaiman, David Kaplan, and Bill Willingham.

This course is intended for those with no prior background in folklore or knowledge of various cultures. Texts range in age from the first century to the twentieth, and geographically from the Middle East to Europe to the United States. Each collection displays various techniques of collecting folk materials and making them concrete. Each in its own way also raises different issues of genre, legitimacy, canon formation, cultural values and context.

252. (NELC252) Themes in Jewish Tradition. (C) History & Tradition Sector. All classes. Staff.
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the "open" and "closed" in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

270. (GSWS270) Folklore and Sexuality. (M) Azzolina.
Sexuality is usually thought of as being biological or social, divided into categories of natural and unnatural. Often missed are its creative and communicative aspects. Examining the constructed social elements of sexuality requires attention be paid to folklore in groups, between individuals and on the larger platform of popular technological media. The most interesting locations for exploration are those places where borders or margins, occur between genders, orientations and other cultural categories. A field-based paper will be required that must include documentary research.

280. (COML283, JWST260, NELC258, RELS221) Jewish Folklore. (C) Ben-Amos.
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back...
more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.

299. Independent Study. (C) Staff. Directed study at the sophomore level.

323. (HIST323) Material Life in America, 1600-1800. (C) St. George.
This course will explore the history of America's use and fascination with material goods between 1600 and 1860. We will examine such issues as the transferal of European traditions of material culture to the New World, the creation of American consumerism, the impact of reformers in the late eighteenth and early nineteenth centuries, and the development of regional landscapes. Thematic issues will include consumerism, objects as symbolic communication and metaphor, and the complementary issues of archaeology and history of art in material culture study.

360. (ANTH360, COML362, RELS316) Native American Folklore. (C) J.Berman.
A survey of the indigenous oral literatures of North America that will read Native American myths and other traditional narratives with the primary aim to exploring their meanings to Native people. Topics will include, among other things, moral and religious significance, performance, aesthetics, humor, and the relationship of myth to landscape and individual life experience. The course will also place the study of Native American folklore in the context of the history of scholarship, and current issues such as cultural renewal, language endangerment, cultural representation, and cultural property rights.

399. Independent Study. (C) Staff. Directed study at the junior level.

406. (RELS406) Folklore and the Supernatural. (M) Staff.
Some beliefs in the supernatural have not diminished appreciably in modern cultures, in spite of many predictions that they would do so. This course will examine traditional beliefs about supernatural beings, supernatural realms, and humans who interact with these, as well as the historical development of Western ideas of "the supernatural" itself.

420. Culture, Communication, and Body Language. (M) Staff.
Our perception and interpretation of body language is often subliminal, but is crucial in all communication. This course will develop skills in observation and analysis of nonverbal behavior, with a particular emphasis on cross cultural communication. In contemporary society, the analysis of nonverbal communication has applications in education, psychology, business, advertising, medicine, police work, the justice system, the military, religion, sports, and politics. As video and digital cameras are increasingly being placed in public (and private) locations, the ethical questions of why, how, and by whom body movements and images are analyzed become a topic of primary importance for society. Clothing, scents, gestures, eye contact, silence, music, dance, the built environment -- all are used to construct relationships and develop markets for the new century. Readings from a number of disciplinary perspectives will give us the opportunity to investigate these and other issues related to the body and to nonverbal communication in multicultural societies.

436. (URBS436) Urban Folklore. (M) Staff.
This course examines the emergent aesthetic and expressive traditions of urban environments. Cities are unique places with a wide range of folkloric traditions, including neighborhood stories, ethnic festivals, and folk art. We will examine the material, customary, and verbal traditions that emerge in everyday life, including contemporary legends, urban agriculture and food ways, public displays and celebrations, body art, children's play, and Philadelphia's ethnic arts. We will consider how these contemporary practices may be understood within a traditional folklore framework, as well as what these practices reveal about contemporary values, anxieties, and concerns. Course work will involve local field observations and will be of use to anyone studying human interaction, creative processes, or urban ethnography.

Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

499. Independent Study. (C) Staff. Directed study at the senior level.

SM 503. (ANTH503, COML512, ENGL503) Issues in Folklore Theory. (C) Staff. An introduction to folklore for graduate students, concentrating upon certain key issues in the theory and history of the discipline. "Fieldwork" is the term folklorists and scholars in related fields use to describe the process by which they arrive at their discipline's subject matter. This includes everything from the pragmatic issues of collecting and documenting materials to the complex relations involved when people study people. Readings, short writing assignments, and class discussions will probe this spectrum of concerns comprehensively. Brief exercises are planned to experience different aspects of fieldwork. On this background of theory and practice, students will work toward designing a fieldwork based project and draft a funding proposal.

SM 518. (HSPV528) American Vernacular Architecture. (C) St. George.
This course explores the form and development of America's built landscape - - its houses, farm buildings, churches, factories, and fields -- as a source of information on folk history, vernacular culture, and architectural practice.

SM 531. (COML560, NELC582) Prose Narrative. (M) Ben-Amos.
The topics of discussion in the course are the following: the nature of narrative, narrative taxonomy and terminology, performance in storytelling events, the transformation of historical experience into narrative, the construction of symbolic reality, the psycho-social interpretation of folktales, the search for minimal units, the historic-geographic method in folktale studies, the folktale in history and the history of folktale research.

SM 532. (COML529, NELC662) Proverb, Riddle and Speech Metaphor. (M) Ben-Amos.
Through readings and collaborative projects this working seminar will explore the place of metaphor in the genres of proverb and riddle and examine their position in oral communication in
traditional and modern societies. Critical readings of former definitions and models of riddles and metaphors will enable students to obtain a comprehensive perspective of these genres that will synthesize functional, structural, metaphorical, and rhetoric theories.

541. (MLA 541) Academic Writing and Research Design in the Arts and Sciences. (M) Rabberman.

Have you ever noticed that scholars in different academic disciplines seem to speak different languages? Have you wondered how scholars put together a plan for their research, explain their findings, and organize and write their papers? This class is designed to introduce MLA students and other advanced students to the research and writing conventions used by scholars in the arts and sciences. With attention to disciplines in the humanities, social sciences, and sciences, we will identify and explore some of the theories, sources, language, and qualitative and quantitative methodologies that scholars use as they conduct original research in their fields. Throughout the class, we'll also discuss writing conventions across the arts and sciences, with special attention to the structure of argument; the use of evidence; voice and style in both traditional academic writing and more innovative forms of writing; and documentation conventions. Students will develop an original research project through incremental writing assignments, and will write a formal research proposal (15–20 pages), which can be used as their Capstone proposal if they wish.

SM 549. (ANTH545) Structural Analysis. (M) Ben-Amos.

In folklore scholarship, structural analysis extends over several genres. In this course we will examine the analysis of genres from structural perspectives, the critique of structural analysis and the current constructive directions that have emerged in the field in response to criticism of structuralism.

SM 603. (ANTH601) Food, Culture, and Society. (M) Staff.

Behind a simple proverb like “You are what you eat” lies a great deal of food for thought. Human beings have always elaborated on the biological necessity of eating, and this course will explore the myriad ways in which people work, think, and communicate with food. The course will survey the major approaches from folklore, anthropology and related fields toward the role of food, cookery, feasting and fasting in culture. Among the topics to be addressed are gender roles and differences in foodways, the significance of food in historical transformations, the transmission of foodways in writing and publishing, the relationship of foodways to ethnicity and region, the intimate relationship between food and religion, and foodways in the global market place. Short exercises and a term project will provide students with opportunities to research and write about foodways from different angles.

SM 605. (AFST605, ANTH605, COML605, MUSC605) Anthropology of Music. (C) Muller.

This seminar in ethnomusicology examines music from a cultural perspective. We investigate theoretical and methodological issues that arise when music is situated within an ethnographic context. Theories from anthropology and folklore are studied as they have been applied in ethnomusicology, including structural-functionalism, structuralism, symbolic anthropology, and performance theory. Topics include music and social structure; ritual and performance; social change and historical process; class, ethnic identity, and gender. Case studies from around the globe enrich this exploration of music in culture.

SM 606. (COML760, HSSC680) History of Folklore Studies. (C) Ben-Amos.

A survey of the theoretical basis and the historical development of research in international and American folkloristics.

SM 620. (HIST620) Feminist Theories. (M) Staff. When the topic is "Feminist Theories," FOLK 620 will be crosslisted and the following description applies.

This course gives students the opportunity to engage with the most significant theoretical influences upon feminist thought and historical scholarship in the last 35 years. Foucault, Bourdieu, Rubin, Butler, and Freud are just some of the theorists we will discuss. We will also incorporate recent works in feminist film theory and queer theory. Our focus is twofold: working collectively through difficult theory that is too daunting to tackle alone, and exploring possible applications of feminist theory for feminist politics and historical studies of women, gender and sexuality. Approximately half of our course reading will be devoted to work designated as "theory" and the other half to recent applications by historians.

SM 629. (COML662, NELC663, RELS605) Theories of Myth. (M) Ben-Amos.

Theories of myth are the center of modern and post-modern, structural and post-structural thought. Myth has served as a vehicle and a metaphor for the formulation of a broad range of modern theories. In this course we will examine the theoretical foundations of these approaches to myth focusing on early thinkers such as Vico, and concluding with modern twentieth century scholars in several disciplines that make myth the central idea of their studies.

SM 639. (COML639, COMM639) Issues in Cultural Studies. (M) Zelizer.

This course tracks the different theoretical appropriations of "culture" and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication, and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as "cultural studies." The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues, and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.

SM 650. Folklore and Critical Regionalism. (M) Hufford, M.

In tandem with global political and economic restructuring, and the related unsettling of national and local identities, scholarship on place has burgeoned. Recently, scholars from multiple disciplines have called for a shift from identity-centered approaches to the study of place and region to a more critical assessment of how the encounter of the local with "the larger than local" is articulated (Shuman, 1993). "Critical regionalism," a term hailing from architectural theory, names an effort to "frame a dialogue between localized dimensionality and the imperatives of international architecture" (Frampton, 1981). One way of framing this dialogue is to examine the imaginaries that span disjoint places "twinned" through those larger than local processes, imaginaries that regionalize from within (Herr, 1996). What are the foundations for such a project in folkloristics, and what is the role of ethnography in cultivating critical regionalism? To get at such questions, we will examine selected regional ethnographies and place-based folklore.
programs. Work for the course will include 1) evaluating a regional ethnography and a public program in light of critical regionalist theory and 2) developing, with a partner or group, a proposal for a multi-site ethnography anchored partly in the mid-Atlantic region.

702. Practicum. (C) Hufford, M. Advanced students may arrange for a practicum. The nature of the learning task and the work to be completed must be discussed both with the student's advisor and the practicum supervisor at the hosting organization or institution. Suitable practicum sites are museums, community or state arts organizations, not-for-profit organizations in the realm of cultural programming and advocacy, etc. The practicum may be taken for credit only once.

706. (ANTH704, COML706, EDUC706, URBS706) Culture/Power/Identities. (A) Hall. This course will introduce students to a conceptual language and the theoretical tools to analyze the complex dynamics of racial, ethnic, gender, sexual, and class differences. The students will critically examine the interrelationships between culture, power, and identities through the recent contributions in cultural studies, critical pedagogy and post-structuralist theory and will explore the usefulness of these ideas for improving their own work as researchers and as practitioners.

SM 715. (AFST705, ANTH705, COML715, GSWS705, MUSC705) Seminar in Ethnomusicology. (M) Muller. Open to graduate students from all departments. Seminar on selected topics in ethnomusicology. Freedom is a pervasive idea in the twentieth century, in the United States and elsewhere. This seminar will examine a range of texts concerned with the idea of freedom, politically, philosophically, and musically. A key part of the seminar will focus on free jazz, as it has been recorded in the twentieth century, and as it occurs in live performances on Penn campus and elsewhere in Philadelphia.

SM 725. (ANTH725) Bodylore. (M) Hufford, M. Bodylore, a term coined in the late 1980s by folklorist Katharine Young, names an emerging subfield focused on the body's role in the making of social meanings. In this seminar, we'll consider the body as it is theorized by Bakhtin, Bourdieu, Douglas, Harvey, Stewart, Young, and others, and we'll turn to selected ethnographic case studies to explore problems of embodiment. How does the body enact the discourses that constitute it? How do our ways of imagining and interpreting the body bear on our ways of ordering the social and natural world? How is the body's dual status as both mode and object of knowing (Stewart) negotiated in ethnographic and scientific practice? How might a more humanistic ethnography undo and displace the dualisms of mind and body, body and self, and perhaps even return us to the body as a measure of all things (Harvey)? Work for the course will include in-class presentations, participation in electronic and face-to-face discussion about the readings, and a final paper.

SM 770. (AFRC771, MUSC770) Seminar in Afro-American Music. (M) Ramsey. This seminar treats selected aspects of the history, aesthetics, criticism and historiography of African-American music. Topics will vary each time this course is offered.

999. Independent Study and Research. (C)
Gender Studies and Women's Studies
(AS) {GSWS}

003. Introduction to Sexuality Studies and Queer Theory. (A) Adley.
This course will examine major ideas in the field of queer studies. Relying upon theoretical, historical, and cultural studies texts, we will consider the representation and constructions of sexuality-based identities as they have been formed within the contemporary United States. We will explore the idea of sexuality as a category of social identity, probing the identities of lesbian, gay, bisexual and transgender to try and understand what they really mean in various cultural, social, and political milieus. In doing so, we will ask: What does it mean to study queerness? What do we mean by "queer studies"? How do institutions - religious, legal, scientific - shape our understandings of queer identities? In what ways do sexuality and gender interact, and how does this interaction inform the meanings of each of these identity categories? How do other social categories of identification - race, ethnicity, class, etc. - affect the ways in which we understand expressions of queerness? What does studying queerness tell us about the workings of contemporary political, cultural, and social life? What is normal and who/what is it that defines and controls normality?

This course centers on the intersections of womanism, woman of color identity development, and agency within hip-hop culture. We will touch on several topics that uncover the condition of minoritized women in hip-hop media, including creating/owning space, lyrical assault, defining womanhood, sexuality, and fetishes. In exploring music, literature, advertisements, film, and television, we will discuss the ways women of color construct understandings of self, while navigating and reimagining reality within hip-hop contexts.

L/R 102. (CIMS112, COML245, ENGL102, PSYS102) Study of a Literary Theme. (C) Arts & Letters Sector. All Classes. Staff.
The primary for this course is the English Department. When the course content includes gender, sexuality and women’s studies it will be cross-listed with GSWS. See additional information and description on the English Department's website: https://www/english.upenn.edu

115. (RUSS115) Before Transgender: Hermaphrodites in 19th Century Literature.
This course provides a literary and cultural prehistory to contemporary discourses on transgender identity by focusing on the figure of the hermaphrodite in 19th Russia and the West. Far from a marginal subject, the hermaphrodite and intersex characters played central roles in the novels of Balzac, Tolstoy, Dostoevsky, and many others whose work we will read in this course. Interdisciplinary in nature, this course draws on 19th century discourses in medicine, psychology, opera, religious philosophy, and political theory to understand why characters who exist outside of the male/female gender binary feature so prominently in 19th century literature and cultural texts across a wide range of traditions (Anglophone, French, and Russian, and others).

128. (COML128, ENGL103) The Diary. (A) Staff.
Diary writing is an intimate mode of expression in which individuals seek to find meaning in their personal lives and relations, responding to the external realities in which they live. Their coping is subjected to their historical, educational and social contexts, and to the generic conventions of diary writing. This course examines the diary as a genre, exploring its functions, meanings, forms and conventions, comparing it with fictive and non-fictive autobiographical writings such as the diary novel, autobiography and the memoir, as well as comparative gender diary-writing.

SM 135. (ENGL135) Creative Non-Fiction Writing. Staff.
A workshop course in the writing of expository prose. Assignments include informal as well as formal essays, covering such topics as autobiography, family history, review, interview, analysis of advertising and popular culture, travel, work, and satire.

See the English Department's website at www/english.upenn.edu for a description of the current offerings

Gender Studies and Women's Studies

SM 145. (ENGL145) Advanced Non-Fiction Writing. (C) This course is not open to freshmen. Students wishing to take this course must submit a writing sample a part of the selection process. May be repeated for credit with a different instructor.

Writing with a view to publication in the freelance sections of newspapers such as THE PHILADELPHIA INQUIRER and THE NEW YORK TIMES, in magazines such as THE ATLANTIC and THE NEW YORKER, and in the literary quarters and the journals of opinion. Among the areas likely to be considered are writing as a public act, issues of taste and of privacy, questions of ethics and of policy, methods of research and of checking, excerpting, marketing, and the realistic understanding of assignments and of the publishing world. Student papers will be the basis of weekly editorial sessions, with concentration on the language: how to render material literate, how to recognize and dispose of padding and self-indulgence, how to tighten structure and amplify substance.

See the English Department's website at www/english.upenn.edu for a description of the current offerings

This interdisciplinary course explores over two decades of work produced by and about black queer subjects throughout the circum-Atlantic world. While providing an introduction to various artists and intellectuals of the black queer diaspora, this seminar examines the distinct sociocultural, historical and geographical contexts in which "black queerness" as a concept is embraced or contested. We will interrogate the transnational and transcultural mobility of specific aesthetics as well as racial and sexual identity categories more broadly using ethnography, poetry, painting, film, photography and literature. Our aim is to use the prism of artistry to highlight the dynamic relationship between African Diaspora Studies and Queer Studies.

SM 212. (ANCH212, CLST213) Women in Imperial Rome. (C) Gillespie.
Livia, the first empress of Rome, is a critical figure for our understanding of Roman women at the transitional moment between Republic and Empire. As the most publicly celebrated woman of Augustus' household, Livia is an opportune figure through which to examine a variety of Augustan and early imperial texts and monuments.
This course will survey Livia's different literary and material representations and attempt to come to terms with the various perspectives on the first empress presented by these texts and contexts. Livia provides a key figure through whom students will be exposed to various issues surrounding the portrayal of Roman women in the early empire. Through lecture and discussion, we will relate Livia to her contemporary world, and then examine the role of imperial women through the rest of the Julio-Claudian era and beyond. We will discover Livia's influence in creating the role of the empress, and analyze the differences between her representation as an ideal and that of later imperial women. Students will write brief response papers to primary texts and present on select secondary readings that add to our understanding of the portrayal of Livia and imperial women more generally.

216. (HSOC216) Women and Health. (M) Staff.
This course explores the ways in which the production of medical knowledge, the provision of health care, and the experiences of health, illness, and bodily changes are gendered and will consider how and why they are gendered in different ways in different parts of the world. The course begins with an introduction to relevant theoretical materials from feminist studies, anthropology, sociology, and political economy, on sexuality, the body, and reproduction. Students will then read ethnographic material that analyzes experiences such as sexual maturation, reproduction, eating disorders, aging, and sex work - as well as ordinary encounters with medical systems - as experienced through and with the gendered body in a variety of contexts around the world. Students will have the chance to conduct ethnographic interviews, and will write final research papers that integrate this ethnographic material, along with library material, in the study of a particular gendered medical experience in the U.S. or another region of the world. Note: both men's and women's health issues will be addressed.

SM 217. (SAST217) CU In India - Topics Course. (E) Staff.
C.U. in India is a hybrid, domestic/overseas course series which provides students with the opportunity to have an applied learning and cultural experience in India. The 2-CU course requires: 1) 15 classroom hours at Penn in the Fall term 2) A 12-Day trip to India with the instructor during the winter break to visit key sites and conduct original research (sites vary) 3) 15 classroom hours at Penn in the Spring term and 4) A research paper, due at the end of the spring term. Course enrollment is restricted to students admitted to the program. For more information, and the program application, go to http://sites.sas.upenn.edu/cuinindia

SM 230. (HIST230) Topics in European History. (C) Staff. Topics in European History. Topics vary

SM 244. (ANTH243, HSOC289) Critical Methods in Sexuality Studies. (C) Staff.
How do we read, record, and write histories and practices of sexual difference -- in the archives, on Tumblr, or in a dyke bar? This seminar examines the links between queer politics and method. We will ask how differences in sexuality are understood and described in sexuality studies, anthropology, literature, and cultural texts. We will also consider counter archives, ephemeral objects, live performance, and subcultural scenes in the making of queer knowledge. How might emphasizing practices, not identities, modify our understanding of representation, evidence, and interpretation? In our search for unrecognized and intangible modes of evidence, we will necessarily ask what a body and its difference might be beyond easily legible forms of subjectivity. We will also experiment with video, blogging, co-teaching and diverse forms of research and writing.

Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

SM 269. (ENGL259) Topics In Modernism. (M) Staff.
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts.

Gender Studies and Women's Studies

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 292. (CIMS202, COML292, ENGL292) Topics FILM STUDIES. (M)

L/R 294. (ARTH294, ARTH694, COML291, ENGL059, VLST236) Art Now. (M) Silverman, K.
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

This course will be a three-part exploration of our photographic present. In the first part, we will look at the role played by the photographic image in the post World War II "return to the world. In the second part, we will examine the suspicion under which this image falls in teh 1970's and 1980's, and the derealization to which it is subjected. In the third part, we will focus on artists who adopt a very different relationship to photography: who see it as a "trace," instead of a representation, and use it to mourn what is gone, remember what has been forgotten or repressed, and reorient themselves to others and the world.

SM 296. (COML291, ENGL294) Topics In Literary Theory. Staff.
This course explores an aspect of literary theory intensively; specific course topics vary from year to year. It is an English course that is cross-listed with GSWS when the topic includes gender, sexuality and women's studies. Please check out the English Department's website for the current semester's description.

SM 301. (ARTH301, CIMS301, FREN301) FRENCH IDENTITY. (C)

SM 313. (ARTH313, EALC353) Topics in East Asian Art.
Topic varies.
SM 322. (CIMS322, COML322, SOCI322) Advanced Topics in Global Gender and Sexuality Studies. (A) Staff.

How do sex and gender become sites of cultural production, identity-formation, and contentious politics? This seminar engages these questions in the context of the "Middle East" as a constructed geopolitical space for imperial politics and political intervention. The class is divided into three units. In the first unit, we engage feminist and queer theories to discuss the shifting meanings of "sex" and "gender" in transnational and postcolonial contexts. In the second unit we explore the contextual and shifting notions of "private" and "public" as they have been elaborated in political theory, feminist theory, and media studies. We also consider how different media technologies enable and constrain the performance and expression of gender and sexual identities. In the last unit, we examine the material and symbolic construction of sex and gender in the shadow of Orientalism, the War on Terror, Multiculturalism, and the recent Arab uprisings. In this unit, we consider how geopolitics are refracted in public controversies around issues like gay rights, female genital mutilation, and honor killing.

SM 326. (AFRC326, CIMS326, GSWS526) Theories in Gender and Sexuality Studies. (A) Keirbeck. Prerequisite(s): A prior course in gender, sexuality and women's studies.

What are queer cultural experiences and values? Many academics and social movements have noted that the radical aspirations of queer theory and activism not only disrupt but also shore up neoliberal ideologies. In this course students will explore the historical and co-emergence of queer cultures and neoliberalism by examining the promises and pitfalls of queer politics over the past quarter century. The coming of "queer theory" by Theresa de Lauretis in 1990 was intended as a disruptive joke. Its provocation resided in joining "queer," an appropriation of street slang bandied about among New York City activists and artists in the 1980s, to "theory," the passport of privilege in academic life. The irreverence of her joke exemplifies a central ethic of queer experience that renders palpable the tensions between margins and centers. The course will traverse scholarship from economic and queer anthropology, history, sociology & science studies, philosophy, political theory and literary studies. This wide survey of literature will allow students to develop an understanding of the political and economic processes that have conditioned the emergence of queerness as a diverse range of ethical commitments in particular sociocultural contexts globally. Students will investigate the affective dimensions of the emergence of queer theory, studies and activism within the United States and elsewhere in the context of global neoliberal social reforms. The course is split into four units: 1) In the Place of Queer Origins; 2) Queer Values; 3) Queer Circulations and Subjectivities; and 4) Queer Temporalities.

SM 328. (CIMS328, ENGL290, THAR275) Feminist & Queer Aesthetics: Art, Theater, Film, and Visual Culture. (C) Staff.

In 1971 Linda Nochlin provocatively inquired, "Why have there been no great women artists?" Her polemic ignited new waves of knowledge production about the world making possibilities of female, feminist and "outsider" art. This seminar considers art at the margins and how it reimagines the visual to perform a rebuttal to male dominated art scenes, heteronormative aesthetics, and racist art markets. Working at the intersection of queer studies, feminist art historical practice, theater, and cinema studies, we will interrogate the aesthetics of indentity politics. How does feminist art compel new directions in the way we conceive of labor, value, process, and circulation? How do art practices contest and rewrite normative meanings of bodily and sexual difference? Our class privileges art as a transformative mode of language and critique as we bridge visual culture and scholarship to create multiple lenses of analysis.

We will consider diverse genres, for example, body art, photography, film, process art, literature and epistolary forms. We will examine how amateurism, deskilling, display, and objectification become strategic performances of feminist and queer identities and political refusal. Configurations of community, such as appropriation, co-optation, "selling out," and safe space will be interrogated. Finally, we will look at the "Occupy Museum" movement to think about the institutionalization of marginalized art forms and makers.

How we are born and give birth can vary more than most people realize. Until the rise of medical technology, women gave birth at home surrounded by other women. Now, the majority of Americans are born in hospitals, and a large percentage of those birth are the result of surgical interventions. This course will explore the medicalization of birth, as well as the movements dedicated to promoting home birth, natural birth, and midwifery. Many of the readings will examine birth from an unapologetically feminist and/or holistic perspective, and we will discuss the psychological, political, cultural and spiritual dimensions of birth practices. We will also consider the impact of increasingly sophisticated medical technology on conception and pregnancy, including in vitro fertilization, surrogate mothers, and extending the childbearing years well into late life. An important theme throughout will be the concept of "appropriate technology" -- which technologies are appropriate and who decides? Readings will be drawn from a number of sources, principally midwifery, nursing, and medical journals.

SM 353. (ENGL353) Topics In 19th-Century American Literature. (M) Staff.

The primary for this course is the English Department. When the course content includes gender, sexuality and women's studies it will be cross-listed with GSWS. See additional information and description on the English Department's website: https://www.english.upenn.edu

SM 369. (ANTH369, ENGL369, PSYS369) Topics In Poetry and Poetics. (M)

SM 391. (SPAN390) INTRO SPAN AMER LIT. (M)

423. Gendered Constructions of Other Cultures in Western Travel Literature. Rabberman. Descriptions of peoples from foreign lands and faraway places have captured the imaginations of Europeans for centuries. Pilgrims and merchants, explorers and conquistadores, Victorians taking their Grand Tour and 21st century travelers have preserved their observations, both in written form, in ethnographies and diaries, novels and travel narratives, and in visual form, in maps, illuminated manuscripts, engravings, and photographs. Through these media, these travelers have not
simply captured their memories, but have also helped to shape Western representations of the people they encountered. In the process, these travelers often have justified Western political, economic, cultural, and social dominance, although instead some travelers have critiqued the West. And in all these depictions, gender and sexuality have played central roles in the creation of these identities and relationship.

SM 434. (ANTH434) The Politics of Ugly. (M) Carelock. Venus was the God of Beauty and Love yet she was married to Hephaestus, the mangled, grumpy and for all intents and purposes, ugly god. Why juxtapose such distinct figures? Are they doing the same job? The course discusses the interplay between ugliness and politics with focus on a number of central concepts such as race, social conflict, nationalism, ideology, dictatorship, propaganda and autonomy. Emphasis is put on the double role of the deployment of ugliness, as reinforcement of ideological and political ideas and as a force of social criticism. How does the state justify its own existence by the use of aesthetic narratives? How does the State identify undesirables? This class highlights how groups who feel somatically alike behave, and how their boundaries form and change over time. The focus will be interdisciplinary and multi-national, with case studies from past and present. The class will have a digital media focus as we delve into issues of representation particularly with respect to race. For example, we will delve into the aesthetic discussion of northern and southern Sudanese as well and Hitler's Germany.

475. (THAR475) ADVD TPCS IN PERFORMANCE. (M)

SM 485. (PHIL485) Topics in Gender Theory. (M) Staff. This course seeks to assemble some of the philosophical evidence for feminist claims that traditional political theories are fundamentally inadequate because they have not, and presumably cannot, deal with basic facts of gender and the oppression of Women. We will begin by examining the nature of the distinction between sex and gender. This will take us through discussions of: the meaning and significance of categories being socially constructed, the possibility that sexual differences (and inequalities) are in some sense natural and what normative force this has. We will then consider various attempts to describe the nature of women's oppression. What is it? How does it manifest itself in the lives of women? This will take us through discussions of freedom, constrained choice, ideology, "consciousness raising", androcentrism and the relation between, and methodological importance of, ideal and non-ideal theory. Along the way we will be constructing a version of the feminist framework known as the dominance approach and seeing how it analyzes three presumed sites of oppression: sexuality, reproduction and work/family. Among the authors we will be reading are: Elizabeth Anderson, Marily Frye, Sally Haslanger, Rae Langton, Anthony Laden, Catherine MacKinnon, and Susan Okin.

The prerequisite for UNDERGRADUATES taking this course is: two philosophy courses (ONE of which is in moral or political philosophy) OR ONE of the following Gender Studies courses: GSWS/PHIL 028, GSWS/PoliSci 280, GSWS 320. There will be one short paper (6-8 pages) with revision, a longer final paper (15 pages) and weekly one-page reflections on a topic from the previous week's discussion.

SM 488. (AFRC488, ANTH488, SOCI488) Topics: Culture, Sexuality and Global Health. (A) Fiereck. What does it mean to claim that "Homosexuality is un-African"? This course explores the linked histories of race, nation, gender and sexuality in Africa that such an ideological claim invokes, yet effaces. The polemics that produce statements like this play out through the disciplinary tensions that exist between African and sexuality/queer studies. These tensions have as much to do with the role played by the relation between sexuality and race within cultures of European colonization, as they have with the role of gender and sexuality within postcolonial power relations in Africa. Such antagonisms are sustained through the marginalization of gender and sexuality perspectives within postcolonial scholarship on Africa, as well as the bracketing of African perspectives in queer and feminist studies. This course will deconstruct these impasses by exploring scholarship at the margins of each area of study. Students will be encouraged to ask questions about how issues of race, ethnicity, nation, gender and sexuality are produced as suppressed presences in a range of texts, films and other materials.

The course will include readings from postcolonial, gender, sexuality and African studies, anthropology, history, literary studies and Marxism, giving students a grounding in historical and contemporary perspectives at the intersection of African, queer and feminist studies.

SM 509. (COML509, ENGL591, GRMN509, JWST509, YDSH509) Topics in Yiddish Lit. (M) "Jewish Women Writers" is a graduate seminar also open to advanced undergrads. The seminar will consider works by Jewish women who wrote in Yiddish, Hebrew, Ee

SM 517. (SOCI517) WORK AND IDENTITY. (M) Jacobs, Leidner. The thinkers whose work formed the foundations of sociological theory considered the nature of the relationship between work and identity key to understanding social solidarity, power, and historical change. In recent years, the division of labor, structures of work, and employment relations have all been undergoing rapid change, necessarily affecting the possibilities for constructing identity through work. This seminar examines how changes in the nature and organization of work have reshaped the relationship between work and identity.

SM 524. (COML522, ENGL525) CHAUCER. (M) Staff. An advanced introduction to Chaucer's poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer's development as a narrative artist.

SM 525. (GRMN526) The Trouble with Freud: Psychoanalysis, Literature, Culture. (C) Weissberg. For professionals in the field of mental care, Freud's work is often regarded as outdated, if not problematic psychologists view his work as non-scientific, dependent on theories that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.
resist stale modes of teaching, in learning and knowing difference and "the woman question." Our aim is to interrogate the normative directionality of feminist "waves" and additive/intersectional models of suturing gender and sexuality to minoritarian politics. We will conceptualize feminism as relational to studies of affect, object oriented ontology, animality, feminist science, and aesthetics.

**SM 527. (AFRC527) Race, Gender and Auto/Biography. (C) Sanders.**
This course examines the lived and shared experiences and representations of Caribbean and Latin American women. We will discuss the relationship between gender, labor, sexuality, religion, and race in the Caribbean and the ways these concepts intersect with women's individual subjectivity and national identity. By examining primary sources such as speeches and letters alongside historical scholarship, literature, and popular media, we will study the impact of slave society and colonial pasts on representations of women and construction of womanhood in the modern Caribbean and Latin America and the diasporas through the 20th century. Beginning with late-18th century and ending with contemporary migration narratives of each country, we will study the local and regional political conditions that informed gender norms, social movements, and characterizations of Caribbean sexuality globally. In our historical examination, we will question some of the iconic representations of Caribbean and Latin American women—the racially mixed temptress, the pious matriarch, and the poor uneducated laborer—to understand the meaning, purpose and usage Caribbean women's bodies as objects of praise, possession, obsession and/or ridicule by communities, governments and religions within and outside of the Caribbean.

In our interrogation of gender meanings, we will consider the ways Caribbean women and men define themselves and each other, while considering the intersections of color, class, religion and culture on the political and social realities of the Caribbean and the region. The geographic scope of the course will extend to Haiti, the Dominican Republic, Jamaica, Cuba, Puerto Rico, Costa Rica and Trinidad & Tobago. The following interrelated questions will anchor our exploration of each text: How have representations of Caribbean and Latin American women informed historical constructions and rhetoric of the region and national identity? What political and social strategies have Caribbean women and men used to define themselves in their countries and throughout the region? How do the history and contemporary conditions of a post-colonial nation impact the gender construction of Caribbean identities? What is the relationship between modern Caribbean gender identities and the regional racial and economic politics?

**SM 536. (COML546, ENGL546, FREN537, HIST537) The Novel and Marriage. Joan DeJean.**
Historians have argued that early novels helped shape public opinion on many controversial issues. And no subject was more often featured in novels than marriage. In the course of the 18th and the 19th centuries, at a time when marriage as an institution was being radically redefined, almost all the best known novels explored happy as well as unhappy unions, individuals who decided not to marry as well as those whose lives were destroyed by the institution. They showcased marriage in other words in ways certain to provoke debate. We will both survey the development of the modern novel from the late 17th to the early 20th century and study the treatment of marriage in some of the greatest novels of all time. We will begin with novels from the French and English traditions, the national literatures in which the genre first took shape, in particular Laclos' DANGEROUS LIAISONS, Austen's PRIDE AND PREJUDICE, Bronte's JANE EYRE, Flaubert's MADAME BOVERY. We will then turn to works from the other European traditions such as Goethe's ELECTIVE AFFINITIES and Tolstoy's ANNA KARENINA. We will begin the course by discussing the novel often referred to as the first modern novel, THE PRINCESS DE CLEVES. This was also the first novel centered on an exploration of questions central to the debate

We will begin the course by discussing the novel often referred to as the first modern novel, THE PRINCESS DE CLEVES. This was also the first novel centered on an exploration of questions central to the debate about marriage for over two centuries - everything from the question of whether one should marry for love or for social position to the question of adultery. Each week, we will discuss the changing definitions of the word "marriage" in various European languages. We will also discuss the laws governing marriage as a civil and as a religious institution were evolving in various European countries. All readings will be in English. Opened to advance undergraduates with the permission of the instructor.

**Gender Studies and Women's Studies**

**SM 539. (RELS539) Medieval and Early Modern Women Visionaries. (C) Matter.**
This graduate seminar will examine the works of women visionaries of the Christian tradition in the medieval and early modern periods, including Hildegard of Bingen, Catherine of Siena, Teresa of Avila, and others. All readings will be available in English. A research paper will be required from each student.

**SM 544. (ENGL544) Science of Sex & Sexuality. Staff. Prerequisite(s): This is an advanced seminar for MLA students.**
The author of a New York Times article entitled "On Being Male, Female, Neither or Both" concluded her comments with the following statement: "The definition of sex was (and is) still up for grabs." In our post-modern world, we have become accustomed to the malleability of gender identity and sexuality. We are also aware that individuals undergo sex reassignment surgeries but by and large we assume that transgender people are transitioning from one discrete category to another. Queer activists certainly challenge this assumption, preferring to envision sex, gender, and sexuality on a continuum, but these days even scientists don't concur about a definitive definition of sex. Should sex be defined chiefly by anatomy? Chromosomes? The body's ability to produce and respond to hormones? If the boundaries of biological categories can be contested, what are the implications for culturally constructed ideas about gender identity and sexuality.

**SM 545. EXPERIMENTAL COURSE. (M)**

**574. (ARTH505) Masters in Liberal Arts Proseminar. (M) Staff.**
Topic varies.

**SM 579. (ENGL456, THAR579) Provocative Performance. (M) Malague.**
This course will examine a wide array of performance pieces by and about women, designed to provoke social, political, and personal change. Ranging from the serious to the hilarious (and sometimes outrageous), our readings will center on plays and performance art; we will also study live and filmed pieces, attend course-related productions in the city and on campus, and incorporate contextual material on feminist theatre theory and history.
**Gender Studies and Women's Studies**

**SM 584. (PSCI584) Political Philosophy. (M) Hirschkorn.**

An examination of basic theoretical problems of political science divided into three parts. First, specific features of social sciences will be examined and three most important general orientations of social sciences (analytical, interpretative and critical) will be compared and analyzed. Second, basic concepts of social and political sciences will be studied: social determination, rationality, social change, politics, power, state, democracy. Third, the problem of value judgments will be considered: Is there a rational, objective method for the resolution of conflicts in value judgments? Is morality compatible with politics?

**SM 589. (COML590, ENGL590, LALS590) REC ISSUE IN CRIT THEORY. (M)**

**SM 630. (EALC230, EALC630, GSWS234) Gender and Religion in China. (A) Cheng.**

This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female deities in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the significance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms.

**SM 640. (COML643, FREN640) STUDIES IN RENAISSANCE.**

**SM 654. (EALC255, EALC655, GSWS254) Japanese Theater. (C) Kano. Prerequisite(s): Reading knowledge of Japanese and/or previous coursework in literature/theater will be helpful, but not required.**

Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

**SM 670. (AFRC670, EALC541, HIST670) Topics in Trans Regional History. (C) Brown.**

What do historians gain by approaching the past with an awareness of the body as a material and historically contingent entity? In this course we consider several different ways of imagining historical bodies and the body in history. Our readings will explore how events and new social, racial, economic and political formations influence how contemporaries imagined and described bodies and their capacities. We will also explore whether the body itself might be a dynamic source of historical change. Among the topics we will discuss are: medical theories about bodies, epidemics and their impact; sensory capacities; capacities for physical labor; cultures of violence; reproductive capacities and politics; coerced imigration; fashion, beauty, and grace; and the state's interest in mobilizing bodies to serve imperial, economic, and military agendas.

**SM 731. (COMM731) Beautiful People. (M) Pearl.**

Have concepts of beauty changed over time? According to Darwin, the meaning of facial expressions and emotions are consistent across cultures and are universally understood. Modern scholarship would have us believe that notions of human beauty are framed by facial symmetry and reproductive fitness, while fashion magazines seem to challenge both these claims. What role does technology play in communicating and shaping ideas of beauty? By the same token, to what extent is technology deployed in service of the ideas of those behind the lens? In this course, we will explore changing notions of beauty and their relationship to the technologies and media through which it is viewed.

**SM 740. (AFRC740, HIST740) Research Seminar in Middle Eastern History. (M) Staff.**

Research seminar on selected topics in Middle Eastern history. See the History's Department website for course description.

**SM 762. (SAST762) Topics in: Women in South Asia. (C) Sreenivasan.**

This course on women in South Asian history has several objectives. To comprehend the genres of narratives in which South Asian women between the sixteenth and twentieth centuries have spoken and have been spoken about. To gain an understanding of evolving institutions and practices shaping women’s lives, such as the family, law and religious traditions. To understand the impact of historical processes -- the formation and breakdown of empire, colonialism, nationalism and decolonization -- upon South Asian women between the sixteenth and twentieth centuries. We will read primary sources in addition to familiarizing ourselves with the historiography of women in South Asia.

**771. (EALC771) Current Japanology. (M) Staff.**

Major trends in scholarship as reflected in important recent publications, especially formative books and periodical literatures. The trajectory within certain disciplines as well as the interaction among them will be critically evaluated in terms of gains and losses. Implications of these theses in the planning of graduate and postgraduate research.

**SM 793. (ARTH793, CIMS793, ENGL797) Topics in Cinema and Media. (M) Staff.**

Topics vary. Please refer to the History of Art Department's website for the course description:

http://www.sas.upenn.edu/arthistory.

**SM 830. (NURS830) RES IN GLOBAL WMN HEALTH. (A)**

The course focuses on critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls in formal and informal structures of health care delivery as those needing and/or seeking health care, and as those providing health care to others. We will examine multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. We will focus our examination on the implications of seeking and providing health care for women's and girls' health and well-being. By examining issues in local and global contexts and across geographical boundaries, we will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women's health. Invited guest speakers will highlight examples of research in global women's health representing multiple disciplinary perspectives.
investigate how the notion of empire—both in its traditionally understood form in Islamic and European history, as well as in its iterations as US Military and soft power—privileges certain voices over others, and how we can reclaim the voices of the marginalized in both contemporary discourse as well as historical oral traditions.

**SM 009. Critical Writing Seminar In Women's Studies. (C) Staff.**

This is a critical writing seminar. It fulfills the writing requirement for all undergraduates. As a discipline-based writing seminar, the course introduces students to a topic within its discipline but throughout emphasizes the development of critical thinking, analytical, and writing skills. For current listings and descriptions, visit the Critical Writing Program's website at www.writing.upenn.edu/critical.

**SM 016. (AFRC016, CIMS016, ENGL016) Topics in Literature. (C) Staff.**

Freshman Seminar. Freshman Seminars under the title "Topics in Literature." When the course content includes women, gender and sexuality this course will be cross listed with GSWS. Freshman seminar under this title will afford the entering student the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. Consult Program for detailed descriptions.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

**SM 028. (COML028, PHIL028) Introduction to Feminist Philosophy. (M) M. Meyer. Offered through the College of Liberal and Professional Studies.**

Feminist theory grows out of women's experiences. In this course we will investigate how some contemporary feminist thinkers' consideration of women's experience has caused them to criticize society and philosophy. Traditional philosophical areas addressed may include ethics, social and political philosophy, aesthetics, philosophy of religion, and epistemology.

**SM 041. (SOCI041) Topics in Sociology. (C) Staff.**

Freshman Seminars. Topics vary from semester to semester. Past offerings include Society and History; The 1960's: Preludes and Postludes; Mistakes, Errors, Accidents & Disasters; Urban Analysis with Computers; Race and Public Policy; Perspectives on Inequality; Homelessness and the Urban Crisis.

**045. (ENGL045) 18th-Century Novel. (C) Staff.**

This survey of the novel addresses key questions about the novel's "rise" in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent "rise" of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did the institutions like literary reviews, libraries, and the church play in the novel's early reception? While reading will vary from course to course, students should expect to read such authors as Austen, Behn, Brookden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett.

This course will be cross-listed with GSWS when the course content includes women, gender and sexuality. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

**055. (COML055, ENGL055) Nineteenth-Century Novel. (M) staff.**

Fulfills Arts & Letters Distribution.

During the nineteenth century the novel became the dominant literary form of its day, supplanting poetry and drama on both sides of the Atlantic. In this introduction to the novelists of the period, we will read the writers who secured the novel's cultural respectability and economic prominence. Likely authors will include Austen, the Brontes, Collins, Dickens, Eliot, Hardy, Hawthorne, Melville, Poe, Thackeray, Scott, and Stowe. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
060. (ARTH070, COML070, ENGL070, LALS060) Intro to Latina/o Literature: Beginnings to 1898. (M) Staff.
A survey of cultural productions by Latinas/os (i.e. people of Latin American descent who have been raised in the U.S.) that usually will focus on the twentieth century, but might at times examine earlier periods instead. The course will take a culturally and historically informed approach to a wide range of novels, poems, plays, and films, and will sometimes include visual art and music. Writers and artists might include Américo Paredes, Piri Thomas, Cherrie Moraga, Sandra Cisneros, Julia Alvarez, Junot Diaz, Cristina Garcia, El Teatro Campesino, John Leguizamo, Carmen Lomas Garza, the Hernandez Brothers, and Los Tigres del Norte.
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

075. (FOLK075, MUSC075) Jazz Style and History. (M) Ramsey, Parberry.
Music 075 401 (Dr. Ramsey): Exploration of the family of musical idioms called jazz. Attention will be given to issues of style, to selected musicians, and to the social, cultural, and scholarly issues raised by its study. Music 075 601 (Professor Parberry): Development of jazz from the beginning of the 20th Century to present. Analysis of the stylistic flux of jazz, such as the progression from dance music to bebop and the emergence of the avant-garde and jazz rock. Attention will be given to both the artists who generated the changes and the cultural conditions that often provided the impetus.

090. (AFRC090, COML090, ENGL090) Gender, Sexuality, and Literature. (C) Staff.
Focusing on literature by and/or about women, this course examines women as readers, writers, and subjects of literature. Works studied vary considerably from semester to semester and may include a wide range of works from various countries and in various genres, often selected to allow for examination of theoretical issues such as feminist humor, feminist literary theory, women and popular culture, and the place of women in the literary mainstream. Often special attention is paid to the experience of minority women. For additional information, please see English's website for a description:
https://www.english.upenn.edu
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality -- a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennessy, Chandra Tadpole Mohanty, and Susan Stryker.
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 100. (COML107, ITAL100) Topics Freshman Seminar. (M) Staff.
Topics Vary. When topics include Gender, Sexuality and Women's Studies the course will be cross-listed with GSWS-100.
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

L/R 101. (CIMS100, COML117, ENGL101) Study of an Author. (C) Arts & Letters Sector. All Classes. Staff.
This is an introduction to literary study through the works of a single author—often Shakespeare, but some versions of this course will feature other writers. (For offerings in a given semester, please see the on-line course descriptions on the English Department website.) We will read several works and approach them—both in discussion and in writing—from a range of critical perspectives. The author's relation to his or her time, to literary history generally, and to the problems of performance, are likely to be emphasized. This course is designed for the General Requirement; it is also intended to serve as a first or second course for prospective English majors.
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

This course looks at the contrast between the model of the virtuous woman, and the instructive power of the uncontrollable woman, from 1800 to the present in Hinduism, Christianity, and Islam. Drawing examples from a variety of historical contexts and traditions, this course will touch on issues of religious empowerment, piety, leadership, and theoretical questions involving gender, spirituality, the body, and the intersection of class status and religious performance.

SM 113. (JWST113, RELS113) Major Western Religious Thinkers. (M) Staff. This course is crosslisted with RELS 113, a topics course when the subject matter is appropriate to Women's Studies. See current timetables.
Introduction to the writings of one or two significant western religious thinkers, designed for those who have no background in religious thought. Possible thinkers to be studied: Augustine, Maimonides, Spinoza, Luther, Teresa of Avila, Edwards, Mendelssohn, Kierkegaard, DuBois, Bonhoeffer, King.

This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labo and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

The material world is shaped and maintained through work, but so is the
social world. How work is organized, allocated, and rewarded determines the opportunities people have for developing their own capacities, the kinds of ties they will have with others, and how much control they will have over their own lives. We will consider various sociological perspectives on work and compare alternative ways of organizing work, with a focus on the contemporary United States.

Post-Revolutionary Iranian cinema has gained exceptional international reception in the past two decades. In most major national and international festivals, Iranian films have taken numerous prizes for their outstanding representation of life and society, and their courage in defying censorship barriers. In this course, we will examine the distinct characteristics of the post-revolutionary Iranian cinema. Discussion will revolve around themes such as gender politics, family relationships and women's social, economic and political roles, as well as the levels of representation and criticism of modern Iran's political and religious structure within the current boundaries. There will be a total of 12 films shown and will include works by Kiarostami, Makhmalbaf, Beizai, Milani, Bani-Etemad and Panahi, among others.

122. (SOCI122) The Sociology of Gender. (C) Society Sector. All classes. Leidner.

Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people's lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class—interact with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.

SM 125. (CIMS125, COML127, RUSS125) The Adultery Novel. (C) Arts & Letters Sector. All Classes. Staff. All readings and lectures in English.

The object of this course is to analyze narratives of adultery from Shakespeare to the present and to develop a vocabulary for thinking critically about the literary conventions and social values that inform them. Many of the themes (of desire, transgression, suspicion, discovery) at the heart of these stories also lie at the core of many modern narratives. Is there anything special, we will ask, about the case of adultery—once called "a crime which contains within itself all others"? What might these stories teach us about the way we read in general? By supplementing classic literary accounts by Shakespeare, Pushkin, Flaubert, Chekhov, and Proust with films and with critical analyses, we will analyze the possibilities and limitations of the different genres and forms under discussion, including novels, films, short stories, and theatre. What can these forms show us (or not show us) about desire, gender, family and social obligation? Through supplementary readings and class discussions, we will apply a range of critical approaches to place these narratives of adultery in a social and literary context, including formal analyses of narrative and style, feminist criticism, Marxist and sociological analyses of the family, and psychoanalytic understandings of desire and family.

SM 149. Law and Social Policy on Sexuality and Reproduction. (C) Tracy.

This course will examine how statutory law, court decisions and other forms of social policy encourage or discourage various forms of sexuality, reproduction and parenting. Such issues as contraception, abortion, gay and lesbian rights, reproductive technology, family violence, and welfare and family policies will be covered.

This course introduces students of literature, women's studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres—devotional literature, memoir, fiction, and poetry—we will study women's roles and selves, the relation of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is devided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English.

182. (STSC182) Social Science and American Culture. (A) Staff.

This course examines the role of social science in the United States during the 20th century. There have been popular social scientific theories since the early 19th century, when the craze spread for interpreting individuals' character by feeling the bumps on their heads. But popular social science is really a 20th century phenomenon. And popular culture influenced academic research. Our coverage cannot be comprehensive. We have insufficient time to treat all human sciences equally. For example, there is enormous popular interest in paleoanthropology and archaeology, but we will not discuss these in class—although you might choose to write your research paper for the course on a specific aspect of one of these disciplines.

186. (EALC166, EALC566, GSWS586) Gender and Sexuality in Japan. (M) Kano.

This seminar deals with issues which such as the cultural and historical constructions of femininity and masculinity; gendered division of education and labor; representation of gender and sexuality in literature, theater, and popular culture; and forms of activism for the rights of women and sexual minorities. This course will use films, videos, and manga, as well as readings from anthropological, historical, literary, and theoretical texts. All readings will be in English, but Japanese materials will be available to those interested.
surrounding Indian cinema, exploring the ways in which it is produced, circulated, and avidly consumed. We will examine the ways the Indian cinema accounts for nationality, religion, migration, and gender, and consider themes such as the use and creation of public space, spectatorship and visuality. This course will enable students to think critically about how cinema reflects, reforms and re-imagines the culture and society that creates it.

SM 221. (COML222, ENGL222) Topics in Romance. (A) Staff.
This seminar explores an aspect of epic or romance intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

Restoring women to African history is a worthy goal, but easier said than done. The course examines scholarship over the past forty years that brings to light previously overlooked contributions African women have made to political struggle, religious change, culture preservation, and economic development from pre-colonial times to present. The course addresses basic questions about changing women's roles and human rights controversies associated with African women within the wider cultural and historical contexts in which their lives are lived. It also raises fundamental questions about sources, methodology, and representation, including the value of African women's oral and written narrative and cinema production as avenues to insider perspectives on African women's lives.

SM 223. (COML354, ENGL221) Topics in Medieval Literature. (M) Staff.
This seminar explores an aspect of medieval literature intensively; specific course topics will vary from year to year. Topics in the past have included the medieval performance, medieval women, and medieval law and literature. The course will be cross-listed with GSWS when the subject matter includes gender, women, and sexuality.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

Gender Studies and Women's Studies

235. (EDUC235) Psychology of Women. (C) Staff.
Critical analyses of the psychological theories of female development, and introduction to feminist scholarship on gender development and sexuality.

SM 241. (ASAM241, COML239, ENGL241) Topics in Eighteenth Century Brit12sh Literature. (M) Staff.
Space will be reserved for English majors. This is a topics course. If the topic is appropriate, the course is cross-listed with ENGL 241. This course explores an aspect of 18th-century literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 245. (ENGL245) Topics In The 18th-Century Novel. (M) Staff.
The primary for this course is the English Department. When the course content includes gender, sexuality and women's studies it will be cross-listed with GSWS. See additional information and description on the English Department's website: https://www.english.upenn.edu

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 249. (EDUC576, PHIL249) Philosophy of Education. (M) Detlfsen.

SM 250. (CIMS251, COML249, ENGL251) Topics in 19th Century Literature. (M) Staff.
This course explores an aspect of 19th-century literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
L/R 252. (COML253, ENGL105, GRMN253, HSOC253, STSC253) Freud: The Invention of Psychoanalysis. (M) Humanities & Social Science Class. Course of 2010 & beyond. Weissberg. All readings and lectures in English.

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today.

In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. Specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

265. (ANTH265) Sex and Reproduction in Humans: A Biocultural Approach. (A) Valeggia. Prerequisite(s): ANTH 003.

An exploration of human reproduction from an evolutionary and biosocial perspective. Focuses on physiological, ecological, and social aspects of human reproduction with a life cycle approach. Also explores human reproductive strategies in a variety of cultural settings. Topics include cognitive and behavioural differences between men and women and male and female reproductive strategies. Examples are drawn primarily from traditional and modern human societies; data from studies of non-human primates are also considered.

SM 266. (COML263, ENGL261) Topics in 20th C. Literature. (C) Staff.

The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

279. (THAR279) Women in Theatre and Performance. (M)

This interdisciplinary seminar will explore theories and practices of globalization. The process of globalization raises many questions that scholars are attempting to answer. What are its historical roots? Why has it seen such rapid growth? Is globalization predominantly an economic, cultural or ideological issue? Has it affected women and men equally? The seminar will consider present discussions on globalization, provide tools to analyze this concept critically, and introduce examples taken from the Third World, Europe, and the United States. Students will be expected to write several short papers and take an active part in class discussions. The final exam will consist of an extended essay on topics dealt with in class.

This course is designed to provide an overview of the variety of ideas, approaches, and subfields within feminist political thought. Readings and divided into three sections: contemporary theorizing about the meaning of "feminism"; women in the history of Western political thought; and feminist theoretical approaches to practical political problems and issues, such as abortion and sexual assault.

This interdisciplinary seminar will explore theories and practices of globalization. The process of globalization raises many questions that scholars are attempting to answer. What are its historical roots? Why has it seen such rapid growth? Is globalization predominantly an economic, cultural or ideological issue? Has it affected women and men equally? The seminar will consider present discussions on globalization, provide tools to analyze this concept critically, and introduce examples taken from the Third World, Europe, and the United States. Students will be expected to write several short papers and take an active part in class discussions. The final exam will consist of an extended essay on topics dealt with in class.

Gender Studies and Women's Studies
SM 284. (AFRC263, ENGL253) Topics in American Literature. (M) Staff.
This course explores an aspect of 19th-century American literature intensively; specific course topics will vary from year to year. When the course content includes gender, sexuality and/or women's studies the course will be cross-listed with GSWS.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 287. (AFRC287, CIMS286) Topics in Africana Studies. (C) Staff. This course will be cross-listed with GSWS when the content includes gender, sexuality, and women's studies.

See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.

SM 290. (AFRC290, ENGL290) Topics in Gender, Sexuality, and Literature. (C) Staff. This course is not open to freshmen.

The primary for this course is the English Department. When the course content includes gender, sexuality and women's studies it will be cross-listed with GSWS. See additional information and description on the English Department's website: https://www.english.upenn.edu

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 310. (COML310, ITAL310) The Medieval Reader. (M) Staff. All Readings and Lecture in English.

Through a range of authors including Augustine, Dante, Petrarch, Galileo, and Umberto Eco, this course will explore the world of the book in the manuscript era. We will consider 1) readers in fiction-male and female, good and bad; 2) books as material objects produced in monasteries and their subsequent role in the rise of the universities; 3) medieval women readers and writers; 4) medieval ideas of the book as a symbol (e.g., the notion of the world as God's book); 5) changes in book culture brought about by printing and electronic media. Lectures with discussion in English, to be supplemented by slide presentations and a field trip to the Rare Book Room in Van Pelt Library. No prerequisites. Readings available either in Italian or English. Satisfies General Requirement in Arts and Letters.

SM 318. (HSOC341, NURS318) Race, Gender, Class and the History of American Health Care. (C) Fairman.

This multidisciplinary course surveys the history of American health care through the multiple perspectives of race, gender, and class and grounds the discussions in contemporary health issues. It emphasizes the links between the past and present, using not only primary documents but materials from disciplines such as literature, art, sociology, and feminist studies that relate both closely and tangentially to the health professions and health care issues. Discussions will surround gender, class-based, ethnic, and racial ideas about the construction of disease, health and illness; the development of health care institutions; the interplay between religion and science; the experiences of patients and providers; and the response to disasters and epidemics.

SM 320. Contemporary Feminist Thought. (A) Kurz. Prerequisite(s): One prior gender, sexuality and women's studies course.

This course covers a broad range of feminist writers, from the pioneer thinkers of the 18th century to current feminists who focus on globalization. After examining how and why feminist thought developed, we will explore how different feminists' perspectives explain gender inequality both in the US and in contemporary global contexts. Readings will also focus on how gender issues interact with race, ethnicity, sexuality, and social class. We will also focus on how feminist theory informs current social movements for gender equality.

SM 324. (HSOC324, NURS324) Children's Health in the United States, 1800-2000. (C) Connolly. For Benjamin Franklin Scholars & Nursing Honors Students.

This course explores the impact of historical ideas, events, and actors pertaining to the history of children's health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children's health care policy and the delivery of care.

This course explores the gendered nature of science as social endeavor, intellectual construct and political resource. We consider the role of gender, masculinity, and the arms race, the notion of a "Successor science" grounded in feminist theory, and the historical role of gender in defining who can do science and what counts as scientific data. We also explore how science has interpreted male-female differences. Our goal is to understand the profound impact of social place in the history of science, and thereby to understand the social nature of scientific knowledge.

This course is an intensive and focused introduction to social gerontology as a trans-disciplinary lens through which to examine aspects of social structure, actions, and consequences in an aging society. A variety of sources are employed to introduce students from any field focused on human behavior and interaction to classical notions of social gerontology and current scholarly inquiry in gerontology. Field work in the tradition of thick description creates a mechanism to engage students in newly gerontological understandings of their life worlds and daily interactions. Weekly field work, observing aspects of age and representations of aging and being old in every day experiences forms, is juxtaposed against close critical readings of classical works in social gerontology and current research literature as well as readings of film and readings of popular literature as the basis for student analysis. Student participation in the seminar demands careful scrutiny and critical synthesis of disparate intellectual, cultural, and social perspectives using readings and field work and creation of oral and written arguments that extend understandings of the issues at hand in new and substantive ways. Emphasis is placed on analysis of field work and literature through a series of media reports and a final term paper.

SM 341. (ENGL341) Topics in 18th Century Literature. (M) Staff: Benjamin Franklin Seminar.

This course explores an aspect of 18th-century British literature intensively; specific course topics will vary from year to year. This is an English course when the course topic includes gender, sexuality and women's studies it will be cross-listed with GSWS.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

344. (EDUC345) Psychology of Personal Growth. (C) Staff.

Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and
behavior. Recommended for submatriculation in Psychological Services Master's Degree program.

L/R 349. (HIST349) History of Sexuality in the U.S. (C) Peiss.

This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identity and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many themes with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.

SM 350. (COML350) Theory of Literature. (M) Staff.

This course includes both a general survey of classic writings in Western aesthetics as well as readings on the major trends in literary criticism in the twentieth century. A recurring theme will be the literary canon and how it reflects or influences values and interpretive strategies. Among the topics covered are feminist literary criticism, structuralism and poststructuralism, Marxist criticism, and psychological criticism. Authors include Plato, Aristotle, Hume, Kant, Hegel, T.S. Eliot, Bakhtin, Sontag, Barthes, Foucault, Derrida, Virginia Woolf, de Beauvoir, Showalter, Cixous, Gilbert and Gubar, Kolodny, Marx, Benjamin, and Freud.

SM 360. (FREN360) French Literature of the 18th Century. (M) Staff.

Throughout the 18th Century, the novel was consistently chosen by the philosophes as a forum in which to present political ideas to a broad audience. French novels of the Enlightenment are therefore often hybrid works in which fictional plots, even love stories, co-exist with philosophical dialogue and with more or less fictionalized discussions of recent political events or debates. We will read novels by all the major intellectual figures of the 18th century -- for example, Montesquieu's "Lettres Persanes," "Contes" by Voltaire, Diderot's "Le Neveu De Rameau" -- in order to examine the controversial subject matter they chose to explore in a fictional format and to analyze the effects on novelistic structure of this invasion of the political. We will also read works, most notably Laclos' "Les Liaisons Dangereuses," that today are generally thought to reflect the socio-political climate of the decades that prepared the French Revolution of 1789. In all our discussion, we will be asking ourselves why and how, for the only time in the history of the genre, the novel could have been, in large part and for most of the century, partially diverted from fictional concerns and chosen as a political vehicle.

SM 390. (ENGL390) Topics in Gender, Sexuality and Literature. (M)

This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identity and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many themes with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.

SM 400. Senior Seminar. (E) Kurz.

This course is for senior undergraduate Women's Studies majors who will be completing their thesis. The seminar helps students decide on the most appropriate methodologies to use and topics to include in their thesis. Other topics include thesis organization and drawing conclusions from primary and secondary sources of data.

Families serve as the basic building blocks of societies. Besides helping to distribute economic resources within a family, families reflect societies' values, norms, tensions and power dynamics through their structure. Furthermore, changes in the family's values, functions and structures mirror changes in women's roles and experiences, both inside and outside the home. Finally, families also serve as the repository for memories from generation to generation.

In this course, we will explore historians' understandings of the causes underlying this cultural phenomenon. With special attention to gender, social position, and religious belief, we will join academic debates about the causes of these persecutions. We will also read some primary sources from the medieval through the early modern periods, including trial transcripts, sermons, and pamphlets. Were they the main target of witchcraft accusations and executions, and if so, was misogyny their most important cause? What role did sexual norms and beliefs have in the way that accusations were framed? Were there different patterns of accusation and executions across time and region, and if so, what social and cultural factors might explain them?

422. History of Sexuality. (B) Rabberman.

In this course, rather than simply debating changes in sexual practices over time, we...
will discuss the ways in which different societies in the past and present constructed sexual norms and understood normality and deviance in sexual terms. We will focus special attention on the following questions: To what extent are sexual identities constructed by different cultures, rather than simply being determined biologically? What influence do social, economic, and political conditions have on social constructions of sexuality? How have different societies used sexual norms to mark "natural" practices from "deviant" ones, and how are these norms connected to societies' power structures? We will explore case studies from Classical Greece through to the contemporary United States. Our readings will explore topics such as medieval and modern views of the body, gender, sexuality, and science; prostitutes in medieval and Victorian England; same-sex relationships from classical Greece to medieval Europe; expectations for sexuality within and outside marriage; hermaphrodites; and sexual deviants, among others.

Students will be expected to participate actively in class discussions, and to complete short response papers and a longer research paper.

**SM 430. (CIMS492, COMM440)**

Lesbian, Gay, Bisexual, and Transgender Representation. (A)

Staff. Prerequisites: COMM 123 or SOCI 137/FOLK 137 or Permission from the Instructor.

This class investigates the history of LGBT representation in a range of media since the 1960s - in film, television, music, pornography, internet, video games, and so on. We will consider ongoing debates about queer images, including stereotypes, camp, and the value of limits of "positive images." The class includes a strong emphasis on independent research: students will learn how to develop and carry out an original qualitative research project throughout the semester.

**SM 432. Family Dramas, Family Players.** (M) Burnham.

Though families have been the subject of literary scrutiny at least since Oedipus Rex, Eugene O'Neil's magisterial Long Day's Journey Into Night was arguably the first American work to look unflinchingly at the darker side of family life. In this course, we will read twentieth century novels, plays, and poems (as well as some nonliterary theoretical works on gender) that show the family as a whole, albeit a fragmented whole. We will read stories by the Irish writers William Trevor and Edna O'Brien who show marriage in various stages of decay, as well as two short novels by the American Jane Smiley whose family survives their crises. We'll look at the relationship of neighborhood and family through stories by the African-American writers John Edgar Wideman and Toni Cade Bambara. Arthur Miller's "Death of a Salesman" and poems from Life Studies by Robert Lowell will let us examine family through the lens of America's obsession with success. Finally, we'll look at families with traditional homes, through Barbara Kingsolver's "The Bean Trees" and Marilynne Robinson's "Housekeeping." Several of the works on the list have been made into excellent films, and we will watch at least two. Brief weekly response papers will encourage all to participate in discussion. There will be a final comparative paper, and no exam.

Prerequisites: ANTH 003 and either ANTH 143, 105, or 106.

A seminar-style graduate and advanced undergraduate course designed to provide an overview of the latest advances in human reproductive ecology and the mechanics of writing a proposal. We will discuss readings and exchange ideas on the different directions that this relatively new discipline may take. As a way of reviewing the material and train ourselves to present our ideas to a funding agency, we will write individual research proposals.

This seminar traces hysteria as a uniquely female malady from Hippocrates, to the nineteenth century France and Jean-Martin Charcot, to Sigmund Freud in Vienna 1900, to French feminist refections on hysteria in the 1970s, such as Luce Irigaray's "La Mysterique," up until more recent reimaginings of the figure, ending with a consideration of what today's hysteria looks like and the women who are "afflicted." Through hysteria, we will consider the ways in which illness has been feminized and women have been pathologized not only in the past, but in the 21st century. Furthermore, we will consider the sick feminine beyond gender binaries and consider how that which is sick is feminine -- weak, inferior, passive -- even when not biologically female. The course will draw from a variety of texts (literary, historical, scientific, and psychological), film, and recent media (from newspapers and magazines to blogs, twitter, Facebook, etc.).

**513. (CIMS215, GSWS213, SAST213, SAST513)** Indian Cinema & Society. (B) Staff.

This course will meet for three hours to view and discuss a variety of films/videos in Hindi, Tamil, Bengali, Urdu (with English subtitles), and English, which bring up issues of social, political, and cultural significance. Readings for the course will include articles in various fields ranging from film studies and communication to sociolinguistics and women's studies. Discussions will focus on cinema as a means of expression and as an instrument for social change, examining the various ways in which films both reflect and influence contemporary culture.

**SM 516. (AFST516, ANTH516, URBS516)** Public Interest Workshop. (M) Staff.

This is a Public Interest Ethnography workshop (originally created by Peggy Reeves Sanday - Department of Anthropology) that incorporates an interdisciplinary approach to exploring social issues. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann's call for interdisciplinary cooperation across the University and to the Department of Anthropology's commitment to developing public interest research and practice as a disciplinary theme. Rooted in the rubric of public interest social science, the course focuses on: 1) merging problem solving with theory and analysis in the interest of change motivated by a commitment to social justice, racial harmony, equality, and human rights; and 2) engaging in public debate on human issues to make research results accessible to a broader audience. The workshop brings in guest speakers and will incorporate original ethnographic research to merge theory with action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. This is an academically-based-community-service (ABCS) course that partners directly with Penn's Nettet Center Community Partnerships.

This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and patients; changing role expectations and realities for nurses; changing midwifery
practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.

SM 528. (HSSC528) Gender and Science. (M) Lindee.
With a special focus on methods, this course explores the rich literature on gender and technical knowledge.

SM 532. (DEMG541, SOCi541) Gender, the Labor Force and Labor Markets. (M) Madden.
Drawing from sociology, economics and demography, this course examines the causes and effects of gender differences in labor force participation, earnings and occupation in the United States and in the rest of the developed developed and developing world. Differences by race and ethnicity are considered. Theories of labor supply, marriage, human capital and discrimination are explored as explanations for the observed trends. The course reviews current labor market policies and uses the data to study, theories of labor supply, marriage, human capital and discrimination to men, evaluate their effects on women and men.

SM 537. (COML521, ITAL537) Boccaccio. (M) Kirkham.
Boccaccio's life and work in the context of Italian and European culture and society.

SM 542. (SOCi542) Work and Gender. (M) Leidner.
This seminar examines the relevance of gender to the organization and experience of paid and unpaid work. Combining materialist and social constructionist approaches, we will consider occupational segregation, the relation of work and family, gender and class solidarity, the construction of gender through work, race and class variation in work experiences, and related topics.

Feminist activists and academics have posed fundamental challenges to existing approaches to social theory. This seminar explores the development of feminist theory since the 1960s, focusing on approaches that have the most relevance for social science. The relations among feminist theorizing, research, and activism will be emphasized.

SM 553. (COML554, ENGL553, HIST553) British Women Writers. (M) Bowers.
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

555. (NURS555) Women and Incarceration. (A) Brown, K.; Guidera; Durain.
This elective course will afford students the opportunity to participate in service learning and health education in the Philadelphia prison system, in particular to incarcerated women. Students will explore the social and historical framework and trends in the incarceration of women and the health status of incarcerated women. During seminar discussions with experts in the criminal justice system and with staff and inmates at Riverside, the Philadelphia women's jail, students will explore the health, health care and health care needs of incarcerated women and identify specific areas in need of attention, especially with regard to health education. In collaboration with Philadelphia jail staff and female inmates, students will design and implement a health education project.

SM 556. (CIMS556, COML557, ENGL556) Topics in Nineteenth Century Literature. (M) Staff.
This course covers topics in nineteenth-century British literature, its specific emphasis varying with the instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 566. (COML566, ENGL566) Topics in Literature and the Law. (M) Staff.
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 569. (AFRC569, COML569, ENGL569) Topics in American Literature. (M) Staff.
This is a topics course where the primary is English. When the topic is Gay/Lesbian/Queer Studies and 19th Century American Literature or African American and Chicana Feminism, this course will be cross listed with women's studies. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

572. (EDUC572) Language and Gender. (B) Pomerantz.
A critical investigation of the relationship between language, gender, and social structure which addresses the role of language in reflecting and perpetuating gender divisions. Students' ongoing discourse analytic projects are integral to our exploration of issues related to sexism and through language. Implications for individual and social change are discussed.

This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an obstetrical gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health.

590. (EDUC590) Gender and Education (ELD). (B) Schultz; Kuriloff.
This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.

SM 594. (ARTH593, CIMS590, COML599) Topics in Contemporary Art. (M)
Topics vary. The primary for this course is the Art History Department. For a course description please see their website: http://www.sas.upenn.edu/arthistory/courses

599. Independent Study. (C) Staff.
SM 610. (COML610, HIST610) Topics in American History. (A) Staff.
Reading and discussion course on selected topics in American history.

612. (EDUC612) Interactional Processes with LGBT Individuals. (L) Wortman.
In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding of the interactional processes facing LGBT individuals.

SM 705. (AFST705, ANTH705, COML715, FOLK715, MUSC705) Seminar in Ethnomusicology. (A) Staff.
Topics in Ethnomusicology. Imagining Africa Musically: This seminar considers ways in which scholars write about and imagine the African continent through the lens of musical performance. We will consider a range of writings about Africa as a continent, regionally, and nationally, including north Africa and the Maghreb through series of themes including: diaspora, cosmopolitanism, gender, spirituality, and as world music. This is a reading and listening intensive seminar.

SM 735. (COML637, ENGL735) Shakespeare. (M) Staff.
An advanced seminar, usually focused on Shakespeare, treating the literature and culture of the late 16th- and early 17th-centuries.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 778. (COML778) Twentieth-Century Aesthetics. (M) Steiner.
This course explores notions that have conditioned twentieth-century attitudes toward beauty: among them, ornament, form, fetish, and the artifact "women". The moves to twentieth-century fiction, art,
manifestos, theory, and such phenomena as beauty contests and art adjudications.

See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 790. (COML790, ENGL790) Recent Issues in Critical Theory. (M) Staff.
The primary for this course is the English Department. When the course content includes gender, sexuality and women's studies it will be cross-listed with GSWS. See additional information and description on the English Department's website: https://www.english.upenn.edu
See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

SM 806. (COMM806) Gender, Globalization and Media. (M) Staff.
This seminar creates a forum for debate over the ways in which the cultural politics of gender structure the historical, economic and social landscapes of media globalization Media culture, as the course readings seek to show, provides a fertile site to examine how globalization media practices articulate gendered imaginations. Adopting a transnational feminist perspective, the seminar specifically address between and among media technologies, representations, and institutions and the complex scripting of gendered meanings and subject positions in multiple locations in the global public sphere. Course topics include globalization and transnational and postcolonial feminist theories; gender, sexuality, and media; gender and labor in globalized media industries; femininity, consumerism, and global advertising; gender, global media, and morality; tourism, gender, and media economies; and gender, religion, and popular culture. For the major assignment, students will be expected to produce a research paper that focuses on one of the following: a critical review of a set of theories or a body of empirical work in a specific region; textual analysis of media with special attention to influences of globalization; political-economic analysis of media institutions and corporate practices.
GENOMICS AND COMPUTATIONAL BIOLOGY

SM 493. (BIOL493) EPIGEN OF HEALTH & DISEASE.

534. (PHRM534) Experimental Genome Science. C Brown, J Murray. Prerequisite(s): Undergraduates and Masters students need BIOL431 or equivalent.

L/L 535. (CIS 535, MTR 535) Introduction to Bioinformatics. (B) B Voight. Prerequisite(s): The course will assume a solid knowledge of modern biology. An advanced undergraduate course such as BIOL421 or a graduate course in biology such as BIOL526 (Experimental Principles in Cell and Molecular Biology), BIOL527 (Advanced Molecular Biology and Genetics), BIOL528 (Advanced Molecular Genetics), BIOL540 (Genetic Systems, or equivalent, is a prerequisite. Corequisite(s): Registration for GCB 535-402 (Laboratory) is required. All students are required to bring a laptop to the lab sessions (Fridays). TAs will provide help with the material, but students should be computer-capable with their own laptop, and should be willing/capable to download and install free software from the internet.

This course provides broad overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of this course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing, RNA and gene expression, single gene and whole-genome analysis, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science.

However, a basic primer in programming and operating in a UNIX environment will be presented.

This course emphasizes direct, hands-on experience with applications to current biological research problems. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL437/GCB 536 and GCB/CIS/BIOL537 are more appropriate.

536. (BIOL437) Computational Biology. (M)

An introductory computational biology course designed for computational scientists. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling. Students will be expected to learn the basic algorithms underlying computational biology, basic mathematical/statistical proofs and molecular biology. Topics to be covered are genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics and small molecule folding.

SM 537. (BIOL537, CIS 635) Advanced Computational Biology. (B) Y Barash, L Wang. Prerequisite(s): GCB536 or equivalent.

SM 752. (CAMB752) Genomics. (B) S Diskin.
GERMANIC LANGUAGES

AS {GRMN}

SM 262. (ARTH362) TOPICS IN NORTH BAROQUE. (M)

SM 023. (COML023) In Praise of the Small in Literature and the Arts. (M) 
Weissberg. Freshman seminar. All readings and lectures in English. No knowledge of German is required. We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.

SM 027. Euro Zone Crisis - The EU in a Currency War for Survival?. (M) 
Shields, Susanne (Lauder Institute). Freshman seminar. All readings and lectures in English. No knowledge of German is required. "Let me put it simply...there may be a contradiction between the interests of the financial world and the interests of the political world... We cannot keep constantly explaining to our voters and our citizens why the taxpayer should bear the cost of certain risks and not those people who have earned a lot of money from taking those risks." Angela Merkel, Chancellor of Germany, at the G20 Summit, November 2010.

In January 1999, a single monetary system united Germany, a core nation, with 10 other European states. Amidst the optimism of the euro's first days, most observers forecast that Europe would progress toward an ever closer union. Indeed, in the ensuing decade, the European Union became the world's largest trading area, the euro area expanded to include 17 member states, and the Lisbon Treaty enhanced the efficiency and democratic legitimacy of the Union.

150. Fascist Cinemas. (M) MacLeod. Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. Mussolini, too, declared cinema "the strongest weapon." This course explores the world of Nazi cinema ranging from infamous propaganda pieces such as The Triumph of the Will and The Eternal Jew to entertainments by important directors as Douglas Sirk. While the main focus is Germany, the course explores the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.

As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

181. (ENVS181) Comparative Cultures of Sustainability. (L) Richter. Prerequisite(s): There are no prerequisites or language requirements. Summer abroad course. Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands.

This hybrid course combines online instruction with a short-term study abroad experience in Berlin and Rotterdam. During the pre-trip online portion of the course, students will become acquainted with the cultural histories of German and Dutch attitudes toward sustainability and the environment through a combination of recorded lectures by the instructor, reading assignments, viewing assignments (documentary and feature films), threaded discussions, and short written assignments. The goal of the pre-trip instruction are to help students develop tools for analyzing and interpreting cultural difference, construct working models of German and Dutch concepts of sustainability, and formulate hypotheses about the relation between culture and policy in Germany and the Netherlands.

The class will spend a total of ten days in Europe: five days in Berlin and five days in the area of Rotterdam. The days will be jam-packed with visits to important sites of sustainable practice; discussion with policy makers, activists, and scientists; and immersion in the cultures of the Netherlands and Germany. Upon our return from Europe, the class will debrief and students will present online projects. There are no prerequisites or language requirements.

203. (GRMN506) TEXTS AND CONTEXTS. (A) Staff. Prerequisite(s): GRMN 104 or the equivalent.

In this course, you will explore themes of cultural and historical significance in contemporary German-speaking countries through literature and nonfiction, through film and current event media coverage. Whether you wish to dive deeply into historical or political contexts, explore untranslatable cultural phenomena or the aesthetic rhythm and semantic complexity of the German language, GRMN 203 Texts and Contexts will inspire your imagination and deepen your understanding of German language, culture and literature. This is a
required course for all courses taught in German at or above the 200 level.

279. (COML094, ENGL094) Introduction to Literary Theory. (M) Staff. This course introduces students to major issues in the history of literary theory.

SM 280. (PHIL280) Topics in Aesthetics. (M) Gibbons. What is beauty? What is the relationship between beauty and goodness? What does aesthetic judgment tell us, if anything, about the world? This course addresses these and other questions by focusing predominantly on Kant's highly influential aesthetic theory. It situates this text in the context of other works on aesthetics. We begin with Plato's view expressed in The Symposium that beauty is a form to which humans gain (some) access through love. We then turn to essays by Shaftesbury and Hume that introduce key aesthetic notions that Kant will elaborate (and revise) including those of taste, common sense, harmony, and aesthetic disinterest. We also read selections from the work of Friedrich Schiller, John Dewey, and A. K. Coomaraswamy who offer alternative accounts of the relationship between beauty and ethical life--a relationship that Kant acknowledges but considers to be importantly limited. The question of the relationship between ethics and aesthetics will form the backdrop for this semester's reading overall.

302. Places of Memory. Lieux de memoire. Erinnerungsorte. (A) Staff. Prerequisite(s): GRMN 203 or equivalent. Taught in German.

SM 526. (COML523, ENGL571, GSWS525, HSSC594) The Trouble with Freud: Psychoanalysis, Literature, Culture. (M) Weissberg. Readings and discussions in English. For professionals in the field of mental care, Freud's work is often regarded as outdated, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.

SM 527. (PHIL526) Philosophy & Psychoanalysis: Freud and the Interpretation of Culture. (M) Steinberg, S. More than a century after Sigmund Freud transformed--for better or worse--our understanding of what it means to be human. Freudian psychoanalysis still exerts a profound influence in our culture. This seminar course is an exploration of the philosophical issues raised by Freudian psychoanalysis as a theory of mind and culture. After a close reading of Freud's theoretical writings on the nature of the mind and human behavior, we will explore why Freud's theories--despite more than a century of criticism--remain highly influential as a framework for the interpretation of art, literature, religion, society, politics, and history. Readings from Freud's "meta-psychological", cultural, and social writings, Paul Ricoeur-Freud and Philosophy, and other contemporary authors in philosophy, psychoanalysis, and other fields. No previous knowledge of psychoanalysis, psychology, or philosophy required.

SM 542. (ARTH563, COML542, NELC584) Topics in Culture. (M) Staff. Topics vary annually.

SM 567. (PHIL467) Topics in History of Philosophy. Topics change annually. Title for Spring 2016 is: Schiller's Philosophical Writings. (M) Hahmann. Seminar taught in English. Topics change annually. Topic title for Spring 2016 is: Schiller's Philosophical Writings. Today Friedrich Schiller is primarily known for his dramas and poems. However, during a period of several years (after he was appointed professor of History in Jena) he was also concerned with philosophical issues. The focus of the seminar was mainly on questions of aesthetics and philosophy of history. With regard to both, it was Kant who was extremely influential for the development of Schiller's philosophical position. But Schiller did not simply copy or rearrange Kantian ideas, in fact, he evolved Kantian philosophy significantly in numerous respects. And even though Schiller later gave up with his philosophical ambitions--in a letter he even dismissed his philosophical efforts altogether as immature--his specific understanding of Kantian philosophy became extremely influential for the genesis of German idealism in general, but in particular the reception of Kantian ideas by Hegel. In this seminar we will look at Schiller's most important philosophical writings and address both his conception of aesthetics and his approach to philosophy of history.

SM 628. Topics 18th Century, vary annually. Topic for Fall 2014 is: Wolfgangs Lehrjahre. (M) Richter. Graduate seminar, taught in German. Topics for Fall 2014 is: Wolfgangs Lehrjahre (1765-1774) The decade before the publication of Goethe's Die Leiden des jungen Werthers is full of literary ferment. The goal of this course is to gain a sense of the multiplicity of projects and perspectives in this crucial decade in order to break down any teleology that might see Werther as its crowning triumph. In other words, this is a course in the "politics" of literature.
and literary aesthetics. Works to be read, discussed, and reported on include: Kant, Beobachtungen ueber das Gefuehl des Schoenen und Erhabenen; Klopstock, Salomo, ein Trauerspiel; Goethe, Lieder nach dem Anakreon; Herder, Fragmente ueber di neuere deutsche Literatur; Lessing, Laokoon oder ueber die Grenzen der Mahlerey und Poesie; Wieland, Geschichte des Agathon; Lessing, Minna von Barnhelm; Mendelssohn, Phaedon oder ueber die Unsterblichkeit der Seele; von Gerstenberg, Ugolino; Wieland, Musarion; Klopstock, Oden und Elegien; La Roche, Geschichte des Fraueleins von Sternheim; Herder, Abhandlung ueber den Ursprung der Sprache; Lavater, Von der Physiognomik; Lessing, Emilia Galotti; Goethe, Goetz von Berlichingen mit der eisernen Hand; Herder, Von deutscher Art und Kunst; Nicolai, Sebaluds Nothanker; Wieland, Alceste; Zimmerman, Von der Einsamkeit; Blankenburg, Versuch ueber den Roman, and, of course, Werther.

GERMAN (GRMN)

SM 002. Lords of the Ring. (M) Frei. Freshman Seminar. All readings and lectures in English. No knowledge of German is required.

"One Ring to rule them all; One Ring to find them; One Ring to bring them all and in the darkness bind them; In the Land of Mordor where the Shadows lie." (J.R.R. Tolkien) So begins your journey into legends and traditional lore. You will read stories of unrequited love, betrayal, magical powers, and the deeds of dragon slayers. This course traces the power of the tales of the ring from J.R.R. Tolkien to Richard Wagner, from the Middle High German epic the Nibelungenlied to the Norse poetry of The Saga of the Volsungs, and back to the twentieth century with Thomas Mann's The Blood of the Walsungs.

SM 003. (COML011) Censored! A History of Book Censorship. (M) Wiggin. Freshman Seminar. All readings and lectures in English. No knowledge of German is required.

Although its pages may appear innocuous enough, bound innocently between non-descript covers, the book has frequently become the locus of intense suspicion, legal legislation, and various cultural struggles. But what causes a book to blow its cover? In this course we will consider a range of specific censorship cases in the west since the invention of the printed book to the present day. We will consider the role of various censorship authorities (both religious and secular) and grapple with the timely question about whether censorship is ever justified in building a better society. Case studies will focus on many well-known figures (such as Martin Luther, John Milton, Voltaire, Benjamin Franklin, Goethe, Karl Marx, and Salman Rushdie) as well as lesser-known authors, particularly Anonymous (who may have chosen to conceal her identity to avoid pursuit by the Censor).

SM 010. (JWST101) Translating Cultures. (M) Hellerstein. Freshman seminar. All readings and lectures in English. No knowledge of German is required.

"Languages are not strangers to one another," writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn't know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depends upon translation between people, between cultures, between texts.

With a diverse group of readings, -- autobiography, fiction, poetry, anthropology, and literary theory -- this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? What are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

SM 011. Bad Taste. (M) MacLeod. Freshman seminar. All readings and lectures in English. No knowledge of German is required.

"Beauty is not a quality inherent to things: it only exists in the mind of the beholder." (David Hume) "Taste classifies, and it classifies the classifier." (Pierre Bourdieu) "Kitsch causes two tears to flow in quick succession. The first tear says: How nice to see children on the grass. The second tear says: How nice to be moved, together with all mankind, by children running on the grass! The second tear makes kitsch kitsch." (Milan Kundera)

Most of us can recognize bad taste as soon as we see it: Harlequin romances, Elvis on black velvet, lawn ornaments. But bad taste also has a history, and kitsch has been identified as a peculiarly modern invention related to capitalism and consumerism. Beginning with a discussion of taste in the eighteenth century (Hume, Kant), we will investigate under what conditions good taste can go bad, for example when it is the object of mass reproduction, and, on the other hand, why bad taste in recent times has increasingly been recuperated as an art form. Categories such as the cute, the sentimental, the miniature, kitsch, and camp will be explored. We will also ask what forms of ideological work have been done by this brand of aesthetics, for example in the connection between politics and kitsch, feminity and the low-brow, or camp and queer identity.

101. (GRMN501) Elementary German I. (C) Staff.

Designed for the beginning student with no previous knowledge of German. German 101, as the first course in the first-year series, focuses on the development of language competence in listening, speaking, reading, and writing. By the end of the semester, students will be able to engage in simple conversations about familiar things, know greetings and everyday expressions, they will be able to count and tell time, and negate sentences in day-to-day contexts. Furthermore, students will be able to speak about events that happened in the immediate past and express plans for the future. In addition, students will have developed reading strategies that allow them to glean information from simple newspaper and magazine articles and short literary texts. Because cultural knowledge is one of the foci of German 101, students will learn much about practical life in Germany and will explore German-speaking cultures on the Internet.

102. (GRMN502) Elementary German II. (C) Staff. Prerequisite(s): GRMN 101 or equivalent.

This course is a continuation of GRMN 101 and is designed to strengthen and expand students' listening, speaking, reading, and writing competence and to deepen an understanding of German-speaking cultures. By the end of the course, students will be able to handle a variety of day-to-day needs in a German-speaking setting and engage in simple conversations about personally significant topics. Students can expect to be able to order food and
beverages, purchase things, and to be familiar with the German university system, the arts, and current social topics. Students will begin to be able to talk about the past and the future, make comparisons, describe people and things in increasing detail, make travel plans that include other European countries, and make reservations in hotels and youth hostels. By the end of the course students will be able to talk about their studies and about their dreams for the future. In addition, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts.

Furthermore, students will feel more able to understand information when hearing German speakers talking about familiar topics. Cultural knowledge remains among one of the foci of German 102, and students will continue to be exposed to authentic materials.

103. (GRMN503) Intermediate German I. (C) Staff. Prerequisite(s): GRMN 102 or equivalent.
This course is designed to improve students writing and speaking competence, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules and prepares students well for GRMN 104 and a minor or major in German.

104. (GRMN504) Intermediate German II. (C) Staff. Prerequisite(s): GRMN 103 or equivalent.
A continuation of GRMN 103. Expands students writing and speaking competence in German, increases vocabulary and helps students practice effective reading and listening strategies. Our in-class discussions are based on weekly readings of literary and non-literary texts to facilitate exchange of information, ideas, reactions, and opinions. In addition, the readings provide cultural and historical background information. The review of grammar will not be the primary focus of the course. Students will, however, expand and deepen their knowledge of grammar through specific grammar exercises. Students will conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.

106. (GRMN505) Accelerated Elementary German. (A) Staff.
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers.

An intensive two credit course in which two semesters of elementary German (GRMN 101 & 102) are completed in one. Introduction to the basic elements of spoken and written German, with emphasis placed on the acquisition of communication skills. Readings and discussions focus on cultural differences. Expression and comprehension are then expanded through the study of literature and social themes.

107. (GRMN514) Accelerated Intermediate German. (B) Staff.
Prerequisite(s): 102 or 106 or equivalent.
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. This accelerated course is designed to improve students writing and speaking competencies, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules. Students conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.

180. German in Residence. (C) Staff.
The German House is a half-credit course with concentrations in German conversation, film, and culture. Though many students enroll for credit, others often come to select events. All interested parties are invited, and you do not have to actually live in the house to enroll for credit. Students from all different levels of language proficiency are welcome. Beginners learn from more advanced students, and all enjoy a relaxed environment for maintaining or improving their German language skills.

219. Business German: A Macro Perspective. (A) James. Prerequisite(s): GRMN 203 or equivalent. Course taught in German.
This course offers you insights into the dynamics of Business German, while taking a macro approach. Examples of various course topics include: economic geography and its diversity, the changing role of the European Union, and the economic importance of national transportation and tourism. In addition, the course emphasizes the development of students' discourse competencies, Business German vocabulary and grammar. Course assignments include oral presentations on current events, class discussions, role-play, and collaborative group work. Class time will be utilized to practice speaking, answering questions, reviewing exercises and holding group discussions on various topics. Class participation is a key component of this course.

220. Business German: A Micro Perspective. (B) James. Prerequisite(s): GRMN 203 or equivalent. Course taught in German.
This course is designed to enhance your speaking, reading and writing skills, in addition to helping you build a strong foundation in business vocabulary. Course objectives include acquiring skills in cross-cultural communication, teamwork, business management, and creating a business plan. German grammar will be covered on a need be basis. This course will prepare you to perform and contribute while in a German-speaking business environment.

Although its pages may appear innocuous enough, bound innocently between non-descript covers, the book has frequently become the locus of intense suspicion, legal legislation, and various cultural struggles. But what causes a book to blow its cover? In this course we will consider a range of specific censorship cases in the west since the invention of the printed book to the present day. We will consider the role of various censorship authorities (both religious and secular) and grapple with the timely question about whether censorship is ever justified in building a better society. Case studies will focus on many well-known figures (such as Martin Luther, John Milton, Voltaire, Benjamin Franklin, Goethe, Karl Marx, and Salman Rushdie) as well as lesser-known authors, particularly Anonymous (who may have
chosen to conceal her identity to avoid pursuit by the Censor.

235. (COML238) Autobiographical Writing. (M) Weissberg.

How does one write about oneself? Who is the "author" writing? What does one write about? And is it fiction or truth? Our seminar on autobiographical writing will pursue these questions, researching confessions, autobiographies, memoirs, and other forms of life-writing both in their historical development and theoretical articulations. Examples will include selections from St. Augustine's confessions, Rousseau's Confessions, Franklin's Autobiography, as well as many examples from contemporary English, German, French, and American literature.

What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, its transformation into an industrial city in the late nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban stritecture, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin. Indeed, Berlin will be a specific example to explore German history and cultural life of the last 300 years.

The course will be interdisciplinary with the fields of German Studies, history, history of art, and urban studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deprecate the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The "origins of environmentalism" lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian texts from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

Do we still believe in ghosts and spirits? Do they have any place in an age of science and technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimeé, Villiers de l'Isle-Adam, and others.

L/R 244. (CIMS244, COML254, URBS244) Metropolis: Culture of the City. (M) Arts & Letters Sector. All Classes. MacLeod. All lectures and readings in English.

An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder, traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doeblin, Marx, Engels, Benjamin, Kraeauer. Films include Fritz Lang's Metropolis and Tom Tykwer's Run Lola Run.

"A spectre is haunting Europe--the spectre of Communism": This, the famous opening line of The Communist Manifesto, will guide this course's exploration of the history, legacy, and potential future of Karl Marx's most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx's ideas might still hold in a world vastly different from his own.

248. (COML268, PHILO67, RELS238) Nietzsche's Modernity and the Death of God. (M) Staff. All readings and lectures in English.

"God is dead." This famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine
GERMANIC LANGUAGES

both the "modernity" of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us "how to philosophize with a hammer."

SM 249. (COML140, COML248, COML355, ENGL259, RUSS252) Topics in Modernism. (M) Staff. Topics vary annually.

This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year.

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today.

In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

258. (CIMS258, COML270) German Cinema. (M) Arts & Letters Sector. All Classes. MacLeod. All readings and discussions in English.

An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political context, the course will explore the "Golden Age" of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to "Papa's Kino" and the rise of New German Cinema in the 1960s.

259. (CIMS259, COML261, GRMN550) Topics in Film History. (M) Katz, Corrigan, Decherney, Beckman. This topic course explores aspects of Film History intensively. Specific course topics vary from year to year. See the Cinema Studies website at http://cinemastudies.sas.upenn.edu for a description of the current offerings.

261. (CIMS279, COML265, ENGL279, JWST261) Jewish Films and Literature. (M) Arts & Letters Sector. All Classes. Hellerstein. All readings and lectures in English.

From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Teyve the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

262. (GSWS162, JWST102, NELC154) Women in Jewish Literature. (M) Arts & Letters Sector. All Classes. Hellerstein. All readings and lectures in English.

This course introduces students of literature, women's studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres--devotional literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relation of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English.

"Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890)

SM 263. (COML277, ENGL261, JWST261) Jewish American Literature. (M) Arts & Letters Sector. All Classes. Hellerstein. All readings and lectures in English.

What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers "immigrate" from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.

"Languages are not strangers to one another," writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn't know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts.

With a diverse group of readings--autobiography, fiction, poetry, anthropology, and literary theory--this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? What are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

265. (EEUR265, GRMN565, HIST265, JWST265, JWST465) Yiddish in Eastern Europe. (M) Hellerstein. All readings and lectures in English.

This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.

318. (GRMN536) Foreign Exchanges: German Travel Literature and the East. (M) Wiggin. Prerequisite(s): GRMN 203 or equivalent. This course is taught in German.

For centuries the "Orient" has functioned as an important concept in formulating a European as well as a specifically German identity. In the context of today's debates about the expansion of Europe and the so-called war on terrorism, it is a concept which demands further historical investigation. On the basis of travel narratives and other texts, we will explore this key term, noting how it has been insistently (re)formulated since the beginnings of modernity. We will also investigate several theoretical models which can help us to think through the cultural encounters documented in the primary works. A series of fundamental questions will accompany us through the semester: Where is the East? Is the East a homogenous place eliciting either fear or wonder? Who lives in the East and how are the "customs and manners" of its inhabitants comprehended? What happens to a German in the East? And, vice versa, what happens to an "Oriental" in Germany? Is the East only in the East? Can one also find the East in Germany?

325. Politics of the Past: Telling Early Modern Tales to Modern Readers. (M) Wiggin. Prerequisite(s): GRMN 203 or equivalent. Taught in German.

In this class we will focus on how literary hi/stories are (re)written, and to what ends. Over the course of the semester, texts from the seventeenth century will be paired alongside a rewrite from the twentieth. Paired readings may include: Martin Opitz (Buch von der deutschen Poeterey) and Gunther Grass (Das Treffen in Telgt), Grimmelshausen (Cursache) and Bertold Brecht (Mutter Courage) and Abraham I Sancta Clara (Predigten) and Barbara Frischmuth (Die Klosterschule). In our discussions, we will explore a series of related questions: How does the older text resonate within the new? How does the newer text comment on the old? What are the politics of such dialogues with the distant past?

SM 330, (COML330, DTCH330, DTCH509, PHIL280) ADV TOPICS DUTCH STUDIES. (M) Staff. Taught in English.
Topics vary annually

The detective story and the crime drama are time-honored genres of literature and popular culture. We are drawn to morbid scenes of violence and crime, and satisfied by the apprehension of criminals and their punishment. At the same time, the process of detection, of deciphering clues, is much like the process of reading and interpretation.

In this course we will read a variety of detective and crime stories, some by famous authors (e.g., Drost-Huelhoff, Fontane, Handke), others by contemporary authors that address interesting aspects of German culture (e.g., Turkish-Germans, gay and lesbian subcultures, DDR and Wende). We will also look at episodes from popular West, East, and post-reunification German TV crime shows (e.g., Tatort).

360. German Culture: Prose of the Twentieth Century. (M) Staff. Taught in German.

Lectures and discussions of major works of modern German prose narrative, including Kafka, Mann, Hesse, Seghers, Grass, and Boell.

375. German Literature after 1945. (M) Staff. Taught in German.

Focus on the continuity of the literary tradition, innovation, and prominent themes related to coming-of-age in today's society, and specific stylistic experiments. Topics include: the changing literary perspective on German history and World War II; the representation of such prominent issues as individual reponsibility, German reunification, and human relations in modern society.

377. Germany and the European Union. (M) Shields. Prerequisite(s): GRMN 203 or equivalent. Taught in German.

In January 1999, a single monetary system united Germany, a core nation, with 10 other European states. Since January 2002 Euro bank notes and coins have gone into circulation in 12 European countries. The European Union is now stronger than ever before, and on May 1, 2004 ten more countries joined the EU - the largest-ever expansion. Is the EU benefiting from this enlargement or does the arrival of so many new members drain money from the EU budget and slow down the EU decision-making? This course will provide an overview of the political and economic developments towards integration in post-war Europe, focusing on Germany's key role. Studying content-rich reading materials, it explores historic-political,
social, economic and cultural issues that are urgent for Germany as well as the European community. Accompanying activities will help students to improve the level of complexity of their language skills.

378. Foreign in Germany. (M) Shields. Prerequisite(s): GRMN 203 or equivalent. Taught in German.

Foreign minority groups are integral elements of German society. This course will provide an overview of the history of foreigners in Germany and their political, social and economic significance. Content-rich reading materials will show Germany as a country that is rapidly developing into a multinational, multicultural society. Focusing on the various attitudes of Germans held towards foreigners and the foreigners' attitudes towards life in Germany, the text selection will provide the basis for in-depth study of the subject, including the development of German policy regarding foreigners.

379. Decadence. (M) Weissberg. Prerequisite(s): GRMN 203 or equivalent. Taught in German.

The period of the late nineteenth and turn to the twentieth century has often been described as a time of decadence—a decline in the "standards" of morals and virtue. While Freud explored the nature of sexual desire, writers like Schnitzler or Wedekind made this exploration central for their stories or plays. The course will focus on the literature and culture of fin-de-siecle Vienna and Berlin, and consider a variety of texts as well as their later reception and translation into film. Lectures and discussion in German.

380. (GRMN584) Heimat. (M) MacLeod. Prerequisite(s): GRMN 203 or equivalent. Taught in German.

The concept of Heimat (homeland, home, roots) has been a focal point of German culture for at least the past two hundred years; but it has no precise translation into English. Heimat is deeply connected with German notions of modernity, nature, community, and gender; but the question of where one belongs has also been associated with escapism, exclusion and marginality. Beginning with a reading of Freud's essay "Das Unheimliche," we will explore literary representations of Heimat (including works by authors such as Eichendorff, Storm, Stifter, Raabe, and Sebald); nineteenth-century paintings by artists such as Leibl; and Edgar Reitz's epic film Heimat (1984).

SM 381. Topics in German Culture: Consuming Culture. (M) Staff. Prerequisite(s): GRMN 203 or equivalent. Taught in German.

Have you ever experienced Kaufrausch? Wondered why there are so many English words in German advertisements? Found German ice cream ads surprisingly...sexual? In this course we will ask how a critical examination of advertising and consumer culture can provide insight into the complex and sometimes contradictory dynamics of modern German (and American) culture. In posing this question, we will take a broad interdisciplinary approach in examining everything from art and literature to historical and demographic data and recent research into consumer anthropology and psychology.

401. Trans(l)its. (A) Wiggin, MacLeod. Prerequisite(s): GRMN 203. This course will be offered every fall semester.

The course, required for all majors in the fall of their senior year, considers movements between languages, including those of the students themselves. Research underscores the importance of providing students and adult language learners with the tools to reflect on their own languages learning. This required course provides an important space for German-learners at Penn to draw on one another's experiences in the program, to build a sense of community, and to complete a final project which, in the case of majors, serves to establish their senior thesis. Drawing on Goethe's musings on "world literature," the course focuses on authors who have arrived at their German words via global, worldly itineraries. Authors who adopt German as their literary language-sometimes called Chamisso authors in honor of the nineteenth-century writer Adalbert von Chamisso, by birth a French speaker--provide a special focus of this course. The course encourages students to become Chamisso authors themselves via a series of critical and creative writing exercises.

SM 403. Senior Colloquium. (B) Wiggin, MacLeod.

SM 507. Elementary Middle High German. (M) Staff. Taught in English.

This course examines major foreign language methodologies, introduces resources available to foreign language teachers, and addresses current issues and concerns of foreign language teaching and learning, such as second language acquisition theory and application of technology.
The reading list will keep in mind the project of literary studies in process today. Colonial Studies and Cultural Studies have, in Discourse Theory, Colonial and Post Feminism, Queer Theory, Minority Historicism, Cultural Materialism, as varied as Deconstruction. New and methodological developments. Bracing reconfigured by a variety of theoretical and topics vary annually. History of Literary Theory. (M)

SM 531. German Literature to 18th Century. (A) Staff. Historical overview of authors, their works, genres, and epochs. Special attention to social, historical, cultural and religious backgrounds. Reading of selected works or passages.

SM 532. German Literature 18th Century to Present. (B) Staff. A continuation of GRMN 531, this course examines literary developments from the Enlightenment to the present.

SM 534. (CLST511, COML501, ENGL571, SLAV500, SPAN682) History of Literary Theory. (M) Staff. Topics vary annually. Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing-and-often confrontational-dialogues between theoretical and political positions as varied as Deconstruction. New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the /professional / study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature—we will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism.

There will be no examinations. Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be an annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor; it will typically include three or four books and six to eight articles or their equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare "position notes" each week, which will either be posted on a weblog or circulated in class.

SM 535. (COML536) Goethe’s Novels. (M) MacLeod. Prerequisite(s): Upper-level course, assumes some familiarity with German literature and culture. With each of his major novels, Goethe intervened decisively and provocatively in the genre and wider culture. This seminar will analyze three of Goethe’s novels spanning his career: the sensational epistolary novel The Sorrows of Young Werther (1774, rev. 1787); the novel of adultery Elective Affinities (1809), and the Bildungsroman Wilhelm Meister's Apprenticeship (1795/96). (We will also look ahead to his "archival" novel Wilhelm Meister’s Journeyman Years [1829].) Particular attention will be paid to the ways in which these novels address questions of modernization - technology and secularization, to name only two - through the lens of individuals who understand themselves in relation to artistic media. We will also consider seminal scholarship on the novels (e.g. Benjamin, Lukacs) in addition to recent critical approaches.

536. (GRMN318) Foreign Exchanges: German Travel Literature and the East. (M) Wiggin. Taught in German. For centuries the “Orient” has functioned as an important concept in formulating a European as well as a specifically German identity. In the context of today’s debates about the expansion of Europe and the so-called war on terrorism, it is a concept which demands further historical investigation. On the basis of travel narratives and other texts, we will explore this key term, noting how it has been insistently (re)formulated since the beginnings of modernity. We will also investigate several theoretical models which can help us to think through the cultural encounters documented in the primary works. A series of fundamental questions will accompany us through the semester: Where is the East? Is the East a homogenous place eliciting either fear or wonder? Who lives in the East and how are the "customs and manners" of its inhabitants comprehended? What happens to a German in the East? And, vice versa, what happens to an "Oriental" in Germany? Is the East only in the East? Can one also find the East in Germany?

SM 540. (ARTH560, COML539, ENGL588, JWST540) Memory, Trauma, Culture. (M) Weissberg. All readings and lectures in English. In recent years, studies of memory (both individual and cultural) have rivalled those of history, and have produced alternative narratives of events. At the same time, research has also focused on the rupture of narrative, the inability to find appropriate forms of telling, and the experience of a loss of words. The notion of trauma (Greek for "wound") may stand for such a rupture. Many kinds of narratives, most prominently the recollections of Holocaust survivors, are instances in which memories are invoked not only to come to terms with traumatic events, but also to inscribe trauma in various ways. In this seminar, we will read theoretical work on memory and trauma, discuss their implication for the study of literature, art, and culture, read select examples from Holocaust survivors' autobiographies (i.e. Primo Levi, EliWiesel), and discuss visual art (i.e. Boltanski, Kiefer) and film (i.e. Resnais, Lanzmann, Spielberg).

550. (CIMSS550, COML552, GRMN259) German Film History and Analysis. (M) Richter. Topics vary annually. From the early 20th century, German cinema has played a key role in the history of film. Seminar topics may include: Weimar cinema, film in the Nazi period, East German film, the New German cinema, and feminist film.

SM 551. (PHIL465) Kant’s First Critique. (M) Horstmann. Kant's 'Critique of Judgment' (1790) is the third and last of his three Critiques. It is of major importance for an understanding of Kant's philosophy as a whole in at least three respects. 1) Being the latest of the three Critiques it gives the ultimate view Kant has with regard to his 'critical system' in its entirety. This view is presented explicitly both in the unpublished First Introduction and the published version of
the Introduction to the third Critique. 2) It contains as its first part his theory of the judgment of taste, i.e. his aesthetic theory. This theory is of interest not just because of its immense influence on subsequent theories of the beautiful but also because of the way it tries to solve the problem of the universal validity of judgments that do not have the statue of judgments of cognition. 3) The third Critique presents in its second part Kant's attempt to integrate living organisms as objects of knowledge into his epistemological framework. It thus comprises his philosophy of biology and his discussion of the status and the function of teleological explanations in science. Though the seminar is meant to deal with all these aspects it can -- depending on the interests of the participants -- focus with different intensity on each of these.

SM 552. (PHIL466) Kant II. (M) Guyer.
A study of Kant's moral philosophy, political philosophy, and aesthetics, focusing on his Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Metaphysics of Morals, and Critique of Judgement.

SM 553. (COML581, RELS508) Hermeneutics. (M) Dunning.
Theory of interpretation and the construction of meaning. Focus is usually on a text by Hegel or Gadamer. May be repeated for credit.

SM 560. (COML559, ENGL590, JWST560, PHIL551) Topics in Philosophy and Literature. (M) Spooehase. Topics vary. The title for Fall 2015 is: Adorno and Literary Theory. The topic for Fall 2015 is: Adorno and Literary Theory. Theodore W. Adorno consistently developed his cultural and social theory in close engagement with art works. During the seminar, therefore, we will be reading both the theoretical reflections of Adorno on art (especially literature) as well as his interpretations of literary texts. We will be taking a closer look at (a) his reflections associated with literary form, (b) his fundamental reflections on the relationship between literature and society, and (c) his specific interpretations of German literature--including his famous interpretations of Goethe, Hoelderlin, Eichendorff, and Hebbel.

565. (EEUR265, GRMN265, HIST265, JWST265, JWST465) Yiddish in Eastern Europe. (M) Hellerstein. All readings and lectures in English. This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.

SM 568. (PHIL568) Hegel's Aesthetics. (M) Hindrichs.
Prerequisite(s): GRMN 216 or equivalent. Upper-level course, assumes some familiarity with German literature and culture. This course is taught in German.

SM 573. (ARTH573, CIMS515, COML570, ENGL573, FREN573) Topics in Criticism & Theory: Auteurism: Theories and Practices. (M) Corrigan.
Auteurism has arguably been at the center of film practice, theory and historiography since the 1950s. Originating in the work of the French New Wave, auteurism has shaped our understanding of many film cultures around the world and across different media beyond the cinema. This course will examine the history of auteurism as it has evolved from France to the U.S. and through national cinemas from China and India to Iran and Denmark. As part of this study, we'll investigate the changing theoretical terms of auteurism as it has adapted to the pressures of post-structuralist theory, feminist interventions, cultural and racial distinctions, and the challenges of new media.
course is to expose students to these scholars and their work, to get to know them as people, learn from them at high level, and understand their approach to the field. Over the course of the spring semester there will be four 3-session modules. Students will meet with 4 different fellows for 3 sessions each. The weekly 90-minute classes will be held at the Katz Center on Wednesdays from 10:30 am - 12 pm, and participants will be encouraged to then stay for lunch and the fellows' seminar which runs from 12:30 - 2:30 pm.

SM 582. (PSCI582, PSCI584) Topics in Political Science. (M) Topics vary.

SM 602. (LING610) Seminar in German Philology. (M) Topics vary annually.

SM 603. Seminar in German Literature. (M) Topics range from the study of individual authors to analyses of major texts.

SM 604. Seminar in German-Jewish Studies. (M) Weissberg

The course will focus on a specific topic, such as German-Jewish autobiography, writings related to the Jewish emancipation, German-Jewish philosophy and literature, the notion of exile, the Shoah, or contemporary German-Jewish literature. Topics will be announced.

SM 611. (ARCH711, ARCH712) Topics in History and Theory. (M) Staff.

A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.

SM 631. The Age of Storm and Stress. (M) Richter.

An in-depth investigation of the major thinkers and writers of the Sturm und Drang period (1767-1785). Concepts to be considered include: genius, nature, language, violence, irrationality, "Germanness." Works by Herder, the young Goethe and Schiller, Hamann, Gerstenberg, Lenz, Klinger, and Wagner. Emphasis on drama and drama theory.

SM 632. Romanticism. (M) MacLeod, Weissberg.

The course focuses both on the timely impact and the lasting contribution of Romanticism. Lectures cover the philosophical, intellectual, social, and political currents of the age. Authors: Schlegel, Wackenroder, Tieck, Brentano, Arnim, Novalis, Hoffmann, Kleist, Eichendorff.

SM 633. Classicism. (M) MacLeod, Richter.

An investigation of Weimar Classicism. Drawing on literary and theoretical works by Goethe, Schiller, and others, the seminar will explore concepts such as: aesthetic education; the nature of a "classic"; "autonomous" art; imitation; German responses to Greek antiquity.

SM 635. Goethe's Wilhelm Meister. (M) MacLeod.

Goethe's Wilhelm Meister project spanned several decades and three novels. This seminar will analyze Wilhelm Meisters Lehrjahre (1795), the foundational work in the development of the German Bildungsroman, and Wilhelm Meisters Wanderjahre (1829), an anomalous and eccentric narrative that stretches the boundaries of the novel genre. We will also consider recent critical approaches to the novels, and will discuss in particular Foucauldian and psychoanalytic readings that deal with Bildung as a discourse of desire, formation, and discipline.

SM 636. Literature of Enlightenment. (M) Richter.

German intellectual and literary developments from 1690-1780 in the context of the European enlightenment.

The course concentrates on issues of "realism" and "representation". Examples will be drawn from nineteenth century German fiction.

SM 641. Drama of the Nineteenth Century. (M) Staff.

A study of the German drama after Goethe and Schiller, with special emphasis on the response of such authors as Kleist, Buechner, Grillparzer, and Hebel to the classical drama. Discussions of theories and techniques (Freytag, Szondi). Readings also include Nestroy, Hauptmann, and Schnitzler.

SM 642. (COML642) Drama of the Twentieth Century. (M) Jarosinski.

Based on a discussion of the relationship of drama (text) and theater (performance), the course examines the development of realistic and antirealistic currents in modern German drama. From Wedekind and Expressionism to Piscator's political theater, Brecht's epic theater and beyond (Horvath, Fleisser, Frisch, Duerrenmatt, Handke).

SM 646. Novel of the Twentieth Century. (M) Staff.

A study of the major developments in modern German narrative prose in its international context. Discussions of theories and techniques. Readings of authors such as Kafka, Thomas and Heinrich Mann, Döblin, Seghers, Boell, and Grass.

SM 648. Modern German Lyric. (M) MacLeod.

Origins and development of modern German lyrical poetry since the late nineteenth century. Authors such as George, Rilke, Hofmannsthal, Brecht, Benn, Bachmann, Celan will be interpreted in light of the important poetic trends in the twentieth century.

SM 650. (PSCI584) Topics in 20th-C Studies. (M) Staff. Topics vary.

Lectures on the concept of "Baroque" in literature and the social and intellectual backgrounds of German Baroque literature; reading and discussion of lyrics, dramas and novel.

Major works and authors of the fifteenth and sixteenth centuries. Authors include Luther, Hans Sachs, Wickram, Fichart, and Frischlin.

SM 660. German Literature After 1945: Recording, Remembrance, and Forgetting. (M) Staff.

The seminar examines literary and other artistic works that represent contested parts of the recent German past. Particular attention will be paid to the use made of historical facts in lyric poetry, prose, documentary theater, film, and photography. Through close readings of emblematic literary and theoretical texts, we will consider the widespread notion of the past as a narrative construction, investigate modes of witnessing and testimony, and examine collective and individual repression as well as private and public rituals of remembrance. The material will be considered along with the larger claim of literary discourse, and lyric poetry specifically, as uniquely suited to represent otherwise inaccessible dimensions of experience.
SM 663. Weimar Literature. (M) Staff. Conducted as a research seminar, requiring an oral presentation and lengthy scholarly paper. Primary readings and discussion will be in German.

This course examines the major cultural developments including Expressionism, New Objectivity, and the European avant-garde that took place during the tumultuous years of Germany's first experiment in democracy. We will cover a variety of genres (poetry, drama, fiction and non-fiction), while also paying attention to the visual arts, in particular the cinema. The primary aims of the course are: to familiarize students with the rich cultural efflorescence of the period; to examine the legacy of the First World War, the rise of the urban metropolis and their various representations; and to assess the course of history as reflected both in and outside the literary sphere. Authors to be covered include: Vicki Baum, Walter Benjamin, Bertolt Brecht, Alfred Doblin, Ernst Juenger, Irmgard Keun, Siegfried Kracauer, Erich Maria Remarque, Joseph Roth and Ernst Toller.

SM 664. (HIST620) Topics in European History. (A) Staff.

This course will focus on problems in European political, social, cultural, and economic development from 1750 to the close of the second World War. Readings will be major works in the different fields of European historical scholarship, ranging from family to diplomatic history and covering a wide variety of methodological approaches.

SM 670. (ARTH670, COML670) German Literary Theory & Criticism. (M)

This course will concentrate on major and/or current issues in literary criticism, specific problems, critics, or approaches. Topics will vary; in the past, courses have concentrated on Walter Benjamin's work, and "The Frankfurt School and After."

SM 672. (COML634) Reading Modernity. (M) Jarosinski. Taught in English.

In this course we will examine Modernism and the avant-garde as concepts in literature, theater, and criticism. Both terms in the seminar title will be significant to our work, as we ask not only how to define and debate "modernity" today, but also how to understand various notions of "reading" and cultural analysis that emerge during the period and live on in various ways today. In addition, we will take account of important technological, social, and economic developments marking modernity, focusing our attention on the ways in which they intersect and interact with cultural production, cultural politics, and perception itself. Readings will include key texts by representative authors, including Benjamin, Kafka, Barthes, Kracauer, Brecht, Adorno, Baudelaire, Eliot, Woolf, and others. The final section of the course is concerned with contemporary debates surrounding Modernism's relation to Fascism and the juxtaposition of Modernism and Postmodernism.

SM 674. (ARTH674, CIMS591, COML674, PHIL583) Topics in Aesthetic Theory. (M) Weissberg, MacLeod, Corrigan. Topics vary annually.

SM 676. (COML676, GSWS676) Readings in Feminist Theory. (M) Weissberg.

The seminar will provide a survey of recent feminist theories, and a discussion of literary texts focusing on issues of gender, race, and class. The reading list will include essays by French, English, and American theorists as well as novels by Bachmann, Wolf, and Jelinek.

What is "realism"? What does it mean to depict the world as a "realist" writer or artist? This seminar will consider these questions and concentrate on German literature and art of the second half of the nineteenth century. It will focus on writers such as Stifter, Storm, Raabe, and Fontane; but also on Stifter's drawings and paintings, visual artists such as Menzel, and the vogue of historical painting. Finally, the seminar will consider the role of early photography in the development of the notion of "realism." Secondary literature will include studies by Michael Fried, Linda Nochlin, and others.

SM 680. Studies in Contemporary Music. (M)

Seminar on selected topics in the music of the twentieth century.

SM 691. Travel in German Literature. (M) Wiggin.

During the early modern period (circa 1450-1800) the world became global. A "new world" which challenged "old world" frameworks of knowledge was made to accommodate European travellers. This seminar will devote itself to travel literature (broadly conceived) on the Americas to explore questions historical and actual, literary and theoretical: How did contact initially effect the old world? How did its representation evolve over the early modern period? How can a concept of early modern globalization be useful today? Weekly seminar topics will be organized around a single primary text (some available only in Van Pelt's Rare Book Room) and an array of secondary materials. Each participant will lead one seminar session, assigning further readings as s/he determines necessary. A one-day seminar within the seminar will allow students to present their work on early modern globalization in a conference-style format. Each contribution will then be re-worked as the final paper. Primary materials may include: Herzog Ernst; Scheldel's Weltchronik; Muenster's Cosmographica, travel accounts by Staden and Hutters; Theodor de Bry's American publications; Ortelius, Blaeu, and Jansson maps; Gottfried's American compilation; travel literature by Penn, Pastorius, and Saur; Insel Felsenburg; Humboldt.

DUTCH (DTCH)

A first semester language course covering the core Dutch grammar and vocabulary with the goal of providing the corner stone for developing overall linguistic proficiency in Dutch.

102. (DTCH502) Elementary Dutch II. (B) Naborn.

Continuation of DTCH 101.

103. (DTCH503) Intermediate Dutch I. (A) Naborn. Prerequisite(s): Dutch 102 or equivalent.

A third semester Dutch language course. The emphasis lies on vocabulary expansion through the use of audio-taped materials and readings. Grammar is expanded beyond the basics and focuses on compound sentences, features of text coherence and idiomatic language usage.

104. (DTCH504) Intermediate Dutch II. (B) Naborn. Prerequisite(s): Dutch 103 or equivalent.
105. (DTCH505) Advanced Dutch I - Cultural History of the Netherlands & Flanders. (M) Naborn. Prerequisite(s): DTCH 104 or equivalent.
This course combines a Dutch language course with a content-based course on Dutch history and literature. Units on linguistic aspects of the language are added as review and refinement. The course also serves as an introduction to writing papers in Dutch.

106. (DTCH506) Advanced Dutch II. (M) Naborn. Prerequisite(s): Dutch 105 or equivalent.
Continuation of Dutch 105. The emphasis lies on literary and other writings from the 20th Century.

Topics vary annually. Topic for Spring 2016 is: "Dutch Literature and World Literature"

SM 330. (COML330, DTCH509, GRMN330, PHIL280) Advanced Topics in Dutch Studies. (M)
Topics vary.

A first semester Dutch language course covering the core Dutch grammar and vocabulary with the goal of providing the corner stone for developing overall linguistic proficiency in Dutch.

502. (DTCH102) Elementary Dutch II. (B) Naborn.
Continuation of DTCH 501.

503. (DTCH103) Intermediate Dutch I. (A) Naborn. Prerequisite(s): Dutch 502 or equivalent.
A third semester Dutch language course. The emphasis lies on vocabulary expansion through the use of audio-taped materials and readings. Grammar is expanded beyond the basics and focuses on compound sentences, features of text coherence and idiomatic language usage.

504. (DTCH104) Intermediate Dutch II. (B) Naborn.

505. (DTCH105) Advanced Dutch I - Cultural History of the Netherlands & Flanders. (M) Naborn. Prerequisite(s): DTCH 504 or equivalent.
This course combines a Dutch language course with a content-based course on Dutch history and literature. Units on linguistic aspects of the language are added as review and refinement. The course also serves as an introduction to writing papers in Dutch.

506. (DTCH106) Advanced Dutch II. (M) Naborn. Prerequisite(s): Dutch 505 or equivalent.
Continuation of Dutch 505. The emphasis lies on literary and other writings from the 20th Century.

507. Dutch for Reading Knowledge. (M) Naborn. No knowledge of Dutch required.
This course is designed for undergraduates, graduate students and faculty who want to be able to read Dutch. Of particular interest to historians and art historians, people interested in international business and law, religious studies, social policy, and literature. Emphasis on reading skills; structures of grammar and pronunciation are taught as needed. Text selection will be tailored to individual student needs. No knowledge of Dutch required.

Topics vary annually.

SCANDINAVIAN (SCND)

Basic language course stressing grammatical structures and vocabulary, pronunciation, simple conversation and reading of elementary texts. Credit for this course will only be given upon successful completion of SCND 102.

102. (SCND502) Elementary Swedish II. (J) Williams. Prerequisite(s): SCND 101 or equivalent.
Continuation of SCND 101. This is a two-semester course designed to teach beginning skills in Swedish reading comprehension, vocabulary acquisition, listening comprehension, writing, and conversation. Swedish social development will also be examined in relation to its cultural milieu. A trip to Gloria Dei Old Swedes Church in Philadelphia for their Luciafest will be included on a December weekend, a visit to a Swedish film during the Philadelphia Film festival will take place in late April, and other events as announced.

103. (SCND503) Intermediate Swedish I. (H) Williams. Prerequisite(s): SCND 102 or equivalent.

104. (SCND504) Intermediate Swedish II. (K) Williams. Prerequisite(s): SCND 103 or equivalent.

105. (SCND505) Advanced Swedish I. (M) Staff. Prerequisite(s): SCND 104 or equivalent.

106. (SCND506) Advanced Swedish II. (M) Staff. Prerequisite(s): SCND 105 or equivalent.

Continuation of SCND 501.

504. (SCND104) Intermediate Swedish II. (K) Williams.

505. (SCND105) Advanced Swedish I. (A) Staff.

506. (SCND106) Advanced Swedish II. (B) Staff.

YIDDISH (YDSH)

101. (JWST031, YDSH501) Beginning Yiddish I. (A) Staff.
The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazie Jewry in studying the language.

102. (JWST032, YDSH502) Beginning Yiddish II. (B) Staff. Prerequisite(s): YDSH 101 or permission of the instructor.
In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.

103. (JWST033, YDSH503) Intermediate Yiddish I. (M) Staff. Prerequisite(s): YDSH 102 or permission of the instructor.
The course will continue the first year’s survey of Yiddish grammar with an additional emphasis on reading Yiddish
texts. The course will also develop conversational skills in Yiddish.

104. (JWST034, YDSH504) Intermediate Yiddish II. (M) Staff. Prerequisite(s): YDSH 103 or permission of the instructor. Continuation of GRMN 403. Emphasis on reading texts and conversation.

108. (JWST438, YDSH508) Readings in Modern Yiddish Literature. (M) Botwinik. Prerequisite(s): Reading knowledge of Yiddish. This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation.

501. (JWST031, YDSH101) Beginning Yiddish I. (A) Staff. The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazie Jewry in studying the language.

502. (JWST032, YDSH102) Beginning Yiddish II. (B) Staff. Prerequisite(s): YDSH 101 or permission of the instructor. The course will continue the first year’s survey of Yiddish grammar with an additional emphasis on reading Yiddish texts. The course will also develop conversational skills in Yiddish.

503. (JWST033, YDSH103) Intermediate Yiddish I. (M) Staff. Prerequisite(s): YDSH 102 or permission of the instructor. This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer, Moyshe-Leyb Halpern, and Kadya Molodowsky.
GOVERNMENT ADMINISTRATION

514. Encouraging Economic Growth. (AS) {GAFL}
Online course fee of $150.
This course is a hybrid and meets on-campus four times during the semester on the following Fridays and Saturdays: Sep 11, 12; Oct 16, 17; Nov 13, 14; Dec 4, 5

524. Planning for Performance. (L)
Bury, Betsy. Meets on campus 3 times per semester. On-campus meetings are as follows for Summer 2015 11-week session: May 8-9, June 12-13, and July 10-11.
Online course fee of $150.
Students will learn the basics of strategic planning and performance management, the argument made for and against using these tools in the public sector context, and, ultimately, to develop their own philosophy about how to affect organizational change.

526. Municipal Bonds. (A)
Steven Genyk.
The course provides a comprehensive overview of the $3.7 trillion municipal bond market, with a focus on public finance investment banking; capital project financing for state and local governments including water, sewer, mass transit and road projects, and non-profit financing for educational and healthcare institutions; the legal and regulatory framework governing the municipal bonds market; rating agency analysis; quantitative modeling; and investor perspectives.

529. Nonprofit Financial Management. (B)
Rosenzweig, Janet.
The course is designed to provide the student with an understanding of the primary financial management issues and decisions that confront senior management in nonprofits and government. Students will examine financial analysis techniques from both a practical and strategic perspective as they examine operating and capital decisions. The objective of the course is to allow the student to understand how managers integrate the various discrete financial decisions within a broader framework that allows them to analyze, develop and execute a coherent overall financial strategy.

534. Infrastructure Investment and Economic Growth: Why, How, and When. (B)
Angelides.
Infrastructure is widely acknowledged to be critical for economic success, and infrastructure investments are promoted as leading to economic growth, either at the local or national level. Yet, investments in telecommunications, transportation, energy, or other infrastructure do not always yield the hoped public benefit. This course will help answer the question: Under what circumstances does infrastructure investment contribute to economic growth, and how do we know? Because government resources are limited, advocates often must be creative to find sufficient funding to get desirable projects completed. This course will also help answer the question: How do we pay for the infrastructure projects we want to build? The course will illustrate approaches to answering these questions using case studies of past and proposed investments.

542. (CPLN642) DOWNTOWN DEVELOPMENT. (A)
SM 546. Social Enterprise Models and Social Impact Locally and Globally. (B)
Hansen-Turton, Tine; Torres, Nicholas.
If you believe in finding innovative ways to make a difference and solve social issues locally and globally, you will benefit from the Social Enterprise and Impact Locally and Globally Course (Social Enterprise). Social Enterprise is designed for those who have a practitioner's interest in the development, leadership, and management of the evolving nonprofit sector and their intersection with the socially conscious private sector and government. The course takes the student through the process of developing a mock social enterprise including idea exploration, testing and plan execution and provides the student with essential strategies and tools to conduct in-depth analysis of a social enterprise leading to their application to a regional social enterprise.
This course fulfills an elective for the MPA and the Certificate in Nonprofit Administration.

548. Grant Writing. Colleen Terrell. In Summer 2016 ONLY This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.
This course will provide students with the role of the foundation in philanthropy, what it does, how it does it, and what you need to know to be both an effective foundation manager and foundation grant seeker. From the foundation side, the course will include strategic planning, assessment of project results, and the responsibilities of the foundation grant program officer. From the grant seeker side, it will include identifying the appropriate foundations, making the connection to the foundation, grant writing, and relationship management.
Summer 2016 On-Campus Meetings: 9:30am-1:00pm Fridays and Saturdays May 20-1, June 24-5, and July 22-3

549. Leading Nonprofits.
This course will provide an analysis of the nonprofit sector in relation to public and for-profit organizations, focusing on building the six core organizational competencies that are essential to a successful nonprofit.

SM 555. (DYNM655) Using the Political Process to Effect Organizational Change. (B)
Prerequisite(s): Course permits must be requested at https://www.sas.upenn.edu/ips/graduate/dynamics/course-permit. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

599. INDEPENDENT STUDY.

640. Program Evaluations and Data Analysis. (B)
Lim, Nelson. This course is a requirement for MPA full-time students who started in Fall 2015 or later. It is an elective for MPA full-time students who started Fall 2014 or earlier.

714. ENCOURAGING ECON GROWTH.
733. Public Management (MPA Executive Section). (B) Jones, Darrell D. This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

Overview--Public managers must have technical expertise in planning, staffing, and budgeting; however, technical skills alone are not sufficient to become an effective public manager. You must understand the socio-political context of your organization and your success will be dependent on your ability to analyze policy options and persuade stakeholders and supervisors, through effective communications, to pursue the policy options you recommend. Public managers in the 21st century must also understand the ever increasing diversity of their constituents and stakeholders. Economic globalization and international migration continue to increase the the racial and ethnic diversity of our workforce. Diversity begets complexity and tension. Effective public managers must learn to lead inclusive organizations that leverage diversity and defuse tensions among heterogeneous constituents and stakeholders. Learning objectives The goal for this class is to expand your knowledge about public management, both as a profession and as a field of study.

At the end of this course, you will understand key competencies of an effective public manager, demonstrate your understanding through class discussions, weekly reading notes, a group case study analysis and presentation, and a policy memo that analyzes management dilemmas and proposes responses. To accomplish this goal, we will go beyond passive learning from classroom lectures. We will have a few guest speakers whose expertise will complement readings. We expect you to be prepared and to participate in classroom discussions, engage practicing public administrators and accomplished researchers in seminars/workshops, and learn to draft policy briefs and policy memos completing scenario-based assignments.

This course will meet in-person from 9:30am-1:00pm on the following Fridays and Saturdays: September 9-10, October 14-15, November 18-19, December 2-3. This course will meet virtually Mondays 7:30-8:30pm.

797. CAPSTONE FIELDWORK.

SM 799. MPA Capstone. (C) Nelson Lim--MPA Full-Time Format; Claire Robertson-Kraft--MPA Exec Format. This course has two parts--the seminar, which has a regularly scheduled meeting, and the 'independent study,' which does not have a meeting pattern but is a means of assigning a capstone advisor individually to each enrolled student. Students taking the capstone should put in a request for the seminar and the independent study placeholder. Individual independent study sections will be assigned after the start of the term by the department. Any questions can be directed to Kathryn Brossa at brossak@sas.upenn.edu NOTE: Capstone offered in the Summer term is a "hybrid" course.

The completion of a capstone projects is one of the academic requirements for the Master of Public Administration (MPA) at the University of Pennsylvania’s Fels Institute of Government. The capstone project represents a way for graduate students to apply their multi-disciplinary learning from the program to a specific public administration challenge(s) or issue(s). To successfully complete a capstone project, a student must receive a passing grade for his or her capstone paper and associated briefing.

The student's capstone paper resembles a policy memo that an administrative staff writes to decision makers and stakeholders. The paper integrates and deepens the student's learning from the program. More importantly, the capstone paper provides a way for a student to bring her/his learning and knowledge from the program back into her/his chosen career. The research focus should be one that is of great interest to the student as well as one from which a potential organization will benefit.

Summer 2016 On-Campus Meetings: 2:00pm-5:30pm Fridays and Saturdays May 20-1, June 24-5, and July 22-3

Core Courses

589. Policy Development. (A) Martinez.

This course examines the policy development process including: the interaction of branches of government; policy analysis; information; constituencies; and management of a policy development office. The objective of this course is to provide an understanding of the development of government policy, both at the macro level and from the viewpoint of persons who are in supporting roles to the major actors in the process. The formula employed to achieve this objective consists of a combination of readings, lectures, discussions, and activities that are designed to blend conceptual and practical skills.

612. Quantitative Methods for Policy Analysis. (B) Robertson-Kraft, Claire.

This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. Weekends vary by term. Please read the course description for further information. This course will help students learn how to make evidence-based decisions in a public sector context. The course will introduce important data analysis skills and help students evaluate the quality of studies undertaken to measure the impact of public policies and programs.

On-campus meetings for Spring 2016 will be on Fridays from 9:30am-1pm on Jan. 15, Feb. 12, Mar. 18, and Apr. 15 and on Saturdays from 2-5:30pm on Jan 16,
Fig. 13, Mar. 19, and Apr. 16. The class will meet online weekly on Mondays 6-7pm.

621. Public Economics. (A) Sieg, Holger Wolfgang.
This course provides students with the knowledge required to understand government operations in relation to the market economy. In theory of supply and demand, students explore the pricing mechanism, price elasticity, and the effects of price controls on markets. Efficiency is examined in connection with competition and again in connection with equity, and market failure is considered as a reason for government intervention. Cost-benefit analysis is examined in the context of selecting among public investment alternatives. The course also assists students in addressing issues connected with local public goods and economic development.

631. Policy Making & Public Institutions. (B) Meredith, Marc. This course is a core requirement for the full-time MPA program at the Fels Institute of Government. Permits will not be issued to non-Fels students.
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government. The class will be a mix of lecture and cases. Cases are on a diverse set of policy topics, with a goal of illustrating broad themes about the policy-making process rather than the specifics of certain policy areas.

L/L 703. (CRIM535) Statistics for Public Leadership. (A) Owens/Perrins.
This course presents students with statistical tools for government and public policy evaluation. The foundations of statistical description and inference are emphasized, and the course builds the skills students need to become critical consumers of statistical information. An integrated laboratory component provides training in the use of general statistical software.

This core MPA course is intended to help each student to learn more than he or she already knows about public management both as a profession and as a field of academic study and to enjoy the company of supportive peers, instructors, and special guests as he or she contemplates a post- MPA career in governance.
This course satisfies a core requirement in the Master of Public Administration full-time program.

735. Performance Management. (D) Botwinik/Golda.
How can leaders manage performance and make decisions that lead to desired outcomes such as less crime, better education, or lower unit costs? This course examines the various ways that public sector organizations can use data to plan strategically, manage risk, and monitor performance. Students will learn about the theory behind performance measurement and risk management, as well as the benefits, challenges, and limitations of performance management.

Representative Electives

502. Public Communications. (S) Benedict (Fall & Spring); Besnoff (Summer). This course has seats reserved for Fels' students and gives priority to grad students. Post-bacc students, contact Kathryn Brossa (brossak@sas.upenn.edu).
Successful leaders must be able to convey their integrity and their ideas, their vision and their values clearly and convincingly in public settings. By analyzing great political speeches and afforded students the opportunity to prepare and deliver different types of speeches, this course teaches the fundamentals of persuasive public speaking while encouraging students to develop their own voice. This is a performance course. Students will gain skill and confidence in their speech writing and public speaking skills through practice, peer feedback, and extensive professional coaching. Class lectures and discussions will focus on persuasive strategies and techniques for handling community meetings, Q and A sessions, and interactions with the media.

503. Speech Writing. (B) Benedict.
Leaders need to know how to express themselves with clarity and conviction--in a meeting with five people or in a public forum with five hundred. Whether you're writing for yourself or someone else, this course will provide the basics of speech writing and give you the opportunity to write, revise and deliver a variety of different speeches. You will also be given the opportunity to answer audience questions after your speeches. The emphasis will be on preparing and giving longer speeches where a prepared text or speaking notes would be advisable. In this performance course, you will examine and learn from great speeches—from the classics down to the present. Your speeches will be videotaped and you will receive feedback from both the instructor as well as your peers.

515. Public Finance Investment Banking. (B) Matteo.
This course examines the field of public finance in theory and in practice. The purpose of the course is to provide a detailed understanding of the many facets of and applications of finance in the public sector with a focus on public finance investment banking. The course will provide students with a broad-based and technical overview of public finance and municipal bonds as well as a thorough understanding of the business of public finance.

The purpose of the course is to study the theory and application of certain, key quantitative methods utilized in financial and fiscal decision-making in state and local governments: defining and measuring efficiency and equity; statistical analysis, multivariate analysis, linear and multiple regression; inter-temporal decision-making; and cost-benefit analysis. Primary emphasis will be on understanding the context and quantitative basics of these methods to prepare students for effective careers in state and local governments. Each student should have a basic understanding of market economics, the roles of government in our market economy, accounting/budgeting basics, and the Philadelphia metro area economy and government.

520. Marketing & Fundraising for Non-Profit Organizations. (A) Hugg.
This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee. 
Fundraising and marketing are complementary tools for building revenue streams and fulfilling the program.
objectives of nearly every nonprofit organization. This course develops students' ability to market a nonprofit to mission recipients and prospective donors and to solicit funds from individuals and organizations.

Through lectures, readings, discussions, and assignments, students are actively engaged in learning how to help an organization achieve its mission and objectives. This includes but is not limited to the assessing an organization's marketing and fundraising capabilities; identifying, segmenting, and creating relationships with target markets and donors; building infrastructure to properly seek and steward gifts; using technology to fulfill marketing and fundraising objectives; and focusing on fundraising and marketing methods such as social media, direct response, events, major gifts, planned giving, and others.

This course emphasizes applications. Each student will complete a fundraising and/or marketing plan for a specific organization of their choosing, the structure of which will be derived from the term's assignments.

This course will meet in-person from 2:00-5:30pm on the following Fridays and Saturdays: September 9-10, October 14-15, November 18-19, December 2-3. This course will meet virtually on Wednesdays 9:00-10:00 pm.

521. Advanced Public Management. (B) Lim.
TBA

This course will meet in-person from 2:00-5:30pm on the following Fridays and Saturdays: September 9-10, October 14-15, November 18-19, December 2-3. This course will meet virtually on Tuesdays 6:45-7:45 pm.

528. Marketing for Nonprofit Organizations. (A) Hugg.

This course provides students with the concepts and tools to help nonprofit and government organizations market their programs and services. The course emphasizes applications, and students will complete a marketing plan during the course for a nonprofit organization or government agency of their choice. Students will learn how to conduct competitive analyses, benchmarking, market segmentation and client needs; explore opportunities for social research on client needs; explore opportunities for social entrepreneurship and product development; and design effective Web and direct marketing tactics as part of an overall promotion and packaging strategy.

SM 530. (PSCI413) Evidence Based Policies of Economic and Political Development. (B)

This class provides a "hands-on" introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development.

This course has three parts: the first is devoted to understanding the "nuts and bolts" of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha's Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or—for those interested—in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.

This class explores how city administrators and legislatures have addressed the critical issues facing urban America today, including fighting urban blight and transforming neighborhoods, public school funding, public financing of sports stadiums, reducing the tax burden, public health issues like smoking bans, legislative redistricting, crime and safety issues, campaign finance reform, economic development issues like tax increment financing, race relations, welfare reform, public transportation, and how to reverse job and population losses. The goal is to place in context the various ways that elected officials approach complex issues, towards a more realistic understanding of how to influence a proposal as it works its way through the process towards implementation.

551. (WSTD551) Lobbying. (M)

In a system of representative government, organizations and individuals with interests at stake often seek the support of a government relations professional. This course addresses government relations from the varying perspectives of the current or aspiring professional, the client, and the government official. It is designed to provide the students with an introduction to government affairs and lobbying at the local, state, and federal levels of government and to illustrate how lobbying and the lobbyists shape and affect public policy. The course is not designed as a how-to in lobbying, but, rather, it is designed to expose students to lobbying and, more importantly, the lobbying process. To that end, students will draw on many disciplines, such as psychology, law, history, political science, urban affairs, economics, foreign policy, domestic policy, and others, to understand the complex mosaic of the lobbying and legislative processes.

561. Media Relations. (C) Frank Igwe.

This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

This course is designed to help you better understand the role and practice of media relations and messaging in corporate, nonprofit, and government organizations in this new media era. You will learn how to research media and reporters, develop messages, build strategic media plans, generate media coverage, serve as spokespeople, handle crisis situations, and use new media strategies. You will hear from public relations professionals on such topics as working with reporters, developing PR campaigns, and creating effective web outreach programs. Class discussions, reading assignments, research and writing projects, group projects, and case studies offer an engaging and interactive learning environment to expand and apply your knowledge of media relations and messaging.

Summer 2016 On-Campus Meetings: 9:30am-1:00pm Fridays and Saturdays May 20-1, June 24-5, and July 22-3.

This course offers an exploration of how legislative action, government policymaking, and citizen advocacy
influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.

642. (CPLN642) Downtown Development. (A) Levy.

The course will provide an overview of the changing role of downtowns and commercial centers, how and why they have evolved, diversified and been redeveloped and who are the various public and private actors that are helping them reposition themselves in a new regional and global context. There will be a strong focus on implementation, on how things get done, on the role of business improvement districts, not-for-profit development corporations and local government in the United States, Canada and a few international cities.

651. Public Financial Management I & II: Budgeting & Accounting. (B) Olanipekun-Lewis, Folasade & Alleva, Jennifer. This course has two units of 7 weeks each. Students must register for both sections of the course.

This course will introduce students to the fundamentals of budgeting and accounting for government and nonprofit managers. The course is divided into two units. The first unit covers budgeting concepts and skills, culminating in a real-world budgeting simulation. The second unit will cover basic accounting principles and financial statement literacy, so that students are able to evaluate the fiscal health of public sector organizations. The unit culminates with a final project requiring students to analyze the City of Philadelphia’s CAFR (Comprehensive Annual Financial Report).

The first unit runs from January 15 through February 26. The second unit runs from February 29 through April 27 with no class the week of March 9 in observance of Spring break.

This course satisfies a core requirement in the Master of Public Administration, Certificate in Public Finance, and Certificate in Economic Development and Growth.

652. Financial Management of Public and Nonprofit Organizations. (B) Cho, Michelle. This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

This course provides students with a foundation in public and nonprofit financial management vocabulary, analytic tools, and analysis placed within the context of decision challenges that confront managers and leaders of public and nonprofit organizations. This is not an accounting course; students will not be creating financial reports. Instead, the goal is to allow students to interpret, understand, and effectively analyze financial information and reports used to make decisions in public and nonprofit organizations.

Ultimately, the course attempts to allow the student to understand how various discrete financial information and financial decisions are integrated within a broader framework that is used to develop and execute a coherent financial strategy.

On-campus meetings for Spring 2016 are from 2:00pm-5:30pm on the following days: January 15, 16; February 12, 13; March 18, 19; and April 15, 16.

710. Negotiations. (C) This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

This course will meet in-person from 9:30am-1:00pm on the following Fridays and Saturdays: September 9-10, October 14-15, November 18-19, December 2-3. This course will meet virtually Tuesdays 8:00-9:00pm.

713. Entrepreneurship and Economic Development. (B) Thornburgh.

This course analyzes and challenges strategies for encouraging economic growth nationally and in states and metropolitan areas, with the goal of helping students become effective practitioners of the art. After reviewing key concepts and context, the course will ask students to evaluate and make choices about economic strategies and investments in a political context.

SM 719. Advanced Budgeting. (A) Nadol and Westerman.

The course will build on the fundamentals taught in the introductory budgeting unit to help build students’ competence in budgetary analysis. Using detailed data from a major city as a course-long case study, and incorporating excel skill-building exercises, students will develop hands-on understanding of budgets by working through such factors as economic drivers of fiscal performance, revenue analysis and forecasting, including tax policy considerations; expenditure analysis and projection, with an emphasis on workforce costs; and capital budgeting and financing. Students will also be introduced to key fiscal policies, budget monitoring and performance measurement, and the development of effective budget communications for various audiences.

720. Critical Issues in Public Finance. (C) This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

This course will consider contemporary issues affecting the fiscal state of local governments. Covered will be issues that have distressed municipalities; the policies/initiatives that seek to rectify such, including: privatization/public private partnerships, reformation of municipal pensions, sustainable education funding alternatives; and tax policies aimed at promoting economic growth. Students will be assigned to a team, which will identify and provide a solution for an issue or issues plaguing a fictional government. Each team will prepare a written report and make a presentation, all of which will constitute the final project. Assignments will serve as the building blocks for the final written product and presentation developed by each team.

The class is divided into four modules. The first module will take a historical look at events behind fiscal distress in municipalities and then explore current day drivers that are causing the same today. Modules two, three, and four will examine some of the tools that have been used successfully, or otherwise, to remediate the drivers of fiscal distress. In each module, case studies will be used to further analyze the particular fiscal challenge of a municipality. Written assignments will be based on case studies.

On-campus meetings for Spring 2016 will be from 2-5:30pm on Friday and
Saturday on these dates: January 15, 16; February 12, 13; March 18, 19; and April 15, 16. The course will meet in DRL 3W2.

This course will focus on the theory and practice of managing public sector investment assets. The course will examine cash management, pension fund management, project and construction fund investment vehicles, longer-term asset management and other aspects of treasury management.

In a system of representative government, organizations and individuals with interests at stake often seek the support of a government relations professional. This course addresses government relations from the varying perspectives of the current or aspiring professional, the client, and the government official. It is designed to provide the students with an introduction to government affairs and lobbying at the local, state and federal levels of government and to illustrate how lobbying and the lobbyists shape and affect public policy. The course is not designed as a how to in lobbying, but rather it is designed to expose students to lobbying and more importantly, the lobbying process. To that end, students will draw on many disciplines such as psychology, law, history, political science, urban affairs, economics, foreign policy, domestic policy and others, to understand the complex mosaic of the lobbying and legislative process.

792. Contracting for Public Services. (B) Nadol and Neiderman.
This course examines how different strategies of ownership affect the performance of programs. This course explores the different forms of privatization, including asset sales, deregulation, and public sector contracting; ownership and managerial behavior; state-owned enterprises and mixed-ownership enterprises; US and overseas experience; and techniques and politics of privatization.
600. English Language Skills. (A) Theodoropulos.
For prospective International Teaching Assistants seeking English fluency certification, this course emphasizes the development of oral academic discourse skills and practices prominent features of spoken English that promote successful communication in academic settings, including intelligibility, active listening skills, grammar.

519. PRINCETON EXCHANGE.
520. PRINCETON EXCHANGE.
522. PRINCETON EXCHANGE.
538. PRINCETON EXCHANGE.
543. PRINCETON EXCHANGE.
548. PRINCETON EXCHANGE.
562. PRINCETON EXCHANGE.
604. PRINCETON EXCHANGE.
698. PRINCETON EXCHANGE.
534. STANFORD EXCHANGE.
560. STANFORD EXCHANGE.
596. STANFORD EXCHANGE.
598. STANFORD EXCHANGE.
901. INTRO TO ADVANCED ENDO.
HEALTH AND SOCIETIES
(AS) {HSOC}

During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they related to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a "Western Civ" course with a difference, open to students at all levels.

L/R 002. (HIST036, STSC002) Medicine in History. (A) History & Tradition Sector. All classes. Barnes.
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamentals of science and research, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole—recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down"or "from the bottom up,"this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.

003. (STSC003) Technology and Society. (B) Society Sector. All classes. Staff.
"We shape our technologies; thereafter they shape us." This course surveys the ways in which technology has shaped our societies and our relations with the natural world. We will examine the origins and impact of technical developments throughout human history and across the globe—from stone tools, agriculture and cave painting to ancient cities, metallurgy and aqueducts; from windmills, cathedrals, steam engines and electricity to atom bombs, the internet and genetic engineering. We will pay attention to the aesthetic, religious and mythical dimensions of technological change and consider the circumstances in which innovations emerge and their effects on social order, on the environment and on the ways humans understand themselves.

"Two fundamental questions structure this course: (1) What kinds of factors shape population health in various parts of the world in the twenty-first century? and (2) What kinds of intellectual tools are necessary in order to study global health? Grasping the deeper "socialness" of health and health care in a variety of cultures and time periods requires a sustained interdisciplinary approach. "Health and Societies: Global Perspectives" blends the methods of history, sociology, anthropology and related disciplines in order to expose the layers of causation and meaning beneath what we often see as straightforward, common-sense responses to biological phenomena. Assignments throughout the semester provide a hands-on introduction to research strategies in these core disciplines. The course culminates with pragmatic, student-led assessments of global health policies designed to identify creative and cost effective solutions to the most persistent health problems in the world today."

SM 025. (HIST025, RELS116, STSC028) Western Science, Magic and Religion 1600 to the present. (C) History & Tradition Sector. All classes. Kuklick.
Throughout human history, the relationships of science and religion, as well as of science and magic, have been complex and often surprising. This course will cover topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.

SM 032. (STSC032) Risky Business. (M)
This freshman seminar on medical decision-making will focus on personal and public medical and health decisions - how we make them and how they can be improved. While in theory medical decisions are in large part both informed and constrained by scientific evidence, in reality they are much more complex. Drawing upon a range of information sources including textbooks, original research and popular media, the seminar will introduce students to the challenges of making personal and public (i.e., policy) decisions under conditions of inherent uncertainty and resources constraints and how research and scholarship can inform and improve decision making processes and decisions. Using a variety of highly engaging approaches (in-class discussions, examination of primary research, popular media, simple experiments, expert panel debates) this highly interactive seminar will provide students a strong introductory foundation to medical decision making specifically and, by extension to decision making under conditions of uncertainty more generally. The seminar will take a multi-disciplinary perspective, drawing upon knowledge developed from psychology, sociology, economics, insurance and risk management, statistical inference, neuroscience, operations research, communications, law, ethics and political science.
SM 039. The Healer’s Tale: Negotiating Trust in Modern America. (M) Tighe.

Dramatic, deadly, and terrifying in their brutal immediacy, outbreaks of epidemic disease have devastated and transformed human societies since the beginnings of recorded history. From the Black Death to cholera to AIDS, epidemics have wrought profound demographic, social, political and cultural change all over the world. Such is the power of their mystery and horror that while thousands die every day in the United States from mundane illnesses such as heart disease or lung cancer, panic grips the land at the thought of a handful of deaths from seemingly exotic affictions such as West Nile encephalitis and "weaponized" anthrax. Through a detailed analysis of specific historical outbreaks, this seminar will investigate the causes and effects of epidemic disease, and will examine the ways in which different societies in different eras have responded in times of crisis.

This freshmen seminar is designed to introduce students to research and debates surrounding the concept of mental disorder and to help them to think critically about these disorders' biological and social construction. In addition to learning about the presentation and treatment of mental illness, they will also be introduced to concepts in epidemiology, psychology, psychiatry and health services research, and learn about the history of the science surrounding psychiatry and how different beliefs at different times have influenced policy, systems, services and treatment.

The CDC estimates that 1 in 150 children have autism. Three decades ago, this number was 1 in 5,000. The communities in which these children are identified in ever increasing numbers are ill prepared to meet their needs. Scientists have struggled to understand the causes of this disorder, its treatment, and why it appears to be rapidly increasing. Families, policy makers, schools and the healthcare system have argued bitterly in the press and in the courts about the best way to care for these children and the best ways to pay for this care. In this class, we will use autism as a case study to understand how psychiatric and developmental disorders of childhood come to be defined over time, their biological and environmental causes identified, and treatments developed. We will also discuss the identification and care of these children in the broader context of the American education and healthcare systems.

SM 059. Medical Missionaries and Partners. (M) Bream.

Global health is an increasingly popular goal for many modern leaders. Yet critics see evidence of a new imperialism in various aid programs. We will examine the evolution over time and place of programs designed to improve the health of underserved populations. Traditionally categorized as public health programs or efforts to achieve a just society, these programs often produce results that are inconsistent with these goals. We will examine the benefits and risks of past programs and conceptualize future partnerships on both a local and global stage. Students should expect to question broadly held beliefs about the common good and service. Ultimately, we will examine the concept of partnership and the notion of community health, in which ownership, control, and goals are shared between outside expert and inside community member.

L/R 100. (SOCL100) Introduction to Sociological Research. (C) Armenta, Harknett, Koppel, Park, Smith, Wilde.

One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them. By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.

L/R 101. (PHIL072, PPE 072) Biomedical Ethics. (M) Society Sector. All classes. Martin.

A survey of moral problems in medicine and biomedical research. Problems discussed include: genetic manipulation, informed consent, infanticide, abortion, euthanasia, and the allocation of medical resources. Moral theory is presented with the aim of enabling students to think critically and analytically about moral issues. The need for setting biomedical issues in broader humanistic perspective is stressed.

SM 107. (SAST197, STSC107) Science, Technology & Medicine in Colonial India. (C) P. Mukarji.

In this course we will explore the broad contours of the histories of Science, Medicine and Technology in Colonial India (c. 1757-1947). This broad overview will be developed each week through a case study based on any one particular scientific discipline, technological project or medical event. Overall the course will attempt to locate the development of science, technology and medicine within the social, political and cultural context of colonial India. It is also worth noting that 'Colonial India', will include discussions of regions which today make up the Republic of India, Pakistan and Bangladesh.

L/R 110. (COML074, ENGL075, HIST117, STSC110) Science and Literature. (B) Arts & Letters Sector. All Classes. Adams.

This course will explore the emergence of modern science fiction as a genre, the ways it has reflected our evolving conceptions of ourselves and the universe, and its role as the mythology of modern technological civilization. We will discuss such characteristic themes as utopias, the exploitation of space and time, biological engineering, superman, robots, aliens, and other worlds--and the differences between European and American treatment of these themes.

111. (SOCH111) Health of Populations. (C) Kohler.

This course develops some of the major measures used to assess the health of populations and uses those measures to consider the major factors that determine levels of health in large aggregates. These factors include disease environment, medical technology, public health initiatives, and personal behaviors. The approach is comparative and historical and includes attention to differences in health levels among major social groups.

L/R 123. (STSC123) Darwin’s Legacy. (B) Living World Sector. All classes. Lindee.

Darwin's conceptions of evolution have become a central organizing principle of modern biology. This lecture course will explore the origins and emergence of his
ideas, the scientific work they provoked, and their subsequent re-emergence into modern evolutionary theory. In order to understand the living world, students will have the opportunity to read and engage with various classic primary sources by Darwin, Mendel, and others. The course will conclude with guest lectures on evolutionary biology today, emphasizing current issues, new methods, and recent discoveries. In short, this is a lecture course on the emergence of modern evolutionary biology—its central ideas, their historical development and their implications for the human future.

In this ABCS and Fox Leadership Program course students will use course readings and their community service to analyze the institutions, ideas, interests, social movements, and leadership that shape "the politics of food" in different arenas. Service sites include: the Agatston Urban Nutrition Initiative; the Greater Philadelphia Coalition Against Hunger; the West Philadelphia Recess Initiative; the Vetri Foundation’s Etiquette Program; and Bon Appetit at Penn. Academic course work will include weekly readings, Canvas blog posts, several papers, and group projects. Service work will include a group presentation (related to your placement) as well as reflective writing during the semester. Typically one half of each class will be devoted to a discussion of the readings and the other either to group work and discussion of service projects, or to a course speaker. This course is affiliated with the Communication within the Curriculum (CWIC) program, and student groups are required to meet twice with speaking advisors prior to giving presentation.

SM 140. History of Bioethics. (C) Linker.
This course is an introduction to the historical development of medical ethics and to the birth of bioethics in the twentieth-century United States. We will examine how and why medical ethical issues arose in American society at this time. Themes will include human experimentation, organ donation, the rise of medical technology and euthanasia. Finally, this course will examine the contention that the current discipline of bioethics is a purely American phenomenon that has been exported to Great Britain, Canada and Continental Europe.

This course focuses on health and healing in the colonial and post-colonial world. We give special attention to local healing under condition of domination, to definitions of the body and the person in biomedicine and in non-European healing traditions, and to the epiphenomenal and cultural place of medicine in regions which have experienced colonial rule.

SM 150. (SOCI152) American Health Policy. (C) Linker.
"American Health Policy" places the success or failure of specific pieces of U.S. health care legislation into social and political context. The course covers the time period from the U.S. Civil War to the 2010 Affordable Care Act (ACA), addressing two central questions: 1) Why was the United States one of the only industrialized nations to, until recently, have a private, non-nationalized, non-federalized health care system? 2) Why has U.S. health insurance historically been a benefit given through places of employment? Some topics addressed include: private health insurance, industrial health and workmen's compensation, the welfare state (in Europe, Canada, and the U.S.), maternal and infant care programs, Medicare and Medicaid. One of the main take-home messages of the course is that 20th-century U.S. health care policies both reflected and shaped American social relations based on race, class, gender, and age.

This course is a combination lecture and "SAIL" class. SAIL stands for "Structured, Active, In-Class Learning." During many class periods, students will work in small groups on a specific exercise, followed by a large group discussion and/or brief lecture. Students who choose to take this course, therefore, must be fully committed to adequately preparing for class and to working collaboratively in class. (Note: the 2015 format will be somewhat different from the 2014 format).

SM 152. (STSC162) Technology and Medicine in Modern America. (L) Staff.
Medicine as it exists in contemporary America is profoundly technological; we regard it as perfectly normal to be examined with instruments, to expose our bodies to many different machines; and to have knowledge produced by those machines mechanically/electronically processed, interpreted and stored. We are billed technologically, prompted to attend appointments technologically, and often buy technologies to protect, diagnose, or improve our health: consider, for example, HEPA-filtering vacuum cleaners; airpurifiers; fat-reducing grills; bathroom scales; blood pressure cuffs; pregnancy testing kits; blood-sugar monitoring tests; and thermometers. Yet even at the beginning to the twentieth century, medical technologies were scarce and infrequently used by physicians and medical consumers alike. Over the course of this semester, we will examine how technology came to medicine's center-stage, and what impact this change has had on medical practice, medical institutions and medical consumers - on all of us!

The history of modern medicine as we know it in the West is remarkably recent; until the nineteenth century prevailing theories of the body and mind, and the many therapeutic methods to combat disease, were largely informed by an elaborate system developed centuries earlier in ancient Greece, at a period when the lines between philosophy, medicine, and what we might consider magic, were much less clearly defined than they are today. This course will examine the ways in which the Greeks conceptualized the body, disease, and healing, and will compare these to medical culture of our own time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and whenever possible we will juxtapose these writings with modern discourse about similar topics. Several visitors from the Medical School are expected to participate on a regular basis. All readings will be in English and no previous background in Classical Studies is required.

179. (ENV179, STSC179) Environmental History. (M) Greene.
Environmental history studies the interactions between humans and the natural world. In this kind of study, mosquitoes and rain are actors in history as well as humans and their impact. This course explores these interactions through case studies and topics nationally and globally, such as energy, disease, human migration and settlement, animals, technological changes, urban and suburban development, conservation and politics. This course is geared toward students who want to think about how history happens, in different places and over time.
202. (STSC202) The Scientific Revolution. (M) VOELKEL, J.
The emergence of science in the sixteenth to eighteenth centuries as an activity that remade ideas of nature and society, that created new professions and institutions, and that ultimately transformed human consciousness. Classical approaches to science, challenges and new departures, the mutation of research inside and outside universities, new patterns in the dissemination of science and in public response.

This course will explore the current context of health policy, health reform, and health service delivery in the developing world. After examining global economic and political context of health care, students will analyze the role that economic development plays in promoting or undermining health. Students will examine key disease challenges such as tuberculosis, malnutrition, and HIV/AIDS.

In this survey we explore the relationships between technical knowledge and war in the nineteenth and twentieth centuries. We attend particularly to the centrality of bodily injury in the history of war. Topics include changing interpretations of the machine gun as inhumane or acceptable, the cult of the battle, and industrialized war and total war; trench warfare and mental breakdown; the atomic bomb and Cold War; chemical warfare in Viet Nam; and "television war" in the 1990s.

216. (GSWS216) Women and Health. (M) Staff.
Women's health is a constant refrain of modern life, prompting impassioned debates that speak to the fundamental nature of our society. Women's bodies are the tableaux across which politicians, physicians, healthcare professional, activists, and women themselves dispute issues as wide-ranging as individual versus collective rights, the legitimacy of scientific and medical knowledge, the role of the government in healthcare, inequalities of care, and the value of experiential knowledge, among many others. Understanding the history of these questions is crucial for informed engagement with contemporary issues.

SM 230. Fundamentals of Epidemiology. (B) Staff.
This course introduces students to the basic tenets of epidemiology and how to quantitatively study health at the population level. Students learn about measures used to describe populations with respect to health outcomes and the inherent limitations in these measures and their underlying sources of data. Analytic methods used to test scientific questions about health outcomes in populations then are covered, again paying particular attention to the strength and weaknesses of the various approaches. Multiple large epidemiologic research and field studies are used as in-class exemplars.

SM 232. Social Epidemiology. (M) Staff.
Illness, crime, and other instances of societal dysfunction do not happen in a vacuum, nor are they distributed randomly throughout society. The field of social epidemiology examines the influence of workplace, neighborhood, social relationships, and other nonbiological factors on health outcomes. This course gives students the skills to explore and assess complex health challenges that are seen in popular media and public discourse by examining such factors as healthcare access, social inequality, racism and discrimination, and trust and social capital. Using readings, videos and interactive discussions with a focus on emergent health issues, this course equips students to diagnose and interpret underlying reasons for poor health using social epidemiological tools, and to consider practical interventions to address those fundamental causes of illness.

Introduction to medical anthropology takes central concepts in anthropology -- culture, adaptation, human variation, belief, political economy, the body -- and applies them to human health and illness. Students explore key elements of healing systems including healing technologies and healer-patient relationships. Modern day applications for medical anthropology are discussed.

249. (ANTH249) Anthropology and Everyday Bioethics. (M) Staff.
For many people, the term "bioethics" denotes abstract philosophical questions about human cloning or the limits of genetic engineering technologies. Yet issues of bioethics and medical ethics arise everyday in the common situations of our lives, affecting our immediate health and well being and eventually that of the society around us. This seminar will examine this everyday bio/medical ethics from an ethnographic point of view. Topics include medical error, birth, death, population control, poverty, race global medical experimentation and corporate responsibility. We will read works by social scientists of medicine that chronicle ordinary people's struggles and the bioethics quandaries that accompany them, and in doing so will distinguish between the everyday moral experiences of people all over the world faced with difficult choices, and the ethical ideals to which they aspire. We will then ask: how can these perspectives be reconciled? When trying to reconcile these perspectives, how can we account for powerful dynamics of race, gender, class religion, and cultural difference that influence everyday medical decision-making? And finally, how can we develop a code of ethics that takes these issues into account and is also fundamentally connected to the moral lives of the particular individuals who are affected? Is this even possible?

Many factors have shaped, and continue to shape, population health and public health policy. This course will explore the concept, mission, and core functions of public health. Students will have a chance to learn about its key methodological (epidemiology, biostatistics) and content (environmental health, social and behavioral sciences, health policy) areas. In addition, we will focus on topics of particular relevance to the current health of...
the public; topics likely will include the basics of life (food, water, and shelter) and topics of current interest (e.g., motor vehicle crashes, mental health, violence).

252. Law and Medicine. (M) Staff.
This course is intended to give students an in-depth understanding of the ways in which medical practice and medical decision-making are guided by modern American law. Students will learn how the law’s regulatory powers have been used to set boundaries in medicine and, in turn, how medical practice and theory have informed modern legal developments. The field of health care law sits at a crossroads where many of life’s “big questions” converge, and consequently is shaped, more than any other legal discipline, by social, ethical, cultural and economic influences. By the end of this course, students should have an understanding both of the current state of American health law, and of the social forces that have shaped its historical development.

275. (SOCI175, SOCI275) Medical Sociology. (C) Society Sector. All classes. Schnittker.
This course is designed to give the student a general introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. While we will not cover everything, we will attempt to cover as much of the field as possible through four central thematic units: (1) the organization of development of the profession of medicine, (2) the delivery of health-care, (3) social cultural factors in defining health, and (4) the social causes of illness. Throughout the course, our discussions will be designed to understand the sociological perspective and encourage the application of such a perspective to a variety of contemporary medical issues.

This seminar examines the links between queer theory and research methods, with an emphasis on how queer theory informs methods in sexuality studies. Over the course of the term, students will become familiar with a variety of methods for conducting qualitative research in the interdisciplinary field of critical sexuality studies.

289. Independent Study.

299. Independent Study.
This course will provide University of Pennsylvania and a local Philadelphia High School students with the opportunity to learn fundamental biology concepts and apply them in a hands-on, inquiry-based approach that is also attentive to society, history and social context. Biological sciences have long been deeply engaged with social issues, and our topics for this course reflect their relevance to everyday life. Topics of this course will include, but are not limited to, cell development and stem cell biology, which form the basis of the emerging field of Regenerative Medicine. Penn students will reinforce their learning of these concepts by mentoring high school students, demonstrations by Penn scientists, and a co-teaching method involving Penn faculty and a partnering high school teacher. A primary goal of this course is to expose both Penn and high school students to cutting edge science and its societal impact. Through this course Penn students will learn critical skills that can help them bring scientific ideas to professionals, and important to any educated professional.

This seminar will explore a wide range of themes at the intersection of globalization and therapeutic cultures in South Asia and amongst South Asian diasporas. To begin with the course understands 'supraterritoriality' as the key feature of globalization and proceeds to interrogate the myriad ways in which this supraterritoriality was produced, consumed, used and abused within the therapeutic cultures that have been, and occasionally are, available in South Asia—both in reality and symbolically. Each week, through a specific case study, framed by a few theoretical readings, we will attempt to deepen and problematize the simple definition of globalization with which we start the course. Throughout the course there will be a strong emphasis on combining case study-based empirical material with theoretical interventions in Cultural Theory and Postcolonial Studies.

The course explores the historical development of traditional weapons of mass destruction such as chemical, nuclear and biological agents, in addition to newer and seemingly non-traditional weapons such as land mines and civilian aircraft that can also be employed to cause large numbers of injuries and deaths among civilian and military populations. Through case studies in technology and public health, students will evaluate the medical, scientific, environmental, and cultural ramifications of these weapons and their effect on human health and society by analyzing the rise of the military-industrial-academic-complex in twentieth century America.

SM 321. (ANTH312, URBS312) Health in Urban Communities. (A) Staff.
This course will introduce students to anthropological approaches to health and to theories of participatory action research. This combined theoretical perspective will then be put into practice using West Philadelphia community schools as a case study. Students will become involved in design and implementation of health-related projects at an urban elementary or middle school. As one of the course requirements, students will be expected to produce a detailed research proposal for future implementation.

This course explores the impact of historical ideas, events and actors pertaining to the history of children's health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children's health care policy and the delivery of care.
332. (GSWS303, NURS303, NURS503) Contemporary Issues in Human Sexuality. (B) Guidera.
Course content emphasizes theories of sexual development and factors influencing sexual behavior within the continuum of health and illness. Common sexual practices of people are studied within the context of lifestyle and situational life crises. Concepts of normal sexual function and dysfunction are examined. Contemporary sexual issues are explored.

SM 334. (GSWS333) Birth Culture and Medical Technology. (M) Mackenzie.
How we are born and give birth can vary more than most people realize. Until the rise of medical technology, women gave birth at home surrounded by other women. Now, the majority of Americans are born in hospitals, and a large percentage of those birth are the result of surgical interventions. This course will explore the medicalization of birth, as well as the movements dedicated to promoting home birth, natural birth, and midwifery. Many of the readings will examine birth from an unapologetically feminist and/or holistic perspective, and we will discuss the psychological, political, cultural and spiritual dimensions of birth practices. We will also consider the impact of increasingly sophisticated medical technology on conception and pregnancy, including in vitro fertilization, surrogate mothers, and extending the childbearing years well into late life. An important theme throughout will be the concept of "appropriate technology" -- which technologies are appropriate and who decides? Readings will be drawn from a number of sources, principally midwifery, nursing, and medical journals.

SM 335. (PSCI335) Healthy Schools. (M) Summers.
This academically based community service research seminar will develop a pilot program to test the efficacy of using service-learning teams of undergraduates and graduate students to facilitate the development of School Health Councils (SHCs) and the Center for Disease Control's School Health Index (SHI) school self-assessment and planning tool in two elementary schools in West Philadelphia. This process is intended to result in a realistic and meaningful school health implementation plan and an ongoing action project to put this plan into practice. Penn students will involve member of the school administration, teachers, staff, parents and community member in the SHC and SHI process with a special focus on encouraging participation from the schools' students. In this model for the use of Penn service-learning teams is successful, it will form the basis of on ongoing partnership with the School District's Office of health, Safety & Physical Education to expand such efforts to more schools.

SM 337. Race and Medicine in the Global South. (C) Mukharji.
Racialized medical provisions under Apartheid in South Africa, theories of racial immunity to malaria in the Philippines and contemporary investigations of caste-based disease risks in India are some of the topics to be covered in this course. From the more straightforward issues of racial discrimination in medicine, to more complex issues of racial immunity or racial susceptibility to disease, medicine and race have been entangled together in multiple ways. More importantly these issues are far from being matters of the past. Genomic medicine and risk society have combined to make race and medicine one of the most potent contemporary issues. Outside the Western World, in the Global South, these issues are further refracted through local cultural, historical and political concerns. This course will take a long-term view of these contemporary issues.

This course examines the technological, scientific, and spatial evolution of the modern hospital from the miasmatic, vermin-infested medieval European hospital-as-alms house, to the late twentieth-century ideal of the modern hospital as a condenser of sophisticated technologies, scientific expertise, and Taylorist efficiencies. In so doing, we will see how designers of hospital space, consciously or not, have striven to realize the mechanized, technologiacavision of the hospital as curing machine a phrase first invoked by 18th century French surgeon and anatomist Jacques Tenon. While the early nineteenth-century hospital had been a locus for fears about contagion, death, and disease in a pre-germ theory world, through its eventual integration of antiseptic practices, spatially produced zones of medical expertise (the operating suite, the laboratory, pediatric and maternity wards),novel technologies (incubators, hyperbaric chambers, x-rays, ultrasounds) and factory-like efficiencies the hospital came into its own as the epitome of rational modernist space.

For Benjamin Franklin Scholars & Nursing Honors Students.
This multidisciplinary course surveys the history of American health care through the multiple perspectives of race, gender, and class, and grounds th discussions in contemporary health issues. It emphasizes the links between the past and present, using not only primary documents but materials from disciplines such as literature, art, sociology, and feminist studies that relate both closely and tangentially to the health professions and health ca issues. Discussions will surround gender, class-based, ethnic, and racial ideas about the construction of disease, health and illness; the development of health care institutions; the interplay between religion and science; the experiences of patients and providers; and the response to disasters and epidemics.

From Yoga clinics to Acupuncture shops, from Sting's advocacy of Tantric Sexual regimens to Dr. Gregory House recommending the Cordyceps sinensis, Asian medicines are an increasingly important and conspicuous facet of the modern world. Yet, nearly all of them claim to be thousands of years old. How have they managed to survive and thrive despite their age? Why have they not disappeared like so much else from bygone Asian intellectual traditions? This course asks these and similar questions. It looks at the multifaceted ways in which Asian medicines have negotiated with modernity.

SM 359. (ANTH359) Nutritional Anthropology. (M) Staff.
Human nutrition and nutritional status within context of anthropology, health, and disease. Particular emphasis on nutritional problems and the development of strategies to describe, analyze, and solve them. Students will participate in the Urban Nutrition Initiative, an academically based community service project in local area schools.

SM 379. (STSC379) Animals in Science Medicine Technology. (C) Greene.
What we call human society is composed of both non-human and human animals.
Rats, mosquitoes, horses, dogs, sparrows, camels and whales have been historical actors, integral to questions about change over time. Using a historical approach, this course will examine animal science and research, veterinary medicine, and animal energy and technology in the context of changing ideas about human-animal relations, animal welfare, animal rights and animal studies. We will explore broad change over time in human-animal relations, and focus specifically on the period since the mid-19th century, looking at specific species and drawing from materials in the arts, literature, history, science and social science.

SM 382. Guns and Love Gone Bad: A Public Health Perspective. (M) Sorenson.

This course will address two health concerns of long-standing controversy: the role of guns in population health and violence in relationships. We will adopt a healthy skepticism about the assumptions and ideologies that currently dominate formal and informal discourse about these topics. A life span perspective - guns from design through use, and abuse from childhood through late life - will be grounded in a public health injury prevention framework. As a function of this approach, we will examine key aspects of the social context in which guns and abuse exist and within which related policies are formulated. Students are encouraged to examine their perceptions about these issues so that they can become more effective members of a society that appears to maintain a deep ambivalence about guns and about violence in relationships.

SM 408. (ENVS408) Urban Environments: The Urban Asthma Epidemic. (B) Pepino. ABCS Course. Visits to community centers required.

This course will examine the epidemiology of asthma, the potential causes of asthma, the public health issues and environmental triggers. Penn students will collaborate with the Children's Hospital's clinical research study - Community Asthma Prevention Program. Students will conduct environmental triggers classes in the community.

Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won't answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between "natural" and "performance-enhanced," work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth

SM 413. (STSC413) Perfect Bodies. (C) Linker.

SM 420. Research Seminar. (B) Staff.

This course is designed to provide HSOC students with the tools necessary to undertake original research, guiding them through the research and writing process. Students will produce either a polished proposal for a senior thesis project, or, if there is room in the course, a completed research paper by the end of term. Students work individually, in small groups and under the close supervision of a faculty member to establish feasible research topics, develop effective research and writing strategies, analyze primary and secondary sources, and provide critiques of classmates' drafts. Students must apply for this course by December 1.

SM 421. Medicine and Development. (C) Feierman.

This course is devoted to readings and research about medicine and development in resource-poor countries. The focus is on medical institutions and practices as seen within the broader context of development. We try to understand changing interpretations of how development takes place - of its relationship to technical knowledge, power and inequality. The course give students the opportunity to do intensive original research.

SM 430. Disease & Society. (C) Aronowitz.

What is disease? In this seminar students will ask and answer this question by analyzing historical documents, scientific reports, and historical scholarship (primarily 19th and 20th century U.S. and European). We will look at disease from multiple perspectives - as a biological process, clinical entity, population phenomenon, historical actor and personal experience. We will pay special attention to how diseases have been recognized, diagnosed, named and classified in different eras, cultures and professional settings.

Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.

SM 441. (ANTH441) Cross Cultural Approaches to Health. (B) Barg.

This course will explore the ways that health and illness-related beliefs and behaviors develop within communities. We will identify the forces that shape these beliefs and behaviors and ultimately affect who gets sick, who gets well, and the very nature of the illness experience. Emphasis will be given to the relationships among sociocultural, political and biological factors and the ways that these factors interact to produce the variation that we see in health and illness related attitudes, behaviors and outcomes across cultures.
442. (STSC442) HOSPITAL AS CURING MACH.
This course examines the technological, scientific, and spatial evolution of the modern hospital from the miasmatic, vermin-infested medieval European hospital-as-alms house, to the late twentieth-century ideal of the modern hospital as a condenser of sophisticated technologies, scientific expertise, and Taylorist efficiencies. In so doing, we will see how designers of hospital space, consciously or not, have striven to realize the mechanized, technological vision of the hospital as curing machine a phrase first invoked by 18th century French surgeon and anatomist Jacques Tenon. While the early nineteenth-century hospital had been a locus for fears about contagion, death, and disease in a pre-germ theory world, through its eventual integration of antiseptic practices, spatially produced zones of medical expertise (the operating suite, the laboratory, pediatric and maternity wards), novel technologies (incubators, hyperbaric chambers, x-rays, ultrasounds) and factory-like efficiencies the hospital came into its own as the epitome of rational modernist space. But, over the course of its evolution, the modern hospital has been transformed. As an incubator for super-bugs, as an engine for projects of death and renewal, and as a site for the cultural transformation of the meaning of birth, death, and health itself.

SM 449. Vertical Global Health Movements. (M)
In the past 30-40 years, “vertical” movements to tackle specific disease problems—or even eliminate particular disease vectors—have become the norm for global health interventions, replacing a short-lived Primary Health Care movement that sought to broadly improve health and welfare conditions from the bottom up in resource-poor countries around the world. Many of these vertical programs were at first implemented with little consideration of specific local circumstances regarding differences in disease burden, transmission pathways, microbial strain, existing local treatment and control approaches, significant historical factors, or type and degree of suffering. Recent campaigns have attempted to revisit the problem of the "local." This course examines some of the most influential of these global vertical disease control campaigns from the 1950s through the present. Our goal will be to elucidate some of the crucial factors that have shaped local experiences of the relevant diseases, and that have influenced the direction and outcome of vertical control efforts at the local and global levels. Students will extensively research a particular campaign and its potential effects in a geographical location and time period of their choice.

Do classrooms' fluorescent lights give you headaches? Have you ever felt invigorated by a mountain's breeze? Have you ever sought to get a "healthy" tan at the beach? Throughout history people have attributed their health—good and bad—to their physical surroundings. In this class we will explore how medical professionals, scientists, and the general population have historically understood the ways in which the environment impacts different people, in different places, in different ways. We will interrogate medical theories that underpinned popular practices, like health tourism, public health campaigns, and colonial medical programs. We will also consider how people constructed and understood the physical environment, including farms and factories, cemeteries and cities, to be healthy or not. This course is designed to foster a collaborative atmosphere in which students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project.

SM 461. (STSC461) THE CHILD IN THE CITY. (M)
Summer camps, spring break, and trips to the beach, mountains, and national parks: vacations are an integral part of American culture. Often we talk and think about traveling for its ability to rejuvenate our tired bodies and spirits. Although tourism only developed over the past 100 years, the tradition of traveling for health has a much deeper history. This course will examine how different people in different times have understood the connections between travel and health, and how technologies have and continue to mediate those experiences. Over the course of the semester students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project. By the end of the semester, students will have honed their skills in primary and secondary source research, the construction of an academic argument and paper, and will continue to develop skills in critical analysis through weekly reading assignments.

SM 471. (PUBH534, STSC471) Guns and Health. (C) Sorenson.
The purpose of this course is for students to gain an understanding of the role of guns in health, and population and prevention approaches to violence. The course will include a focus on policies and regulations related to firearms, the primary mechanism by which violence-related fatalities occur in the U.S. We will address the life span of a gun, from design and manufacture through to use. In addition, we will address key aspects of the social context in which firearms exist and within which firearm policy is made.

499. Capstone Independent Study. (C)
HEALTH CARE MANAGEMENT (WH) {HCMG}

101. Health Care Systems. (C) Harrington/Polsky.
This introductory course takes a policy and politics angle to health care's three persistent issues - access, cost and quality. The roles of patients, physicians, hospitals, insurers, and pharmaceutical companies will be established. The interaction between the government and these different groups will also be covered. Current national health care policy initiatives and the interests of class members will steer the specific topics covered in the course. The course aims to provide skills for critical and analytical thought about the U.S. health care system and the people in it.

202. (ECON039) The Economics and Financing of Health Care Delivery. (C) David. Prerequisite(s): Economics 1 or consent of instructor. Students who take HCMG 202 may not also take HCMG 352 for further credit. The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed.

203. Clinical Issues in Health Care Management: Doctors, Patients and Managers in Modern Society. (B) Asch.
This course will explore the effects of the changing health care environment on the physician, patient and health care manager. It is intended for any undergraduate with an interest in how 1/6th of the American economy is organized as well as those planning careers as health care providers and managers. The course complements other health care courses (that take a societal perspective) by focusing on the individuals who participate in the health care enterprise. There are no prerequisites, as the course will stand on its own content. The course will be divided into modules that focus on the participants of the health care process and the process itself. We will analyze the patient, the doctor, and manager in light of the patient-doctor interaction, the turbulent health care marketplace, expensive new technologies, resource allocation, and ethics.

204. (HCMG859) Comparative Health Care Systems. (A) Danzon.
This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive: How do these different systems deal with tough choices, such as decisions about new technologies? Our main focus is on the systems in four large, prototypical OECD countries—Germany, Canada, Japan, and the United Kingdom—and then look at other countries with interesting systems— including Italy, Chile, Singapore, Brazil, China and India. We draw lessons for the U.S. from foreign experience and vice versa.

211. (HCMG854, LGST211, LGST811) Legal Aspects of Health Care. (A) Rosoff/Field.
This course offers a current and historical overview of the regulation of health care delivery and financing in the US. It examines principles and practical applications of the laws that affect the operational decisions of health care providers, payors, and managers and that impact development of markets for health care products and services. Also considered are the social and ethical issues encountered in trying to balance the interests, needs and rights of individual citizens against those of society. For part of the term, the class will divide into two groups so that students can focus on their choice of (1) health care management (antitrust law, and regulation of the drug and medical device industry) or (2) selected issues of patients' rights (e.g. abortion, treatment of terminal patients, etc.)

212. Health Care Quality and Outcomes: Measurement and Management. (B) Silber. Prerequisite(s): Introductory Statistics or permission of instructor.
This course will familiarize students with methods used to assess the quality of hospital or provider health care using outcomes data, and to understand and evaluate studies involving health care outcomes. Students are exposed to the mechanics of hospital quality evaluation and challenged to evaluate the medical and health services research literature on health care evaluation, as well as to make inferences regarding hospital quality and the comparison or rankings of hospitals or providers. Topics will include the history of health care outcomes analysis; the conceptual framework for outcome studies; consumer demand for information; an overview of medical data and data collection systems; a description of outcome statistics and severity adjustments currently in use; the study of excess variation in outcomes; and the use of guidelines to assess outcomes. By the end of the course, students will have developed a thorough appreciation of the current methods used by policy makers, researchers, and health care providers to evaluate medical outcomes, as well as those used by consumers to choose hospitals and providers.

This course presents an overview of the business of health and how a variety of health care organizations have gained, sustained, and lost competitive advantage amidst intense competition, widespread regulation, high interdependence, and massive technological, economic, social and political changes. Specifically, we evaluate the challenges facing health care organizations using competitive analysis, identify their past responses, and explore the current strategies they are using to manage these challenges (and emerging ones) more effectively. Students will develop generalized skills in competitive analysis and the ability to apply those skills in the specialized analysis of opportunities in producer (e.g. biopharmaceutical, medical product, information technology), purchaser (e.g. insurance), and provider (e.g. hospitals, nursing homes, physician) organizations and industry sectors. The course is organized around a number of readings, cases, presentations, and a required project.

215. Management and Economics of Pharmaceutical, Biotech, and Medical Device Industries. (B) Danzon. Prerequisite(s): One undergraduate Health Care Management course or Economics course.
This course provides an overview of the management, economic and policy issues
HEALTH CARE MANAGEMENT

facing the pharmaceutical, biotechnology, and medical device industries. The course perspective is global, but with emphasis on the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure and rapid technological change; biotechnology and genomics startups and alliances with the pharma industry; a complex global marketplace in which prices are regulated in most countries and customers include governments and insurers, as well as physicians, pharmacists and consumers; intense and evolving M&A, including mergers, joint ventures, and complex alliances; government regulation of every business function, including R&D, pricing and promotion; and global products and multinational firms. We use Wharton and industry experts from various disciplines to address these issues.

216. Health Insurance and Health Care Strategy. (B) STARC.
This course combines the insights of health economics with a strategic perspective on the business of health. The first section will consider the costs and benefits of medical interventions, while the second considers insurance theory and places special emphasis on the challenges facing firms in the face of the rising costs of health benefits as well as opportunities for private insurers operating in publicly financed markets. The third section will analyze strategies of vertical and horizontal integration and their effect on the balance of power in local healthcare markets. Finally, the course will cover the effects of reform on firm incentives. The course will be taught using a mix of lectures and cases.

This course will provide students a broad overview of the current U.S. healthcare system. The course will focus on the challenges facing the health care system, an in-depth understanding of the Affordable Care Act (ACA) and of its potential impact upon health care access, delivery, cost, and quality as well as its effect on firms within the health care sector. The course will examine potential reforms, including those offered by liberals and conservatives and information that can be extracted from health care systems in other developed countries.

The course will also explore key facets of the ACA, including improving access to care and health insurance exchanges, improving quality and constraining costs through health care delivery system reforms, realigning capacity through changes in the health care workforce and in medical education, the potential impact on biomedical and other innovations, and the impact on economic outcomes such as employment, wage growth, and federal budget deficits. The course will also examine the political context and process of passing major legislation in general and health care legislation in particular, including constitutional arguments surrounding the Affordable Care Act. Throughout the course, the key lessons will integrate the disciplines of health economics, health and social policy, law and political science to elucidate key principles.

The purpose of this course is to apply economics to an analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, the economics of direct-to-consumer advertising and its effect on drug safety, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, and shifting of services between inpatient and outpatient settings and its effect on health care costs and quality.

Delivering basic health care advances worldwide and continuing to increase lifespan and quality (in an affordable manner) represent some of the major societal challenges of our time. Addressing these challenges will require innovation in both medical technology and the ways in which health services are delivered. Through readings, cases, guest lectures, and your own entrepreneurial work outside of class, we will examine the environment facing prospective health care entrepreneurs: (1) sources of health care innovation; (2) the many "customers" in health care: patients, doctors, hospitals, insurers, and regulators; (3) the powerful established firms with developed clinical and sales expertise; (4) the investing community. Along the way we will develop a framework for thinking about what is different (and what is not) about the challenges of health care entrepreneurship.

841. Health Services System. (A) Burns. Lectures and cases. Weekly reading assignments.
This course provides an overview of the evolution, structure and current issues in the health care system. It examines the unique features of health care as a product, and the changing relationships between patients, physicians, hospitals, insurers, employers, communities, and government. The course examines three broad segments of the health care industry: payors, providers and suppliers. Within the payor segment, the course examines the sources and destinations of spending, managed care (HMOs, PPOs), employer based health insurance, technology assessment, payor strategy, and efforts to pay for the elderly, the poor & the medically indigent. Within the provider segment, the course examines the impact of cost containment and competition on hospitals and integrated delivery systems, long term care and disease management, and the important role of epidemiology in assessing population health needs and risks. Within the supplier segment, the course will examine developments in the biotechnology, pharmaceutical, medical devices, genomics and IT industries. NOTE: This is a required course for Wharton Graduate Health Care Management majors; it counts as an elective course for all other Wharton Graduate students. It is also open to Law School and Nursing School students with a joint Wharton Program.

845. Managed Care and the Industrial Organization of Health Care. (B) Starc/Fluegel. Lectures, cases, exam, and orally presented term project.
This course, co-taught with Brad Fluegel (former Executive VP of Wellpoint, Inc and current Chief Strategy Officer at Walgreens) will focus on two interrelated topics: managed care and market structure. The section on managed care will cover strategic planning and marketing of managed care services, operational issues in developing a managed care network, actuarial issues, and the management of physician behavior. The section on health care market structure will analyze strategies of vertical integration and horizontal integration (M&A), and their attempt to alter the balance of power in local healthcare markets. The section will also analyze the operational issues in managing cost and quality in an integrated system, integration along the supply chain, and the
performance of these systems, and the bargaining and negotiation between hospitals, physicians, and health plans.

849. Financial Management of Health Institutions. (A) Harrington. Prerequisite(s): Finance 611 or equivalent coursework or experience. Lecture and cases. Students work in teams to complete 4-5 case write-ups and an oral case presentation. There is also a written exam.

This course focuses on health care organizations' financial decisions in the changing health care landscape. Upon completion of the course, students will be able to utilize a range of financial tools and techniques for making value-added financial decisions in a variety of important contexts in the health care sector. The course involves case analyses and lectures, including presentations by practitioners with extensive real world experience. The course is organized around cases dealing with publicly-traded health care company valuation, valuation and return on investment of biopharmaceutical and medical technology development projects, valuation and deal structure for startup and early stage health care organizations, health plan pricing and finance, and health care provider risk-sharing arrangements. Each case is accompanied by background on tools, methods, institutions, and markets. Students seeking careers in health care finance and financial decision making. Students with more background will extend and enhance their analytical skills in a variety of important areas.

The purpose of this course is to apply economics to the analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, shifting of services between inpatient and outpatient settings and its effect on health care costs and quality, and innovation in primary care from retail clinics to patient-centered medical homes and retainer-based medicine.

Successful medical devices are an amalgamation of creative and innovative thinking, clinical expertise, and engineering know-how that endures intense regulatory and reimbursement scrutiny. This course will provide a foundation for understanding the nuances of the medical device industry. It will cover topics ranging from device design and discovery, regulatory issues, marketing, reimbursement, management, and strategy. Classroom activities will be supplemented with optional tours of hospitals, research and manufacturing facilities, and hands-on demonstrations of devices. Though the course is intended primarily for MBA students, it will be open to medical and engineering students as well as to hospital house staff.

854. (HCMG211, LGST211, LGST811) Legal Aspects of Health Care. (A) Rosoff/Field. Lecture and group discussion. The setting is informal and members of the class are expected to participate actively; participation counts 10% of the grade. The course includes periodic quizzes (20%), the student's choice of a midterm exam or legal research paper (either counting 30%), and a final exam (40%). The course serves a mix of graduate and undergraduate students, including: Healthcare Management majors (MBA & UG), pre-med undergrads, Health & Society majors, pre-med students, nursing and social work students, and bioethics and law students. Background knowledge of health care systems is helpful for full appreciation of the issues covered but is not required. No prior study or background in law is required. Grading is carefully handled to assure that no category of students is at a relative disadvantage. This course offers a current and historical overview of the legal oversight and regulation of health care delivery in the U.S. It examines principles and practical applications of the laws that affect the operational decisions of health care providers, payors, and managers and that impact development of markets for health care products and services. Also considered are the social, moral, and ethical issues encountered in trying to balance the interests, needs and rights of individuals against those of the larger society. For part of the term, the class will divide into two groups so that students can focus on their choice of (a) health care management or (b) selected issues of patients' rights. Cross-listed with LGST 811.

This mini course is designed to provide students with an appreciation of the good, the bad and the ugly of how our current health care system cares for one of our nation's most precious resources - our seniors! This course will review care provided to seniors within a variety of institutional settings (hospitals, nursing facilities, various senior housing levels) as well as outpatient and home care services. Special attention will be paid to nursing homes and senior housing options and their past, present and future role within the overall health care system in the United States. The course will start with an overview of the senior population with special attention to their health and social needs. Several classes will be held off campus at selected nursing facilities and senior housing complexes. In addition, a broad range of special programs and services will be reviewed such as sub-acute care, long term care insurance, Medicare Risk Programs, elderly housing, adult day care, managed care, Medicare Part D, case management, hospice and other recent developments. Throughout the course, emphasis will be placed on entrepreneurial opportunities to serve the senior market at all levels.

Students are required to produce a paper for this course that focuses on a specific area impacting the senior market. This is a wonderful opportunity for students to select an area of personal interest and conduct an in depth review of that area including making direct contact with national experts within the topic selected. All student topics must be approved during the first two weeks of class and the depth of research required agreed upon by the by the student and the instructor. Interested students not in the HCMG major are urged to speak to the instructor before enrolling in the course.

858. Health Care Marketing. (A) Grennan/Mahadaven. This course explores these challenges in detail, always concentrating on what is different - and what is not - about marketing in health care relative to other industries. This broad coverage lays the foundation for the course project where students develop a plan and forecast for marketing a new health care product. Lectures and case discussions will provide a mix of strategic and toolkit content, and guest lectures from a variety of industry executives will provide additional real-life, real-time perspectives.

This course is aimed at students interested in better understanding an increasingly complex market environment for
Healthcare product development and commercialization. Across the entirety of the class we will explore the facts and clarify the implications of five ongoing thematic changes - the 5 D's - that are fundamentally transforming commercial decision making in health care markets from insurance and care delivery to pharmaceuticals, biotechnology, and devices: (1) Dispersion (of choice): Healthcare product/service choice has dispersed from a physician-centric world to include patients, payors, governments, advocacy groups, purchasing organizations, pharmacies, and hospitals. (2) Data (explosion of): How organizations understand and leverage the immense availability of data and shepherd its conversion into insights will be key driver of future competitive differentiation. (3) Disruption (technological avalanche): The multiplicity of channels within which is gathered, shared and exploited has caused much confusion in an industry that often feels hampered by regulatory oversight. How can a commercialization/marketing executive maintain control over information and brand identity in such an age? (4) Division (of responsibilities): Companies are most often organized in multiple customer-facing and/or functional silos (e.g., Customer Marketing, Professional Promotion, Managed Markets, Early Development, Data Management). In a world where these organizational functions have converged how is commercialization and marketing best managed? (5) Dollars (economic implications): Each stakeholder within this newly dispersed set has different concerns and interacts in different ways, at different points of the value chain, with different incentives! Understanding the collective impact of the interplays across these differences is a competence that any Healthcare marketer needs to develop in order to craft and deliver market-perceived value.

859. (HCMG204) Comparative Health Care Systems. (A) Danzon.
Prerequisite(s): Format: HCMG or ECON course.
This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive: How do these different systems deal with the tough choices, such as decisions about new technologies? Our focus first on the systems in four large, prototypical OECD countries- Germany, Canada, Japan, and the United Kingdom - and then look at other developed and emerging countries with interesting systems - including Italy, Chile, Singapore, Brazil, China and India. We will draw lessons for the U.S. from foreign experience and vice versa.

863. Management and Economics of Pharmaceutical, Biotech and Medical Device Industries. (B) Danzon.
This course provides an overview of the management, economic and policy issues facing the pharmaceutical, biotechnology and medical device industries. The course perspective is global, but with emphasis on the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure with regulation and rapid technological change; strategic challenges of biotechnology startups; a complex global marketplace in which prices are regulated in most countries and customers include governments and insurers, as well as physicians, and consumers; intense and evolving M&A, joint ventures, and complex alliances; thriving generics industry in the US and globally. We use Wharton and industry experts from various disciplines to address these issues.

866. E-Health: Business Models and Impact. (B) Glaser/Patel.
This course will introduce students to the main components of Health Information Technology (HIT) and how HIT currently effects, and in the future, may change health care operating models. Although it will not prepare students for primary technology management positions, it will help them understand the role of information technology in the success of the delivery system and other important healthcare processes. It will provide a foundation that will prepare them as managers, investors and consultants to rely upon or manage information technology to accomplish delivery system objectives. The course will give special attention to key health care processes, and topics such as the drive for provider quality and cost improvements, the potential ability to leverage clinical data for care improvement and product development, the growth of new information technologies for consumer directed healthcare and telemedicine, the strategies and economics of individual HIT companies and the role of government.

The course relies heavily on industry leaders to share their ideas and experiences with students.

867. Health Care Entrepreneurship. (B) Kurtzman & Libson.
The course focuses on the creation, funding, and management of biotechnology and health services enterprises. The course is designed to supplement other offerings in the Health Care Systems and Management Departments for those students with entrepreneurial interest in such ventures, and will focus on special issues surrounding the conceptualization, planning, diligence and capitalization, launch, compensation and management of these ventures. In addition, course offers methods for self-assessment & development of business models and plans, techniques for technology assessment and strategy, develops foundation for capitalization and partnering strategies, and creates a basis for best practices in company launch and plan execution. Students must apply to take this course. Please see the Health Care Management Department for the application.

868. Private Sector Role in Global Health. (B) Sannum.
Issues surrounding global health have captivated the attention of the public sector and foundations for many decades. Many of their initiatives are realizing progress on the health-related Millennium Development Goals. The private sector has been less engaged in global health, but has a significant role to play in providing resources and in building infrastructure, human resource capacity and sustainability. This course explores entrepreneurial and other private sector solutions for health services and access to medicines and technologies in the developing world and other underserved areas. The course also encompasses study of creative programs to engage the private sector in development of vaccines and medicines for tropical and neglected diseases. Furthermore, the course addresses novel care systems and therapeutic strategies for the rapidly growing burden of chronic, non-communicable diseases in the developing world. In short, the course builds on the content of conventional global health courses from a managerial and entrepreneurial perspective. Learning is driven through readings, class discussion and a series of guest speakers representing a wide range of global health issues. Evaluation is largely based on a student group project.
HEALTH CARE MANAGEMENT

HCMG 890-001: This course examines issues related to the Services Sector of the health care industry. For those interested in management, investing, or banking, the health care industry, the services sector will likely be the largest and most dynamic sector within all of health care. We will study key management issues related to a number of different health care services businesses with a focus on common challenges related to reimbursement, regulatory, margin, growth, and competitive issues. We will look at a number of different businesses and subsectors that may have been unfamiliar to students prior to taking the course. We will make extensive use of outside speakers, many of whom will be true industry leaders within different sectors of the health care services industry. Speakers will address the current management issues they face in running their businesses as well as discuss the career decisions and leadership styles that enable them to reach the top of their profession. Students will be asked to develop a plan to both buyout and manage a specific health care services business of their choosing and will present their final plans to a panel of leading Health Care Private Equity investors who will evaluate their analysis. Prerequisites: HCMG 841

Senior healthcare executives and policy leaders will be engaged as guest speakers.

SM 901. Seminar in Health Care Cost Benefit and Cost Effectiveness Analysis. (A) Polsky/Glick.
The purpose of this doctoral level course is to investigate the theory and practice of cost-benefit and cost-effectiveness analysis as applied to health care. The three techniques to be examined are cost-effectiveness analysis with single dimensional outcomes, cost effectiveness analysis with multiple attributes (especially in the form of Quality Adjusted Life Years), and economic cost-benefit analysis. Valuation of mortality and morbidity relative to other goods will be emphasized. Students will be expected to develop written critiques of articles in the literature, and to design a new application of one of the techniques as a term project.

955. MGMT HLTH CRE FOR ELDRLY. (A)

Ph.D. Seminars

900. Proseminar in Health Services Research. (C) Harrington.
This seminar will explore empirical methods in health care research with an emphasis on applications in health care economics and finance. The methods covered include estimation with panel data, program evaluation models, qualitative and limited dependent variable models, stochastic frontier models, estimation with count data, and duration models. The readings consist of a blend of classic and recent empirical studies, including articles on the demand for health care and health insurance, tests for moral hazard and adverse selection, and estimation of provider cost functions. Students are required to conduct an econometric analysis of some issue within the health care field. With the permission of the instructor, the seminar is open to doctoral students from departments other than Health Care Systems.

903. Economics of Health Care and Policy. (B) Town.
This course applies basic economic concepts to analyze the health care market and evaluate health policies. The course begins with an analysis of the demand for health, the derived demand for medical care and the demand for health insurance. The second part of the course examines the supply of medical care by physicians and hospitals, medical technology, and the role of managed care organizations. The implication of adverse selection, moral hazard, externalities, and asymmetric information will be explored. The third part of the course examines the rationale for government intervention in medical markets as well as the effectiveness and efficiency of various health policies, including: Medicare, Medicaid, price regulation of hospitals, physician payment reform, medical malpractice, uncompensated care, and physician manpower planning.
521. American Architecture. (A)
Wunsch.
This course is a survey of architecture in the United States. The organization, while broadly chronological, emphasizes themes around which important scholarship has gathered. The central purpose is to acquaint you with major cultural, economic, technological, and environmental forces that have shaped buildings and settlements in North America for the last 400 years. To that end, we will study a mix of "high-style" and "vernacular" architectures while encouraging you to think critically about these categories. Throughout the semester, you will be asked to grapple with both the content of assigned readings (the subject) and the manner in which authors present their arguments (the method). Louis Sullivan, for instance, gives us the tall office building "artistically considered" while Carol Willis presents it as a financial and legal artifact. What do you make of the difference? Finally, you will learn how to describe buildings. While mastery of architectural vocabulary is a necessary part of that endeavor, it is only a starting point. Rich or "thick" description is more than accurate prose. It is integral to understanding the built environment - indeed, to seeing it at all.

SM 528. (HIST528) American Vernacular Architecture. (M) St. George.
This course explores the form and development of America's built landscapes, its houses, farm buildings, churches, factories, and fields--as a source of information on folk history, vernacular culture, and architectural practice.

530. American Domestic Interiors Before 1850. (C) Winkler.
The American domestic interior from the early British and French settlements in North America until 1850. Emphasis will be on the social, economic, and technological forces as well as the European influences that determined household decoration ranging from the decorative arts to floor, wall, and window treatments.

531. American Domestic Interiors. (B) Stutman.
This course will examine the American domestic interior from the seventeenth century through the twentieth century with emphasis on the cultural, economic, and technological forces that determined the decoration and furnishing of the American home. Topics to be covered include the decorative arts; floor, wall and window treatments; and developments in lighting, heating, plumbing, food preparation and service, and communication technologies. In addition to the identification of period forms and materials, the course will give special emphasis to historical finishes. The final project will involve re-creation of an historic interior based on in-depth household inventory analysis and study. Several class periods will be devoted to off-site field trips.

The course introduces the history and understanding of common American landscapes and surveys the field of cultural landscape studies. Methods of Methods of landscape preservation are also surveyed. The cultural-landscape perspective is a unique lens for understanding the evolution of the built environment, the experience of landscapes, and the abstract economic, political and social processes that shape the places where most Americans spend most of their time. The course will focus on the forces and patterns (natural and cultural) behind the shaping of recognizably "American" landscapes, whether urban, suburban, or rural. Methods for documenting and preserving cultural landscapes will be surveyed. Class discussions, readings, and projects will draw on several disciplines--cultural geography, vernacular architecture, environmental history, historic preservation, ecology, art, and more.

Much architectural writing--from Vitruvius to Le Corbusier--has drawn analogous comparisons between buildings and the human body. Like the skeleton, skin, and internal metabolic systems of the human corpus, buildings are comprised of a structure, infrastructure, and outer surface which are all connected and through which liquids, gases and solids pass. Traditionally, form depended in large part on systems of construction and the selection and manipulation of individual materials. Understanding architecture's materiality in terms of form and fabric, structure and skin, and mechanical systems is essential in understanding not only what a building is, but how it evolves over time. American Building Technology will be divided into two discreet six week modules conceived in succession and taught during the second half of the first semester and first half of the second semester respectively. Module 1: Building Anatomy will examine traditional construction methods through a typological analysis of construction systems. Module 2: Building Archaeology will address the morphological evolution of a structure and its physical setting, sometimes known as "above ground archaeology." Since the physical fabric and its evidences of cultural alteration present one primary mode of inquiry, archaeological theory and method provide an excellent means to recover, read, and interpret material evidence, especially in association with documentary and archival sources. The course is intended to introduce students in Historic Preservation to the physical realities of form and its analysis through careful observation and description. Note: This course continues in the first half of the spring semester for another 0.5 CU.

541. American Building Technology II: Building Archaeology. (B) Matero.
Built works- be they barns or bridges, gardens or corn fields, palaces or pit houses - all embody something of their makers and users, and the prevailing social and cultural norms of the day. As a form of material culture, things- buildings and landscapes- are made and modified consciously and unconsciously, reflecting individual and societal forces at play. Since the physical fabric and its alteration present one primary mode of evidence, their investigation provides a critical form of research, especially in association (and often in contest) with archival documentary sources and oral histories. This course will examine the theories and techniques used to investigate the morphological evolution of built works, sometimes known as "above ground archaeology". Students will learn and apply methods relevant to the reading of architectural fabric. Methods of investigation will include absolute and relative dating techniques such as dendrochronology, finishes stratigraphy, mortar analysis, and various typological -seriation studies including framing, molding, fastener (nails and screws), and hardware analyses. Students are expected to use this knowledge in combination with the recording skills of HSPV 601 to record their assigned sites.

SM 551. Building Pathology. (B)
Henry. Prerequisite(s): HSPV 555 or one technical course in architecture.
This course addresses the subject of deterioration of buildings, their materials, assemblies and systems, with the emphasis
on the technical aspects of the mechanisms of deterioration and their enabling factors, material durability and longevity of assemblies. Details of construction and assemblies are analyzed relative to functional and performance characteristics. Lectures cover: concepts in durability; climate; psychrometric, soils & hydrologic; conditions; physics of moisture in buildings; enclosure, wall and roof systems; structural systems; and building services systems with attention to performance, deterioration, and approaches to evaluation of remedial interventions.

552. Building Diagnostics and Monitoring. (A) Henry.
Building diagnostics pertain to the determination of the nature of a building's condition or performance and the identification of the corresponding causative pathologies by a careful observation and investigation of its history, context and use, resulting in a formal opinion by the professional. Monitoring, a building diagnostic tool, is the consistent observation and recording of a selected condition or attribute, by qualitative and/or quantitative measures over a period of time in order to generate useful information or data for analysis and presentation. Building diagnostics and monitoring allow the building professional to identify the causes and enabling factors of past or potential pathologies in a building and building systems, thus informing the development appropriate interventions or corrective measures. In the case of heritage buildings, the process informs the selection of interventions that satisfy the stewardship goals for the cultural resource. In the case of recently constructed buildings, the process informs the identification of envelope and systems interventions for improved performance and energy efficiency.

SM 555. Conservation Science. (B) Matero. $30 Lab Fee.
This course provides an introduction to architectural conservation and the technical study of traditional building materials. Lectures and accompanying laboratory sessions introduce the nature and composition of these materials, their properties, and mechanisms of deterioration, and the general laboratory skills necessary for field and laboratory characterization. Knowledge of basic college level chemistry is required.

556. Documentation and Conservation of the Historic Landscape. (M) Staff.
"Landscape conservation" is a growing concern in contemporary preservation circles. It is a multi-faceted issue, drawing on the fields of landscape architecture, horticulture, architectural history, regional planning, and archaeology. This course aims to provide a comprehensive overview, a look at the state-of-the-art, including philosophical issues, attempts at international and national guidelines, evaluative/survey systems, technical investigation techniques, and selected case studies. Students will be asked to analyze and develop a preliminary conservation plan for a selected site in the Philadelphia area.

572. Preservation Through Public Policy. (B) Hollenberg.
This course explores the intersection between historic preservation, design and public policy, as it exists and as it is evolving. That exploration is based on the recognition that a network of law and policy at the federal, state and local level has profound impact on the ability to manage cultural resources, and that the pieces of that network, while interconnected, are not necessarily mutually supportive. The fundamental assumption of the course is that the preservation professional must understand the capabilities, deficiencies, and ongoing evolution of this network in order to be effective. The course will look at a range of relevant and exemplary laws and policies existing at all levels of government, examining them through case studies and in-depth analyses of pertinent programs and agencies at the local, state and federal level.

600. Documentation, Research, Recording 1. (A) Wunsch.
The goal of this class is to help students develop their understanding and utilization of materials that contextualize the history of buildings and sites. In order to gain first-hand exposure to the actual materials of building histories, we will visit a half-dozen key archival repositories. Students will work directly with historical evidence - both textual and graphic - and exercise their facility through projects. We will explore various forms of documentation, discussing each in terms of its nature, the motives for its creation, and some ways it might find effective use. Philadelphia is more our laboratory than a primary focus in terms of content, as the city is rich in institutions that hold over three centuries of such materials; students will find here both an exposure to primary documents of most of the types they might find elsewhere, as well as a sense of the culture of such institutions and of the kinds of research strategies that can be most effective.

601. Documentation, Research, Recording II. (B) Matero/Mason/Faculty.
Documentation, Research, Recording II. This course provides an introduction to the survey and recording of historic buildings and sites. Techniques of recording include traditional as well as digitally-based methods including field survey, measured drawings, photography and rectified photography. Emphasis is placed on the use of appropriate recording tools in the context of a thorough understanding of the historical significance, form and function of sites. Required for first-year MSHP students; others by permission.

606. Historic Site Management. (B) Faculty.
The course focuses on management, planning, and decision-making for all types of heritage sites from individual buildings to historic sites to whole landscapes. Course material will draw on model approaches to management, as well as a series of domestic and international case studies, with the goal of understanding the practicalities of site management. Particular topics to be examined in greater detail might include conservation policy, interpretation, tourism, or economic development strategies.

Architectures of Commerce: Buildings and Landscapes of American Retail from the Colonial Era to the Present. Merchants and the "world of goods" have left an indelible mark on America's neighborhoods, cities, and regions. We will examine the structures and spaces in which commercial activities occurred - an excursion running the gamut from counting houses to warehouses, from pushcarts to mini-malls. Studying these buildings as distinctive types, we will also analyze the roles they have played in the American cultural landscape. Doing so requires forays into urban, economic, and cultural history. Close reading and student-led discussion form the course's backbone.

SM 621. Urban Conservation Seminar. (B) Mason.
Urban Conservation Seminar: Heritage and Urbanism in China. This seminar covers basic concepts, tools, history, theory and case studies in urban conservation - a specialist area of preservation bringing to
bear aspects of urban history, planning, design, development, policy and governance. The course will compare and contrast the experiences of European cities, where urban conservation has developed over centuries, and Asian cities that have been experiencing explosive growth and are informed by quite different theories of urbanism and heritage. A series of lectures, intensive readings, case studies, small writing projects and guest presentations will build familiarity with the breadth of practices nationally and internationally. The second half of the semester will include intensive project (over spring break and the second half of the term) studying urban conservation issues, histories and opportunities in one or two cities (yet to be determined).

L/L 624. Digital Media for Historic Preservation. (A) Hinchman.
A required praxis course designed to introduce students to the techniques and application of digital media for visual and textual communication. Techniques will be discussed for preservation use including survey, documentation, relational databases, and digital imaging and modeling.

625. Preservation Economics. (B) Rypkema.
The primary objective is to prepare the student, as a practicing preservationist, to understand the language of the development community, to make the case through feasibility analysis why a preservation project should be undertaken, and to be able to quantify the need for public/non-profit intervention in the development process. A second objective is to acquaint the student with the measurements of the economic impact of historic preservation and to critically evaluate "economic hardship" claims made to regulatory bodies by private owners.

SM 637. Landscape Preservation Seminar. (M) Staff.
The seminar on the Common American Landscape concentrates on a selected topic which illuminates a typical land/or significant aspect of the American landscape in a particular time and place.

SM 638. Topics in Historic Preservation. (B) HSPV Faculty.
Spring 2016: This seminar will examine the role of sound in shaping modern urban spaces and life. While music plays a large part in the sounds of the city, we will focus on soundscapes more broadly. From the late 19th century through the present, and in geographies spanning from Paris to Philadelphia, we will explore the making, meaning, and experience of sound for varied populations; the politics of sound as an instrument of power; and the policies of noise regulation. As an interdisciplinary seminar supported by the Mellon Humanities+Urbanism+Design Initiative, the course will bring together students and faculty from diverse fields to probe the subject of urban sound through the lenses of both theory and practice. We will read across a wide variety of disciplines, including urban and environmental history, sound studies, urban geography, the history of sensation, musicology, anthropology and critical theory. We will engage with sound archives, installations, films, and photographs, and also have an opportunity to make field recordings of our own. The format of the final project is flexible and could include a research paper, theoretical essay, visualizations, GIS mapping, sonic compositions, short film, or other types of media. Instructors: Francesca Ammon and Naomi Waltham-Smith.

Thoughtful contemporary design can add value and meaning to historic settings of any scale. Rigorous dialogue with history and context enriches contemporary design. This seminar immerses students in the rewarding yet challenging realm of design with landmarks and existing structures. It will encourage participants to create their own models for design and preservation planning through discussion of source materials that illustrate the political, cultural and aesthetic environments that have shaped regulation and design with heritage throughout the past century. Sketch problems set in Philadelphia and analysis of case studies from around the world will enable students to critique and communicate a range of responses to landmarks and historic contexts, and to explore the roles of significance, physical and intangible conditions in shaping appropriate responses.

A three to four week summer course offered in different locations in Europe to teach international theories and methodologies of conservation as practiced there. Lectures, documentation, field work, and field trips will be involved. Past course locations included Italy, England and Turkey. Travel and residence fees may be extra. Offered every year.

L/L 656. Advanced Conservation Science. (C) Vatanhkhal. Prerequisite(s): HSPV 555, Conservation Science or Permission of the Instructor.
A methodological approach to the examination and analysis of historic building materials is introduced. Experimental design for conducting conservation research plus statistical analysis and modeling of research data will further complete the discussion. Practical analytical techniques appropriate for conservation practice including: classical and advanced instrumental techniques for qualitative and quantitative analysis of organic and inorganic materials will be discussed. Theoretical and practical applications of advanced surface techniques for both elemental and molecular/composition analysis as well as applications of nanotechnology and nanomaterials in conservation will be covered. Students will also learn about deterioration processes and long term effects of conservation treatments through accelerated aging techniques. Course materials will be taught through lectures, invited speakers, lab visits and laboratory sessions by practicing learned techniques and procedures on related masonry samples, along with provided course readings and literature.

660. Theories of Historic Preservation. (A) Mason. Prerequisite(s): Instructor's permission required for any student not registered in the Graduate Program in Historic Preservation.
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. This course examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. Emphasis is placed on literacy in the standard preservation works and critical assessment of common preservation concepts. In addition to readings and lectures, case studies from contemporary practice will form the basis for short assignments. Professional ethics are reviewed and debated. The instructor's permission is required for any student not registered in the Graduate Program in Historic Preservation. Note that the course is organized in two parts; the first half, on the basics of preservation theory, is taught in the fall semester while the second half takes place in the spring semester and engages advanced topics. Note: this course continues in the second half of the spring semester for another 0.5 CU.
SM 661. Theories of Historic Preservation II. (B) Mason.

Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. HSPV 661 builds on HSPV 660, which examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. HSPV 661 engages advanced topics such as cultural landscape theory, economics of preservation, sustainability and environmental conservation, social justice, and urban design. In addition to readings and lectures, case studies from contemporary practice will be used to examine theories in practice. The principal assignment will be a term research paper. The instructor's permission is required for any student not registered in the Graduate Program in Historic Preservation. (Note that the course is the second of two parts; the first half, on the basics of preservation theory is taught in the fall semester while the second half takes place in the spring semester.)

Introduction to the legal framework of urban planning and historic preservation, with special emphasis on key constitutional issues, zoning, historic districts, growth management, and state and local laws for conserving historic buildings.

The studio is a practical course in planning architectural, urban and regional conservation interventions, bringing to bear the wide range of skills and ideas at play in the field of historic preservation. Recognizing that historical areas are complex entities where cultural and socio-economic realities, land use, building types, and the legal and institutional setting are all closely interrelated, the main focus of the studio is understanding the cultural significance of the built environment, and the relation of this significance to other economic, social, political and aesthetic values. Through the documentation and analysis of a selected study area, studio teams undertake planning exercises for an historical area, consult with communities and other stakeholders, carry out documentation and historical research, and create policies and projects. The studio seeks to demonstrate how, through careful evaluation of problems and potentials, preservation planning can respond to common conflicts between the conservation of cultural and architectural values and the pressure of social forces, economic interest, and politics.

The studio focuses on a specific site in need of comprehensive preservation effort, most often in Philadelphia proper. Students work in teams as well as on individual projects. Consultation with local preservation and planning groups, community representatives, and faculty advisors informs research and analyze the study area, helping to define major preservation planning problems and opportunities, formulate policies, and propose preservation plans and actions.

This 1-CU course-combining seminar and studio teaching methods-will focus on the opportunities and challenges posed by the sustainable conservation of urban heritage areas with a particular focus in the historic centers of Latin America. Adapting urban heritage sites and buildings for contemporary uses with proven demand is a strategy that is gaining acceptance around the world and is considered more capable of sustaining the conservation of urban heritage than traditional conservation methods based on the strict preservation of the physical characteristics and uses. However, the adaptive rehabilitation of historic neighborhoods and buildings poses significant conceptual and design challenges.

Class sessions will explore the conceptual problems involved in the adaptive rehabilitation of heritage building and public spaces in historic centers including all historic periods: pre-Columbian, colonial, republican and those from the modern movement. The methodology includes the analysis and discussion of case studies of successful listing and adaptive rehabilitation efforts. The Studio exercise will focus on the practical challenges posed by this approach to heritage conservation in the historic center of Quito in Ecuador, the first urban heritage area included in UNESCO's World Heritage List. The students will work in close cooperation with government officials in Ecuador in charge of managing the historic center.

710. Thesis I. (A) Faculty.

Students are admitted to thesis after completion of two semesters or their equivalent in the graduate program. Theses should be based on original research and relate to each student's elected concentration in history, theory, technology, planning or design. Thesis proposals are required at the time of fall enrollment, and during the fall semester thesis students are required to defend their topics before preservation faculty and students. Thesis guidelines, available in the Historic Preservation office, describe other details.

711. Thesis II. (B) Faculty.

Students are admitted to thesis after completion of three semesters or their equivalent in the graduate program. Theses should be based on original research and relate to each student's elected concentration in history, theory, technology, planning, or design. Thesis proposals are required at the time of fall enrollment, and during the fall semester thesis students are required to defend their topics before preservation faculty and students. Thesis guidelines, available in the Historic Preservation office, describe other details.

SM 713. Rural Studio/Seminar. (B) HSPV Faculty.

The preservation of rural places -- landscapes, villages and towns -- presents a widespread and urgent challenge. Economic restructuring, metropolitan development, and other social forces continue to challenge the integrity and vitality of rural communities and landscapes across the U.S. This seminar/studio course explores means of activating rural places while retaining their character. Issues of abandonment and underutilization, industrial and agricultural restructuring, environmental conservation, and new economic opportunities will be explored. Tools from historic preservation, land conservation, economic development, community engagement and ecological design will be considered and applied. Research and focused readings will establish key issues, case studies, innovative ideas and institutions; students will create focused proposals for the conservation and redevelopment of a chosen study site in southeastern Pennsylvania.

SM 739. Conservation Seminar: Masonry/Wood. (A) Ingraffia/Fearon. Prerequisite(s): Pre-requisite: HSPV 555 Conservation Science and permission needed from department.

Module 1: Masonry - Roy Ingraffia. This seminar will offer an in-depth study of the conservation of masonry buildings and monuments with a particular focus on American building stone. Technical and aesthetic issues will be discussed as they pertain to the understanding required for conservation practice. Part 1 will address a
broad range of building stone, masonry construction technologies, and deterioration phenomenon; Part 2 will concentrate on conservation methodology as well as past and current approaches for the treatment of stone masonry structures. The subject will be examined through published literature and case studies. Students will gain practical experience through lab and field exercises and demonstrations. The subject matter is relevant to interested students of conservation and preservation, architecture, landscape architecture, architectural history, and archaeology.

Module 2: Wood - Andrew Fearon. Prior to the twentieth century, most structures found in the built environment relied upon wood as a primary material for both structural members and decorative features. An understanding of the physical properties as well as the historic application of this organic material provides the basis for formulating solutions for a wide spectrum of conservation issues. As the scope of preserving wooden structures and wooden architectural elements is continually broadened, new methods and technology available to the conservator will together allow for an evolving program - one that is dependent upon both consistent review of treatments and more in depth study of craft traditions. This course seeks to illustrate and address material problems typically encountered by stewards of wooden cultural heritage - among them structural assessment, bio-deterioration, stabilization and replication techniques. Through a series of lectures and hands-on workshops given by representative professionals from the fields of wood science, conservation, entomology, engineering, and archeology, theoretical and practical approaches to retaining wooden materials will be examined with the goal to inform the decision making process of future practicing professionals.

Pre-requisite: HSPV 555 Conservation Science and permission needed from department.

SM 741. Special Topics: American Marble. (D) MATERO. Prerequisite(s): HSPV 555.

Fall 2016 - HSPV-741-301 - Special Topics in Historic Preservation: American Marble. Nearly every culture in the Old and New World has made use of natural stone for its buildings and monuments, whether as found rubble or ledge rock, cut and dressed load-bearing dimensional stone, or thin veneer cladding on a brick, steel or concrete frame. In North America, indigenous cultures of the Southwest demonstrated a highly sophisticated and long-lived tradition of masonry building long before European contact as evidenced by the surviving structures at Chaco Canyon, Mesa Verde, and other ancient settlements. Beginning with the Spanish construction of massive masonry fortifications and churches in the sixteenth and seventeenth centuries in New Spain and the rise of academic classicism in the eighteenth century European-American colonies, the preference for building in stone has carried well into the present despite changes in taste and technology. Ideologically as well as functionally, stone construction has embodied and connoted permanence and durability wherever it is found.

There is an abundant variety of stone in the United States and virtually every variety of rock firm enough to hold together has been put to use as building stone. The restoration and conservation of historic masonry structures represent a major component of the architectural and construction industry industry yet little technical information is readily available on the nature of these obsolete materials or on the appropriate methods for their repair and restoration. This seminar will offer an in depth study of American marble utilizing the newly acquired archives and stone collection of the Vermont Marble Company. Aesthetic and technical issues will be discussed as they pertain to the total understanding required for conservation practice. Part 1 will focus on the characterization and deterioration of marble and the technology related to its extraction and use in architecture and monument design and construction. The subject will be examined through research topics related to the Vermont Marble collection. Part 2 will concentrate on past nd current methods for the treatment of marble with a focus on the Hood Cemetery Entrance Gate in Germantown. The subject matter is relevant to interested students of conservation and preservation, architecture, landscape architecture, architectural history, and archaeology.

Pit and Quarry: The Cement and Slate Industries of Lehigh Valley 2013 marked the 50th anniversary of Kenneth Hudson's groundbreaking book and manifesto on "industrial archaeology," the "mongrel" field he first named as the bastard offspring of industry and archaeology. Today the remains of industry past dominate the global landscape. Urban and rural America are littered with the evidence of the last two centuries of the country's former industrial prowess and many of these places, now abandoned, hold latent value for their transformation and reuse. Despite the recent popularity of industrial chic, critics now question whether this form of "adhocism"-that is, the improvisation of
new, unrelated uses devoid of meaning and interpretation—has led to, at best, a polite taming of industrial heritage, and, at worst, its disfigurement in the name of gentrification and short-sighted corporate marketing. A shift in thinking is now required for more sustainable preservation: thematic approaches that examine the problems and potential based on the original industrial processes; consideration and interventions at the landscape scale, ecological as well as architectural thinking, and finally, human connections through past and current associations.

Slate World: The Pennsylvania “Slate Belt,” an area of only 22 square miles, lies approximately 50 miles to the northwest of Philadelphia and just south of Blue (Kittanning) Mountain between the Delaware and Lehigh Rivers. The first quarries opened in the 1830s, but significant growth followed in the first decade of the twentieth century when Lehigh Valley accounted for approximately half the slate produced in the United States, eventually becoming the greatest slate producing region in the world. Cement Age: Reinforced concrete would prove to be the modern material of the new century and in the United States, the creation of the first Portland cement plants in the Lehigh Valley in 1871 at Coplay, would give rise to an industry that would forever change the face of America and the world. By 1901 the Atlas Portland Cement Co. in Northampton, PA was the largest cement company in the United States - more than twice the size and probably five to ten times the size of most firms in the industry. Today the valley is still the country’s center of cement production but automation has rendered the old plants nearly vacant, their historic mills and kilns, though still impressive, largely abandoned.

This advanced research studio builds on a current PennPraxis grant focused on the study of the cement and slate industries of Pennsylvania’s Lehigh Valley. It is funded by the J. M. Kaplan Fund and directed by Frank Matero, Professor of Architecture and Historic Preservation, and aims to bring a more critical approach to the identification, evaluation, and preservation of the most important and neglected of American industrial sites. Using information already collected, students will identify specific plants within the cement and slate belts and develop conservation programs for their preservation and interpretation. Focus will be on the industrial remains: buildings, structures, machinery, and features and involve their physical recording, condition survey, and analysis. Interested students should contact Frank Matero at fgmatero@design.upenn.edu

**SM 744. Architectural Archaeology: Building Lives. (B) Matero.**

Time, like space, is all around us. Its evidence is visible in the natural world as physical change. In our own fabricated material works, time exerts its presence through the tell-tale signs of stylistic and technological anachronism and material degradation. It is through these indicators that we confront time indirectly and attempt to position a thing or place in relation to the present. How buildings and landscapes are received by each generation depends on the specific conditions of time and place. Built works, be they barns or bridges, gardens or corn fields, palaces or pit houses, all reflect something of their maker and user as well as the prevailing social and cultural norms. Such trajectories are dependent on many diverse factors; however once consciously examined, all creative works under consideration for their ability to communicate to us; to have relevance in ways consistent or new to their original authorship and to contemporary society. In our efforts to relate to buildings and places from the past, we use time as the primary measure from the present and historical narrative to describe what we know.

As a form of material culture, buildings and landscapes are made and modified both consciously and unconsciously, directly and indirectly, thus reflecting individual and societal forces at play. Since the physical fabric and its evidences of alteration present one primary mode of inquiry, architectural theory and methodology provide an excellent means to recover, read, and interpret that evidence in association with documentary and archival sources.

This course will examine the theories and techniques necessary to investigate the morphological evolution of a structure and its physical setting. Students will learn and apply methods relevant to the reading of physical fabric as demonstrated and applied to a case site. The coursework assumes a knowledge of the core curriculum in historic preservation and is therefore recommended for advanced (i.e. second year) students.

**SM 746. CONSERVATION & MGMT.**

**SM 747. (ANTH508) Conservation of Archaeological Sites and Landscapes. (C) Matero.**

This seminar will address the history, theories, and practice of the preservation and display of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts. Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation, display, and exhibits; tourism and development, and legislation, policy, and contemporary issues of descendent community ownership.

The course is organized as a seminar incorporating readings, lectures, and discussions focused on major themes. Readings have been selected to provide exposure to seminal works in the development of theory and method as well as current expressions of contemporary practice. Readings and discussions will be complemented by a field project. This course is open to all first and second year preservation students and all others interested in the conservation and management of archaeological sites.

**748. Preservation Case Studies: Advanced Theory. (A) Mason.**

Preservation Case Studies will bring cutting-edge theoretical debates, current issues and the latest work of faculty and guests into the HSPV curriculum. Coordinated by the Chair, but populated with a number of other faculty, practitioners and guest scholars, the course will sample and explore current theoretical, conceptual, political and practical issues facing the historic preservation field. The course will serve two main purposes: First, to present critical and cutting-edge cases and issues in preservation in to the preservation curriculum and the discourse of PennDesign; second, present an opportunity for second-year master's and PhD to devote an elective CU to the advanced study of preservation theory. It will revolve around a series of curated, public talks - scheduled at an hour enabling the entire HSPV Program to attend the talks - as well as course-centerroundtable discussions. The course will be offered for credit as an "Advanced Theory" seminar for second-years or PhD students; attendance by all Program students will be expected at the public talks. The schedule of topics and talks will be finalized in August, and will likely include: recent social-scientific studies of historic preservation impacts; new architectural works incorporating preservation; systems research and its implications for historic preservation theory; and the politics of preservation advocacy.
750. Heritage Conservation Praxis. (L) Matero & Guest Faculty.
Prerequisite(s): HSPV 540 American Building Technology or HSPV 555 Conservation Science.
Architectural Conservation Praxis: Traditional Buildings/Traditional Practice 1 course unit. Studio. Pre-requisite: HSPV-540 or HSPV-555. This is an intensive 4 week summer course designed for students pursuing studies in architectural conservation and builds on Penn Preservation's core curriculum and the first year year conservation technology courses. The syllabus is organized around project fieldwork supplemented by lectures, demonstrations, exercises, and site visits that will allow students to experience firsthand the design and construction of vernacular buildings and the application of traditional craft-based methods to preserve them. Through a partnership with the National Park Service and the Vanishing Treasures Program, students will engage in the recording, survey, and treatment of timber and masonry structures under the supervision of Penn, NPS, and guest faculty. The course will be based in Mancos, Colorado for the first two weeks during which time students will work with with instructors on traditional construction methods including timber, brick masonry, and adobe. Students will then focus their final two weeks on field projects at selected NPS parks including Bar BC Dude Ranch at Grand Teton National Park, WY and Mesa Verde, CO. The course will also examine preservation issues related to the rich vernacular landscape and National Park heritage with visits to other sites in the area. Accommodation will be shared cabins and meals will be a communal event and prepared by a cook. Weekends (Saturday and Sunday) are free and on your own. Cost for meals (breakfast, lunch and dinner) will be $20/day and some travel will be paid by the course budget - details to come. Students are requested to bring laptops, cameras, sleeping bags and all personal items. More information available at http://www.conlab.org/ocl/edtr/Praxis/edtrpraxis.html. Course enrollment is by permit only. Please contact the HSPV Dept. at pennhspv@design.upenn.edu. Course dates are 7/25/2016-8/20/2016.

760. Preservation Planning Praxis. (L) Rypkema/Mason.
Description: 1 course unit. Studio. Pre-requisite: HSPV 572 or 625 or other planning-centered coursework. This course is designed to meet two broad learning outcomes: first, solidify student's knowledge of basic city and regional planning concepts, systems and methods as applied to historic cities; second, and more extensively, apply this knowledge in a practical situation relevant to contemporary preservation planning practice. The course will be conducted over three weeks in the early summer and will have two distinct components: a short, first part of the course will be held in Philadelphia over three days in late May. It will focus on readings, lectures, and discussions about preservation planning in general; Randy Mason will lead this part of the course. The second, international part of the the course will take place in Yangon, the capital of Myanmar. Lasting approximately two weeks, the course's international component will center on the application of preservation-led planning and development strategies to the dynamic center of this large Asian city. Some travel will be paid by the course budget - details to come. Course enrollment is by permit only. Please contact the HSPV department at pennhspv@design.upenn.edu.

Description: 1 course unit. Studio. Pre-requisite: HSPV 600 and 601; 606 preferred. This course is designed to meet two broad learning outcomes: first, solidify graduate students' basic knowledge of public history issues and process; second, apply research and communication skills to the interpretation of specific heritage sites in the context of professional site management. The course will be conducted over three weeks in the early summer and will have two distinct components. The first part of the course will be held on campus over the first week of the three-week course. It will focus on three overall subjects: close reading and debate of the literature on public history, review of case studies, and guest lectures; on interpretation best-practices and philosophies; workshops on interpretive tools. The second part of the course will take place at heritage sites all along the East Coast (specific list TBD), to include sites in New York, Washington and points between. Focus of this fieldwork will be evaluation of sites' management and interpretive experiences. The third part of the course is centered on Cliveden and its regional connections to former plantations in Delaware. Students will work with archives and site experiences to research, design and implement an interpretation project. Some travel will be paid by the course budget - details to come. Course enrollment is by permit only. Please contact the HSPV Dept. at pennhspv@design.upenn.edu.

Offering training beyond the classroom, this advanced praxis in architectural conservation focuses on the integration of theory and practice. A written project proposal must be submitted for consideration and approval by faculty, and a written defense of the work must be presented after the completion of the project. Students must have completed the conservation emphasis within the Master of Science program in Historic Preservation at the University of Pennsylvania.

The Workshop is an orientation course designed to prepare incoming, first-year graduate students for the intense coursework of their first semester. Generally, the Workshop orients students to the issues and methods of the core MSHP curriculum, begins familiarizing students to the resources of Philadelphia, and begins skill-building exercises. The workshop employs lectures, exercises, and fieldtrips to introduce some of the important skills, questions, and issues that will be at the center of first year's work in the Program. Documentation, descriptive analysis of buildings and places, and critical historiography are particular emphases. The Workshop also constitutes an extended introduction to the Program's faculty and the students in first-year and second-year cohorts. Course enrollment is by permit only. Please contact Amanda Bloomfield (HSPV Dept.) at amab@design.upenn.edu.

999. Independent Study. (C) Faculty.
An opportunity for a student to work on a special project under the guidance of a faculty member.
VERNACULAR ARCHITEC.

South Korea: Economy & Policy.
Kim.
South Korea ("Korea" hereafter) has achieved a remarkable economic development during the past half a century. Originally a poor agrarian economy, Korea joined the Organization for Economic Co-operation and Development (OECD), a club of 34 wealthy nations, as a second member from Asia after Japan.

Furthermore, Korea emerged from an aid-recipient to a donor country. Many developing economies in particular took note, seeking to learn policy lessons from Korea's development experiences. Taught by a former governor of the Bank of Korea, a Penn Economics Ph.D., this course covers

This course examines American history from the first contacts of the indigenous peoples of North America with European settlers to our own times by focusing on a few telling moments in this history. The
course treats twelve of these moments.

Each unit begins with a specific primary document, historical figure, image, location, year, or cultural artifact to commence the delving into the American past. Some of these icons are familiar, but the ensuing deciphering will render them as more complicated; some are unfamiliar, but they will emerge as absolutely telling. The course meets each week for two 50-minute team-taught lectures and once recitation session. Course requirements include: in-class midterm and final exams; three short paper assignments; and punctual attendance and participation in recitations.

L/R 024. (ANCH025, NELC101)
Introduction to the Ancient Near East. (D) History & Tradition Sector. All classes. Frame.
See primary department (NELC) for a
complete course description.

SM 528. (HSPV528) AMER
VERNACULAR ARCHITEC.
medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world's first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR's sudden implosion at the end of the century. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, and intellectuals; Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

050. England and the British Isles to 1707. (C) History & Tradition Sector. All classes. Todd.

The subject of this course is the history of the British Isles from the Roman Conquest in 43AD to the creation of the United Kingdom in 1707. Between these two dates the various societies and cultures in the British Isles were brought into the orbit of the Roman Empire, converted to Latin Christianity, and developed distinctive cultures and strong ties with the Continent. From the twelfth century on, the kingdom of England began to exert its power over Wales, Ireland, and Scotland, although English power waxed and waned in these areas between the twelfth and the seventeenth centuries. The Anglo-Norman continental empire of the Plantagenet dynasty also played a large part in shaping the English monarchy, as did the playing out of the Hundred Years War, the internal divisions in fifteenth-century English society, and the rise of the Tudor-Stuart dynasty.

051. MODERN BRITAIN, 1783-2000: EMPIRE, EXPANSION, AND DEMOCRACY. (C) History & Tradition Sector. All classes. CHASE-LEVENSON.

This course surveys British history from the eighteenth century to the present. In two centuries, Britain built an empire that ruled over a quarter of the globe and became the world's leading economy. In 2015, the Empire is gone, but coincident with its loss, Britain gained a welfare state and retained the role as a powerhouse of culture and finance. Themes emphasized in the course include national identity, class, political reform, war, and imperial interaction. How did Britain come to dominate the world economy and what did this dominance look like? How should we understand its role in the world today? Do the Beatles, the Royal Family, and Amy Winehouse add up to a "Cool Britannia" that has somehow "made up" for the loss of the Empire? Using written and visual primary sources, we'll look at all of these questions as we study the birth and development of modern Britain.

054. (COML052) Books that Made History. Moyer.

It is often said that books reflect the society in which they were written. Yet many books—and their authors—shaped society, and changed how people understood the world around them. In this course we will focus on a variety of texts from the world of Rome to 1600, the era in which European society took form. In each case, we will seek not only to understand the work itself, but also how it affected the lives and the thought of its readers. Works will range from Cicero and the Biblical New Testament to Luther and Machiavelli.

055. Reading the Classics. Feroz.

In this course we will study the early roots of Western culture—the Biblical, Greek and Roman traditions—as well as how sixteenth- and seventeenth-century European authors reproduced, rethought and reshaped these early traditions. Instead of reading and discussing the required texts according to the date when they were written (first the early traditions and ending with the Renaissance views), we will focus our attention on a few themes that were central concerns to those living in Classic and Renaissance times, and that continue to influence modern ways of thinking and acting in Western societies: conceptions of God and the place of religion in society; nature of power and authority, and individuals' rights and duties; good, evil, and ethical philosophy; views on women, their nature and roles in society; ethnography and the perception of other cultures and societies. In addition to reading and discussing several of the biblical books—Genesis, Exodus, the Book on Revelation—we will study other seminal classical works—Sophocles' Antigone, Aristotle's Politics and Ethics, Herodotus' The Histories; Plato's Apology— and works by Michel de Montaigne, Maria de Zayas y Sotomayor, Marie de Gournay, Christopher Marlowe, William Shakespeare, and several others. We will also work with books published in the last decades, analyzing the classics and and their reception in various periods of history, but also books that analyze what the classics tell us today--Dreyfus and Kelly's All things shining, Reading the Western Classics to find meaning in a secular Age; Anthony Grafton's Bring Out Your Dead; the Past as Revelation; James Miller, Examined Lives, from Socrates to Nietzsche; and Sarah Bakewell, How to Live: Or a Life of Montaigne in One Question and Twenty Attempts at an Answer.

Fulfills History & Tradition Distribution Requirement.

This course provides an introduction to the broad literature on Latin America's rich colonial history. We will begin by tracing some of the early origins of - and points of contact between - the Indian, Iberian, and African men and women who formed the basis of colonial society. As the course progresses, we will explore the variety of ways in which colonial subjects lived, worked, ate, worshipped, and socialized. Lectures and reading assignments will draw upon a variety of sources, including court cases, artistic renderings, city maps and street plans, travel accounts of visits to the regions, and the material, cultural, and intellectual products made possible by the wealth and dynamism of the seventeenth and eighteenth centuries. The course will conclude with an analysis of the Age of Revolutions, a period of dramatic upheaval that remains at the center of lively scholarly debates. By the end of the semester, students will be able to engage the key questions driving these debates, the most important of which, perhaps, is: what is Latin America's colonial legacy?

071. (LALS071) Latin American Survey 1782-Present. (B) History & Tradition Sector. All classes. Farnsworth-Alvar.

Surveys Latin American and Caribbean history from the Tupac Amaru Revolt to the present. We will examine the legacy of
Spanish colonialism and slavery, movements for national and cultural independence, twentieth-century radicalism, and the politics of race in contemporary Latin America. Readings include fictional as well as analytical representations, and a film series will accompany the course.

072. (LALS072) Introduction to Latin American and Latino Studies. (A) Farnsworth-Alwear.

Designed to introduce students to the interdisciplinary field of Latin American and Latino Studies, this is a seminar oriented toward first and second year students. Readings will range widely, from scholarly work on the colonial world that followed from and pushed back against the "conquest"; to literary and artistic explorations of Latin American identities; to social scientists' explorations of how Latinos are changing the United States in the current generation.

L/R 075. (AFRC075, AFST075) Africa Before 1800. (B) History & Tradition Sector. All classes. Babou.

Survey of major themes and issues in African history before 1800. Topics include: early civilizations, African kingdoms and empires, population movements, the spread of Islam, and the slave trade. Also, emphasis on how historians use archaeology, linguistics, and oral traditions to reconstruct Africa's early history.

L/R 076. (AFRC076, AFST076) Africa Since 1800. (A) History & Tradition Sector. All classes. Cassanelli.

Survey of major themes, events, and personalities in African history from the early nineteenth century through the 1960s. Topics include abolition of the slave trade, European imperialism, impact of colonial rule, African resistance, religious and cultural movements, rise of naturalism and pan-Africanism, issues of ethnicity and "tribalism" in modern Africa.

L/R 081. (NELC031) History of the Middle East Since 1800. (A) History & Tradition Sector. All classes. Kashani-Sabet/Trotta-Powell.

A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity.

084. (NELC032) Topics in 20th C. Middle East. (C) Kashani-Sabet.

If "the clash of civilizations" is the first image that jumps to mind when thinking about the modern Middle East, then this is the course for you. From the familiar narratives about the creation of modern nation-states to the oft-neglected accounts of cultural life, this course surveys the multi-faceted societies of the twentieth-century Middle East. Although inclusive of the military battles and conflicts that have affected the region, this course will move beyond the clichés of war and conflict in the Middle East to show the range of issues and ideas with which intellectuals and governments grappled throughout the century. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered in the course. By considering illustrative cultural moments that shed light on the political history of the period, this course will adopt a nuanced framework to approach the Arab/Israeli conflict, the history of the Gulf States, the Iran-Iraq War, and U.S. involvement in the region.

L/R 087. (ANTH063, SAST063) Performing History. (C) St.George.

From medieval processions to the Mummers Parade, from military reenactments to Mardi Gras, communities do more than "write" or "read" history in order to feel its power and shape their futures. Drawing upon traditions in theater, spectacle, religion, and marketing, they also perform their history--by replaying particular characters, restaging pivotal events and sometimes even changing their outcomes--in order to test its relevance to contemporary life and to both mark and contest ritual points in the annual cycle. This course will explore diverse ways of "performing history" in different cultures, including royal passages, civic parades, historical reenactments, community festivals, and film.

091. (EALC071) Modern Japanese History. (C) History & Tradition Sector. All classes. Dickinson.

This course will survey the major political, economic, social and intellectual trends in the making of modern Japan. Special emphasis will be given to the turbulent relationship between state and society from 1800 to the present.

093. (COML103, FOLK103, THAR103) Late Imperial China. (C) Fei.

This lecture course -- the first of a two-part sequence -- examines the history of late imperial China through the early 19th century. We begin with the Song dynasty transformation: the rise of gentry society and imperial absolutism, the institution of Confucian orthodoxy, the shift of the population and the economic center of gravity to the south, the commercialization of the economy, and change in the relative status of women and men. We then trace China's subsequent political and social history, including the following themes: inner vs. outer court politics; law, government, and society; intellectuals and political dissent; gender, family, and kinship practices; patterns of peasant life and rebellion; traditional foreign relations and first contacts with the West; internal sources of the decline of imperial order.

097. (EALC047) History of Modern China. (C) History & Tradition Sector. All classes. Fei.

From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China...
during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity.

Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao's China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of "Greater China" that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

L/R 098. (EALC080) Introduction to Korean Civilization. (C) History & Tradition Sector. All classes. Park.

This gateway course surveys the history of Korea from early times to the present. We will study the establishment of various sociopolitical orders and their characteristics alongside major cultural developments. Covered topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations; responses to Western imperialism; and Korea's increasing presence in the modern world as well as its future prospects. Students will also be introduced to various interpretive approaches in the historiography. No prior knowledge of Korea or Korean language is presumed.

Freshman Seminars (101-106) and BFS Seminars (111-116) for Freshmen and Sophomores as well. Topics vary each semester.

SM 101. (JWST103, RELS026) Freshman Seminar: Europe before 1800. (C) Staff.

SM 102. Freshman Seminar: Europe after 1800. (C) Staff.

Topics vary each semester. Courses are mainly for freshmen and sophomores in the Benjamin Franklin Scholars program. Other students need instructor's consent.

SM 111. Europe before 1800: Benjamin Franklin Seminar. (C) Staff.

SM 112. Europe after 1800: Benjamin Franklin Seminar. (C) Staff.

SM 113. America before 1800: Benjamin Franklin Seminar. (C) Staff.

SM 114. America after 1800: Benjamin Franklin Seminar. (C) Staff.

SM 115. The World before 1800: Benjamin Franklin Seminar. (C) Staff.

SM 116. The World after 1800: Benjamin Franklin Seminar. (C) Staff.

Introductory Courses (100-level)

Topics vary each semester. Listings are posted outside the Department of History office during advance registration. Enrollment is limited; history majors will be given priority in admission.

The course follows the evolution of industrial capitalism since the beginning of the English industrial revolution in the late 18th century. It ranges from the problems of the industrial revolution in England to problems of building a market economy in eastern Europe today. In particular, it examines industrialization and explores the sources of sustained economic growth from a comparative perspective. Most of the world, especially in so-called emerging economies, is still confronted with the challenge, and often pain, of creating a modern industrial capitalist society. The course attempts to build a conceptual apparatus for understanding models of industrialization and is built around issues such as law, anti-trust, corporate forms, banking institutions, industrial relations, etc. By definition, the course tends to concentrate on successful industrializers around the world, but questions regarding continued underdevelopment will be addressed.

118. (ANTH118, GSWS119, RELS109) Witchcraft and Possession. (C) St.George.

This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

Over the last two centuries, the modern corporation has emerged as the dominant form of doing business throughout the world. As such, it not only effects people's daily lives, but also influences government policies and larger trends in society. This course looks at the history of the international corporation from the industrial revolution to the present, to consider how corporations have evolved and the varying ways in which they have influenced the history of our times. We will consider the fundamental debates surrounding the responsibility between shareholders, managers, workers, customers, and most importantly, society as a whole. Much of the course will involve an examination of case studies of individual companies, industries or issues, to understand how
corporations have functioned in specific instances.

120. (EALC081) PREMODERN KOREA: PHILOSOPHERS, WARRIORS AND SLAVES. (C) History & Tradition Sector. All classes. Park. This course surveys the history of Korea from early times to 1800, focusing on the establishment of various sociopolitical orders and their characteristics as well as major cultural developments. Covered topics include: state formation and dissolution; status hierarchy and social mobility; the role of ideology and how it changes; religious beliefs and values; agriculture, crafts and commerce; and changing family relations and gender roles. Students will also be introduced to various interpretive approaches in the historiography. No prior knowledge of Korea or Korean language is required. The course fulfills the College's History and Tradition Sector and Cross Cultural Analysis requirements. For the History major and minor, this course counts toward the pre-1800 and Asia requirements.

121. (EALC082) Modern Korea. (C) Park. An examination of Korean society and culture in tumultuous transition, focusing on challenges for the Choson Dynasty and its reform effort, pressures imperialism, impact of Japanese colonial rule, conflict between two rival regimes, South Korea's emergence as a major player in the international political economy, some salient features of the totalitarian North Korean regime, triumph of democracy, and Korea's place in the world.

123. Economic History of Europe I. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Safley. This course concentrates on the economy of Europe in the Early Modern Period, 1450-1750. It was a time of great transition. Europe developed from an agriculturally-based to an industrially-based economy, with attendant changes in society and culture. From subsistence-level productivity, the European economy expanded to create great surfeits of goods, with attendant changes in consumption and expectation. Europe grew from a regional economic system to become part--some would say the heart--of a global economy, with attendant changes in worldview and identity. Economic intensification, expansion, globalization, and industrialization are our topics, therefore. Beginning with economic organizations and practices, we will consider how these changed over time and influenced society and culture. The course takes as its point of departure the experience of individual, working men and women: peasants and artisans, merchants and landlords, entrepreneurs and financiers. Yet, it argues outward: from the particular to the general, from the individual to the social, from the local to the global. It will suggest ways in which the economy influenced developments or changes that were not in themselves economic, shaped, and deflected economic life and practice.

124. Economic History, 1600 to present. (C) Drew. Economic affairs dominate much of our daily lives and an appreciation of how our economic world evolved is essential for an intelligent understanding of today's society. This course will survey the world's economic history from 1600 to the present. It will consider the evolution of government policies, the growth of trade, business and industry, the economic inter-relationship between regions, governments and business, and, of course, their effect on ordinary people's economic lives.

126. Modern Europe, 1789-1919. (C) Chase-Levenson. It's old, it's new. It's unfamiliar, it's recognizable. This course investigates the collapse of the "old regime" and the birth of something like the Europe we recognize. The long nineteenth century witnessed the development of political, economic, and cultural phenomena we often see as characteristic of modern society. Topics considered include political revolution, industrialization, liberalism, imperialism, and new ideologies of gender, race, and class. Our focus will be consistently transnational. Where did Europe begin and end? How did borders and boundaries operate at the edge of nations, but also within societies? We will investigate these questions as we follow European history from the violence and optimism of the French Revolution to the chaos of the First World War.

128. From Complete Destruction to Superpower: Europe 1945-2013. (C) Steinberg. This course offers a survey of European history, including both eastern and western Europe since World War II until the present. The course examines how Europe in all its complexity and cultures lived under the shadow of the Cold War. It examines the origins and nature of the cold War, not just in its diplomatic and political dimensions, but also its effects on the culture and people of Europe. It explores the reasons for the phenomenon of anti-Americanism and the series of revolts exploding throughout eastern Europe until the fall of the Berlin Wall. Finally, the course examines a number of thematic areas about European political culture, immigration, decolonization, the 1960s revolts and the 1970s terrorism, the resurgence of nationalism, but also the growth of the European community. The course explores the question: what does it mean to be European?

130. History of Globalization. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Drew. Globalization seems the essence of modernity, but it is not a new phenomena. The world has already witnessed several eras of globalization, each of which transformed and changed the world in often similar but sometime unique fashions. This course will look at continuing trends towards globalization and consider its rich history and the contentious arguments that it has always provoked. Although the focus of the course will be on globalization during the 19th and 20th centuries, we will also consider earlier episodes of globalization, to fully appreciate its evolution and importance.
International. At the same time we will pay careful attention to the many countervailing forces that have resisted the process of globalization: various forms of nationalism, local ethnic and religious movements in places as far-flung as Central Africa and Northern Ireland, and struggles over territories and border control from Arizona to Kashmir. We will look at the long history of contention between these opposing trajectories, exploring such topics as Wilsonianism and its reception in Europe and beyond, transnational human rights norms, the environmentalist movement, institutions designed to deal with global threats such as the World Health Organization or the International Atomic Energy Agency, European integration, political Islam, and the War on Terror.

139. (JWST156, NELC051, NELC451, RELS120) Jews and Judaism in Antiquity. (B) History & Tradition Sector. All classes. Dohrmann.

A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.

140. (JWST157, NELC052, RELS121) Medieval and Early Modern Jewry. (A) History & Tradition Sector. All classes. Ruderman.

Exploration of intellectual, social, and cultural developments in Jewish civilization from the rise of Islam in the seventh century to the assault on established conceptions of faith and religious authority in 17th century Europe, that is, from the age of Mohammed to that of Spinoza. Particular attention will be paid to the interaction of Jewish culture with those of Christianity and Islam.

141. (JWST158, NELC053, RELS122) Jews in the Modern World. (B) History & Tradition Sector. All classes. Wenger.

This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

L/R 146. (HSOC145, STSC145) Comparative Medicine. (C) History & Tradition Sector. All classes. Mukharji. See primary department (HSOC) for a complete course description.

147. (AFST147, NELC187) Islamic History to 1517. (C) Staff.

This course consists of an overview of the history of the major Islamic dynasties which ruled over the Middle East and North Africa from the beginning of the "Islamic Empire" to 1517 A.D.

150. (JWST130, JWST430, RELS124) American Jewish Experience. (C) Wenger.

This course offers a comprehensive survey of American Jewish history from the colonial period to the present. It will cover the different waves of Jewish immigration to the United States and examine the construction of Jewish political, cultural, and religious life in America. Topics will include: American Judaism, the Jewish labor movement, Jewish politics and popular culture, and the responses of American Jews to the Holocaust and the State of Israel.

153. (URBS104) Transformation of Urban America: From the Mid-Twentieth Century to the Present. (C) Society Sector. All classes. Fairbanks.

The course traces the economic, social, and political history of American cities after World War II. It focuses on how the economic problems of the industrial city were compounded by the racial conflicts of the 1950s and 1960s and the fiscal crises of the 1970s. The last part of the course examines the forces that have led to the revitalization of cities in recent years.

155. (ASAM003) Introduction to Asian American History. (C) History & Tradition Sector. All classes. Azuma.

This course will provide an introduction to the history of Asian Pacific Americans, focusing on the wide diversity of migrant experiences, as well as the continuing legacies of Orientalism on American-born APA's. Issues of race, class, gender, and sexuality will also be examined.

156. (SAST166) History of Jewish Civilization I: From Biblical Period to Early Middle Ages. (C) Goldenberg.

A broad introduction to the history of Jewish civilization from its Biblical beginnings until the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.

L/R 159. Technology, Policy & War. (C) Waldron.

Comparative and interdisciplinary examination of successful and failed uses of force in international relations, from ancient to modern times, using case studies. Readings will include Clausewitz, Sun Tzu, and a variety of primary and secondary sources for the wars considered each year. Issues of war's fundamental origins, and its many impacts on society, will also be considered.

Analysis of the political use of force, both in theory and in practice, through analytical readings and study of selected wars. Readings include Sun Zi, Kautilya, Machiavelli, Clausewitz and other strategists. Case studies vary but may include the Peloponnesian War, the Mongol conquests, the Crusades, the Crimean War, Russo-Japanese War, World War II, Korea, or the Falklands, among others, with focus on initiation, strategic alternatives, decision and termination. Some discussion of the law of war and international attempts to limit it.

L/R 161. (ECON014) American Capitalism. (C) Society Sector. All classes. Licht.

A broad overview of American economic history will be provided by focusing on the following topics: colonial trade patterns, the growth of the market economy, the political economy of slavery, industrial expansion, segmentation in the labor force and changes in work, technological and organizational innovations, business cycles, the rise of the corporate welfare state, the growth of monopoly capitalism, and current economic problems in historical perspective.

L/R 163. Modern American Culture. (C) History & Tradition Sector. All classes. Peiss.

Through the twentieth century, American culture took on new forms and meanings, spurred by technological innovation, commerce, and institutions, and shaped by an ever-changing population. In the process, American culture became self-consciously "modern"-embraced, contested, repudiated, and continually redefined. This course explores the history of American culture from the 1890s to the 1990s, with a focus on the following questions: Why did culture become such an important part of
American economic, social, and political life in the twentieth century? How has culture been created, understood, and mobilized by different groups in American society at different times? What have been the politics of culture over the twentieth century? Topics include the rise of "culture industries" and mass entertainment, including amusement parks, film, radio, and television; the growth of consumer culture; the impact of gender in such arenas as sports and fashion; the role of working-class peoples, African Americans, and immigrants in American culture; the cultural response to the Depression and World War II; and popular activism. The course emphasizes the study of primary documents—journalism, fiction, letters and diaries, music, photographs, and film—as a means of understanding the past.

164. Recent American History. (C) Licht.
This course examines major developments in United States history since the Great Depression, a tumultuous period that gave birth to many of our contemporary debates about the responsibilities of government, the possibility of radical social change, and the meaning of citizenship. Reading primary documents alongside historical accounts, we will address the building of the New Deal state; the emergence of the United States as a superpower; the domestic and international repercussions of the Cold War; the impact of mass consumption, suburbanization, and new technologies; the civil rights movement and other drives for social change; the cultural and political fallout of the Vietnam War; transformations in gender roles and the family; and the end of the "American century."

L/R 165. (CIMS167) HOLLYWOOD & AMER. HISTORY. (C)
This course examines crucial events in American history, from the Puritans to the present, through the lens of Hollywood film and other media. We will consider how these visual representations have influenced our present understanding of key matters such as the Constitution, presidential politics, Protestant religion, racial tensions, and war-making. Material to be viewed includes The Patriot, Gettysburg, Gold Diggers of 1933, The Best Years of Our Lives, West Side Story, and Guess Who's Coming to Dinner?

L/R 166. (CIMS166, NELC137) ARABIC/ISRAELI CONFLICT IN LIT. & FILM. (C) Trout-Powell.
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like an ending crisis?

168. (AFRC168) HISTORY OF AMERICAN LAW TO 1877. (A) Berry.
The course surveys the development of law in the U.S. to 1877, including such subjects as: the evolution of the legal profession; the transformation of English law during the American Revolution, the making and implementation of the Constitution, and issues concerning business and economic development, the law of slavery, the status of women, and civil rights.

169. (AFRC169) HISTORY OF AMERICAN LAW SINCE 1877. (B) Berry.
This course covers the development of legal rules and principles concerning individual and group conduct in the United States since 1877. Such subjects as regulation and deregulation, legal education and the legal profession, and the legal status of women and minorities will be discussed.

L/R 170. (AFRC172) THE AMERICAN SOUTH. (D) History & Tradition Sector. All classes. McCurry.
Southern culture and history from 1607-1860, from Jamestown to secession. Traces the rise of slavery and plantation society, the growth of Southern sectionalism and its explosion into Civil War.

L/R 171. THE AMERICAN SOUTH 1860-PRESENT. (D) History & Tradition Sector. All classes. Hahn.
This course will trace the history of the American South from the end of the Civil War to the present. It will investigate Reconstruction, the New South, Populism, racial disfranchisement and the rise of Jim Crow, the politics of the One-Party South, the South in the Progressive era and its role in the New Deal and World War II, the Civil Rights Movement of the 1950s and 1960s, and the rise of the Republican South. While following the narrative of politics and economic development, we will pay particular attention to race relations and will be more than casually interested in gender roles. In addition, we will take frequent peeks at the evolving Southern identity as reflected in popular culture and literature as well as in other corners of the public sphere.

172. (AFRC175, LALS175) HISTORY OF AMERICAN POLITICAL DEVELOPMENTS IN THE AMERICAS. (C) Richter.
This course surveys Native American life east of the Mississippi River from earliest times to the present. The diverse histories of Native peoples will be examined both on their own terms and as continuing elements of the continent's broader story. Topics to be addressed include 16th- and 17th-century demographic, economic, and social consequences of contact with European peoples, 18th century strategies of resistance and accommodation to colonial powers, 19th-century impacts of U.S. government removal and cultural assimilation policies, and 20th-century cultural and political developments among the region's surviving Native American communities.

173. (AFRC175, LALS175) HISTORY OF AMERICAN POLITICAL DEVELOPMENTS IN THE AMERICAS. (C) History & Tradition Sector. All classes. Offered.
The United States and Latin America produced a remarkable series of revolutions and reforms during the postwar period. This course examines efforts in the United States, Guatemala, Cuba, and Brazil to define and address problems around land, labor, and property; nation, empire, and autonomy; and racism, democracy, and citizenship. In studying the US and Latin America together, the class invites students to explore central themes of both regions' histories as parts of global processes. We will explore exchanges between social movements in the US, Cuba and Africa, for instance, ask how ideas about poverty traversed national borders, and examine the global rise of human rights consciousness. The class, in other words, not only compares national histories but analyzes the relationships between national upheavals and the global significance of events in the hemisphere.

175. (AFRC175, LALS175) SOCIETY AND CULTURE IN BRAZIL. (C) Walker.
With its booming economy, the recent inauguration of its first female president, and its selection as host to the 2012 World Cup and Olympic games, Brazil is growing in global prestige. But amid all these
The purpose of this course is to provide the Early Modern Atlantic World systems. resistance and rebellion in the various slave experiences and the methods of black also examine the different slave. The course will concentrate on the variety of black responses to capture, enslavement, and emancipation during the Civil War. The role played by religion in the Atlantic world; persistence and continuity of Native cultures and beliefs during an age of expansion; the creation of new identities; the role played by African nations in the creation of the Atlantic world; and the creation of an Atlantic economy.

179. (LALS179, ROML250) The Rise and Fall of the Spanish Empire 1450-1700. (C) History & Tradition Sector. All classes. Feros.

This course will provide students with a solid knowledge of the history of early modern Spain (1450-1700). Through readings of primary and secondary texts that offer a complex vision of the cultural, religious, intellectual, and economic contexts and processes, students will be able to appreciate the intricacies of Spain's historical evolution. The course focuses on the rise and decline of the Spanish monarchy: the conditions that enabled Spain to become the most powerful monarchy in early modern times, and the conditions that led to its decline. This course also touches upon other important aspects critical to understanding early modern Spain: relationships among Christians, Muslims, and Jews in the Iberian Peninsula; the conquest and colonization of the New World; and early modern debates about Spain's rights to occupy America and the so-called "destruction of the Indies."

188. (NELC188, SOCI231) Revolutions in the Middle East: Mass Movements & Contemporary Politics in the Middle East and North Africa. (C) Kashani-Sabet.

Ideas play an intangible role in defining culture and politics. In the contemporary Middle East, mass movements and revolutions have become a familiar feature of social and political life. This course surveys some of the major revolutions and ideologies that have caused significant change in the Middle East over the last century. We will examine icons of imperialism and consider varying sources of conflict within and between states. Novels, essays, and secondary works will comprise the bulk of the readings. The weekly assignments will focus on particular themes or on works that show the nature of political change in various contexts and geographic settings. Thematic texts will be supplemented with some factual information to help the students put the ideas of revolt and protest in the proper historical context.

189. (NELC139) Modern Egypt. (C) Troutt-Powell.

This course will seek to explore how Egyptian culture has dealt with its many pasts by investigating early modern and modern Egyptian history. With an emphasis on the 18th century to the present we will explore the culture of Egypt under the Ottoman Empire, slavery in Egypt, the unsuccessful French attempt to colonize Egypt and the successful British occupation of the country.

Seminar in History (201-206)

Topics vary each seminar. Listings are available from the Department of History office during advance registration, and at all times on the Web at http://www.history.upenn.edu. Enrollment is limited; history majors will be given priority in admission.

SM 201. (COML207, ITAL200, JWST201, RELS233) Major Seminar in History: Europe Before 1800. (C) Staff.

SM 202. Major Seminar in History: Europe After 1800. (C) Staff.

SM 203. (GSWS203) Major Seminar in History: America Before 1800. (C) Staff.

SM 204. (AFRC205, GSWS204, JWST204, LALS204, URBs227) Major Seminar in History: America After 1800. (C) Staff.

SM 205. (JWST205, LALS205, NELC235) Major Seminar in History: The World before 1800. (C) Staff.

SM 206. Major Seminar of the World after 1800. (C) Staff.
Advanced Benjamin Franklin Seminars

Topics vary each semester. Courses are mainly for juniors and seniors in the Benjamin Franklin Scholars program. Other students need instructor's consent.

SM 211. (FREN360) Europe before 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

SM 212. (ITAL200) Europe after 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

SM 213. America before 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

SM 216. (NELC286) The World after 1800: Advanced Benjamin Franklin Seminar. (C) Staff.

Intermediate Courses (220-397)

SM 209. (URBS103) Industrial Metropolis. (A) History & Tradition Sector. All classes. Vitello.
Although we no longer think of most U.S. cities as industrial cities, metropolitan areas today are all products of industrial economies, technologies, and social systems. This course explores the industrialization and deindustrialization of American cities within their evolving global context from the era of European colonization to the present. It includes weekly readings and discussion, regular response papers and walking tours, in-class exercises, and a research paper using primary sources. Themes include energy and ecology, labor and production, inner city and suburban development, globalization, and economic restructuring. Ultimately, the class aims to give students a broad knowledge of 1) the history of industrial capitalism, 2) its effects on cities and regions over the past three centuries, and 3) analytical tools for understanding the past, present, and future of metropolitan economies, geography, and society.

This course offers an overview of the cultural history of Rus from its origins to the eighteenth century, a period which laid the foundation for the Russian Empire. The course takes an interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodoxy viewed in a broader European context. Although this course is historical in content, it is also about modern Russia. The legacy of Medieval Rus is still referenced, often allegorically, in contemporary social and cultural discourse as the Russian, Ukrainian and Belarusian societies attempt to reconstruct and reinterpret their histories. In this course, students learn that the study of the medieval cultural and political history explains many aspects of modern Russian society, its culture and mentality.

220. (COML220, RUSS220) RUSSIA AND THE WEST. (M)

227. (SAST163) Topics in S. Asian Hist. (C)

230. (CLST230, COML248, GRMN232, ITAL230, JWST230) Topics in European History. (C) Staff.
Topics vary

231. (AFRC229, ASAM203, ENGL253, JWST215, RELS209) Topics in US History. (C) Staff.
Topics in US History

232. (AFRC233, AFST232, CIMS233, NELC282) World History: Africa or the Middle East. (A) Staff.
Topics vary

275. (AFRC274, AFST274) Islam and Society in Africa. (C) Babou.
This course is designed to provide the students with a broad understanding of the history of Islam in Africa. The focus will be mostly on West Africa, but we will also look at developments in other regions of the continent. We will examine the process of islamization in Africa and the interplay between Islam and the African traditional religions and customs. Topics include conversion, Islamic education and literacy, the status of women, Muslim response to European colonial domination, Islamic mysticism, and the contemporary development of Sunni movements.

276. (EALC176) Japan: The Age of the Samurai. (C) Hurst.
This course deals with the samurai in Japanese history and culture and will focus on the period of samurai political dominance from 1185 to 1868, but it will in fact range over the whole of Japanese history from the development of early forms of warfare to the disappearance of the samurai after the Meiji Restoration of the 19th century. The course will conclude with a discussion of the legacy of the samurai in modern Japanese culture and the image of the samurai in foreign perceptions of Japan.

277. (EALC270) Topics in Premod Jap History.

308. Renaissance Europe. (C) Moyer.
This course will examine the cultural and intellectual movement known as the Renaissance, from its origins in fourteenth-century Italy to its diffusion into the rest of Europe in the sixteenth century. We will trace the great changes in the world of learning and letters, the visual arts, and music, along with those taking place in politics, economics, and social organization. We will be reading primary sources as well as modern works.

309. Age of Reformation. (C) Safley.
The Protestant Reformation of the 16th century was a watershed in European history. It marked the culmination of centuries of religious, political and social change and had profound institutional and intellectual consequences. We will examine the central teachings and activities of the Protestant reformers against this broad background. Topics will include: medieval traditions of religious protest and reform; social and political changes in the period of the Reformation; the changing role of the Papacy; and the impact of the new technology of printing. Readings will be both primary texts and secondary sources and discussions will be an integral part of the class.

310. Europe in the Age of Baroque. (C) Safley.
The baroque earns its name from a style of art and architecture, developed in Europe between 1550 and 1700 and typified by elaborate ornamentation and color. The term can be applied well to the history of the period, which was characterized by conflict and complexity.

312. Britain’s Century of Revolution. (C) Todd.
England, Ireland, Wales and Scotland experienced revolutions in the first half of
the seventeenth century that abolished monarchy and hereditary aristocracy, and carried out the first judicial execution of a monarch in European history. England was re-constructed as a republic, then with Scotland became the United Commonwealth of Great Britain, then declined into a military dictatorship, and finally invited the king back. In 1688, however, the Glorious Revolution deposed that king and declared Britain a strictly constitutional monarchy. This course will explore what motivated ordinarily obedient British subjects to take up arms against their rulers. The works of Milton and Marvell, Cromwell, Hobbes and Locke, and many lesser-known writers of diaries, autobiographies, sermons, statutes, and letters will illuminate the issues. The focus will be on how law, politics and religion interacted in the onset of war and defining of settlement, but with an eye to the larger social and cultural setting in which revolutions happened: this is also an era of both witchcraft and scientific revolution, puritanism and the slave trade, the near-destruction of London by fire and plague and its re-birth as the capital of a commercial empire.

318. (ITAL318) Italian History from Napoleon to Berlusconi. (M) Steinberg. The seminar looks at the evolution of modern Italy from the Napoleonic Era through the unification of the Kingdom in 1861, through its crisis in the First World War and the subsequent struggle for control of the new mass society. It looks at the emergence of the first fascist regime and the first modern dictatorship under Benito Mussolini; the rise and consolidation of that dictatorship, its descent into anti-Semitism, defeat in war and the civil war of 1943-45.

SM 320. (HSOC279, STSC279) Nature’s Nation: Americans and their Environment. (C) Greene. Environmental history studies the interactions between humans and the natural world. In this kind of study, mosquitoes and rain are actors in history as well as humans and their impact. This course explores these interactions through case studies and topics nationally and globally, such as energy, disease, human migration and settlement, animals, technological changes, urban and suburban development, conservation and politics. This course is geared toward students who want to think about how history happens, in different places and over time.

323. (FOLK323) Material Life in America, 1600-1800. (C) St. George. This course will explore the history of America’s use and fascination with material goods between 1600 and 1860. We will examine such issues as the transferal of European traditions of material culture to the New World, the creation of American creolized forms, the impact of reformers in the late eighteenth and early nineteenth centuries, and the development of regional landscapes. Thematic issues will include consumerism, objects as symbolic communication and metaphor, and the complementary issues of archaeology and history of art in material culture study.

331. American Diplomatic History Since 1776. (C) McDougall. Survey course tracing the origins and evolution of the great traditions of U.S. foreign policy, including Exceptionalism, Unilateralism, Manifest Destiny, Wilsonianism, etc., by which Americans have tried to define their place in the world. Three hours of lecture per week, extensive reading, no recitations.

333. (COML236, RUSS240) Napoleonic Era & Tolstoy. (C) Holquist/Vinttsky. In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy’s War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel?

This semester marks the 200th anniversary of Napoleon’s attempt to conquer Russia and achieve world domination, the campaign of 1812. Come celebrate this Bicentennial with us! Because we will read War and Peace over the course of the entire semester, readings will be manageable and very enjoyable.

341. Tudor England. (C) Todd. This course examines the history of England from the accession of Henry VII in 1485 to the death of Elizabeth I in 1603, with emphases on the political and personal history of this colorful dynasty, the religious revolution known as the protestant Reformation, the arts and literature known as the English Renaissance, imperial and trade ventures overseas, and aspects of popular culture including the witch craze. Unlike most English histories of the period, we will also look closely at the other realms of the British Isles, Scotland, Wales, and Ireland. Readings consist of a textbook with a British scope, and an array of primary sources, some in book form and others (marked with an asterisk on the syllabus) attached to Blackboard or distributed in class. Books are available at the Penn Book Center, except for biographies associated with film critiques. Most of the films noted in the syllabus will be available on PVN; otherwise, they can be viewed at the library or through Netflix. Assignments in square brackets are optional.

342. (COML342) European Intellectual History, 1300-1600. (C) Moyer. This course will examine the formation of European traditions of scholarship and letters, including medieval, Renaissance and early modern writings. Topics will include court literature and romance; scholastic thought and university scholarship; political thought; the humanist tradition. It will consider the rise of printing, the formation of the "republic of letters," and the development of popular literature.
343. (COML343) Nineteenth Century European Intellectual History. (C) Breckman.

Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.

344. (COML344) Twentieth Century European Intellectual History. (B) Breckman.

European intellectual and cultural history from 1870 to 1950. Themes to be considered include aesthetic modernism and the avant-garde, the rebellion against rationalism and positivism, Social Darwinism, Second International Socialism, the impact of World War One on European intellectuals, psychoanalysis, existentialism, and the ideological origins of fascism. Figures to be studied include Nietzsche, Freud, Woolf, Sartre, Camus, and Heidegger.

L/R 345. (AFRC345, GSWS345) Sinners, Sex and Slaves: Race and Sex in Early America. (A) Brown.

This course explores the lost worlds of sinners, witches, sexual offenders, rebellious slaves, and Native American prophets from the seventeenth to nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.

L/R 346. (AFRC346, GSWS346) Gender in Modern American History. (B) Peiss.

This course explores how immigration, industrialization, racial segregation, and the growing authority of science transformed the fundamental conditions of women's lives in the late nineteenth and early twentieth centuries. Building on previous efforts by female reformers to perfect society, women at the turn of the century organized large social movements dedicated to improving the lives of women and children and gaining public access to political power. We will examine the fruits of this activism as well as the consequences of subsequent events for the rise of several important social movements in the latter half of the century -- including civil rights, women's liberation, and gay rights -- in which women played a vital role. The course concludes with an assessment of feminism in the present day, with special emphasis on the responses of younger women to its legacy.

L/R 349. (GSWS349) History of Sexuality in the U.S. (C) Peiss.

This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identities and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.

This course will explore the role of peoples of African descent in the making and transformation of the Atlantic world between the revolutionary era of the late 18th century, which saw the establishment of the first black republic in the Western Hemisphere, and the early decades of the 20th century, when a new pan-African consciousness emerged. We will look at the roles that slavery and the slave trade played in marking the boundaries of a black Atlantic, and we will pay special attention to the part that people of African descent played both in struggles against slavery in the Americas and in the struggles to define the meanings of freedom and peoplehood there and elsewhere.

This class will focus on America's expansion into the Pacific around the turn of the century with the acquisition of Hawaii and the Philippines. It can deal with various issues, including the meaning of "frontier," colonialism, development of capitalist economies in the region, diplomacy, racism, migration, an American brand of Orientalism in encountering the "natives" and "heathens," and histories of the West and the Pacific Islands in general.

This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.

SM 371. (AFRC372, AFST373, NELC334) Africa and the Mid-East. (C) Troutt-Powell.

This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism--how the scramble for Africa dovetailed with the last decades of the Ottoman Empire--with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. The course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.

372. (AFST372, AFST542, HIST542) The History of Foreign Aid to Africa. (C) Cassanelli. Prerequisite(s): AFST/HIST 076, AFST 190, or AFST 256.

This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of 'foreign aid,' that era introduced ideas and
institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.

L/R 373. (URBS217) America in the 1960s. (A) Sugrue.

This course examines the political, cultural, and intellectual history of America between 1954 and 1974. It considers the civil rights movement, the New Frontier and Great Society, the Supreme Court and right politics, the rise of the New Right, the debate over Vietnam, student radicalism, sexual liberation movements, black power, the counterculture, the urban crisis, and white backlash. The course emphasizes the transformation of liberalism and the revitalization of conservatism, and the tensions between integration and separatism, between libertarianism and communitarianism that shaped the social movements of the sixties.

380. (JWST380, RELS320) Modern Jewish Intellectual and Cultural History. (C) Ruderman.

An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialist thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geiger, Hirsch, Herzl, Achaicha-Am, Baec, Buber, Kaplan, and others. No previous background is required.

History 394 is a comprehensive introduction to the last hundred years of China's relations with the world, with emphasis on American-Chinese relations, but within the necessary context of China's relations with other countries from Asia to Europe to Africa and elsewhere (as well as Washington's changing relations with Beijing). China's role in the world can be understood only when the full background and international context is made clear. This course has no prerequisites: freshmen and others lacking background will find it manageable and interesting. Students who have successfully completed this course will be well positioned to understand some of the most important of current events, and if they like, pursue the topics as careers (there will be no shortage, I assure you).

Although much will be said about diplomacy, and Chinese diplomatic strategy in particular, the mile-posts of the course will be a series of wars: World War I and its effects on China; the heroic Chinese war of resistance against Japan (1937-1945) in which, effectively without allies, the Chinese avoided defeat; the bitter Civil War that followed almost immediately (1946-1949) and brought Mao Zedong and his Communists to power while the predecessor Nationalist government fled to the island of Taiwan; then the Korean War (1950-1953) and the close Chinese-Soviet alliance that followed; The Taiwan Straits Crises (1954-1955, 1958, 1996); the Chinese-Indian war (1962) the origin of a situation now heating up; the Sino-Soviet border conflicts (1969); the Vietnam War (1955-1975) which changed the United States profoundly while reorienting China internationally; the (at the time) little noticed Chinese invasion of Vietnam (1979) - and finally the increasingly tense situation today, between China and India, and China and her maritime neighbors from Japan to Indonesia, many U.S. allies.

This course will survey the history of relations among the great powers in East Asia from 1600 to the present. Special emphasis will be placed upon the peculiarities of cross-national exchange in Asia (as compared to Europe), particularly the difficulties of relations among states possessing fundamentally different cultural traditions. We will explore the many informal, as well as formal, means of diplomacy in Asia over the past 400 years.

Departmental Honors Program (398, 400-401)

SM 398. Junior Honors in History. (B)

Open to junior honors candidates in history. Introduction to the study and analysis of historical phenomena. Emphasis on theoretical approaches to historical knowledge, problems of methodology, and introduction to research design and strategy. Objective of this seminar is the development of honors thesis proposal.

SM 400. Senior Honors in History I. (E)

Open to senior honors candidates in history who will begin writing their honors thesis during this seminar.

Undergraduate Upper Level Courses (403-499). Open to Graduate Students

SM 411. (COML411, ENGL234) Introduction to Written Culture, 14th - 18th Centuries. (C)

Chartier/Stallybrass.

SM 414. Human Rights and History. (C) Nathans.

The idea of universal, inalienable rights---once dismissed by the philosopher Jeremy Bentham as "nonsense upon stilts"---has become the dominant moral language of our time, the self-evident truth par excellence of our age. Human rights have become a source of inspiration to oppressed individuals and groups across the world, the rallying cry for a global civil society, and not least, a controversial source of
legitimation for American foreign policy. This seminar asks: how did all this come to be? We will investigate human rights not only as theories embodied in texts, but as practices embedded in specific historical contexts. Are human rights the product of a peculiarly European heritage, of the Enlightenment and protestantism? How did Americans reconcile inalienable rights with the reality of slavery? Did human rights serve as a "civilizing" mask for colonialism? Can universal rights be reconciled with genuine cultural diversity? Through case studies and close readings, the seminar will work toward a genealogy of human rights.

A survey based solely on primary sources of the main currents of seventeenth-century European thought: the criticism of inherited systems and of the authority of the past; skepticism, rationalism; empiricism; and the rise of the new natural philosophy. We will study deep conceptual change as an historical phenomenon, examining works that were both profoundly influential in the seventeenth-century and that are of enduring historical significance. There are no prerequisites, and one of the goals of the course is to make seventeenth-century thought accessible in its context to the twenty-first-century student.

416. (COML416) European Intellectual History in the 18th Century. (B) Kors.

A survey based solely on primary sources of the main currents of eighteenth-century European thought: the "Enlightenment," deism; natural religion; skepticism; evangelical revival; political reform; utilitarianism; naturalism; and materialism. The course will focus on works widely-read in the eighteenth century and of enduring historical significance. There are no prerequisites, and one of the goals of the course is to make eighteenth-century thought accessible in its context to the twenty-first century.

SM 418. (COML418) European Intellectual History since 1945. (B) Breckman.

This course concentrates on French intellectual history after 1945, with some excursions into Germany. We will explore changing conceptions of the intellectual, from Sartre's concept of the 'engagement' to Foucault's idea of the 'specific intellectual'; the rise and fall of existentialism; structuralism and poststructuralism; and the debate over 'postmodernity.'

420. European International Relations from the Age of Enlightenment to the Great War. (A) McDougall.

This course will examine the international politics of Europe in the 18th and 19th centuries, up to the outbreak of World War I. During these centuries, the European great powers experienced significant internal transformations and also a revolution in their relations, both of which reinforced and accelerated each other. In the process, Europe asserted a dominant position in world politics, but also sowed the seed for the terrible catastrophes of the 20th Century. The course will address this transformation of European diplomacy with special attention to the rivalries between the great powers, the impact of nationalism and emerging mass politics, the interplay between military and economic power, and the relationship between the European powers and the rest of the world.

421. Europe and the World since 1914. (D) Ogle.

This course looks at Europe's interactions with other world regions throughout the twentieth century. Over the course of roughly a hundred years, Europeans have shaped the fates of peoples living beyond the western world, for instance through the impact of two world wars, European colonialism, and the global Cold War. At the same time, European societies 'at home' were not left unaffected by these interactions. Even today, Europeans are facing the legacies of some of these histories in immigration and the politics of religion and secularism for example. The past century also saw a dramatic shift in Europe's position in the world - from dominance to a loss of influence in the shadow of the United States and more recently, China.

The course spends significant time covering the histories of world regions other than Europe. It furthermore considers some interactions and exchanges between world regions from a social and cultural point of view. Because the class spans roughly a century, the content has to remain introductory and general, although a very basic familiarity with 20th-century international history is helpful.

This survey course examines the outbreak, conduct, and aftermath of the First World War. The First World War put an end to the world of the 19th century and laid the foundations of the 20th century, the age of destruction and devastation. This course will examine the war in three components: the long-term and immediate causes of the First World War; the war's catastrophic conduct, on the battlefield and on the home front; and the war's devastating aftermath. While we will discuss military operations and certain battles, this course is not a military history of the war; it covers the social, economic, political and diplomatic aspects that contributed to the war's outbreak and made possible its execution over four devastating years. No preliminary knowledge or coursework is required.

L/R 430. Rise and Fall of the Third Reich. (A) Childers.

The meteoric rise of Hitler's NSDAP in Germany, the nature of Nazi rule, and the final collapse of the Third Reich. The first half of the semester analyzes the appeal of the NSDAP- who joined the party, who voted for it, and why. Nazi mobilization tactics, campaign strategy, and grass-roots techniques, the content of the party's social appeals. The second half of the course concentrates on the Nazis in power, their use of terror and propaganda, their ideological objective, everyday life in the Third Reich, the possibilities of resistance to the regime. Special attention will be devoted to Nazi Jewish policy and the step that led to the "Final Solution" and the Holocaust.

L/R 431. A World at War: World War II in Europe and Asia. (B) Childers.

This course will examine the diplomatic origins, military course and domestic implications of World War II.

SM 440. (URBS420) Perspectives on Urban Poverty. (C) Fairbanks.

This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of
course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constrains meaningful channels of action in urban poverty policy and practice interventions.

A survey of the development of American colonial society, 1607-1750, with emphasis on the regional differences between life in early New England, the Mid-Atlantic, and the South, as well as the relationships between British colonists, Native Americans, and African Americans.

As a number of historians have observed, the American Revolution now may seem to have been the inevitable culmination of political, economic, and cultural changes underway in the eighteenth century. But for many whose lives were altered by its disruptive contours, it was more improbable than inevitable. How, then, are we to make sense of the Revolution? What were its causes? Its progress? Its extended "settlement," or period of resolution and questions during the course of the semester, we will need to keep our eyes open to changes afoot in many social fields: the ascendency or democratic and egalitarian thought; the widespread development of consumerism and market capitalism; the linked processes of rebellion and nation-building; and the economic and strategic progress of the conflict itself.

God and Nature examines the place of the natural world, medicine, and science in Jewish thought from antiquity to the modern era. It looks especially at a body of primary sources in Hebrew written during the age of the so-called "scientific revolution" and during its aftermath. The course is a seminar open to undergraduate and graduate students with a reading knowledge of classical Hebrew. Students without Hebrew with special interest in the subject might enroll with special permission from the instructor.

451. The U.S. and the World since 1898. (C) Offner.
This class examines the emergence of the U.S. as a world power since 1898, and considers both the international and domestic consequences of U.S. foreign relations. In one respect, the twentieth century was a strange time to become a global empire: it was the period when colonial systems centered in Europe, Russia, Japan, and Turkey collapsed, and new nations emerged throughout Africa and Asia. This class explores the changing strategies of military, economic, and political intervention that the U.S. pursued as colonization lost legitimacy. Within that framework, the class invites students to think about several questions: How did the idea and practice of empire change over the twentieth century? How did the United States relate to new visions of independence emerging in Africa, Asia, and Latin America? How did global interactions both inform and reflect racial ideology in the United States? Finally, how did international affairs transform U.S. politics and social movements?

452. (INTR290) Topics in International Relations. (C) STAFF.

SM 455. (PPE 475, SOCI450) Topics in American History. (C) STAFF.

This seminar will examine the experiences of recent emigrants and refugees from Africa, including many now living in the city of Philadelphia and the surrounding region. In addition to reading some of the historical and comparative literature on migration, ethnic diasporas, and transnationalism, students will have the opportunity to conduct research on specific African communities in Philadelphia or elsewhere in North America, Europe, or the Middle East. African emigrants' relations with both their home and host societies will be explored and compared with the experience of other immigrant groups over the past century. Topics include reasons for leaving Africa, patterns of economic and educational adaptation abroad, changes in gender and generational roles, issues of cultural and political identity, and the impact of national immigration policies.

SM 490. (GRMN581, JWST490, RELS429) Topics in Jewish History. (C) Staff.
Reading and discussing course on selected topics in Jewish history.

SM 590. (COML502, ENGL501, GRMN510) TPCS IN LANG AND LIT. (A) Staff.

Graduate Courses (500-999)

SM 501. The Nature of Sex. (C) Brown.
What is natural about sex, gender, sexuality and reproduction? This course examines a range of social science, feminist, and historical theories that try to make sense of some of the most intimate and seemingly timeless features of the human experience: the difference between the sexes, the relationship between gender and anatomical sex, and the emotional and social dynamics of reproduction. Among the topics we will consider are the relationship between public and private life; the historic connections between patriarchy and capitalism; reproduction as a social and cultural as well as a biological phenomenon; class, race, ethnicity, and religion as alternative sites of identity; citizenship, legal personhood and contract; the dynamics of empire and conquest; feminism; sexuality; the history of the body; visual culture; postmodernism, poststructuralist, and postfeminist ways of thinking about sex and gender; the current debates about the meaning of marriage; and the challenge presented by transgender lives. The course is designed for graduate students but open to undergraduates with the permission of the instructor.

SM 530. (AFRC530) 20th Century Afro-American Historiography. (A) Staff.
This course will study major historical works on African American history for the post-1890 period. Emphasis on intellectual, political, and cultural history, and special attention to current debates about the relevance of this history and race generally to studies and students of United States history.

SM 533. (JWST533, RELS533) Topics in Ancient and Medieval Christianity. (B) Staff.
Topics vary.

SM 550. Topics in Jewish History. (C) Staff.
Reading and discussion course on selected topics in Jewish history.

Open to PhD students, this scholar-oriented seminar explores how academic researchers from different disciplines define researchable questions, craft research designs, and contribute to knowledge through an examination of important and/or recently published books and monographs with an urban focus. Required of all first-
and second-year CPLN doctoral students and those doctoral students enrolled in the Urban Studies Graduate Certificate Program, enrollment is limited to 15 students. Other doctoral students may enroll on a space available basis. Course requirements include completion of a major research paper on a topic selected in consultation with the instructor.

SM 610. (AFRC610, GSWS610, HSSC610, URBS610) Topics in American History. (A) Staff.
Reading and discussion course on selected topics in American history.

SM 620. (COML621, GRMN630, JWST620, RUSS618, SLAV623) Topics in European History. (A) Staff.
Reading and Discussion course on selected topics in European history.

SM 630. (EALC541, EALC726, EALC774, EALC780, SAST512) Topics in Asian History. (C) Staff.
Reading and discussion course on selected topics in Asian history.

SM 640. (NELC686) Topics in Middle Eastern History. (C) Staff.
Reading and discussion course on selected topics in Middle Eastern history.

SM 650. (AFRC650, AFST650) Topics in African History. (C) Staff.
Reading and discussion course on selected topics in African history.

SM 660. (AFRC527) Topics in Latin American and Caribbean History. (C) Staff.
Reading and discussion course on selected topics in Latin American and Caribbean history.

SM 668. (AFRC668) Colloquium in the History of Law and Social Policy. (A) Berry.
This is a course in the history of law and policy-making with respect to selected social problems. Discussion of assigned readings and papers will elaborate the role law, lawyers, judges, other public officials and policy advocates have played in proposing solutions to specific problems. The course will permit the evaluation of the importance of historical perspective and legal expertise in policy debates.

SM 670. (AFRC670, GSWS670) Topics in Trans Regional History. (C) Staff.
Reading and discussion course on selected topics in Transregional History.

Proseminars and Research Seminars

SM 700. Proseminar in History. (E) Staff.
Weekly readings, discussions, and writing assignments to develop a global perspective within which to study human events in various regional/cultural milieus, c. 1400 to the present.

SM 710. (LAW 969) Research seminar in American history. (C) Staff.
Research seminar on selected topics in American history.

SM 720. (COML721, RELS738) Research in European History. (C) Staff.
Research seminar on selected topics in European history.

SM 730. Research Seminar in Asian History. (C) Staff.
Research seminar on selected topics in Asian history.

SM 740. (AFRC740, AFST740, GSWS740) Research Seminar in Middle Eastern History. (C) Staff.
Research seminar on selected topics in Middle Eastern history.

SM 750. (AFRC710) Research Seminar in African History. (C) Staff.
Research seminar on selected topics in African history.

SM 760. Research Seminar in Latin American and Caribbean History. (C) Staff.
Research seminar on selected topics in Latin American and Caribbean history.

SM 770. (LALS771) Res Sem: Transregional. (C) Staff.
Research seminar on selected topics in Transregional history.
HISTORY & SOCIOLOGY OF SCIENCE (AS) {HSSC}

Listings for STSC, the undergraduate major in Science, Technology, and Society (STSC) follow HSSC 999.

This seminar surveys a variety of popular and scholarly approaches to the study of medicine and its history, ranging from traditional physician-centered narratives to more recent cultural and epistemological methodologies. The potential values of journalistic, sociological, anthropological, geographical and other approaches to the historical study of health, disease, and health care will be explored.

SM 504. Reading Seminar in History of Science. (A) Adams.
Survey of major themes and figures in the history of western science, technology, and medicine since the Renaissance, through reading and discussion of selected primary and secondary sources. Topics include: Kepler, Galileo, Bacon, Newtonianism, Pasteur, the Industrial Revolution, the rise of German science, etc. Concurrent attendance at STSC 1 lectures is recommended.

SM 505. Seminar in the History and Sociology of Science. (A) Staff.
Seminar for first-year graduate students, undergraduate majors, and advanced undergraduates. Reading will introduce the student to current work concerning the effect of social context on science, technology, and medicine.

SM 508. Knowledge in Motion. (M) Kucuk.

SM 509. Oral History. (M)

This course will review major developments in biomolecular sciences and many historians of science, technology and medicine have embraced the study of popular culture in recent years. They have drawn on a rich literature in mainstream history, on the history of reading, of the book, of museums, of oral culture, journalism, theater, and of the mass media, including radio and television. Some have even proposed that popular culture provides insights into elite knowledge systems that are not accessible in other kinds of sources, thus privileging what is publicly known over the traditional private textual, visual and material records of the archive or museum. In this graduate research seminar we will be exploring the relevance of the study of popular culture to the history of science, technology and medicine. Participants will write an original research paper in which they draw on popular culture as a resource for the interpretation of practices, theories and material resources in natural knowledge systems. Readings will generally focus on surveys that explicitly discuss methods, though we will also read some primary sources possibly including science fiction texts, memoirs of patients, engineers, physicians and scientists, gee-whiz popular science books, and didactic books intended for children.

SM 519. Topics in the Social History of Knowledge. (M) Tresch.
This reading seminar will cover writings on the social history of knowledge that are often mentioned by historians of science but less often read; it will give students a chance to read and discuss authors who are neglected, trendy, difficult, and/or foundational in this field. We will begin with Lovejoy's Great Chain of Being and critiques brought against it, moving to classic histories of scientific ideas with a focus on "mechanical philosophy" followed by recent rethinkings of "the Scientific Revolution." We will then visit major schools of historical interpretation: Foucault's genealogies of knowledge and power, Marxist criticism and the Frankfurt School, Max Weber's analysis of rationalization and the values of science, along with philosophical approaches to technoscience, biopower, the state of exception and artificial life. Throughout, our guiding questions will be the relationship between scientific knowledge and institutions, practices, technologies and values, as well as the connection between local case studies and the "big picture" of science and technology in the modern world. The seminar is open to graduate students from any discipline who want to engage critically with these works.

SM 527. (COML525, PHIL525) Topics in Philosophy of Science. (M) Staff.
Topics will vary.

SM 528. (GSWS528) Gender and Science. (M) Lindee.
With a special focus on methods, this course explores the rich literature on gender and technical knowledge.

SM 529. Readings in Genetics and Genomics. (M) Lindee.

This is a graduate reading seminar in which we will be trying to understand how science and imperialism shaped each other in helping to create the modern period (we will concentrate on the period 1750-1900). We will look at the ways in which the modern sciences took shape, paying particular attention to new schemes for naming various natural kinds (from animals, plants and people to chemical elements and electrical units) and at the types of scientific work (especially collecting, classifying and setting standards) that are the prerequisites for new systems of names.

In addition to analyzing specific examples, both of particular sciences and of particular imperial/colonial situations, we will be taking a critical look at some of the explanatory and theoretical models of science in its imperial context that have been offered by historians and sociologists. And we will be discussing whether such models help or hinder historians in their work.

SM 536. (SAST536) Imperial Medicine in the British World. (M) Mukharji.

SM 546. (SAST586) Making India Modern. (C) Mukharji.

This seminar surveys a variety of popular and scholarly approaches to the study of medicine and its history, ranging from traditional physician-centered narratives to more recent cultural and epistemological methodologies. The potential value of journalistic, sociological, anthropological, geographical, and other approaches to the historical study of health, disease and health care will be explored.

SM 550. The Information Sciences. (M) Staff.
This course will explore the emergence and widespread adoption in the early Cold War-period of a set of interrelated tools, techniques, and discourses organized
around the concept of "information." These emerging information sciences included not only new disciplines such as cybernetics, information theory, operations research, and ecology, but also some traditional physical sciences - such as biology and chemistry - as well as a broad range of social sciences, including economics, political science, sociology and urban planning. The focus of the course will be on tracing the important structural changes in post-war science that encouraged the adoption of the rhetoric of information (if not its substance), as well as on extending the relevance of these developments to a wide range of topics in the history of science, medicine, and technology.

SM 565. Environmental History. (M) Staff.
A survey of recent and influential works in environmental history, including works from both within and outside the American environmental history canon. The focus is on situating emerging historiographical trends within the long-term development of the field and in relation to other closely allied fields, including the history of science, technology, and medicine, social and cultural history, urban history, agricultural history, world history, historical ecology, environmental anthropology, and ecocriticism.

SM 581. Social Science and American Culture. Staff.

SM 588. Humannities Beyond the Human. (M) Benson.

SM 594. (COML523, GRMN526, GSWS525) THE TROUBLE WITH FREUD.

Postcolonial Theories, building largely on Frankfurt School theorists, have critiqued the totalizing aspirations of what it calls 'Enlightenment Rationality'. Such critiques have also fed a range of critiques of Science. At the heart of such critiques is a rather restricted and plastic idea of Science as a singular, homogenous body of knowledge that has steadily promoted the disenchantment of the world. In this course we seek to destabilize this monolithic vision of science by revisiting its plural, heterogeneous histories. The course is particularly interested in exploring the historical entanglements between the sciences and the enchanted world of intangible entities such as spirits, ghosts and gods. The course will be divided into three broad sections. The first will deal with the theoretical critiques of 'Enlightenment Rationality' and 'Science' in postcolonial theory. The second will undertake a detailed and loosely chronological examination of the multifaceted entanglements of science and technology with the paranormal in the 19th and 20th centuries. Finally, the last section will explore the transformative aspects of scientific rationality in colonial and postcolonial contexts in a bid to understand the background that led to the postcolonial theorization.

SM 610. (HIST610) Colloquium in American History. (M) Staff.
Reading & discussion course on selected topics in American history.

SM 611. Reading Seminar History of Medicine. (M) Staff.
A survey of key issues in the development of Western medicine during the past two centuries. Historiographically oriented, it will emphasize areas of recent historical concern such as the role of the patient, the institutionalization of medical care, and shifting conceptions of disease. The course itself will include some lecture as well as discussion. A paper will be required.

SM 620. (GSWS620, HIST620, JWST620, RELS622) Colloquium in European History. (M) Staff.
This course will focus on problems in European political, social, cultural, and economic development from 1750 to the close of the second World War. Readings will be major works in the different fields of European historical scholarship, ranging from family to diplomatic history and covering a wide variety of methodological approaches.

SM 626. Research Seminar in History of Technology. (C) Staff.
This graduate seminar provides a structured environment in which each student executes an independent research project. Early class meetings focus on the craft of researching and writing scholarly articles. Later meetings are devoted to discussion of students progress on their research projects. Each student defines their own research topic in the history of technology, subject to the Professor's approval.

SM 629. Readings in Genetics and Genomics. (C) Lindee.

SM 677. Scientific Careers. (M) Staff.

SM 690. Publish or Perish. (M) Staff.

999. Graduate Independent Study. (C)
Available to doctoral students only.

SM 069. Computer Worlds. (C) Voskuhl.

SM 077. Voyages of Discovery. (M) Petrie.
Across the nineteenth century, voyages of sail and steam made possible the creation of empires and a globalized world, through the transportation of people and commodities. Similarly, this course is a voyage of discovery based on the study of actual ship's logs held in Penn's Rare Book collection. We will use these accounts to guide our investigation into the science, technology, medicine, economic and environmental history of life at sea and in the ports of call for these ships around the Indian and Atlantic Oceans. Collectively, the seminar will produce an online exhibition built on logs, diaries and other sources held at Penn, in other local collections and gleaned from archives around the world.

This course examines contemporary environmental issues such as energy, waste, pollution, health, population, biodiversity and climate through a historical and critical lens. All of these issues have important material, natural and technical aspects; they are also inextricably entangled with human history and culture. To understand the nature of this entanglement, the course will introduce key concepts and theoretical frameworks from science and technology studies and the environmental humanities and social sciences.

169. (ENVS169) Engineering Planet Earth. (C) Etienne Benson.
SM 308. Science, Technology and Global Capitalism. (C) Staff.

Modern capitalism has been defined by the circulation of commodities, from gold in the 16th century to sugar in the 17th, tobacco in the 18th, cotton in the 19th, oil in the 20th, and financial derivatives in the 21st. But the world is always messy and complex, rather than neatly divided into products and goods. How, why, and for whose benefit do we divide nature into the abstractions of the marketplace? Who holds power over where, why, and how that happens? In this seminar, we'll use a wide range of scholarship from the humanities, social sciences, and the sciences, along with primary texts and other sources, in order to understand the close links among global capitalism, science and technology, and the natural world.??

SM 310. Futurology. (M) Adams.
Prerequisite(s): STSC 001, STSC 110.

This seminar will explore past attempts by scientists and visionaries to predict the future. After exploring the nature and methodological problems inherent in prognostication that have caused most such attempts to fail, we will focus on a series of interesting essays, stories, and visionary works that seem to have successfully foreseen aspects of the world we live in, and attempt to analyze what they got right, what they got wrong, and why. We will conclude with critical, historically informed analysis of some current scientific prognostications about our short, intermediate, and longer term destiny. Grading will be based on class participation, student reports, several short papers, and a final research paper.

SM 316. Science, Technology and Society in Modern East Asia. (M)

The course aims to survey the history of science and technology in East Asian countries-China, Japan and Korea-since the late 19th century. Since Japan was the only nation in East Asia that succeeded in modernizing itself by adopting Western science, technology and politics, it will be studied first. The Chinese and Korean cases then will be reviewed with different angles. The course will emphasize the mutual influence between science & technology and society to answer how these countries became major industrial powers in the 21st century.

SM 328. What is Prediction?. (M) Kucuk.

This course is an investigation into the notion of prediction from antiquity to the present. By looking closely at key practices from Homeric divination to modern actuarial science and from early modern astrology to contemporary climate models, the course seeks to historicize the way we engage with the future. As part of the course, students also explore the role that methodology, models, causation and big data have played in predictive practices. The readings include a mixture of primary sources, modern scholarship and journalism.

What is the relationship between technology and politics in global democracies? This course explores various forms of technology, its artifacts and experts in relation to government and political decision-making. Does technology "rule" or "run" society, or should it? How do democratic societies balance the need for specialized technological expertise with rule by elected representatives? Topics will include: industrial revolutions, factory production and consumer society, technological utopias, the Cold War, state policy, colonial
and post-colonial rule, and engineers' political visions.

SM 364. (HIST305) Technologies of Research: Digital Methods in Action. (M)

This course asks three questions: What is technology? What is research? And how does technology aid research? These three questions beg a fourth: how can we spend a semester on three questions? Well, the answers to each of these questions may seem apparent, but think about them for more than a few seconds and you'll be hard pressed to offer a satisfactory answer. The term technology conjures images of recent, micro-processors, robots, or the Internet. But think deeper about the terms meaning for a moment and you'll see that such ancient, elemental things as mathematics and the alphabet are technologies, too. Likewise, you'll find that something we have all done before researching an opaque and contestable term. The question of research gets at the very processes through which knowledge is produced.

SM 371. Emerging Technologies. (M) Roberts

SM 411. (HSOC411) Sports Science Medicine Technology. (M)

Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won't answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between "natural" and "performance-enhanced," work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth.

The course fulfills the Capstone requirement for the HSOC/STSC majors. Semester-long research projects will focus on "un-black-boxing" the metrics sport scientists and physicians use to categorize athletes' bodies as "normal" or "abnormal." For example, you may investigate the test(s) used to define whether an athlete is male or female, establish whether an athlete's blood is "too" oxygenated, or assess whether an athlete is "too" fast (false start). Requirements therefore include: weekly readings and participation in online and in-class discussions; sequenced research assignments; peer review; and a final 20+ page original research paper and presentation.

SM 436. (HSOC436) Biopiracy: Medicinal Plants and Global Power. (M) Mukharji

Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.

SM 442. (HSOC442) Hospital as Curing Machine. (M) Greene

This course examines the technological, scientific, and spatial evolution of the modern hospital from the miasmatic, vermin-infested medieval European hospital-as-alms house, to the late twentieth-century ideal of the modern hospital as a condenser of sophisticated technologies, scientific expertise, and Taylorist efficiencies. In so doing, we will see how designers of hospital space, consciously or not, have striven to realize the mechanized, technological vision of the hospital as curing machine a phrase first invoked by 18th century French surgeon and anatomist Jacques Tenon. While the early nineteenth-century hospital had been a locus for fears about contagion, death, and disease in a pre-germ theory world, through its eventual integration of antiseptic practices, spatially produced zones of medical expertise (the operating suite, the laboratory, pediatric and maternity wards), novel technologies (incubators, hyperbaric chambers, x-rays, ultrasounds) and factory-like efficiencies the hospital came into its own as the epitome of rational modernist space. But, over the course of its evolution, the modern hospital other change as well: as an incubator for super-bugs, as an engine for projects of and renewal, and as a site for the cultural transformation of the meaning of birth, death, and health itself.

SM 443. Science and the Senses: Visual Culture, Material Objects. (M) Berkowitz

Using various types of readings, podcasts, and visits to area museums and centers of research, this course examines the relationships between seeing, sensing, and knowing in science. What roles do the senses and the material objects they observe play in production of science, and how has that changed historically? Are the senses reliable and standardizable, and if so, how can we talk about them with a common vocabulary? Are some more important than others? We will begin to answer those questions historically, following the role of the senses in science from the early modern period up to the present. We will look at ways in which vision was constructed as the primary sense during the Enlightenment and in ways in which it was made objective and, historically, as an incubator for super-bugs, as an engine for projects of renewal, and as a site for the cultural transformation of the meaning of birth, death, and health itself.

SM 461. (HSOC461) The Child in the City. Greene

This course examines the problem of the child in urban space in 19th and 20th century European and American discourses. This course does not propose to recover the subjective experience of the child but, rather, views the child as an object around which numerous adult anxieties connected to industrialization, urbanization, and modernity itself cohered. Discourses on public health, environmental pollution, sexuality, criminality, and racial degeneration all focused their attention, anxieties, and energies on how to deal with the unique vulnerability of the child in modern urban space. This interdisciplinary course focuses specifically on atmospheres, environments, and architectures in urban settings as diverse as Chicago, New York, Paris, and London. We will examine how the built environment was envisioned as part of a set of critical technologies for resolving the threat that urban space posed to the child. We will explore objects and envir as diverse as tenement babycages, war-time floating hospitals, open-air schools, adventu playgrounds in post-
WWII London, car-less communities in Radburn, NJ, and American chili books about urban blight and renewal.

This course will explore the relationship between technological innovation and business history. By looking at a series of case studies of technologically driven firms - both U.S. and international -- we will develop a more sophisticated and historically informed model of the relationship between technological, economic, legal and political developments in the late 19th and 20th centuries.

SCIENCE, TECHNOLOGY, & SOCIETY (STSC)

During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they related to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a "Western Civ" course with a difference, open to students at all levels.

L/R 002. (HIST036, HSOC002) Medicine in History. (A) History & Tradition Sector. All classes. Barnes.

This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole -- recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down" or "from the bottom up," this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.

003. (HSOC003, SOCI033) Technology and Society. (B) Society Sector. All classes. Staff.

Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we'll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.

SM 013. The Scientific Revolution. (C) Adams.

The Scientific Revolution of the sixteenth and seventeenth centuries created the intellectual, philosophical, social, and institutional foundations of modern science, fundamentally changing the way we see the universe and our place within it. In this seminar we will take a biographical approach, exploring that revolution by examining the lives, ideas and achievements of some of the period's most renowned and consequential thinkers, among them Copernicus, Kepler, Galileo, Bacon, Descartes, and Newton. In the course of our biographical explorations, we will also consider the rise of scientific societies, the "scientific method," "experimental philosophy," the impact of new technologies (including the telescope and the microscope), and the political and religious implications of the new scientific world view.
A discussion of some philosophical questions that naturally arise in scientific research. Issues to be covered include: The nature of scientific explanation, the relation of theories to evidence, and the development of science (e.g., does science progress? Are earlier theories refuted or refined?).

L/R 110. (COML074, ENGL075, HIST117, HSOC110) Science and Literature. (B) Arts & Letters Sector. All Classes. Adams.
This course will explore the emergence of modern science fiction as a genre, the ways it has reflected our evolving conceptions of ourselves and the universe, and its role as the mythology of modern technological civilization. We will discuss such characteristic themes as utopias, the exploitation of space and time, biological engineering, superman, robots, aliens, and other worlds—and the differences between European and American treatment of these themes.

Darwin's conceptions of evolution have become a central organizing principle of modern biology. This lecture course will explore the origins and emergence of his ideas, the scientific work they provoked, and their subsequent re-emergence into modern evolutionary theory. In order to understand the living world, students will have the opportunity to read and engage with various classic primary sources by Darwin, Mendel, and others. The course will conclude with guest lectures on evolutionary biology today, emphasizing current issues, new methods, and recent discoveries. In short, this is a lecture course on the emergence of modern evolutionary biology—its central ideas, their historical development and their implications for the human future.

This course covers the history of biology in the 19th and 20th centuries, focusing on the development of evolutionary biology, cell biology, embryology, genetics, and molecular biology. We will have three main goals: first, to delineate the content of the leading biological theories and experimental practices of the past two centuries; second, to situate these theories and practices in their historical context, noting the complex interplay between them and the dominant social, political, and economic trends; and, third, to critically evaluate various methodological approaches to the history of science. The course is intended for students with some background in the history of science as well as in biology, although no specific knowledge of either subject is required.

SM 108. (COML224, PHIL225) Introduction to Philosophy of Science. (M) Domotor.

152. (HSOC157) Chinese Science. (C) Staff.
This course explores the social, cultural and political contexts of scientific knowledge in China over the course of two millennia, through a diverse cast of historica actors spanning emperors and midwives, Buddhist monks and Jesuits, eminent authorities and everyday people. We will examine the evolution of various learned traditions (astronomy, alchemy, medicine, natural history) that sought to define and understand the heavens, the earth, and the body - and the manner in which those forms of knowledge could be deployed for the good of state, society or individual. In the process, we will compare Chinese experience to other cultures and evaluate the status and dynamics of Chinese traditions in the modern era of Western political and scientific dominance. No prior knowledge of Chinese history is assumed. Class discussion will be a part of each meeting.

Certain new technologies are greeted with claims that, for good or ill, they must transform our society. The two most recent: the computer and the Internet. But the series of social, economic and technological developments that underlie what is often called the Information Revolution include much more than just the computer. In this course, we explore the history of information technology and its role in contemporary society. We will explore both the technologies themselves—calculating machines, punched card tabulators, telegraph and telephone networks, differential analyzers, digital computers, and many others—and their larger social, economic and political contexts. To understand the roots of these ideas we look at the prehistory of the computer, at the idea of the post-industrial or information society, at parallels with earlier technologies and at broad historical currents in the United States and the world.
179. (ENVS179, HSOC179) Environmental History. (M) Greene.
The field of environmental history studies human history in the context of the biological and physical setting we call "nature" or "the environment." It focuses on the interactions between natural actors (landscapes, weather, plants, animals, microorganisms) and human actors. Just as human actors have shaped the biological and physical world, so actors from the biological and physical world have shaped human history. This course explores the history of American environmental change as a set of questions about how and why the natural world have changed over time. Topics include: European encounters with the Americas, industrialization, conservation of natural resources, preservation of wilderness and wildlife, urban pollution and health, the rise of environmentalism, and the impact of warfare. In each case we will ask how natural actors and Americans' ideas about nature interacted with political institutions, economic arrangements, social groups and cultural values, in order to explain the course of environmental change. We will explore the multiple, shifting meanings of "nature," trace changes in environmental use and impact, and evaluate past events in light of current ideas about sustainability.

182. (GSWS182) Social Science and American Culture. (C) Staff.
This course examines the role of social science in the United States during the 20th century. There have been popular social scientific theories since the early 19th century, when the craze spread for interpreting individuals' character by feeling the bumps on their heads. But popular social science is really a 20th century phenomenon. And popular culture influenced academic research. Our coverage cannot be comprehensive. We have insufficient time to treat all human sciences equally. For example, there is enormous popular interest in paleoanthropology and archaeology, but we will not discuss these in class—although you might choose to write your research paper for the course on a specific aspect of one of these disciplines.

Over the last two centuries, scientists have produced a broad range of knowledge about the physical world, from light to electromagnetism to atoms to nuclei, facilitating or explaining an ever increasing mastery over the natural world. Because of their success, these developments played an important role in forming our views of how to effectively generate knowledge of the natural world. This course will examine some of the major developments in the physical sciences during the 19th and 20th century, asking how that knowledge and the means by which it was produced related to institutions, technical practices and broader cultural knowledge and knowledge production to explore how past practices have, or have not, left their traces in later science. The course will meet twice a week for lecture and discussion. Readings will consist of Pursuing Power and Light: Technology and Physics from James Watt to Albert Einstein by Bruce J. Hunt When Physics Became King by Iwan Rhys Morus Night Thoughts of a Classical Physicist by Russel McCormach as well as articles from a course reader. Students will produce three short papers (about three pages) and a term paper (about ten pages)

In this survey we explore the relationships between technical knowledge and war in the nineteenth and twentieth centuries. We attend particularly to the centrality of bodily injury in the history of war. Topics include changing interpretations of the machine gun as inhumane or acceptable; the cult of the battleship; banned weaponry; submarines and masculinity; industrialized war and total war; trench warfare and mental breakdown; the atomic bomb and Cold War; chemical warfare in Vietnam; and "television war" in the 1990s.

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today.

SM 250. (ANTH260, SOCI260) Cyberculture. (C) Staff.
Computers and the internet have become critical parts of our lives and culture. In this course, we will explore how people use these new technologies to develop new conceptions of identity, build virtual communities and affect political change. Each week we'll see what we can learn by thinking about the internet in a different way, focusing successively on hackers, virtuality, community, sovereignty, interfaces, algorithms and infrastructure. We'll read books, articles, and blogs about historical and contemporary cultures of computing, from Spacewar players and phone phreaks in the 1970s to Google, Facebook, World of Warcraft, WikiLeaks, and Anonymous today. In addition, we'll explore some of these online communities and projects ourselves and develop our own analyses of them.

SM 269. Computers, Ethics, and Social Values. (M) Staff.
This course will explore the various social implication of information technology: social, cultural, political and economic. Topics will include technology policy, organizational change, globalism and the digital divide, intellectual property rights, Linux and the free software movement, cyber libertarianism, and the rise and fall of the dot.com economy.

Energy is at the center of many discussions of today's world. How central is an apparently unlimited supply of energy to a healthy economy? What is the importance of sources of energy supply to national security? How can we expend the energy we need to foster human life as we know it without allowing climate change to disrupt the existing global environments that sustain the lives of humans and other living species in accustomed ways? How crucial is the current level of energy use to patterns of American consumption, and how willing are Americans to alter their consumption habits in order to reduce energy use? What is the connection between various sources of energy and the relationships of social, economic, and political power that exist in the U.S. today. This course will examine changes in energy sources, energy use, and energy technologies across American history in order to help students understand how the U.S. and the world arrived at its present situation with regard to energy and to understand the complex technological, environmental, social, economic, and political challenges implicit in any effort to modify the current trajectories of energy use.

SM 288. (SOCI282) Knowledge and Social Structure. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Staff.
Throughout human history, the relationships of science and religion, as well as of science and magic, have been complex and often surprising. This course we cover
topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.

299. Independent Study. (C)

This seminar will explore a wide range of themes at the intersection of globalization and therapeutic cultures in South Asia and amongst South Asian diasporas. To begin with the course understands 'supraterritoriality' as the key feature of globalization and proceeds to interrogate the myriad ways in which this supraterritoriality was produced, consumed, used an dabused within the therapeutic cultures that have been, and on occasion still are, available in South Asia—both in reality and symbolically. Each week through a specific case study, framed by a few theoretical readings, we will attempt to deepen and problematize the simple definition of globalization with which we start the course. Throughout the course there will be a strong emphasis on combining case study-based empirical material and theoretical interventions in Cultural Theory and Postcolonial Studies.

The course explores the historical development of traditional weapons of mass destruction such as chemical, nuclear and biological agents, in addition to newer and seemingly non-traditional weapons such as land mines and civilian aircraft that can also be employed to cause large numbers of injuries and deaths among civilian and military populations. Through case studies in technology and public health, students will evaluate the medical, scientific, environmental, and cultural ramifications of these weapons and their effect on human heal and society by analyzing the rise of the military-industrial-academic-complex in twentieth century America.

SM 318. Experiment in the Modern Life Sciences. (M) Staff.

Experiments on living material are now controversial for ethical reasons (think stem cells, animal experimentation and animal rights, etc), but the scientific merit of experimenting on the living is rarely challenged. We tend to take for granted that experiments are the best way to understand biology, but in the nineteenth century, the opposite was true. Why has this changed, and what are the implications of the change? Is the appearance of consensus around the role of experiment in biology simply a false impression? These are the sorts of questions that this course will explore through popular, scientific, and historical literature.

SM 322. (ENGL248) Edgar Allan Poe's Science. (C) Tresch.

You probably read Poe first in junior high, and his works are often treated as juvenile: cheap thrills, campy horror, self-indulgent longing. But Poe also engaged with the most serious issues faced by his period, from politics and philosophy to industrialization and science. His works dealt with these concerns in a variety of ways, while reflecting all along about the conditions of literature in a newly commercialized marketplace. This seminar will look at Poe's literary innovations through the lens of the developing technology and science of the early republic. It will examine the political importance of new institutions for research and diffusion as well as various emerging venues for popular science, including the journals in which Poe wrote as an early science reporter. The course thus explores the peculiar situation of science and technology in the early USA, at the same time as it reveals the varied and complex literary production of Poe in a new and revealing light.

This course explores the gendered nature of science as social endeavor, intellectual construct and political resource. We consider the rise of gentlemanly science, masculinity and the arms race, the notion of a "Successor science" grounded in feminist theory, and the historical role of gender in defining who can do science and what counts as scientific data. We also explore how science has interpreted male-female differences. Our goal is to understand the profound impact of social place in the history of science, and thereby to understand the social nature of scientific knowledge.

SM 368. (GRMN239) Sustainability & Utopianism. (M) Wiggin.

This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The "origins of environmentalism" lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

SM 379. (HSOC379) Animals in Science Medicine Technology. (C) Greene.

This course examines different ways of knowing about animals, categorizing animals and relating to animals, through the sciences, medicine, and technological practices. It will explore the history of animals in human society, changes over time in human-animal relationships, and different sites of human-animal relationships and of knowledge production about animals. Topics may include: domestication, animal breeding, work animals and pets, animal archaeology, veterinary medicine, zoos, wildlife science and management and animal welfare. This is a seminar that will include visiting speakers, workshop exercises, films, and on-campus field trips. Student will write several short papers and a research project.

SM 388. Who Owns the Past. (M) Staff.

Stories told about the past have long been understood as moral lessons. And historical narratives have also been susceptible to different readings by opposed parties. But the strength of appeals to the past is not a constant: historical experience has at some times and in some places been seen as irrelevant to practical action. Today, in the United States as well as in many other parts of the world, appeals to historical precedent carry considerable weight, and are made for many purposes. For example, the dissolution of Yugoslavia, has been explained as a result of centuries-old ethnic tensions, yet when Yugoslavia was created at the end of World War I, objections were countered with the anthropological judgment that the new nation's ethnic divisions were not really significant. Or consider the debate over the ownership of the bones of so-called "Kennewick Man,"
which pitted Native Americans against scientists over questions of identity and legal claims. Or, historical generalizations in biology over the value of Darwin's theory, resulting in political debates in local and school board elections and presidential contests. This course will discuss the uses of history in contemporary and past situations, drawing examples from the United States, Europe, the Middle East, and Africa.

SM 400. Undergraduate Seminar in Science Technology and Society. (B) Staff.
This is a capstone seminar for STSC majors, and a required seminar for any STSC junior who wishes to write a senior thesis for honors in the major. It is designed to provide the tools necessary to undertake original research by guiding students through the research and writing process. Students will produce either a polished proposal for a senior thesis project, or a completed research paper by the end of the term. Although each student will work on a different topic, the class will focus on general aspects of historical, and social scientific research and guide students through a close reading of key texts in science and technology studies.

An exploration of the interface between science and literature, including: the role of genre, narrative form, metaphor, and style in science; the depiction of science and scientists in fiction; the role of popular culture in reflecting--and creating--the social meaning of science and technology; and the use of science fiction in teaching the history of science, technology and medicine. Themes will include utopias, robots, supermen, aliens, time travel, alternate histories, and future histories.

SM 413. (HSOC413) Perfect Bodies. (C) Linker.

SM 426. (PHIL426) Philosophy of Psychology. (M) Hatfield.
Is there a science of psychology distinct from physiology? If there is, what is its subject matter? What is the relationship between scientific psychology and traditional philosophical investigation of the mental? Examination of these questions is followed by analysis of some concepts employed in cognitive psychology and cognitive science, particularly in the fields of perception and cognition.

SM 471. (HSOC471) Guns and Health. (A) Sorenson.
The purpose of this course is for students to gain an understanding of the role of guns in health, and population and prevention approaches to violence. The course will include a focus on policies and regulations related to firearms, the primary mechanism by which violence-related fatalities occur in the U.S. We will address the life span of a gun, from design and manufacture through to use. In addition, we will address key aspects of the social context in which firearms exist and within which firearm policy is made.

498. Honors Thesis. (A) Staff.

499. Undergraduate Independent Study. (C)
Available with all members of the department faculty subjects ranging from the history of anthropology to the sociology of institutions.
IMMUNOLOGY
(MD) {IMUN}

506. (MICR506) Immune Mechanisms. (A) Terri Lauffer, M.D. Prerequisite(s): Permission of instructor. 4 h. 1 c.u. Taught Monday, Wednesday, with review session on Friday. This is an introductory graduate course which surveys most areas of immunology. It is assumed that students have a background in biochemistry and molecular biology, and at least some familiarity with immunological concepts.

Topics covered include the major histocompatibility complex, structure of antibodies and T cell receptors, antigen-antibody interactions, the generation of diversity of immunoglobulins and B cells, antigen presentation, and immunological tolerance.

There will be two exams, both of which will require assessment and interpretation of experimental data and/or readings from the primary literature.

507. Immunopathology. (A) Schreiber. Prerequisite(s): MICR 100 or IMUN 506. 2 h.

The relationship between basic immunology and clinical immunologic diseases is emphasized. Course lecturers represent University faculty who are established investigators in immunological research and established clinical immunologists. Course topics include plasma protein systems; B cell, T cell, macrophage immunology; immunohematology; tumor immunology; benign and malignant, immunoproliferative disorders; neuro-immunology; pulmonary immunology; renal immunology; immune complex disease and immunoregulatory abnormalities.

508. Immune Responses. (B) Peter Felsburg, VMD., Ph.D. and Kate Sullivan, M.D., Ph.D. Prerequisite(s): IMUN 506 or equivalent and permission of instructor. Taught Monday, Wednesday & Friday, 9:00am-11:00am. 6 hours, 2 cu.

This course is designed to (1) extend the basic immunology principles addressed in 506, and (2) apply the fundamental principles of the mechanism of immune recognition and development presented in 506 to the immune response in health and disease in vivo. The course is designed as a series of minicourses which may change from year to year. Each minicourse will cover an important topic in immunology in detail. Students must take three minicourses over the Spring semester and must take at least one each from the basic and applied immunology categories (see below).

The course will be taught as formal lectures on Monday and Wednesday and a diThe minicourses will be taught as a combination of formal lectures and seminar-format discussions of relevant literature. Each minicourse will have a slightly different format. The minicourses will consist of 6 hours/week for 4 weeks. The semester will be divided into 3 sessions with between 2 to 3 minicourses offered each session. Progress in the course will be evaluated by an exam/paper at the end of each minicourse and class participation. The exams will require students to incorporate the knowledge and thinking gained from the in depth analyses of these topics.

SM 520. Tutorials in Immunology. (A) Randy Cron, M.D., Ph.D. Prerequisite(s): A senior undergraduate, graduate or professional school course in Immunology. This tutorial course is designed to provide students with an in-depth knowledge of a specific branch of Immunology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their thesis projects or to expand on a topic that the student found interesting in one of their basic courses. The course is currently the only immunology elective and is, therefore, required for all Immunology Graduate Group students. It is also open as an elective to BGS students who meet the prerequisite. The tutorial course will be examined by the program director and the tutorial leader and the grade will be based on a written paper on the subject studied (5 to 10 typewritten pages) and by an oral presentation of the paper (15 to 20 minutes).

599. Immunology Faculty Research Seminar. (C) Dr. David Artis; Dr. Jonathan Maltzman. Prerequisite(s): Permission of Graduate Group Chair. Mandatory attendance at weekly research presentations by graduate group faculty.

605. Current Topics in Cellular and Molecular Immunology. (B) Philip Scott, Ph.D., and Laurence Turka, M.D. Prerequisite(s): IMUN 506 or permission of instructor.

Recent developments in basic cellular and molecular immunology are discussed by students using the current literature as a resource. This course reinforces and expands upon concepts presented in immunology 506. Students gain experience in critically evaluating current literature and orally presenting and defending their ideas.

In the first part of the course, students present one or two papers relevant to a current topic in immunology. In the second part, the students each select a research topic and write and defend orally a small research proposal. Course aims are to provide more in-depth knowledge in specific and timely areas of immunologic research. In addition, the course encourages the development of oral presentation skills and the ability to critically evaluate published research and the ideas of one's peers.

SM 607. Grant Writing. (B) Drs. David Allman and Mike Madaio. Prerequisite(s): IMUN 506, 605, and/or permission of instructor.

This course will introduce the student to basic principles of grant writing. In this regard a primary objective of the course is to teach you how to describe your ideas and experimental objectives in a clear and concise manner within the standard NIH grant format. To accomplish this, you will be required to write an NIH, "RO1" type grant proposal based on your current laboratory project.

609. (CAMB609) Vaccines and Immune Therapeutics. (A) David Weiner, Ph.D., and Paul Offit, M.D. Prerequisite(s): The course is intended for graduate students or Medical Students in various MS, Ph.D. or MD/Ph.D. programs on the campus as well as local scientists and professionals in the community. As a prerequisite students should have taken biology, biochemistry or immunology courses at the advanced college level. The goal of the Vaccines course is to expand on student's general understanding of the immune system and to focus this understanding towards the application of vaccination. Furthermore the course will give the student a sense of how these principles are applied to vaccine and immune therapeutic development. The course covers basic science as well as the Clinical, Ethical & Political implications of Modern Vaccines.

Initial lectures will review immune mechanisms believed to be responsible for vaccine induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism as well as vaccines for cancer. An appreciation for the application of laboratory science to the clinical development of vaccines is provided in the next section of the course along with lectures that focus on the ethical
implications of vaccines in different situations. The financial implications of specific vaccines and their impact on the global community, is a specific focus of the course.

The course is lecture style and will have a required reading list prepared in advance to provide the students background for the specific topic. Students will be graded by course participation as well as by a final written exam. The course is intended for graduate students or Medical Students in various MS, Ph.D. or MD/Ph.D. programs on the campus as well as local scientists and professionals in the community. As a prerequisite students should have taken biology, biochemistry or immunology courses at the advanced college level. A final project will be graded from all students. The final project is to propose in a written report a vaccine strategy for a current pathogen of importance that does not as yet have an effective vaccine. Strategies used should build on the material presented in the class lectures. The details of the final paper will be further discussed in class.

699. Laboratory Rotation. (C) Various Immunology Group Faculty. Prerequisite(s): Permission of instructor and immunology chair. Laboratory research conducted under a faculty advisor. Three different rotations covering usually the fall semester of the first year through the fall semester of the second year are required of all Immunology Ph.D. students. Students will defend the rotation research in their Preliminary Exams.

799. Independent Study.

899. Predissertation Lab.
INTEGRATED PRODUCT DESIGN

(EG) {IPD}

500. PRODUCT ENG BASICS.

L/L 501. Integrated Computer-Aided Design, Manufacturing and Analysis. (B) Prerequisite(s): MEAM 101, MEAM 150, and MEAM 210, or graduate standing in the School of Engineering, Design, or Wharton with similar experience.

The majority of today's engineered products move through an advanced computer-aided workflow which greatly speeds design and process time. This course will explore the fundamental components of this workflow through a combination of lectures, hands-on exercises, and a semester design project.

General course topics include: fundamental design principles, project definition and needfinding, advanced computer-aided design, rapid prototyping techniques, computer-controlled machining, and an in-depth exploration of the modern analysis and simulation tools that have revolutionized the way in which products are designed. Enrollment is limited.

503. (ARCH303) IPD FUNDAMENTALS.

504. (BE 514) Rehab Engineering and Design. (C) Prerequisite(s): Graduate students or permission of the instructor.

Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients.

509. Needfinding. (B)

Needfinding is an approach that puts people and their needs at the center of product development and business strategy creation. Over 90% of new products introduced into the marketplace fail. A good portion of these failures are due to lack of understanding of end consumers and their needs. To develop truly successful new products, it's not enough just to ask people what they need or want. Designers and engineers need tools and techniques to get beyond what people can explicitly state and determine their implicit needs. Needfinding is an approach for developing deep insights that provide strategic direction for corporations and open up new possibilities for product development. In this class students will gain a toolset from which to develop their own approaches to conducting research for design: learning how to think about other people, about culture, and about new perspectives. They will also learn tactical skills: how to define research questions, how to conduct observations and interviews, how to interpret results, how to synthesize them into fodder for design, and how to communicate their findings in a way that is compelling and actionable for designers, marketers, and business strategists.

This class is designed for graduate students and upper level undergrads with a specific interest in product design or design thinking.

511. Creative Thinking and Design. (A) It is recommended that undergraduates take MEAM 101 prior to this course.

This is a creative & iterative problem solving course that uses a series of mechanical design challenge projects to move students into the broad realm of unpredictable often incalculable time-constrained problem solving. It explores a wide variety of problem definition, exploration and solving "tools," and a variety of surrounding "design thinking" topics, such as ethics and the design of experience. Drawing and prototyping are used in the projects for ideation, iteration, speculation and communication.

514. (MEAM514) Design for Manufacturability. (B) Prerequisite(s): MEAM 101 or equivalent, MEAM 210 or equivalent, Senior or Graduate standing in the School of Design, Engineering, or Business with completed product development and/or design engineering coursework or related experience.

This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems.

515. (MEAM415, OIDD415) Product Design. (C)

This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype. The course is open to juniors and seniors in SEAS or Wharton.

L/L 516. (MEAM516) Advanced Mechatronic Reactive Systems. (B)

This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.

517. (OIDD416) Des & Dev Web-Based Prod. (C)

519. (ESE 519) REAL TIME EMBEDDED SYS. (C)

SM 521. (ARCH721) DESIGNING SMART OBJECTS. (C)

525. Ergonomics/Human Factors Based Product Design. (C)

Human Factors and Ergonomics knowledge is a critical component of a product designer or design engineer's toolbox. This course teaches the direct application of existing human factors/ergonomic data to the creation of new product designs. Applying human factors knowledge to problem solving for product design happens throughout the design process. It is a useful input as initial ideas begin to ut and as a way to verify completed concepts through directly documented user testing and design iteration. The course would be a mini-lecture/studio style course in which the students will work in class on assigned
structural stability, acoustics, wall system looking at critical issues of mass pre

530. (ARCH733) Building Product Workshop: Transwall. (C)
As Craig Vogel notes in The Design of Things to Come, "we are in a new economic age that is in need of a new renaissance in product development, on that leverages multiple minds working in concert." With this mindset, this interdisciplinary workshop guides students through the product design process from design brief to concept generation in one semester, working firsthand with Transwall, a leading manufacturer of demountable wall systems, to focus on a specific product need. The design opportunity looks for the next generation of pre-manufactured wall systems; getting away from field constructed walls and looking at critical issues of mass-produced wall systems; flexibility, mobility, structural stability, acoustics, transparency/opacity, and operability.

During the workshop, students will explore the context that creates the unique need for a new product and have an opportunity to conceptualize their design ideas through sketches, scale model studies and partial prototypes.

and a semester long interdisciplinary team project, this class will provide insight into the problem identification and product design processes, user needs research, intellectual property research, experience design, Industrial Design, Interface Design, brand development and product centric fundraising processes.

Specific knowledge areas to be explored: Product design processes, User needs research, Intellectual property research, Experience design, Industrial design, Interface design, Product Driven Financial development

551. Design Processes. (C)
This studio is structured for IPD students as an intensive, interdisciplinary exploration of Design as purposeful for Integrated Product Design. The goal of the studio is to give students a firsthand experience of various processes involved in creating successful integrated product designs. This first semester of the four-semester studio sequence focuses on giving students experience developing designs based on a range of starting points: form, function, materiality and manufacturing process. Students will practice design through rigorous, consistent processes for thinking through the evolution of their ideas. In this course, they will go through an entire design process from conceptualization to producing prototypes. They will be taught to focus on the specifics of their designs, causing them to be conscious of what drives their choices as designers and providing them with a wider range of tools to design from in successive projects. Course work will involve readings, assignments, class participation, in-class exercises, a mid-term presentation and a final submission.

552. Problem Framing. (B)
In the second semester of the four-semester studio sequence, we ask students to take a step back from what and how they are designing and ask the question of why they are designing it. We will teach them a rigorous process for understanding stakeholder needs and for translating those needs into implications for product design. They will begin to develop greater awareness of the personal, social, competitive and technological contexts that their products fit into, and to learn how to design for those contexts. They will develop the ability to dive into a topic and frame a design problem, and to understand the implications of how they frame the problem on what they design. Ideally, they will use this process to identify a problem or opportunity to work on for their final project. Course work will involve readings,
assignments, class participation, in-class exercises, and a final submission.

INTERNATIONAL RELATIONS
(AS) {INTR}

101. Transnational Issues in Global Politics. (C) Staff.
Transnational Issues in Global Politics This course is designed to provide students with an introduction to transnational issues and world politics and to acquaint them with some of the leading issues, theories, concepts and processes that shape and define world events. It is expected that students taking the course will gain an ability to analyze, understand objectively evaluate and appreciate the complex dynamic that is "global politics." In order to better understand other nations, their leaders and their motivations, the readings and lectures in the first segment of this course will examine the traditional and contemporary approaches to studying world politics. Next, we will focus on the instruments of conflict and cooperation and the forces of integration and fragmentation in the world today. Finally, we will assess some of the major international issues of our time (i.e. climate change, proliferation of weapons of mass destruction, genocide and human trafficking) and debate the prospects for bringing peace and prosperity to a world that is rife with conflict and poverty. The overriding challenge in this introductory course is to consider international relations from different perspectives and to be open and adaptive as you develop a deeper understanding of global issues and politics.

199. Independent Study. (C)

200. International Relations Theory & Practice.
A survey of theoretical and conceptual approaches to the study of International Relations as they are employed by analysts and practitioners in the field.

250. Political Risk Analysis. (C) Frank Plantan.
This course teaches students to apply social science theories and concepts together with futures methodologies (e.g. Delphi method; country risk assessments used by ratings agencies) to the challenges of addressing international political risks to the continuity, effectiveness and operations of business, government and other organizations in their international transactions.

290. (ASAM122, HIST365, HIST412, SAST282, SAST292) Topics in International Relations. (C) Staff.

350. Research Methods/Practice in IR. (M)
International Relations is concerned with both theory and practice so we employ a range of analytical tools to examine actors and events in world politics. The purpose of this course is to introduce students to the various research methods utilized by students and scholars in the field of IR including: case studies, historical - comparative and archival research, survey research, interviewing techniques, simulations, quantitative and statistical analysis.

SM 391. Senior Seminar For Thesis Research. (B) Staff. Prerequisite(s): INTR 390.
Seminar in international relations. Second semester of a two semester sequence including review of advanced international relations theory and research methods for the preparation of the senior thesis.

399. Independent Study for Thesis Research. (C)
JEWISH STUDIES PROGRAM

(AS) {JWST}

Jewish Studies at Penn is an interdisciplinary program which draws upon the methodologies and expertise of a wide range of university departments, including Near Eastern Languages and Civilizations, Religious Studies, History, Anthropology, Political Science, English, Folklore, Sociology, Germanic Languages and Literatures, and the Law School. Please look for courses under listings for these departments.

SM 016. (GRMN022, MUSC018) FRESHMAN SEMINAR. (M)

031. (YDSH101, YDSH501) Beginning Yiddish. (A) Staff.
Yiddish is a 1000-year-old language with a rich cultural heritage. YDSH 101, the first in the Beginning Yiddish language series, introduces the student who has no previous knowledge of the language to the skills of reading, writing, and speaking Yiddish. Starting with the alphabet, students study grammar, enriched by cultural materials such as song, literature, folklore, and film, as well as the course on-line Blackboard site, to acquire basic competency. By the end of the first semester, students will be able to engage in simple conversations in the present tense, know common greetings and expressions, and read simple texts, including literature, newspapers, songs, and letters. Students are encouraged to continue with YDSH 102/ JWST 032/ YDSH 501 in the Spring. Four semesters of Yiddish fulfill the Penn Language Requirement.

032. (YDSH102, YDSH502) Beginning Yiddish II. (B) Staff. Prerequisite(s): JWST 031 or permission of the instructor.
In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.

033. (YDSH103, YDSH503) Intermediate Yiddish I. (A) Hellerstein. Prerequisite(s): GRMN 402 or equivalent.
A continuation of JWST 032/ YDSH 102, Beginning Yiddish II, this course develops the skills of reading, writing, and speaking Yiddish on the intermediate level through the study of grammar and cultural materials, such as literature, newspapers, films, songs, radio programs.

034. (YDSH104, YDSH504) Intermediate Yiddish II. (B) Hellerstein. Prerequisite(s): GRMN 403 or permission of the instructor.
Continuation of JWST 033; emphasizes in reading texts and conversation.

051. (HEBR051, HEBR651) Elementary Modern Hebrew I. (F) Staff.
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew.

052. (HEBR052, HEBR652) Elementary Modern Hebrew II. (F) Staff. Prerequisite(s): HEBR 051 or permission of instructor.
A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

053. (HEBR053, HEBR653) Intermediate Modern Hebrew I. (C) Staff. Prerequisite(s): HEBR 052 or permission of the instructor.
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

054. (HEBR054, HEBR654) Intermediate Modern Hebrew II. (C) Staff. Prerequisite(s): HEBR 053 or permission of instructor.
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

059. (HEBR059, HEBR552) Advanced Modern Hebrew: Reading and Composition. (C) Engel. Prerequisite(s): HEBR 054 or permission of instructor.
After four semesters of language study, it's time to enter the vibrant world of contemporary Israeli culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israeli society. HEBR 054 or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).

SM 100. (ANTH129, NELC252, RELS129) Themes in Jewish Tradition. (M) History & Tradition Sector. All classes. Ben-Amos/Dohrmann/Fishman.
Course topics will vary; have included Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman).

SM 103. (HIST101) The Messianic Impulse in Jewish History. (C) Ruderman.

L/R 122. (RELS002) Religions of the West. (C) History & Tradition Sector. All classes. Reed.
Introduction to Judaism, Christianity, and Islam, the three major traditions that originated in the Middle East. Attention to sacred scriptures, historical development, and modern expressions.

123. (NELC283, RELS123) Introduction to Judaism. (C) dohmann.
Focusing on the festivals of the Jewish calendar and on Jewish life-cycle events, this course examines primary sources from various periods and places that illuminate changes in Jewish practice, in Jewish understandings of ritual, and in ritual's place in Jewish life.

126. (NELC186, RELS126) Jewish Mysticism. (M) Staff.
Survey of major periods of development of mystical speculation and experience within Judaism. Mystical symbolism as a basis for theosophical interpretations of Torah, Immanuelist theologies, mystical ethics. Types of experiences and practices which were cultivated by Jewish mystics in order to achieve intimate communion with the Divine and to facilitate a sacred transformation of themselves and the world. Includes "Riders of the Chariot", The Zohar (Book of Splendor), Lurianic Kabbalah, Hasidism.
This course offers a comprehensive survey of American Jewish history from the colonial period to the present. It will cover the different waves of Jewish immigration to the United States and examine the construction of Jewish political, cultural, and religious life in America. Topics will include: American Judaism, the Jewish labor movement, Jewish politics and popular culture, and the responses of American Jews to the Holocaust and the State of Israel.

136. (RELS136) Death and the Afterlife in Ancient Judaism and Christianity. (C) Reed.
This course surveys the development of concepts about death and the afterlife in Judaism and Christianity, exploring the cultural and socio-historical contexts of the formation of beliefs about heaven and hell, the end of the world, martyrdom, immortality, resurrection, and the problem of evil. Readings cover a broad range of ancient sources, including selections from the Hebrew Bible and New Testament, as well as other Jewish and Christian writings (e.g., "apocrypha," "pseudepigrapha," Dead Sea Scrolls, classical rabbinic literature, Church Fathers, "gnostic" and "magical" materials). In the process, this course introduces students to formative eras and ideas in the history of Judaism, Christianity, and Western culture.

SM 150. (NELC150, RELS125) Introduction to the Bible (The "Old Testament"). (A) Humanities & Social Science Sector. Class of 2010 & beyond. Tigay.
A survey of the major themes and ideas of the Bible, with special attention paid to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity.

The Babylonian Talmud (Bavli), a product reflecting the collaborative effort of generations of sages, is the foundational legal and ethical document of rabbinic Judaism. Both the methods of interpreting this text—and their theoretical frameworks—have varied dramatically, evolving creatively throughout the generations. In the past century, theories of how to read the Talmud and hypotheses about its formation and redaction have opened up new avenues for understanding what the text says and, more importantly, how it works. Through in-depth examination of demonstrative legal passages, this course will contrast the insights generated by the major critical schools of the past century and with the interpretations of selected medieval scholars, the Rishonim. English translations will be provided alongside the original texts. Previous study of Talmud is helpful.

SM 153. (COML257, NELC158, RELS223) Jewish Literature in the Middle Ages in Translation. (C) Stern/Fishman.
This course is devoted to introducing and exploring the different genres and types of Jewish literature in the Middle Ages, including poetry, narrative, interpretation of the Bible, liturgy, historiography, philosophy, sermonic, mystical and pietistic writings. Specific topics will vary from semester to semester. Attention will be paid to the varieties of Jewish experience that these writings touch upon. All readings in translation.

154. (CIMS159, COML282, NELC159) Modern Hebrew Literature and Culture in Translation. (C) Arts & Letters Sector. All Classes. Gold. There will be five film screenings; the films will also be placed on reserve at the library for those students unable to attend. The content of this course changes from year to year, and therefore, students may take it for credit more than once.
Fall 2016: In the first decade of the new millennium, the so called "Second Generation", children of Holocaust survivors reached maturity. Only in their 40s and 50s they finally began confronting and reconstructing their parents' experiences, as well as their own nightmarish childhoods. These include striking narratives Our Holocaust by Amir Gutfreund and Corner People by Esty G. Hayim as well as films like Walk on Water. The third generation is also returning to the forbidden story with prize winning films like "The apartment." The quintessential Holocaust narrative The Diary of Anne Frank appeared in 1947, one year prior to the establishment of the Jewish State. Nevertheless, Israeli culture "waited" until the public trial of Adolf Eichmann in 1961 to hesitantly face the momentous catastrophe. The Zionist wish to forge a "New Jew" motivated this suppression, at least in part, Aharon Appelfeld's stories were the first Holocaust-related works to enter the modernist literary scene in the 1960s, followed by the cryptic verse of Dan Pagis, a fellow child survivor. It was not until 1988 that this practice of concealing the past was broken, when two Israeli-born pop singers, children of survivors, released the watershed documentary "Because of That War."
This course will follow and analyze the transformation of Israeli literature and cinema from instruments of suppression into a means of processing this national trauma. While Israeli works constitute much of the course's material, European and American film and fiction play comparative roles.

The course is an overview of Jewish history, culture, and society from its biblical settings through the Hellenistic-Roman, and rabbinic periods. We will trace the political, social, and intellectual-religious, and literary development of Judaism from its beginnings through the Second Temple period to the formation and evolution of Rabbinic Judaism. Topics to be covered include: the evolution of biblical thought and religious practice over time; Jewish writing and literary genres; varieties of Judaism; Judaism and Imperialism; the emergence of the rabbinic class and institutions.

157. (HIST140, NELC052, NELC452, RELS121) Medieval and Early Modern Jewry. (A) History & Tradition Sector. All classes. Ruderman.
Exploration of intellectual, social, and cultural developments in Jewish civilization from the rise of Islam in the seventh century to the assault on established conceptions of faith and religious authority in 17th century Europe, that is, from the age of Mohammed to that of Spinoza. Particular attention will be paid to the interaction of Jewish culture with those of Christianity and Islam.

This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious
movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.

173. (HEBR153, HEBR453, JWST473) Intermediate Biblical Hebrew I. (A) Carasik. Prerequisite(s): Successful completion of HEBR 152 or permission of the instructor.

This course will focus on using the grammar and vocabulary learned at the introductory level to be able to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the cantillation/punctuation marks used in the Bible. A suitable entry point for students who know modern Hebrew or have previously learned Biblical Hebrew in a less demanding framework.

199. Directed Readings. (C) Staff.

A tutorial under the direction of a member of the Jewish Studies Program faculty. Student and faculty member will create a reading list designed to achieve specific goals. The students will meet regularly with the faculty member and submit written assignments. Prior approval and sponsorship by a Jewish Studies Program faculty member is needed to take the course.

SM 201. (HIST201) Major Seminar in History: Europe Before 1800. (C) Staff.

SM 202. (HIST202, JWST502, RELS207) Major Seminar in History: Europe After 1800. (C) Staff.

Course explores attitudes toward monotheists of other faiths, and claims made about these "religious Others" in real and imagined encounters between Jews, Christians and Muslims from antiquity to the present. Strategies of "othering" will be analyzed through an exploration of claims about the Other's body, habits and beliefs, as found in works of scripture, law, theology, polemics, art, literature and reportage. Attention will be paid to myths about the other, inter-group violence, converts, cases of cross-cultural influence, notions of toleration, and perceptions of Others in contemporary life. Primary sources will be provided in English.

This course explores how the Holocaust has been constructed as an historical event. Beginning in the mid-1940s, with the first attempts to narrate what had transpired during the Nazi era, this seminar traces the ways that the Holocaust became codified as a distinct episode in history. We will examine documentary films, memoirs, survivor testimonies, as well as other scholarly and popular representations of the Holocaust. Students will be introduced to unfamiliar sources and also asked to reconsider some well-known Holocaust documents and institutions.

SM 222. (RELS222) Topic Med Jewish Culture. (M)

SM 225. (NELC251, RELS225) Introduction to the Dead Sea Scrolls. (M) Staff.

Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to other known Jewish groups at that time (the beginning of the common era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocrypha" and "pseudoepigrapha," biblical texts and interpretations.

SM 227. (PHIL255, RELS227) Modern Jewish Thought. (M) Staff.

Through a reading of such thinkers as Martin Buber, Gershom Scholem and Franz Rosenzweig, the course will address some of the fundamental issues in modern Jewish thought and experience.

SM 233. (RELS231) JESUS AND JUDAISM. (M)

SM 236. (SOCI231) Topics in Israeli Culture. (M) Staff.

This course examines general themes and trends in Israeli history, culture, and society. The specific focus of this course will vary, depending on topic and instructor.

SM 241. (NELC280, RELS241) Topics in Judaism and Islam. (M) Staff.

244. (RELS244) Miracles to Mindfulness. Steve Weitzman, Phil Webster.

In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and colleagues such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fields neuroscience, psychoanalysis, phenomenology, psychology, anthropology, to name only a few, to present their cutting-edge research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00 will open consideration of the subject with help from relevant readings 2) a guest lecture series every Tuesday from 5:00-6:30, nary angels or in light featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions.

L/R 248. (PSCI251) ARAB ISRAELI RELATIONS. (C)

SM 249. (RELS259) ULTIMATE MEANINGS.

SM 255. (COML380, NELC250, RELS250) The Bible in Translation. (C) Cranz. May be repeated for credit.

256. (COML228, HEBR250, RELS220) Studies in the Hebrew Bible. (C)
Tigay. Fluency in reading and translating Biblical Hebrew and prior study of the Bible in the original, at a high school or college level.

The aim of this course is to introduce students to the methods and resources used in the modern study of the Bible. To the extent possible, these methods will be illustrated as they apply to a single book of the Hebrew Bible that will serve as the main focus of the course.

The course is designed for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes a working knowledge of Biblical Hebrew grammar.

SM 257. (HEBR257, RELS226) Studies in Rabbinic Literature. (D)
Stern/Fishman.

Various topics.

SM 258. (FOLK258, HEBR258, NELC285, RELS228) Studies in Medieval Hebrew Literature. (A)
Stern/Fishman. Prerequisite(s): Reading knowledge of Hebrew.

This course will introduce students to the modern academic study of the different genres of medieval Jewish literature -- poetry, narrative, interpretation of the Bible, liturgy, historiography, philosophy, sermonic, mystical and pietistic writings. In addition to studying the primary texts, the course will also explore the historical, religious, and cultural contexts in which these texts were first produced and then studied, and the aspects of Jewish historical experience that these texts reflect. The specific topic of the course (e.g. Medieval Biblical Interpretation, Kabbalah) will vary from semester to semester. In some cases, the specific topic may also be the work of a specific author, like Maimonides. Primary sources will be read in their original Hebrew. While no previous experience in studying these texts is required, students should be able to read unpointed Hebrew texts. If there is a question as to whether the course is appropriate for you, please contact the professor.

SM 259. (COML266, HEBR259, HEBR559) Introduction to Modern Hebrew Literature: 1ST ISRAELIS:AMICHAI, OZ. (A) Arts & Letters Sector. All Classes. Gold. Prerequisite(s): HEBR 059 or equivalent. The class will be conducted in Hebrew and the texts read in the original. There will be 3-4 short papers and a final exam.

Fall 2016: We will discuss literary works that reflect Israelis' struggle with their national identity. For the patriotic 1948 generation, self and country were one and the same while contemporary writers ask what it means to be Israeli. Yehuda Amichai's 1955 poem "I want to die in my bed" was a manifesto for individualism, yet the seemingly interminable Arab-Israeli conflict forced writers to return to the national, social, and political arenas starting in the 1980s, although in entirely different ways. Readings include works by the contemporary Orly Kestel Bloom, Elgar Keret and Sayed Kashua as well as by the early writers Natan Alterman, Amir Gilboa, Dahlia Ravikovitch, A.B. Yehoshua, and David Grossman. The class is conducted in Hebrew and all texts are read in the original. Seminar. Fulfills Arts & Letters. (HEBR 259, HEBR 559, COML 266, COLL 227)

260. (COML283, FOLK280, NELC258, RELS221) Jewish Folkslore. (C) Ben-Amos.

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that those countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms.

From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Tvey the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

SM 262. (CIMS261, ENGL261) Jewish Literature in Translation. (M) Filetis.

The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year. Fall 2016: REPRESENTATION OF THE HOLOCAUST IN LITERATURE AND FILM: This discussion-centered course is about the enormous difficulties faced by those who felt the urgent need to describe their own or others' experiences during the genocide of the European Jews, 1933-1945.

JEWISH STUDIES PROGRAM

Fall 2016: We will discuss literary works that reflect Israelis' struggle with their national identity. For the patriotic 1948 generation, self and country were one and the same while contemporary writers ask what it means to be Israeli. Yehuda Amichai's 1955 poem "I want to die in my bed" was a manifesto for individualism, yet the seemingly interminable Arab-Israeli conflict forced writers to return to the national, social, and political arenas starting in the 1980s, although in entirely different ways. 260. (COML283, FOLK280, NELC258, RELS221) Jewish Folkslore. (C) Ben-Amos.

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that those countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms.

From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Tvey the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

SM 262. (CIMS261, ENGL261) Jewish Literature in Translation. (M) Filetis.

The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year. Fall 2016: REPRESENTATION OF THE HOLOCAUST IN LITERATURE AND FILM: This discussion-centered course is about the enormous difficulties faced by those who felt the urgent need to describe their own or others' experiences during the genocide of the European Jews, 1933-1945.

We will explore the complex options they have faced as narrators, witnesses, allegorists, memoirists, scholars, teachers, writers and image-makers. Some linguistically (or visually) face the difficulty head on; most evade, avoid, repress, stutter or go silent, and agonize. One purpose of the course is for us to learn how to sympathize with the struggle of those in the latter group. This is not a history course, although the vicissitudes of historiography will be a frequent topic of conversation. Students will write frequent short papers, called position papers, due before class, in order to provide a basis for discussion. Students need not know anything about the Holocaust, although enrollees should consider historical reading over the summer.

SM 263. (ENGL255) Topics in Jewish Literature. Staff.

265. (EEUR265, GRMN265, GRMN565, HIST265, JWST465) Yiddish in Eastern Europe. (C) Hellerstein. All readings and lectures in English.

This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their
experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.

266. (ARTH260, ARTH660) Jewish Art. (M) Silver.

Jewish Art provides a survey of art made by and for Jews from antiquity to the present. It will begin with ancient synagogues and their decoration, followed by medieval manuscripts. After a discussion of early modern representation of Jews in Germany and Holland (esp. Rembrandt), it focuses most intently on the past two centuries in Europe, American, and finally Israel and on painting and sculpture as Jewish artists began to pursue artistic careers in the wider culture. No prerequisites or Jewish background assumed.

299. Independent Study. (C) Staff.

An independent study course culminating in a final written project. Prior approval and sponsorship by a member of the Jewish Studies Program faculty is needed to take the course.

SM 305. (ANCH305) Jewish Diaspora in the Roman Empire. Wilker.

Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

SM 351. (HEBR350, HEBR550, RELS322) A Book of the Bible. (A)

Staff. Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English. The course is designed primarily for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading Biblical Hebrew, including a working knowledge of Biblical Hebrew grammar.

In-depth textual study of a book of the Hebrew Bible studied in the light of modern scholarship (including archaeology and ancient Near Eastern literature) as well as ancient and medieval commentaries. The book varies each semester and the course may be repeated for credit.

352. (HEBR357, HEBR657, JWST552) Classical Midrash & Aggadah. (D)

Stern. Prerequisite(s): Students must be able to read an unpointed Hebrew text. Readings in Rabbinic lore from classical Midrashic texts.

355. (HEBR358, HEBR658) Siddur and Piyyut. (M) Stern. Prerequisite(s): AMES 052 or equivalent.

A study of the institution of Jewish prayer, its literature, and synagogue poetry. Texts will be read in Hebrew with supplementary English readings.

Christianity and Judaism are often called "Biblical religions" because they are believed to be founded upon the Bible. But the truth of the matter is that it was less the Bible itself than the particular ways in which the Bible was read and interpreted by Christians and Jews that shaped the development of these two religions and that also marked the difference between them. So, too, ancient Biblical interpretation -- Jewish and Christian -- laid the groundwork for and developed virtually all the techniques and methods that have dominated literary criticism and hermeneutics (the science of interpretation) since then.

The purpose of this course is to study some of the more important ways in which the Bible was read and interpreted by Jews and Christians before the modern period, and particularly in the first six centuries in the common era. We will make a concerted effort to view these interpretive approaches not only historically but also through the lens of contemporary critical and hermeneutical theory in order to examine their contemporary relevance to literary interpretation and the use that some modern literary theorists (e.g. Bloom, Kermode, Derrida, Todorov) have made of these ancient exegetes and their methods. All readings are in English translation, and will include selections from Philo of Alexandria, the Dead Sea Scrolls, Rabbinic midrash, the New Testament and early Church Fathers, Gnostic writings, Origen, and Augustine. No previous familiarity with Biblical scholarship is required although some familiarity with the Bible itself would be helpful.

SM 357. (NELC355, RELS355) Topics in Biblical Studies. (M) Staff.

Topics vary. Please consult the Jewish Studies website for term specific detail. http://ccat.sas.upenn.edu/jwst/courses.htm

Prerequisite(s): HEBR 059 or HEBR 259 or permission of the instructor. This class is conducted in Hebrew and the texts are read in the original. The syllabus serves solely as an outline. The amount of material we cover depends on the pace of the class. Additionally, the packet contains significantly more material than will be studied in class to compensate for the difficulty of obtaining Hebrew texts in America. The content of this course changes from year to year and therefore students may take it for credit more than once.

Modern Hebrew literature, an offspring of Zionism, has long rejected writing about one’s personal life as embarrassing narcissism and self-exposure. However, many well-known Israeli artists have reached the age where they want to tell their true stories, and the younger generation has grown up during an individualistic period where it is acceptable to talk about open wounds and trauma. The Israeli scholar of autobiography Nitza Ben-
Dov sees this trend as a symptom of the culture of exposure in which we live (e.g. reality TV, Facebook, etc.). The genres examined in this course are fluid: memoirs; poetry, prose and even films that reveal or conceal the author’s life story. Authors to be studied include: Yehuda Amichai, Dahlia Ravikovitch, Aharon Appelfeld, Amos Oz, S.Y. Agnon. Filmmakers include: Shemi Zarhin, Dori Shaul, and Ari Folman.

L/R 380. (HIST380, RELS320) Modern Jewish Intellectual and Cultural History. (C) Ruderman.

An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialism thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Gehez Hirsch, Herzl, Acha- ha-Am, Baecck, Buber, Kaplan, and others. No previous background is required.

SM 390. Senior Research Seminar. (B) Staff. Permit required.

JWST 390 is required of all students majoring in the Interdisciplinary Jewish Studies major, but all majors and minors in the various departmental programs are encouraged to take the seminar. Students will conduct independent research and complete a 20-30 page paper.

399. Senior Honors Thesis. (C) Staff.

Jewish Studies Honors majors must take JWST 399 in which they will design, with the guidance of an advisor, an individualized directed reading program culminating in the writing of an honors thesis.

SM 410. (ARTH410, HIST410, RELS438) TOPICS IN MEDIEVAL HIST. (C)

SM 419. (NELC489, RELS419) Jewish-Christian Relations Through the Ages. (M) Fishman.

This is a Bi-directional course which explores attitudes toward, and perceptions of, the religious "Other", in different periods of history. Themes include legislation regulating interactions with the Other, polemics, popular beliefs about the Other, divergent approaches to scriptural interpretation, and cross-cultural influences, witting and unwitting.

Different semesters may focus on Late Antiquity, the Middle Ages, Early Modern period, or contemporary times. May be repeated for credit.

SM 426. (HEBR486, RELS426) Rabbinic Writers on Rabbinic Culture. (M) Fishman. Prerequisite(s): Reading knowledge of Hebrew.

The course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period - Midrash, Mishna and Talmud - and in later juridical genres - talmudic commentary, codes and responsa. Attention will be paid to the mechanics of different genres, the role played by the underlying protoflex, the inclusion or exclusion of variant opinions, the presence of non-legal information, the balance between precedent and innovation. Reading knowledge of Hebrew is required.

438. (YDSH108, YDSH508) Readings in Modern Yiddish Literature. (M) Hellerstein. Prerequisite(s): Reading knowledge of Yiddish.

This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation.

God and Nature examines the place of the natural world, medicine, and science in Jewish thought from antiquity to the modern era. It looks especially at a body of primary sources in Hebrew written during the age of the so-called "scientific revolution" and during its aftermath. The course is a seminar open to undergraduate and graduate students with a reading knowledge of classical Hebrew. Students without Hebrew with special interest in the subject might enroll with special permission from the instructor.

Course will examine several key legal passages (sugyot) in the Babylonian Talmud from both a traditional and an academic perspective. After identifying important tensions and inconsistencies in each text, we will consider the disparate solutions posed by the early medieval rabbis (Rishonim) and contemporary scholars, and compare their respective approaches. Through these in-depth readings we will highlight how modern assumptions and goals for Talmud study differ from earlier generations and how contemporary approaches allow us to uncover new structures and meanings in the text. Attention will be paid to the comprehension of Aramaic lexical and grammatical forms. Open to students with prior experience studying the Babylonian Talmud in the original.

465. (EEUR265, GRMN265, GRMN565, HIST265, JWST265) Yiddish in Eastern Europe. (C) Hellerstein. All readings and lectures in English.

This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," "Religious vs. Secular Jews," "Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.

471. (HEBR151, HEBR451, JWST171) Elementary Biblical Hebrew I. (A) Carasik. Prerequisite(s): For the second semester: Completion of the first semester or permission of the instructor.

This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.

473. (HEBR153, HEBR453, JWST173) Intermediate Biblical Hebrew I. (A) Carasik. Prerequisite(s): Successful completion of HEBR 152 or permission of the instructor.

This course will focus on using the grammar and vocabulary learned at the introductory level to be able to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the cantillation/punctuation marks used in the Bible. A suitable entry point for students
who know modern Hebrew or have previously learned Biblical Hebrew in a less demanding framework.

**SM 490.** (GRMN581, HIST490, RELS429) Topics in Jewish History. (C) Staff.

Reading and discussion course on selected topics in Jewish history.

**499. Independent Study.** (C)

**SM 509.** (COML509, ENGL591, GRMN509, YDSH509) MODERNIST JEWISH POETRY.

**SM 520.** (JWST320, NELC454, RELS321, RELS520) Spirit and Law. (M) Fishman.

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

**SM 523.** (COML527, HEBR583, HIST523, RELS523) Studies in Medieval Jewish Culture. (A) Fishman. Prerequisite(s): Unless otherwise noted, reading knowledge of Hebrew is required. Primary source readings from a broad array of medieval Jewish genres. Topic will vary from one semester to another, for example: custom, gender, dissent.

**SM 533.** (HIST533, RELS533) Ancient and Medieval Church History. Staff.

Topics vary.

**SM 540.** (COML539, ENGL588, GRMN540) Memory, Trauma, Culture. (M) Weissberg. All readings and lectures in English.

In recent years, studies of memory (both individual and cultural) have rivaled those of history, and have produced alternative narratives of events. At the same time, research has also focused on the rupture of narrative, the inability to find appropriate forms of telling, and the experience of a loss of words. The notion of trauma (Greek for "wound") may stand for such a rupture. Many kinds of narratives, most prominently the recollections of Holocaust survivors, are instances in which memories are invoked not only to come to terms with traumatic events, but also to inscribe trauma in various ways. In this seminar, we will read theoretical work on memory and trauma, discuss their implication for the study of literature, art, and culture, read select examples from Holocaust survivors' autobiographies (i.e. Primo Levi, Elie Wiesel), and discuss visual art (i.e. Boltsanski, Kiefer) and film (i.e. Resnais, Lanzmann, Spielberg).

**SM 550.** (HEBR357, HEBR657, JWST352) Classical Midrash and Aggadah. (M) Stern. Prerequisite(s): Students must be able to read an unpointed Hebrew text. See description for JWST 352.

**SM 553.** (HEBR557, NELC557, RELS557) Seminar in Rabbinic Literature. (B) Stern. Prerequisite(s): Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll. May be repeated for credit.

This seminar will investigate biblical and other precedents for the idea of the messiah and the messianic age, and their interpretation and extension into both ancient Judaism and ancient Christianity. To what degree are Second Temple Jewish and early Christian ideas about the messiah an extension of ancient Israelite concepts? To what degree might they reflect a response or reaction to Hellenistic and Roman imperial ideologies? How (and when) did beliefs surrounding Jesus depart meaningfully from Jewish ideas about the messiah? How do Rabbinic Jewish traditions about the messiah and messianic age differ from their Christian counterparts, and is there evidence of any "influence"? These questions will be explored with a focus on primary source readings.

**SM 555.** (COML556, JWST356, NELC356, NELC556, RELS418) Ancient Interpretation of the Bible. (M) Stern. May be repeated for credit. See NELC 356 for description. Graduate option would require a lengthier research paper.

**SM 556.** Seminar Modern Hebrew Literature: LITERATURE & IDENTITY. (M) Gold. Prerequisite(s): HEBR 659 or HEBR 259 or permission of the instructor. This class is conducted in Hebrew and the texts are read in the original. The syllabus serves solely as an outline. The amount of material we cover depends on the pace of the class. Additionally, the packet contains significantly more material than will be studied in class to compensate for the difficulty of obtaining Hebrew texts in America. The content of this course changes from year to year and therefore students may take it for credit more than once.

This course is for students who are interested in taking a literature course in Hebrew and are proficient in it. Grading is based primarily on students' literary understanding. There will be four 2-page written assignments over the course of the semester. We will discuss literary works that reflect Israeli's struggle with their national identity, from the patriarchic 1948 generation for whom self and country overlapped to contemporary writers who ask what it means to be Israeli. While Yehuda Amichai's 1955 poem "I want to die in my bed" was a manifesto for individualism, the seemingly terminable Arab-Israeli conflict returned writers to the national, social, and political arenas starting in the 1980's. Readings include poems by Natan Alterman, Amir Gilboa, Meir Wieseltier and Roni Somek as well as fiction by Amos Oz, David Grossman, Sayed Kashua, Alona Kimhi and Etgar Keret. Texts, discussions and papers in Hebrew. The content of This course changes from year to year so students may take it for credit more than once.

**SM 560.** (COML559, GRMN560, PHIL551) Topics in Philosophy and Literature. (M) Weissberg. Topics vary.

**SM 582.** (ARTH560, COML582, GRMN580, PHIL480) Topics in Aesthetics. Weissberg.

The course will study Arendt's political theory, as developed in The Origins of Totalitarianism, and her controversial book Eichmann in Jerusalem. It will also consider essays collected in Men in Dark Times. (Fall 2016 course)

**SM 620.** (GSWS620, HIST620, RELS621) Modern Jewish History. (A) Staff.

JWST 620 will be offered when the HIST 620 Colloquium subject matter is appropriate.
SM 650. (HEBR556, RELS620) Seminar in Biblical Studies. (A) Staff.
Prerequisite(s): Facility in Biblical Hebrew.
In-depth study of a special topic or problem in biblical studies.

SM 655. (HEBR658) Siddur & Piyyut. (M) Stern.
A study of the institution of Jewish prayer, its literature, and synagogue poetry. Texts will be read in Hebrew with supplementary English readings.

699. Independent Study. (C) Staff.

SM 726. (ANTH726) Readings and Research in Near Eastern Archaeology. (M) Staff. May be repeated for credit.
Advanced seminar for students wishing to pursue study of field data, methods, theoretical problems in archaeology of Near East.

SM 735. (CLST735, RELS735) Seminar in Judaism and/or Christianity in the Hellenistic Era. (F)
Kraft. Knowledge of Greek Presupposed. Student may enter either term.
Selected topics from current research interests relating to early Judaism and early Christianity.

999. Independent Study. (C)
LANDSCAPE ARCHITECTURE & REGIONAL PLANNING

(FA) \{LARP\}

Core Courses

501. Studio I. (A) Faculty.
The focus of this foundation studio is to explore ways of recording and representing landscape - with an emphasis on material, space, rhythm and measure - through a range of drawings and constructions. The studio attempts to create a sensibility toward landscape where the act of surveying a site is as much an imaginative endeavor as is the crafting of an artifact or the construction of a path in a landscape. Emphasis is placed on visual and manual skills in two-dimensional and three-dimensional constructions (drawing, fabrications, model-making, etc.), while developing ways to "see" landscape. The studio is structured around the themes of wetness/dryness and enclosure/disclosure, and works with one or more sites in the Philadelphia region. Recent sites have included Bartram's Gardens and East Fairmount Park in Philadelphia. In the past, the studio has focused on a territory around Martha's Furnace in the Pine Barrens, NJ; a part of the Meadowlands in northern NJ; an anthracite-stripe-mine in part of Pennsylvania's Appalachian Mountains; the Wissahickon Creek and, the Schuylkill River Trail in Philadelphia; and Great Falls in Paterson, NJ. Projects involve the making of pathways in these otherwise undesigned environments.

502. Studio II. (B) M'Closkey/Faculty.
Prerequisite(s): LARP 501: Studio I.
This foundation design studio explores the relationship among sites, drawings, models and the making of landscape architectural projects. The studio site is typically located on vacant or abandoned land in North Philadelphia along the Delaware River. Such sites are fairly large in size and present a complex set of issues, including fragmentation, lack of access, and contamination. Through the design of a park, students test and refine the relationship among project concept, modes of visualization, and project formation (organizational and material).
As a precursor to site work, students experiment with methods and materials for making organization and form in two and three dimensions. In the early part of the semester, we explore techniques of imaging that generate multiples (scenarios), serial progressions (transformations of a sort), and iterations (transformations of another). Through various grafting techniques, we use the resultant drawings and models as analogous structures in order to imagine possible future organizations and uses for the site. These studies occur in conjunction with site interpretations ranging from photographs and sketches, to measured drawings and diagrams. The objective for the studio is to develop an informed and imaginative response to the site in order to create new relationships among the site, its immediate edges and the larger neighborhood or region.

This workshop explores a sequence of sites extending from the Atlantic Ocean to the Appalachian Mountains that illustrates the changing geology and topography of the regional physiographic provinces including the Atlantic Coastal Plain, Piedmont, and Valley and Ridge. In moving westward along the transect, field trips to natural areas and constructed sites will highlight the diversity of regional plant communities ranging from primary dune to salt marsh, serpentine Virginia pine-oak forest to seepage wetland, and more. Analysis of the inter-connections between the underlying geology, topography, hydrology, soils, vegetation, wildlife, and human interventions will reveal patterns reflecting process and demonstrate key ecological and cultural systems and processes through the production of field notebooks as well as large-scale measured drawings. Ultimately students will develop a vocabulary (recognition, identification and nomenclature) of the materials of landscape, its substance, its ecology, and its changing nature owing to place and time.
NOTE: COURSE MEETS IN ASSIGNED CLASSROOM FROM 9-1PM. CLASS MEETING FROM 2-5PM IS DEDICATED TO FIELD WORK.

L/L 512. Workshop II: Landform and Planting Design. (B) Olgyay.
Prerequisite(s): LARP 511: Workshop I Corequisite(s): Summer Field Ecology Laboratory/Willig.
Workshop II combines two of the most elemental tools in the practice of landscape architecture: landform and planting design. Grading - the shaping and sculpting of the landform - is both art and science, and thus Workshop II aims to provide an appreciation of landform as an evocative component in the design vocabulary as well as a critical tool in solving difficult design problems. The basic techniques and strategies of grading design (slopes, terraces, water management, grade change devices) will be introduced, practiced and reinforced, so that grading design becomes an integral part of the students' design approach. Lecture, field trips, modeling, in-class exercises, and group projects will be used.
The Planting component provides students with a working overview of the principles and processes of planting design. Plants will be considered both as individual elements and as part of larger dynamic systems. The natural distribution of plants, concepts of plant community and successional patterns, and the relationship of planting an topography will be used as the initial framework for planting design. Planting design typologies will be examined as an outgrowth of these "natural" patterns. The role of plants as a key element in the structural design of the landscape will be explored through a combination of modeling, plan and section drawing, temporal studies, writing, field trips and case studies. Emphasis will be placed on process and evolution: the temporality of planting (daily, seasonal and annual changes), establishment and maintenance of plantings, and the process of planting design. During the first week of May, a five-day field ecology course focuses on techniques of urban revitalization, sustainable land use, reclamation, and restoration. The field trips offer insight into the diversity of approaches to using plants to promote positive environmental change.

533. Media I: Drawing and Visualization. (A) Faculty.
Drawing is the ability to experience deeply things we see and envision. It allows us, not only to represent things or images seen, but, to discover and construct space and depth on the two dimensions of drawing surface. Expanding the tools of drawing, this course presents inquiries into applied media providing a basis for envisioning the speculative and developing an economy of expression. Work will be closely related to work in Studio I. Students will be introduced to the formal syntax of drawing (line, contour, structure, texture, chiarosuro), graphic grammar (orthographic, oblique, perspective projection drawings and free-hand sketching) alongside exercises in material expression (collage, assemblage).

Landscape architecture, architecture and visual art are all mediations between nature and culture. This course is designed to help students form their own view regarding our relationship with the "natural" world.
around us in an age of ecological crisis. To achieve this, the course provides a stimulating historical and contemporary survey of ideas of nature. We explore ways "nature" has been understood mythically, theologically, ideologically, philosophically, scientifically, and artistically through the ages, with an emphasis on contemporary culture. We survey the way in which the polarity of culture and nature has been historically constructed and more recently, deconstructed. The pedagogical philosophy of this course is that an appreciation of the broad pattern of history and the ideas that have shaped it are foundational to living a critical and ethical life and central to the process of making contemporary art, architecture, and landscape architecture.

540. Theory II: History of Ideas and Forms in Landscape Architecture. (B) Fabiani Giannetto.

This course unfolds several contemporary issues that shape the profession, such as giving form to environmental values, balancing science and art, ecology and design, reconsidering the need for the beautiful vis-a-vis the many sites challenged by pollution and abuse. Among the topics of discussion, this course will also take into account how recent phenomena such as the late twentieth-century increase in world population, sprawl, and environmental pollution, and how these have changed the reality described by the very word "nature" and have contributed to expand the domain of landscape architecture. The discussion of topics will integrate contemporary ideas and their roots in earlier theoretical formulation. The past will be presented as a way to illuminate, receive, and critique the present. Course objectives are to become familiar with the social and cultural processes that inform the landscape architectural discourse and to be able to discuss in an informed manner the impact of the latter upon design trends; to be able to trace the roots of contemporary ideas in earlier theoretical formulations; and to be able to think critically and to enhance synthesis and augmentation skills.

542. Media II: Digital Visualization. (B) VanDerSys. Prerequisite(s): LARP 533: Media I.

Continuing the sequence of the Landscape Architecture media classes, this course will provide students with the techniques to explore and examine precision surface profiles and land forming strategies, in both physical and digital models. These models provide a basis to speculate on what processes and programs might be engendered or instigated. Rhino will be the primary modeling platform. Associated plug-ins of Grasshopper, Rhino Terrain, Sonic, and Bongo will help extend the toolset. GIS will facilitate the collection and analysis of extent data. The Adobe Creative Cloud will also be used for documenting and expressing modeling processes through static and time-based visualizations.

543. Media III: Flows: Linear / Non-Linear. (A) VanDerSys/Faculty.

Prerequisite(s): Students in the 3-yr MLA program must complete LARP 533: Media I and LARP 542 Media II prior to beginning LARP 543: Media III.

This course is the third in the media sequence and is required of all MLA students at the 600 level. This course engages the generative potential of the dynamic and temporal attributes of the landscape medium. Time-based visualizations are used to investigate landscape organizations shaped through the dynamic interplay of varying processes and their spatial consequences. Emphasis will parallel the LARP 601 on urban ecology and landscape systems.

544. Media IV: Futures: Trends and Trajectories. (B) Freese. Prerequisite(s): Students in the 3-yr MLA program must complete LARP 533: Media I, LARP 542 Media II and LARP 543: Media III prior to beginning LARP 544: Media IV.

This course is the fourth in the media sequence and is required of all MLA students at the 600 level. This course exposes students to parametric tools as mechanisms for analyzing and generating both predictable and emergent terrain dependent urban morphologies. Rather than inert lines of shapes, space infrastructure are visualized as products of force and flow. Emphasis will parallel the LARP 602 studio on forms of urbanization. This course is open to Landscape Architecture students only. Students outside of Landscape Architecture will need instructor permission to enroll in this course.

601. Studio III. (A) Faculty.

Prerequisite(s): Students in the 3-yr MLA program must complete LARP 501: Studio I and LARP 502: Studio II prior to beginning LARP 601: Studio III.

This studio brings together both two-year and three-year MLA students for a landscape studio problem that works at a regional scale, as well as multiple design scales. LARP 601 - the Green Stimuli studio - emphasizes rigorous site analysis, the strategic organization of living material, and the potential of design to produce a wide range of effects. Studio problems are "live" - local leaders and experts are actively trying to solve them, there is an audience for student work outside the University, and projects have the potential to stimulate debate and new directions.

The Green Stimuli studio takes on design problems where soil, terrain, geology, mineral resources, climate, water, plants, wildlife, and living systems interactions are major drivers. Studio projects explore one or more of these dimensions in depth to reach high levels of design exploration, strategic thinking, technical resolution and physical expression. The studio's topics intersect with a broader universe of practical concerns, including land use, local and regional economies, real estate development and public policy, as well as philosophical and artistic questions about nature and ecology. The intent is that designed Green Stimuli make new connections between the material of landscape and the economic, infrastructural, scientific, social, cultural and creative attributes of a region.

602. Studio IV. (B) Marcinkoski/Faculty.

Prerequisite(s): Students in the 3-yr MLA program must complete LARP 501: Studio I, LARP 502: Studio II and LARP 601: Studio III prior to beginning LARP 602: Studio IV.

This studio is the fourth and final studio in the core sequence and is designed to introduce students to essential competencies related to contemporary problems in urban design. The studio operates in what have been referred to as "global cities" - contexts in which there are significant pressures on the physical form of a metropolis from substantial population and economic growth (both ongoing and projected). These pressures induce considerable demands for the development of new contexts. The studio is focused on managing and mediating these pressures through landscape-driven strategies capable of guiding and organizing this urbanization. Students develop individual design strategies through a process of mapping, modeling, scenario building and fieldwork that lead to both conceptual and physical proposals for the development of new urban districts and metropolitan agendas.
611. Workshop III: Site Engineering and Water Management. (A) Faculty. Prerequisite(s): Students in the 3-yr MLA program must complete LARP 511: Workshop I and LARP 512: Workshop II prior to beginning LARP 611: Workshop III.

Building upon the skills and concepts developed in Workshops I and II, this intermediate workshop focuses on technical aspects of site design, with an emphasis on landscape performance. Functional considerations related to landscapes and their associated systems - including circulation, drainage and stormwater management, site stabilization and remediation - will be explored as vital and integral components of landscape design, from concept to execution. Lectures, case studies, field trips, and focused design exercises will enable students to develop facility in the tools, processes and metrics by which landscape systems are designed, evaluated, built and maintained. In concert with the concurrent design studio, students will consider the means by which functional parameters can give rise to the conceptual, formal, and material characteristics of designed landscapes.

612. Workshop IV: Advanced Landscape Construction. (A) Burrell. Prerequisite(s): LARP 611: Workshop III.

Advanced Landscape Construction: The Art and Craft of Design Documentation and Detailing introduces students to the process of landscape documentation as means of strengthening design intent through careful material selection and articulation of form. The course builds upon Workshop III by expanding the concept of site systems to the full range of drawings, details, specifications, and contracts used by landscape designers in the creation of the man-made environment. The course features lectures, case studies and field walks, exploring documentation from initial concept through construction administration. Topics will include materials and their use in exterior environments, documentation phases and their role in a projects evolution and the art of detailing to ensure beautiful, durable landscapes that define cohesive design.

701. (ARCH701) Studio V. (A) Faculty.

These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M'Closkey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia.

More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedeto (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

702. Studio VI. (B) Faculty.

These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M'Closkey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia.

More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedeto (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

781. (CPLN673) Case Studies in Contemporary Urbanism, Landscape Arch, and Design. (B) Gouverneur.

This course will expose students to a wide array of case studies in planning, urban design, and landscape architecture including notions of sustainable development, the interplay between open space and built form, the rehabilitation of existing areas as historic districts, commercial corridors, and the improvement of squatter settlements. Also, it will focus on city expansions and new towns, housing, mix-use developments, and areas of new centrality. The program will also address territorial planning, the improvement of open space systems, and site specific interventions of parks, plazas, streetscape and gardens. Cases will provide the proper ground for analysis and interpretation of issues related to the design and implementation of “good” landscape and urban form. Class discussions will be complemented with short design exercises. We will also enjoy the presence of outstanding visiting lecturers who will share with us cutting-edge information, derived from their professional practice and research. Registration is limited to MLA students in the LARP 602 studio and to students in the Urban Design Certificate.
program. This course is cross-listed with CPLN 673.

Elective Courses

This course is a requirement for students enrolled in Certificate in Urban Design and for Master of City Planning students enrolled in the Urban Design concentration. How should urban designers give shape to the city? What urban design methods could they apply? This course helps students acquire the principles that can inform urban design practice. It has three major pedagogical objectives. First, it helps students understand the contemporary city through a series urban design tools. Second, it covers both historical and modern urban design principles. Finally, it includes all the scales in which urban designers operate, ranging from the fundamentals of social interaction in public space, to the sustainability of the region.

720. Topics in Representation. (C)
Faculty. Prerequisite(s): LARP501, LARP533, LARP601, ARCH501, ARCH532 OR ARCH601.
In these advanced representation courses the work extends to new ways of documenting and seeing landscape. These courses are open to all interested School of Design students who have previous drawing experience or have taken foundation studios. Recent topics have been: Traces and Inscriptions (spring 2013), instructors: Anuradha Mathur, Matthew Neff; Landscape Representation (fall annually), instructors: Valerio Morabito; Landscape Drawing (spring annually), instructor: Laurie Olin; Landscape Drawing (spring 2008), instructors: David Gouverneur, Trevor Lee; Shifting Landscapes: A Workshop in Representation (spring 2005, 2004), instructor: Anuradha Mathur; and The Agile Pencil and Its Constructs (spring 2004) instructor: Mei Wu.

740. Topics in Digital Media. (C)
Faculty. Prerequisite(s): LARP-543, MEDIA III.
These courses offer advanced instruction in the uses and applications of various digital media, including Geographical Information Systems, 3-D modeling, video, animation, and web-design. These courses are open to all interested School of Design students who already have a working knowledge of basic digital graphic techniques and with permission of the instructor. Recent topics have been: Simulated Natures (fall 2015, 2014), instructors Keith VanDerSys, Joshua Fierce; Digital Fabrication (spring 2009-2013), instructor Keith VanDerSys; Non-Static Representation: Video, Animation, and Interactive Media (fall 2013, 2012), instructor: Todd Montgomery; Interoperable Terrains (fall 2008-2013), instructor: Keith Kaseman; Kino-Eye: Intro to Spatial Filmmaking (fall 2011, 2010), instructor: Richie Gelles; Geometry Clouds, Fluid Landscapes (fall 2002-2006), instructor: David Ruy; Tactical Surfaces / Topographic Modeling (fall 2002), instructor: Charles McGloughlin.

741. (CPLN362) Modeling Geographic Space. (B) Tomlin.
This course explores the nature and use of raster-oriented (i.e. image-based) Geographic Information Systems (GIS) for the analysis and synthesis of spatial patterns and processes. Previous experience in GIS is not required.

743. (CPLN670) Geospatial Software Design. (A) Tomlin.
The purpose of this course is to equip students with a selected set of advanced tools and techniques for the development and customization of geospatial data-processing capabilities. It is open to any student with experience equivalent to that of an entry-level class on GIS.

750. Topics in Construction, Horticulture and Planting Design. (C)
Faculty.
These courses explore relevant topics in construction, horticulture and planting
design as they relate to contemporary landscape architecture. The aim is to supplement fundamental skills and ideas explored in the core curriculum workshops with more advanced, cutting-edge research, technology and case studies. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested School of Design students.

In this course, students will learn about plants from an organistical perspective, an applied/practical perspective, an aesthetic perspective, an environmental perspective, and an evolutionary perspective. Utilizing the plant collection of the Morris Arboretum as a living laboratory and the expertise of arboretum staff, this course will bring students, novices and experts alike, to a better understanding of plants. Session topics integrate both theoretical and hands-on practical work. Course assessment will be based on weekly practical assignments and two exams.

Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).

756. Arboretum Management II: Evaluating Public Gardens. (B) Skema.

This interdisciplinary course looks at public gardens as a whole, studying these public institutions and their performance in the four major services they undertake: research, horticultural display, conservation and education/outreach. Students, of any level or discipline, begin the course by learning what arboreta and botanic gardens are, how they function, and what role they fill in our society through a series of lecture sessions at the Morris Arboretum. For the remainder of the semester, the students take that knowledge into the field to apply what they have learned and evaluate some of the many public gardens in "America's Garden Capital," the Philadelphia region, with expert instructors from the Morris Arboretum as guides. Course assessment will be based on one exam, and a series of essays pertaining to their garden evaluations. Garden evaluations and the written work can be tailored to a particular subject of interest to a student, if pertinent within the public garden realm.

Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own or to other Philadelphia area public gardens as required for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).

760. Topics in Ecological Design. (C) Faculty.

These elective courses explore relevant topics in ecological design and new technologies as they relate to contemporary landscape architecture. The courses explore topics such as ecology, sustainability, habitat restoration, hydrology, green roof and green architecture technology, soil technology, and other techniques pertinent to the construction of ecologically dynamic, functioning landscapes. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested PennDesign students.

SM 770. (ARTH782, COML615, ENGL584, GRMN614, URBS614) Topics in Landscape Architecture History and Theory. (C) Faculty.

These advanced seminars explore central issues in the history and theory of landscape architecture from the Renaissance to the present day. The focus is upon the cultural context of built works, their relation to conceptual writings (contemporary with the designs as well as modern) and the dialogue between modern professional practice and historical example and method.

Recent topics taught by Professor Hunt have been: Place & Peacefulness (fall 2012); Texts & Topics (fall 2011); The Role of History in Contemporary Landscape Architecture (fall 2010); Understanding Venice Research Seminar (spring 2009); Sculpture Parks and Sculpture in Parks (fall 2008); Six Landscape Architects & What We Say About Them (spring 2007); Open Spaces & Open Places: The Design and Use of American Landscapes (spring 2006), co-taught with Emily Cooperman; Reception, or the After Life of Landscapes (Spring 2005), Land Art and Ian Hamilton Finlay (fall 2004), Lawrence Halprin: Theory, Practice, Context & the Archival record (spring 2004) co-taught with Emily Cooperman; French Landscape Architecture: Case Studies (spring 2003); Picturesque as Modernism (spring 2002).

Recent topics taught by Professor Fabiani Giannetto have been: Landscape Theory and Criticism: Six Case Studies (spring 2013); Villa Gardens and Villa Life: Cultural and Social Transformations (spring 2012); and American Landscape Architecture & Its Sources (spring 2011).

Recent topics taught by Professor Aaron Wunsch have been: Therapeutic Landscapes in America (spring 2014); The American Suburb: Real and Ideal (spring 2013).

SM 780. (CPLN685, LARP535) Topics in Theory and Design. (C) Faculty.

These advanced seminars explore advanced ideas in contemporary landscape architectural design and theory. A special link is made between the analysis of built work and text to design practice and the making of projects. Topics include the intersections of art, nature and creativity; practices of analysis and criticism; ideas of urbanism and infrastructure; collaborative ventures and cross-disciplinarity; vision and visuality; and representational structures, both verbal and visual. These courses fulfill the Landscape Architecture Theory III requirement and are open to all
interested School of Design students. Spring 2017:

796. Independent Studio. (S) Faculty.
An independent studio may be undertaken in the final semester but is not required. The independent studio is intended to provide highly motivated students who have demonstrated their ability to work independently with the opportunity to pursue topics that extend the boundaries of the profession. For permission, students must prepare a written proposal in the preceding semester and apply for approval from the faculty. Details available in Landscape Architecture department office.

999. Independent Study. (S) Faculty.
An independent study may be taken for elective credit at any point during the degree program for a letter grade. For permission, students must prepare a written proposal in the preceding semester and obtain a Landscape Architecture faculty advisor to oversee their work. Details are available in the Landscape Architecture department office.

Summer Institutes

790. LARP Summer Institute: Landscape Operations. (L) Faculty. Course fee: $500.00.
This one-week course, for entering three-year MLA students, introduces concepts and techniques for analyzing, representing, and operating on landform, the fundamental medium of landscape architecture. Students will learn representational and model-making techniques for conveying topography, and will describe a series of landscape interventions on a topographic surface. Through models and drawings, students will develop an appreciation for the spatial implications of landform, for landscape narrative, for the movement of water and people across the landscape, and for the operation of reshaping the ground. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.

791. LARP Summer Institute: Drawing & Measure. (L) Faculty. Course fee: $500.00.
This week long introductory course is intended to enable students to orient themselves to digital media facilities, programs, and workflows. The course is focused around daily projects building up to a final pinup. Each daily project illustrates a different set of work paths between digital programs, as well as teaches students how to use different software applications key to the practice of landscape architecture today. The focus of this course is to enable students to understand what each digital software application offers to the landscape process, and how to build change and iteration into digital workflows. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.

This four-day session for entering three-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic. With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions, and potential for use. Field trips will include visits to the Inner Coastal Plain and Piedmont. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.

The reading and shaping of landform is an elemental tool in the practice of landscape architecture. The act of grading design - the shaping and sculpting of landform - is both art and science. This four-day session for entering two-year MLA students aims to provide an appreciation of landform as both an evocative component in the design vocabulary and as a critical tool in resolving difficult design problems. Basic techniques and strategies of grading design are introduced and reinforced, so that grading design becomes an integral part of the student's design approach. This session is intended to provide a concise overview of the principles and process of landform and grading design, and is designed to prepare the entering two-year students for Workshop III. Course enrollment is by permit only. Please contact Darcy Van Buskirk at darcyv@design.upenn.edu.

This five-day session for entering two-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic. With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions and potential for use. Field trips will include visits to the Coastal Plan and Piedmont of New Jersey and Pennsylvania. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.

795. LARP Summer Institute: Computing Introduction and Academic Writing. (L) VanDerSys/Fleming. Course fee: $500.00. The Intro to Computing session introduces students to the facilities of digital media as the primary mode of design visual communication. The course provides a short, yet intensive, hands-on inquiry into
the production and expression of digital media that is essential for all designers. Through a series of working labs, students learn various software applications and associated techniques to execute precise two-dimensional representations of three-dimensional concepts. Students also learn the PennDesign systems, network basics and computer lab procedures.

In the Academic Writing session, students will also receive a basic introduction to research methods, research resources, academic writing, citation formats, and standards expected by the School of Design. Course enrollment is by permit only. Please contact Darcy Van Buskirk at darcyv@design.upenn.edu.
LATIN AMERICAN AND LATINO STUDIES
(AS) {LALS}

SM 016. (ENGL015) Topics in Literature. (C) Freshman Seminar.
Freshman Seminars under the title "Topics in Literature" will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare's period to the ethnic fiction of contemporary America. Small class-size will insue all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be applied to a period, genre, or thematic requirement within the major.

057. (ENGL057) Literature of Americas Before 1900. (M) Staff.
This course examines U.S. literature and culture in the context of the global history of the Americas. Historical moments informing the course will range from the origins of the Caribbean slave-and-sugar trade at the beginning of the nineteenth century, to the Monroe Doctrine of 1823 and the U.S. Mexico and Spanish-American wars. Readings will include works by authors such as Frances Calderón de la Barca, Frederick Douglass, Helen Hunt Jackson, Henry Wadsworth Longfellow, Jose Marti, Herman Melville, John Rollin Ridge, Maria Amparo Ruiz de Burton, and Felix Varela.

L/R 070. (HIST070) Colonial Latin America. (A) History & Tradition Sector.
All classes. Walker, T. Fullfills History & Tradition Distribution Requirement.
This course provides an introduction to the broad literature on Latin America's rich colonial history. We will begin by tracing some of the early origins of - and points of contact between - the Indian, Iberian, and Africa men and women who formed the basis of colonial society. As the course progresses, we will explore the variety of ways in which colonial subjects lived, worked, ate, worshipped, and socialized. Lectures and reading assignments will draw upon a variety of sources, including court cases, artistic renderings, city maps and street plans, travel accounts of visits to the regions, and the material, cultural, and intellectual products made possible by the wealth and dynamism of the seventeenth and eighteenth centuries. The course will conclude with an analysis of the Age of Revolutions, a period of dramatic upheaval that remains at the center of lively scholarly debates. By the end of the semester, students will be able to engage the key questions driving these debates, the most important of which, perhaps is; what is Latin America's colonial legacy?

071. (HIST071) Latin America 1791-Present. (B) History & Tradition Sector.
All classes. Farnsworth-Alvare.
Surveys Latin American and Caribbean history from the Haitian Revolution of 1791 to the present. We will examine the legacy of Spanish colonialism and slavery, movements for national and cultural independence, twentieth-century radicalism, and the politics of race in contemporary Latin America. Readings include fictional as well as analytical representations, and a film series will accompany the course.

072. (HIST072) Introduction to Latin American and Latino Studies. (B) Dr. Ann Farnsworth-Alvare.
Designed to introduce students to the interdisciplinary field of Latin American and Latino Studies, this is a seminar oriented toward first and second year students. Readings will range widely, from scholarly work on the colonial world that followed from and pushed back against the "conquest"; to literary and artistic explorations of Latin American identities; to social scientists' explorations of how Latinos are changing the United States in the current generation.

SM 100. (ARTH100) Intro to Art. (C) Staff. For freshmen only.
Topics Varies.

Topics Vary

L/R 110. (PSCI110) Comparative Politics. (C) Staff.
This course is designed to introduce students to comparative political analysis. How can the political behavior, circumstances, institutions, and dynamic patterns of change that people experience in very different societies be analyzed using the same set of concepts and theories? Key themes include nationalism, political culture, democratization, authoritarianism, and the nature of protracted conflict.

116. (ANTH116) Caribbean Culture and Politics. (M) Thomas, D.
This course offers anthropological perspectives on the Caribbean as a geopolitical and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region's long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred.
Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.

SM 133. (ANTH133) Native People and Their Environment. (M) Erickson.
This course examines the relationship between the activities of native peoples and the environment. The course is divided into two parts: (1) a historical overview of the impact of European explorations and contact on native peoples and their environment, and (2) a contemporary analysis of the impact of technology, conservation and development on native peoples and the environment. The relationship between native peoples and the environment is a complex and contentious issue. One perspective argues that native peoples had little impact on the environments because of their low population densities, limited technology, and conservation ethic and worldview. At other extreme, biodiversity, and Nature itself, is considered the product of a long history of human activities. This seminar will examine the Myth of the Ecologically Noble Savage, the Myth of the Pristine Environment, the alliance between native peoples and Green Politics, and the contribution of native peoples to appropriate technology, sustainable development and conservation of biodiversity.

On one level Chicano History is the history of Mexican-origin peoples in the United States since 1848. But Chicano also refers to the emergence of a specific historical identity grounded in the protest movements of the late 1960s and early 1970s. Both definitions are part of the project of this course. We will survey the histories of the many Mexican American people who might (or might not) consider themselves Chicano from the Mexican American War to the Zoot Suit Riots, from El Plan Espiritual de Aztlán to Selena. The class will also explore issues of ethnicity,
immigration past and present, class and gender differences, cultural conflict and exchange, transnational economies and identities, popular cultural images and production, family life and community building, struggles for equality, the relationship of Mexican Americans to Latino/as, and the controversies raised by the emergence of an increasingly multi-ethnic, multilingual society.

174. Reform and Revolution in the Americas. (C) History & Tradition Sector. All classes. Offner.

The United States and Latin America produced a remarkable series of revolutions and reforms during the twentieth century. This course examines efforts throughout the hemisphere to define and address problems around land, labor, and property; nation, empire, and autonomy; and racism, democracy, and citizenship. It considers the relationship between national upheavals, the global consequences of events in the hemisphere, and the relation between social and political history, on the one hand, and the development of economic ideas, on the other.

175. (HIST175) Society and Culture in Brazil. (C) Walker, T.

With its booming economy, the recent inauguration of its first female president, and its selection as host to the 2012 World Cup and Olympic games, Brazil is growing in global prestige. But amid all these exciting developments are devastating socioeconomic inequalities. Access to safe living conditions, livable wages, higher education, and overall social mobility remain painfully out of reach to many Brazilians, the majority of whom are the descendants of slaves. Why do these problems persist in a country that has had such an enduring and widespread reputation as a "racial democracy"? What are the possibilities of closing the equality gap in Brazil?

SM 220. (CIMS224, PRTG222) Literature, Film and Music of Brazil. (M) Staff. Prerequisite(s): PRTG 221.

Topics vary. For current course description, please see department's webpage: http://ccat.sas.upenn.edu/roml/portuguese/undergraduate/courses.html

SM 221. (COML223, SPAN221) Early Hispanic Literature and Culture. (A) Staff. Prerequisite(s): SPAN 219.

This course engages in an in-depth study of Spanish and Colonial Spanish American culture(s) from the Pre-Roman period through the 17th century. Among the topics included are: Islamic Spain, the Spanish Reconquista, the Inquisition, the Origins of the Spanish Language, Sephardic Culture in Spain, the Pilgrimage Route to St. James, Picarresque Literature, Golden Age Spanish Drama, pre-Columbian Civilizations, the Conquest of the New World, and the establishment of colonial rule in Spanish America.

SM 231. (PRTG221) Perspectives in Brazilian Culture. (M) Flannery Marcia. Prerequisite(s): Taught in Portuguese.

Topics vary. For current course description, please see department's webpage: http://ccat.sas.upenn.edu/roml/portuguese/undergraduate/courses.html

235. (SOCI266) Special Topics in Sociology/Latinos in the United States. (C) Emilio Parrado.

This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.

251. (PSCI251) Inter-American Relations. (C) Staff.

This course examines patterns of inter-American conflict and cooperation. The course examines United States-Latin America relations, regional organizations and subregional organizations. Specific topics include development, dependency, and security.

SM 252. (SPAN250) Spanish American Literature in Translation. (C) Arts & Letters Sector. All Classes. Staff. All readings will be offered in English.

This is a topics course. The topic may be "Latin American Travel Narratives or "Caribbean Writers in the U.S."

The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn's impressive Museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, queque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.
SM 260. (AFRC262, AFST260, ENGL260, GSWS260, LING470) Advance Topics in Narrative. (M) Staff.
This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. Specific course topics will vary from year to year.

268. (ANTH258, CIS 106) Visualizing the Past/Peopling the Present. (M) Badler/Erickson.
Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of "ancient, mysterious, and lost" civilizations, and tours often led by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote the past? This class will focus on case studies and critiques of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art.

SM 270. (SPAN250) Major Works in Spanish & Latin American Literature. (M) Staff.
Topics vary. See the Romance Languages Department's website at http://ccit.sas.upenn.edu/roml for a description of current offerings.

SM 271. (URBS270) Ethnicity: The Immigrant City. (M) Hanson, R.
Immigration is a controversial issue, dividing Americans from Congress to big cities to small towns. What's at stake in these debates? What does immigration mean for cities and regions? And what roles should policy makers, planners, and community organizations play in shaping migration and its impacts? This course examines these questions in the context of immigrant, refugee, and receiving communities in the United States. It surveys public policy and community and economic development practices related to migration, at the local, regional, and national scale. Class readings, discussions, and regular visits to a variety of Philadelphia's immigrant neighborhoods explore themes including labor markets, political mobilization, social and cultural policy, and the built environment.

274. (ARTH274) Facing America. (M) Shaw.
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and African identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

275. Race and Ethnicity in U. S. Latino/a Literature. (C) Carmen Lamas.
In this course we will study the construction of race and ethnicity in key novels written in English by Latino/a writers. We will examine how U.S.-American race relations shape Latino/a notions and constructions of race in these texts and how the authors' connections with Latin America and the Caribbean do the same. In order to understand these constructions from a hemispheric perspective, we will juxtapose our reading of Latino/a texts with works by Latin American writers that address similar issues but in a Latin American context. All coursework and discussions are in English.

SM 286. (AFRC289, ENGL286, HIST286, URBS286) Topics in American Literature. (M)
The literature studied in this course is usually organized thematically. Examples: American Authors and The Imagined Past, considering the role of history in literature and studying works by Benjamin Franklin, Nathaniel Hawthorne, William Faulkner, Mark Twain, James Fenimore Cooper, and others; "American Writers and "The School of Hawthorne" studying the influence of Hawthorne on Henry James, Flannery O'Connor, Robert Penn Warren, and others: "Ezra Pound" or "Edgar Allan Poe and the Poe Tradition."

SM 291. (COML284, ENGL270, ROML290) Latin American Literature. (M) Staff. Spaces will be reserved for English Majors.
This course explores an aspect of Latina/o literature intensively; specific course topics will vary from year to year.
See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 293. (COML293, ENGL293) Topics in Literature & Society. (M) Staff. ENGL 293 is a Topics course. When the topic is Caribbean literature, the following description applies.
This course explores an aspect of Postcolonial literature intensively; specific course topics vary from year to year.

SM 296. (CIMS294, COML294, ROML296) Latin American Film. (M) Staff.
See the Romance Language site.

299. (ARTH299) Latin American Art: Pre Colombian to Colonial. (M) Staff.
This course examines the visual culture of Latin America before and after the culture of Latin America before and after the conquest up to the eighteenth century. It first explores Mesoamerican and South American art and architecture, focusing on the Olmec, Mayan, Aztec, Incan and Tupinamba. The the class studies the way in which the colonial culture of the Americas developed in the early modern period throught an analysis of works in various media including codices, painting, featherwork, sculpture, architecture and print. Historical political and religious contexts will be explored in relationship to art production. Some themes for the course include hybridity, cross-cultural interaction, conversion and propaganda.
303. (HIST303) Social Movements in Latin America. (C) Farnsworth/Alvear.
This course has two goals: first, to provide an in-depth look at a select number of twentieth century social movements in Latin America. Second, to allow students to "learn by doing;" each participant will produce a major research paper based on primary sources. Readings will include testimonial accounts and fictional works, as well as critical studies.

SM 331. (PSCI331) Latino Politics. Staff.

SM 355. (SPAN355) Topics in Spanish Drama. (M) Staff. Prerequisite(s): Span 219.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a description of the current offerings.

SM 370. (ENGL370) Topics in Latina/o Literature. (M) Staff. Benjamin Franklin Seminar.
This course explores an aspect of Latina/o literature intensively; specific course topics will vary from year to year.

SM 387. (AFRC387) Topics in Africana Studies. (C) Osei, Sanders-Johnson, Willis. Prerequisite(s): Junior and Senior Seminar.
Topics vary. A recent topic is "The Black Body and the Lens." The Spring 2013 topic, "Race in Brazil: The goal of this course is to have an understanding of race and race-mixing in Brazil with explicit comparisons with the U.S., Mexico, and other countries in the Western Hemisphere. We will compare and contrast forms of racial categorization and ideologies towards race mixture, whether in the form of family formation, nation-building projects, and social policy. Specifically, we will examine how it has been promoted or prevented by society as well as the state. We will draw primarily on social science perspectives, however we will cover some work by historians and legal scholars. By the end of this course, students should have an understanding of the role of race-mixing in both constructing and deconstructing racial categories and its impact on racial and ethnic inequality. This course will count as a requirement for the Africana major and minor.

L/R 388. (CIMS388, SPAN388) TPCS: SPAN/LTAM CINEMA.

SM 390. (FREN390) Survey of Francophone Literature. (M)
A brief introduction about the stages of French colonialism and its continuing political and cultural consequences, and then reading in various major works -- novels, plays, poems -- in French by authors from Quebec, the Caribbean, Africa (including the Maghreb), etc. Of interest to majors in International Relations, Anthropology and African Studies as well as majors in French.

SM 391. (SPAN391) Spanish American Poetry. (M) Staff. Prerequisite(s): Span 219.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a description of the current offerings.

SM 392. (SPAN392) Colonial Spanish American Literature. (M) Prerequisite(s): Span 219.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a description of the current offerings.

SM 393. (COML396, ROML396) Latin American Literature. (M) Staff.

SM 394. (SPAN394) Spanish American Fiction. (M) Staff.
Prerequisite(s): Span 219.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a description of the current offerings.

SM 395. (SPAN395) Hispanic Theater. (M) Regueiro. Prerequisite(s): Span 219.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a description of the current offerings.

SM 396. (COML390, SPAN390) Introduction to Spanish American Literature. (M) Staff. Prerequisite(s): Span 219.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a description of the current offerings.

Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a description of the current offerings.

SM 398. (CIMS397, SPAN397) History of Spanish American Culture. (M) Staff. Prerequisite(s): Span 219.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a description of the current offerings.

SM 414. (URBS414) Memory and Urbanism in the Americas. (M) Faber.
Whether as statues, walls, plaques, parks, or other commemorative structures, monuments are regular features of urban topography. Such "sites of memory" not only instruct us about significant events of the past, but do so in the space and time of the present. And yet, the historical memory of cities is also made legible through modes of cultural expression and inscription - including literature, visual art, graffiti, music, and street performance. Cycles of urban de-industrialization and renewal since the 1970s, as well as legacies of conflict and inequality, have exacerbated the need for alternate forms of commemoration. The Occupy movement is one continued example of how urban space can be reanimated through demarcation, embodiment, and calls for collective memory.
introductory course in Latin American politics, history or cultures.

SM 425. (SOCI425) LATIN@ CULTURAL HISTORY. Irizarry, Johnny.
This course takes a multi-disciplinary approach to the study of the resiliency and impact of Latin@ cultural and artistic contributions, esthetics, expressions and institution building int he United Stats from the Civil Rights Era to the present. We will explore how Latin@s argiculturally defining being “American”; how their artistic expressions fit and influence the creativity and productivity of American and global Arts & Cultural expressions; and the Latin@ interactions of race, culture, society, economy and politics in the U.S.

SM 431. (SOCI431) Modern Mexican Society. (M)
An introduction to social, political, and economic organization of modern Mexico. This course traces to evolution of Mexico’s fundamental societal institutions from their birth during the Mexican Revolution of 1910, through their flowering during the 1950s and 1960s, to recent changes under neoliberal administrations. The course ends with a discussion of Mexico’s transition to democracy and the election of the first opposition President in 80 years.

433. (ANTH433) Andean Archaeology. (M) Erickson.
Consideration of culture history of native peoples of Andean area, with emphasis on pre-conquest archaeology of Central Andean region.

468. (ANTH468) The Ancient Maya. (M) Sharer.
Examination of current understanding of Ancient Maya, emphasizing critical review of recent archaeological research and theories.

SM 527. (AFRC527) Spring 2015: Race, Gender & Auto/Biography. (C) Sanders.
Story telling, oral history, and memoir are some of the oldest forms of documenting lives. Pivoting around the themes of voices, authenticity and memory, this course deconsiders the methods, theories and archival practices of autobiography, biography and oral history. It builds on the last two decades of scholarship that pair oral history with traditional written archival material- giving particular attention to the methodologies and practices used by African descended women and queer storytellers and listeners. During our discussions, we will consider the ethics between researcher and storyteller while addressing the following questions: How do emotions, performances, and identities (gender, sexuality, race, age (dis)ability, etc.) inform the stories we tell and collect? How does history impact the contemporary construction and narration of history? How does the practice and procedure of black women’s and queer autobiography, biography and oral history inform interdisciplinary research methods and blur narrative genres?

SM 554. (PSCI554) DEMOC IN LATIN AMERICA. (M)
SM 557. (AAMWS57, ANTH557) Seminar in Archaeological Theory and Method: Archaeology of Landscapes. (M) Erickson, C.
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends.

SM 586. (ENGL586) Topics in 20th Century American Fiction. (M) Staff.
This course covers topics in 20th Century American fiction with specific emphasis determined by the instructor.

SM 587. (HIST587) Iberian Colonialism. (H) Staff.
The creation of colonial societies in America under Spanish and Portuguese rule. Emphasis on primary sources (English translation) dealing with the social, cultural and biological effects of European contact. Topics include: the role of missionaries and evangelization, Iberian and Indian perceptions of the “other”, the impact of Old-World diseases, animals and plants on American people and ecosystems.

SM 589. (ANTHS89, HIST589) Conquest and Conversion. (C) Staff.
Early culture contact in Mesoamerica (Mexico and Central America) and the Andes. Compares European and Amerindian conceptions of time and space of evil and disorder, the individual’s relation to society, the physical world, and the sacred. Emphasis is on the zones and the means of intercultural communication - especially as influenced by the introduction of European writing -- and on the intermediaries who straddled the linguistic and cultural boundaries.

SM 590. (COML590, ENGL590, GSWS589) Introduction to Francophone Literature. (M)
An introduction to major literary movements and authors from five areas of Francophone: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.

SM 592. (ENGL592) 20th Century Literature & Theory. (M)
This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor.

SM 655. (PSCI655) Democratization. (M) Falleti.
This graduate class focuses on issues of democratization (and de-democratization), as studied in the comparative politics literature. The course is structured in four parts. In the first part, we scrutinize conceptualizations and measurements of democracy. In the second part, we study competing political theories about the origins of democracy. The third part of the seminar is devoted to the study of democratic transition and consolidation processes. To finish, we tackle specific issues in democratization such as social capital and civic participation, as well as the resilience of (subnational) authoritarianism.

SM 673. (EDUC673) Selected Topics in Education Linguistics. (C)
The focus for each semester will vary to reflect those issues most relevant to current concerns in educational linguistics.

SM 677. (SOCI677) International Migration. (M) Flippin, C.
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of new classical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory, and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course concludes with an evaluation of immigration policies in the United States.

SM 690. (COML691, SPAN690) Studies in Spanish American Literature. (M) Staff.
Topics vary. Previous topics have included Latin American Narrative and Art in Times of Globalization, Modernismo / fin de siglo, Art, Literature, and Society in Latin America at the End of the 20th Century.
SM 692. (SPAN692) Colonial Literature of Spanish America. (M) Staff.
Study of the historical context of the colonial period in Spanish America and of major works in prose and poetry.

SM 694. (CIMS694, SPAN694) Spanish & Latin Am Cine. (M) Staff.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml/ for a description of the current offerings.

SM 697. (SPAN697) Studies in Latin American Culture. (M) Staff.
Topics vary. See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml/ for a description of the current offerings.

SM 710. (AFRC710) POL/SOC HIST AFR DIASP.

Seminar on selected topics in the music of the Renaissance.

This course will consider the American musical landscape from the colonial period to the present with an emphasis, though not exclusive focus, on non-written traditions. The course is not a chronological journey, but rather a topical treatment of the various issues in the history of American music. Some of the specific, project-oriented activities of the course will consist of, but will not be limited to the following:
(1) participating in the development of a traveling exhibition on the Apollo Theater for the Smithsonian Institution;
(2) development of a permanent website for a history of jazz course at Penn;
(3) reviewing two manuscripts for publication to a major press; (4) developing a working proposal for a history of African American music. In this context students will learn the basics of contemporary music criticism, including: identifying a work's significant musical gestures; positioning those gestures within a broader field of musical rhetoric, conventions, and social contracts; and theorizing the conventions with respect to large systems of cultural knowledge, such as historical, geographical contexts as well as the lived experiences of audiences, composers, performers, and dancers. Other topics covered: origin and development of American popular music and gendered and racial aspects of American classical music.

SM 771. (HIST770) ORAL HISTORY. (C)
798. Advanced Topics. (C)
Titles and Topics vary. See department website for descriptions:
http://www.sp2.upenn.edu/programs/msw/courses.html
The growing importance of technology in business and industry and the corresponding increase in the scope of regulation in this area are creating greater synergies between law and technology.

560. BUSINESS IMMIGRATION.
568. FEDERAL CRIMINAL LAW.
576. PENN STAFF IND STUDY.
577. INTERNET LAW.
578. DISCOVERY METHODS.
585. UNINCORPORATED BUSINESS.
587. ENTERTAINMENT LAW.
588. HEALTH LAW FRAUD & ABUSE.
596. FASHION LAW.
598. STRUCTURING VENTURE CAP.
LEGAL STUDIES AND BUSINESS ETHICS (WH) {LGST}

101. Introduction to Law and Legal Process. (C) Staff.
This course presents law as an evolving social institution, with special emphasis on the legal regulation of business. It considers basic concepts of law and legal process, in the U.S. and other legal systems, and introduces the fundamentals of rigorous legal analysis. An in-depth examination of contract law is included.

This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stake holders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed.

204. (LGST804, REAL204, REAL804) Real Estate Law. (C) Staff.
See Real Estate, REAL 204

205. (LGST805, MKTG260, MKTG760) Law of Marketing and Antitrust. (C) Cornell.
The course explores the legal aspects of competition. The aim is to understand what legal obligations a business organization owes to its competitors and consumers. In particular, the course focuses on permissible and impermissible marketing tactics, pricing strategies, use of intellectual property (including patents, copyrights, and trademarks), and exertion of market dominance. The focus is primarily on U.S. law, but the challenges posed by diverse domestic, foreign, and international regimes will also be discussed. The course is useful to students interested in marketing strategy or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competitive business interaction.

206. (MGMT291, OIDD291) Negotiation and Conflict Resolution. (C) Staff.
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.

This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues.

This course is based on the principle that knowledge and understanding of employment law facilitate (1) promotion of a workforce with a high degree of commitment to reaching business goals, (2) the development of practical business solutions to problems arising in the workplace, (3) effective human resources policy and procedures that comply with applicable laws. It provides students with an introduction to the law of the workforce and examines the balance between business goals and employment law compliance. The course examines the various employment laws with which businesses must comply and the legal rights and responsibilities of employees and employers. The emphasis is on laws concerning equal employment opportunity with respect to discrimination and harassment because of sex, race, national origin, religion, sexual orientation, age, disability and other characteristics protected by workforce laws; work-related privacy including investigations, electronic communication and social media; employee misclassification and affirmative action; and the legal and regulatory environment regarding immigration, wage and hour, leaves of absence, hiring, termination and afterwards, the non-employee workforce, whistle blower concerns, labor/management relations and collective bargaining.

210. Corporate Responsibility and Ethics. (C) Staff.
This course explores business responsibility from both theoretical and managerial perspectives. Its focus includes theories of ethics and their application to case studies in business. Topics include moral issues in advertising and sales; hiring and promotion; financial management; corporate pollution; product safety; and decision-making across borders and cultures.

211. (HCMG211, HCMG854, LGST811) Legal Aspects of Health Care. (C) Rosoff, Field.
This course offers a current and historical overview of the legal oversight and regulation of health care delivery in the U.S. It examines principles and practical applications of the laws that affect the operational decisions of health care providers, payors, and managers and that impact the development of markets for health care products and services. Also considered are the social, moral, and ethical issues encountered in trying to balance the interests, needs and rights of individuals against those of society. For part of the term, the class will divide into two groups so that students can focus on their choice of (a) health care management or (b) selected issues of patients’ rights.

212. (BEPP212) Economic Analysis of Law. (C) Buccola. Prerequisite(s): Econ 001.
The course is designed to teach students how to think as an economist about legal rules; to evaluate alternative legal rules against standards of economic efficiency and distributive justice; and to understand the nature of the legal process and several specific areas of the law. With the use of alternative texts, both deductive and inductive reasoning will be employed to study the formation and interpretation of legal rules.

213. (LGST813) Legal Aspect of Entrepreneurship. (C) Hochstadter.
Legal Aspects of Entrepreneurship is a practical, hands-on course examining critical legal issues that confront start-up and mature companies with a focus on
entrepreneurship. Students will emerge prepared to use law as a positive force for growth and success of their business plans, as well as to manage and mitigate legal risk via company policies, contracts, insurance or ADR. They will also learn when it is strategic and cost-effective to turn to legal counsel. Case studies incorporate current issues, and real life client/courtroom experience. Topics cover intellectual property; non-competition, non-disclosure and invention assignment agreements; choice of entity and tax; venture capital and private equity; mergers and acquisitions; bankruptcy; securities; discrimination; and independent contractors. This course will prove useful for any business career in providing an overview of business law and social policy.

This course aims to familiarize students with and prepare students for the conduct of international transactions. Students will work their way through a series of hypothetical trade transactions, placed against a background of concepts and general theories. Students will take a hypothetical firm through a series of possible transnational investments, again after discussion of concepts and general theories. Throughout, the course will discuss issues of importance to emerging economies. Students should be able to make thoughtful choices rather than simply reciting bullet points about international business transactions.

215. (LGST815, MGMT213, MGMT773) Environmental Management: Law & Policy. (C) Orts, Light.
This course provides an introduction to environmental management by focusing on foundational concepts of environmental law and policy and how they affect business decisions. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment, the existing legal and policy framework of environmental protection, and how business managers can think about managing their relationship with both the environment and the law.

216. Emerging Economies. (C) Nichols.
This course explores important issues in conducting business internationally in and with emerging economies. Much of the course attempts to define emerging economies and to understand the changes occurring in these countries. The course also examines the position of emerging economies in the global context, and how broad social issues affect the development of emerging economies and the ability to establish relationships or conduct business in emerging economies.

218. (AFRC218) Diversity and the Law. (C) Anderson.
The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include a term paper and class case presentations.

219. Law and Policy in International Business. (C) Zaring.
This course introduces students to the legal frameworks for regulating international business - national, regional, and international. Topics include mechanisms for dispute resolution, different standards on assigning nationality, jurisdictional and choice of law problems, controversies regarding the treatment of incoming foreign direct investment and expropriation of foreign-owned businesses, patterns in extraterritoriality, problems of clashing legal standards affecting areas like labor and the environment, and projects for creating more uniform rules governing the conduct of international business. Throughout students will be encouraged to evaluate the policy dimensions of laws and to develop their own critical perspectives regarding these.

220. (LGST820) International Business Ethics. (C) Staff.
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.

221. Constitutional Law and Free Enterprise. (C) Sepinwall.
The course explores the fundamentals of U.S. constitutional doctrine and adjudication, with an emphasis on commercial and business issues and implications of constitutional law. The course starts by considering the Constitution and the structure and relationship of the governmental entities it establishes and upon which it depends. Special attention is given to the role of the federal courts, especially the Supreme Court, in interpreting and applying constitutional principles. From this foundation, the course moves on to examine in detail the major economic and business implications of constitutional law in different eras of the nation's history. A core theme is how historical events and changing notions of public policy have affected and been affected by the evolution of constitutional doctrine.

222. (OIDD222) Internet Law & Policy. (C) Werbach.
The Internet has become central to business and daily life. This course looks at how courts, legislatures, and regulators confront the major legal issues that the Internet poses. The fundamental challenge is that law comes from governments and other institutions in specific places, but the Internet is global and virtual. Conflicts such as the shutdown of the Napster peer-to-peer file-sharing service and the debate over "network neutrality" regulations for broadband access illustrate the challenge. How does the legal system think about Google, Skype, Twitter, and Facebook? How should it?

The material in the course ranges from the foundations of cyberlaw, developed during the e-commerce boom of the 1990s, to current leading-edge questions around social networks, user-generated content, location-based services, cloud computing, and broadband platforms. Major topics include: how legally-enforceable contracts are made online; how courts determine jurisdiction over online transactions; intellectual property rules around digital assets such as music, video, and online texts; control over Internet domain names; liability of intermediaries such as Internet Service Providers and search engines; and online privacy protections. No pre-existing legal or technical knowledge is required.

223. (LGST807) Securities Regulation. (C) Buccola.
The course examines the federal securities laws and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers,
accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management, and real estate.

The 2000 UN Global Compact has confirmed the role of TNCs as central actors in the UN system of international human rights law, but whether their role should be voluntary or legally mandated remains in dispute. This course introduces students to how globalization has led to projects for expanding international human rights law to capture the operations of TNCs and why this development is opposed in many quarters. Competing perspectives on the pros and cons of imposing human rights responsibilities on TNCs and on the respective roles that businesses and governments should play will be examined. The Positions of various governments, businesses, international institutions, academics, and NGOs will be considered, and a number of illustrative case studies will be analyzed.

Markets play a central role in the life of a capitalist democracy. But is this a good thing? Should we let markets decide who is rich and who is poor? Who makes decisions and who follows them? Whose ideas get heard and whose ideas do not? The goal of this class will be to examine the market from the perspective of various social values to see whether we should want a market system and, if so, what kind of market system we should want. Among the issues we will examine are the following. Does the market contribute to the common good? If so, how? Does the market conflict with the idea that all human beings are of equal value? What is the relation between the market and freedom? Does the market liberate us or oppress us? Can we reconcile the market with our democratic ideals? What role should corporations play in a healthy democracy? What role should markets play in an increasingly globalized world? We will read several important philosophers, economists, and political theorists writing on these issues, including Adam Smith, John Rawls, Amartya Sen, Friedrich Hayek, Karl Marx, Robert Nozick, Jurgen Habermas, and others. Grades will be based on three papers and class participation.

227. Literature of Success. (C) Shell.
This course explores the history, literature, and philosophy of two age-old questions: what does it mean to be successful and how does one achieve this elusive goal? It surveys some of the classics of the "success" genre - from Benjamin Franklin's Autobiography in the 18th century to Dale Carnegie's How to Win Friends and Influence People and Marcus Buckingham's Now, Discover Your Strengths in the 20th and 21st centuries. Case studies of remarkable achievements in business and society and Arthur Miller's play Death of a Salesman provide additional contexts within which to reflect on the questions at the center of the course. Students will keep a personal journal and use web-based tools to examine their own character strengths, talents, and achievement orientations. Grading is based on class attendance and participation, reading response papers, personal journals on assigned topics involving self-reflection, a mid-term paper on an assigned research subject related to success, and a final, longer paper exploring, based on course readings and original research, each student's personal philosophy of success. No final exam.

228. Sports Law. (C) Staff.
This course focuses on the areas of association, contract, constitutional, labor, antitrust, and agency law as they apply to the sports industry. This course exposes the student to many of the legal issues facing stakeholders in sport organizations. Special attention is given to the regulation of professional sports leagues promoting competitive balance, as well as antitrust law and labor-management relations dealing with the organization structure of sports leagues. The course also takes an inside look at previous and newly formed collective bargaining agreements and the use of Salary Cap or lack thereof in professional sports leagues. The development of effective communication skills will be emphasized through class presentations, written assignments, and quizzes; leadership and interpersonal communications will be cultivated through small group projects and meetings, and critical thinking and problem solving skills will be fostered through the careful study of case law impacting the sports industry in a variety of facets.

What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured? Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed?

This survey course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves case studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: How should business enterprises and business thinking be engaged to improve society in areas not always associated with business? The course is required for the secondary concentration in Social Impact and Responsibility.

240. (OIDD240) Gamification for Business. (C) Werbach.
Gamification means using the techniques of digital game design to serve business and social impact objectives. The video game industry is now bigger than Hollywood because well-designed games take advantage of both technology and psychology. Gamification takes the elements of games and applies them to real-world environments. Major companies and fast-growing startups now use it in marketing, human resources, innovation processes, health and wellness, education, and customer engagement.

This course examines the mechanisms of gamification their effective use in business or other contexts. No particular technical skills or game knowledge are
required. The focus is on gamification as a design practice, which it rooted in research on human motivation and implemented through online systems and social media. To illustrate these concepts, the course itself will be gamified.

241. (LGST641) Theories of the Business Enterprise. (C) Orts.
What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives.

In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

292. (MGMT292, OIDD292) Advanced Negotiations. (C) Schweitzer, Staff. Prerequisite(s): LGST 206 Negotiations.
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations.

In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

SM 299. Seminar in Law and Society. (C) Staff. See department for current offerings.
A study of the nature, functions, and limits of law as an agency of societal policy. Each semester an area of substantive law is studied for the purpose of examining the relationship between legal norms developed and developing in the area and societal problems and needs.

524. (LGST224) Human Rts & Globalization. (C) Bellace.
The 2000 UN Global Compact has confirmed the role of TNCs as central actors in the UN system of international human rights law, but whether their role should be voluntary or legally mandated remains in dispute. This course introduces students to how globalization has led to projects for expanding international human rights law to capture the operations of TNCs and why this development is opposed in many quarters. Competing perspectives on the pros and cons of imposing human rights responsibilities on TNCs and on the respective roles that businesses and governments should play will be examined. The positions of various governments, businesses, international institutions, academics, and NGOs will be considered, and a number of illustrative case studies will be analyzed.

641. (LGST241) Theories of the Business Enterprise. (C) Orts.
What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives.

In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

SM 920. Ethics in Business and Economics. (M) Staff. Ph.D Course.
The seminar explores the growing academic literature in business ethics. It also provides participants an opportunity to investigate an ethical issue of their choosing in some depth, using their field of specialty as context. The seminar assumes no previous exposure to business ethics. Different theories and frameworks for investigating issues will be discussed. In turn, these theories will be applied to a range of issues, both domestic and international. Such issues include: corruption in host countries, the management of values in modern corporations, the ethical status of the corporation, ethics in sophisticated financial transactions (such as leveraged derivative transactions), and gender discrimination in the context of cultural differences. Literature not only from business ethics, but from professional and applied ethics, law, and organizational behavior will be discussed. Often, guest speakers will address the seminar. At the discretion of the class, special topics of interest to the class will be examined. Students will be expected to write and present a major paper dealing with a current issue within their major field. The course is open to students across fields, and provides integration of ideas across multiple business disciplines.

This course will introduce students to basic jurisprudential discussions and debates that relate to understanding business in society. Topics will include a general overview of the nature of law and its relationship to ethics; theories of contract, torts, and property; criminal law as it applies to business situations; and theories of the business enterprise and its regulation. Selected topics will also be chosen in accordance with the interest of participants in the seminar.
Linguistics

American Sign Language and Irish Gaelic courses are sponsored by the Department of Linguistics and offered through the Penn Language Center. Please see http://ccat.sas.upenn.edu/plc/

Undergraduate Courses

A general introduction to the nature, history and use of human language, speech and writing. Topics include: the biological basis of human language, and analogous systems in other creatures; relations to cognition, communication, and social organization; sounds, forms and meanings in the world’s languages; the reconstruction of linguistic history and the family tree of languages; dialect variation and language standardization; language and gender; language learning by children and adults; the neurology of language and language disorders; the nature and history of writing systems. Intended for any undergraduate interested in language or its use, this course is also recommended as an introduction for students who plan to major in linguistics.

Most of the languages now spoken in Europe, along with some languages of Iran, India and central Asia, are thought to be descended from a single language known as Proto-Indo-European, spoken at least six thousand years ago, probably in a region extending from north of the Black Sea in modern Ukraine east through southern Russia. Speakers of Proto-Indo-European eventually populated Europe in the Bronze Age, and their societies formed the basis of the classical civilizations of Greece and Rome, as well as of the Celtic, Germanic and Slavic speaking peoples. What were the Proto-Indo-Europeans like? What did they believe about the world and their gods? How do we know? Reconstruction of the Proto-Indo-European language, one of the triumphs of comparative and historical linguistics in the 19th and 20th centuries, allows us a glimpse into the society of this prehistoric people.
In this seminar students will, through comparison of modern and ancient languages, learn the basis of this reconstruction -- the comparative method of historical linguistics -- as well as explore the culture and society of the Proto-Indo-Europeans and their immediate descendants. In addition, we will examine the pseudo-scientific basis of the myth of Aryan supremacy, and study the contributions of archaeological findings in determining the "homeland" of the Indo-Europeans. No prior knowledge of any particular language is necessary. This seminar should be of interest to students considering a major in linguistics, anthropology and archaeology, ancient history or comparative religion. (Also fulfills Cross-Cultural Analysis.)

This course introduces the foundations of linguistics - the scientific study of language - through exploration of multilingualism in the USA and in different societies around the world.
Contacts between groups of people speaking different languages are documented from earliest records, and around the world it remains the norm to find more than one language in regular use in a single community. In this course we will see that multilingualism is a catalyst for linguistic change: sometimes languages are lost; sometimes new languages are created; sometimes the structure of a language is radically altered. We will consider: Which parts of linguistic structure are most susceptible to change under conditions of bilingualism? Does language contact - whether a result of trade, education, migration, conquest, or intermarriage - influence language structure in predictable ways? How do individual speakers handle multiple languages? How have attitudes to speakers of multiple languages changed through history? How have socio-historical events shaped the linguistic situation in the USA?

L/R 102. Introduction to Sociolinguistics. (B) Society Sector. All classes. Tamminga. Satisfies Quantitative Data Analysis.
Human language viewed from a social and historical perspective. Students will acquire the tools of linguistic analysis through interactive computer programs, covering phonetics, phonology and morphology, in English and other languages. These techniques will then be used to trace social differences in the use of language, and changing patterns of social stratification. The course will focus on linguistic changes in progress in American society, in both mainstream and minority communities, and the social problems associated with them. Students will engage in field projects to search for the social correlates of linguistic behavior, and use quantitative methods to analyze the results.

The purpose of this course is to explore the relationship between linguistic structure and the use of language for artistic purposes. The syllabus is organized as a sequence of units, each built around a particular theme. These include the sound structure of poetry (meter, rhyme, and other linguistic patterns in Jabberwocky, the Odyssey, Shakespeare, the Troubadours, and others); how precise linguistic data can be used to solve an outstanding literary problem (determining the approximate date when Beowulf was composed); and the structure of folktales of various cultures and of narratives of everyday experience.

L/R 105. (CIS 140, COGS001, PHIL044, PSYC207) Introduction to Cognitive Science. (A) Brainard/Ungar. This is a Formal Reasoning course.
Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce students to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between such modules. The course shows how the different views from the parent disciplines interact, and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories, and provides an introduction to some of the main directions of current research in the field.

L/R 106. Introduction to Formal Linguistics. (A) Staff. This is a Formal Reasoning course.
This course is intended as an introduction to the application of formal language theory, automata theory, and other computational models to the understanding of natural human language. Topics include regular languages and finite state automata; context-free languages and pushdown automata; recursive transition networks; augmented transition networks; tree- adjoining grammars.
L/R 115. Writing Systems. (A) History & Tradition Sector. All classes. Buckley.
The historical origin of writing in Sumeria, Egypt, China, and Mesoamerica; the
transmission of writing across languages and cultures, including the route from
Phoenician to Greek to Etruscan to Latin to English; the development of individual
writing systems over time; the traditional classification of written symbols
 ideographic, logographic, syllabic, alphabetic); methods of decipherment;
differences between spoken and written language; how linguistic structure
influences writing, and is reflected by it; social and political aspects of writing;
literacy and the acquisition of writing.

120. Introduction to Speech Analysis. (C) Kuang. Satisfies Quantitative Data Analysis.
This course focuses on experimental investigations of speech sounds. General
contents include: the fundamentals of speech production and perception; speech
analysis tools and techniques; and topics in phonetic studies. The course consists of
integrated lectures and laboratory sessions in which students learn computer
techniques for analyzing digital recordings.

140. Construct a Language. (M)
Legate.
In this course, students construct their own
language, one that is compatible with what
is known about possible human languages.
To this end, the course investigates
language typology through lectures and
examination of grammars of unfamiliar
languages. Topics include language
universals, points of choice in a fixed
decision space, and dependencies among
choices.

160. (AFRC160) Introduction to African American and Latino
English. (A) Staff.
An introduction to the use and structure of
dialects of English used by the African
American and Latino communities in
the United States. It is an academically based
service learning course. The field work
component involves the study of the
language and culture of everyday life and
the application of this knowledge to
programs for raising the reading levels of
elementary school children.

230. (LING503) Sound Structure of
Language. (B) Noyer. Prerequisite(s):
Prerequisite: A prior course in linguistics or
permission of instructor.
An introduction to phonetics and
phonology. Topics include articulatory
phonetics (the anatomy of the vocal tract;
how speech sounds are produced);
transcription (conventions for representing
the sounds of the world's languages);
classification (how speech sounds are
classified and represented cognitively
through distinctive features); phonology
(the grammar of speech sounds in various
languages: their patterning and interaction)
and syllable structure and its role in
phonology.

240. Structure of a Language. (M)
Staff.
Designed to apply linguistic principles to
the grammatical analysis of a particular
language, this course focuses on a different
language each time it is given, according to
the decision of the instructor. It may be
taken by students with prior knowledge of
the language in question who have not
taken previous courses in linguistics, and
by students of linguistics who wish to
explore a new language. The selected
language will be announced prior to pre-
registration for any semester in which it is
given.

241. Language in Native America.
(M) Buckley.
This course is an introduction to linguistic
perspectives on the languages native to the
Americas (their nature and distribution,
typological similarities and differences),
with an emphasis on North America. The
diverse languages of this region will be
examined from the point of view of
particular linguistic phenomena, such as
phonology, morphology, and syntax; and in
addition we will study their historical
development and their place in culture,
society, and thought.

247. Structure of American Sign
Language. Fisher/Santorini.
Prerequisite(s): Ling 001 or permission of
instructor(s).
This course covers the linguistic structure
of American Sign Language (ASL),
including its phonology (articulatory
features, phonological constraints,
nonmanuals), morphology (morphological
constraints, compounds, incorporation,
borrowing), and syntax (syntactic
categories, basic phrase structure, common
sentence types). Also discussed are the
topics of classifiers and deixis. In keeping
with the comparative perspective of
linguistic theory, parallels and differences
between ASL and other (primarily spoken)
languages are pointed out where
appropriate. Historical and sociolinguistic
issues are addressed where they are
relevant to elucidating linguistic structure.
Though the course focuses on ASL, it
necessarily touches on issues concerning
sign languages more generally, notably the
possible effects of modality (sign vs.
speech) on linguistic structure and the
implications of the signed modality for
general linguistics.
Although the course does not
presuppose knowledge of ASL, it does
require acquaintance with basic concepts of
linguistics.

250. Introduction to Syntax. (B)
Santorini.
This course is an introduction to current
syntactic theory, covering the principles
that govern phrase structure (the
composition of phrases and sentences),
movement (dependencies between syntactic
constituents), and binding (the
interpretation of different types of noun
phrases). Although much of the evidence
discussed in the class will come from
English, evidence from other languages
will also play an important role, in keeping
with the comparative and universalist
perspective of modern syntactic theory.

252. Logical Analysis of Language.
(M) Clark.
Everyone seems to think that language and
thought are somehow intimately related.
But what, exactly, is the relationship? For
some people, language and thought are
identical, so that pre-linguistic creatures are
completely incapable of thought. This
course examines language as an instrument
to send and receive information. In part I,
we will start with a computational approach
to the problem of how an information agent
would extract and use information from
language. That is, we will take language to
be an encoding of a mental content. The
course considers some of the classic
position papers on artificial intelligence and
then moves on to develop a compositional
account of computing meanings based on
categorial grammar. We will, in addition,
discuss some of the leading ideas in the
theory of artificial neural nets and concept
formation, particularly prototype theory.
In part II, we will focus on
compositional theories of meaning; we will
pay particular attention to categorial
grammar, developing a strictly
compositional theory of the encoding. In
this section, we will develop some ideas
from dynamic semantics and pragmatic
thories of presupposition and implicature.
In part III, we will explore reasons for
supposing that meaning is largely social
and not purely a question of mental content.
This will lead us to a critical consideration
of linguistic relativity, the idea that
language can influence thought.
255. Formal Semantics and Cognitive Science. (M) Schwarz. NOTE TO PSYCHOLOGY MAJORS: Ling 255 can be counted towards the 'Additional Psych Courses', as specified in the Undergraduate Handbook. NOTE TO COGNITIVE SCIENCE MAJORS: Ling 255 counts towards Concentration 3: Language and Mind.

This course provides an introduction to the study of meaning in natural language. The first part of the course introduces a formal perspective on meaning in terms of truth conditions as well as the basic analytical tools necessary for this, primarily building on set theory and logic. The main part of the course covers a range of empirical investigations of phenomena related to meaning using experimental methods from psycholinguistics. Topics include a selection of issues on the semantics-pragmatics interface, such as conversational implicatures, presuppositions, reference resolution and perspective taking, and quantifier scope. Students will carry out a class project, possibly in groups, to develop (and, if possible, carry out) an experimental study of meaning-related phenomena of their own. Relevant tools for experimental design and the implementation of such studies will be introduced along the way. This provides students with the opportunity to engage in a scientific investigation of their own early on in their undergraduate career in a domain that is easily accessible and yet central to the general enterprise of the cognitive sciences.

270. Language Acquisition. (M) Yang. An introduction to language acquisition in children and the development of related cognitive and perceptual systems. Topics include the nature of speech perception and the specialization to the native language; the structure and acquisition of words; children's phonology; the development of grammar; bilingualism and second language acquisition; language learning impairments; the biological basis of language acquisition; the role in language learning in language change. Intended for any undergraduate interested in the psychology and development of language.

SM 300. Tutorial in Linguistics. (A) Legate. Prerequisite(s): Senior status or permission of the instructor. Majors only. This tutorial allows students to deal in a concentrated manner with selected major topics in linguistics by means of extensive readings and research. Two topics are studied during the semester, exposing students to a range of sophisticated linguistic questions.

301. Conference. (C) An independent study for majors in linguistics.

SM 302. (LING502) Linguistic Field Methods. (M) Buckley/Legate. Prerequisite(s): Ling 230 and Ling 250. Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 502.

310. History of the English Language. (A) Ringe/Kroch. This course traces the linguistic history of English from its earliest reconstructable ancestor, Proto-Indo-European, to the present. We focus especially on significant large-scale changes, such as the restructuring of the verb system in Proto-Germanic, the intricate interaction of sound changes in the immediate prehistory of Old English, syntactic change in Middle English, and the diversification of English dialects since 1750.

354. Language and Game Theory. (M) Clark. This course is an introduction to game-theoretic pragmatics. It focuses on aspects of meaning that follow from rational, strategic decision making. The course covers an introduction to the theory of games with an emphasis on coordination games and cooperation. We develop a game theoretic account of truth conditional semantics using zero-sum games. We then cover Gricean implicature; focal points and coordination; polysemy vs homophony; and a game account of reference tracking and pronoun interpretation.

380. (LING580) Introduction to Semantics. (A) Schwarz. Prerequisite(s): Ling 250. This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.

398. Senior Thesis. (C) Staff.

404. Morphological Theory. (M) Embick. This course will explore some issues concerning the internal structure of words. After a brief introduction to some basic terms and concepts, we will discuss the interaction of morphology with phonology. We will look both at how morphology conditions phonological rules and how phonology conditions morphology. Then we will turn to the interaction of syntax and morphology. We will look at some problems raised by inflectional morphology, cemics and compounds. The main requirement for the class will be a series of homework exercises in morphological analysis and a short paper at the end of the semester.

SM 411. Old English. (M) Kroch. The main purpose of this course is to teach students to read Old English ("Anglo-Saxon"), chiefly but not exclusively for research in linguistics. Grammar will be heavily emphasized; there will also be lectures on the immediate prehistory of the language, since the morphology of Old English was made unusually complex by interacting sound changes. In the first eight weeks we will work through Moore and Knott's "Elements of Grammar" and learn the grammar; the remainder of the term will be devoted to reading texts.

440.Pidgins and Creoles. (H) The origins and development of pidgins (languages of intercommunication that have evolved for practical reasons in situations of trade, conquest, or colonization, and spoken as second or auxiliary languages) and creoles (languages with native speakers that have developed from previous pidgins); relations between creoles and other languages; implications of creole studies for general theories of language and language change.

SM 449. Language and Computation. (M) Yang. The computational study of natural language and its implications for linguistic theories. Topics include finite state tools, computational morphology and phonology, grammar and parsing, computational models of language learning in children and machines.

450. Languages in Contact. (I) Multilingualism from a societal, individual, and linguistic point of view. The different types of contacts between populations and between individuals which give rise to multilingualism. Second-language acquisition and the problem of the "critical age." Cognitive and cultural aspects of
multilingualism; applications to the teaching of languages. "Bidialectalism." Code-switching (alternation), interference and integration: the mutual influences of languages in contact. Political and social aspects of multilingualism.

SM 470. (AFRC262, AFST260, FOLK470, LALS260) Narrative Analysis. (M)
The course will develop our understanding of narrative structure on the basis of oral narratives of personal experience, told by speakers from a wide range of geographic backgrounds and social classes. It will link the principles governing oral narratives to the narratological examination of myth, literature and film by Propp, Greimas, Prince, Chatman, and others. The principles that emerge from the study of oral narrative will be re-examined in literary narrative, including Scandinavian, Greek and Hebrew epics, medieval romances, film, and modern novels, with attention to the differences between vernacular, literary and academic style. The class will then consider the work of psychologists on how narratives are remembered and understood, based on the causal network theory of Trabasso, and apply these principles to narratives written to teach children to read, particularly those designed to reflect the cultural and linguistic framework of African American children.

Graduate Courses

This course is intended for advanced graduate students who are interested in developing a research paper. Each student will present his or her topic several times during the semester as the analysis develops, with feedback from the instructor and other students to improve the organization and content of the analysis. The goal is an end product appropriate for delivery at a national conference or submission to a journal.

SM 502. (LING302) Linguistic Field Methods. (M) Buckley/Legate.
Prerequisite(s): LING 530 and Ling 550. Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 302. Each student will write a final paper on some aspect of the language.

503. (LING230) Sound Structure of Language. (B) Noyer.
An introduction to articulatory and acoustic phonetics; phonetic transcription; basic concepts and methods of phonological analysis.

505. Research Topics. (C)
A reading course on specialized topics in linguistics. Arranged by instructor.

510. Introduction to Historical and Comparative Linguistics. (A) Ringe.

511. Language Variation & Change. (B) Tamminga. Prerequisite(s): LING 510 or equivalent.
Speech communities as a focus for the understanding of language evolution and change: language variation in time and space. The relationship between language structure and language use; between language change and social change. Populations as differentiated by age, sex, social class, race, and ethnicity, and the relationship of these factors to linguistic differentiation.

SM 515. Dynamics of Language. (C) Yang. Prerequisite(s): Ling 510.
This course introduces the tools, techniques, as well as current research on the approach to language as a dynamical system, which seeks to fruitfully integrate linguistic theory, psycholinguistics, corpus linguistics, and historical linguistics through the means of mathematical modeling. Topics include: string processing, dynamical systems and stability, stochastic processes, mathematical models of population dynamics, and dynamical models of language learning, processing, and change.

520. Introduction to Phonetics. (A) Liberman/Kuang. Prerequisite(s): An introductory course in linguistics, or consent of instructor.
Speech: its linguistic transcription, its quantitative physical description, and its relationship to the categories and dimensions of language structure and use. The physical basis of speech: acoustics, vocal tract anatomy and physiology, hearing and speech perception, articulation and motor control. Phonetic variation and change. Prosody: stress, intonation, phrasing speech rate. Phonetic instrumentation, the design and interpretation of phonetic experiments, and the use of phonetic evidence in linguistic research, with emphasis on computer techniques. Introduction to speech signal processing. Speech technology: introduction to speech recognition, text-to-speech synthesis, speech coding. This course will emphasize the phonetics of natural speech, and its connections to issues in other areas of linguistics and cognitive science.

L/L 521. Introduction to Phonetics II. (B) Kuang/Liberman. Prerequisite(s): LING 520.
This is a methodology course, which focuses on how to conduct phonetics research using very large speech corpora. Topics include scripting and statistical techniques, automatic phonetic analysis, integration of speech technology in phonetics studies, variation and invariability in large speech corpora, and revisiting classic phonetic and phonological problems from the perspective of corpus phonetics.

A hands-on signal and image processing course for non-EE graduate students needing these skills. We will go through all the fundamentals of signal and image processing using computer exercises developed in MATLAB. Examples will be drawn from speech analysis and synthesis, computer vision, and biological modeling.

530. Phonology I. (A) Noyer. Prerequisite(s): LING 503 or equivalent. First half of a year-long introduction to the formal study of phonology. Basic concepts in articulatory phonetics; the distribution of sounds (phonemes and allophones); underlying and surface forms, and how to relate them using both ordered-rule and surface-constraint approaches. The survey of theoretical topics in this term includes distinctive features (context, organization, underspecification); the autosegmental representation of tone; and the theory of phonological domains and their interaction with morphological and syntactic constituency. Emphasizes hands-on analysis of a wide range of data.

531. Phonology II. (B) Buckley. Prerequisite(s): LING 530.
Second half of a year-long introduction; continues LING 530. Topics to be surveyed include syllable structure and moraic theory; the prosodic hierarchy; the properties and representation of geminates; templatic and prosodic morphology; reduplication and emergence of the
unmarked; and metrical phonology (properties of stress, foot typology, and issues of constituency). Emphasizes hands-on analysis of a wide range of data.

**SM 538. Computational Methods in Linguistic Research. (M) Staff.**
This course aims to provide students with the knowledge and skills needed to use computational techniques to facilitate linguistic research. It introduces the computer representation of linguistic data, the construction of linguistic databases, ways of searching for and extracting information of interest, and ways of generating useful displays of the results. Topics covered include the representation of text on computers (multilingual character encoding, mark-up schemes, means of converting among representations); regular expressions and their use in searching; context free grammars; basic parsing techniques; properties and uses of databases; approaches to annotation; and sorting as a tool for searching and organizing data.

This two-semester sequence will provide basic mathematical modeling and algorithmic tools for interdisciplinary research in animal, human or machine communication, in association with the IRCs IGERT program. Topics include signal processing, statistical modeling and machine learning, information theory, game theory, and formal language theory. The courses will be taught in a laboratory setting, and will emphasize practical skills as well as basic concepts.

**546. (PSYC646) Mathematical Foundations of Language Communication II. (D) Liberman.**
This two-semester sequence will provide basic mathematical modeling and algorithmic tools for interdisciplinary research in animal, human or machine communication, in association with the IRCs IGERT program. Topics include signal processing, statistical modeling and machine learning, information theory, game theory, and formal language theory. The courses will be taught in a laboratory setting, and will emphasize practical skills as well as basic concepts.

**SM 548. Proof Theoretic Foundations of Linguistic Structure. (A) Clark.**
This course covers the fundamentals of proof theory and logic as they apply to linguistics. The notion of a well-formed derivation is fundamental to all flavors of formal linguistics and all sub-disciplines of linguistics-phonology, morphology, syntax and semantics. It rests, ultimately, on axiomatic systems developed by logicians to encode the process of valid formal reasoning. We will place a particular emphasis on constructive methods and, where appropriate, develop connections with parsing theory, automatic theorem proving and computational semantics. Time permitting, we will consider some introductory topics in substructural logic-systems that encode some proper sub-part of first order logic. These systems have proven very important in planning, theorem proving, dynamic logic and computational linguistics. The course is intended as a preparation for Linguistics 553 (Formal Semantics I). It includes a review of the propositional and predicate calculus before introducing tableaux and resolution systems, unification, axiomatic systems, natural deduction and sequent calculus. The latter two systems are particularly relevant for grammar formalisms like phrase structure grammars, TAGs and Categorial Grammar.

**549. (CIS 477) Mathematical Techniques in Natural Language Processing. (A) Joshi.**
Basic concepts of set theory, relations and functions, properties of relations. Basic concepts of algebra. Grammars, languages, and automata-finite state grammars, regular expressions, finite state transducers, context-free grammars and pushdown automata. Context-sensitive grammars-string context sensitivity and structural context-sensitivity. Mildly context-sensitive grammars. Turing machines. Grammars ad deductive systems, parsing as deduction. Stochastic grammars. The course will deal with these topics in a very basic and introductory manner, i.e., the key ideas of the proofs and not detailed proofs will be presented. More importantly, throughout the course plenty of linguistic examples to bring out the linguistic relevance of these topics will be discussed.

**550. Syntax I. (A) Kroch.**
A general introduction at the graduate level to the analysis of sentence structure. The approach taken is that of contemporary generative-transformational grammar.

**551. Syntax II. (B) Legate.**
Prerequisite(s): LING 550 or permission of instructor.
The second half of a year-long introduction to the formal study of natural language syntax. Topics to be covered include grammatical architecture, derivational versus representational statement of syntactic principles; movement and locality; the interface of syntax and semantics; argument structure; and other topics. The emphasis is on reading primary literature and discussing theoretical approaches, along with detailed case-studies of specific syntactic phenomena in different languages.

**SM 556. Historical Syntax. (M) Kroch.**
Prerequisite(s): LING 551 or the equivalent.
Introduction to the study of the syntax of languages attested only in historical corpora. The course will cover methods and results in the grammatical description of such languages and in the diachronic study of syntactic change.

**SM 560. The Study of the Speech Community: Field Methods. (C)**
For students who plan to carry out research in the speech community. Techniques and theory derived from sociolinguistic studies will be used to define neighborhoods, enter the community, analyze social networks, and obtain tape-recorded data from face-to-face interviews. Students will work in groups and study a single city block.

**SM 562. Quantitative Study of Linguistic Variation. (I) Tamminga.**
Prerequisite(s): LING 560 and either STAT 500 or STAT 501 (or permission of instructor).
This course provides students with the opportunity to hone their statistical, computational, and organizational skills while conducting original linguistic research on data gathered in continuing fieldwork in the speech community. Topics include forced alignment and vowel extraction, auditory and automated variable coding, the application of linear and logistic regression, and techniques for effective data visualization.

**SM 563. Sound Change in Progress. (M) Prerequisite(s): LING 520.**
The study of current sound changes in the speech community through instrumental means. Causes of linguistic diversity and consequences for speech recognition.

**568. (LING368) Dialect Geography. (M) Tamminga.**
This course traces the origins and characteristics of regional dialects. Beginning with a survey of the traditional dialectology literature beginning in the 19th century, we will discuss the influences of social, political, and physical geography on language change. We will then move on to examine the foundations of North...
American English dialect regions and the large-scale language changes that underlie their development. Students enrolled in 368 will complete a final project on American English accents; students enrolled in 568 will write an original research paper on a non-English dialect topic of their choosing.

**SM 570. Developmental Psycholinguistics. (B) Yang.**

The generative literature on language acquisition has produced many accurate and insightful descriptions of child language, but relatively few explicit accounts of learning that incorporate the role of individual experience into the knowledge of specific languages. Likewise, the experimental approach to language development has identified processes that could provide the bridge between the data and the grammar, but questions remain whether laboratory findings can sufficiently generalize to the full range of linguistic complexity. This course is an overview of research in language acquisition with particular focus on the important connection between what children know and how they come to know it.

**575. Mental Lexicon. (M) Yang.**

An investigation of the psychological representations and processing of words. Topics include: the extraction of words from speech; lexical access and production; the induction of morphological and phonological regularities in word learning; decomposition of morphologically complex words; frequency effects in morphological processing; storage vs. computation in the lexicon; the past tense debate; morphological change. This course makes extensive use of linguistic corpora. Students will also be familiarized with experimental design issues in the psycholinguistic study of the lexicon.

**580. (LING380) Semantics I. (A) Schwarz.** Prerequisite(s): Ling 550. Corequisite(s): Ling 550.

This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.

**581. Semantics II. (B) Schwarz.** Prerequisite(s): Ling 551. Corequisite(s): Ling 551.

The first part of the course expands the system from LING 580 to include intensional contexts. In particular, we discuss analyses of modals, attitude verbs, and conditionals, as well as the scope of noun phrases in modal environments. The second part of the course discusses a selection of topics from current work in semantics, such as the semantics of questions, tense and aspect, donkey anaphora, indefinites, genericity, degree constructions, events and situations, domain restriction, plurality and focus.

**590. Linguistic Pragmatics I. (A) Staff.** Prerequisite(s): LING 550 or permission of instructor.

This course is the first of a two-term introduction to linguistic pragmatics, the branch of linguistics whose goal is to provide a formal characterization of discourse competence, i.e. of what people know when they "know" how to use (a) language. Among the topics investigated are: The Cooperative Principle, conversational and conventional implicature, speech acts, reference, and presupposition.

**SM 591. Linguistic Pragmatics II. (B) Staff.** Prerequisite(s): LING 590.

This course is the second of a two-term introduction to linguistic pragmatics. Among the topics investigated are: given/new information, definiteness/ indefiniteness, topic/comment, Centering Theory, discourse structure, and the functions of syntax.

**595. Game Theoretic Pragmatics. (M) Clark.**

A great deal of linguistic meaning can be explained if we conceive of language as being a signaling system used by rational agents. Game theory provides an explicit mathematical account of rational, strategic interaction. This course will lay out the fundamentals of game theory, evolutionary game theory and multi-agent systems necessary to develop a theory of "radical pragmatics." We will discuss game theoretic models of implicature; presupposition and accomodation; reference tracking; scalar implicature as well as a number of other phenomena.

**SM 596. Pragmatics Workshop. (A) Clark.**

**SM 603. Topics in Phonology. (M) Buckley/Noyer.** Prerequisite(s): LING 530-531.

Topics are chosen from such areas as featural representations; syllable theory; metrical structure; tonal phonology; prosodic morphology; interaction of phonology with syntax and morphology.

**SM 604. Topics in Discourse Analysis. (C) Staff.** Prerequisite(s): LING 550 and LING 590 or permission of instructor.

Selected topics in discourse and pragmatics, e.g. reference, presupposition, functions of syntax.

**SM 608. Topics in Semantics and Pragmatics. (M) Clark/Schwarz.**

**SM 610. (GRMN602) Seminar in Historical and Comparative Linguistics. (C) Ringe.**

Selected topics either in Indo-European comparative linguistics or in historical and comparative method.

**SM 615. Comparative Indo-European Grammar. (E) Ringe.**

A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.

**SM 616. Comparative Indo-European Grammar II. (C) Ringe.**

A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.

**SM 620. Topics in Phonetics. (M) Liberman/Kuang.**

**SM 630. Seminar in Morphology. (M) Noyer/Embick.** Prerequisite(s): LING 530.

Readings in modern morphological theory and evaluation of hypotheses in the light of synchronic and diachronic evidence from various languages.

**SM 640. Formal Semantics and Mathematical Linguistics. (B) Clark.**

Advanced readings in formal semantics and discrete and continuous models of linguistic behavior.
SM 650. Topics in Natural-Language Syntax. (C) Kroch/Legate. Prerequisite(s): LING 551 or permission of instructor. Detailed study of topics in syntax and semantics, e.g., pronoun realization, negation, complementation. Topics vary from term to term.

SM 653. Topics in the Syntax-Semantics Interface. (A) Kroch. Topics in the Syntax-Semantics Interface

SM 656. Seminar in Historical Syntax. (M) Kroch. This course analyzes several well documented syntactic changes in the European languages with the tools of modern grammatical and quantitative analysis. The focus is on the competition between forms and systems as in the loss of the verb-second constraint in English and French and the competition between head initial and head final word orders in the several West Germanic languages.

SM 660. Research Seminar in Sociolinguistics. (M) This course will have different topics each term. Students approaching the dissertation level will explore with faculty frontier areas of research on linguistic change and variation. Topics addressed in recent years include: experimental investigation of the reliability of syntactic judgments; the development of TMA systems in creoles; transmission of linguistic change across generations. The course may be audited by those who have finished their course work or taken for credit in more than one year.

SM 662. Topics in Experimental Sociolinguistics.

SM 670. Topics in the Cultural Evolution of Language. Roberts. Readings in the cultural evolution of language. This encompasses research on the contribution of processes of cultural change to the emergence of language in the human species, the emergence of new languages, and language change viewed as a cultural-evolutionary process. There will be an emphasis on research employing empirical methods, particularly experimentation. Otherwise focus varies from term to term.

999. Independent Study and Research. (C) Student must submit brief proposal for approval. May be repeated for credit.

**Language Courses**

- **071. American Sign Language I. (C)** Staff. Offered through the Penn Language Center. Introduction to learning and understanding American Sign Language (ASL); cultural values and rules of behavior of the Deaf community in the United States. Includes receptive and expressive readiness activities; sign vocabulary; grammatical structure; receptive and expressive fingerspelling; and deaf culture.

- **072. American Sign Language II. (C)** Staff. Prerequisite(s): LING 071 or Permission of the Instructor. Offered through the Penn Language Center. Increased communication skill in American Sign Language (ASL); cultural values and behavioral rules of the deaf community in the U.S.; receptive and expressive activities; sign vocabulary; grammatical structure; receptive and expressive fingerspelling; and aspects of Deaf culture.

- **073. American Sign Language III. (C)** Staff. Prerequisite(s): LING 072 or permission of instructor. Offered through the Penn Language Center. Expanded instruction of American Sign Language (ASL). Receptive and expressive activities; sign vocabulary; grammatical structure; receptive and expressive fingerspelling; narrative skills; cultural behaviors; and aspects of Deaf culture. Abstract and conversational approach.

- **074. American Sign Language IV. (C)** Staff. Prerequisite(s): LING 073 or permission of instructor. Offered through the Penn Language Center. Increases the emphasis on more abstract and challenging conversational and narrative range. Includes receptive and expressive readiness activities; sign vocabulary; grammatical structure; receptive and expressive fingerspelling; various aspects of Deaf culture and cultural behavior rules.

- **075. American Sign Language V. (C)** Staff. Prerequisite(s): LING 074 or permission of instructor. Offered through the Penn Language Center. This is an advanced ASL course in which students expand their conversational and narrative range. While receptive readiness activities continue to be an important part of the class, the emphasis moves toward honing expressive sign skills through narrative presentation and ASL-only class discussions. Various aspects of Deaf culture and cultural behavior rules will be incorporated into the course. A large component of the course is a unit on Deaf history in which students read and discuss major events and famous deaf people via readings, film, class lectures and discussions, and other outside resources.

SM 076. Deaf Literature, Performance, Art, and Film. (B) Dragana-Hawk. Prerequisite(s): Ling 074 and prior language experience or permission from instructor. This course is an advanced/conversational ASL course that explores several key topics related to Deaf culture and the Deaf experience's influence on literature (both written and signed); theatre, fine and visual arts, and film - both Deaf and hearing directed and acted. Using only ASL in class, students learn about various perspectives and approaches to each of the themes and topics of the course. Some questions to explore and answer in this course will be: What is Deaf Literature? The Deaf Lens: What is it? How is it different from a hearing perspective on film? How is Deafness expressed differently in each of the arts discussed in this course? Analysis and discussion will come from readings as well as views of various types of Deaf arts.

077. ASL/Deaf Studies - ABCS. Fisher. Prerequisite(s): Ling 078 and permission from instructor. For this course, students will attend Pennsylvania School for the Deaf on a weekly basis where they will participate in and contribute to the school community via tutoring or other mutually agreeable activities. Students will also have formal class on a weekly basis with discussions and activities centered on reflection of community experiences through linguistic as well as cultural lenses. Additionally, drawing from the required Linguistics and other ASL/Deaf Studies coursework, students will develop an inquiry question and conduct preliminary community-based research to analyze sociolinguistic variations of ASL and Deaf cultural attitudes, behaviors, and norms. Ongoing reflections and discussions formal and informal on Deaf cultural/theoretical topics drawn from readings as well as community experiences will be integral to the course experience. LING 078, Topics in Deaf Culture and permission from the instructor, are required for this course.
SM 078. Deaf Culture. (C) Fisher.
Prerequisite(s): LING 074 or permission from coordinator. Offered through Penn Language Center.
This course is an advanced/conversational ASL course that explores several key topics related to Deaf Culture. Using only ASL in class, students will read and discuss books, articles, and films related to the following topics: What is Deaf Culture?, The History of the Deaf American, Communication Issues and Pathological Perspectives on Deafness, Deafness and Education, Deaf/Hearing Family Dynamics, and Deaf Theatre, Arts, and Poetry. Vocabulary, grammar, and idioms related to the topics will be presented through direct instruction as well as through the course of class conversation.

081. Beginning Irish Gaelic I. (D)
Blyn-LaDrew. Offered through the Penn Language Center.
Irish Gaelic, spoken primarily on the west coast of Ireland, is rich in oral traditions, song, poetry and literature. Knowledge of this language provides a foundation to understanding Celtic folklore and linguistics and also enhances the study of Anglo-Irish literature and history. The first-year course will include reading, conversation, listening and speaking.

082. Beginning Irish Gaelic II. (C)
Blyn-LaDrew. Prerequisite(s): LING 081 or permission from instructor. Offered through Penn Language Center.

083. Intermediate Irish Gaelic I. (C)
Blyn-LaDrew. Prerequisite(s): LING 082 or equivalent. Offered through the Penn Language Center.

085. Advanced Irish Gaelic I. (C)
Blyn-LaDrew. Prerequisite(s): LING 084 or equivalent. Offered through Penn Language Center.

086. Advanced Irish Gaelic II. (C)
Blyn-LaDrew. Prerequisite(s): LING 085 or equivalent. Offered through the Penn Language Center.
This course will emphasize reading of literary texts, and advanced aspects of grammar, composition, and conversation.

088. History of the Irish Language. (L)
Blyn-LaDrew. Offered through the Penn Language Center.
From downloadable lists of computer terminology in Irish to Ogam inscriptions chiseled in stone in the 5th century, the history of the Irish language reflects the history of the people themselves. This course outlines the language's changes through time and emergence from the unwritten Celtic, proto-Celtic, and Indo-European speech of its ancestors. Beginning in the modern period, when the very status of Irish as a living language has been hotly debated, the course will look backwards at the Celtic cultural revival of the late 19th century, the impact of the famine, nationalism, colonialism, the arrival of Christianity and the Roman alphabet, and the position of Irish within the Celtic branch of the Indo-European language family. Term papers may be based on fieldwork in the Irish-American community, or research. Audio and visual resources will supplement the lectures. Knowledge of Irish Gaelic is not required.

091. American Sign Language III/IV. (M)
Staff. Prerequisite(s): LING072 or by permission of instructor. Corequisite(s): Expanded instruction of ASL. Offered by Penn Language Center; permit from Penn Language Center required for admission. Expanded instruction of American Sign Language (ASL). Includes receptive and expressive readiness activities; sign vocabulary; grammatical structure; receptive and finger-spelling; narrative skills; cultural behaviors; and aspects of Deaf culture. Increases the emphasis on more abstract and challenging conversational and narrative range. Abstract and conversational approach.
LOGIC, INFORMATION AND COMPUTATION (AS) {LGIC}

L/R 010. (PHIL005) Ideas in Logic and Computation. (B) Weinstein. This is a Formal Reasoning course.
This course provides an introduction to some of the fundamental ideas of logic and computation. Topics will include truth functional logic, quantificational logic, and logical decision problems.

210. (MATH340) Applied Mathematics of Information and Computation I. (A) Scedrov, Towsner. Prerequisite(s): MATH 114 or MATH 115 or permission of the instructor.
The first semester of a two-semester course designed to introduce students to a range of mathematical subjects useful in the analysis of information and computation. This course will treat topics chosen from set theory, combinatorics, graph theory, and number theory.

220. (MATH341) Applied Mathematics of Information and Computation II. (M) Scedrov, Towsner. Prerequisite(s): LGIC 210 or permission of the instructor.
The second semester of a two-semester course devoted to mathematical subjects useful in the analysis of information and computation. Topics will be drawn from automata theory, formal languages, computability and complexity, and information theory.

310. (MATH570, PHIL410, PHIL412) Logic I. (C) Scedrov, Towsner, Weinstein. Prerequisite(s): Math 371 or Math 503.

SM 320. (MATH571, PHIL412) Logic II. (C) Scedrov, Towsner, Weinstein. Prerequisite(s): LGIC 310 or permission of the instructor.
The second semester of a two-semester course on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.
MANAGEMENT (WH) {MGMT}

000. Study Abroad.

L/R 100. Leadership and Communication in Groups. This course is exclusively reserved for Wharton undergraduate students.
Through the process of action, reflection, and experimentation, and application, MGMT 100 aims to develop your leadership, teamwork, and communication skills. The course provides many occasions to strengthen your ability to exercise leadership through service, to speak and write persuasively, and to work collaboratively with a diverse group of individuals. Through the course of the term, you will have a heightened sense of your individual strengths and opportunities for growth.
Eleven sections of approximately 60 students are scheduled each year (nine in the fall; two in the spring). Attached to each section are six recitations. Your recitation determines your project team. Whether you are in lecture participating in role plays or simulations, in recitation doing impromptu speeches, or out in the field working on your project, Management 100 is highly interactive and participative. The hallmark of the course is experiential learning.

Over the course of the year, Management 100 teams complete nearly 70 field projects. In the fall, freshmen participate in community service projects, a good number supplied by the United Way; in the spring, upper level transfer and dual degree students work on consulting projects vetted by Wharton's Small Business Development Center (SBDC).

L/R 101. Introduction To Management. (C) Prerequisite(s): None.
This course is an introduction to the critical management skills involved in planning, structuring, controlling and leading an organization. It provides a framework for understanding issues involved in both managing and being managed, and it will help you to be a more effective contributor to organizations that you join. We develop a "systems" view of organizations, which means that we examine organizations as part of a context, including but not limited to environment, strategy, structure, culture, tasks, people and outputs. We consider how managerial decisions made in any one of these domains affect decisions in each of the others.

104. (SOCI105) Industrial Relations and Human Resource Management. (C) Prerequisite(s): MGMT 100 & MGMT 101.
This undergraduate core course introduces students to a combination of basic concepts and timely topics around work and employment. As such, it is divided into two main sections and two quarters within each of those. The first main section deals with micro-level work issues, while the second main section deals with macro-level work issues. Within each of those sections, the first quarter focuses on basic concepts, while the quarter section deals with more applied topics.

111. Multinational Management. Prerequisite(s): MGMT 100 & MGMT 101.
Multinational management is the study of the international corporation and the global political and economic environment. This course provides an introduction to the more advanced offerings. It covers the historical origins of the multinational corporation, the economics of trade, money and investment in the world economy, and the policies and behavior of governments and international organizations. We place considerable emphasis in understanding the national and historic origins of the international firm, as well as on current issues regarding emerging economies and shifts in the political economy of global markets.

205. Multinational Corporate Strategies. (B) Prerequisite(s): MGMT 100, MGMT 101, & MGMT 111.
This course focuses on the creation of competitive advantage in the multinational firm. It examines the nature of global competition by exploring the characteristics of global versus non-global industries and firms. We also explore different types of international strategy and structure and examine the specific challenges of managing in multiple countries and markets. Finally, we consider the strategic allocation of resources along the value chain and the role of strategic alliances as a crucial element of an effective global strategy.

208. Globalization and International Political Economy. (B)
Globalization and International Political Economy is an upper level undergraduate course designed to provide the background necessary to understand globalization and the changes taking place in the international political-economy. The course objective is to help students develop a conceptual framework that will provide an understanding of the current international political-economic environment, provide a basis for thinking about the fundamental changes which are now taking place, and to build a solid foundation to which new material can be added throughout the students' careers.
Format: Class discussions will be interactive and structured to encourage maximum student participation.
Requirements: Take home mid-term exam, a final course paper of 10-15 pages and two shorter (1-2 page papers) dealing with the readings for the day. Students will not be allowed to enroll after the third class session.

209. The Political Environment of the Multinational Firm.
Are you well prepared to manage or analyze business challenges and competitive threats in a variety of political and social environments? For example, what should you do to dissuade or counter an individual critic armed with a camera phone a YouTube account? Or a decentralized grassroots organization that seemingly pops up overnight, appears to have no single leader or headquarters, and yet is quite successful in capturing media attention? Or a government official who because of a tight reelection campaign or an internal challenge from a populist general turns on you? Lone individuals, small activist groups and unexpected political shifts have done extensive damage to the reputations - and value - of multinationals in recent years. And yet most companies don't plan for, or even think about, investing in building the kinds of solid relationships with community leaders, governments, NGOs, and other key players that can help them avoid such crises and, when necessary, draw upon their reservoir of stakeholder capital to respond quickly and decisively when a challenge or threat emerges. This semester-long class provides an integrative perspective towards the management of these risks and opportunities.

It highlights that better assessment of stakeholder opinion, understanding of how stakeholders impact firm value and of how to infuse stakeholder relationships with trust to unlock that value are increasingly critical elements of a firm's long-term success, particularly in emerging markets. Firms must also focus on continual improvement in their stakeholder engagement, reinforcing their actions with strategic communications and via organizational culture. The course will give students a combination of practical tools and the latest academic thinking in the emerging field of corporate diplomacy.
211. Competitive Strategy. (A) Prerequisite(s): MGMT 100 & MGMT 101 and some knowledge of microeconomics is suggested. The course will be discussion oriented and based largely on case materials and mini-lectures.

This is an advanced course in competitive strategy. The course will apply the tools of industrial organization economics and game theory to examine the strategic decisions that managers make. We will examine those decisions concerning pricing, capacity investment, advertising, new product introductions, and research and development. Emphasis will be placed on the strategic interaction among rival sellers. In particular we will look at the various methods of entry deterrence and strategic commitment. The course will attempt to integrate traditional economic models with case study materials.

212. (MGMT 810) Social Entrepreneurship. (B) Prerequisite(s): MGMT 230 Recommended.

This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more profits and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity.

Creating a profitable social entrepreneurship venture is by no means a simple challenge. It involves deeply understanding how to prioritize a multi-mission entity, how to analyze and engage traditional agencies, how to formulate political strategies to develop influence and social assets in target beneficiary markets, how to forge negotiating strategies for securing resources, how to capture publicity for the enterprise, and generally how to minimize resource requirements. Students in teams will develop a PowerPoint deck presenting a social enterprise start up using the tools and principles of the course.

Format: Lecture, discussion, live case studies (discussions of progress reports of students own ventures), nation-boosting presentations.

223. Business Strategy. Prerequisite(s): MGMT 100 & 101; seniors and juniors that have completed introductory courses in finance, marketing, and accounting.

This course encourages students to analyze the problems of managing the total enterprise in the domestic and international setting. The focus is on the competitive strategy of the firm, examining issues central to its long- and short-term competitive position. Students act in the roles of key decision-makers or their advisors and solve problems related to the development or maintenance of the competitive advantage of the firm in a given market. The first module of the course develops an understanding of key strategic frameworks using theoretical readings and case-based discussions.

Students will learn concepts and tools for analyzing the competitive environment, strategic position and firm-specific capabilities in order to understand the sources of a firm's competitive advantage. In addition, students will address corporate strategy issues such as the economic logic and administrative challenges associated with diversification choices about horizontal and vertical integration. The second module will be conducted as a multi-session, computer-based simulation in which students will have the opportunity to apply the concepts and tools from module 1 to make strategic decisions.

The goal of the course is for students to develop an analytical tool kit for understanding strategic issues and to enrich their appreciation for the thought processes essential to incisive strategic analysis. This course offers students the opportunity to develop a general management perspective by combining their knowledge of specific functional areas with an appreciation for the requirements posed by the need to integrate all functions into a coherent whole. Students will develop skills in structuring and solving complex business problems.

225. (MGMT 714) Value Creation and Value Capture in American Business History. Prerequisite(s): MGMT 100 & MGMT 101.

This course concerns the history of capitalism in America viewed from the perspective of the people who operated (and in some cases owned) the firms. Its focus is on the activities of value creation and value capture and on how evolving opportunities and selection pressures have conditioned the historic development of competition, strategic analysis and initiatives, organizational structures, merger-and-acquisition activity, entrepreneurship, and the like. Accounting and control are also part of the story: the course in fact considers issues arising in a variety of different management disciplines and shows off their interrelationships. The maintenance (or otherwise) of value capture over the cycle and over time is a running theme.

The course has a narrative element (running from Franklin's days through the early twenty-first century) but its deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. It proceeds through a consideration of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School—they are often case-like and when possible draw on documents contemporary to the decisions such as correspondence, memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. They require thoughtful preparation. This course is much more focused on the students than many and a successful experience of its demands that the students both engage with the materials and take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. For more information, please contact the instructor: raff@wharton.upenn.edu.

230. Entrepreneurship. Prerequisite(s): Completion of all business fundamental courses and second semester sophomore standing. Ideally you will also have mastered the concepts of business policy.

MGMT 230 integrates the material introduced in business fundamental courses and applies it to the design and evaluation of new ventures. The purpose of this course is to explore the many dimensions of new venture creation and growth and to foster innovation and new business formations in independent and corporate settings. The course addresses both a theoretical perspective on venture initiation and the application of writing an actual business plan.

In this course you are asked to get out of the habit of being a receiver of ideas, facts, concepts and techniques, and get into the habit of generating ideas, identifying problems, analyzing and evaluation alternatives, and formulating workable action plans, thus putting textbook knowledge into practice. Students will get this hands-on experience in the following ways: Through the formation and ongoing
work of venture teams that will design a comprehensive business development plan for a particular start-up company. Teams are expected to utilize the tools and analytical approaches discussed in class to their venture. Through lectures and class discussions that are designed to familiarize students with the many dimensions of entrepreneurship and new venture initiation. Class format varies throughout the course: in some class sessions, there will be a lecture on specific topics; other sessions will consist of case discussions of a particular topic or a discussion of the business concepts that students are developing; guest speakers also lead and participate in some class sessions.

231. (MGMT806) Entrepreneurial Venture Initiation. (B) Prerequisite(s): MGMT 230 (recommended). This advanced course on entrepreneurship focuses on developing a validated opportunity into a venture that is ready for seed financing and/or launching the product or service. Participants in the workshop must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The workshop provides a practical guidance for developing the product or service, forming the entity, raising capital building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be "pitch ready" - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture.

Format: Readings, discussion, and developing an implementation plan for a real venture.

233. (MGMT833) Strategies and Practices of Family-Controlled Companies. (B) Prerequisite(s): None. This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness, organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics and communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm.

Format: The class is structured around topical lectures with frequent utilization of case studies. There will be in-class discussion, as well as on-site and off-site project work time.

234. (MGMT875) International Comparative Management: The Challenge of Diversity and Integration. (B) This course is comprised of lectures with case discussions, group and individual short papers and quizzes on the readings.

This course focuses on the comparative institutional environments in which business, government, and society interact. It provides students with a set of conceptual tools and analytical frameworks to navigate the complexities and ambiguities of the global economy. It provides an understanding of how to identify, measure and interpret the economic, social, political and cultural factors that shape regulatory policy, business strategy and market outcomes. It does so by traversing a rich empirical terrain that cuts across developing and industrialized countries, and is especially attentive to change over time. The course is deeply interdisciplinary and brings insights from economics, political science, sociology, anthropology, geography and history.

235. Technological Innovation and Entrepreneurship. (A) Prerequisite(s): MGMT 100 & MGMT 101; open to juniors and seniors in Engineering, Applied Science, and Wharton; others only with special permission. All students must receive instructor's permission. Graduating M&T students receive priority enrollment. The focus of this course is on analysis of the issues and options which must be faced in developing a successful technological venture and on the creation of a winning business plan. Particular attention is directed to the identification of technology-based venture opportunities, evaluation of technical feasibility and commercial potential, and planning for successful commercialization.

237. Management of Technology. (B) Prerequisite(s): MGMT 100 & MGMT 101; this section is based on seniority and open to Wharton students.

The course is designed to meet the needs of the future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems.

238. Organizational Behavior. Prerequisite(s): MGMT 100 & MGMT 101. Management 238 is an organizational behavior course, examining individual, interpersonal, and group effectiveness at work. Topics range from decision-making, motivation, and personality to networks, influence, helping, leadership, teamwork, and organizational culture. The learning method is heavily experiential, with a focus on applying key principles to the human side of management in role-play exercises, simulations, and group projects in local organizations. This course requires the instructor's permission. Registration is by application only; Penn In Touch requests will not be processed. The link to the application form will be available on the Management Department's website: https://mgmt.wharton.upenn.edu/programs/undergraduate, beginning March 14, 2016. The deadline for applications is March 25, 2016 at 5 PM. Students will be notified after April 1, 2016 regarding the status of their application.

239. Organization Design.

240. Group Dynamics. Section 001 -- Open to all Juniors and Seniors. This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve team effectiveness. This course makes use of analytic and reflective writing, peer feedback and coaching, simulations, and an intensive field project with a real team in the Philadelphia area. There are four kinds of teams that are the focus of your study: teams of which you've been a member in the past; your 240 Team, with three or four other classmates; a team outside of 240 that your 240 Team will observe, analyze, and report on -- your Host Team; and a team you expect to be on in the future. The primary case material for applying course concepts (learned from readings and lectures) will be these teams you know.
from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene -- as leader, member, or consultant -- to improve the performance sustainability, and impact on the members of any team. Prerequisite: Junior standing or above.

Special registration for MGMT 240 Section 001: Enrollment in this section of MGMT 240 is by permission of the instructor, Professor Stew Friedman. To apply for admission, please contact him via email: friedman@wharton.upenn.edu.

Section 002 -- Open only to MGMT 100 Teaching Assistants. Permission of instructor is required. This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve team effectiveness. This course makes use of readings, analytic and reflective writing, assessments, peer feedback and coaching, simulations, and your services as a MGMT 100 Teaching Assistant (TA). There are four kinds of teams that are the focus of your study: teams of which you've been a member in the past; your 240 Team, with two or three other classmates; the team of Wharton freshmen in your MGMT 100 section for whom you serve as TA; and a team you expect to be on in the future. The primary case material for applying course concepts (learned from readings and lectures) will be these teams you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene -- as leader, member, or consultant -- to improve the performance, sustainability, and impact on the members of any team. Prerequisite: Sophomore standing or above and assignment as MGMT 100 TA.

Recent technological changes have raised awareness of the magnitude and devastating long-term effects of poverty, food insecurity, limited and unequal access to education, and other social issues. Coupled with growing awareness of these issues is the emerging sense that traditional government programs and charities may be unable to solve these problems - at least, not alone. What may be needed are new strategies - strategies borne of (a) a deep understanding of the issues; (b) interdisciplinary collaboration; and (c) access to business knowledge, frameworks, and resources.

This course is designed to provide the information, strategies, examples, and analytical mindset to make students more rigorous, insightful, and effective in analyzing social ills and crafting potential solutions. Together, a cross-disciplinary group of undergraduate students, including students in Wharton, the College, and other Penn Schools, will examine the nature and extent of two pressing social problems - food insecurity and barriers to post-secondary education - and current approaches to solving these problems. After an introduction to the social impact landscape and review of frameworks and tools for social impact, we will meet with researchers, business leaders, and non-profit leaders to learn what's not working, what is working, and what might work even better.

247. (LGST208, MGMT795) Employment Law.

249. Mergers and Acquisitions. Prerequisite(s): MGMT 100 & MGMT 101. This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it also will explore leveraged buy-outs and hostile financial acquisitions as well as their influence on corporate buyers. Please note that you must fulfill the prerequisites in order to enroll in this class. Requests for this course should be submitted to: MGMT-Courseinfo@wharton.upenn.edu.

251. Consulting to Growth Companies. (A) Prerequisite(s): Junior or Senior Standing Recommended.

This course offers students a unique opportunity to develop consulting skills and entrepreneurial expertise by working as consultants to thriving entrepreneurial ventures in the Philadelphia area. This capstone course combines both fieldwork and class work and allows students to apply knowledge and skills acquired through other course work to real world issues that must be addressed by operating companies. An understanding of characterics producing rapid entrepreneurial growth and skills related to effective communications and management of a business relationship are emphasized.

264. Venture Capital and Entrepreneurial Management. (A)

This course focuses on venture capital management issues in the context of a high-growth potential start-up company. The course is motivated by rapid increases in both the supply of and demand for private equity over the past two decades. The topic is addressed from two distinct perspectives: issues that relate to the demand for private equity and venture capital (the entrepreneur's perspective) on the one hand, and issues that relate to the supply of capital (the investor's perspective) on the other. As well, we will address management issues that relate to how the VC and the entrepreneur work together once an investment has been made, compensation issues, and governance issues in the privately held venture capital backed company.

Format: Case/discussion format, supplemented by lectures and guest speakers.

Requirements: Classroom participation, written case assignments, late midterm.

Materials: Required coursepack and supplemental recommended reading.

265. Culture of Technology: Culture & Institutions of the Tech Sector--Bridging Research and Practice. Vice Dean Lori Rosenkopf.

Academics, students and practitioners alike are fascinated by the culture of tech sector--its people, practices, and organization. In this course we explore this sector using a combination of academic research papers and practitioner involvement. Each class session will be devoted to discussion of a single research article, during which we will be joined via Telepresence technology by a Wharton alum from the tech sector whose expertise is relevant to the paper topic. Therefore, the learning objectives of this half-credit course are to: 1) Understand the managerial, organizational, and regional institutions that characterize the tech sector, with particular emphasis on the case of Silicon Valley 2) Bridge research and practice by critical analysis of academic research in conjunction with practitioner input 3) Forge connections with tech sector practitioners, particularly with our West Coast alumni base. Registration is by application only; Penn In Touch requests will not be processed. Enrollment is limited. The link to the application form
will be available on the Management Department's website: https://mgmt.wharton.upenn.edu/programs/undergraduate, beginning March 21, 2016 through midnight on April 3, 2016.

Students will be granted permits to enroll after a review of the applications (no later than April 8). The deadline to apply is Sunday, April 3, 2016.

266. (MGMT766) Family Enterprise Mgmt.
This class will examine the causes and consequences of the creation of family fortunes, with a focus on the practical implications for family decision-making. We will discuss psychological characteristics associated with the typically entrepreneurial creators of family wealth; with their children, whose childhood development takes place in the context of growing businesses and accumulating wealth; and with their grandchildren and beyond, whose childhood development occurring in the context of established and often very public wealth, to build a comprehensive view of the interplay between family dynamics and economic decision making. Note that this class focus will be on behavioral aspects of family dynamics in a range of decision settings, rather than on management of an operating business per se. While this class will be particularly relevant to individuals aspiring to create their own family fortunes or whose ancestors have already done so, it will also be useful for individuals interested in foundation management, non-profit fund-raising or business catering to the very wealthy such as asset management and luxury retail.

272. Power and Politics in Organizations.
The purpose of this course is to introduce you to the power dynamics in organizations. The course is designed so that you will learn concepts that are useful for understanding, analyzing, and harnessing power. But beyond discovering ways to extend your own power, influence and political skill in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of theoretical and business articles, cases, exercises, assessments and simulations, we will extract a variety of lessons about power and politics in organizations. Topics include political skill, influence, issue selling, change management, networks, hierarchy, political conflict, corruption, coping with intolerable bosses, speaking up, redemption, and downsizing.

This course will explore the diverse ways in which scholars and practitioners have defined "good judgment." And it will introduce students to practical tools for assessing and improving judgment, with special emphasis on probabilistic reasoning. Students will have the opportunity both to fine-tune their personal judgment skills as well as to master and then weave together insights from several bodies of scientific knowledge, including frequentist and Bayesian statistics, psychological work on judgment and choice, group dynamics, organizational behavior and political science (key concepts discussed in Tsetlock's (2015) book "Superforecasting").

We will focus on bottom-line accuracy in sizing up real world problems. Class work will be primarily exercises, including working as an individual and in teams. You will have opportunities to forecast on a wide range of political, business, and macro-economic questions, which we will use as feedback tools to help you calibrate your judgment. Assessments include a weekly concept test and a final group presentation aimed to help you improve your judgment. The goal is to launch you on the lifelong process of learning how much trust you should place in your judgments of trustworthiness.

Finally, note this has been approved by the Curriculum Committee effective 11/11/15.

288. (MGMT788) Managing and Competing in China. (A)
This course provides an examination of some of the largest business firms in the People's Republic of China, acquainting students with the governance and management (both management structure and management teams) of some of the largest and best known Chinese firms. Students will also become acquainted with the capabilities and liabilities of Chinese firms and their strategic options. Tools needed to assess the investment potential of Chinese firms will be provided, and students will have an opportunity to do original research on issues of governance and management of Chinese firms.

291. (LGST206, OID291) Negotiations. Prerequisite(s): MGMT 100 & MGMT 101.
This course includes not only conflict resolution but techniques which help manage and even encourage the valuable aspects of conflict. The central issues of this course deal with understanding the behavior of individuals, groups, and organizations in conflict management situations. The purpose of this course is to understand the theory and processes of negotiations as it is practiced in a variety of settings. The course is designed to be relevant to the broad spectrum of problems that are faced by the manager and professional including management of multinationals, ethical issues, and alternative dispute resolutions. Cross listed w/ LGST 206 & OID 291.

292. (LGST292, OID292) Advanced Negotiation.

353. Wharton Field Challenge.
Weigelt and Staff.
http://fap.wharton.upenn.edu/353 Students Info.htm

610. Foundations of Teamwork and Leadership.
Management 610 is the first core course in the MBA Program and it cannot be waived. The first week of the fall term (in August) is dedicated to this formative and foundational experience. This course focuses on developing students' knowledge and skill set for teamwork and leadership. It is meant to be an intense immersion experience that draws strongly on the pedagogy of the Wharton Teamwork and Leadership Simulation, a team-based, highly interactive simulation that was custom-designed specifically to allow students to experience the core concepts they need in this class. The three goals of this course are for students to learn: 1. Leadership behaviors: how to enact the skills that contribute to a team's effective performance. 2. Team dynamics: how to be an effective team member, as well as how to best design work teams; 3. Organizational awareness: understanding organizational culture.

Format: A custom-designed Wharton-only simulation is paired with course sessions to deliver a unique learning experience. Classes will include experiential learning combined with debriefings, lectures, readings, class discussion and personal and group performance feedback. This course reflects the realities that informal leadership occurs in teams on an ongoing basis, that being a good team player is a part of leadership, and that many of one's early experiences with leadership will occur while working on teams. Because of the team-based nature of this course, and time intensive nature of this experience, attendance is mandatory for ALL five sessions of this class.

NOTE: Credit-bearing, core coursework begins with the MGMT610:
Foundations of Teamwork and Leadership course.

611. (LAW 517) Managing Established Enterprises.

The management of large, established enterprises creates a range of multi-facet challenges for the general manager. A general manager needs to understand the internal workings of a firm, how to assess and create a strategy, and how to take into account increasing, globalization. While these issues are distinct, they are very much intertwined. As a result, this course will provide you with an integrated view of these challenges and show you that effective of an established enterprise requires a combination of insights drawn from economics, sociology, psychology and political economy.

Emerging enterprises, the focus in this course, are small, new, fast-growing organizations. Their founders and managers face multifaceted challenges: how to assess the competitive position of their business model and develop a strategy; how to develop the internal organizational structure, culture, and policies for selecting and managing employees; and how to pursue global opportunities. We cover these challenges in separate modules on strategy, human and social capital, and global issues. The human and social capital module covers classic management challenges of aligning interests of the individual and the organization; managing individual psychological needs and social influences; and developing employee capabilities that provide competitive advantage. Also covered are unique challenges that young organizations face, i.e. building an effective culture; recruiting, selecting, and retaining talent; building systematic approaches to motivating employees; coping with the stresses of rapid growth; and leveraging the benefits (and avoiding the liabilities) of the founder's powerful imprint.

The strategy module covers fundamental issues central to the competitiveness of the enterprise. Because the strategy field is broad, MGMT 612 emphasizes topics and frameworks that are most relevant for younger firms, such as innovation, disruption, managing resource constraints, and building capabilities. However, a key insight of the module is the importance of seeing the playing field from the perspective of the competition. Thus, by the end of this section, students will have a robust grounding in strategy that will allow them to succeed, whether their career path leads to a Fortune 100 firm or a garage start up.

The global module covers the emerging firm's decision about when (and whether) to internationalize. This decision must address which foreign markets to enter; the mode of entry; the sequence of moves to develop capabilities; what organizational form to choose; where to establish HQ; and how to adapt to the unique economic and institutional features of different markets. In all these issues, the emphasis is on how young, resource-constrained firms can position themselves profitably in globally competitive markets. For the final project, student teams provide integrated analysis across the modules for an emerging enterprise of their choice.

766. (MGT266) FAMILY ENTERPRISE MGMT.

This class will examine the causes and consequences of the creation of family fortunes, with a focus on the practical implications for family decision-making. We will discuss psychological characteristics associated with the typically entrepreneurial creators of family wealth; with their children, whose childhood development takes place in the context of growing businesses and accumulating wealth; and with their grandchildren and beyond, whose childhood development occur in the context of established and often very public wealth, to build a comprehensive view of the interplay between family dynamics and economic decision making. Note that this class focus will be on behavioral aspects of family dynamics in a wide range of decision settings, rather than on management of an operating business per se. While this class will be particularly relevant to individuals aspiring to create their own family fortunes or whose ancestors have already done so, it will also be useful for individuals interested in foundation management, non-profit fund-raising or business catering to the very wealthy such as asset management and luxury retail.

Format: The class will consist of a mixture of lectures, case discussions and class exercises. Submission of several written case studies, and a final examination are required.

772. Power and Politics in Organizations.

The purpose of this course is to introduce you to the power dynamics in organizations. The course is designed so that you will learn concepts that are useful for understanding, analyzing, and harnessing power. But beyond discovering ways to extend your own power, influence and political skill in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of theoretical and business articles, cases, exercises, assessments, and simulations, we will extract a variety of lessons about power and politics in organizations. Topics include political skill, influence, issue selling, change management, networks, hierarchy, political conflict, corruption, coping with intolerable bosses, speaking up, redemption, and downsizing.

Prerequisite(s): None (but an interest in links between business and politics is helpful).

A world-class poker player defined the difference between serious players and amateurs this way: serious players know the difference between 40-60 and 60-40 propositions. In other words, serious players are well calibrated (skilled at distinguishing what they know from what they don't). This course gives you chances to explore how well calibrated you are in a low-risk setting. The course should appeal to students with interests in strategy, international business, political-risk analysis, and the managerial challenges of maximizing the judgmental accuracy of key personnel. The class will pit its wits against competitors in a global-forecasting tournament sponsored by the Intelligence Advanced Research Projects Agency (IARPA) - as well as design forecasting exercises around your individual career and business plans. Key challenges include: (a) learning to translate "interesting questions" into "testable propositions," (b) getting into the habit of translating vague hunches into probability metrics and making good use of feedback on how well calibrated you are, (c) applying tools for enhancing accuracy, (d) making solo forecasts - and exploring methods of making team forecast more than the sum of their individual-contributor parts.

896. DECISION MAKING LDRSHIP.

SM 920. Sem in Hum Res Research.

This class is designed to give students an overview of the fundamental topics and arguments in the area of employment, how different social science paradigms consider employment topics, and some the new and emerging approaches to this topic.
MARKETING (WH) {MKTG}

L/R 101. Introduction to Marketing. (C) Niedermeier. Recitation Section 220 is reserved only for Wharton Scholars. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in assessing and solving marketing problems. The course is also a foundation for advanced electives in Marketing as well as other business/social disciplines. Topics include marketing strategy, customer behavior, segmentation, market research, product management, pricing, promotion, sales force management and competitive analysis.

211. (MKTG711) Consumer Behavior. (C) Reed, Cutright. Prerequisite(s): MKTG 101. This course is concerned with how and why people behave as consumers. Its goals are to: (1) provide conceptual understanding of consumer behavior, (2) provide experience in the application of buyer behavior concepts to marketing management decisions and social policy decision-making; and (3) to develop analytical capability in using behavioral research.

212. (MKTG712) Data and Analysis for Marketing Decisions. (A) Prerequisite(s): MKTG 101, STAT 101. Students are encouraged to take statistics in the semester immediately preceding this course. (Former course title Marketing Research). Firms have access to detailed data of customers and past marketing actions. Such data may include in-store and online customer transactions, customer surveys as well as prices and advertising. Using real-world applications from various industries, the goal of the course is to familiarize students with several types of managerial problems as well as data sources and techniques, commonly employed in making effective marketing decisions. The course would involve formulating critical managerial problems, developing relevant hypotheses, analyzing data and, most importantly, drawing inferences and telling convincing narratives, with a view of yielding actionable results.

221. (MKTG721) New Product Management. (C) Armstrong. Prerequisite(s): MKTG 101; NOTE: Students may not take this course and MKTG 262 (Former MKTG 232) for credit. 0.5 c.u. One-half term. Examination of the marketing aspects of products or services exclusive of their promotion, pricing or distribution. Focuses on decisions regarding product introduction, positioning, improvements, and deletion, and the tools available for making these decisions.

224. (MKTG724) Advertising Management. (C) Williams. Prerequisite(s): MKTG 101 or permission of instructor; NOTE: Students may not take this course and MKTG 265 (formerly MKTG 235) for credit. 0.5 c.u. One-half term. Immersion in the advertising development process and examination of the practice of advertising. Focuses on decisions regarding advertising objectives, copy selection, budget setting and media selection.

225. (MKTG725) Principles of Retailing. (C) Prerequisite(s): MKTG 101. 0.5 c.u. One-half term. This course explores the domain of retailing; marketing to the final consumer. Emphasis is placed on marketing aspects of retailing not covered in other courses: retail strategy, merchandising, vendor relations and location.

227. (MKTG727) Digital Marketing and Electronic Commerce. (C) Bell. Prerequisite(s): MKTG 101. 0.5 c.u. One-half term. Students may not take both MKTG 227 and the full semester version of this course, MKTG 270 (formerly MKTG 230x) for credit. The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing plays a key role in shaping the modern consumption-led economies fueled by these technologies. MKTG 227 provides a research-based and framework-driven approach to understanding digital marketing and electronic commerce.

The course is organized around three sections and utilizes relevant theory, empirical analysis, and practical examples to develop the key learning points. Part I presents will establish the behavioral foundations for understanding electronic commerce and covers relevant phenomena and theory from economics, marketing, and related fields. Part II focuses on how digital marketing fosters commerce business growth. In particular, we survey, critique, and evaluate common digital marketing methods and tactics.

234. Idea Generation & the Systematic Approach for Creativity. (A) Rom Schrift. Prerequisite(s): MKTG 101. Students may not take both MKTG 292 and MKTG 234x for credit. Experimental course for 2016-17. The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people.

The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer.
241. (MKTG741) Entrepreneurial Marketing. (C) Lodish, Lautman. Prerequisite(s): MKTG 101; MKTG 212 (can take concurrently); students are discouraged from taking this course and MKTG 221 without the permission of the marketing undergraduate faculty advisor. 0.5 cu half credit course. (Former MKTG 281).

This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.

254. (MKTG754) Pricing Policy. (C) Prerequisite(s): MKTG 101 and Sophomore standing. 0.5 c.u. One-half term. (Former MKTG 222) Students can not take both MKTG 254 and the full semester version of this course, MKTG 288, for credit.

The pricing decision process including economic, marketing, and behavioral phenomena which constitute the environment for pricing decisions and the information and analytic tools useful to the decision maker.

260. (LGST205, LGST805, MKTG760) Law of Marketing and Antitrust. Prerequisite(s): MKTG 101. (Former MKTG 236).

See Legal Studies, LGST 205

265. Principles of Advertising. (C) Prerequisite(s): MKTG 101. NOTE: Students should not take both MKTG 265 (full semester version) and MKTG 224 (mini course version), since credit will not be given for both courses. (Former MKTG 235).

This course focuses on advertising via all media - print, digital, video, TV, Internet, etc. Emphasis is placed on understanding the communication development process and consumer behavior (psychology), the measurement and evaluation of advertising effects, and developing appropriate media plans.

266. Marketing for Social Impact. (A) Deborah Small. Prerequisite(s): MKTG 101 or instructor permission. Students may not take both MKTG 266 and MKTG 233 (the 0.5 cu version of the course) for credit.

Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fundraising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.

270. (MKTG770) Digital Marketing, Social Media and E-Commerce. (B) Berman, Bell. Prerequisite(s): MKTG 101. Students may not take both MKTG 270 and the half semester version of this course, MKTG 227 for credit. This course replaces experimental course MKTG 230x.

MKTG 270 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 227, Digital Marketing and Electronic Commerce, a half cu course offered by the department.

In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital.

The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business).

The course is not only about models, however. It also covers modeling needs. Some industries such as the media and entertainment or the pharmaceutical industries present unique problems and modeling needs. The third objective of the course is to expose participants to the nature and essence of such idiosyncratic problems as well as modeling needs in such industries. Overall, the course will make participants understand better critical marketing problems by analyzing them rigorously and will enhance their skills in either designing or evaluating models-based strategies.

277. (MKTG777) Marketing Strategy. (C) Robertson. Prerequisite(s): MKTG 101. Lectures, discussions, cases.

This course views marketing as both a management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of
advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.

288. Pricing Strategies. (B) Zhang. Prerequisite(s): MKTG 101. NOTE: Students may not take both MKTG 288 and MKTG 254 (former MKTG 222) for credit.

This course is designed to equip students with the concepts, techniques, and latest thinking on pricing issues, with an emphasis on ways in which to help a firm improve its pricing. The orientation of the course is about practice of pricing, not theory. We will focus on how firms can improve profitability through pricing, look at how firms set their prices and how to improve current practices to increase profitability. The first part of the course focuses on how to analyze costs, customers, and competitors in order to formulate proactive pricing strategies. The second part focuses on price promotions, price bundling, price discrimination, versioning, nonlinear pricing, pricing through a distribution channel, dynamic pricing, etc.

306. (MKTG806) Special Topics: Retail Merchandising. (A)
Prerequisite(s): MKTG 101; MKTG 225. 0.5 c.u., One-half term (Former MKTG 396).

This course provides a detailed introduction to the role of merchandising at various retailers, including apparel and other soft lines businesses, grocery stores, mass-merchandisers and "category killers". Selected topics may include product development, line planning, sourcing, product lifecycle, forecasting, planning and allocation, pricing and markdowns, and vendor relations.

309. (MKTG809) Special Topics: Experiments for Business Decision Making. (B)
Prerequisite(s): MKTG 101 or faculty permission is required; STAT 101, STAT 431, or equivalent is recommended. (Former MKTG 269).

In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a "test and learn" philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the "test and learn" philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments.

Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.

350. Special Topics - Consumer Neuroscience. (B) Wes Hutchinson. Prerequisite(s): None.

Basic neuroscience made steady progress throughout the 20th century with only small areas of application outside of medicine. Over the past 30 years, however, breakthroughs in measurement and computation have accelerated basic research and created major applications for business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of these developments. The course follows a straightforward theory/application format for each major area of cognitive neuroscience. On Tuesdays, the basics of neuroscience are covered along with a few illustrative applications. A key take-away from this part of the course is to gain the elementary scientific knowledge that is necessary to separate "neuro-reality" from "neuro-hype." On Thursdays, we cover application areas in greater detail. There are two general types of applications. First, there are applications of neuroscience in marketing research. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and the field, to emerging methods and measures, such as mobile EEG, face reading algorithms, and MRI predictors of market response.

Application areas include, packaging and shelf display, copy testing for television and print advertisements, video games, product usability studies, and simulators. Second, there are applications of neuroscience in the development of new products. Product development applications include wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices (especially prosthetic devices), and neurosciences-based "edutainment" designed to enhance cognitive functions. Special attention will also be paid to changes in brain anatomy and function over the lifespan. Key markets are children (mainly for enhancement products), seniors (mainly for remediation/restoration products), and working adults (both enhancement and remediation/restoration products). This course is self-contained and has no prerequisites. That said, students with some background in business, industrial design, psychology, or neuroscience are likely to find the material covered in this course complementary to the knowledge they already have.

399. (MKTG899) Independent Study. (C) Prerequisite(s): MKTG 212 and written permission of instructor and the department undergraduate advisor. Content arranged by project supervisor, 1.0 c.u.

476. (MKTG776, STAT476) Applied Probability Models for Marketing. (C) Fader. Prerequisite(s): A high comfort level with basic integral calculus and recent exposure to a formal course in probability and statistics such as STAT 430 is strongly recommended.

This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.

611. Marketing Management. (A) Williams, Kahn, Berger. Prerequisite(s): None. One half term. 0.5 cu.

This course addresses how to design and implement the best combination of marketing efforts to carry out a firm's strategy in its target markets. Specifically, this course seeks to develop the student's (1) understanding of how the firm can benefit by creating and delivering value to its customers, and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding,
precise, distribution, and promotion. The
course uses lectures and case discussions,
case write-ups, student presentations, and a
comprehensive final examination to
achieve these objectives.

**612. Dynamic Marketing Strategy. (C)**
Van den Bulte, Bradlow. Prerequisite(s):
MKTG 611. One half-term. 0.5 cu.
Building upon Marketing 611, the goal of
this course is to develop skills in
formulating and implementing marketing
strategies for brands and businesses. The
course will focus on issues such as the
selection of which businesses and segments
to compete in, how to allocate resources
across businesses, segments, and elements
of the marketing mix, as well as other
significant strategic issues facing today's
managers in a dynamic competitive
environment.

A central theme of the course is that
the answer to these strategic problems
varies over time depending on the stage of
the product life cycle at which marketing
decisions are being made. As such, the
PLC serves as the central organizing
vehicle of the course. We will explore such
issues as how to design optimal strategies
for the launch of new products and services
that arise during the introductory phase,
how to maximize the acceleration of
revenue during the growth phase, how to
sustain and extend profitability during the
mature phase, and how to manage a
business during the inevitable decline
phase.

**613. Strategic Marketing Simulation.**
(3) Reibstein. Prerequisite(s): MKTG 611.
0.5 cu.
Building upon Marketing 611, Marketing
613 is an intensive immersion course
designed to develop skills in formulating and
implementing marketing strategies for
brands and businesses. The central activity
will be participation in a realistic
integrative product management simulation
named SABRE. In SABRE, students will
form management teams that oversee all
critical aspects of modern product
management: the design and marketing of
new products, advertising budgeting and
design, sales force sizing and allocation,
and production planning. As in the real
world, teams will compete for profitability,
and the success that each team has in
achieving this goal will be a major driver of
the class assessment.

The SABRE simulation is used to
carry the two foci of learning in the
course: the changing nature of strategic
problems and their optimal solutions as
industries progress through the product life
cycle, and exposure to the latest analytic
tools for solving these problems.
Specifically, SABRE management teams
will receive training in both how to make
optimal use of marketing research
information to reduce uncertainty in
product design and positioning, as well as
decision support models to guide resource
allocation.

**711. (MKTG211) Consumer Behavior.**
(C) Reed. Prerequisite(s): Completion of
MKTG 611. Format: Lectures and
discussion, case analyses, presentations.(Former MKTG 773).
Marketing begins and ends with the
customer, from determining customers’
needs and wants to providing customer
satisfaction and maintaining customer
relationships. This course examines the
basic concepts and principles in customer
behavior with the goal of understanding
how these ideas can be used in marketing
decision making. The class will consist of
a mix of lectures, discussions, cases,
assignments, project work and exams.
Topics covered include customer
psychological processes (e.g., motivation,
perception, attitudes, decision-making) and
their impact on marketing (e.g.,
segmentation, branding, customer
satisfaction). The goal is to provide you
with a set of approaches and concepts to
consider when faced with a decision
involving understanding customer
text responses to marketing actions.

**712. (MKTG212) Data and Analysis
for Marketing Decisions.** (C) Iyengar,
Elaisshberg. Prerequisite(s): MKTG 611;
STAT 613 strongly recommended. Format: Lecture, discussion, and cases.(Former MKTG 756, Marketing Research).
Firms have access to detailed data of
customers and past marketing actions. Such
data may include in-store and online
customer transactions, customer surveys as
well as prices and advertising. Using real-
world applications from various industries,
the goal of the course is to familiarize students with several types of managerial
problems as well as data sources and
techniques, commonly employed in making
effective marketing decisions. The course
would involve formulating critical
managerial problems, developing relevant
hypotheses, analyzing data and, most
importantly, drawing inferences and telling
convincing narratives, with a view of
yielding actionable results.

**721. (MKTG221) New Product
Management.** (C) Prerequisite(s): MKTG
611. Format: Lectures, cases, simulations,
class discussions, and guest speakers.
(Former MKTG 753).
This course provides a total immersion in
the new product development process -
from sourcing ideas and innovation,
through new product sales forecasting. The
focus is on collective learning, what works,
what doesn't, and why. While the primary
focus is the new product development
process within a corporate structure, some
coverage is given to key issues surrounding
start-ups.

**724. (MKTG224) Advertising
Management.** (C) Prerequisite(s):
Completion of MKTG 611; and MKTG
612, 613 or 622. (May be taken
concurrently with MKTG 612, 613 or
622). Format: Case discussions, in-class
exercises, lectures, group projects, guest
lectures by marketing professionals.
(Former MKTG 755).
The purpose of this course is to provide
students with an opportunity to learn and
apply the major frameworks, theories,
current research findings, principles and
practices of effective advertising
management as part of an Integrated
Marketing Communications (IMC)
program. By the end of this course,
students should not only be familiar with a
large body of advertising knowledge, but
should also be able to apply this
information to create and evaluate effective
advertising strategies and tactics. The
emphasis will be on: 1) understanding the
psychology of customer motivation and
persuasion; 2) crafting effective and
creative messages; 3) making efficient
selections and use of media; and 4) under-
standing metrics, all within the
broader Integrated Marketing
Communications perspective.

**725. (MKTG225) Principles of
Retailing.** (C) Prerequisite(s): MKTG
611; and MKTG 612, 613 or 622; or
permission of instructor. Format: Lecture
and discussion, case analyses, and guest
speakers. (Former MKTG 793).
This course provides an interdisciplinary
overview of the retailing industry. Primary
focus will be on the customer facing
activities of retailers, including assortment
planning, private-label development and
the management of in-store operations, and
the back-door activities (forecasting and
supply chain management) that support
customer interaction. In addition, current
issues facing retailers, such as customer
relationship management, industry
consolidation and supplier relations, will be
explored. The course will also survey topics in finance, operations, information technology and real estate as they relate to retail.

727. (MKTG227) Digital Marketing and Electronic Commerce. (C) Bell. Prerequisite(s): Completion of MKTG 611; and MKTG 612, 613 or 622. 0.5 c.u. One-half term (Former MKTG 784) Students may not take both MKTG 727 and the full semester version of this course, MKTG 730x or MKTG770 for credit. The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing plays a key role in shaping the modern consumption-led economies fueled by these technologies. MKTG 727 provides a research-based and framework-driven approach to understanding digital marketing and electronic commerce.

The course is organized around three sections and utilizes relevant theory, empirical analysis, and practical examples to develop the key learning points. Part I presents will establish the behavioral foundations for understanding electronic commerce and covers relevant phenomena and theory from economics, marketing, and related fields. Part II examines ecommerce business models and institutions including Internet retail, subscription commerce, curated commerce and so on. Part III focuses on how digital marketing fosters ecommerce business growth. In particular, we survey, critique, and evaluate common digital marketing methods and tactics.

Guests from the entrepreneur and investor communities participate, as appropriate (former and illustrative speakers include Pooja Batra (Bollywood Actress), Joe Cohen (Lore.com), Mike Cohen (Birchbox.com) and Rob Coneybeer (Shasta Ventures).)

733. Marketing for Social Impact. (A) Deborah Small. Prerequisite(s): MKTG 611 or permission of instructor. Format: Lecture, class discussion, simulations, cases and guest lecturers.

Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fund-raising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.

734. Idea Generation and the Systematic Approach for Creativity. (A) Rom Schrift. Prerequisite(s): None. Students may not take both MKTG 792 and MKTG 734 for credit.

The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students' (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people.

The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer
business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 727, Digital Marketing and Electronic Commerce, a half cu course offered by the department.

771. (MKTG271) Models for Marketing Strategy. (M) Eliashberg. Prerequisite(s): Completion of: MKTG 611; and MKTG 612, 613 or 622; basic calculus; exposure to basic statistical analysis, and some tolerance for expressing critical ideas in simple math. Format: Evaluating marketing models; practicing with computer-based models and software; discussing case studies that describe modeling applications; group presentations of model-based marketing analysis and strategy.

In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital. The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business).

The course is not only about models, however. It also covers modeling needs. Some industries such as the media and entertainment or the pharmaceutical industries present unique problems and modeling needs. The third objective of the course is to expose participants to the nature and essence of such idiosyncratic problems as well as modeling needs in such industries. Overall, the course will make participants understand better critical marketing problems by analyzing them rigorously and will enhance their skills in either designing or evaluating models-based strategies.

775. Managing Customer Value. (B) Fader. Prerequisite(s): None. Format: Lecture and discussion.

As the concept of CRM becomes common parlance for every marketing executive, it is useful to take a step back to better understand the various different behaviors that underlie the development of successful CRM systems. These "behaviors" include customer-level decisions, firm actions, and the delicate but complex interplay between the two. Accordingly this course is comprised of four main modules.

We start with the discussion of customer profitability - focusing on the concepts of "customer lifetime value" and "customer equity". We will examine how to measure long-run customer profitability in both business-to-customer and business-to-business environments, and the uses of these measures as major components assessing overall firm valuation. Second, we move to the value that the firm provides to its customers - better understanding the true nature of customer satisfaction and its non-trivial relationship with firm profitability. Third, we examine each of the three main components of the firm's management of its customer base: customer acquisition, development, and retention - and the complex resource allocation task that must be balanced across them. Finally, we conclude with a discussion of various tactical and organizational aspects of customer relationship management.

776. (MKTG476, STAT476) Applied Probability Models in Marketing. (B) Fader. Prerequisite(s): Students must have a high comfort level with basic integral calculus, and recent exposure to a formal course in probability and statistics is strongly recommended. Format: Lecture, real-time problem solving.

This course will expose students to the theoretical and empirical "building blocks" that will allow them to develop and implement powerful models of customer behavior. Over the years, researchers and practitioners have used these methods for a wide variety of applications, such as new product sales forecasting, analyses of media usage, customer valuation, and targeted marketing programs. These same techniques are also very useful for other types of business (and non-business) problems. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.

777. (MKTG277) Marketing Strategy. (A) Wind. Prerequisite(s): Completion of MKTG 611; and MKTG 612 or 613 or 622. Format varies by instructor. Typically: case, lecture, group projects and class discussion. See syllabus.

This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.

806. (MKTG306) Special Topics: Retail Merchandising. (A) Prerequisite(s): MKTG 611 or MKTG 725. 0.5 cu half credit course. Format: Lecture, discussion. (Former MKTG 896).

This course provides a detailed introduction to the role of merchandising at various retailers, including apparel and other soft lines businesses, grocery stores, mass-merchandisers and "category killers". Selected topics may include product development, line planning, sourcing, product life cycle, forecasting, planning and allocation, pricing and markdowns, and vendor relations.

809. (MKTG309) Special Topics: Experiments for Business Decision Making. (C) Prerequisite(s): MKTG 611 required; STAT 431 or equivalent required; MKTG 712 recommended but not required. (Former MKTG 669).

In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a "test and learn"
philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the "test and learn" philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments.

Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.

850. Special Topics - Consumer Neuroscience. (B) Wes Hutchinson. Prerequisite(s): None. 0.5 CU half credit course.

Basic neuroscience made steady progress throughout the 20th century with only small areas of application outside of medicine. Over the past 30 years, however, breakthroughs in measurement and computation have accelerated basic research and created major applications for business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of these developments. The course follows a straightforward theory/application format for each major area of cognitive neuroscience. On Tuesdays, the basics of neuroscience are covered along with a few illustrative applications. A key take-away from this part of the course is to gain the elementary scientific knowledge that is necessary to separate "neuro-reality" from "neuro-hype." On Thursdays, we cover application areas in greater detail. There are two general types of applications. First, there are applications of neuroscience in marketing research. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and the field, to emerging methods and measures, such as mobile EEG, face reading algorithms, and fMRI predictors of market response.

Application areas include, packaging and shelf display, copy testing for television and print advertisements, video games, product usability studies, and simulators. Second, there are applications of neuroscience in the development of new products. Product development applications include wearables in physiological devices and apps, sensory branding for foods and fragrances, pharmaceutical and medical devices (especially prosthetic devices), and neuro-based "edutainment" designed to enhance cognitive functions. Special attention will also be paid to changes in brain anatomy and function over the lifespan. Key markets are children (mainly for enhancement products), seniors (mainly for remediation/restoration products), and working adults (both enhancement and remediation/restoration products). This course is self-contained and has no prerequisites. That said, students with some background in business, industrial design, psychology, or neuroscience are likely to find the material covered in this course complementary to the knowledge they already have.

SM 890. (OIDD890) Advanced Study Project (ASP). (C) Prerequisite(s): For GCP Advanced Study Projects: Acceptance to this course is by application only. Students must apply and be interviewed in September for spring participation. Visit www.whartonpgc.org. Individual group meetings with the instructor.

The principal objectives of this course are to provide opportunities for undertaking an in-depth study of a marketing problem and to develop the students' skills in evaluating research and designing marketing strategies for a variety of management situations. Selected projects can touch on any aspect of marketing as long as this entails the elements of problem structuring, data collection, data analysis, and report preparation. The course entails a considerable amount of independent work. (Strict library-type research is not appropriate) Class sessions are used to monitor progress on the project and provide suggestions for the research design and data analysis. The last portion of the course often includes an oral presentation by each group to the rest of the class and project sponsors. Along with marketing, the projects integrate other elements of management such as finance, production, research and development, and human resources.

SM 895. Advanced Study Project - Domestic Consulting Practicum. (B) Prerequisite(s): Acceptance to this course is by application only. Students must apply and be interviewed in September for spring participation. Visit www.whartonpgc.org. Corequisite(s): Students will not be permitted to enroll in this course if they are delaying a core, in particular FNCE 601 in fall and FNCE 602 in the spring. Course is open to all first and second year full time and executive MBA students. Individual group meetings with the instructor.

The Wharton Domestic Consulting Practicum (DCP) creates a forum in which students of business can apply the concepts, methods and paradigms learned in the classroom with the resources of a professional network to develop strategic, innovative, and operational plans for organizations worldwide. By providing students with resources and guidance (as opposed to direction), the DCP endeavors to create an academic, social and ethically-minded atmosphere which cultivates experiential and dynamic learning, and which produces state-of-the-art results for clients. Students' learning correlates with their commitment levels and the efforts put into the projects and team effort. Many, if not all, dimensions of the experience are screened against the "reality experience" one would encounter in consulting (and other professional) environments, with an appropriate safety net tailored to each team to enhance success and the Wharton brand.

899. (MKTG399) Independent Study. (C) Prerequisite(s): MKTG 611; and MKTG 612, 613 or 622; and the written permission of instructor and the department MBA faculty advisor.

A student contemplating an independent study project must first find a faculty member who agrees to supervise and approve the student's written proposal as an independent study (MKTG 899). If a student wishes the proposed work to be used to meet the ASP requirement, he/she should then submit the approved proposal to the MBA adviser who will determine if it is an appropriate substitute. Such substitutions will only be approved prior to the beginning of the semester.

SM 940. Measurement and Data Analysis in Marketing - Part A. (A) PhD Course. (Formerly part of MKTG 966) 0.5 cu.

In this course we consider models for binary, count, and continuous data including contingency table models, logistic and probit regression, ANOVA, ANCOVA, conjoint analysis, and OLS. In addition we cover multidimensional
techniques such as MDS, cluster analysis, principal components analysis, factor analysis, and discriminant analysis. We utilize the statistics package SPlus 2000, and also BUGS for implementing many of the techniques described in a Bayesian manner.

SM 941. Measurement and Data Analysis in Marketing - Part B. (B) PhD Course. (Formerly part of MKTG 966) 0.5 cu.

In this course we consider models for binary, count, and continuous data including contingency table models, logistic and probit regression, ANOVA, ANCOVA, joint analysis, and OLS. In addition we cover multidimensional techniques such as MDS, cluster analysis, principal components analysis, factor analysis, and discriminant analysis. We utilize the statistics package SPlus 2000, and also BUGS for implementing many of the techniques described in a Bayesian manner.

SM 942. Research Methods in Marketing - Part A. (A) PhD Course. (Formerly part of MKTG 967).

This course provides an introduction to the fundamental methodological issues that arise in experimental and quasi-experimental research. Illustrative examples are drawn from the behavioral sciences with a focus on the behavior of consumers and managers. Topics that are covered include: the development of research ideas; data collection and reliable measurement procedures; threats to validity; control procedures and experimental designs; and data analysis. Emphasis is placed on attaining a working knowledge of the use of regression methods for non-experimental and quasi-experimental data and analysis of variance methods for experimental data. The primary deliverable for this course is a meta-analysis of a research problem of the students choosing that investigates the effects of research methods on empirical results.

SM 950. Judgment and Decision Making Perspectives on Consumer Behavior - Part A. (A) PhD Course. Alternates with MKTG 951. Offered every other year. (Formerly part of MKTG 960).

The purpose of this course is to provide a solid foundation for critical thinking and research on the judgment, decision-making and choice aspects of consumer behavior. There is a focus on how people process information when making judgments and choices and how the processes of judgment and choice might be improved. Topics of discussion include rationality, judgment under uncertainty, judgment heuristics and biases, risk taking, dealing with conflicting values, framing effects, prospect theory, inter-temporal choice, preference formation, and the psychology of utility. The focus will be on the individual decision-maker, although the topics will also have some applicability to group and organizational decision-making and behavioral research methodologies.

SM 951. Judgment and Decision Making Perspectives on Consumer Behavior - Part B. (B) PhD Course. Formerly part of MKTG 960. Contact professor for current syllabus.

The purpose of this course is to build off MKTG950, "Judgment and Decision Making Perspectives on Consumer Behavior - Part A" with a more specialized focus that will vary from year to year. This course is intended for those interested in deepening their study of Judgment and Decision Making beyond the basics.

SM 952. Information Processing Perspectives on Consumer Behavior - Part A. (B) PhD Course. Alternates with MKTG 953. Offered every other year. (Formerly part of MKTG 963).

The purpose of this seminar is to provide graduate students with a solid foundation for critical thinking and research in psychology and marketing on information processing related topics. Topics of discussion include consumer knowledge (learning, memory and categorization), attitude theory, persuasion, affect and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior, as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.

SM 953. Information Processing Perspectives on Consumer Behavior - Part B. (B) PhD Course. (Formerly part of MKTG 963).

The purpose of this seminar is to provide graduate students with a solid foundation for critical thinking and research in psychology and marketing on information processing related topics. Topics of discussion include consumer knowledge (learning, memory and categorization), attitude theory, persuasion, affect and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior, as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.

SM 954. Economic/OR Models of Marketing - Part A. (A) PhD Course. (Formerly part of MKTG 961).

This doctoral seminar reviews analytical models relevant to improving various aspects of marketing decisions such as new product launch, product line design, pricing strategy, advertising decisions, sales force organization and compensation, distribution channel design and promotion decisions. The primary focus will be on analytical models. The seminar will introduce the students to various types of analytical models used in research in marketing, including game theory models for competitive analysis, agency theory models for improving organization design and incentives within organizations, and optimization methods to improve decision making and resource allocation. The course will enable students to become familiar with applications of these techniques in the marketing literature and prepare the students to apply these and other analytical approaches to research problems that are of interest to the students.
SM 955. Economic/OR Models of Marketing - Part B. (B) PhD Course.
(Formerly part of MKTG 961).
This is a continuation of MKTG954. This doctoral seminar reviews analytical models relevant to improving various aspects of marketing decisions such as new product launch, product line design, pricing strategy, advertising decisions, sales force organization and compensation, distribution channel design and promotion decisions. The primary focus will be on analytical models. The seminar will introduce the students to various types of analytical models used in research in marketing, including game theory models for competitive analysis, agency theory models for improving organization design and incentives within organizations, and optimization methods to improve decision making and resource allocation. The course will enable students to become familiar with applications of these techniques in the marketing literature and prepare the students to apply these and other analytical approaches to research problems that are of interest to the students.

SM 956. Empirical Models in Marketing - Part A. (B) PhD Course.
(Formerly part of MKTG 964) 0.5 cu.
This course is designed to generate awareness and appreciation of the way several substantive topics in marketing have been studied empirically using quantitative models. This seminar reviews empirical models of marketing phenomena including consumer choice, adoption of new products, sales response to marketing mix elements, and competitive interaction. Applies methods and concepts developed in econometrics and statistics but focuses on substantive issues of model structure and interpretation, rather than on estimation techniques. Ultimately, the goals are a) to prepare students to read and understand the literature and b) to stimulate new research interests. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.

SM 957. Empirical Models in Marketing - Part B. (B) PhD Course.
Alternates with MKTG 956. Offered every other year. (Formerly part of MKTG 964).
This course is designed to generate awareness and appreciation of the way several substantive topics in marketing have been studied empirically using quantitative models. This seminar reviews empirical models of marketing phenomena including consumer choice, adoption of new products, sales response to marketing mix elements, and competitive interaction. Applies methods and concepts developed in econometrics and statistics but focuses on substantive issues of model structure and interpretation, rather than on estimation techniques. Ultimately, the goals are a) to prepare students to read and understand the literature and b) to stimulate new research interests. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.

Taught collectively by the faculty members from the Marketing Department, this course investigates advanced topics in marketing. It is organized in a way that allows students to 1) gain depth in important areas of research identified by faculty; 2) gain exposure to various faculty in marketing and their research values and styles; and 3) develop and advance their own research interests.

SM 952. Advanced Topics in Marketing - Part B. (B) Wednesday Seminar. Half credit course meets entire semester.
Taught collectively by the faculty members from the Marketing Department, this course investigates advanced topics in marketing. It is organized in a way that allows students to 1) gain depth in important areas of research identified by faculty; 2) gain exposure to various faculty in marketing and their research values and styles; and 3) develop and advance their own research interests.

This course is taught collectively by the faculty members from the Marketing Department. It is designed to expose Doctoral students to the cutting-edge research in marketing models in order to help them to define and advance their research interests. This course will offer: in-depth discussions on some important topics in marketing by experts in respective areas; tools, and methodologies required for conducting research in those areas; broad exposure to our faculty members and their proven research styles.

This course is taught collectively by the faculty members from the Marketing Department. This course will offer: in-depth discussions on some important topics in marketing by experts in respective areas; tools, and methodologies required for conducting research in those areas; broad exposure to our faculty members and their proven research styles.

995. Dissertation. (C)

999. Supervised Independent Study. (C) Ph.D. course.
Requires written permission of instructor and the department graduate adviser.
221. Quantum Physics of Materials.  
(C) Prerequisite(s): PHYS 140, 141 concurrent and MATH 240. Meets Natural Science Requirement.
The course is directed at the development of a background in basic physics required to understand the behavior of electrons in atoms, molecules and solids. Examples to illustrate the application of these techniques will be centered in the free and nearly free electron theory of solids. The application of modern physics to many state-of-the-art materials analysis techniques will be demonstrated throughout the course.

L/L 250. Nano-scale Materials Lab.  
(B) Prerequisite(s): MSE 220. 
The course provides an in-depth experimental introduction to key concepts in materials and the relationships between nanoscale structure, the properties and performance. The use of laboratory methods to examine the structure of materials, to measure the important properties, and to investigate the relationship between structure and properties is covered. Emphasis is placed on a complete exposure of Nano and Materials science as a field. Most experiments require multiple laboratory sessions, with priority given to experiments in which students explore the entire range of materials science, from the synthesis of materials and the characterization of structure, thermodynamics and composition, to the measurement of properties and discussion of applications. Students are able to realize working devices as an end product of the key laboratories in this course. Practice in oral and written communication is realized through course assignments.

393. Materials Selection. (B)  
Prerequisite(s): MSE 220, Junior or Senior Standing. 
Throughout mankind's history, materials have played a critical role in civilization and technology. The selection of materials has been based on availability and functionality. The rapid advances of materials technologies in the last 150 years, however, have made nearly all classes and forms of materials available, at a cost. Therefore, in theory at least, materials selection can now proceed on a rational basis as an optimization process. In this course, we will focus on structural applications where mechanical design is central. By the end of the course, the students can expect to acquire a level of engineering familiarity with a broad range of materials, and be prepared to undertake material design projects in the future.

405. (MEAM405, MEAM505, MSE 505) Mechanical Behavior of Macro/Nanoscale Materials. (A)  
The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including
mapping strategies for understanding the ranges of material properties.

430. (CBE 430, CBE 510, MSE 580) Polymers and Biomaterials. (A)
Prerequisite(s): MSE 260 or equivalent course in thermodynamics or physical chemistry (such as BE 223, CHE 231, CHEM 221, MEAM 203).
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects and polymer chain size/dimension that drive the molecular, microscopic and macroscopic structures and the resulting properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.

440. Phase Transformations. (B)
The state of matter is dependent upon temperature, thermal history, and other variables. In this course the science of structural transitions is treated, with the purpose in mind of utilizing them for producing materials with superior properties. The subjects covered include the methods of structural analysis, solidification, solid state transformation, and order-disorder transition.

460. Computational Materials Science. (C)
Prerequisite(s): Junior or Senior Standing. Ability to write simple computer codes would be an advantage.
This course provides an introduction to modeling and simulation in materials science, covering continuum methods (e.g. finite element methods) and atomistic and molecular simulation (e.g. molecular dynamics). These tools play an increasingly important role in modern engineering. You will get hands-on training in both the fundamentals and applications of these methods to key engineering problems. The lectures will provide an exposure to areas of application, based on the scientific exploitation of the power of computation. We will use software packages (Comsol and LAMMPS) and thus extensive programming skills are not required. Matlab background needed for the course will be covered in a self-contained module.

465. (MSE 565) Fabrication and Characterization of Micro and Nanostructured Devices. (C)
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and chemical applications. Basic principles of chemistry, physics, thermodynamics and surface/interface science are applied to solid state, liquid, and colloidal approaches to making materials. The approaches to nano- and microfabrication: photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 25% of class time and 30% of the homework devoted to hands on experiences. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3-4 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.

495. Senior Design. (A)
Independent student or team research on the design and construction of an original experimental or theoretical project related to materials science. The results of this project are presented at the end of the year in the form of a thesis and in an oral presentation to peers and faculty.

496. Senior Design. (B)
Independent student or team research on the design and construction of an original experimental or theoretical project related to materials science. The results of this project are presented at the end of the year in the form of a thesis and in an oral presentation to peers and faculty.

L/L 500. Experimental Methods in Materials Science. (A)
Prerequisite(s):
Permission of the Undergraduate Curriculum Chair and Instructor.
This laboratory course introduces students to a variety of experimental methods used in materials science and engineering. Hands-on training will be provided for atomic force microscopy, X-ray diffraction and scattering, mechanical testing with image capture, Rutherford backscattering, and dynamic light scattering. Students will use numerous software packages for data collection and analysis, as well as being introduced to LabVIEW as a method for customizing experiments. In addition, students will see demonstrations of scanning electron microscopy, transmission electron microscopy, and electron diffraction and analyze data from these methods.

505. (MEAM405, MSE 405) Mechanical Properties of Macro/Nanoscale Materials. (A)
The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.

507. (MEAM507) Fundamentals of Materials. (C)
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics.

515. Mathematics for Materials Science. (A)

520. Structure of Materials. (B)
Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.
Description of crystal structure and bonding. Symmetry: line, plane, point, and space groups. Symmetry considerations in structure-property relations. Physical optics, diffraction as Fourier transforms. Effects of size, shape, temperature and distortion on diffraction intensity. Gas, liquid, fibers, DNA. Diffuse scattering, order/disorder. Pair distribution function, inverse problem, small angle scattering.
Radiation-matter interaction, scattering physics, atomic and electronic spectroscopy.

525. (ESE 525) Nanoscale Science and Engineering. (A) Prerequisite(s): ESE 218 or PHYS 240 or MSE 220 or equivalent, or by permission.
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustenance of current approaches, and for the development of revolutionary designs and applications.

530. Thermodynamics and Phase Equilibria. (A) Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.
Fundamental elements of engineering thermodynamics, statistical thermodynamics and materials thermodynamics. Covers thermodynamic functions, stability, phase transitions, mixtures (gases, condensed matter, polymer solution), defects and interfaces. Applications to energy problems (engines, efficiency, power, electrochemical cells), properties (constitutive equations, equation of states), phase diagrams and predominance diagrams.

536. ELEC PROP OF MATERIALS. (C)
537. (MEAM537) Nanotribology. (C)
Faculty. Prerequisite(s): Freshman physics; MEAM 354 or equivalent, or consent of instructor.
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nanoscale mechanics and tribology at interfaces, and the critical role these topics play in the developing area of nanoscience and nanotechnology. We will discuss how mechanics and tribology at interfaces become integrated with the fields of materials science, chemistry, physics, and biology at this scale. We will cover a variety of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Literature reviews, critical peer discussion, individual and team problem assignments, a laboratory project, and student presentations will be assigned as part of the course.

540. Phase Transformations. (B) Prerequisite(s): Permission of the Undergraduate Curriculum Chair and Instructor.
The atomic structure of condensed matter is dependent upon temperature, pressure, thermal history and other variables. In this course, the science of such structural transitions is treated. The topics discussed include introduction to statistical mechanics, theory of nucleation and growth kinetics, solidification, diffusionless solid state transformations, and microscopic theory of phase transition.

545. Materials for Energy Storage and Generation. (A) This course provides an understanding of the major materials issues for current and emerging energy technologies. It includes a classification of materials for energy applications involving generation, transmission and storage of electricity; current and future uses of fossil fuels, with emphasis on higher efficiency uses of fossil fuels and "all electric" applications (e.g. transportation and power generation) and new materials as technology enablers for future energy sources: nuclear, fuel cells, solar, wind.

555. Environmental Degradation of Materials. (B) This course is designed to provide an understanding of the corrosion principles and the engineering methods used to minimize and prevent corrosion. Metals and alloys are emphasized because these are the materials in which corrosion is the most prevalent. Aqueous environments are also emphasized these are the common corrosion conditions.
In the first half of the course, the impact and electrochemical nature of the corrosion are described, and then the corrosion fundamentals (electrochemical reactions, phase (Pourbaix) diagrams, aqueous corrosion kinetics, passivity, and high-temperature oxidation) are emphasized. The forms of corrosion (galvanic, pitting and crevice, environmentally induced cracking) and corrosion in the human body (for example, surgical implants and prosthetic devices) and in other selective environments (concrete, seawater, and water solutions containing dissolved salts, sulfur, and bacteria) are also described in the second half.

561. (MEAM553) Atomic Modeling in Materials Science. (B) This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis such as correlations, radial distribution function, etc. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding, tight-binding. Basics of the density functional theory. Needed mechanics, condensed matter physics, thermodynamics and statistical mechanics are briefly explained.

565. (MSE 465) Fabrication and Characterization of Nanostructured Devices. (C) Prerequisite(s): MSE 360 or permission of the instructor.
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and chemical applications. Basic principles of chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. The approaches to nano- and microfabrication: photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 25% of class time and 30% of the homework devoted to hands on experiences. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3-4 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.

571. (ESE 515) Physics of Materials II. (M) Prerequisite(s): MSE 570 or equivalent.

Failures of free electron theory. Crystals and the reciprocal lattice wave propagation in periodic media; Bloch's theorem. One-electron band structure models: nearly free electrons, tight binding. Semiclassical dynamics and transport. Cohesive energy, lattice dynamic and phonons. Dielectric properties of insulators. Homogeneous semiconductors and p-n junctions. Experimental probes of solid state phenomena; photoemission, energy loss spectroscopy, neutron scattering. As time permits, special topics selected from the following: correlation effects, semiconductor alloys and heterostructures, amorphous semiconductors, electro-active polymers.

575. Statistical Mechanics. (B)

This course will provide an overview of select topics in equilibrium and non-equilibrium statistical mechanics. The emphasis will be on elucidating the basic postulates of statistical mechanics, explaining its fundamental laws and introducing the methodology of non-equilibrium processes via select applications in diverse fields. Statistical Mechanics is a unique branch of physics that permeates our understanding of matter at all length scales, from nanometers to stellar dimensions, and ranging in temperatures from nano-Kelvin to billions of degrees Kelvin. The techniques of Statistical Mechanics have been employed in condensed matter physics and materials science when studying solids, liquids, and gases as well as in other disciplines such as biology, zoology, molecular biology, physiology, economics, signal transmission and large scale networks such as the worldwide web. It is envisaged that students at Penn and especially in MSE/SEAS will benefit by getting a perspective of this fascinating subject and appreciate how its principles govern phenomena as diverse as semiconductor devices, greenhouse effect, biological pattern formation and instabilities on material surfaces.

580. (MSE 430) Polymers and Biomaterials. (A) Prerequisite(s): MSE 260 or equivalent course in thermodynamics or physical chemistry (such as BE 223, CHE 231, MEAM 203).

Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects and polymer chain size/dimension that drive the molecular, microscopic and macroscopic structures and the resulting properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.

581. Advanced Polymer Physics. (M)

Prerequisite(s): MSE 430 or equivalent. Advanced polymer physics includes the topics of polymer chain statistics, thermodynamics, rubber elasticity, polymer morphology, fracture, and chain relaxation. Rigorous derivations of select theories will be presented along with experimental results for comparison. Special topics, such as liquid crystalline polymers, blends and copolymers, will be presented throughout the course. Special topics, such as liquid crystallinity, nanostructures, and biopolymer diffusion, will be investigated by teams of students using the current literature as a resource.

590. Surface and Thin Film Analysis Techniques. (M)

The objective of this course is to study the fundamental physics of the interaction of ions, electrons, photons, and neutrons with matter. A second objective is to use the products of these interactions to characterize the atomic (or molecular) structure, composition, and defects of a semiconductor, ceramic, polymer, composite, or metal. Ion beam techniques will include Rutherford backscattering and forward recoil spectrometry, and secondary ion mass spectrometry. Electron probe techniques will include x-ray photoelectron spectroscopy. Neutron techniques will include neutron reflectivity. The strengths and weaknesses of each technique will be discussed. Examples will be drawn from metallurgy, electronic materials, polymer science, ceramic science, archaeology, and biology.

597. Master's Thesis Research. (C)

599. Master’s Indep Study. (C)

610. Electron Microscopy. (M)

Theoretical and practical aspects of conventional and high-resolution transmission electron microscopy and related techniques. Imaging theory; kinematical and dynamical diffraction theory. Diffraction contrast analysis of imperfect crystals; phase contrast analysis of crystal lattice structures. With laboratory.

637. (MEAM637) Mesoscale Modeling and Simulation. (C)

This course is targeted at engineering, physical science, computational and mathematics Ph.D. students. The course focuses on techniques for the simulation/modeling of materials on a time and/or length scale that is large compared with atomistic/molecular but with structure that is fine on the scale of typical (homogenized) continuum theory. The course explores kinetic models, defect dynamics, and statistical mechanics models and their implementation in computer simulation.

650. (MEAM650) Mechanics of Soft and Biomaterials. (M)

This course is aimed to expose the students to a variety of topics in mechanic materials via discussion of "classic" problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials.

670. Statistical Mechanics of Solids. (M)

This course constitutes an introduction to statistical mechanics with an emphasis on application to crystalline solids. Ensemble theory, time and ensemble averages and particle statistics are developed to give the basis of statistical thermodynamics. The theory of the thermodynamic properties of solids is presented in the harmonic approximation anharmonic properties are treated by the Mie-Gruneisen method. Free electron theory in metals and semiconductors is given in some detail, with the transport properties being based on conditional transition probabilities and the Boltzmann transport equation. The theory of order-disorder alloys is treated by the Bragg-Williams, Kirkwood and quasi-chemical methods.

790. Selected Topics in Materials Science and Engineering. (C) Staff. Both terms.

Students should check department office for special topics.

895. Teaching Practicum. (C)
MATHEMATICS
(AS) {MATH}

CALCULUS: MATH 104, the first calculus course, assumes that students have had AB Calculus or the equivalent. Students who have not had AB Calculus or did poorly in AB Calculus should take MATH 103, which provides an introduction to calculus. There are two second-semester calculus courses. Students are advised to check their major department or their program for the specific requirements. In general, Math 114 is taken by students in the natural sciences, engineering and economics. Math 114 prepares students for the more advanced Calculus courses Math 240 and 241. Those who do not plan to take Math 240 may still want to consider taking Math 114. Math 115 is for students who do not plan to take more calculus like Math 240, and want an introduction to probability and matrices. Premed students who do not need Math 114 for their majors could take Math 115. Most Wharton students may take either Calculus II course.

MATH 103, 104, 114, 115, and 170 fulfill the FORMAL REASONING & ANALYSIS General Requirement. Also, MATH 170 satisfies the NATURAL SCIENCE & MATHEMATICS General Requirement.

Students may not receive credit for two courses at the same level where the content is similar. For example, a student may not receive credit for both MATH 114 and MATH 115. The list of FORBIDDEN PAIRS of courses is (114, 115), (312, 370), (312, 412), (360, 508), (361, 509), (370, 502), (371, 503), and several statistics courses. Students are allowed to take a "topics course" such as MATH 480 more than once if the topics are different.

PROSPECTIVE MATH MAJORS should note that the "proof in mathematics" courses, 202 and 203, are recommended for the major. These are courses that are taken concurrently with Calculus. Potential majors who begin Calculus with MATH 114 or 240 usually take at least one of these courses during their freshman year. Potential majors who begin with MATH 104 often postpone their proof courses until the following year. Please see http://www.math.upenn.edu/ugrad/major.html for more information. To find out the requirements for MATH MINORS, please visit our web site http://www.math.upenn.edu/ugrad/minor.html for details. Majors and Minors could also find the most current listing of the cognate courses Majors or Minors may take at

http://www.math.upenn.edu/ugrad/cognates.html

L/R 103. Introduction to Calculus. (C)
Staff. This is a Formal Reasoning course. Introduction to concepts and methods of calculus for students with little or no previous calculus experience. Polynomial and elementary transcendental functions and their applications, derivatives, extremum problems, curve-sketching, approximations; integrals and the fundamental theorem of calculus.

L/R 104. Calculus, Part I. (C)
Staff. Prerequisite(s): None. Engineering students are encouraged to register for the 006 lecture and group 6 recitations. This is a Formal Reasoning course. Brief review of High School calculus, applications of integrals, transcendental functions, methods of integration, infinite series, Taylor's theorem, and first order ordinary differential equations. Use of symbolic manipulation and graphics software in calculus.

L/R 114. Calculus, Part II. (C)
Staff. Prerequisite(s): Math 104. This is a Formal Reasoning course. Functions of several variables, vector-valued functions, partial derivatives and applications, double and triple integrals, conic sections, polar coordinates, vectors and vector calculus, first order ordinary differential equations. Use of symbolic manipulation and graphics software in calculus.

L/R 115. Calculus, Part II with Probability and Matrices. (C)
Staff. Prerequisite(s): Math 104. This is a Formal Reasoning course. Functions of several variables, partial derivatives, multiple integrals, differential equations; introduction to linear algebra and matrices with applications to linear programming and Markov processes. Elements of probability and statistics. Applications to social and biological sciences. Use of symbolic manipulation and graphics software in calculus.

L/R 116. Honors Calculus. (C)
Staff. This is a Formal Reasoning course. Students who are interested in math or science might also want to consider a more challenging Honors version of Calculus II and III, Math 116 and Math 260 (the analogues of Math 114 and Math 240, respectively). These courses will cover essentially the same material as 114 and 240, but more in depth and involve discussion of the underlying theory as well as computations.

123. Community Math Teaching Project. (M)
Staff. This course allows Penn students to teach a series of hands-on activities to students in math classes at University City High School. The semester starts with an introduction to successful approaches for teaching math in urban high schools. The rest of the semester will be devoted to a series of weekly hands-on activities designed to teach fundamental aspects of geometry. The first class meeting of each week, Penn faculty teach Penn students the relevant mathematical background and techniques for a hands-on activity. During the second session of each week, Penn students will teach the hands-on activity to a small group of UCHS students. The Penn students will also have an opportunity to develop their own activity and implement it with the UCHS students.

L/R 170. Ideas in Mathematics. (C)
Natural Science & Mathematics Sector. Class of 2010 and beyond. Staff. May also be counted toward the General Requirement in Natural Science & Mathematics. Topics from among the following: logic, sets, calculus, probability, history and philosophy of mathematics, game theory, geometry, and their relevance to contemporary science and society.

Staff. Elementary applications of decision analysis, game theory, probability and statistics to issues in accounting, contracting, finance, law, and medicine, amongst others.

SM 202. Proving Things: Analysis. (C)
Staff. Corequisite(s): Math 104, 114 or 240.

This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying real and complex numbers, sequences, series, continuity, differentiability and integrability. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
L/L 203. Proving things: Algebra. (C) Staff. Corequisite(s): Math 104, 114 or 240.
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying arithmetic, algebra, linear algebra, groups, rings and fields. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.

210. Mathematics in the Age of Information. (C) Staff. Prerequisite(s): Math 114, Math 115 or equivalent.
This course counts as a regular elective for both the Mathematics Major and Minor.
This is a course about mathematical reasoning and the media. Embedded in many stories one finds in the media are mathematical questions as well as implicit mathematical models for how the world behaves. We will discuss ways to recognize such questions and models, and how to think about them from a mathematical perspective. A key part of the course will be about what constitutes a mathematical proof, and what passes for proof in various media contexts. The course will cover a variety of topics in logic, probability and statistics as well as how these subjects can be used and abused.

SM 220. (LAW 520, PHIL220) Proof in Math, Phil, Law. Staff.
Proofs are vital to many parts of life. They arise typically in formal logic, mathematics, the testing of medication, and convincing a jury. How do you prove that the earth is essentially a sphere (in particular, not flat)? In reality, proofs arise anywhere one attempts to convince others. However, the nature of what constitutes a proof varies wildly depending on the situation -- and on whom you are attempting to convince. Convincing your math teacher or a judge is entirely different from convincing your mother or a jury. The course will present diverse views of Proof. On occasion there may be guest lecturers.

L/R 240. Calculus, Part III. (C) Staff. Prerequisite(s): Calculus II.
Linear algebra: vectors, matrices, systems of linear equations, vector spaces, subspaces, spans, bases, and dimension, eigenvalues, and eigenvectors, maxtrix exponentials. Ordinary differential equations: higher-order homogeneous and inhomogeneous ODEs and linear systems of ODEs, phase plane analysis, non-linear systems.

L/R 241. Calculus, Part IV. (C) Staff. Prerequisite(s): MATH 240.
Partial differential equations and their solutions, including solutions of the wave, heat and Laplace equations, and Sturm-Liouville problems. Introduction to Fourier series and Fourier transforms. Computation of solutions, modeling using PDE’s, geometric intuition, and qualitative understanding of the evolution of systems according to the type of partial differential operator.

L/R 260. Honors Calculus, Part II. (M) Staff. Prerequisite(s): Calculus II.
This is an honors version of Math 240 which explores the same topics but with greater mathematical rigor.

312. (MATH412) Linear Algebra. (M) Staff. Prerequisite(s): MATH 240. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513. Linear transformations, Gauss Jordan elimination, eigenvalues and eigenvectors, theory and applications. Mathematics majors are advised that MATH 312 cannot be taken to satisfy the major requirements.

313. (MATH513) Computational Linear Algebra. Staff. Prerequisite(s): Math 240, and some programming experience. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313. Students can receive credit for at most one of Math 312 and Math 313.
Many important problems in a wide range of disciplines within computer science and throughout science are solved using techniques from linear algebra. This course will introduce students to some of the most widely used algorithms and illustrate how they are actually used.
Some specific topics: the solution of systems of linear equations by Gaussian elimination, dimension of a linear space, inner product, cross product, change of basis, affine and rigid motions, eigenvalues and eigenvectors, diagonalization of both symmetric and non-symmetric matrices, quadratic polynomials, and least squares optimization.
Applications will include the use of matrix computations to computer graphics, use of the discrete Fourier transform and related techniques in digital signal processing, the analysis of systems of linear differential equations, and singular value decompositions with application to a principal component analysis.

The ideas and tools provided by this course will be useful to students who intend to tackle higher level courses in digital signal processing, computer vision, robotics, and computer graphics.

L/L 314. (AMCS514, MATH514) Advanced Linear Algebra. Staff. Prerequisite(s): Math 114 or 115. Math 314/514 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 or Math 314.
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.

320. Computer Methods in Mathematical Science I. (A) Staff. Prerequisite(s): MATH 240 or concurrent and ability to program a computer, or permission of instructor.
Students will use symbolic manipulation software and write programs to solve problems in numerical quadrature, equation-solving, linear algebra and differential equations. Theoretical and computational aspects of the methods will be discussed along with error analysis and a critical comparison of methods.

321. Computer Methods in Mathematical Science II. (M) Staff. Prerequisite(s): MATH 320. Continuation of MATH 320.

340. (LGIC210) Discrete Mathematics. (M) Staff. Prerequisite(s): MATH 114 or Math 115 or permission of the instructor.
Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations, posets, asymptotics.

341. (LGIC220) Discrete Mathematics II. Staff. Prerequisite(s): Math 340/Logic 210 or permission of the instructor.
Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.

350. Number Theory. (M) Staff.
Congruences, Diophantine equations, continued fractions, nonlinear congruences, and quadratic residues.

Page 506
425. (AMCS525) Partial Differential Equations. (A) Staff. Prerequisite(s): MATH 240 or permission of instructor. Knowledge of PHYS 150-151 will be helpful. Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.

430. (AMCS530) Introduction to Probability. (M) Staff. Prerequisite(s): MATH 240. Random variables, events, special distributions, expectations, independence, law of large numbers, introduction to the central limit theorem, and applications.

432. (AMCS532) Game Theory. (C) Staff. A mathematical approach to game theory, with an emphasis on examples of actual games. Topics will include mathematical models of games, combinatorial games, two person (zero-sum games), non-cooperative games and equilibria.

480. Topics in Modern Math. (M) Staff. Prerequisite(s): A year of analysis at the 300 level or above (for example, Mathematics 360-361, 508-509) or 512 (with an extended background required). The course will include: introduction of the real numbers through Dedekind cuts, continuity of real-valued functions on the real line; Cantor nested-interval principle, basic results for continuous functions, Maximum and Intermediate Value theorems, Heine-Borel Theorem, Uniform Continuity on closed intervals; metric spaces, convergence of sequences, Cauchy sequences, completeness, more general uniform continuity and intermediate value theorems; general topology, separation, compactness, product spaces, Tychonoff's Theorem.

Special topics in analysis: Weierstrass Polynomial Approximation Theorem, Bernstein polynomials and simultaneous approximations on functions and derivatives, Topics from divergent series, summation methods; measure theory, the Lebesgue integral, $L^p$ spaces, Holder, Minkowski, and Cauchy-Schwarz inequalities; basics of Functional Analysis, normed spaces, Banach spaces and Hilbert space, with examples ($L^p$ spaces, continuous-functions spaces), Banach spaces and spectral theory, groups and Fourier transforms, Tauberian theorems; approximation theory, again, through the prism of functional analysis; extension of the polynomial approximation theorem (Stone-Weierstrass theorem), Muntz approximation theorem (by polynomials with preassigned powers), compact operators, the Spectral theorem, Stone's theorem (representations of the additive group of real numbers); Peter-Weyl theory (representations of compact groups). A selection from these topics as time and class preparation allow.

499. Supervised Study. (C) Staff. Prerequisite(s): Permission of major adviser. Hours and credit to be arranged. Study under the direction of a faculty member. Intended for a limited number of mathematics majors.

501. (MATH465) Geometry-Topology, Differential Geometry. (M) Staff. Prerequisite(s): Math 240, Math 312 (or 370), and Math 361 (or 508); or Math 500; or with the permission of the instructor. The course moves from a study of extrinsic geometry (curves and surfaces in n-space)
to the intrinsic geometry of manifolds. After a review of vector calculus and a section on tensor algebra, we study manifolds and their intrinsic geometry, including metrics, connections, geodesics, and the Riemann curvature tensor. Topics include Eulerian curvature and Euler's theorems, the Gauss map and first/second fundamental forms, the Theorema Egregium, minimal surfaces in n-space; other topics as time permits.

L/L 502. Abstract Algebra. (A) Staff. Prerequisite(s): Math 240. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513. An introduction to groups, rings, fields and other abstract algebraic systems, elementary Galois Theory, and linear algebra -- a more theoretical course than Math 370.

L/L 503. Abstract Algebra. (B) Staff. Prerequisite(s): Math 502 or with the permission of the instructor. Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513. Continuation of Math 502.

504. Graduate Proseminar in Mathematics. (A) Staff. This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.

505. Graduate Proseminar in Mathematics. (B) Staff. This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.

L/L 508. Advanced Analysis. (A) Staff. Prerequisite(s): Math 240/241. Math 200/201 also recommended. Construction of real numbers, the topology of the real line and the foundations of single variable calculus. Notions of convergence for sequences of functions. Basic approximation theorems for continuous functions and rigorous treatment of elementary transcendental functions. The course is intended to teach students how to read and construct rigorous formal proofs. A more theoretical course than Math 360.

L/L 509. Advanced Analysis. (B) Staff. Prerequisite(s): Math 508 or with the permission of the instructor. Linear algebra is also helpful. Continuation of Math 508. The Arzela-Ascoli theorem. Introduction to the topology of metric spaces with an emphasis on higher dimensional Euclidean spaces. The contraction mapping principle. Inverse and implicit function theorems. Rigorous treatment of higher dimensional differential calculus. Introduction to Fourier analysis and asymptotic methods.

512. Advanced Linear Algebra. Staff. Prerequisite(s): Math 114 or 115. Math 512 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 and Math 512. Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and unitary operators; Tensor products and polynomial maps; Symmetric and skew-symmetric tensors and exterior algebra.

513. (MATH313) Computational Linear Algebra. Staff. A number of important and interesting problems in a wide range of disciplines within computer science are solved by recourse to techniques from linear algebra. The goal of this course will be to introduce students to some of the most important and widely used algorithms in matrix computation and to illustrate how they are actually used in various settings. Motivating applications will include: the solution of systems of linear equations, applications matrix computations to modeling geometric transformations in graphics, applications of the Discrete Fourier Transform and related techniques in digital signal processing, the solution of linear least squares optimization problems and the analysis of systems of linear differential equations. The course will cover the theoretical underpinnings of these problems and the numerical algorithms that are used to perform important matrixcomputations such as Gaussian Elimination, LU Decomposition and Singular Value Decomposition.

L/L 514. (AMCS514, MATH314) ADVANCED LINEAR ALGEBRA.

520. (MATH702) Selections from Algebra. (M) Staff. Corequisite(s): Math 502 or permission of the instructor. Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.

521. Selections from Algebra. (M) Staff. Corequisite(s): Math 502 or permission of the instructor. Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.

524. Topics in Modern Applied Algebra. (M) Staff. Prerequisite(s): Math 371 or Math 503. Topics such as automata, finite state languages, Boolean algebra, computers and logical design will be discussed.

525. Topics in Modern Applied Algebra. (M) Staff. Prerequisite(s): Math 371 or Math 503. Topics such as automata, finite state languages, Boolean algebra, computers and logical design will be discussed.

530. Mathematics of Finance. (M) Staff. Prerequisite(s): Math 240, Stat 430. This course presents the basic mathematical tools to model financial markets and to make calculations about financial products, especially financial derivatives. Mathematical topics covered: stochastic processes, partial differential equations and their relationship. No background in finance is assumed.

540. (MATH730) Selections from Classical and Functional Analysis. (M) Staff. Corequisite(s): Math 508 or permission of the instructor. Informal introduction to such subjects as compact operators and Fredholm theory, Banach algebras, harmonic analysis, differential equations, nonlinear functional analysis, and Riemann surfaces.

546. (STAT930) Probability Theory. (A) Staff. The required background is (1) enough math background to understand proof techniques in real analysis (closed sets,
uniform coverage, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross's probability text or some exposure to probability in a statistics class).

A4fter a summary of the necessary results from measure theory, we will learn the probabilist's lexicon (random variables, independence, etc.). We will then develop the necessary techniques (Borel Cantelli lemmas, estimates on sums of independent random variables and truncation techniques) to prove the classical laws of large numbers. Next come Fourier techniques and the Central Limit Theorem, followed by combinatorial techniques and the study of random walks.

547. (STAT931) Stochastic Processes. (M) Staff. Prerequisite(s): Math 546/Stat 530 or the equivalent.

548. Topics in Analysis. (M) Staff. Prerequisite(s): Math 360/361 and Math 370; or Math 508/509 and Math 502.
Topics may vary but typically will include an introduction to topological linear spaces and Banach spaces, and to Hilbert space and the spectral theorem. More advanced topics may include Banach algebras, Fourier analysis, differential equations and nonlinear functional analysis.

L/L 549. Topics in Analysis. (M) Staff. Prerequisite(s): Math 548 or with the permission of the instructor.
Continuation of Math 548.

560. (MATH760) Selections from Geometry and Topology. (M) Staff. Corequisite(s): Math 500 or permission of the instructor.
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.

561. Selections from Geometry and Topology. (M) Staff. Corequisite(s): Math 500 or permission of the instructor.
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.

570. (LGIC310, PHIL410) Introduction to Logic and Computability. (M) Staff. Prerequisite(s): Math 371 or Math 503.

SM 571. (CIS 518, LGIC320, MATH671, PHIL412) Topics in Logic. (M) Staff. Prerequisite(s): Math 570 or with the permission of the instructor.
Continuation of Math 570.

575. Mathematical Theory of Computation. (M) Staff. Prerequisite(s): Math 574 or with the permission of the instructor.
Continuation of Math 574.

580. Combinatorial Analysis and Graph Theory. (M) Staff. Prerequisite(s): Permission of the instructor.
Generating functions, enumeration methods, Polya's theorem, combinatorial designs, discrete probability, extremal graphs, graph algorithms and spectral graph theory, combinatorial and computational geometry.

581. Combinatorial Analysis and Graph Theory. (M) Staff. Prerequisite(s): Math 580 or with the permission of the instructor.
Continuation of Math 580.

This course offers first-hand experience of coupling mathematics with computing and applications. Topics include: Random walks, randomized algorithms, information theory, coding theory, cryptography, combinatorial optimization, linear programming, permutation networks and parallel computing. Lectures will be supplemented by informal talks by guest speakers from industry about examples and their experience of using mathematics in the real world.

583. Applied Mathematics and Computation. (M) Staff. Prerequisite(s): Math 582 or with the permission of the instructor.
Continuation of Math 582.

584. (BE 584) The Mathematics of Medical Imaging and Measurement. (M) Staff. Prerequisite(s): Math 314, Math 508 and 509 or with permission of the instructor.
In the last 25 years there has been a revolution in image reconstruction techniques in fields from astrophysics to electron microscopy and most notably in medical imaging. In each of these fields one would like to have a precise picture of a 2 or 3 dimensional object which cannot be obtained directly. The data which is accessible is typically some collection of averages. The problem of image reconstruction is to build an object out of the averaged data and then estimate how close the reconstruction is to the actual object. In this course we introduce the mathematical techniques used to model measurements and reconstruct images. As a simple representative case we study transmission X-ray tomography (CT). In this context we cover the basic principles of mathematical analysis, the Fourier transform, interpolation and approximation of functions, sampling theory, digital filtering and noise analysis.

585. The Mathematics of Medical Imaging and Measurement. (M) Staff. Prerequisite(s): Math 584 or with the permission of the instructor.
Continuation of Math 584.

586. (BIOL586) Topics in Mathematical Biology. Staff. Prerequisite(s): Math 430 or equivalent is required. Math 241 and 340 are recommended.
This course will cover various mathematical models and tools that are used to study modern biological problems. The specific emphasis will vary from year to year, but typically will include an introduction to stochastic processes and computational methods that arise in evolutionary biology and population genetics. No prior knowledge of biology is needed to take this course, but a strong background in probability and familiarity with algorithms and combinatorics will be assumed.
Mathematics

594. (PHYS500) Advanced Methods in Applied Mathematics. (M) Staff. Prerequisite(s): Math 241 or Permission of Instructor. Physics 151 would be helpful for undergraduates.

Introduction to mathematics used in physics and engineering, with the goal of developing facility in classical techniques. Vector spaces, linear algebra, computation of eigenvalues and eigenvectors, boundary value problems, spectral theory of second order equations, asymptotic expansions, partial differential equations, differential operators and Green’s functions, orthogonal functions, generating functions, contour integration, Fourier and Laplace transforms and an introduction to representation theory of SU(2) and SO(3). The course will draw on examples in continuum mechanics, electrodynamics and transport problems.

599. Independent Study. (C)

600. Topology and Geometric Analysis. (A) Staff. Prerequisite(s): Math 500/501 or with the permission of the instructor.

Differentiable functions, inverse and implicit function theorems. Theory of manifolds: differentiable manifolds, charts, tangent bundles, transversality, Sard’s theorem, vector and tensor fields and differential forms: Frobenius’ theorem, integration on manifolds, Stokes’ theorem in n dimensions, de Rham cohomology. Introduction to Lie groups and Lie group actions.

601. Topology and Geometric Analysis. (B) Staff. Prerequisite(s): Math 600 or with the permission of the instructor.

Covering spaces and fundamental groups, van Kampen’s theorem and classification of surfaces. Basics of homology and cohomology, singular and cellular; isomorphism with de Rham cohomology. Brouwer fixed point theorem, CW complexes, cup and cap products, Poincaré duality, Kunneth and universal coefficient theorems, Alexander duality, Lefschetz fixed point theorem.

602. Algebra. (A) Staff. Prerequisite(s): Math 370/371 or Math 502/503.

Group theory: permutation groups, symmetry groups, linear algebraic groups, Jordan-Holder and Sylow theorems, finite abelian groups, solvable and nilpotent groups, p-groups, group extensions. Ring theory: Prime and maximal ideals, localization, Hilbert basis theorem, integral extensions, Dedekind domains, primary decomposition, rings associated to affine varieties, semisimple rings, Wedderburn’s theorem, elementary representation theory.

603. Algebra. (B) Staff. Prerequisite(s): Math 602 or with the permission of the instructor.

Continuation of Math 602.

SM 604. First Year Seminar in Mathematics. (A) Staff. Prerequisite(s): Open to first year Mathematics graduate students. Others need permission of the instructor.

This is a seminar for first year Mathematics graduate student, supervised by faculty. Students give talks on topics from all areas of mathematics at a level appropriate for first year graduate students. Attendance and preparation will be expected by all participants, and learning how to present mathematics effectively is an important part of the seminar.

605. First Year Seminar in Mathematics. (B) Staff. Prerequisite(s): Open to first year Mathematics graduate students. Others need permission of the instructor.

Continuation of Math 604.

608. (AMCS608) Analysis. (C) Staff. Prerequisite(s): Math 508-509.

Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge’s theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to real analysis: Weierstrass approximation, Lebesgue measure in Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini Theorem.

609. (AMCS609) Analysis. (C) Staff. Prerequisite(s): Math 608 or permission of the instructor.

618. Algebraic Topology, Part I. (A) Staff. Prerequisite(s): Math 600/601 or with the permission of the instructor.

618. Algebraic Topology, Part I. (B) Staff. Prerequisite(s): Math 618 or with the permission of the instructor.

Rational homotopy theory, cobordism, K-theory, Morse theory and the h-cobordism theorem. Surgery theory.

634. ARITHMETIC GEOMETRY.

642. Topics in Partial Differential Equations. Staff. Prerequisite(s): Math 608, 609. This course will not presume courses in Partial Differential Equations or Differential Geometry. Background will be covered in the course.

Problems in differential geometry, as well as those in physics and engineering, inevitable involve partial derivatives. This course will be an introduction to these problems and techniques. We will use PDE as a tool. Some of the applications will be small, some large. The proof of the Hodge Theorem will be a small application. Discussion of the Yamabe problem and ricci flow (used to prove the Poincare Conjecture) will be larger.

SM 878. Probability and Algorithm Seminar. Staff.

Seminar on current and recent literature in probability and algorithm.

SM 879. Seminar on additive combinatorics. Staff.

Advanced Graduate Courses

612. Selections from Algebra. (M) Staff. Corequisite(s): MATH 600 and 602. Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
620. Algebraic Number Theory. (M) Staff. Prerequisite(s): Math 602/603.
Dedekind domains, local fields, basic ramification theory, product formula, Dirichlet unit theory, finiteness of class numbers, Hensel's Lemma, quadratic and cyclotomic fields, quadratic reciprocity, abelian extensions, zeta and L-functions, functional equations, introduction to local and global class field theory. Other topics may include: Diophantine equations, continued fractions, approximation of irrational numbers by rationals, Poisson summation, Hasse principle for binary quadratic forms, modular functions and forms, theta functions.

621. Algebraic Number Theory. (M) Staff. Prerequisite(s): Math 620 or with the permission of the instructor.
Continuation of Math 620.

622. Complex Algebraic Geometry. (M) Staff. Prerequisite(s): Math 602/603 and Math 609.
Algebraic geometry over the complex numbers, using ideas from topology, complex variable theory, and differential geometry. Topics include: Complex algebraic varieties, cohomology theories, line bundles, vanishing theorems, Riemann surfaces, Abel's theorem, linear systems, complex tori and abelian varieties, Jacobian varieties, currents, algebraic surfaces, adjunction formula, rational surfaces, residues.

623. Complex Algebraic Geometry. (M) Staff. Prerequisite(s): Math 622 or with the permission of the instructor.
Continuation of Math 622.

624. Algebraic Geometry. (M) Staff. Prerequisite(s): Math 602/603.
Algebraic geometry over algebraically closed fields, using ideas from commutative algebra. Topics include: Affine and projective algebraic varieties, morphisms and rational maps, singularities and blowing up, rings of functions, algebraic curves, Riemann Roch theorem, elliptic curves, Jacobian varieties, sheaves, schemes, divisors, line bundles, cohomology of varieties, classification of surfaces.

625. Algebraic Geometry. (M) Staff. Prerequisite(s): Math 624 or with the permission of the instructor.
Continuation of Math 624.

626. Commutative Algebra. (M) Staff. Prerequisite(s): Math 602/603.
Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor's interests.

627. Commutative Algebra. (M) Staff. Prerequisite(s): Math 602/603.
Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor's interests.

628. Homological Algebra. (M) Staff. Prerequisite(s): Math 602/603.
Complexes and exact sequences, homology, categories, derived functors (especially Ext and Tor). Homology and cohomology arising from complexes in algebra and geometry, e.g. simplicial and singular theories, Cech cohomology, de Rham cohomology, group cohomology, Hochschild cohomology. Projective resolutions, cohomological dimension, derived categories, spectral sequences. Other topics may include: Lie algebra cohomology, Galois and etale cohomology, cyclic cohomology, l-adic cohomology. Algebraic deformation theory, quantum groups, Brauer groups, descent theory.

629. Homological Algebra. (M) Staff. Prerequisite(s): Math 628 or with the permission of the instructor.
Continuation of Math 628.

Algebraic and Differential Topology

630. Differential Topology. (M) Staff. Prerequisite(s): Math 600/601.
Fundamentals of smooth manifolds, Sard's theorem, Whitney's embedding theorem, transversality theorem, piecewise linear and topological manifolds, knot theory. The instructor may elect to cover other topics such as Morse Theory, h-cobordism theorem, characteristic classes, cobordism theories.

631. Differential Topology. (M) Staff. Prerequisite(s): Math 630 or with the permission of the instructor.
Continuation of Math 630.

632. Topological Groups. (M) Staff. Prerequisite(s): Math 600/601 and Math 602/603.

633. Topological Groups. (M) Staff. Prerequisite(s): Math 632 or with the permission of the instructor.
Continuation of Math 632.

638. Algebraic Topology, Part II. (C) Staff. Prerequisite(s): Math 618/619.
Theory of fibre bundles and classifying spaces, fibrations, spectral sequences, obstruction theory, Postnikov towers, transversality, cobordism, index theorems, embedding and immersion theories, homotopy spheres and possibly an introduction to surgery theory and the general classification of manifolds.

639. Algebraic Topology, Part II. (C) Staff. Prerequisite(s): Math 638 or with the permission of the instructor.
Continuation of Math 638.

Classical Analysis

640. Ordinary Differential Equations. (M) Staff. Prerequisite(s): Math 508/509.
The general existence and uniqueness theorems for systems of ordinary differential equations and the dependence of solutions on initial conditions and parameters appearing in the equation. The proofs of existence and uniqueness are related to numerical algorithms for finding approximate solutions for systems of ODE's. We consider special properties of constant coefficient and linear systems. We then present the theory of linear equations with analytic coefficients, the theories of singular points, indicial roots and asymptotic solutions. We then turn to boundary value problems for second order equations with an emphasis on the eigenfunction expansions associated with self adjoint boundary conditions and the Sturm comparison theory. The remaining time is devoted to topics; for example: Hamiltonian systems and symplectic geometry, singular boundary value problems, perturbation theory, the Lyapounov-Schmidt theory and the Poincare-Bendixson theorem, the equations of mathematical physics, the calculus of variations, symmetries of ODE's and transformation groups.

641. Ordinary Differential Equations. (M) Staff. Prerequisite(s): Math 640 or with the permission of the instructor.
Continuation of Math 640

Subject matter varies from year to year. Some topics are: the classical theory of the
wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and nonlinear problems. Sobolev spaces and the theory of distributions will be developed as needed.

645. Partial Differential Equations. (M) Staff. Prerequisite(s): Math 600/601, Math 608/609.
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and nonlinear problems. Sobolev spaces and the theory of distributions will be developed as needed.

646. Several Complex Variables. (M) Staff. Prerequisite(s): Math 600/601, Math 608/609.
Analytic spaces, Stein spaces, approximation theorems, embedding theorems, coherent analytic sheaves, Theorems A and B of Cartan, applications to the Cousin problems, and the theory of Banach algebras, pseudoconvexity and the Levi problems.

647. Several Complex Variables. (M) Staff. Prerequisite(s): Math 646 or with the permission of the instructor.
Continuation of Math 646.

Functional Analysis

650. Lie Algebras. (M) Staff. Prerequisite(s): Math 602/603.
Connections with Lie groups, universal enveloping algebras, Poincare-Birkhoff-Witt Theorem, Lie and Engel theorems, free Lie algebras, Killing form, semisimple algebras, root systems, Dynkin diagrams, classification of complex simple Lie algebras, representation theory of Lie algebras, cohomology of Lie algebras.

651. Lie Algebras. (M) Staff. Prerequisite(s): Math 650 or with the permission of the instructor.
Continuation of Math 650.

652. Operator Theory. (M) Staff.
Subject matter may include spectral theory of operators in Hilbert space, C*-algebras, von Neumann algebras.

653. Operator Theory. (M) Staff.
Subject matter may include spectral theory of operators in Hilbert space, C*-algebras, von Neumann algebras.

654. Lie Groups. (M) Staff. Prerequisite(s): Math 600/601, Math 602/603.
Connection of Lie groups with Lie algebras, Lie subgroups, exponential map. Algebraic Lie groups, compact and complex Lie groups, solvable and nilpotent groups. Other topics may include relations with symplectic geometry, the orbit method, moment map, symplectic reduction, geometric quantization, Poisson-Lie and quantum groups.

655. Lie Groups. (M) Staff. Prerequisite(s): Math 654 or with the permission of the instructor.
Continuation of Math 654.

656. Representation of Continuous Groups. (M) Staff.
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.

657. (PHYS657) Representation of Continuous Groups. (M) Staff.
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.

Differential Geometry

Riemannian metrics and connections, geodesics, completeness, Hopf-Rinow theorem, sectional curvature, Ricci curvature, scalar curvature, Jacobi fields, second fundamental form and Gauss equations, manifolds of constant curvature, first and second variation formulas, Bonnet-Myers theorem, comparison theorems, Morse index theorem, Hadamard theorem, Preissmann theorem, and further topics such as sphere theorems, critical points of distance functions, the soul theorem, Gromov-Hausdorff convergence.

661. Differential Geometry. (M) Staff. Prerequisite(s): Math 660 or with the permission of the instructor.
Continuation of Math 660.

670. (LGIC320, PHIL412, PHIL416, PHIL516) Topics in Logic. (M) Staff. Prerequisite(s): Math 570/571.
Discusses advanced topics in logic.

671. (CIS 518, LGIC320, MATH571, PHIL412) Topics in Logic. (M) Staff. Prerequisite(s): Math 570/571.
Discusses advanced topics in logic.

676. (CIS 610) Advanced Geometric Methods in Computer Science. (M) Staff. Prerequisite(s): Math 312 or Math 412, or with the permission of the instructor.
Advanced geometric methods used in geometric modeling, computer graphics, computer vision, and robotics.

680. Applied Linear Analysis. (M) Staff. Prerequisite(s): Math 241 and one semester of: Math 360/361 or Math 508/509.
Application of techniques from linear algebra to real problems in economics, engineering, physics, etc. and the difficulties involved in their implementation. Particular emphasis is placed on solving equations, the eigenvalue problem for symmetric matrices and the metric geometry of spaces of matrices. Applications to problems such as options pricing, image reconstruction, airplane and ship design, oil prospecting, etc. (these topics will vary from year to year).
Analysis of the numerical algorithms available to solve such problems, rates of convergence, accuracy and stability.

681. Applied Linear Analysis. (M) Staff. Prerequisite(s): Math 680 or with the permission of the instructor.
Continuation of Math 680.

690. Topics in Mathematical Foundations of Program Semantics. (M) Staff.
This course discusses advanced topics in mathematical foundations of semantics of programming languages and programming structures.
"What is to distinguish a digital dollar when it is easily reproducible as the spoken word? How do we converse privately when every syllable is bounced off a satellite and smeared over an entire continent? How should a bank know that it really is Bill Gates requesting from his laptop in Fiji a transfer of $100,000,....,000 to another bank? Fortunately, the mathematics of cryptography can help. Cryptography provides techniques for keeping information secret, for determining
that information has not been tampered
with, and for determining who authored
pieces of information." (From the Foreword
by R. Rivest to the "Handbook of Applied
Cryptography" by Menezes, van Oorschot,
and Vanstone.)

Textbook: Douglas R. Stinson.

Publisher: Chapman & Hall/CRC; 3 edition

691. Topics in Mathematical Foundations of Program Semantics. (M) Staff.
The course discusses advanced topics in
mathematical foundations of semantics of
programming languages and programming
structures.

A study of numerical methods for matrix
problems, ordinary and partial differential
equations, quadrature and the solution of
algebraic or transcendental equations.
Emphasis will be on the analysis of those
methods which are particularly suited to
automatic high-speed computation.

693. Numerical Analysis. (M) Staff. Prerequisite(s): Math 692 or with the
permission of the instructor.
Continuation of Math 692.

694. (PHYS654) Mathematical Foundations of Theoretical Physics. (M) Staff.
Selected topics in mathematical physics,
such as mathematical methods of classical
mechanics, electrodynamics, relativity,
quantum mechanics and quantum field
theory.

695. (PHYS655) Mathematical Foundations of Theoretical Physics. (M) Staff.
Selected topics in mathematical physics,
such as mathematical methods of classical
mechanics, electrodynamics, relativity,
quantum mechanics and quantum field
theory.

696. (PHYS656) Topics in Mathematical Physics and String Theory. (M) Staff. Prerequisite(s): Math
694 or permission of the instructor.
This interdisciplinary course discusses
advanced topics in mathematical physics.
Topics may include elliptic operators, heat
kernels, complexes and the Atiyah-Singer
index theorem, Feynman graphs and
anomalies, computing Abelian and non-
Abelian anomalies, and the relation of
anomalies to the index theorem.

697. (PHYS657) Topics in Mathematical Physics and String Theory. (M) Staff. Prerequisite(s): Math
696 or permission of the instructor.
Continuation of Math 696. Topics may
include the family index theorem,
equivariant cohomology and loop spaces,
the homological algebra of BRST
invariance and the Wess-Zumino
consistency condition, the descent
equations, and worldsheet anomalies in
string theory.

Advanced Topics Courses

702. (MATH520) Topics in Algebra. (M) Staff.
Topics from the literature. The specific
subjects will vary from year to year.

703. Topics in Algebra. (M) Staff.
Topics from the literature. The specific
subjects will vary from year to year.

720. Advanced Number Theory. (M) Staff. Prerequisite(s): Math 620/621.
Ramification theory, adeles and ideles,
Tate's thesis, group cohomology and Galois
cohomology, class field theory in terms of
ideles and cohomology, Lubin-Tate formal
groups, Artin and Swan conductors, central
simple algebras over local and global
fields, general Hasse principles. Other
topics may include the following: zero-
dimensional Arakelov theory, Tate duality,
introduction to arithmetic of elliptic curves,
local and global epsilon factors in
functional equations, p-adic L-functions
and Iwasawa theory, modular forms and
functions and modular curves.

721. Advanced Number Theory. (M) Staff. Prerequisite(s): Math 720 or with the
permission of the instructor.
Continuation of Math 720.

724. Topics in Algebraic Geometry. (M) Staff. Prerequisite(s): Either Math
622/623 or Math 624/625.
Topics from the literature. The specific
subjects will vary from year to year.

725. Topics in Algebraic Geometry. (M) Staff. Prerequisite(s): Either Math
622/623 or Math 624/625.
Topics from the literature. The specific
subject will vary from year to year.

730. (MATH560) Topics in Algebraic and Differential Topology. (M) Staff. Prerequisite(s): Math 618/619.
Topics from the literature. The specific
subjects will vary from year to year.

731. Topics in Algebraic and Differential Topology. (M) Staff. Prerequisite(s): Math 618/619.
Topics from the literature. The specific
subjects will vary from year to year.

748. Topics in Classical Analysis. (M) Staff. Prerequisite(s): Math 608 and Math
609 and permission from the
instructor.
Harmonic analysis in Euclidean space,
Riemann surfaces, Discontinuous groups
and harmonic analysis in hyperbolic space,
Pseudodifferential operators and index
theorems, Variational methods in nonlinear
PDE, Hyperbolic equations and
conservation laws, Probability and
stochastic processes, Geometric measure
theory, Applications of analysis to
problems in differential geometry. The
specific subjects will vary from year to
year.

749. Topics in Classical Analysis. (M) Staff. Prerequisite(s): Math 748 or with
the permission of the instructor.
Continuation of Math 748.

750. Topics in Functional Analysis. (M) Staff.
Topics from the literature. The specific
subjects will vary from year to year.

751. Topics in Functional Analysis. (M) Staff.
Topics from the literature. The specific
subjects will vary from year to year.

752. Topics in Operator theory. (M) Staff.
Topics from the literature. The specific
subjects will vary from year to year.

753. Topics in Operator Theory. (M) Staff.
Topics from the literature. The specific
subjects will vary from year to year.

760. (MATH560) Topics in Differential Geometry. (M) Staff. Prerequisite(s):
Math 660/661.
Topics from the literature. The specific
subjects will vary from year to year.

761. Topics in Differential Geometry. (M) Staff. Prerequisite(s): Math 660/661.
Topics from the literature. The specific
subjects will vary from year to year.

794. Physics for Mathematicians. (M) Staff. Prerequisite(s): Math 694.
Corequisite(s): Math 695.
This course is designed to bring
mathematicians with no physics
background up to speed on the basic theories of physics: mechanics, relativity, quantum mechanics, classical fields, quantum field theory, the standard model, strings, superstrings, and M-theory.

Graduate Seminars

SM 820. Algebra Seminar. (M) Staff.
Seminar on current and recent literature in algebra.

SM 821. Algebra seminar. (M) Staff.
Seminar on current and recent literature in algebra.

SM 824. Seminar in Algebra, Algebraic Geometry, Number Theory. (M) Staff.
Seminar on current and recent literature in algebra, algebraic geometry, and number theory.

SM 825. Seminar in Algebra, Algebraic Geometry, Number Theory. (M) Staff.
Seminar on current and recent literature in algebra, algebraic geometry, and number theory.

SM 830. Geometry-Topology Seminar. (M) Staff.
Seminar on current and recent literature in geometry-topology

SM 831. Geometry-Topology Seminar. (M) Staff.
Seminar on current and recent literature in geometry-topology

SM 840. Analysis Seminar. (M) Staff.
Seminar on current and recent literature in analysis.

SM 841. Analysis Seminar. (M) Staff.
Seminar on current and recent literature in analysis.

Seminar on current and recent literature in partial differential equations.

Seminar on current and recent literature in partial differential equations.

SM 850. Seminar in Functional Analysis. (M) Staff.
Seminar on current and recent literature in functional analysis.

SM 851. Seminar in Functional Analysis. (M) Staff.
Seminar on current and recent literature in functional analysis.

SM 861. Seminar in Riemannian Geometry. (M) Staff.
Seminar on current and recent literature in Riemannian geometry.

SM 870. Logic Seminar. (M) Staff.
Seminar on current and recent literature in logic.

SM 871. Logic Seminar. (M) Staff.
Seminar on current and recent literature in logic.

SM 872. Seminar in Logic and Computation. (M) Staff.
Seminar on current and recent literature in logic and computation.

SM 873. Seminar in Logic and Computation. (M) Staff.
Seminar on current and recent literature in logic and computation.

SM 880. Combinatorics Seminar. (M) Staff.
Seminar on current and recent literature in combinatorics.

SM 881. Combinatorics Seminar. (M) Staff.
Seminar on current and recent literature in combinatorics.
MECHANICAL ENGINEERING AND APPLIED MECHANICS (EG) {MEAM}

091. Shop Tr: Manual Milling. (C)
Fundamental principles of manual milling of metals, including hands-on training in the machine shop.

092. Shop Tr: Manual Turning. (C)
Fundamental principles of manual turning of metals using a lathe, including hands-on training in the machine shop.

093. Shop Tr: Hybrid Milling.
Building upon the basics covered in 091, this intermediate-level course includes detailed operation sequencing, fixture design, and hands-on conversational CNC programming for the ProtoTrak Hybrid Mill.

094. Tr: CNC Milling/solidcam. (C)
Building upon proficiency in 091 and 093, this hands-on course covers the details of full computer-controlled machining using SolidCAM and the Haas MiniMill.

095. Shop Tr: CNC Turning. (C)
Building upon the basics of 092, this course explores advanced computer-controlled turning using SolidCAM and the Haas TL-1.

099. Independent Study. (C)
Open to all students. A maximum of 2 c.u. of MEAM 099 may be applied toward the B.A.S. or B.S.E. degree requirements. An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal. Subject to the approval of the MEAM Undergraduate Curriculum Chair.

L/L 101. Introduction to Mechanical Design. (C) This course is available to all Engineering majors.
This hands-on, project-based course covers the fundamentals of the modern mechanical design process, from needfinding and brainstorming to the basics of computerized manufacturing and rapid prototyping.

Topics include: product definition (needfinding, observation, sketching, and brainstorming); computer-aided design (part creation, assemblies, and animation using SolidWorks); fundamental engineering design practices (material selection, dimensioning, tolerances, etc.); basic computer simulation and analysis; and rapid prototyping (laser cutter, 3-D fused-deposition modeling, and an introduction to computer-controlled machining).

L/R 110. Introduction to Mechanics. (A) Corequisite(s): MATH 104 (The Engineering section of this class is strongly recommended) and MEAM 147.
This lecture course and a companion laboratory course (MEAM 147) build upon the concepts of Newtonian (classical) mechanics and their application to engineered systems. This course introduces students to mechanical principles that are the foundation of upper-level engineering courses including MEAM 210 and 211. The three major parts of this course are: I. Vector Mechanics; II. Statics and Structures; and III. Kinematics and Dynamics. Topics include: vector analysis, statics of rigid bodies, introduction to deformable bodies, friction, kinematics of motion, work and energy, and dynamics of particles. Case studies will be introduced, and the role of Newtonian mechanics in emerging applications including bio- and nano-technologies will be discussed.

147. Introduction to Mechanics Lab. (A) Corequisite(s): MEAM 110. This half-credit laboratory class is a companion to the Introduction to Mechanics lecture course (MEAM 110). It investigates the concepts of Newtonian (classical) mechanics through weekly hands-on experiments, emphasizing connections between theoretical principles and practical applications in engineering. In addition to furthering their understanding about the workings of the physical world, students will improve their skills at conducting experiments, obtaining reliable data, presenting numerical results, and extracting meaningful information from such numbers.

L/R 203. Thermodynamics I. (B) Prerequisite(s): Math 104 and Math 114. Thermodynamics is the study of the fundamental concepts underlying the conversion of energy in such mechanical systems as internal and external combustion engines (including automobile and aircraft engines), compressors, pumps, refrigerators, and turbines. This course is intended for students in mechanical engineering, chemical engineering, materials science, physics and other fields.
The topics include: Basic definitions, microscopic and macroscopic points of view; properties of pure substances and reversibility and irreversibility, the thermodynamic temperature scale, entropy, availability, second law analysis, power and refrigeration cycles and their engineering applications.

L/R 210. Statics and Strength of Materials. (A) Prerequisite(s): MEAM 110/147 or Physics 150. Corequisite(s): Math 240 and MEAM 247 are strongly recommended.
This course is primarily intended for students in mechanical engineering, but may also be of interest to students in materials science and other fields. It continues the treatment of statics of rigid bodies begun in MEAM 110/PHYS 150 and progresses to the treatment of deformable bodies and their response to loads. The concepts of stress, strain, and linearly elastic response are introduced and applied to the behavior of rods, shafts, beams and other mechanical components. The failure and design of mechanical components are discussed.

L/R 211. Engineering Mechanics: Dynamics. (B) Prerequisite(s): MEAM 210. Corequisite(s): MATH 241 or ENM 251 and ENGR 105 or equivalent.
This course introduces the basic concepts in kinematics and dynamics that are necessary to understand, analyze and design mechanisms and machines. These concepts are also fundamental to the modeling and analysis of human movement, biomechanics, animation of synthetic human models and robotics. The topics covered include: Particle dynamics using
energy and momentum methods of analysis; Dynamics of systems of particles; Impact; Systems of variable mass; Kinematics and dynamics of rigid bodies in plane motion; Computer-aided dynamic simulation and animation.

L/R 247. Mechanical Engineering Laboratory I. (A) Prerequisite(s): Sophomore standing in engineering. Corequisite(s): MEAM 210 strongly recommended. This is the first of a two semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. This fall semester course follows closely with MEAM 210, involving experiments to explore the principles of statics and strength of materials.

L/R 248. Mechanical Engineering Laboratory II. (B) Prerequisite(s): Sophomore standing in engineering. Corequisite(s): MEAM 203 and MEAM 211 are strongly recommended. This is the second of a two-semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. The spring semester course follows closely with MEAM 203 and MEAM 211, expanding upon the principles of experimentation, measurement, analysis, and design of systems through hands-on laboratories and projects in thermodynamics and dynamics.

L/R 302. Fluid Mechanics. (A) Prerequisite(s): MATH 241 or ENM 251 and PHYS 150 or MEAM 110/147. Physical properties; fluid statics; Bernoulli equation; fluid kinematics; conservation laws and finite control-volume analysis; conservation laws and differential analysis; inviscid flow; The Navier-Stokes equation and some exact solutions; similitude, dimensional analysis, and modeling; flow in pipes and channels; boundary layer theory; lift and drag.

L/R 321. Vibrations of Mechanical Systems. (B) Prerequisite(s): MATH 241 or ENM 251 and MEAM 211. This course teaches the fundamental concepts underlying the dynamics of vibrations for single-degree of freedom, multi-degree and infinite-degree of freedom mechanical systems. The course will focus on Newton's Force Methods, Virtual-Work Methods, and Lagrange's Variation Methods for analyzing problems in vibrations. Students will learn how to analyze transient, steady state and forced motion of single and multi-degree of freedom linear and non-linear systems. The course teaches analytical solution techniques for linear systems and practical numerical and simulation methods for analysis and design of nonlinear systems.

L/R 333. Heat and Mass Transfer. (B) Prerequisite(s): MEAM 203 and MEAM 302. This course covers fundamentals of heat and mass transfer and applications to practical problems in energy conversion and conservation. Emphasis will be on developing a physical and analytical understanding of conductive, convective, and radiative heat transfer, as well as design of heat exchangers and heat transfer with phase change. Topics covered will include: types of heat transfer processes, their relative importance, and the interactions between them, solutions of steady state and transient state conduction, emission and absorption of radiation by real surfaces and radiative transfer between surfaces, heat transfer by forced and natural convection owing to flow around bodies and through ducts, analytical solutions for some sample cases and applications of correlations for engineering problems. Students will develop an ability to apply governing principles and physical intuition to solve problems.

L/R 347. Mechanical Engineering Design Laboratory. (A) Prerequisite(s): Junior standing in engineering. This is a junior level laboratory course. The course teaches the principles of design and measurement systems including basic electromechanical systems. It follows MEAM 302 and MEAM 321 including experiments in fluid mechanics, and vibration in the design of mechanical systems.

L/R 348. Mechanical Engineering Design Laboratory. (B) Prerequisite(s): Junior standing in engineering. This course is a junior lab which follows MEAM 333 Heat Transfer and MEAM 354 Mechanics of Materials with design projects based on those topics. In the broader context of design/independent skill development, this course also introduces open ended topics, wider design options, and introduces project planning and management.

L/R 354. Mechanics of Solids. (A) Prerequisite(s): MEAM 210 or equivalent, BE200 or permission of instructor. This course builds on the fundamentals of solid mechanics taught in MEAM 210 and addresses more advanced problems in strength of materials. The students will be exposed to a wide array of applications from traditional engineering disciplines as well as emerging areas such as biotechnology and nanotechnology. The methods of analysis developed in this course will form the cornerstone of machine design and also more advanced topics in the mechanics of materials.

404. Materials in Mechanical Design. (C) This course covers materials concepts that are essential in mechanical design. The properties, selection, and processing of a wide range of materials (including metals, ceramics, polymers, composites) are examined from both a fundamental and practical perspective. The relationship of material properties to bonding and microstructure of materials are discussed. An emphasis is placed on mechanical properties of materials, including modulus, strength, fracture, fatigue, wear, and creep. Design-based case studies are used to illustrate the selection of materials and processes.

405. (MEAM505, MSE 405, MSE 505) Mechanical Properties of Macro/Nanoscale Materials. (A) The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.

410. (MEAM510) Design of Mechatronic Systems. (A) Prerequisite(s): Junior or Senior standing in MEAM and a first course in Programming. In many modern systems, mechanical elements are tightly coupled with electronic components and embedded computers. Mechatronics is the study of how these domains are interconnected, and this hands-
on, project-based course provides an integrated introduction to the fundamental components within each of the three domains, including: mechanical elements (prototyping, materials, actuators and sensors, transmissions, and fundamental kinematics), electronics (basic circuits, filters, op amps, discrete logic, and interfacing with mechanical elements), and computing (interfacing with the analog world, microprocessor technology, basic control theory, and programming).

415. (IPD 515, OIDD415) Product Design. (C)
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype. The course is open to juniors and seniors in SEAS or Wharton.

445. Mechanical Engineering Design Projects. (A) Prerequisite(s): Junior standing.
This capstone design project course is required of all mechanical engineering students. Student teams will design and test complex mechanical systems that address a societal or consumer need. Projects are devised by the team, sponsored by industry, or formulated by Penn professors. Each project is approved by the instructor and a faculty advisor. Topics treated in the course include project planning, prototyping, patent and library searches, intellectual property, ethics, and technical writing and presentations. The work is spread over MEAM 445 and MEAM 446.

446. Mechanical Engineering Design Projects. (B)
This is the second course in the two course sequence involving the capstone design project. See MEAM 445 for course description.

454. (MEAM554) Mechanics of Materials. (M) Prerequisite(s): MEAM 210 and/or MEAM 354, MATH 240, 241 or ENM 251.

455. (BE 455, MEAM544) Continuum Biomechanics. (A)
Continuum mechanics with applications to biological systems. Fundamental engineering conservation laws are introduced and illustrated using biological and non-biological examples. Kinematics of deformation, stress, and conservation of mass, momentum, and energy. Constitutive equations for fluids, solids, and intermediate types of media are described and applied to selected biological examples. Class work is complemented by computational laboratory experiences.

502. Energy Engineering. (A)
Prerequisite(s): MEAM 203 or equivalent, and MEAM 333 or equivalent (Heat Transfer, that could be taken concurrently with MEAM 402).
Quantitative introduction to the broad area of energy engineering, from basic principles to applications. The focus is on the science and engineering of power generation. The course includes a review of energy resources and consumption, power cycles, combined cycles, and cogeneration, nuclear energy and wastes, solar thermal and photovoltaic energy, and wind power. Additional energy conversion topics including energy storage and geothermal, thermoelastic, hydroelectric and biomass power will be briefly discussed.

503. Direct Energy Conversion: from Macro to Nano. (C) Prerequisite(s): Basics of thermodynamics (MEAM 203 or equivalent), Basics of heat transfer (MEAM 333 or equivalent).
The course focuses on devices that convert thermal, solar, or chemical energy directly to electricity, i.e., without intermediate mechanical machinery such as a turbine. A variety of converters with sizes ranging from macro to nano scale will be discussed. Topics will include thermoelectric energy converters and radioisotope thermoelectric generator (RTGs), thermonic energy converters (TEC), photovoltaic (PV) and thermophotovoltaic (TPV) cells, as well as piezoelectric harvesters. Additional topics may include magnetohydrodynamic (MHD) generators, alkali metal thermal-to-electric converters (AMTEC), and fuel cells.

504. Tribology. (C) Prerequisite(s): Senior standing in Mechanical Engineering or Materials Science or by permission of the instructor.
The course will comprehensively cover both theoretical and practical tribology, the science and technology of interacting surfaces in relative motion. The various modes of lubrication, hydrodynamic, elastohydrodynamic, hydrostatic, mixed, solid and dry, will be studied in detail. The contact between solid surfaces will be covered, leading to an understanding of friction and various modes of wear. At each stage, it will be shown how the tribological principles learned can be applied in practice to improve the efficiency and durability of mechanical equipment and thereby enhance sustainability through energy and materials conservation.

505. (MEAM405, MSE 405) Mechanical Properties of Macro/Nanoscale Materials. (A)
The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.

507. (MSE 507) Fundamentals of Materials. (C)
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them . The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics.
510. (MEAM410) Design of Mechatronic Systems. (A)
Prerequisite(s): Graduate standing in engineering or permission of the instructor.
In many modern systems, mechanical elements are tightly coupled with electronic components and embedded computers. Mechatronics is the study of how these domains are interconnected, and this hands-on, project-based course provides an integrated introduction to the fundamental components within each of the three domains, including: mechanical elements (prototyping, materials, actuators and sensors, transmissions, and fundamental kinematics), electronics (basic circuits, filters, op amps, discrete logic, and interfacing with mechatronics), and computing (interfacing with the analog world, microprocessor technology, basic control theory, and programming).

L/L 513. (ESE 505) Feedback Control Design and Analysis. (B)
Prerequisite(s): MEAM 321 or ESE 210, Juniors and Seniors encouraged to enroll.
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.

514. (IPD 514) Design for Manufacturability. (B)
Prerequisite(s): MEAM 101 or equivalent, MEAM 210 or equivalent, senior or graduate standing in the School of Design, Engineering, or Business with completed product development and/or design engineering core coursework or related experience.
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems.

L/L 516. (IPD 516) Advanced Mechatronic Reactive Spaces. (B)
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.

519. (MSE 550) Elasticity and Micromechanics of Materials. (C)
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eschely's problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed.

520. Introduction to Robotics. (A)
Prerequisite(s): MEAM 211 and MATH 240 or equivalent.
The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include human-friendly robot arms for manufacturing, interactive robotic pets, medical and surgical assistive robots, and semi-autonomous search-and-rescue vehicles. This course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: rotation matrices, homogeneous transformations, manipulator forward kinematics, manipulator inverse kinematics, jacobians, path and trajectory planning, sensing and actuation, feedback control, haptic interfaces, and teleoperation. The material is reinforced with hands-on lab exercises involving a robotic arm and a haptic interface.

521. Introduction to Parallel Computing. (M)
Prerequisite(s): Familiarity with Linux or Unix will help.
From numerical weather prediction and earthquake simulations, to quantum mechanics, and to genome sequencing and molecular dynamics, high-performance computing (HPC) is a fundamental tool for science. The basic principles on how to design, implement, and evaluate HPC techniques will be covered. Topics include parallel non-numerical and numerical algorithms, computing platforms, and message passing interface. Science applications will sample techniques applied to partial differential equations, many-body problems, and statistical physics. Practical problem-solving and hands-on examples will be a basic part of the course.

522. Fundamentals of Sensor Technology. (M)
Explores the principles of sensor science, develops the relationship between intensive and extensive variables, and presents the linear laws between these variables. Students will review the flux-force relations describing kinetic phenomena against the context of means for transducing temperature, stress, strain, magnetic processes and chemical concentration into electrical signals. The need for multivariate signal processing will be introduced and selected applied topics considered.

L/R 527. (ENM 427) Finite Element Analysis. (A) Prerequisite(s): MATH 241 or ENM 251 and PHYS 151.
The objective of this course is to equip students with the background needed to carry out finite elements-based simulations of various engineering problems. The first part of the course will outline the theory of finite elements. The second part of the course will address the solution of classical equations of mathematical physics such as Laplace, Poisson, Helmholtz, the wave and the Heat equations. The third part of the course will consist of case studies taken from various areas of engineering and the sciences on topics that require or can benefit from finite element modeling. The students will gain hand-on experience with the multi-physics, finite element package FemLab.

528. Advanced Kinematics. (M)
Prerequisite(s): Multivariate calculus, introductory abstract algebra, mathematical maturity.
Differential geometry, Lie groups and rigid body kinematics, Lie algebra, quaternions and dual number algebra, geometry of curves and ruled surfaces, trajectory generation and motion planning, applications to robotics and spatial mechanisms.
529. (ESE 529) Introduction to MEMS and NEMS. (A) 
Introduction to RM MEMS technologies; need for RF MEMS components in wireless communications. Review of micromachining techniques and MEMS fabrication approaches. Actuation methods in MEMS, TRF MEMS design and modeling. Examples of RF MEMS components from industry and academia. Case studies: micro-switches, tunable capacitors, inductors, resonators, filters, oscillators and micromachined antennas. Overview of RF NEMS.

530. Continuum Mechanics. (A) 
Prerequisite(s): Multivariable Calculus, Linear Algebra, Partial Differential Equations.
This course serves as a basic introduction to the Mechanics of continuous media, and it will prepare the student for more advanced courses in solid and fluid mechanics. The topics to be covered include: Tensor algebra and calculus, Lagrangian and Eulerian kinematics, Cauchy and Piola-Kirchhoff stresses, General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics; constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure.

535. Advanced Dynamics. (A) 

536. Viscous Fluid Flow and Modern Applications. (M) 
This course is intended for juniors, seniors and graduate students from the Schools of Engineering and/or Arts and Sciences that have a general interest in fluid dynamics and its modern applications. Students should have an understanding of basic concepts in fluid mechanics and a good grasp on differential equations.
This is an intermediate course that builds on the basic principles of Fluid Mechanics. The course provides a more in depth and unified framework to understand fluid flow at different time and length scales, in particular viscous flows. Topics include review of basic concepts, conservation laws (momentum, mass, and heat), fluid kinematics, tensor analysis, Stokes' approximations, non-Newtonian fluid mechanics, and turbulence. The course will explore important modern topics such as microfluidics, swimming of microorganisms, wind turbines, rheology, biofluid mechanics, and boundary layers.

537. (MSE 537) Nanotribology. (B) 
Prerequisite(s): Freshman physics; MEAM 354 or equivalent, or consent of instructor.
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course.

540. Optimal Design of Mechanical Systems. (M) 
Prerequisite(s): MATH 240, 312 or equivalent; MEAM 210, 453 or equivalent, or permission of the instructor; familiarity with a computer language; undergraduates require permission.
Mathematical modeling of mechanical design problems for optimization. Highlights and overview of optimization methods: unconstrained optimization, unidirectional search techniques, gradient, conjugate direction, and Newton methods. Constrained optimization. KKT optimality conditions, penalty formulations, augmented Lagrangians, and others. SLP and SQP and other approximate techniques for solving practical design problems. Monotonicity analysis and modeling of optimal design problems. Optimization of structural elements including shape and topology synthesis. Variational formulation of distributed and discrete parameter structures. Design criteria for stiffness and strength. Design sensitivity analysis. The course will include computer programs to implement the algorithms discussed and solve realistic design problems. A term project is required.

543. Performance and Design of Unmanned Aerial Vehicles (UAVs). (C) 
Prerequisite(s): MEAM 210, 211, MATH 240 or equivalents.
This course covers the application of classical aircraft performance and design concepts to fixed-wing and rotary-wing Unmanned Aerial Vehicles (UAVs). A survey of the latest developments in UAV technology will be used to motivate the development of quantitative mission requirements, such as payload, range, endurance, field length, and detectability. The implications of these requirements on vehicle configuration and sizing and will be revealed through application of the fundamentals of aerodynamics and propulsion systems. The course will also cover basic flight dynamics and control, including typical inner-loop feedback applications.

544. (MEAM 455) Continuum Biomechanics. (A) 
Prerequisite(s): Statics, linear algebra, and differential equations.
Biological and non-biological systems are both subject to several basic physical laws of broad engineering importance. Fundamental conservation laws are introduced and illustrated using examples from both animate as well as inanimate systems. Topics include kinematics of deformation, the concept of stress, conservation of mass, momentum, and energy. Mechanical constitutive
equations for fluids, solids and intermediate types of media are described and complemented by hands-on experimental and computational laboratory experiences. Practical problem solving using numerical methods will be introduced.

545. Aerodynamics. (B) Prerequisite(s): MEAM 302.
Review of fluid kinematics and conservation laws; vorticity theorems; two-dimensional potential flow; airfoil theory; finite wings; oblique shocks; supersonic wing theory; laminar and turbulent boundary layers.

550. Design of Microelectromechanical Systems. (M) Prerequisite(s): MEAM 354 or equivalent is recommended.
A course that covers the design and fabrication of micro- and nano-electromechanical systems. Topics in the course include micro- and nano-fabrication techniques, mechanics of flexures, thin film mechanics, sensing and actuation approaches (e.g., electrostatic, piezoelectric, and piezoresistive), as well as materials and reliability issues. The fundamentals of these topics will be augmented with device-based case studies.

553. (MSE 561) Atom Mod in Mats Science. (B) Prerequisite(s): Why and what to model: Complex lattice structures, structures of lattice defects, crystal surfaces, liquids, linking structural studies with experimental observations, computer experiments. Methods: Molecular statics, molecular dynamics, Monte Carlo. Evaluation of physical quantities employing averages, fluctuations, correlations, autocorrelations, radial distribution function, etc. Total energy and interatomic forces; Local density functional theory and abinitio electronic structure calculations, tight-binding methods, empirical potentials for metals, semiconductors and ionic crystals.

554. (MEAM454) Mechanics of Materials. (M) Prerequisite(s): MEAM 210, MEAM 354, MATH 240, 241. This course is cross-listed with an advanced level undergraduate course. It may be taken by M.S.E. students for credit. M.S.E. students will be required to do some extra work, they will be graded on a different scale than undergraduate students, and they will be required to demonstrate a higher level of maturity in their class assignments. Rods and trusses. Stress. Principal stresses. Strain. Compatibility. Elastic stress-strain relations. Strain energy. Plane strain. Plane stress. Bending of beams. Torsion. Rotating disks. Castigliano's Theorem. Dummy loads. Principle of virtual work. The Rayleigh-Ritz methods. Introduction to the finite element method. Non-linear material behavior. Yielding. Failure.

L/R 555. (BE 555, CBE 555) Nanoscale Systems Biology. (C) Prerequisite(s): Background in Biology, Chemistry or Engineering with coursework in thermodynamics or permission of the instructor.
From single cell manipulations down to studies of single nanoparticles and single molecules, basic cell- molecular biology and biotechnologies are increasingly 'nano' as well as quantitative. Lectures and laboratories in this course start with nano aspects of optical detection, address the basic thermodynamics of biomolecular interactions, and then cover genomic scale devices. Nanoscale methods are then complemented by basic theories of self-assembly and polymers as well as application in drug delivery and virus engineering with analyses of limitations imposed by the innate immune system. Skills in analytical and professional presentations, papers and laboratory work will be developed.

To introduce students to advanced classical equilibrium thermodynamics based on Callen's postulatory approach, to exergy (Second-Law) analysis, and to fundamentals of nonequilibrium thermodynamics. Applications to be treated include the thermodynamic foundations of energy processes and systems including advanced power generation and aerospace propulsion cycles, batteries and fuel cells, combustion, diffusion, transport in membranes, materials properties and elasticity, superconductivity, biological processes.

L/L 564. (ESE 460, ESE 574) The Principles and Practice of Microfabrication Technology. (A) Prerequisite(s): Any of the following courses: ESE 218, MSE 321, MEAM 333, CHE 351, CHEM 321/322, Phys 250 or permission of the instructor.
A laboratory course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures, microelectronic and microstructural materials, photolithography, diffusion, oxidation, materials deposition, etching and plasma processes. Basic laboratory processes are covered in the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).

L/R 570. (CBE 640) Transport Processes I. (A)
The course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered.

571. Advanced Topics in Transport Phenomena. (M) Prerequisite(s): Either MEAM 570, MEAM 642, CHE 640 or equivalent, or Written permission of the Instructor.
The course deals with advanced topics in transport phenomena and is suitable for graduate students in mechanical, chemical and bioengineering who plan to pursue research in areas related to transport phenomena or work in an industrial setting that deals with transport issues. Topics include: Transport processes with drops, Bubbles and particles; Phase change Phenomena: condensation, evaporation, and combustion; Radiation heat transfer: non-participating media, participating media, equation of radiative transfer, optically thin and thick limits; Introduction to Hydrodynamic and Thermal Instability; Microscale energy transport; Nano-particle motion in fluids and transport.

572. Micro/Nanoscale Energy Transport. (M) Prerequisite(s):
Undergraduate thermodynamics and heat transfer (or equivalent), or permission of the instructor. Undergraduates may enroll with permission of the instructor. As materials and devices shrink to the micro- and nanoscale, they transmit heat, light and electronic energy much differently than at the macroscopic length scales. This course provides a foundation for studying the transport of thermal, optical, and electronic energy from a microscopic perspective. Concepts from solid state physics and statistical mechanics will be included to analyze the influence of small characteristic dimensions on the propagat of crystal vibrations, electrons, photons, and molecules. Applications to
modern microdevices and therometry techniques will be discussed. Topics to be covered include natural and fabricated microstructures, transport and scattering of phonons and electrons in solids, photon-phonon and photon-electron interactions, radiative recombinations, elementary kinetic theory, and the Boltzmann transport equation.

575. Micro and Nano Fluidics. (M)
The course focuses on topics relevant for micro-fluidics, lab on chip technology, point of care diagnostics, nano-technology, biosensing, and interfacial phenomena. Although we will discuss briefly the fabrication of micro and nano fluidic devices, the course will mostly focus on physical phenomena from the continuum point of view. The mathematical complexity will be kept to a minimum. The course will be reasonably self-contained, and any necessary background material will be provided, consistent with the students' background and level of preparation.

Specifically, we will examine fluid and nanoparticle transport under the action of pressure, electric, magnetic, and capillary forces; the structure and role of superhydrophobic surfaces; how the solid/liquid interface acquires electric charge; ion transport in electrolytes (Poisson-Nernst-Planck equations); colloid stability; electroosmosis, electrophoresis, and particle polarization; electrowetting and digital microfluidics; particle and cell sorting; immunoasays; and enzymatic amplification of nucleic acids.

580. Electrochemistry for Energy, Nanofabrication and Sensing. (C)
Prerequisite(s): Undergraduate course in Fluid Mechanics (MEAM 302), and in Heat and Mass Transfer (MEAM 333). Principles and mathematical models of electrochemical processes in energy conversion and storage, water desalination, nanofabrication, electroplating, and sensing for engineering and science graduate students and advanced undergraduates, lacking prior background in electrochemistry. The course covers equivalent circuits, electrode kinetics, electrokinetic and transport phenomena, and electrostatics. The course will introduce and use the finite element program COMSOLTM. We will discuss, among other things, applications to stationary and flow batteries, supercapacitors, integrated electric circuit fabrication, electrokinetics, and biosensing. In contrast to CBE 545 Electrochemical Energy Conversion that focuses on solid state electrochemistry, this course emphasizes liquid-based electrochemistry.

597. Master's Thesis Research. (C)

599. Master's Independent Study. (C)

613. (CBE 617, CIS 613, ESE 617) Nonlinear Control Theory. (M)
Prerequisite(s): A sufficient background to linear algebra (ENM 510/511 or equivalent) and a course in linear control theory (MEAM 513 or equivalent), or written permission of the instructor.
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Forbenius’ theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations.

620. Advanced Robotics. (B)
Prerequisite(s): Graduate standing in engineering and MEAM 535 or ESE 500 or CIS 580 or MEAM 520.
The course covers advanced topics in robotics and includes such topics as multi-body dynamics, nonlinear control theory and planning algorithms with application to robots and systems of multiple robots.

L/R 625. Haptic Interfaces. (M)
Prerequisite(s): Graduate standing in engineering and MEAM 510 (Mechatronics), MEAM 520 (Intro to Robotics), MEAM 535 (Advanced Dynamics) or equivalent. Undergraduates require permission.
This class provides a graduate-level introduction to the field of haptics, which involves human interaction with real, remote, and virtual objects through the sense of touch. Haptic interfaces employ specialized robotic hardware and unique computer algorithms to enable users to explore and manipulate simulated and distant environments. Primary class topics include human haptic sensing and control, haptic interface design, virtual environment rendering methods, teleoperation control algorithms, and system evaluation; current applications for these technologies will be highlighted, and important techniques will be demonstrated in a laboratory setting. Coursework includes problem sets, programming assignments, reading and discussion of research papers, and a final project. Appropriate for students in any engineering discipline with interest in robotics, dynamic systems, controls, or human-computer interaction.

630. Advanced Continuum Mechanics. (M) Prerequisite(s): One graduate level course in applied mathematics and one in either fluid or Solid Mechanics.
This course is a more advanced version of MEAM 530. The topics to be covered include: tensor algebra and calculus, Lagrangian and Eulerian kinematics; Cauchy and Piola-Kirchhoff stresses. General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics. Constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure.

631. Advanced Elasticity. (M)
Prerequisite(s): MEAM 519 or permission of instructor.

632. Plasticity. (M) Prerequisite(s): MEAM 519 or permission of instructor.

633. Mechanics of Plastic Flow and Fracture. (M) Prerequisite(s): Background equivalent to MEAM 519 and ENM 510.
This course focuses on mechanics aspects of localized plastic flow and fracture. Topics include: yield criteria, plastic flow rules, phenomenological theories, linear analysis of cracks in elastic materials, non-linear analysis of cracks in elastic-plastic materials, fracture parameter and J-integral methods with and applications to strain localization, crack growth, and stability. Micro-mechanical models of strain localization and fracture are analyzed using non-linear elasticity, plane strain slip line incremental elastic-plastic boundary value problems, and energy methods.
Applications to various material systems and processes, including layered materials, forming, friction and wear, and contact.

634. Rods and Shells. (M)
Prerequisite(s): First-year graduate-level applied mathematics for engineers (ENM 510 and 511) and a first course in continuum mechanics or elasticity or permission of instructor.
This course is intended for 2nd year graduate students and introduces continuum mechanics theory of rods and shells with applications to structures and to biological systems as well as stability and buckling. The course begins with topics from differential geometry of curves and surfaces and the associated tensor analysis on Riemannian spaces. A brief introduction to variational calculus is included since variational methods are a powerful tool for formulating approximate structural mechanics theories and for numerical analysis. The structural mechanics theories of rods, plates and shells are introduced including both linear and nonlinear theories.

635. Composite Materials. (M)
Prerequisite(s): ENM 510. Corequisite(s): ENM 511.
This course deals with the prediction of the average, or effective properties of composite materials. The emphasis will be on methods for determining effective behavior. The course will be concerned mostly with linear mechanical and physical properties, with particular emphasis on the effective conductivity and elastic moduli of multi-phase composites and polycrystals. However, time-dependent and non-linear properties will also be discussed.

637. (AMCS637, MSE 637) Modern Applications of Dynamics. (C)
When demand permits.
This course is targeted at engineering, physical science, computational and mathematics Ph.D. students. The course focuses on techniques for the simulation/modeling of materials on a time and/or length scale that is large compared with atomistic/molecular but with structure that is fine on the scale of typical (homogenized) continuum theory. The course explores kinetic models, defect dynamics, and statistical mechanics models and their implementation in computer simulation.

642. Advanced Fluid Mechanics. (C)
Fluid mechanics as a vector field theory; basic conservation laws, constitutive relations, boundary conditions, Bernoulli theorems, vorticity theorems, potential flow. Viscous flow; large Reynolds number limit; boundary layers.

646. Computational Mechanics. (M)
Prerequisite(s): ENM 510, ENM 511, and one graduate level introductory course in mechanics. FORTRAN or C programming experience is necessary.
The course is divided into two parts. The course first introduces general numerical techniques for elliptical partial differential equations - finite difference method, finite element method and spectral method. The second part of the course introduces finite volume method. SIMPLER formulation for the Navier-Stokes equations will be fully described in the class. Students will be given chances to modify a program specially written for this course to solve some practical problems in heat transfer and fluid flows.

647. Fundamentals of Complex Fluids. (M) Prerequisite(s): ENM 510, MEAM 530 or MEAM 570, or permission of the instructor.
Complex fluids are a broad class of materials. They are usually homogeneous at the macroscopic scale and disordered at the microscopic scale, but possess structure at an intermediate scale. The macroscopic behavior of these fluids is controlled by the fluid intermediate scale. This course will cover the basic concepts of structure, dynamics, and flow properties of polymers, colloids, liquid crystals, and other substances with both liquid and solid-like characteristics. Both the experimental and theoretical aspects of rheology will be discussed. The basic forces influencing complex fluid rheology will be outlined and discussed. These include van der Waals, electrostatic, excluded volume and other interactions. Methods for characterizing structure will be covered including scattering techniques, optical microscopy. Examples will focus on several types of complex fluids such as polymeric solutions and melts, emulsions & foams, gelling systems, suspensions and self-assembling fluids.

650. (MSE 650) Mechanics of Soft and Biomaterials. (C)
L/R 662. (BE 662, CBE 618) Advanced Molecular Thermodynamics. (A)

663. Entropic Forces in Biomechanics. (C)
This course is targeted for engineering/physics students working in the areas of nano/bio technology. The course will start with a quick review of statistical mechanics and proceed to topics such as Langevin dynamics, solution biochemistry (Poisson-Boltzmann and Debye-Huckel theory), entropic elasticity of bio-polymers and networks, reaction rate kinetics, solid state physics and other areas of current technological relevance. Students will be expected to have knowledge of undergraduate mechanics, physics and thermodynamics.

690. Advanced Topics in Thermal Fluid Science or Energy. (M)
This course will be offered when demand permits. The topics will change due to the interest and specialties of the instructor(s).
Some topics could include: Computational Fluid Mechanics, Visualization of Computational Results, Free Surface Flows, Fluid Mechanics of the Respiratory System, and transport in Reacting Systems.

691. Special Topics in Mechanics of Materials. (M)
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s).
Some topics could include: Compliant Mechanisms, Optimal Control, and Fluid-Structure interaction.

692. Topics in Mechanical Systems. (M)
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s).
Some topics could include: Electromagnetics, Control Theory, and Micro-Electro-Mechanical Systems.

SM 699. MEAM Seminar. (C)
The seminar course has been established so that students get recognition for their seminar attendance as well as to encourage students to attend. Students registered for this course are required to attend weekly departmental seminars given by distinguished speakers from around the world. There will be no quizzes, tests, or homeworks. The course will be graded S/U. In order to obtain a satisfactory (S) grade, the student will need to attend more than 70% of the departmental seminars. Participation in the seminar course will be documented and recorded on the students transcript. In order to obtain their degree, doctoral students will be required to accumulate six seminar courses and MS candidates (beginning in the Fall 2001) two
courses. Under special circumstances, i.e. in case of conflict with a course, the student may waive the seminar requirement for a particular semester by petition to the Graduate Group Chair.

895. Teaching Practicum. (C)
This course provides training in the practical aspects of teaching. The students will attend seminars emphasizing teaching and communication skills, deliver demonstration lectures, lead recitations, lead tutorials, supervise laboratory experiments, develop instructional laboratories, develop instructional material, prepare and grade homework; grade laboratory reports, and prepare and grade examinations. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of the 0.5 c.u. of teaching practicum, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation signed by the faculty member responsible for the course. The evaluation will be based on comments of the students taking the course and the impressions of the faculty in charge.

899. Independent Study. (C)
For students who are studying specific advanced subject areas in mechanical engineering and applied mechanics. Before the beginning of the term, the student must submit a proposal outlining and detailing the study area, along with the faculty supervisor's consent, to the graduate group chair for approval. At the conclusion of the independent study, the student should prepare a brief report.

Master's Thesis

For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.
Military Science (Army ROTC - Reserve Officers' Training Corps) is open to any student desiring to earn a commission in the Active Army, US Army Reserve, or Army National Guard upon graduation.

The primary purpose of Army ROTC is to prepare college men and women to serve as commissioned officers in the US Army. Students enrolled in the ROTC program receive instruction in fundamentals of leadership with emphasis on self-discipline, integrity, confidence, and responsibility.

All students enrolled in Military Science courses will participate, unless ineligible or exempt, in a weekly leadership laboratory (a nominal lab fee is charged), one weekend field training exercise (FTX) per semester, and a physical training program. This training augments the classroom instruction and is included into the final grade.

Freshman and sophomore students can enroll in the ROTC Basic Course without incurring an obligation to serve in the US Army. The term Basic Course refers to first and second year courses, MSCI 101, 102, 201, and 202, which are designed for beginning students who want to qualify for entry into the Advanced Course, and for students who may want to try Military Science without obligations. A number of popular or challenging extracurricular activities are associated with these courses.

101. Basic Leadership I Laboratory/Practicum. (A) Staff. Corequisite(s): Enrollment in MSCI 110 Basic Leadership I Lecture required. 1 h. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

102. Basic Leadership I Laboratory/Practicum. (B) Staff. Corequisite(s): Enrollment in MSCI 120 Basic Leadership I Lecture required. 1 h. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

10. Leadership and Personal Development. (A) Staff. Corequisite(s): Enrollment in MSCI 101 Basic Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation.

Introduces students/cadets to the personal challenges and competencies that are critical for effective leadership. Focus is placed on developing basic knowledge and comprehension of the U.S. Army's Leadership Dimensions while gaining a "big picture" understanding of the Army ROTC program, its purpose in the U.S. Army and our nation, and its advantages for the student. Classes are conducted for one hour once each week.

120. Foundations In Leadership. (B) Staff. Corequisite(s): Enrollment in MSCI 102 Basic Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation.

Reviews leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students/cadets are also exposed to key fundamentals of skills required to be successful as an MS II cadet; namely military map reading and land navigation, and small unit operations/leadership drills.

201. Basic Leadership 2 Laboratory/Practicum. (A) Staff. Corequisite(s): Enrollment in MSCI 210 Basic Leadership 2 Lecture required. 2 h. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

202. Basic Leadership Laboratory/Practicum. (B) Staff. Corequisite(s): Enrollment in MSCI 220 Basic Leadership 2 Lecture required. 2 h. No credit, or as awarded by cross-enrolled schools.

Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

Basic Course Physical Fitness. Only open to students in MSCI 101, 102, 201 and 202. Series, with different roles for students at different levels in the program. Participate in and learn to lead a physical fitness program. Emphasis on the development of an individual fitness program and the role of exercise and fitness is one's life.

Students who continue in the advanced course as juniors and seniors become obligated to serve either on active duty or in the reserve component. The Advanced Course consists of the courses MSCI 301, 302, 401 and 402. It is open only to students who have completed the Basic Course or earned placement credit for the basic course (various methods). The Advanced Course is designed to qualify a student for a commission as an officer of the United States Army. Students must complete all courses numbered greater than 300, to include a six-week Advanced Camp during the summer, usually between the junior and senior years. The courses must be taken in sequence unless otherwise approved by the Professor of Military Science. All contracted students receive $150 per month stipend during the school year.

210. Innovative Tactical Leadership. (A) Staff. Corequisite(s): Enrollment in MSCI 201 Basic Leadership 2 Laboratory required. 1.00 CU - Credit excluded from full-time calculation.

Explores the dimensions of creative and innovative tactical leadership strategies and styles by studying historical case studies and engaging in interactive student exercises. Focus is on continued development of the knowledge of leadership values and attributes through an understanding of rank, uniform, customs and courtesies.

220. Leadership In Changing Environments. Staff. Corequisite(s): Enrollment in MSCI 202 Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation.

Examines the challenges of leading in complex contemporary operational environments. Students/cadets are exposed to more complex land navigation/map reading tasks, as well as more advanced small unit operations/leadership drills. Cadets develop greater self-awareness as they practice communication and team building skills.
301. Leadership Laboratory/Practicum 3. (A) Staff. Prerequisite(s): Completion of MSCI 100 and 200 level courses. Corequisite(s): Enrollment in MSCI 310 Basic Leadership 3 Lecture required. 2.5 hours. No credit, or as offered to the nurse upon graduation. Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

302. Leadership Laboratory/Practicum. (B) Staff. Prerequisite(s): Completion of MSCI 100 and 200 level courses. Corequisite(s): Enrollment in MSCI 320 Basic Leadership 3 Lecture required. 2.5 hours. No credit, or as awarded by cross-enrolled schools. Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

ROTC Advanced Camp. A six-week camp conducted at an Army post. Only open to (and required of) students who have completed MS 301 and 302. The student receives pay. Travel, lodging and most meal cost are defrayed by the US Army. The Advanced Camp environment is highly structured and demanding, stressing leadership at small unit levels under varying, challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The leaders and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type commission and job opportunities given to the student upon graduation from ROTC and the university.

Nurse Summer Training Program. Consist of three weeks at an Advanced Camp (see above) and up to five weeks serving as a nurse in a military medical treatment facility. Only open to (and required of) nursing students who have completed MSCI 301 and 302. Replaces normal advanced. The student receives pay. Travel, lodging and most meal costs are defrayed by the US Army. The camp and clinical environments are demanding, stressing leadership and basic skills performance are evaluated throughout. The leadership and skills evaluations weigh heavily in the subsequent selection process that determines the job opportunities offered to the nurse upon graduation.

310. Leadership in Contact. Staff. Prerequisite(s): Completion of MSCI 100 and 200 level courses. Corequisite(s): Enrollment in MSCI 310 Leadership 3 Lab required. 1.00 CU - Credit excluded from full-time calculation. Uses increasingly intense situational leadership challenges to build cadet awareness and skills in leading small units. Skills in decision-making, persuading, and motivating team members when "in combat" are explored, evaluated, and developed.

320. Complex Team Leadership Issues. (B) Staff. Corequisite(s): Enrollment in MSCI 302 Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation. Challenges cadets with more complex leadership issues to further develop, practice, and evaluate adaptive leadership. Cadets continue to analyze and evaluate their own leadership values, attributes, skills and actions in preparation for the Leadership Development and Assessment Course (LDAC). Primary attention is given to preparation for LDAC and the development of both tactical skills and leadership qualities.

401. Leadership Laboratory/Practicum 4. (A) Staff. Prerequisite(s): Completion of MSCI 100, 200 and 300 level courses. Corequisite(s): Enrollment in MSCI 410 Leadership 4 Lecture required. 1.00 CU - credit excluded from full-time calculation. Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

402. Leadership Laboratory/Practicum. (B) Staff. Prerequisite(s): Completion of MSCI 100, 200 and 300 level courses. Corequisite(s): Enrollment in MSCI 420 Leadership 4 Lecture required. 2.5 hours. No credit, or as awarded by cross-enrolled schools. Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

410. Developing Adaptive Leaders. (A) Staff. Prerequisite(s): Completion of MSCI 100, 200 and 300 level courses. Corequisite(s): Enrollment in MSCI 401 Leadership 4 Lab required. 1.00 CU - credit excluded from full-time calculation. Develops cadet proficiency in planning, executing, and assessing complex operations, functioning as a member of a staff, and providing leadership performance feedback to subordinates. Cadets are given situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC cadets.

420. Leadership in the Contemporary Operating Environment of the 21st Century. Staff. Prerequisite(s): Completion of MSCI 100, 200 and 300 level courses. Corequisite(s): Enrollment in MSCI 402 Leadership I Lab required. 1.00 CU - Credit excluded from full-time calculation. Explores the dynamics of leading in the complex situations of current military operations. Cadets examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. Aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support are examined and evaluated.
MUSIC  
(AS) {MUSC} 

Undergraduate Studies  

Freshman Seminars  

The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www.college.upenn.edu/courses/seminars/freshman.php. Fulfills Arts and Letters sector requirement.  

SM 018. (URBS018) Freshman Seminar. (M) Staff.  
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www.college.upenn.edu/courses/seminars/freshman.php. Fulfills Cross Cultural Analysis Requirement.  

History of Music  

030. 1000 Years of Musical Listening. (C) Arts & Letters Sector. All Classes. Calcagno, Caldwell, Goodman. Open to all students. 

We know that we like music and that it moves us, yet it is often difficult to pinpoint exactly why, and harder still to explain what it is we are hearing. This course takes on those issues. It aims to introduce you to a variety of music, and a range of ways of thinking, talking and writing about music. The majority of music dealt with will be drawn from the so-called "Classical" repertory, from the medieval period to the present day, including some of the 'greats' such as Handel, Beethoven, Mozart, Berlioz, and Verdi, but will also introduce you to music you will most likely never have encountered before. This course will explore the technical workings of music and the vocabularies for analyzing music and articulating a response to it; it also examines music as a cultural phenomenon, considering what music has meant for different people, from different societies across the ages and across geographical boundaries. As well as learning to listen ourselves, we will also engage with a history of listening. No prior musical knowledge is required. (Formerly Music 021)  

031. Symphony. (C) Bernstein. 
This course will focus on a specific repertoire of representative symphonies by such composers as Haydn, Mozart, Beethoven, Schubert, Berlioz, Schumann, Brahms, Tchaikowsky, and Mahler. Historical developments will be considered, along with the effects upon symphonic literature of such major sociological changes as the emergence of the public concert hall. But the emphasis will be on the music itself--particularly on the ways we can sharpen our abilities to engage and comprehend the composers' musical rhetoric. Topics will alternate term to term.  

032. Composers. (M) Arts & Letters Sector. All Classes. Staff. 
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters sector and Cross Cultural Analysis Requirements.  

An investigation, through a series of representative works, of the central problem of opera: how does the combination of music, text, and visual spectacle create an art form in which the whole is more powerful than its parts. Today this issue can be examined not only in live performances but also through media such as film, DVD, streaming video - media to which this four-centuries-old multimedia form has adapted, evolving in still compelling ways. The works chosen for the course provide a chronological survey but also represent the variety of sources on which opera has drawn for it subject matter: myth and legend, the epic, the novel, and the play.  

034. Music Makers. Staff. 
Courses under this number will treat composer performers and performance. Courses will include a class on Haydn and Mozart (formerly 027); Beethoven (Formerly 028; and Mahler (formerly 025).  

035. (AFRC077) Jazz Style and History. (M) Ramsey. This course is an exploration of the family of musical idioms called jazz. Attention will be given to issues of style development, selective musicians, and to the social and cultural conditions and the scholarly discourses that have informed the creation, dissemination and reception of this dynamic set of styles from the beginning of the 20th century to the present. Fulfills Cultural Diversity in the U.S.  

This course aims to introduce students to what it means to study the European musical tradition. Students will approach the diverse music that constitute the classical tradition from a variety of scholarly perspectives. The goal of this class is to listen deeply and think broadly. Students will consider questions such as: what sort of object is music? Where is it located? What does it mean to say a work is "canonic"? What is left out of the story? This class will be in dialog with other tier one classes, and will consider what the historian can bring to the study and understanding of music.  

This course surveys American musical life from the colonial period to the present. Beginning with the music of Native Americans, the European legacy, and the African Diaspora, the course treats the singular social and political milieu that forged the profile of America's musical landscape. Attention will be given to the establishment of the culture industry and to various activities such as sacred music, parlor music, concert and theater music, the cultivation of oral traditions, the appearance of jazz, the trajectory of western art music in the United States, and the eventual global dominance of American popular music. Music 070 prerequisite. Preference given to music Majors and Minors.
This course offers an in-depth look at topics and repertoires of the "earlier" periods, namely one (or more) of three historical epochs: Medieval, Renaissance, or Baroque. The purpose of this course is to give students the opportunity to engage deeply with musical works historically, analytically, and contextually, in addition to introducing a range of methodologies within the historical study of music. (Formerly Music 120, 121,122).

231. Historical Eras and Topics: Later Periods. Staff.
This course offers an in-depth look at topics and repertoires of the eighteenth century to today. Classes focus on one (or more) of four historical epochs: Enlightenment, Romantic, Modern, and Postmodern. The purpose of this course is to give students the opportunity to engage deeply with musical works historically, analytically and contextually, in addition to introducing a range of methodologies within the historical study of music. (Formerly 123, 124).

232. Themes in Music History. (M) Staff.
In this course, students will have the opportunity to explore music history from a thematic or conceptual perspective, frequently through several eras. Past these organizing the course include the Voice, the Sacred, Uncanny, Technology, Instruments, Orality and Literacy, and Machines.

233. Musical Thought and Scholarship. Staff.
This course will introduce students to the field of music philosophy, aesthetics and intellectual history.

234. Music Makers. (M) Staff.
Courses under this number will treat composer, performers, and performance. This class may also on occasion have a performance component, including collaborations with local performance venues, artists in residence. Courses will include a class on Haydn and Mozart (formerly 027); Beethoven (formerly 28); Mahler (formerly 25); Monks and Nuns; String Quartets.

This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces "meaning" and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics. (Formerly Music 146).

236. Performance, Analysis, History. (M) Staff.
Participation in the course is contingent upon a successful audition. This course must be taken for a letter grade (pass/fail option may not be utilized for this course). This weekly seminar will explore music from the past and present through class discussions of performance, historical context, and analytical aspects of the music led by a professor and/or performer. One example of a class in this number will be an indepth study of chamber music repertoire led by the Daedalus Quartet. Students will prepare for a final performance at the end of the semester as well as a paper/presentation. Students interested in this applied approach to music may also wish to take 256 and/or 276.

238. Mahler's "Resurrection" Symphony. (M) Bernstein.
This course is designed to facilitate the sort of in-depth consideration of a musical work that can arise when the better part of a semester is given over essentially to the study of a single composition, in this case, Mahler's Second Symphony. The work will be studied from a variety of perspectives, including: the composer's approach to monumentality; his experiments with orchestral sonority; the influence on this symphony of Beethoven's Fifth and Ninth Symphonies; the relationship to the Second Symphony of Mahler's Lieder aus Des Knaben Wunderhorn and his own First Symphony; and the impact of events in Mahler's early life on the genesis and nature of the Resurrection Symphony. The course is open to Music Majors and Minors. Other students who believe they are adequately prepared for this course should consult with the instructor (Lawrence Bernstein) before registering.

239. Guided Reading in Musicology. (C) Staff. Prerequisite(s): Muse 130 or 135; and 170.
Individual research under the supervision of a member of the faculty. Students who take Music 239 may not take Music 259 or 279. Prerequisite 130 and one other class from tier 1 or 2.

SM 330. Seminar in Music History. (M) Staff.
Advanced seminar in topics in musicology.

Anthropology of Music

050. (AFRC050, AFST050, ANTH022, FOLK022) World Musics and Cultures. (C) Arts & Letters Sector. All Classes. Muller,Rommen,Sykes.
This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways-- particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

051. (AFRC053, AFST053, COML053) Music of Africa. (M) Muller.
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwaido to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the
SM 052. Sounding the Postcolonial: Music & Resistance from Contredanse to Hip-Hop. Donnelly. Fulfills Communication Within the Curriculum, Jazz, and music minor requirements.

Rapid decolonization in the mid-twentieth century drastically changed the global political landscape and has resulted in postcolonial interactions and relationships. The postcolonial manifests itself in music through the creation of postcolonial music, or music that emerged or was directly and profoundly altered from the postcolonial condition, and the postcolonial in music, or expressions of postcolonial sentiments in music, whether it be through lyrics or other musical factors. Through readings, musical recordings, class discussion, and oral presentations, this course aims to examine and explore the multiple registers (political, economic, social, historical among others) in which the postcolonial is mediated through sound. Topics will include hip-hop as resistance in Paris, bhangra in the United Kingdom, and rai in Algeria among others.

150. Introduction to Ethnomusicology. (M) Muller, Rommen, Sykes. Fulfills the requirements of the Music Major.

This course introduces students to the field of ethnomusicology through a series of case studies that explore a range of traditional, popular, and art music forms from around the world. The course takes as a point of departure several works of musical ethnography, musical fiction, and musical autobiography and, through in-depth reading of these texts, close listening to assigned sound recordings, and in-class case studies, generates a context within which to think and write about music.

What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today’s public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.

255. (AFRC157, FOLK157, LALS157) Accordions of the New World. (M) Rommen.

This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling through the polka belt. From there, our investigation turns toward Louisiana and Texas—toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, champame, and forro. Our journey will conclude in the Caribbean, where we will spend some time thinking about merengue and rake-n-scrape music. Throughout the semester, the musical case studies will be matched by readings and film that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World. (Formerly Music 157).

This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required. (Formerly Music 253).

257. (AFRC258, ANTH256, LALS258) Caribbean Music and Diaspora. (M) Rommen.

This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as postcolonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertoires of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North American contexts of music consumption and production. (Formerly Music 258).

This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as postcolonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertoires of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).

259. Guided Research Ethnomusicology. (C) staff. Prerequisite(s): Music 150 and 170. Individual research under the supervision of a member of the faculty. Students who take Music 259 may not take 239 or 279.

350. Seminar in Ethnomusicology. (C) Muller, Rommen, Sykes.

Advanced study in a selected topic in Ethnomusicology.
Theory & Composition

070. Introduction to Theory and Musicianship: Making Sense of Music. (C) Moreno, Primoch, Weesner. Prerequisite(s): There is no prerequisite. Students with some background in music may place out of this course and into Music 170, Theory and Musicianship I.

This course will cover basic skills and vocabulary for reading, hearing, performing, analyzing, and writing music. Students will gain command of musical rudiments, including notation, reading and writing in treble and bass clefs, intervals, keys, scales, triads and seventh chords, and competence in basic melodic and formal analysis. The course will include an overview of basic diatonic harmony, introduction to harmonic function and tonization. Musicianship skills will include interval and chord recognition, rhythmic and melodic dictation and familiarity with the keyboard. There will be in-depth study of selected compositions from the "common practice" Western tradition, including classical, jazz, blues and other popular examples. Listening skills—both with scores (including lead sheets, figured bass and standard notation), and without—will be emphasized. There is no prerequisite. Students with some background in music may place out of this course and into Music 170, Theory and Musicianship I. (Formerly Music 70, 71).

L/L 170. Theory and Musicianship I. (A) Moreno, Primoch, Reise, Waltham-Smith, Weesner. Prerequisite(s): Music 070 or successful completion of diagnostic test. Required of music majors.

Introduction to and development of principles of tonal voice-leading, harmonic function, counterpoint, and form through written analysis, composition, improvisation, and written work. Course covers diatonic harmony and introduction to chromaticism. Repertoires will focus on Western classical music. Musicianship component will include sight-singing, dictation and keyboard harmony.

L/L 171. Theory and Musicianship II. (B) Moreno, Reise, Waltham-Smith, Weesner. Prerequisite(s): Music 170. Required of music majors.

Continuation of techniques established in Theory and Musicianship I. Explores chromatic harmony. Concepts will be developed through analysis and model composition. Musicianship component will include sight-singing, dictation, harmonic dictation and keyboard harmony.

L/L 270. Theory and Musicianship III. (M) Moreno, Primoch, Reise, Waltham-Smith, Weesner. Prerequisite(s): Music 170 and 171. Required of music majors.

Continuation of techniques established in Theory and Musicianship I and II. Concepts will be developed through analysis and model composition. Musicianship component will include advanced sight singing, dictation, harmonic dictation and keyboard harmony.

271. Composition I: Historical Practices. (M) Staff. Prerequisite(s): Music 170, 171, 270.

Studies in selected 16th through 19th century compositional practices. Possible topics may include 16th century modal counterpoint; sonata forms in Viennese classicism; advanced chromatic harmony. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.

272. Composition II: Contemporary Practices. (M) Staff. Prerequisite(s): Music 170, 171, 270.

Studies in selected 20th and 21st century compositional practices. Possible topics may include symmetry in post-tonal harmony; composing for piano; the sonata in the 20th century. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.

273. Orchestration. (M) Staff. Prerequisite(s): Music 70 or 170.

An introduction to writing for the instruments of the orchestra. Course will include study of individual instruments and various instrumental combinations, including full orchestra. Representative scores from the 18th century to the present day will be analyzed. Students will be responsible for several scoring projects and will have opportunities to hear readings of their projects. Prerequisite: at least two semesters of music theory or permission of instructor. (Formerly 285).

274. Jazz Improvisation. (M) Primoch, Ramsey. Prerequisite(s): Music 70 or 170.

This introductory "hands-on" course surveys various theoretical approaches to playing specific idioms of jazz and related musical styles. The approach will be eclectic and includes the study of written scores, recordings, live performances, and selected theoretical treatises. (Formerly Music 145).

275. Electronic Music. (M) Lew. Prerequisite(s): Music 070 or 170. MUSC275 offers an introduction to electronic music/sound production with a focus on analogue systems and performance.

SM 276. Performance and Analysis. (C) Staff. Prerequisite(s): Music 70 or 170. Participation in the course is contingent upon a successful audition. This course must be taken for a letter grade (pass/fail option may not be utilized for this course). This weekly seminar will explore music from the past and present through class discussions of performance and analytical aspects of the music led by a professor and/or performer. Compared to Music 236, this class will have a more analytical focus. Students will prepare for a final performance at the end of the semester as well as a paper/presentation. Students interested in this applied approach to music may also wish to take 236 and 256.

SM 277. Music and Technology. (A) Lew. Prerequisite(s): Music 070 or 170. This course is for Music Majors and minors.

An introduction to music and sound recording with a focus on concerts and live performances. The entire process will be examined from start to finish, including the roles played by composers, musicians, listeners, performance spaces, and recording technology. Meetings will take place in the classroom, in concert spaces and in the studio. Music majors and minors will be given preference for registration.

A class for aspiring composers.

279. Guided Research in Theory and Composition. staff. Prerequisite(s): Music 170, 171 and one other tier 2 class.

Individual research under the supervision of a member of the faculty. Students who take Music 279 may not take Music 239 or Music 259.

Advanced seminar in topics of music theory and compositions.
Other Undergraduate Courses

005. College Music Program. Staff. Permits will be entered after student completes College Music House form. Forms available in Music department. Private study in voice, keyboard, strings, woodwind, brass, percussion, and non-western instruments. Such study is designed to meet the artistic, technical, and/or professional needs of the student. Note: This is not a syllabus. Course requirements and assessment will be determined by the private instructor. Private lessons in the College House Music cannot be taken Pass/Fail. Please visit http://www.sas.upenn.edu/music/performance. Students cannot register through Penn In Touch. Registration will be maintained by the music department upon receipt of application and instructor permission.

007. Ensemble Performance. (C) Staff. Please contact Ensemble Director if you are interested in taking Music 007 for credit.

Successful participation in a music department sponsored group. Ensemble groups: University Orchestra, University Wind Ensemble, Choral Society, University Choir, Ancient Voices, Baroque and Recorder Ensemble, Chamber Music Society, Arab Music Ensemble, Samba and Jazz Combo. This course must be taken for a letter grade (Pass/Fail registration option may not be utilized for this course).

010. Applied Music. (E) Staff. Prerequisite(s): Must be a music major or minor.

Instruction in vocal and instrumental performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance.

SM 056. (AFRC056, AFST056, COML056, MUSC556) Seeing/Hearing South Africa: Politics and History through Contemporary Performance. (M) Arts & Letters Sector. All Classes. Muller. Student financial services is processing application for financial aid currently. This course begins in the spring--students engage with South African performance and political history; the history of the festival in Grahamstown; and listen closely to the history of South African jazz. They are given guidelines for writing about live performances; students discuss program choices; and spend some time talking about travel to South Africa and the live experience of two weeks at the National Arts Festival. Everyone travels to the National Arts Festival in late June and spends two weeks attending live performances (4-6 per day), blogging on the performances, and discussing these experiences with the Professor & fellow students. We visit a game park and do a "township tour" as part of the two weeks in the Eastern Cape. On returning home, students have about 4 weeks to write a substantial paper on the festival experience. While this is primarily a music class, the National Arts Festival includes all kinds of performance--theater, music, dance, and visual arts. This is two weeks of total immersion in the arts, and thinking deeply about the place of the arts in contemporary life and society.

060. (SAST104) BeginningTabla I. (M) Staff.

An introduction to the tabla, the premier drum of north Indian and Pakistani classical music traditions.

Introduction to the fundamentals of Indian music; instruction in performance on the sitar.

062. (SAST105) BeginningTabla II. (B) Staff.

Continued study in Tabla

063. (SAST107) Beginning Sitar II. (C) Nalbandian. Continuation of MUSC 061.

080. (ENGL080) Literatures of Jazz. (E) Staff.

That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We'll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphia's most vibrant jazz venues.

SM 081. (CIMS070, FNAR070) Film Sound and Film Music. Curriculum application 10/2011.

This course is an introduction to classic film scores, music written for movies from the late 1920s to the 1960s. At the same time, we will deal with film sound in general: the technology that made silent movies talk, the rules and tricks of sound and music production for film, and the scientific and aesthetic theories behind different approaches to the soundtrack. One goal of the course is for students to learn to listen analytically to what is heard on a soundtrack. Another is to get a sense for the ways that European classical music (opera and symphony) influenced and continues to influence film composers. Students do not need to read music for this course: we deal with film music on an aural basis and look at musical notation occasionally. Some Musical background (for example, playing an instrument) could be helpful.

North Indian classical music is performed in a format shared by stringed, bowed and wind instruments. Intermediate North Indian Instrumental performance is open to students who play a Western or Indian instrument with at least an intermediate degree of proficiency and to those who have completed Beginning Sitar. The course will cover North Indian methods of composition, rhythm and improvisation and focus on two or three performance pieces. A group performance will be given at the end of the semester.

164. (SAST115) India’s Classical Musics. (M) Miner. Hindustani and Karnatak music are among the great classical music systems of the world. Developed in temple, shrine, court, and concert stage environments in North and South India, they have a strong contemporary following in urban South Asia and a significant international presence. This course is an introduction to theory, structures, instruments, and aesthetics. We will work with primary and secondary texts, recordings, videos, and live performances. Topics will cover selected aspects of raga, tala, composition, improvisation and social contexts. The course aims to give students analytical and listening skills with which to approach and appreciate India’s classical music. No prior music training is required.
168. The Enterprising Musician and Artist. Ketner. Can be counted toward music minor requirements only. 
This course aims to provide students with the skills to ensure that the art they create achieves the maximum impact for their audiences and communities, for their respective fields, and for themselves. The course will also examine the relationship between entrepreneurship and individual artistic development. After arriving at an appropriate definition of entrepreneurship and how it can apply to music and the arts, students will explore the development of creativity and innovation and how that leads to idea generation. Students will then receive instruction in such areas as marketing, fundraising, financial management, and business planning. Guest lectures and the examination of case studies will supplement the instructor's lectures. The course will culminate with each student completing and presenting an individual project and participating in a group project in which the class partners with a local arts organization. Can be counted as a music minor elective only.

265. (SAST005) Performing Arts in South Asia. (C) Arts & Letters Sector. All Classes. 
This course is a survey of selected traditions of theater, music, and dance in India and surrounding regions. Topics include ritual practices, theater, classical dance, classical music, devotional music, regional genres, and contemporary popular musics. Readings and lectures are supplemented by audio and visual materials and live performances. The aim of the course is to expose students to a variety of performance practices from this part of the world and to situate the performing arts in their social and cultural contexts. The course has no prerequisites.

266. (SAST116) Music Cult in India & Pak. (C)
SM 290. (ENGL290) Reinventing Nina Simone.
398. Study Abroad.
Study Abroad

399. Independent Study. (C) Staff. 
Prerequisite(s): Music 170, 171, 270. 
Independent Research Project under faculty supervision

Graduate Studies in Music

Musical Analysis

Analytical Studies in Harmony.

Analytical studies of twentieth-century music.

516. Analysis of 20th Century Music II. (M) Staff. 
Analytical Studies of 20th century music focusing on post World War II music.

Current methods in the analysis of tonal music.

SM 621. (HSPV638) Analytical Methods: Twentieth-Century Music. (M) Staff. 
This seminar will examine the role of sound in shaping modern urban spaces and life. While music plays a large part in the sounds of the city, we will focus on soundscapes more broadly. From the late 19th century through the present, and in geographies spanning from Paris to Philadelphia, we will explore the making, meaning, and experience of sound for varied populations; the politics of sound as an instrument of power; and the policies of noise regulation. As an interdisciplinary seminar supported by the Mellon Humanities+Urbanism+Design Initiative, the course will bring together students and faculty from diverse fields to probe the subject of urban sound through the lenses of both theory and practice. We will read across a wide variety of disciplines, including urban and environmental history, sound studies, urban geography, the history of sensation, musicology, anthropology, and critical theory. We will engage with sound archives, installations, films, and photographs, and also have an opportunity to make field recordings of our own. The format of the final project is flexible and could include a research paper, theoretical essay, visualizations, GIS mapping, sonic compositions, short film, or other types of media.

Analytical methods in early music.

Proseminars in the History, Theory, and Anthropology of Music

SM 600. The Interpretation of Evidence. (M) Bernstein. 
The nature of evidence; basic methods of musicological research.

SM 601. The Interpretation of Written Traditions. (M) Staff. 
Topics may include notation, codicology, editing and print culture.

SM 602. The Interpretation of Theoretical Treatises. (M) Staff. 
A consideration of theoretical principles based upon the reading and interpretation of selected treatises.

SM 603. Aesthetics and Criticism. (M) Staff. 
Topics may include hermeneutics, methods of formulating value judgments, the relationship of evaluation to interpretation, and the role of aesthetics in history.

SM 604. Historiography. (M) Staff. 
Theories and models of historical investigation. Analysis of both historiographic writings and musicological works exemplifying particular approaches.

SM 605. (ANTH605, COML605, FOLK605) Anthropology of Music. (M) Muller, Rommen, Sykes. Open to graduate students from all departments. Topics may include the intellectual history of ethnomusicology, current readings in ethnomusicology, a consideration of theoretical principles based upon the reading and interpretation of selected monographs, and area studies.

SM 606. (AFRC606, FOLK616) The Interpretation of Oral Traditions. (M) Staff. 
Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology.

SM 610. Musical Notation. (M) 
Concepts and systems of the notation of medieval and Renaissance music. Chant, monophonic song, and polyphony through the mid-thirteenth century.

650. (ANTH257, ANTH657, FOLK650, MUSC250) Field Methods in Ethnomusicology. (M) Muller, Rommen, Sykes. 
The goal of the seminar is to give students a compressed dissertation research experience--taking them from the beginnings of "researching" a community
and its music, through the documentation and representation stages. Students do background and methods reading, though the focus of the class is the development of basic ethnographic and documentation skills. This is a community partnership seminar, which means that all forms of representation are produced in collaboration with community partners in West Philadelphia. These include photographic essays, an NPR style audio documentary, but most significantly, twenty-thirty minute documentary films on a particular subject. See sample syllabus and projects on
http://ccat.sas.upenn.edu/music/westphilly music

SM 705. (AFRC640, AFRC705, ANTH705, FOLK715, GSWS705) Seminar in Ethnomusicology. (A) Muller, Rommen, Sykes. Open to graduate students from all departments.
Topics in Ethnomusicology.

Seminars in Music

SM 710. (COML638, FREN638) Studies in Medieval Music. (M) Staff. This course will explore the main repertories of medieval lyric from the dual perspectives of words and music (and disciplinary perspectives of musicology and literary studies). Our focus will be vernacular song and poetry from the late thirteenth to early fifteenth centuries, including detailed exploration of some of the following: polytextual motet, music and poetry of Adam de la halle, the Roman de Fauvel, Machaut,Ciconia and some early Dufay. In exploring how late thirteenth-century writers and composers defined themselves as part of a tradition, we will also look back to their 'history' -- to the repertory of troubadour lyrics. The course will place particular emphasis on the ways medieval writers and musicians construed their creations, and the many productive tensions between language and sound; singing and speaking; words and music. We will explore how that concern with etymologies of song played out not only in the lyrics themselves, but also in theoretical writing about song, and in its manuscript representation and codification. Included in our discussions will be writings by Johannes de Grocheio, Philippe de Vitry, Brunetto Latini and Deschamps, and consideration of a range of chansonniers, including the Chansonnier du roi, the Montpellier codex, and the Machaut manuscripts.

SM 750. (STSC418) Studies in Nineteenth-Century Music-French Opera Comique and Operetta 1860-1933. (M) Staff. The late 18th and early 19th centuries saw the invention of many new instruments in both music and science. They were sometimes made by the same people, and they were often understood to have the same purpose: to attune individuals to the rhythms, proportions, and harmonies of nature. This seminar draws connections between music, science, politics, ethics and aesthetics between 1750 and 1850, a crucial point in European history. We will examine the role of instruments in conceptions of nature, society, and the individual, traversing the clockwork regularity of the enlightenment, the turbulent longings of Romanticism, and the spooky delirium of the fantastic. The course begins with light refracting through prisms; it ends with the blaring trombones of Berlioz's opium-induced Symphonie Fantatique; along the way we will visit ideas of natures, mechanical observation, theories of the passions, global science, demonic virtuosity, phantasms, the uncanny, and the paradoxes of bourgeois selfhood. Students will work with actual instruments, read primary texts, and might meet a 21st century dandy. The class is open to creative undergraduates and graduates from any field who want to explore a range of ideas of what it means to be human in the modern world.

SM 760. Studies in Twentieth-Century Music. (M) Staff. Seminar on selected topics in the music of the twentieth century.

SM 770. (AFRC771, FOLK770, LALS770) Seminar in Afro-American Music. (M) Ramsey. This course will consider the American musical landscape from the colonial period to the present with an emphasis, though not exclusive focus, on non-written traditions. The course is not a chronological journey, but rather a topical treatment of the various issues in the history of American music. Some of the specific, project-oriented activities of the course will consist of, but will not be limited to the following: (1) participating in the development of a traveling exhibition on the Apollo Theater for the Smithsonian Institution; (2) development of a permanent website for a history of jazz course at Penn; (3) reviewing two manuscripts for publication to a major press; (4) developing a working proposal for a history of African American music. In this context students will learn the basics of contemporary music criticism, including: identifying a work's significant musical gestures; positioning those gestures within a broader field of musical rhetoric, conventions, and social contracts; theorizing the conventions with respect to large systems of cultural knowledge, such as historical, geographical contexts as well as the lived experiences of audiences, composers, performers, and dancers. Other topics covered: origin and development of American popular music and gendered and racial aspects of American classical music.

SM 780. (COML780) Studies in Music Theory and Analysis. (M) Staff. Seminar on selected topics in music theory and analysis.

Composition

508. Advanced Musicianship. (E) Staff. Prerequisite(s): Reasonable keyboard and sight-reading facility. Advanced techniques of score reading and general musicianship at the keyboard. Goals of the course include increasing proficiency in sight singing (including C clefs). Taking harmonic, melodic, and rhythmic dictations. Accurate performance of rhythms.

SM 525. Composition in Selected Forms. (M) Staff. Study of the style and form of one genre, composer, or historical period, with emphasis on written projects.

Preparation for the A.M. Comprehensive Examination in Composition.
NAVAL SCIENCE (PV) {NSCI}

100. Naval Science Drill. (C)
Prerequisite(s): Prerequisite (Sophomores, Juniors, Seniors) Fall NSCI 101/Spring NSCI 102. Corequisite(s): Corequisite (Freshmen) Fall NSCI 101/Spring NSCI 102.
A professional laboratory covering various aspects of naval leadership and professional development. While emphasis is given to military marching, formation, and parade, the course also includes lectures from sources in and out of the Navy. Guest speakers cover topics such as leadership, Navy career paths, equal opportunity, rights and responsibilities, AIDS awareness, terrorism/counterterrorism, naval warfare doctrine, employment of naval forces, ethics and values, operations security, and safety.

101. Naval Orientation. (A)
A course designed to familiarize the student with the history, characteristics and present employment of sea power. Particular emphasis is placed upon our naval forces and their capability in achieving and maintaining our national objectives. Naval organization and operational functions are discussed in conjunction with sea power concepts. Additionally, the student is given an insight into the Naval Service, shipboard organization and safety, time management skills and study techniques.

102. Seapower and Maritime Affairs. (B) Engineering and Nursing students receive credit.
A broad survey of naval history designed to add historical perspective to current defense problems. Topics covered include: naval power as an aspect of national defense policy, navies as an instrument of foreign policy, strategy selection, resource control, technology, and manning.

201. Leadership & Management. (A)
Staff. Only Engineering, Nursing, and Wharton students receive credit.
This course emphasizes principles of leadership, personnel and material management, and subordinate development in the context of the naval organization. Practical applications are explored through experiential exercises and case studies.

A comprehensive study of the theory and practice of terrestrial, and electronic navigation and the laws of vessel operations. Topics include fundamentals of coastal and harbor piloting, electronic navigation and mean of navigating without reference to land. An in-depth study of the international and inland nautical Rules of the Road is also included. Case studies and practical exercises are used to reinforce the fundamentals of marine navigation.

301. Engineering. (A) Only Engineering students receive credit.
This course provides an overview of how propulsion and electricity are provided to our Navy's fighting ships. The basic engineering principles relating to thermodynamics, steam propulsion (conventional and nuclear), gas turbine propulsion, internal combustion engines, electricity generation and distribution, and various support systems will be taught. Ship design, stability, damage control, and some engineering-related ethical issues will also be discussed.

302. Weapons. (B) Only Engineering students receive credit.
This course provides an overview of the theory and concepts underlying modern weapons systems. The principles behind sensors and detection systems, tracking systems, computational systems, weapon delivery systems, and the fire control problem will be examined, with a consistent emphasis on the integration of these components into a "weapons system".

310. Evolution of Warfare. (H)
This course is designed to add broad historical perspective to understanding military power. Treating war and the military as an integral part of society, the course deals with such topics as: war as an instrument of foreign policy, military influences on foreign policy, the military as a reflection of society, manning and strategy selection.

401. Navigation II. (A)
Insight into modern naval operations is gained through analysis of relative motion pertaining to ships at sea, underway replenishment, shiphandling, and tactical communications. The process of command and control and leadership is examined through case studies of actual incidents at sea.

402. Leadership and Ethics. (B) Only Wharton students receive credit.
The capstone course of the NROTC curriculum, this course is intended to provide the midshipman with the ethical foundation and basic leadership tools to be effective junior officers. Topics such as responsibility, accountability, ethics, the law of armed conflict, military law, division organization and training, and discipline are introduced through practical exercises, group discussion, and case studies.

410. Maneuver Warfare. (I)
Maneuver Warfare is designed to provide a foundation of knowledge regarding leadership, tactics, and general military skills. Specific topics range from introduction to leadership and problem resolution, to Boyd's decision cycle and military law. Ideas are introduced and reinforced through a wide range of instructional methods, to include lecture, group discussion, practical application, and case studies.
NEAR EASTERN LANGUAGES AND CIVILIZATIONS (AS) {NELC}

08. (STSC016) Islamic Science.

298. Study Abrd: Major Credit. (M)

NEAR EASTERN NON-LANGUAGE COURSES IN LITERATURE, HISTORY AND CULTURE

SM 008. (COML014, GWS008) Critical Speaking Seminar. (C) rafii. Prerequisite(s): None. Corequisite(s): none. American political discourse, especially since September 11th, has often depicted Islam as an oppressive force from which both Muslims and non-Muslims, particularly women and gender/sexual minorities, must be saved. In this CWiC critical speaking seminar, we will investigate how oral and written narratives—such as political rhetoric, apologetics and historical sources—claim to establish unassailable "facts" about Islam, Muslims and the Middle East. We will also investigate how the notion of empire—both in its traditionally understood form in Islamic and European history, as well as in its iterations as US Military and soft power—privileges certain voices over others, and how we can reclaim the voices of the marginalized in both contemporary discourse as well as historical oral traditions.

SM 009. Critical Writing Seminar in Near Eastern Languages and Civilizations. (C) Staff.

This is a critical writing seminar. It fulfills the writing requirement for all undergraduates. As a discipline-based writing seminar, the course introduces students to a topic within its discipline but throughout emphasizes the development of critical thinking, analytical, and writing skills. For current listings and descriptions, visit the Critical Writing Program's website at www.writing.upenn.edu/critical.

L/R 031. (HIST081) History of the Middle East Since 1800. (C) History & Tradition Sector. All classes. Kashani-Sabet. A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity. Requirements: one paper and two take-home exams.

032. (HIST084) Topics in 20th C. Middle East. (C) Kashani-Sabet. If "the clash of civilizations" is the first image that jumps to mind when thinking about the modern Middle East, then this is the course for you. From the familiar narratives about the creation of modern nation-states to the oft-neglected accounts of cultural life, this course surveys the multi-faceted societies of the twentieth-century Middle East. Although inclusive of the military battles and conflicts that have affected the region, this course will move beyond the cliches of war and conflict in the Middle East to show the range of issues and ideas with which intellectuals and governments grappled throughout the century. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered in the course. Ty considering illustrative cultural moments that shed light on the political history of the period, this course will adopt a nuanced framework to approach the Arab/Israeli conflict, the history of the Gulf States, the Iran-Iraq War, and U.S. involvement in the region.

During the past hundred years, Egypt has been the cultural and political pacemaker in the Middle East. It has been on the cutting edge of developments in Arabic literature, movies, and music, and has produced intellectual leaders ranging from feminists to Muslim activists. In the 1950s and '60s, the Egyptian president Gamal Abdel Nasser inspired the pan-Arab movement and at the same time made his country a central player in postcolonial Africa. Meanwhile, Egypt led the Arab countries in opposing the state of Israel until breaking ranks in 1978 to sign peace accords at Camp David. In this class, we will approach the history of twentieth-century Egypt through the lives of a spectrum of its peoples, including Muslims, Christians, and Jews; presidents and peasants; singers, writers, and radical thinkers. Along the way we will examine the social pressures that have inspired modern Egyptian revolutionaries and militants, and attempt to explain the reasons for the country's continuing prominence in the Arab and Muslim worlds.

SM 038. (AFST038) Narrative Journeys: Africa and Asia. (A) Staff.

Have you ever read the Tales of Sindbad and his travels? Do you like narratives about journeys, both ancient and contemporary? The purpose of this seminar is to introduce freshmen to a variety of narratives in different literary genres; to do so through the theme of the journey, whether it be a physical journey from one place to another—a process of change—a rite of passage perhaps, or an inward psychological quest. Female and male authors are presented, as are different periods in the long history of the Middle East and Africa. All the texts to be read are in English translation.

046. (ANCH046, RELS014) Myths and Religions of the Ancient World. (B) History & Tradition Sector. All classes. Frame.

This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.

From sympathetic rituals to cure sexual dysfunction to the sages' esoteric creation of worlds through the manipulation of words, we will learn from the ancient writings of Assyria and Babylonia just what knowledge was, what it was good for, and how it was divided up. This interdisciplinary course will combine literary, anthropological, historical and cultural approaches to textual, archaeological and iconographic data to bring to life the world, words and beliefs of these ancient intellectuals.

048. Introduction to Mesopotamian Civilization. (M) History & Tradition Sector. All classes. Tinney.

This class provides a chronologically organized survey of ancient Mesopotamian culture and history from the dawn of urbanization to the advent of the Greeks. Material culture and primary texts in translation are discussed in their contexts, introducing alongside the history such topics as urbanization and state formation; the invention of writing and the development of education; the king and his scholars in the Assyrian empire; the epic of Gilgamesh and other major works of Sumerian and Akkadian literature. One class will be held at the Penn Museum and will include hands-on experience of cuneiform school texts.

Iraq's ancient civilizations, Sumer, Babylon and Assyria, have emerged spectacularly from their ruin mounds over the last century and a half. In this class we will read the core myths of these cultures in translation and situate them in their literary, historical, religious and cultural contexts. The case of characters includes, among other, Enki, trickster god of wisdom; Inana, goddess of sex and war; and Marduk, warrior son, savior of the sea, king of the gods and founder of Babylon. Themes range from creation to flood, from combat to the dangers of humans acting in the worlds of the divine, to the heroic peregrinations of Gilgamesh as he wrestles with monsters, fate and the pain of mortality.

051. (HIST139, JWST156, NELC451, RELS120) History of Jewish Civilization I--Jews and Judaism in Antiquity: From the Bible to the Talmud. (A) Dohrmann.

The course is an overview of Jewish history, culture, and society from its biblical settings through the Hellenistic-Roman, and early rabbinic periods. The course will trace the political, social, and intellectual-religious, and literary development of Judaism in its formative centuries, building from an awareness of the impact of imperial power on Jewish thoughts, politics, and culture. Topics to be covered include: the evolution of biblical thought and religious practice over time; Jewish writing and literary genres; varieties of Judaism; Judaism and Imperialism; the emergence of the rabbinic class and institutions.

052. (HIST140, JWST157, NELC452, RELS121) Medieval and Early Modern Jewry. (A) History & Tradition Sector. All classes. Ruderman.

Exploration of intellectual, social, and cultural developments in Jewish civilization from the dawn of rabbinic culture in the Near East through the assault on established conceptions of faith and religious authority in 17th century Europe. Particular attention will be paid to the impact of Christian and Muslim "host societies" on expressions of Jewish culture.

053. (HIST141, JWST158, RELS122) The History of Jewish Civilization from the Late Seventeenth Century to the Present. (B) History & Tradition Sector. All classes. Ruderman.

This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

This course surveys the literature of Ancient Egypt from the Old Kingdom through the Graeco-Roman period, focusing upon theme, structure, and style, as well as historical and social context. A wide range of literary genres are treated, including epics, tales, such as the "world's oldest fairy tale;" poetry, including love poems, songs, and hymns; religious texts, including the "Cannibal Hymn;" magical spells; biographies; didactic literature; drama; royal and other monumental inscriptions; and letters, including personal letters, model letters, and letters to the dead. Issues such as literacy, oral tradition, and the question poetry vs. prose are also discussed. No prior knowledge of Egyptian is required.

062. (AFST062) Land of the Pharaohs. (C) History & Tradition Sector. All classes. Wegner.

This course provides an introduction to the society, culture and history of ancient Egypt. The objective of the course is to provide an understanding of the characteristics of the civilization of ancient Egypt and how that ancient society succeeded as one of the most successful and long-lived civilizations in world history.

The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt's Ptolemaic period which culminated in the reign of Cleopatra VII.

068. (NELC668) Art and Architecture in Ancient Egypt. (M) Silverman.

This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
L/R 085. Life and Death in Ancient China and Ancient Egypt. (M)
Humanities & Social Science Sector. Class of 2010 & beyond.
Steinhardt/Silverman/Wegner.
Using materials excavated in tombs, this course investigates funerary cults, death rituals, beliefs about the afterlife, and the preparations for death during life in China from 1500 BCE to AD 1000 and in Egypt from 3000-1000 BCE.

L/R 101. (ANCH025, HIST024) Introduction to the Ancient Near East. (A) History & Tradition Sector. All classes. Frame.
The great pyramids and mysterious mummies of Egypt, the fabled Tower of Babel, and the laws of the Babylonian king Hammurabi are some of the things that might come to mind when you think of the ancient Near East. Yet these are only a very few of the many fascinating -- and at time perplexing -- aspects of the civilizations that flourished there c. 3300-300 BCE. This is where writing first developed, where people thought that the gods wrote down what would happen in the future on the lungs and livers of sacrificed sheep, and where people knew how to determine the length of hypotenuse a thousand years before the Greek Pythagoras was born. During this course, we will learn more about these other matters and discover their place in the cultures and civilizations of that area.

This is an interdisciplinary survey of the history, society and culture of the ancient Near East, in particular Egypt and Mesopotamia, utilizing extensive readings from ancient texts in translation (including the Epic of Gilgamesh, "one of the great masterpieces of world literature"), but also making use of archaeological and art historical materials. The goal of the course is to gain an appreciation of the various societies of the time, to understand some of their great achievements, to become acquainted with some of the fascinating individuals of the time (such as Hatshepsut, the women pharaoh," and Akhenaten, "the heretic king"), and to appreciate the rich heritage that they have left us.

102. (HIST023) Intro to Middle East. (B) History & Tradition Sector. All classes. Cobb, Sharkey.
This is the second half of the Near East sequence. This course surveys Islamic civilization from circa 600 (the rise of Islam) to the start of the modern era and concentrates on political, social, and cultural trends. Although the emphasis will be on Middle Eastern societies, we will occasionally consider developments in other parts of the world, such as sub-Saharan Africa, Central Asia, and Spain, where Islamic civilization was or has been influential. Our goal is to understand the shared features that have distinguished Islamic civilization as well as the varieties of experience that have endowed it with so much diversity.

103. (ANTH121, URBS121) Origin and Culture of Cities. (A) History & Tradition Sector. All classes. Zettel.
The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.

104. Jerusalem through Ages. (M) Staff. Offered through the College of Liberal and Professional Studies.
A study of Jerusalem, the sacred city for three different world religions, is fundamental to a rich understanding of the history and religions of the Middle East. Beginning in antiquity and continuing through the medieval and modern periods, this course will chronicle the rise, fall and reconstruction of Jerusalem many times over. Particular emphasis will be placed on the archaeology and architecture of the city, the phenomenology of sacred space, the meanings of Jerusalem in art, and the religious history of the city. We will investigate the meanings Jerusalem has had in the past and will also consider current questions about its future.

The goal of this course is to provide students with a general introduction to the holy scripture of the religion of Islam, the Qur'an. In particular, students will become familiar with various aspects of Qur'anic content and style, the significance of the Qur'an in Islamic tradition and religious practice, scholarly debates about the history of its text, and contemporary interpretations of it. Through close readings of a wide range of passages and short research assignments, students will gain first-hand knowledge of the Qur'an's treatment of prophecy, law, the Biblical tradition, and many other topics. No previous background in Islamic studies or Arabic language is required for this course.

132. Origins of Islamic Political Thought. (C) Lowry.
This seminar will introduce students to the early and medieval tradition of Islamic political thought. The course will begin by examining notions of power in the Qur'an, and then turn to the career of the Prophet Muhammad. Much of the course will then be devoted to a consideration of the formation of the institution of the caliphate and of resistance of various kinds to caliphal legitimacy and authority.
Medieval responses to the caliphate and its waning will also be considered, as well as the distinctive contribution of Iranian ideas and the Iranian heritage to Islamic political thought. The course will conclude with a brief consideration of some contemporary appropriations of the tradition. (This course will not cover the important, but arguably discrete topic of the reception of Greek political thought in the Islamic intellectual tradition.) The majority of the readings consist of translations of primary Arabic and Persian sources. Due consideration will be given to the literary character of these sources, as well as to the question of the limits of the qualifiers "Islamic" and "Muslim" in regard to the political ideas that emerge from the readings.

SM 133. Penn/Philadelphia/and the Middle East. (C) Sharkey, H.
This seminar explores the historic engagement of the University of Pennsylvania and its faculty, students, and graduates in the Near and Middle East. It does so while drawing on archives, rare books and manuscripts, and artifacts that are now preserved in the University Archives, the Penn Museum, and the Penn Libraries. Together we will consider how, beginning in the late nineteenth century, Penn scholars engaged in archaeological expeditions to celebrated sites like Ur (in what is now Iraq) and Memphis (in Egypt) and how some of these efforts influenced the late Ottoman Empire’s policies toward antiquities and museums. We will examine how Penn’s curriculum changed over time to accommodate Semitics, including the study of languages and biblical traditions, in light of or in spite of historic tensions at the university between secular and religious learning. We will assess how Penn responded to changing American popular attitudes and U.S. foreign policy concerns relative to the Middle East, including during the Cold War and post-2001 (post-9/11) eras. Finally, we will trace the stories or biographies of some individual objects in Penn collections in order to appreciate the university’s roles in collecting, preserving, analyzing, and disseminating knowledge about the region’s deep cultural heritage. Ultimately, by investigating and writing

134. Getting Crusaded. (H) History & Tradition Sector. All classes. Cobb.
What did it feel like to get crusaded? In this course, we will examine the roughly two-century period from the call of the First Crusade in 1095 to the final expulsion of Latin Crusaders from the Middle East in 1291. Our examination will be primarily from the perspective of the invaded, rather than the invaders, as is usually done. How did the Muslims, Jews, and Eastern Christians of the medieval Middle East respond to the presence of Frankish invaders from Europe?

136. (RELIS143, SAST139) Introduction to Islam. (A) Elias.
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

139. (HIST189) Modern Egypt. (C) Troutt-Powell.
This course will seek to explore how Egyptian culture has dealt with its many pasts by investigating early modern and modern Egyptian history. With an emphasis on the 18th century to the present we will explore the culture of Egypt under the Ottoman Empire, slavery in Egypt, the unsuccessful French attempt to colonize Egypt and the successful British occupation of the country.

Sometimes offered as a Benjamin Franklin Seminar.
A study of Mesopotamian civilization, its cultural impact on the ancient Near East and the Bible, and the legacy it bequeathed to Western civilization. Topics will include Mesopotamian religion, law, literature, historiography, and socio-political institutions.

150. (JWST150, NELC450, RELS125) Introduction to the Bible (The ‘Old Testament”). (A) Humanities & Social Science Sector. Class of 2010 & beyond. Staff.
An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.

SM 152. (JWST152, RELS127) Jewish Law & Ethics. (A) Staff. Freshman Seminar.
An introduction to the literary and legal sources of Jewish law within an historical framework. Emphasis will be placed upon the development and dynamics of Jewish jurisprudence, and the relationship between Jewish law and social ethics.

This course introduces students of literature, women's studies, and Jewish studies to the long tradition of women as writers, readers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres--devotional literature, memoir, fiction, and poetry--we will study women's roles and selves, the relation of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English.

"Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890)

155. (ANTH124, JWST124, RELS024) ARCHAEOLOGY & THE BIBLE. (M) Zettler.
The Hebrew Bible (Tanakh) and archaeological research provide distinct, and at times conflicting, accounts of the origins and development of ancient Israel and its neighbors. Religion, culture and politics ensure that such accounts of the past have significant implications for the world we live in today. In this course we will discuss the latest archaeological research from Israel, the Palestinian
Terrorist, and Jordan as it relates to the Bible, moving from Creation to the Babylonian Exile. Students will critically engage the best of both biblical and archaeological scholarship. Open discussions of the religious, social, and political implications of the material covered will be an important aspect of the course.

SM 156. (COML057, JWST151, NELC456, RELS027) Great Books of Judaism. (A) Arts & Letters Sector. All Classes. Staff.
The Babylonian Talmud (Bavli), a product reflecting the collaborative effort of generations of sages, is the foundational legal and ethical document of rabbinic Judaism. Both the methods of interpreting this text—and their theoretical frameworks—have varied dramatically, evolving creatively throughout the generations. In the past century, theories of how to read the Talmud and hypotheses about its formation and redaction have opened up new avenues for understanding what the text says and, more importantly, how it works. Through in-depth examination of demonstrative legal passages, this course will contrast the insights generated by the major critical schools of the past century and with the interpretations of selected medieval scholars, the Rishonim. English translations will be provided alongside the original texts. Previous study of Talmud is helpful.

SM 158. (COML257, JWST153, NELC458, RELS223) Jewish Literature in the Middle Ages in Translation. (C) Fishman.
The course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) -- in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraim), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy. Graduate students have additional readings and meetings.

159. (CIMS159, COML282, ENGL079, JWST154) Modern Hebrew Literature and Culture in Translation. (C) Arts & Letters Sector. All Classes. Gold. There will be five film screenings; the films will also be placed on reserve at the library for those students unable to attend. The content of this course changes from year to year, and therefore, students may take it for credit more than once.

Fall 2016: In the first decade of the new millennium, the so-called "Second Generation", children of Holocaust survivors reached maturity. Only in their 40s and 50s they finally began confronting and reconstructing their parents' experiences, as well as their own nightmarish childhoods. These include striking narratives such as Our Holocaust by Ami Gutfreund and Corner People by Esty G. Hayim as well as films like Walk on Water. The third generation is also returning to the forbidden story with prize-winning films like "The Apartment." The quintessential Holocaust narrative The Diary of Anne Frank appeared in 1947, one year prior to the establishment of the Jewish State. Nevertheless, Israeli culture "waited" until the public trial of Adolf Eichmann in 1961 to hesitantly face the momentous catastrophe. The Zionist wish to forget a "New Jew" motivated this suppression, at least in part. Aharon Appelfeld's stories were the first Holocaust-related works to enter the modernist literary scene in the 1960s, followed by the cryptic verse of Dan Pagis, a fellow child survivor. It was not until 1988 that this practice of concealing the past was broken, when two Israeli-born pop singers, children of survivors, released the watershed documentary "Because of That War."

This course will follow and analyze the transformation of Israeli literature and cinema from instruments of suppression into a means of processing this national trauma. While Israeli works constitute much of the course's material, European and American film and fiction play comparative roles.

166. (NELC468, RELS114) The Religion of Ancient Egypt. (M) Silverman/Wegner.
Weekly lectures (some of which will be illustrated) and a field trip to the University Museum's Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic religious art and architecture, and the religion of daily life.

This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.

180. (COML125, ENGL103, FOLK125) Narrative Across Cultures. (C) Arts & Letters Sector. All Classes. Staff.
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at some shorter types of narrative: short story, the novella, and the fable, but also some extracts from longer works such as autobiography. While some of the works will be from the Anglo-American tradition, a large number of others will be from European and non-Western cultural traditions and from earlier time periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.

The archaeology of the complex societies of the Old and New Worlds from the end of the paleolithic up to and including the earliest civilizations.

Survey of expressions of Jewish mysticism from Hebrew Scripture through the 21st century. Topics include rabbinic concerns about mystical speculation, the ascent through the celestial chambers -heihkalot-, the Book of Creation, the relationship of Jewish philosophy and mysticism, techniques of letter permutation, schematization of the Divine Body, the prominence of gender and sexuality in kabbalistic thought, the relationship of kabbalah to the practice of the
commandments, Zohar, Lurianic kabbalah, Hasidism, New-Age Jewish spirituality and the resurgence of Jewish mysticism in the 20th century. All readings will be in English translation.

188. (HIST188) Revolutions Middle East.

201. (COML212) Modern Middle Eastern Literature in Translation. (B)
Arts & Letters Sector. All Classes. Allen/Gold.
The Middle East boasts a rich tapestry of cultures that have developed a vibrant body of modern literature that is often overlooked in media coverage of the region. While each of the modern literary traditions that will be surveyed in this introductory course—Arabic, Hebrew, Persian and Turkish—will be analyzed with an appreciation of the cultural context unique to each body of literature, this course will also attempt to bridge these diverse traditions by analyzing common themes—such as modernity, social values, the individual and national identity—as reflected in the genres of poetry, the novel and the short story. This course is in seminar format to encourage lively discussion and is team-taught by four professors whose expertise in modern Middle Eastern literature serves to create a deeper understanding and aesthetic appreciation of each literary tradition. In addition to honing students' literary analysis skills, the course will enable students to become more adept at discussing the social and political forces that are reflected in Middle Eastern literature, explore important themes and actively engage in reading new Middle Eastern works on their own in translation. All readings are in English.

233. Arabic Literary Heritage. (A)
Fakhreddine.
This course provides a survey of the genres and major figures in Arabic literary history from the 6th century up to the present day. Selections will be read in translation after a general introduction to the cultural background and a session devoted to the Qur'an and its influence, a sequence of sessions will be devoted to poetry, narratives, drama, and criticism. Each set of texts is accompanied by a collection of background readings which place the authors and works into a literary, political and societal context. This course thus attempts to place the phenomenon of "literature" into the larger context of Islamic studies by illustrating the links between Arab litterateurs and other contributors to the development of an Islamic/Arab culture on the one hand and by establishing connections between the Arabic literary tradition and that of other (and particularly Western) traditions.

SM 234. The Mongol Experience. (M) Cobb.
Was Genghis Khan really such a bad guy after all? Were the Mongol Invasions of the 13th century really a disaster? It almost seems immoral to ask questions like this, but in this class we'll go ahead and ask them anyway. This course is a survey of the history of the medieval Mongol Empire, which, at its greatest extent, stretched from Korea to Germany. We will focus more specifically on that smaller Middle Eastern piece of the empire known as the Il-Khanate, which merely stretched from Turkey to Afghanistan, and made Iran a locus for synthesizing the cultures of Iran, the Arab world, Central Asia, and China. It also produced a lasting political, economic, and cultural legacy throughout much of the Middle East and beyond.

SM 235. (HIST205, JWST205, RELS212) Food in the Islamic Middle East: History, Memory, Identity. (M) Sharkey.
In the tenth century, a scholar named Ibn Sayyar al-Warraq produced an Arabic manuscript called Kitab al-Tabikh ("The Book of Cooking"). This volume, which compiled and discussed the recipes of eighth-and ninth-century Islamic rulers (caliphs) and their courts in Iraq, represents the oldest known surviving cookbook of the Arab-Islamic world. Many more such cookbooks followed; in their day they represented an important literary genre among cultural elites. As one food historian recently noted, "there are more cookbooks in Arabic from before 1400 than in the rest of the world's languages put together". This course will take the study of Ibn Sayyar's cookbook as its starting point for examining the cultural dynamics of food. The focus will be on the Middle East across the sweep of the Islamic era, into the modern period, and until the present day, although many of the readings will consider the study of food in other places (including the contemporary United States) for comparative insights. The class will use the historical study of food and "foodways" as a lens for examining subjects that relate to a wide array of fields and interests. These subjects include politics, economics, agricultural and environmental studies, anthropology, literature, religion, and public health. With regard to the modern era, the course will pay close attention to the social consequences of food in shaping memories and identities - including religious, ethnic, national, and gender-based identities - particularly among people who have dispersed or otherwise migrated.

238. (RELS248) Introduction to Islamic Law. (A) Lowry.
This course will introduce students to classical Islamic law, the all-embracing sacred law of Islam. Among the world's various legal systems, Islamic law may be the most widely misunderstood and even misrepresented; certainly, misconceptions about it abound. Islamic law is, however, the amazing product of a rich, fascinating and diverse cultural and intellectual tradition. Most of the readings in this course will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Quran, gender and sexuality, the modern application of Islamic law, Islamic government and other selected topics.

SM 239. (ASAM239, NELC539, SAST269) Migration and the Middle East. (M) Sharkey.
This reading-and-discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions-- notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing.

This course consists of an analytical survey of civilization in the ancient Mesopotamia from prehistoric periods to the middle centuries of the first millennium B.C. A strong focus is placed on Mesopotamia (Iraq, eastern Syria) proper, but it occasionally covers its adjacent regions, including Anatolia (Turkey), north-central Syria, and the Levantine coast. As we chronologically examine the origin and development of civilization in the region, various social, political, economic, and ideological topics will be explored.
NEAR EASTERN LANGUAGES AND CIVILIZATIONS

including subsistence, cosmology, writing, trade, technology, war, private life, burial custom, and empire. Based on both archaeological and historical evidence, these topics will be examined from archaeological, anthropological, historical and art historical perspectives. Students will be exposed to a variety of theoretical approaches and types of relevant evidence, including settlement survey data, excavated architectural remains and artifacts, and written documents. The course aims to provide students with a strong foundation for further study in Near Eastern civilization.

242. (AAMW543, ANCH542, NELC542) Early Empires of the Ancient Near East: The Neo-Assyrian Empire. (M) Frame. Prerequisite(s): NELC 101 or permission of the instructor.

The Assyrians appear as destructive and impious enemies of the Israelites and Judeans in various books of the Bible and this view is reflected in Lord Byron's poem: "The Assyrian came down like the wolf on the fold, / And his cohorts were gleaming in purple and gold" (Hebrew Melodies. The Destruction of Sennacherib). In the ninth, eighth and seventh centuries BCE, Assyrian armies marched out from their homeland in northern Iraq to Iran in the East, Egypt in the West, the Persian Gulf in the south and central Turkey in the north, and they created the largest empire known up until that time. They built impressive palaces and cities, created great works of art and have left us a vast number of documents preserving ancient literature and scholarly knowledge. In the course we will look at the structure of the Assyrian state, Assyrian culture, the development of the Assyrian empire, and its sudden collapse at the end of the seventh century. While the course will emphasize the use of textual sources, archaeological and iconographic data will also be used to help us arrive at an understanding of the great achievements of the ancient Assyrians. The classes will be part lecture and part seminar.

SM 244. (NELC544) Reading Ancient Mesopotamia. (C) Tinney.

An introduction to the literature of Ancient Mesopotamia. The literature of ancient Mesopotamia flourished thousands of years ago in a culture all of its own, yet the survival of hundreds of thousands of written records challenges us to read it and make sense of it without simply approximating it to the realm of our own understanding. How can we learn to do this? Situating our understanding of how we read and how we understand culture within an interdisciplinary range of literary-critical and analytic approaches, we will approach this question by immersing ourselves in the myths tales and mentalities that made Mesopotamian literature meaningful. To give us a measure of our progress we will bracket the semester by reading Gilgamesh which is never less than a great story, but which will take on new layers of meaning as the semester develops and we learn to read the text in more and more Mesopotamian ways. As we journey through these mysterious realms we will reflect not only Mesopotamia and its immortal literature but on what it means to read and understand any cultures other than our own.

Spring 2015: The Book of Isaiah spans over two centuries and documents one of the most turbulent periods in the histories of Judah and Israel. In this course, we will read Isaiah's prophecies in the context of their historical settings and in consideration of their theological implications. We will align the biblical texts to ancient artifacts and inscriptions that were created during the time of the prophet. A close reading of the text will allow us to appreciate Isaiah's message of peace and salvation. We can then ask: how is Isaiah's message relevant for us today?

SM 251. (JWST225, NELC651, RELS225) Dead Sea Scrolls. (M) Staff.

Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to the known Jewish groups at that time (the beginning of the Common Era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocryphal" and "pseudepigrapha," biblical texts and interpretations.

Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the "open" and "closed" in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

In modern American popular culture Jewish humor is considered by Jews and non-Jews as a recognizable and distinct form of humor. Focusing upon folk-humor, in this course we will examine the history of this perception, and study different manifestations of Jewish humor as a particular case study of ethnic in general. Specific topics for analysis will be: humor in the Hebrew Bible, Jewish humor in Europe and in America, JAP and JAM jokes, Jewish tricksters and pranksters, Jewish humor in the Holocaust and Jewish humor in Israel. The term paper will be a collecting project of Jewish jokes.

258. (COML283, FOLK280, JWST260, RELS221) Jewish Folklore. (A) Ben-Amos.

The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish Folklore in a variety of oral literary forms.

266. (NELC666) History of Ancient Egypt. (A) Wegner.

Review and discussion of the principal aspects of ancient Egyptian history, 3000-500 BC.

281. (ANTH100, ANTH654, NELC681, SAST161) Topics In Anthropology and the Modern World. (B) Spooner.

This course relates anthropological models and methods to current problems in the
Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.

283. (JWST123, RELS123) Introduction to Classical Judaism. (M) Dohrmann.
This course will be a broad introduction for those with little or no knowledge of Judaism. It will be a sampling of several key themes in the religion, as well as several ways to think about both Judaism in particular and religion in general (what after all does it mean to "introduce" a religion?). We will read from several key texts in Jewish history, from Bible to Talmud, mystical and philosophical texts, and beyond. Practices and key concepts (i.e., sacred texts, law, ritual, diaspora, assimilation, Israel, interpretation...) will be studied as dynamic and changing institutions, against the background of historical change.

This seminar will examine what Jews living in Muslim lands wrote during medieval times, focusing on a range of primary sources including poetry, Bible commentary, historiography and polemics. Through these sources we will develop an understanding of the place of this community in Jewish history as well as within the medieval empire of Islam.

SM 331. (AFST331, AFST531, NELC531) Iraq, Egypt, Algeria: Case Studies from the Arab World. (M) Sharkey. Prerequisite(s): A university-level survey course in Middle Eastern or Mediterranean history.
This reading- and discussion-intensive seminar will use historical and political analyses, ethnographic studies, novels, and films to consider and compare the experiences of Iraq, Egypt, and Algeria in the modern period. Themes to be covered include the nature of local Arab and Arabic cultures; the impact and legacies of Ottoman and Western imperialism; the development of Islamist, nationalist, and feminist movements; the status of non-Arab or non-Muslim minorities (notably the Iraqi Kurds, Egyptian Copts, and Algerian Berbers); and patterns of social and economic change. The class will culminate in research projects that students individually design and pursue. This class is intended for juniors, seniors, and graduate students.

SM 332. (AFST332, AFST533, HIST370, NELC632) North Africa: History, Culture, Society. (M) Sharkey. Prerequisite(s): A university-level survey course in Middle Eastern, African, or Mediterranean history.
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.

SM 334. (AFST373, HIST412) Africa and the Middle East. (C) Troutt Powell.

SM 335. (HIST479, JWST335, NELC535, RELS311) Muslim, Christian, and Jewish Relations in the Middle East and North Africa: Historical Perspectives. (C) Sharkey.
This class is a reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal and social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also

SM 336. (NELC536) Nationalism and Communal Identity in the Middle East. (A) Sharkey. Prerequisite(s): NELC 102 or other relevant introductory courses on the Middle East.
This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are "imagined communities" built on "invented traditions." At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context. Students must take a survey of modern Middle Eastern history or politics before enrolling in this class. This class is intended for juniors, seniors, and graduate students.

351. (NELC551) History and Civilization of Ancient Israel. (M) Staff.
This course is a study of ancient Israel from its pre-nation origins through the early Second Temple period. Topics include: methodological issues for the reconstruction of Israelite history; pre-Israelite Canaan - a bridge between empires; the patriarchal and Exodus traditions; Israelite settlement of Canaan; the rise of the monarchy; the Davidic dynasty; the states of Israel and Judah in the context of the greater ancient Near East; the fall of the Israelite states - the Assyrian and Babylonian exiles - and the return from exile in the Persian period. Special issues include: the development of monotheism; the role of the prophet in Israelite society; and the formation of Biblical corpus. Archaeological evidence from the land of Israel and other Near Eastern States, especially written material, will be utilized to supplement the Biblical sources.
Christianity and Judaism are often called "Biblical religions" because they are believed to be founded upon the Bible. But the truth of the matter is that it was less the Bible itself than the particular ways in which the Bible was read and interpreted by Christians and Jews that shaped the development of these two religions and that also marked the difference between them. So, too, ancient Biblical interpretation -- Jewish and Christian-- laid the groundwork for and developed virtually all the techniques and methods that have dominated literary criticism and hermeneutics (the science of interpretation) since then.

The purpose of this course is to study some of the more important ways in which the Bible was read and interpreted by Jews and Christians before the modern period, and particularly in the first six centuries in the common era. We will make a concerted effort to view these interpretive approaches not only historically but also through the lens of contemporary critical and hermeneutical theory in order to examine their contemporary relevance to literary interpretation and the use that some modern literary theorists (e.g. Bloom, Kermode, Derrida, Todorov) have made of these ancient exegetes and their methods. All readings are in English translation, and will include selections from Philo of Alexandria, the Dead Sea Scrolls, Rabbinic midrash, the New Testament and early Church Fathers, Gnostic writings, Origen, and Augustine. No previous familiarity with Biblical scholarship is required although some familiarity with the Bible itself would be helpful.

Course explores attitudes toward monotheists of other faiths, and claims made about these "religious Others" in real and imagined encounters between Jews, Christians and Muslims from antiquity to the present. Strategies of "othering" will be analyzed through an exploration of claims about the Other's body, habits and beliefs, as found in works of scripture, law, theology, polemics, art, literature and reportage. Attention will be paid to myths about the other, inter-group violence, converts, cases of cross-cultural influence, notions of toleration, and perceptions of Others in contemporary life. Primary sources will be provided in English.

This continuing second-year course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Students will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year of previous Urdu or Hindi study or the equivalent proficiency.

This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory.

This comprehensive survey of the traditions of rational thought in classical Islamic culture is distinguished by its attempt to contextualize and localize the history of what is best described as philosophy in Islam, including not only the Islamic products of the Hellenistic mode of thought but also religious and linguistic sciences whose methodology is philosophical. Reading history as a set of local contingencies, the course examines the influence of these different disciplines upon each other, and the process of the Islamic "aspecting" of the Greek intellectual legacy. The readings thus include not only the works of Hellenized philosophers (falasifa) of Islam, but also those of theologians (mutakallimun), legists (fuqh scholars), and grammarians (nahw/lugha scholars). No prerequisites. Additional advanced-level assignments can be given for graduate credit.

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections...
from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

The Babylonian Talmud (Bavli), a product reflecting the collaborative effort of generations of sages, is the foundational legal and ethical document of rabbinic Judaism. Both the methods of interpreting this text --and their theoretical frameworks-- have varied dramatically, evolving creatively throughout the generations. In the past century, theories of how to read the Talmud and hypotheses about its formation and redaction have opened up new avenues for understanding what the text says and, more importantly, how it works. Through in-depth examination of demonstrative legal passages, this course will contrast the insights generated by the major critical schools of the past century and with the interpretations of selected medieval scholars, the Rishonim. English translations will be provided alongside the original.

SM 458. (COML257, JWST153, NELC158, RELS223) Jewish Literature in the Middle Ages in Translation. (C) Fishman.

Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) -- in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy. Graduate students have additional readings and meetings.

Spring 2015

463. (NELC061) Literary Legacy of Ancient Egypt. (M) Silverman.

This course surveys the literature of Ancient Egypt from the Old Kingdom through the Graeco-Roman period, focusing upon theme, structure, and style, as well as historical and social context. A wide range of literary genres are treated, including epics; tales, such as the "world's oldest fairy tale;" poetry, including love poems, songs, and hymns; religious texts, including the "Cannibal Hymn"; magical spells; biographies; didactic literature; drama; royal and other monumental inscriptions; and letters, including personal letters, model letters, and letters to the dead. Issues such as literacy, oral tradition, and the question poetry vs. prose are also discussed. No prior knowledge of Egyptian is required.

Detailed typological and chronological discussion of principal kinds of ancient Egyptian artifacts.

SM 466. Archaeology and History of the Middle Kingdom. (M) Wegner.

Covers principal aspects of ancient Egyptian culture (environment, urbanism, religion, technology, etc.) with special focus on archaeological data; includes study of University Museum artifacts. Follows AMES 266/466 - History of Egypt taught in the Fall semester.

Weekly lectures (some of which will be illustrated) and a field trip to the University Museum's Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic

469. The Archaeology of Nubia. (M) Wegner.

The course will examine the archaeology of Ancient Nubia from Pre-history through the Bronze and Iron Ages, ca. 5000 BCE to 300 AD. The course will focus on the various Nubian cultures of the Middle Nile, and social and cultural development, along with a detailed examination of the major archaeological sites and central issues of Nubian archaeology.

An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to fourteenth-century) Islamic world. Attention is paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primacy of writing. Suitable for students of literature, history, anthropology as well as art history.

515. (NELC115, RELS544) Persian Mystical Thought: Rumi. (M) Staff.

The Islamic Republic of Iran sought to create for its citizens a new Islamic subjectivity, and today's young people, all born after the Revolution of 1978-79, were the targets of that process. By probing the political, cultural, and artistic interests that the young people in Iran have engaged since the Revolution, we might evaluate the effectiveness of that project. To what extent has the Iranian youth conformed to or resisted the kind of citizenship that its government determined for it? Do we sense ambivalence or apathy towards that subjectivity? This course will provide students with the materials necessary to construct an ethnographic portrait of contemporary Iranian youth. Examining a wide range of sources, including films, documentaries, blogs, graffiti, photography, memoirs, music videos, and novels, we will specifically attempt to locate and explore the various languages - visual, musical, written, and spoken - that have emerged alongside these youth cultures.

SM 531. (AFST331, AFST531, NELC331) Iraq, Egypt, Algeria: Case Studies from the Arab World. (M) Sharkey.

This reading- and discussion-intensive seminar will use historical and political analyses, ethnographic studies, novels, and films to consider and compare the experiences of Iraq, Egypt, and Algeria in the modern period. Themes to be covered include the nature of local Arab and Arabic cultures; the impact and legacies of Ottoman and Western imperialism; the development of Islamist, nationalist, and feminist movements; the status of non-Arab or non-Muslim minorities (notably the Iraqi Kurds, Egyptian Copts, and Algerian Berbers); and patterns of social and economic change. The class will culminate in research projects that students individually design and pursue. This class is intended for juniors, seniors, and graduate students. required.

SM 534. (RELS545, SAST549) Topics in Islamic Religion. (M) Staff.

Selected topics, such as Sufi texts or The Qur'an, in the study of Islamic religion.

SM 535. (NELC335, RELS311) Muslim, Christian, and Jewish Relations in the Middle East and North Africa: Historical Perspectives. (M) Sharkey.

This class is a reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what
extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies useful.

SM 536. (NELC336) Nationalism and Communal Identity in the Middle East. (A) Sharkey. Prerequisite(s): NELC 102 or other relevant introductory courses on the Middle East. This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are "imagined communities" built on "invented traditions." At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context.

537. Introduction to Islamic Intellectual History: Hellenism, Arabism, and Islamism. (C) Staff. Does not require a knowledge of Arabic. A comprehensive survey of the traditions of rational thought in classical Islamic culture. The course is distinguished by its attempt to contextualize and localize the history of what is best described as philosophy in Islam, including not only the Islamic products of the Hellenistic mode of thought but also religious and linguistic sciences whose methodology is philosophical. Reading history as a set of local contingencies, the course examines the influence of these different disciplines upon each other, and the process of the Islamic "aspecting" of the Greek intellectual legacy. The readings thus include not only the works of Hellenized philosophers (falasifa) of Islam, but also those of theologians (mutakallimun), logists (fuqaha), and grammarians (nahw/lugha-writers). No prerequisites. Additional advanced-level assignments can be given for graduate credit.

542. (AAMW543, ANCH542, NELC242) Early Empires of the Ancient Near East: The Neo-Assyrian Empire. (M) Frame. Prerequisite(s): NELC 101 or permission of the instructor. The Assyrians appear as destructive and impious enemies of the Israelites and Judeans in various books of the Bible and this view is reflected in Lord Byron's poem: "The Assyrian came down like the wolf on the fold, / And his cohorts were gleaming in purple and gold." (Hebrew Melodies. The Destruction of Sennacherib.) In the ninth, eighth and seventh centuries BCE, Assyrian armies marched out from their homeland in northern Iraq to Iran in the East, Egypt in the West, the Persian Gulf in the south and central Turkey in the north, and they created the largest empire known up until that time. They built impressive palaces and cities, created great works of art and have left us a vast number of documents preserving ancient literature and scholarly knowledge. In the course we will look at the structure of the Assyrian state, Assyrian culture, the development of the Assyrian empire, and its sudden collapse at the end of the seventh century. While the course will emphasize the use of textual sources, archaeological and iconographic data will also be used to help us arrive at an understanding of the great achievements of the ancient Assyrians. The classes will be part lecture and part seminar.

SM 544. (NELC244) Reading Ancient Mesopotamia. (C) Tinney. An introduction to the literature of Ancient Mesopotamia.

551. (NELC351) History and Civilization of Ancient Israel. (M) Staff. This course is a study of ancient Israel from its pre-nation origins through the early Second Temple period. Topics include: methodological issues for the reconstruction of Israelite history; pre-Israelite Canaan - a bridge between empires; the patriarchal and Exodus traditions; Israelite settlement of Canaan; the rise of the monarchy; the Davidic dynasty; the states of Israel and Judah in the context of the greater ancient Near East; the fall of the Israelite states - the Assyrian and Babylonian exiles - and the return from exile in the Persian period. Special issues include: the development of monotheism; the role of the prophet in Israelite society; and the formation of Biblical corpus. Archaeological evidence from the land of Israel and other Near Eastern States, especially written material, will be utilized to supplement the Biblical sources.

SM 552. (NELC252, RELS129, RELS223) Themes Jewish Tradition: Jewish Esotericism. (C) Ben-Amos/Dohrmann/Fishman. Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the "open" and "closed" in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

When did the Bible become the Bible? What was the nature of canon and authority in early Israel and Judaism, and how did biblical communities think about their sacred texts? How and what did the Bible mean to ancient readers? The answers to these questions are varied and surprising. This course looks at early biblical and Jewish texts that both write and re-write the tradition's own central texts. We will think widely and creatively about ancient textuality, orality, interpretation, composition, and authority. Drawing on literary theory, the course will examine the
ways that biblical and post-biblical literature from the Second Temple to the rabbinic period (with some forays into contemporary literature) manifest complex ideas about power, meaning, and religiousity in early Judaism.

555. (NELC255) Archaeology and Society of the Holy Land. (M) Staff. This course will survey the archaeological history of the southern Levant (Israel, West Bank and Gaza, Jordan, southern Lebanon and Syria) from the early complex societies of the Chalcolithic through the demise of the biblical states of the Iron Age. It will focus in particular on the changing organization of society through time, using excavated evidence from burials, houses, temples and palaces to track changes in social heterogeneity, hierarchy and identity. In following the general themes of this course, students will have opportunity to familiarize themselves with the geographic features, major sites and important historical events of the southern Levant. Class material will be presented in illustrated and supplemented by the study

SM 556. (NELC356) Ancient Interpretation of the Bible. (M) Staff. May be repeated for credit.

Christianity and Judaism are often called "Biblical religions" because they are believed to be founded upon the Bible. But the truth of the matter is that it was less the Bible itself than the particular ways in which the Bible was read and interpreted by Christians and Jews that shaped the development of these two religions and that also marked the difference between them. So, too, ancient Biblical interpretation — Jewish and Christian — laid the groundwork for and developed virtually all the techniques and methods that have dominated literary criticism and hermeneutics (the science of interpretation) since then.

The purpose of this course is to study some of the more important ways in which the Bible was read and interpreted by Jews and Christians before the modern period, and particularly in the first six centuries in the common era. We will make a concerted effort to view these interpretive approaches not only historically but also through the lens of contemporary critical and hermeneutical theory in order to examine their contemporary relevance to literary interpretation and the use that some modern literary theorists (e.g., Bloom, Kermode, Derrida, Todorov) have made of these ancient exegetes and their methods. All readings are in English translation, and will include selections from Philo of Alexandria, the Dead Sea Scrolls, Rabbinic midrash, the New Testament and early Church Fathers, Gnostic writings, Origen, and Augustine. No previous familiarity with Biblical scholarship is required although some familiarity with the Bible itself would be helpful.

SM 557. (HEBR557, JWST553, RELS557) Seminar in Rabbinic Literature. (B) Staff. Prerequisite(s): Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll. May be repeated for credit.

Most of the foundational writings of rabbinic Judaism corpora of midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor.

SM 557. (HEBR557, JWST553, RELS557) Seminar in Rabbinic Literature. (M) Staff. Specific topics will vary from year to year.

568. (NELC168) Women in Ancient Egypt. (B)

This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Neferititi and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.

SM 569. Problems in Ancient Egyptian History. (M) Staff.

In depth analysis of specific historical issues and topics. Reading knowledge in French and German is required.

614. (NELC114) Introduction to Persian Literature. Staff.

This course, which requires no knowledge of Persian, aims to introduce students to the major trends and developments in the Persian literary tradition, which has spanned for more than a millennium. Introductory sessions will familiarize students with the history of Persian literature, especially the transition away from classical modes of representation, a tradition that was largely poetic, to modern genres and forms, including the novel, blank-verse poetry, and short stories. However, most of the course will be organized thematically rather than chronologically, and each unit will bring together literary texts from both the classical and modern traditions. Together we will examine how authors from different historical periods have utilized a limited number of motifs in order to represent and critique the dominant religious and social institutions of their time. We will conclude by considering the rapid politicization of Persian literature in the 20th century and recent efforts to control systems of representation, and especially the written word, in the Islamic Republic of Iran.

SM 617. (AAMW537, ARTH537) Art of Iran. (M) Holod.

Iranian art and architecture of the Parthian, Sassanian and Islamic periods, with particular emphasis on regional characteristics in the period. Different themes are explored each time the course is offered. In the past, these have been Ilkhanid and Timurid painting, the city of Isfahan, metropolitan and provincial architecture in the fourteenth century.

618. (NELC118) Iranian Cinema: Gender, Politics and Religion. (C) Staff.

This seminar explores Iranian culture, art, history and politics through film in the contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rakhshan Bani-Etemad, Tahmineh Milani, Jafar Panahi, Bahman Ghobadi, among others.
SM 632. (AFST332, AFST533, NELC332) North Africa: History, Culture, Society. (M) Sharkey. Prerequisite(s): A university-level survey course in Middle Eastern, African, or Mediterranean history.

This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.

SM 633. Seminar in Selected Topics in Arabic Literature. (B) Allen.

This is the graduate seminar course in which a variety of aspects of Arabic literature studies are covered at the advanced graduate level. Students in this course are expected to be able to read large amounts of literature in Arabic on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent topics have included: 1001 NIGHTS; the short story; the novel; MAQAMAT; classical ADAB prose; the drama; the novella; modern Arabic poetry.

SM 638. (LAW 737, RELS648) Approaches to Islamic Law. (M) Lowry. Prerequisite(s): Some background knowledge about Islam is an asset.

This course aims to introduce students to the study of Islamic law, the all-embracing sacred law of Islam. In this course we will attempt to consider many different facets of the historical, doctrinal, institutional and social complexity of Islamic law. In addition, the various approaches that have been taken to the study of these aspects of Islamic law will be analyzed. The focus will be mostly, though not exclusively, on classical Islamic law. Specific topics covered include the beginnings of legal thought in Islam, various areas of Islamic positive law (substantive law), public and private legal institutions, Islamic legal theory, and issues in the contemporary development and application of Islamic law.

This course consists of an analytical survey of civilization in the ancient Mesopotamia from prehistoric periods to the middle centuries of the first millennium B.C. A strong focus is placed on Mesopotamia (Iraq, eastern Syria) proper, but it occasionally covers its adjacent regions, including Anatolia (Turkey), north-central Syria, and the Levantine coast. As we chronologically examine the origin and development of civilization in the region, various social, political, economic, and ideological topics will be explored, including subsistence, cosmology, writing, trade, technology, war, private life, burial custom, and empire. Based on both archaeological and historical evidence, these topics will be examined from archaeological, anthropological, historical and art historical perspectives. Students will be exposed to a variety of theoretical approaches and types of relevant evidence, including settlement survey data, excavated architectural remains and artifacts, and written documents. The course aims to provide students with a strong foundation for further study in Near Eastern civilization.

651. (JWST225, NELC251, RELS225) Dead Sea Scrolls. (M) Staff.

Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to the known Jewish groups at that time (the beginning of the Common Era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocrypha" and "pseudepigrapha," biblical texts and interpretations.

The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism.

Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt's Ptolemaic period which culminated in the reign of Cleopatra VII.

666. (NELC266) History of Ancient Egypt. (A) Wegner.

Review and discussion of the principal aspects of ancient Egyptian history, 3000-500 BC.

This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.

681. (ANTH100, ANTH654, NELC281, SAST161) Topics In Anthropology and the Modern World. (B) Spooner.

This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.

682. (COML529, FOLK532) Proverb, Riddle & Speech Metaphor. (M) Ben-Amos.

Through readings and collaborative projects this working seminar will explore the place of metaphor in the genres of proverb and riddle and examine their position in oral communication in traditional and modern societies. Critical readings of former definitions and models of riddles and metaphors will enable students to obtain a comprehensive perspective of these genres that will synthesize functional, structural, metaphorical, and rhetoric theories.

683. (COML662, FOLK629, RELS605) Theories of Myth. (M) Ben-Amos.

Theories of myth are the center of modern and post-modern, structural and post-structural thought. Myth has served as a vehicle and a metaphor for the formulation of a broad range of modern theories. In this course we will examine the theoretical foundations of these approaches to myth.
focusing on early thinkers such as Vico, and concluding with modern twentieth century scholars in several disciplines that make myth the central idea of their studies.

SM 686. (HIST640) Topics in Mid East History.
Reading and discussion course on selected topics in Middle Eastern history.

ANCIENT NEAR EASTERN LANGUAGE COURSES (ANEL)

440. (ANEL640) First Year Akkadian I. (A) Staff.
Introduction to the grammar of the Akkadian language with emphasis on developing skills in the cuneiform writing system and reading of selected texts.

441. (ANEL641) 1st Year Akkadian II. (B) Staff. Prerequisite(s): ANEL 440, ANEL 640 or permission of the instructor.
Introduction to the grammar of the Akkadian language with emphasis on developing skills in the cuneiform writing system and reading of selected texts.

460. (AFST460) Middle Egyptian. (E) Silverman.
Introduction to the grammar of Middle Egyptian.

461. Middle Egyptian Texts: Literary. (C) Silverman. Prerequisite(s): ANEL 460.
This course will deal with those texts of the Middle Kingdom that are written in the classical form of the language. It will include both monumental inscriptions, such as autobiographical stela inscriptions (P. Newberry, BENI HASSAN) and stelae (Seth, LESESTUCKE) as well as narratives in prose (DeBuck, READING BOOK). Religious texts (ibid. and COFFIN TEXTS) will also be studied and analyzed. Distinctions between the grammar of the literary and non-literary genres will be discussed.

462. (AFST462) Middle Egyptian Texts: Non-Literary. (C) Silverman. Prerequisite(s): ANEL 460.
The course will emphasize non-literary texts dating to Middle Kingdom: letters, reports, medical and mathematical papyri, and dialogues in tombs. The material will be in large part be in the hieratic script, except for the tomb inscriptions.

540. Akkadian Literary Texts. (C) Frame. Prerequisite(s): ANEL 441/641.
Readings in Akkadian literary texts from ancient Mesopotamia.

541. Akkadian Historical Texts. (C) Frame. Prerequisite(s): ANEL 441/641.
Readings in Akkadian historical texts from ancient Mesopotamia.

542. Akkadian Letters. (C) Frame. Prerequisite(s): ANEL 441/641.
Readings in Akkadian letters from ancient Mesopotamia.

560. Late Egyptian. (C) Staff. Prerequisite(s): ANEL 460.
Introduction to the grammar of Late Egyptian.

561. Late Egyptian Texts: Literary. (C) Silverman. Prerequisite(s): ANEL 560.
This course will concentrate on the literary texts of the New Kingdom: Late Egyptian narratives such as THE DOOMED PRINCE, THE TWO BROTHERS, and HOURS AND SETH (Gardiner, LATE EGYPTIAN STORIES) and poetry; (Gardiner, CHESTER BEATTY I and Muller, LIEBESPOESIE). The grammar will be analyzed (Ermann, NEUAGYPTISCHE GRAMMATIK and Korostovtzev, GRAMMARIE DU NEO-EGYPTIEN) and compared to that used in non-literary texts (Groll, THE NEGATIVE VERBAL SYSTEM OF LATE EGYPTIAN, NON-VERBAL SENTENCE PATTERNS IN LATER EGYPTIAN, and THE LITERARY AND NON-LITERARY VERBAL SYSTEMS IN LATE EGYPTIAN).

562. Late Egyptian Texts: Non-Literary. (C) Silverman. Prerequisite(s): ANEL 560.
This course will concentrate on the translation and grammatical analysis of non-literary texts.

563. (AFST563) Old Egyptian. (C) Silverman. Prerequisite(s): ANEL 460; knowledge of German.
This course is an introduction to the language of the Egyptian Old Kingdom. The grammar of the period will be introduced during the early part of the semester, using Edell's ALTAYGYSCHIE GRAMMATIK as the basic reference. Other grammatical studies to be utilized will include works by Allen, Baer, Polotsky,Satzinger, Gilula, Doret, and Silverman. The majority of time in the course will be devoted to reading varied textual material: the unpublished inscriptions in the tomb of the Old Kingdom official Kapure--on view in the collection of the University Museum; several autobiographical inscriptions as recorded by Seth in URKUNDEN I; and a letter in hieratic (Baer, ZAS 93, 1966, 1-9).

564. Ancient Egyptian Biographical Inscription. (M) Silverman.

571. History of the Linguistics of the Near East. (M) Staff.

572. (JWST558) Northwest Semitic Epigraphy. (D) Staff. Prerequisite(s): Ability to read an unpointed Hebrew text and facility in the Hebrew Bible. This is a seminar in which we read inscriptions in the Canaanite dialects other than Hebrew (Phoenician, Moabite, Ammonite, Edomite) as well as Aramaic and Philistine texts, which were written in the 10th-6th centuries BCE, and discovered in the last 140 years by archeologists. The course is a continuation of HEBR555, but can be taken independently.

573. Ugaritic I. (A) Staff.
An introduction to the grammar of the Ugaritic language with emphasis on developing skills in reading Ugaritic texts.

574. Ugaritic II. (B) Staff. Prerequisite(s): ANEL 573 or permission of the instructor.
An introduction to the grammar of the Ugaritic language with emphasis on developing skills in reading Ugaritic texts.

575. (JWST457) Aramaic: Approaches to Talmud: Traditional and Academic. (A) Staff. Prerequisite(s): Prior experience studying the Babylonian Talmud in the original.
Course will examine several key legal passages (sugyot) in the Babylonian Talmud from both a traditional and an academic perspective. After identifying important tensions and inconsistencies in each text, we will consider the disparate solutions posed by the early medieval rabbis (Rishonim) and contemporary scholars, and compare their respective approaches. Through these in-depth readings we will highlight how modern assumptions and goals for Talmud study differ from earlier generations and how contemporary approaches allow us to uncover new structures and meanings in the text. Attention will be paid to the comprehension of Aramaic lexical and grammatical forms. Open to students with prior experience studying the Babylonian Talmud in the original.

577. Syriac I. (A) Staff.
An introduction to the grammar of Syriac with emphasis on developing skills in reading Syriac texts.
600. Old Egyptian Texts: Religious. (C) Silverman. Prerequisite(s): ANEL 563. This course will examine the texts and grammar of religious and wisdom literature. The religious texts utilized will come from the spells of the Pyramid Texts (K. Sethe, *DIE ALTAGYPTISCHEN PYRAMIDENTEXTS*), and the offering formulae carved on stelae and tomb walls. Sources for the latter will include published and unpublished material from Dendera, Giza, and other sites in the collections of the University Museum (H. Fischer, *DENDERA IN THE THIRD MILLENNIUM*, B.C., C. Fisher, *THE MINOR CEMETERIES AT GIZA* and W. Barta, *AUFBAU UND BEDEUTUNG DER ALTAGYPTISCHEN OPFERFORMEL*). For the wisdom literature, the texts of Kagemni (Jequier, *LE PAPYRUS PRISSE ET SES VARIANTES*) and Prince Hordjedef (Brunner-Traut, *ZAS* 76 (1940), 3-9 will be read.

660. Old Egyptian Texts: Secular. (C) Silverman. Prerequisite(s): ANEL 563. This course will concentrate on non-religious themes written in Old Egypt. The texts utilized will include those written in the hieratic as well as hieroglyphic script; comparisons to and distinctions between the grammar used in these texts and those in the religious material will be made. The autobiographical inscriptions in tombs from Giza, Elephantine and Saqqara, Sethe, *URKUNDEN I* will be studied in addition to contemporaneous letters (Gunn, *ASAE* 25, (1925) 242-55, Gardiner and Sethe, *LETTERS TO THE DEAD*, and P. Posener-Krieger, *HIERATIC PAPYRI IN THE BRITISH MUSEUM*) and economic documents (ibid. and *LES ARCHIVS DU TEMPLE FUNERAI*RE DE NEFERIRKARE-KAKAI).

664. (RELS516) Coptic. (M) Silverman. The course will be an introduction to the writing, grammar, and literature of Coptic.

665. Demotic. (M) Houser Wegner. The course will be an introduction to the writing, grammar, and literature of Demotic, the phase of the language in use during the latter periods of Egyptian history.

667. Readings in Demotic. (M)

740. Akkadian Religious and Scientific Texts. (C) Frame. Prerequisite(s): ANEL 441/641. Readings in Akkadian of religious and scientific texts from ancient Mesopotamia.
ARABIC LANGUAGE COURSES

031. (ARAB631) Elementary Arabic I. (A) Staff. This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students will range from 'incipient survival' to 'full' survival in the native-speaking environment.

032. (ARAB632) Elementary Arabic II. (B) Staff. This course is a continuation of ARAB 031/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.

033. (ARAB633) Intermediate Arabic III. (A) Staff. This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This is the continuation of ARAB031 and ARAB 032, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.

034. (ARAB634) Intermediate Arabic IV. (B) Staff. This course is a continuation of ARAB 033/036. This course is a continuation of ARAB 033/036. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.

035. (ARAB635) Advanced Intermediate Arabic I. (A) Staff. This is a proficiency-based course which continues from the first intermediate course, ARAB 033/036. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.

036. (ARAB636) Advanced Intermediate Arabic II. (B) Staff. This course is a continuation of ARAB 035/036. This course is a continuation of ARAB 035/036.

037. (ARAB637) Advanced Arabic and Syntax I. (A) Staff. Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them.

039. (ARAB639) Colloquial Arabic. (C) Staff. A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.
131. (ARAB431) Intensive Elementary Arabic I&II. (L) Staff.
Offered through the College of Liberal and Professional Studies Summer Session I.
This is a six-week intensive beginners' course in Modern Standard Arabic (MSA).
It will introduce the student to speaking, listening, reading, and writing skills in the standard means of communication in the Arabic world. The course is proficiency-based, implying that all activities are aimed at placing the student in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in the terminology of the government's Foreign Service Institute) survival' to 'full survival' in the native-speaking environment.

133 (ARAB530) Intensive Intermediate Arabic I&II. (L) Staff.
Offered through the College of Liberal and Professional Studies Summer Session I.
This is a six-week intensive course offered in the summer through the LPS School; see the Penn Summer Course Guide. This is the continuation of ARAB 031 or ARAB 131, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing the student in the context of the native-speaking environment from the very beginning. As in ARAB 031-032 or ARAB 131, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Arts and Sciences language requirement in Arabic. However, it should be emphasized that the student will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.

135. (ARAB630) Intensive Advanced Intermediate Arabic I&II. (L) Staff.
Offered through the College of Liberal and Professional Studies Summer Session I.
This is a six-week intensive course offered in the summer through the College of General Studies; see Penn Summer Course Guide. It continues from the first intermediate course, ARAB 033/034 or ARAB 133. Emphasis continues to be on all four language skills: speaking, listening, reading, and writing. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both achievement-based and proficiency-based. There is no Oral Proficiency Interview at the end of this session, but we anticipate that by the end of this, third year students will range in proficiency from Intermediate High to Advanced Mid on the ACTFL scale.

SM 180. Arabic in Residence. (E)

331. (ARAB531) Advanced Spoken Standard Arabic. (C) Staff.
Prerequisite(s): ARAB 036/636.
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview.

332. (ARAB532) Advanced Arabic Composition. (M) Staff. Prerequisite(s): ARAB 036/636.
Development of writing skills within a variety of subjects. Extensive readings in various prose techniques and a thorough review of Arabic grammar.

SM 333. Readings in the Qur'an and Tafsir. (M) Lowry. Prerequisite(s): ARAB 35 or permission of the instructor.
This course has two goals: to introduce undergraduate students to reading the Qur'an in Arabic, and to enhance the speaking, listening, and writing skills in MSA. Through the reading and study of selected major Qur'anic narratives and commentary (tafsir), students will become familiar with Qur'anic vocabulary, style, recitation practices, and other intricacies of the Qur'anic text. All students will also memorize a short sura of their choice and practice reciting it in an aesthetically appropriate manner (typically suras 1, 112, 113, or 114). Taught in MSA with writing assignments in MSA.

This course aims to improve reading skills and vocabulary by introducing students to extensive passages taken from a variety of Arabic literary genres from all periods. Taught in MSA with writing assignments in MSA.

SM 435. Readings in Islamsics. (M)
Lowry. Prerequisite(s): Completion of ARAB 036/636 Advanced Intermediate Arabic; or permission of the instructor.
This course provides practice in reading pre-modern classical Arabic texts drawn from a variety of intellectual disciplines, especially (but not exclusively) the religious sciences. Although the texts in this course are pre-modern, the course reinforces MSA reading skills.

SM 436. Introduction to Pre-Modern Arabic Texts. (C) Lowry. Prerequisite(s): Completion of ARAB 036/636 Advanced Intermediate Arabic; or permission of the instructor. May be taken twice for credit with instructors permission.
This course aims to provide incoming graduate students and advanced undergraduate students with an introduction to issues in Arabic grammar and syntax that commonly arise in pre-modern Arabic texts. Students will also be introduced to, and expected to consult, the standard reference works used as aids in reading such texts. Students will be expected to prepare a text or set of texts assigned by the instructor for each session. It is intended that, upon completion of this course, students will be able to work independently with a wide variety of pre-modern Arabic texts. Although the texts in this course are pre-modern, the course reinforces MSA reading skills.

531. (ARAB331) Advanced Spoken Standard Arabic. (A) Staff.
Prerequisite(s): ARAB 036/636.
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA.

532. (ARAB332) Advanced Arabic Composition. (M) Staff. Prerequisite(s): ARAB 036/636.
Development of writing skills within a variety of subjects. Extensive readings in various prose techniques and a thorough review of Arabic grammar. Taught in MSA with writing assignments in MSA.

533. Readings in Islamic Law. (M)
Lowry. Prerequisite(s): Completion of ARAB036/636 or permission of the instructor.
61. (ARAB031) Elementary Arabic I. (E) Staff. Prerequisite(s): For the second semester: completion of the first semester or permission of the instructor.
This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 002) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government's Foreign Service Institute), from 'incipient survival' to 'full' survival in the native-speaking environment.

62. (ARAB032) Elementary Arabic II. (E) Staff.
This course is a continuation of ARAB 031.

63. (ARAB033) Intermediate Arabic I. (E) Staff. Prerequisite(s): ARAB 033 or equivalent. For the second semester: completion of the first semester or permission of the instructor.
This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This course is the continuation of ARAB031 and ARAB 032, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 031-032, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.

64. (ARAB034) Intermediate Arabic II. (E) Staff.
This course is a continuation of ARAB 033/036.

65. (ARAB035) Advanced Intermediate Arabic I. Staff. Prerequisite(s): ARAB 033 or permission of instructor.
This is a proficiency-based course which continues from the first intermediate course, ARAB 033/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based. The test of speaking ability will

66. (ARAB036) Advanced Intermediate Arabic II. (E) Staff.
This course is a continuation of ARAB 035/036.

67. (ARAB037) Advanced Arabic and Syntax I. (E) Staff. Prerequisite(s): ARAB 036/036 or permission of the instructor.
Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them.

68. (ARAB039) Colloquial Arabic. (M) Staff.
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.

69. (ARAB040) Colloquial Arabic. (M) Staff.
This course aims at developing listening and speaking skills. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.

70. Topics in Islamics. (C) Staff. Prerequisite(s): ARAB 033 or permission of instructor.
The topic may vary from year to year. Topics vary from year to year in accordance with the interests and needs of students. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.

71. Topics in Islamic Studies. (C) Staff. Prerequisite(s): ARAB 036 or permission of the instructor.
This is a graduate seminar course in which different genres of premodern Arabic texts are covered at the advanced graduate level. Students in this course are expected to be able to read and prepare (vowel, parse, and translate) passages from Arabic texts on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent and potential topics include: Geographers and travel accounts; biographical dictionaries; chronicles; heresiography; poetry; memoir and sira. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.

401. (HIND400, URDU401) Beginning Hindi Part I. (E) Qureshi. This is a two-semester course offered through the Penn Language Center.
This is a systematic introduction to Urdu language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The urdu script is introduced from the beginning. The target language is presented in its total socio cultural context for achieving a meaningful and operational control of languages. Students acquire basic rules for structural and socio-cultural appropriateness. Students are expected to learn a vocabulary of about 1200 words during the semester. The final evaluation will be based on class participation, performance in quizzes and tests and completed assignments.

402. (HIND401, URDU402) Beginning Hindi-Urdu Part II. Pien.
This continuing first-year course offers beginning students an introduction to the Urdu language and its associated culture. Throughout the first year there will be a special emphasis on speaking and listening skills. The style of language introduced is one that is common to Urdu and Hindi and spoken in both India and Pakistan. Students will also learn to read and write comfortably in the Urdu script. At the end of the first year, students will have learned the skills needed to live in, travel, and engage with Urdu and Hindi speakers throughout South Asia. Students will also acquire a solid conceptual understanding of the language and a broad, functional vocabulary. The course introduces the language through a fun and interactive curriculum that incorporates hands-on activities, role plays, and authentic Urdu in Bollywood film songs.

421. (URDU421) Intermediate Urdu. (E) Qureshi. This is a two-semester course offered through the Penn Language Center.
In Intermediate Urdu, the curriculum focuses on the development of reading, listening and speaking skills. Although there are short assignments for writing in Urdu, the emphasis on developing writing as a skill is not part of the course.
objectives. Authentic texts in the three skills include conversations, short stories, current events, articles, films and plays. There is a continuous emphasis on vocabulary development and students are expected to add about five hundred new words to their active vocabulary per semester. The rules of grammar for structural accuracy and social-cultural propriety are parts of the regular curriculum. Class activities include students' short presentations, role-plays, singing and conversations. There are weekly assignments and quizzes, a midterm and a final examination. The final evaluation will rest on class participation, performance in quizzes and tests, and completed assignments. This is a two-semester course.

431. (URDU431) Advanced Urdu. (E)
Qureshi.

HEBREW LANGUAGE COURSES (HEBR)

051. (HEBR651, JWST051)
Elementary Modern Hebrew I. (C)
Staff.
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew. A grade of B- or higher is needed to proceed to HEBR 052, Elementary Modern Hebrew II.

052. (HEBR652, JWST052)
Elementary Modern Hebrew II. (C)
Staff. Prerequisite(s): HEBR 051 or permission of instructor.
A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

053. (HEBR653, JWST053)
Intermediate Modern Hebrew III. (C)
Staff. Prerequisite(s): HEBR 052 or permission of the instructor.
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

054. (HEBR654, JWST054)
Intermediate Modern Hebrew IV. (C)
Staff. Prerequisite(s): HEBR 053 or permission of instructor.
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

059. (HEBR552, JWST059) Advanced Modern Hebrew: Reading and Composition. (C) Engel. Prerequisite(s): HEBR 054 or permission of instructor.
After four semesters of language study, it's time to enter the vibrant world of contemporary Israeli culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israeli society. HEBR 054 or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).

151. (HEBR451, JWST171, JWST471)
Elementary Biblical Hebrew I. (A)
Carasik.
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.

152. (HEBR452, JWST172, JWST472)
Elementary Biblical Hebrew II. (B)
Carasik. Prerequisite(s): Successful completion of HEBR 151 or permission of the instructor.
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some modern Hebrew.

153. (HEBR453, JWST173, JWST473)
Intermediate Biblical Hebrew I. (A)
Carasik. Prerequisite(s): Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is "permitted" into that semester; you must take the previous semester course).
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.

154. (HEBR454, JWST174, JWST474)
Intermediate Biblical Hebrew II. (B)
Carasik. Prerequisite(s): Successful completion of HEBR 153.
This course is a continuation of the Fall semester's Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the Fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.

182. Study Abroad.

250. (COML228, JWST256, RELS220)
Studies in the Hebrew Bible. (B)
Staff.
This course introduces students to the methods and resources used in the modern study of the Bible. To the extent possible, these methods will be illustrated as they apply to a single book of the Hebrew Bible that will serve as the main focus of the course.
The course is designed for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading and translating Biblical Hebrew and a working knowledge of Biblical Hebrew grammar.
SM 258. (FOLK258, HEBR558, JWST258, RELS228) Studies in Medieval Jewish Literature. (C) Fishman. Prerequisite(s): Reading knowledge of Hebrew.

This course will introduce students to the modern academic study of the different genres of medieval Jewish literature--poetry, narrative, interpretation of the Bible, liturgy, historiography, philosophy, sermonic, mystical and pietistic writings. In addition to studying the primary texts, the course will also explore the historical, religious, and cultural contexts in which these texts were first produced and then studied, and the aspects of Jewish historical experience that these texts reflect. The specific topic of the course (e.g. Medieval Biblical Interpretation, Kabbalah) will vary from semester to semester. In some cases, the specific topic may also be the work of a specific author, like Maimonides. Primary sources will be read in their original Hebrew. While no previous experience in studying these texts is required, students should be able to read unpointed Hebrew texts. If there is a question as to whether the course is appropriate for you, please contact the professor.

SM 259. (COML266, HEBR559, JWST259) Introduction to Modern Hebrew Literature: 1ST ISRAELIS:AMICHAI,OZ. (A) Arts & Letters Sector. All Classes. Gold. Prerequisite(s): HEBR 059 or equivalent. The class will be conducted in Hebrew and the texts read in the original. There will be 3-4 short papers and a final exam.

Fall 2016: We will discuss literary works that reflect Israelis’ struggle with their national identity. For the patriotic 1948 generation, self and country were one and the same while contemporary writers ask what it means to be Israeli. Yehuda Amichai's 1955 poem "I want to die in my bed" was a manifesto for individualism, yet the seemingly incommensurable Arab-Israeli conflict forced writers to return to the national, social, and political arenas starting in the 1980s, although in entirely different ways. Readings include works by the contemporary Orly Kastel Bloom, Etgar Keret and Sayed Kashua as well as by the early writers Nathan Alterman, Amir Gilboa, Dahlia Ravikovitch, A.B. Yehoshua, and David Grossman. The class is conducted in Hebrew and all texts are read in the original. The amSeminar. Fulfills Arts & Letters. (HEBR 259, HEBR 559, COML 266, COLL 227)

SM 350. (HEBR550, JWST351, RELS322) A Book of the Bible. (A) Staff. Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English. The course is designed primarily for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading Biblical Hebrew, including a working knowledge of Biblical Hebrew grammar.

In-depth textual study of a book of the Hebrew Bible studied in the light of modern scholarship (including archaeology and ancient Near Eastern literature) as well as ancient and medieval commentaries. The book varies each semester and the course may be repeated for credit. Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English.

356. (HEBR656, RELS327) Talmudic Midrashic Literature. (M) Staff. Prerequisite(s): Two years of Hebrew or equivalent required.

An introduction to the reading of classical Rabbinic literature. The topic will vary ranging from Talmudic to Siddur. Readings will be in Hebrew with supplemental English works.

357. (HEBR657, JWST352, JWST552) Classical Midrash & Aaggadah. (D) Staff. Prerequisite(s): Students must be able to read an unpointed Hebrew text.

Readings in Rabbinc lore from classical Midrashic texts.

358. (HEBR658, JWST355) Siddur and Piyyut. (M) Staff. Prerequisite(s): HEBR 052 or equivalent.

A study of the institution of Jewish prayer, its literature, and synagogu poetry. Texts will be read in Hebrew with supplementary English readings.

SM 359. (CIMS359, COLL227, COML359, HEBR659, JWST359) Seminar Modern Hebrew Literature. (B) Arts & Letters Sector. All Classes. Gold. Prerequisite(s): HEBR 059 or HEBR 259 or permission of the instructor. This class is conducted in Hebrew and the texts are read in the original. The syllabus serves solely as an outline. The amount of material we cover depends on the pace of the class. Additionally, the packet contains significantly more material than will be studied in class to compensate for the difference of obtaining Hebrew texts in America. The content of this course changes from year to year and therefore students may take it for credit more than once.

The content of this course changes from year to year; and, therefore, students may take it for credit more than once.

This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4- semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.

452. (HEBR152, JWST172, JWST472) Elementary Biblical Hebrew II. (B) Carasik. Prerequisite(s): Successful completion of HEBR 451 or permission of the instructor.

A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some modern Hebrew.

453. (HEBR153, JWST173, JWST473) Intermediate Biblical Hebrew I. (A) Carasik. Prerequisite(s): Successful completion of HEBR 452 or permission of the instructor. This course is the prerequisite for HEBR 454 (no one is "permitted" into that semester; you must take the previous semester course).

This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester,
closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.

454. (HEBR154, JWST174, JWST474) Intermediate Biblical Hebrew II. (B) Carasik. Prerequisite(s): Successful completion of HEBR 453.

This course is a continuation of the Fall semester's Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the Fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.

455. Post-Baccalaureate Hebrew Texts. (M) Staff.

SM 486. (JWST426, RELS426) Rabbinic Writers on Rabbinic Culture. (M) Fishman. Prerequisite(s): Reading knowledge of Hebrew.

This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period - - Midrash, Mishna, and Talmud - - and in later juridical genres - - Talmudic commentary, codes and responsa. Attention will be paid to the mechanics of different genres, the role of the underlying prooftext, the inclusion or exclusion of variant opinions, the presence of non-legal information, attitudes toward predecessors, balance between precedent and innovation.

Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English. The course is designed primarily for undergraduates who have previously studied the Bible in Hebrew either in high school or college. It presupposes fluency in reading Biblical Hebrew, including a working knowledge of Biblical Hebrew grammar.

In-depth textual study of a book of the Hebrew Bible studied in the light of modern scholarship (including archaeology and ancient Near Eastern literature) as well as ancient and medieval commentaries. The book varies each semester and the course may be repeated for credit. Prerequisite(s): Thorough command of Biblical Hebrew and prior experience studying the Bible in the original in high school, college, or a comparable setting. Language of instruction is in English.

552. (HEBR059, JWST059) Advanced Modern Hebrew: Reading and Composition. (C) Engel. Prerequisite(s): HEBR 054 or permission of instructor.

After four semesters of language study, it's time to enter the vibrant world of contemporary Israeli culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. The content of this course changes from year to year, thus students may take it for credit more than once.

SM 583. (COML527, HIST523, JWST523, RELS523) Studies in Medieval Jewish Culture. (A) Fishman. Prerequisite(s): Unless otherwise noted, reading knowledge of Hebrew is required.

According to reigning historiography, the Jewish subcultures of Ashkenaz and Sephard developed differently because the former was the cultural heir of ancient Palestinian Jewry, while the latter was the heir of Babylonian Jewry. Yet scholarship of the last several decades has shown the inadequacy of this claim. This graduate level course will reconstruct some of the underlying problems with this claim and suggest that examination of developments in the broader Roman, Christian and Islamic societies offer alternate ways of accounting for the emergence of these Jewish subcultures in the Middle Ages. Topics to be explored include cultural-geographic patterns following the collapse of the Roman Empire; divergent approaches to Islamic law under the Abbasid and Umayyad caliphates; genres of legal composition in different parts of the Islamic world, and the status of aggadah (i.e., non-legal rabbinic tradition) in
medieval Ashkenaz and Sephardic traditions. Undergraduates may attend with the instructor's permission.

651. (HEBR051, JWST051) Elementary Modern Hebrew I. (C) Staff.
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew.

652. (HEBR052, JWST052) Elementary Modern Hebrew II. Staff. Prerequisite(s): HEBR 651 or permission of instructor.
A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

653. (HEBR053, JWST053) Intermediate Modern Hebrew III. (C) Staff. Prerequisite(s): HEBR 652 or permission of the instructor.
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

654. (HEBR054, JWST054) Intermediate Modern Hebrew IV. (C) Staff. Prerequisite(s): HEBR 653 or permission of instructor.
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

655. (HEBR356, RELS327) Talmudic Midraslic Literature. (M) Staff. Prerequisite(s): Two years of Hebrew or equivalent required.
An introduction to the reading of classical Rabbinic literature. The topic will vary ranging from Talmudic to Siddur. Readings will be in Hebrew with supplemental English works.

656. (HEBR357, JWST352, JWST552) Classical Midrash & Aggadah. (D) Staff. Prerequisite(s): Students must be able to read an unpointed Hebrew text. Readings in Rabbinic lore from classical Midrashic texts.

657. (HEBR358, JWST355, JWST655) Siddur & Piyut. Staff. Prerequisite(s): HEBR 054 or equivalent.
A study of the institution of Jewish prayer, its literature, and synagogue poetry. Texts will be read in Hebrew with supplementary English readings.

SM 659. (CIMS359, COLL227, COML359, HEBR359, JWST359) Seminar Modern Hebrew Literature. (M) Gold. Prerequisite(s): HEBR 059 or HEBR 259 or permission of the instructor. This class is conducted in Hebrew and the texts are read in the original. The syllabus serves solely as an outline. The amount of material we cover depends on the pace of the class. Additionally, the packet contains significantly more material than will be studied in class to compensate for the difficulty of obtaining Hebrew texts in America. The content of this course changes from year to year and therefore students may take it for credit more than once. The content of this course changes from year to year and therefore students may take it for credit more than once. This course is for students who are interested in taking a literature course in Hebrew and are proficient in it. Grading is based primarily on students' literary understanding. There will be four 2-page written assignments over the course of the semester. We will discuss literary works that reflect Israelis' struggle with their national identity, from the patriotic 1948 generation for whom self and country overlapped to contemporary writers who ask what it means to be Israeli. While Yehuda Amichai's 1955 poem "I want to die in my bed" was a manifesto for individualism, the seemingly interminable Arab-Israeli conflict returned writers to the national, social, and political arenas starting in the 1980's. Readings include poems by Natan Alterman, Amir Gilboa, Meir Wieseltier and Roni Somek as well as fiction by Amos Oz, David Grossman, Sayed Kashua, Alona Kimhi and Etgar Keret. Texts, discussions and papers in Hebrew. The content of This course changes from year to year so students may take it for credit more than once.

PERSIAN LANGUAGE COURSES (PERS)

This course is designed to help you start learning Persian and to give you the necessary tools to continue your study of Persian. This course introduces the Persian alphabet alongside grammar and vocabulary. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite.

012. (PERS612) Elementary Persian II. (B) Entezari.
This course is designed to help you build upon what you have learned in Elementary Persian I. Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing-as well as culture, vocabulary, grammar, and pronunciation-are integrated into the course. Students must either have successfully completed PERS-011, or take the departmental exam.

013. (PERS613) Intermediate Persian I. (A) Entezari. Prerequisite(s): PERS 012 or equivalent.
This course is designed to help you continue expanding upon what you have learned in Elementary Persian II (PERS-012). In this course, we will begin to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS-012 or take the departmental placement exam.

014. (PERS614) Intermediate Persian II. (B) Entezari.
In this course, we will continue to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is place on actively using Persian for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading,
and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS-013, or take the departmental placement exam.

015. (PERS615) Advanced Persian I. (A) Staff. Prerequisite(s): For the second semester: completion of the first semester or permission of the instructor; PERS 013 or PERS 017 or permission of the instructor.

016. (PERS616) Advanced Persian II. (B) Assefi-Shirazi. Prerequisite(s): PERS015 or permission of the instructor.

017. (PERS617) Persian for Heritage Speakers I. (C) Assefi-Shirazi. Prerequisite(s): Fluency in spoken Persian. An intensive course designed to teach the reading and writing of standard Tehran Persian to those with a speaking knowledge of that language. In recent years there has been an increasing demand from Persian-speaking Iranian-American students for formal instruction in Persian. While many of these students have some degree of spoken fluency in Persian, they are often unable to read or write it. Their speaking ability makes it difficult to integrate them into first- or second-year classes of students who have started with no knowledge of Persian. If these Persian-speaking students could be brought to at least a second-year level of reading and writing, they could then be enrolled in more advanced courses in Persian where they would be more or less at the same level as other students. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.

018. Advanced Persian in the Media. (C) Staff.

111. (PERS511, SAST405) Beginning Pashtu I. (A) Santry. Reading, writing, basic grammar and elemental speaking.

SM 112. (PERS512, SAST406) Beginning Pashtu II. (B) Santry. Prerequisite(s): For second semester, completion of the first semester. This is a two-semester course. Reading, writing, basic grammar and elemental speaking.

113. (PERS513, SAST425) Intermediate Pashtu. (A) Santry. Prerequisite(s): Beg. Pashtu, or permission by instructor. A wide variety of reading genres, writing, and oral expression.

SM 114. (PERS514, SAST426) Intermediate Pashtu Part II. (B) Santry. Offered through Penn Language Center. This is a two-semester course. Beg. Pashto, or permission of the instructor. A wide variety of reading genres, writing, and oral expression.

116. (PERS516, SAST445) Advanced Pashtu II. (B) Santry. Offered through Penn Language Center. Pashto dialects, using recordings from different regions. BBC broadcasts for listening comprehension and discussion.

511. (PERS111, SAST405) Beginning Pashtu I. (A) Santry. Offered through the Penn Language Center. Reading, writing, basic grammar and elemental speaking.

SM 512. (PERS112, SAST406) Beginning Pashtu Part II. (G) Santry. Prerequisite(s): For second semester, completion of the first semester. Offered through Penn Language Center. This is a two-semester course. Reading, writing, basic grammar and elemental speaking.

513. (PERS113, SAST431) Intermediate Pashtu I. (G) Santry. Prerequisite(s): Beg. Pashtu, or permission by instructor. Offered through the Penn Language Center. A wide variety of reading genres, writing, and oral expression.

SM 514. (PERS114, SAST426) Intermediate Pashtu Part II. (G) Santry. Offered through Penn Language Center. This is a two-semester course.

515. (PERS115, SAST432) Advanced Pashtu I. (G) Santry. Offered through the Penn Language Center.

516. (PERS116) Advanced Pashtu II. (G) Santry. Offered through Penn Language Center.

This course is designed to help you start learning Persian and to give you the necessary tools to continue your study of Persian. This course introduces the Persian alphabet alongside grammar and vocabulary. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite.

612. (PERS012) Elementary Persian II. (B) Entezari.

This course is designed to help you build upon what you have learned in Elementary Persian I. Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing-as well as culture, vocabulary, grammar, and pronunciation-are integrated into the course. Students must either have successfully completed PERS-611, or take the departmental exam.

613. (PERS013) Intermediate Persian I. (A) Entezari. Prerequisite(s): For the second semester: Completion of the first semester or permission of the instructor. This course is conducted in Persian and designed to help you continue expanding upon what you have learned in Elementary Persian II (PERS-012). In this course, we will begin to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS-612 or take the departmental placement exam.

614. (PERS014) Intermediate Persian II. (B) Entezari.

In this course, we will continue to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is place on actively using Persian for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and
pronunciation. Students must either have successfully completed PERS-613, or take the departmental placement exam.

615. (PERS015) Advanced Persian I. (A) Staff. Prerequisite(s): For the second semester: completion of the first semester or permission of the instructor; PERS 013 or PERS 017 or permission of the instructor.

616. (PERS016) Advanced Persian II. (B) Staff.

617. (PERS017) Persian Reading and Writing for Fluent Speakers. (C) Staff. Prerequisite(s): Fluency in spoken Persian.

An intensive, one-semester course designed to teach the reading and writing of standard Tehran Persian to those with a speaking knowledge of that language. In recent years there has been an increasing demand from Persian-speaking American students for formal instruction in Persian. While many of these students have some degree of spoken fluency in Persian, they are often unable to read or write it. Their speaking ability makes it difficult to integrate them into first- or second-year classes of students who have started with no knowledge of Persian. If these Persian-speaking students could be brought to at least a second-year level of reading and writing, they could then be enrolled in more advanced courses in Persian where they would be more or less at the same level as other students. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.

TURKISH LANGUAGE COURSES (TURK)

021. (TURK621) Elementary Turkish I. (A) Hatiboglu.

This is a course for beginners who have no previous knowledge of Turkish. Using a communicative approach, Elementary Turkish introduces basic vocabulary and grammar rules and focuses on building language competencies in listening, reading, speaking and writing. By the end of the course, students will be able to participate in simple conversations, to know daily expressions, and will be able to count and tell time. They will be able to speak about events that happened in the past and express plans for the future. Students will also develop writing strategies that will allow them to write simple letters and fill in commonly-used forms.

022. (TURK622) Elementary Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 021, Elementary Turkish I, or equivalent.

This course is a continuation of TURK 021 and is designed to strengthen and extend students' listening, speaking, reading and writing competence and to deepen an understanding of Turkish people in Turkey. By the end of this course, students will be able to handle a variety of day to day needs in Turkish-speaking settings and engage in simple conversations. Students can expect to be able to order food and drinks, purchase things, and to be able to be familiar with current social topics. Students will be able to talk about all tenses, present, future, past, past continuous, make comparisons, describe people and things in detail, make travel plans, make reservations in hotels and holiday resorts, write complaint letters. By the end of the course, students will be able to talk about their studies and their plans for the future. Also, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Students will learn practical life in Turkey and will explore Turkish culture on the internet.

023. (TURK623) Intermediate Turkish I. (A) Hatiboglu. Prerequisite(s): TURK 022 or equivalent.

A continuation of elementary Turkish, with emphasis on grammar and reading. This course is for students who have previous knowledge of Turkish or students who have completed Elementary Turkish I and II. This course is designed to improve students' writing and speaking competence, to increase vocabulary, to deepen grammar usage and to help develop effective reading and listening strategies in Turkish, and in order give them cultural knowledge, students are exposed to authentic materials.

024. (TURK624) Intermediate Turkish II. (B) Hatiboglu.

Expands students writing and speaking competence in Turkish, increases vocabulary, and helps students' practice effective reading and listening strategies. Our in-class discussions are based on role-plays and weekly readings and news reports from TV and newspapers. We create discussion groups and let them communicate through, threaded discussions, chat rooms and skype. The review of grammar will not be the primary focus of the course. Students will, expand and deepen their knowledge of grammar through specific grammar exercises. They will have opportunity to practice and read about the cultural and historical issues and get prepared for an advanced level Turkish.

025. (TURK625) Advanced Modern Turkish I. (A) Hatiboglu. Prerequisite(s): TURK 024, Intermediate Turkish II.

The study of modern Turkish at the advanced level; emphasis on grammar and reading, focusing on Business Turkish. Interviews with professionals from different business groups will take place, such as, education, medicine, business law and political science.

026. (TURK626) Advanced Modern Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 025, Advanced Modern Turkish I, or equivalent.

This course is designed to improve students writing and speaking levels through role plays, case studies, essays, interviews, reading articles from newspapers, analyzing books of contemporary Turkish authors such as Orhan Pamuk, Elif Safak, Ayse Kulin, Yasam Kemal and introduce students to Turkish poets such as Nazim Hikmet, Orhan Veli, Ozdemir Asaf, Murathan Mungan, Can Yuvel. During each lesson, students will be asked to interview each other on given news articles about different subjects including economy, politics, sports, art, music and daily news. These conversations will take place on student's level of Turkish knowledge.

027. (TURK627) Advanced Spoken Turkish and Cinema I. (A) Hatiboglu.

This course is for students who are from all different levels of Turkish knowledge. They are expected to write and talk about Turkish movies, culture, politics according to their own level and pace. They will talk to Turkish visitors and interview them. Turkish movies will be the part of the course and once a month, students will watch a Turkish movie and analyze it. Discussions will take place and students will write essays about the movie. This course is designed with a technology-rich, project based approach. The materials will go beyond instruction in grammar and vocabulary to support the acquisition of socio-cultural pragmatics, and intercultural learning.

028. (TURK628) Advanced Spoken Turkish and Cinema II. (B)

SM 121. (TURK521) Advanced Turkish Culture & Media I. (A) Hatiboglu.

This course is for students who are from all different levels of Turkish knowledge. They are expected to write and talk about Turkish movies, culture, politics according to their own level and pace. They will talk to Turkish visitors and interview them. Turkish movies will be the part of the course and once a month, students will watch a Turkish movie and analyze it. Discussions will take place and students will write essays about the movie. This course is designed with a technology-rich, project based approach. The materials will go beyond instruction in grammar and vocabulary to support the acquisition of socio-cultural pragmatics, and intercultural learning.

SM 122. (TURK522) Advanced Turkish Culture & Media II. (B) Hatiboglu.

Similar to TURK 212, Advanced Turkish Culture & Media I, in this course students also will have exposure to social Turkish
clubs and to establish their own. They will arrange their Turkish tea parties and learn about Turkish cuisine. Expose Turkish daily news and interview Turkish business people in Turkish. Team spirit or ethics with those of the United States. Students will present and prepare a drama. Mainly students will create and decide their activities and discussions and the instructor will just monitor them most of time. They will continue watching Turkish movies and expose to Turkish culture through these films. After each movie discussions and essay writings will be expected.

SM 229. (TURK629) Ottoman Turkish I. (M) Hatiboglu. Prerequisite(s): Two semesters of Turkish and two semesters of Arabic or Persian OR four semesters of Turkish or equivalent. This course is an introduction to Ottoman Turkish with basic characteristics. Ottoman Turkish through readings in printed selections will be exercised with different techniques. Students will learn Persian and Arabic effects on Ottoman Turkish. They will be able to read simple texts at the end of this course. General information on Ottoman Turkish will be given to students during this course. This course will be offered one semester during the school year. Not open to auditors

SM 329. (TURK729) ADV RDGS OTTOMAN TEXTS. (M)

SM 521. (TURK121) Advanced Turkish Culture & Media I. (A) Hatiboglu. This course is TURK 121 for graduate students.

SM 522. (TURK122) Advanced Turkish Culture & Media II. (B) Hatiboglu. This course is TURK 122 for graduate students.

621. (TURK021) Elementary Turkish I. (A) Hatiboglu. This course is TURK-021 for graduate students. Introduction to the spoken and written language of contemporary Turkey.

622. (TURK022) Elementary Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 621, Elementary Turkish II or equivalent. This course is TURK 022 for graduate students.

623. (TURK023) Intermediate Turkish I. (A) Hatiboglu. Prerequisite(s): TURK 622, Elementary Turkish II, or equivalent. A continuation of TURK 622, with emphasis on grammar and reading. This course is TURK 022 for graduate students.

624. (TURK024) Intermediate Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 623, Intermediate Turkish I or equivalent. This course is TURK 024 for graduate students.

625. (TURK025) Advanced Modern Turkish I. (A) Hatiboglu. Prerequisite(s): TURK 024, Intermediate Turkish II or equivalent. The study of modern Turkish at the advanced level; emphasis on grammar and reading, focusing on business Turkish. Interviews with professionals from different business groups will take place, such as, education, medicine, business, law, and political science. This course is TURK 025 for graduate students.

626. (TURK026) Advanced Modern Turkish II. (B) Hatiboglu. Prerequisite(s): TURK 625, Advanced Modern Turkish I, or equivalent. This course is TURK 026, Advanced Modern Turkish II for graduate students.

627. (TURK027) ADV SPKN TURK/CINEMA. (A)

628. (TURK028) ADV SPKN TURK/CINEMA II. (B)

SM 629. (TURK229) Ottoman Turkish I. (M) Hatiboglu. Prerequisite(s): One semester Arabic or Persian equivalent. This course is an introduction to Ottoman Turkish with basic characteristics. Ottoman Turkish through readings in printed selections will be exercised with different techniques. Students will learn Persian and Arabic effects on Ottoman Turkish. They will be able to read simple texts at the end of this course. General information on Ottoman Turkish will be given to students during this course. This course will be offered one semester during the school year.

SM 729. (TURK329) ADV RDGS OTTOMAN TEXTS.
INSTITUTE OF NEUROLOGICAL SCIENCES (MD) [NGG]

This course will provide in-depth information on neurotransmitters and their associated signaling systems. Emphasis will be placed on the wealth of new molecular information that has been gathered to examine how neurons function and communicate. Students will develop skills to appreciate, present and critically evaluate the current literature in neurotransmitter signaling and neuropharmacology.

521. (BE 521) Brain Computer Interface. Prerequisite(s): BE 301 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used in BE labs, BE 209/210/310). Some basic neuroscience background (e.g. BIOL 215, BE 305, BE 520, NGG core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.
This course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twelve weekly lectures and "hands on" weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures.

SM 534. (CAMBS34) Sem Current Genetics Research. (B)
This is an advanced seminar course emphasizing genetic research in model organisms and how it informs modern medicine. Each week a student will present background on a specific human disease. This is followed by an intense discussion by the entire class of 2 recent papers in which model organisms have been used to address the disease mechanism and/or treatment. As a final assignment, students will have the opportunity to write, edit, and publish a "News & Views" style article in the journal "Disease Models and Mechanisms".

572. Electrical Language of Cells. (A) Toshimori Hoshi, Doug Coulter.
This course introduces students to high-speed electro-chemical signaling mechanisms that occur in nerve and other excitable cells during normal activity. Topics considered in substantial detail include: a) basic description of the passive and active membrane electrical properties; b) the molecular architecture and functional role of ion channels in cell signaling; c) the role of the calcium ion as an ubiquitous chemical messenger, with applications to neurosecretion; d) excitatory and inhibitory transmission in the central nervous system; e) sensory transduction, as illustrated by the visual, olfactory, and auditory pathways. The course assumes a standard background in cell biology, as well as basic concepts from college physics and college calculus.

573. (PSYC609) Systems Neuroscience. (B) Yale Cohen, Diego Contreras.
This course provides an introduction to what is known about how neuronal circuits solve problems for the organism and to current research approaches to this question. Topics include: vision, audition, olfaction, motor systems, plasticity, and oscillations. In addition, the course aims to provide an overview of the structure of the central nervous system. A number of fundamental concepts are also discussed across topics, such as: lateral inhibition, integration, filtering, frames of reference, error signals, adaptation. The course format consists of lectures, discussions, readings of primary literature, supplemented by textbook chapters and review articles.

575. (BIOL442, PSYC421) Neurobiology of Learning and Memory. (I) Ted Abel, Isabel Muzzio.
This course focuses on the current state of our knowledge about the neurological basis of learning and memory. A combination of lectures and discussions will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective. This course is intended for upper level undergraduate and graduate students.

This course focuses on the use of genetic techniques to study the molecular and cellular bases of behavior. Particular emphasis will be given to the role of genetic approaches in understanding the neurological processes underlying learning, memory storage, circadian rhythms, and drug abuse. Reverse genetic approaches utilizing gene knockout and transgenic technology, as well as forward genetic approaches using mutagenesis and quantitative genetic techniques, will be discussed.

582. (PHRM540, PSYC605) Behavioral Neuropharmacology. (J)

SM 583. (PSYC745) Seminar FMRI Data Analysis. (C) Seminar FMRI Data Analysis.

The objectives of this course are: to discuss and evaluate mechanisms controlling sleep and circadian rhythms; to survey novel approaches to investigations in these areas; indicate the clinical relevance of these ideas where possible. About half the course consists of core lectures on basic rhythms, sleep, and their neural substrates. The rest of the lectures are devoted to special topics which change from year to year.

This course is designed to familiarize neuroscientists with basic information about a number of important neurological and psychiatric disease, focusing on a relatively brief clinical description of the condition and a more in depth discussion of what is currently understood about the basic pathobiology of the disorder. The course is divided into two parts: on Tuesday afternoons there will be a formal didactic teaching session. The first part of each lecture (1/2 hour to 1 hour) will be devoted to a discussion of the disease in question and the second part will consist of one or two student presentations (in lieu of a paper or exam) reviewing in depth one critical neuroscience component of the disease. Each student will work with the course director or an assigned faculty member to develop her/his lecture. On Thursday afternoons, a faculty member will
present a research seminar or chalk talk describing the research she or he is conducting in that particular disease. Papers will be provided before the seminar so the students will be familiar with the research. It is expected that having a research seminar given after the introductory lecture will allow the students to become familiar in depth with at least one approach to each disease.

594. (BIBB585, PHYS585, PSYC539) Theoretical and Computational Neuroscience. (B) Vijay Balasubramanian. Prerequisite(s): Previous coursework in physiology and in differential equations and some familiarity with computers, or instructor's permission. Theoretical studies of neural function from the molecular to the cognitive level. Emphasis on organization and function of neural maps, synaptic plasticity, vision, and recent neural network models of higher brain functions and on neurobiological problems that are well suited to computational study.

The goal of this course is to examine the principles underlying nervous system development and to appreciate how understanding the molecular mechanisms that govern development can be used to inform approaches to promote regeneration and repair. This is not a survey course. Rather, the course will focus on selected topics, for which we will discuss the genetic, molecular and cellular strategies employed to study these problems in different model organisms. Emphasis is on how to interpret and critically evaluate experimental data. Each class is 1.5 hours in length. During the first hour, an assigned paper will be discussed in detail. During the last 20-30 minutes, faculty will introduce methods, concepts, background and information pertinent to the paper that will be discussed at the following meeting. Topics for Spring 2014 will include: 1) Neural specification, diversification and the use of Stem Cells for neural replacement and repair, 2) Axon guidance at the midline and regeneration in spinal cord, 3) Neuronal tiling, self-avoidance and Wallerian degeneration, 4) Development of olfactory circuits and 5) Synapse formation, positioning and synaptic partner choice. There are no exams, but each student will submit two short (two page) research proposals related to the topics presented.

598. Advanced Systems Neuroscience. (I) Marc Schmidt, Long Ding. Prerequisite(s): Core III or Permission of course director.

How do we perceive the external world with different senses? How do we use our knowledge of the world to make decisions that benefit us? How do we transform these decisions into actions? How do we improve the execution of the actions themselves? Most importantly, from a neuroscience perspective, how does our brain do it? These are some of the fundamental questions in neuroscience. The Advanced Systems Neuroscience course explores these questions with two focuses: 1) what are our current best guesses? 2) what are the strategies/techniques used in systems neuroscience that have proven successful in improving our guesses? The course will follow a general sensory-decisionmaking motor theme, with lectures, presentations of research articles by students and presentations of experiment proposals by students. Lectures by faculty members will review leading hypotheses in particular topics and illustrate key experiments/results that support those hypotheses; paper presentations by students will facilitate more detailed understanding of how studies were constructed and how results were obtained and interpreted; experiment proposals by students (with faculty mentors) will serve as exercises for the students to develop critical skills in designing experiments and writing proposals.

SM 600. Topics in Neurobiology of Disease 001: Neurodegenerative Diseases.

615. (BMB 518, CAMB615) Protein Conformation Diseases. (I) Yair Argon, Harry Ischiropoulos.

Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidosis. This course will include lectures, directed readings and student presentations, to cover seminal and current papers on the cell biology of conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation.

The human nervous system is subject to several types of injury, (traumatic, ischemic, epileptic, demyelinating and/or inflammatory) that cause serious functional deficits. The mechanisms used by the central and peripheral nervous systems for functional recovery from these injuries will be described in this course. The molecular and cellular pathobiology of CNS injury will be reviewed and methods to enhance functional recovery will be discussed in detail. These include the limitation of secondary neuronal damage by pharmacological manipulations (neuroprotection), the promotion of regeneration, and plasticity, the application of bioengineering strategies, and the use of behavioral rehabilitative approaches. Course Format: a combination of lecture, journal club style student presentations and classroom discussion.

SM 695. Scientific Writing. (B) Alice Chen-Plotkin, Joshua Ian Gold.

Prerequisite(s): NGG Pre-candidacy exam students only.

This 7-class course is designed to introduce students to basic scientific writing skills and is timed for second year graduate students preparing for qualifying examinations. Participants will review the general principles of clear, persuasive writing, and will apply these principles to writing for a scientific audience. Particular emphasis will be placed on conveying the significance of your research, outlining the aims, and discussing the results for scientific papers and grant proposals. The course will also provide an overview of the structure and style of research grant proposals and scientific manuscripts. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. The goal of the course is to encourage active and open interaction among students. Ideal endpoints include improved self-editing, and development of effective strategies for offering and receiving editorial recommendations among peers.

SM 706. (BIBB473, PSYC473) Neuroeconomics. (C)

799. Independent Study. (C)

990. Master's Thesis. (M)
NURSING
(NU) {NURS}

L/R 061. Biologically-Based Chemistry. (A) Lafferty-Della Valle. Prerequisite(s): One year of high school general chemistry or its equivalent. 0.5 course units.
A contextual approach will be used in studying the concepts in General, Organic and Biological Chemistry that are foundational to an understanding of normal cellular processes. Topics that will be covered include measurements, atomic structure, bonding, chemical reactions, properties of gases and liquids, solutions, equilibrium, acids and bases, pH, buffers, nuclear chemistry, nomenclature and properties of the main organic functional groups, and the structures and function of carbohydrates, proteins and lipids.

L/R 062. Cell Biology. (A) Hayes, M.; Lafferty-Della Valle. 0.5 course units.
This course will include the major topics of cell biology and microbiology that are foundational for an understanding of normal and pathological cellular processes. Topics will include the study of prokaryotic and eukaryotic cell structures and functions, the main biological molecules, membrane transport, cellular communications, the flow of genetic information, cell division, and cellular metabolism. The context for this course will be the application of cell biology to understanding the cellular basis of human diseases and the role of genetics and genomics in health and disease processes.

L/R 063. Microbiology. (A) Johnson. Prerequisite(s): NURS 061; NURS 062. 0.5 course units.
This course will focus on the role of microorganisms in human health and infectious diseases. It will include a description of the main types of microorganisms, how they are identified, their growth requirements, the role of the immune system in controlling infections, the control of animal parasites including viruses, bacteria and fungi and host - microbe interactions.

065. Fundamentals of Nutrition. (B) Compher; Dolan; Caspar-Clark. Prerequisite(s): NURS 061; NURS 062 (or equivalent Science Sequence Courses).
Essentials of normal nutrition and their relationships to the health of individuals and families. These concepts serve as a basis for the development of an understanding of the therapeutic application of dietary principles and the nurse's role and responsibility in this facet of patient care.

SM 098. Sexual Health Promotion & Risk Reduction in West Philadelphia: A Seminar on Urban Campus/Community Norms. (B) Jemmot. Prerequisite(s): Junior or Senior academic standing. Satisfies Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
This course is a unique combination of hands-on research, teaching, and serviceto the West Philadelphia community. Students research sexual risk behaviors and risk reduction for HIV and FSTI's in the West Philadelphia community, both on and off Penn's campus, and make concrete recommendations for interventions to promote sexual health & reduce risks for infection based on their findings.
This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

L/R 101. The Nature of Nursing Practice. (A) Kutney-Lee; Brooks-Carthon; Wiltse Nicely. 0.5 course units.
This course facilitates students' ability to conceptualize the experiences of individuals, families, communities, and populations living with health and illness. It emphasizes the integration of knowledge from other disciplines and of nursing science as the basis for practice. The course introduces the four core themes of the undergraduate nursing program: engagement, inquiry, judgment, and voice and examines how the themes are used to characterize the nature of nursing practice.

L/R 102. Situating the Practice of Nursing. (B) Kutney-Lee; Brooks-Carthon; Kaufman; Brewer. Prerequisite(s): NURS 101. 0.5 course units.
This course emphasizes not only how nursing is practiced, but also where it is practiced. The course further explores the four core themes of engagement, inquiry, judgment, and voice as it provides guided observational experiences in a wide variety of settings. These experiences help the student to discover what is not known and what is subsequently necessary to know. These experiences also explore the place of the natural and social sciences and the arts and humanities in nursing practice. This course also will highlight the relationships between and among members of the interprofessional team and families and patients. NURS 102 fosters development of the professional role and sets the stage for life-long learning.

L/R 103. Psychological and Social Diversity in Health and Wellness. (A) Connolly; Lewis, L.; George. Prerequisite(s): NURS 101. Offered in Summer for Accelerated BSN Program.
This course explores and integrates the intersection of psychological, cognitive, and social development with the lived experiences of individuals, families, and communities across the lifespan in order to conduct socially contextualized health assessments and health teaching. Extant theories will be critically analyzed and examined with respect to issues of health care access, health history, health promotion, and issues of equity and diversity from a life-course perspective. This knowledge will be synthesized and integrated with the development of the student's communication skills and interviewing processes necessary to develop socially attuned health history and teaching that promote psychological well being and healthy lifestyles. Simulated and observational experiences provide students with opportunities to acquire and apply knowledge necessary for conducting a comprehensive health history of an individual situated within a diverse community. They also provide opportunities to develop prioritized health teaching plans in partnership with that individual.

An overview of the scientific foundations of nutrition. The focus is on the functions, food sources and metabolism of carbohydrate, fat, protein, vitamins and minerals. Effects of deficiency and excess are discussed and dietary recommendations for disease prevention are emphasized. Current issues and controversies are highlighted. Students will analyze their own dietary intakes and develop plans for future actions.

L/L 131. Human Anatomy and Physiology - Part A. (B) Seanga. Prerequisite(s): NURS 61 and NURS 62 (or equivalent College Level Chemistry and Biology), 4 h. lec. 2 h. lab. $100 lab fee.
The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment.
L/L 132. Human Anatomy and Physiology - Part B. (A) Scanga. Prerequisite(s): NURS 131. 4 h. lec. 2 h. lab. $100 lab fee.
The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of each organ system are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment. Basic concepts of pathophysiology are introduced and applied to certain clinical disorders.

L/R 159. PATHWAYS TO PRACTICE.

L/L 160. Physical Assessment. (L) Staff. Prerequisite(s): Matriculation in the Accelerated BSN Nursing Program. For Students in Accelerated BSN Nursing Program Only.
This is a laboratory course designed to help beginning nursing students to develop competence in the process of physical assessment. Students engage in actual practice of physical assessment with fellow students as their 'patient' subject. A blending of instructor demonstration and supervision of physical examination practice sessions is utilized in the learning laboratory setting. Students prepare via self-learning activities with a variety of supplied resources (readings, videotapes, computer programs) and have the opportunity to refine their skill through faculty-supervised practice sessions. Procedural skills that correlate with the presentations of physiologic system assessment are included.

162. Pathophysiology, Pharmacology, and Therapeutics. (A) Boullata. Prerequisite(s): NURS 215. For Students in Accelerated BSN Nursing Program Only.
Pathophysiologic concepts and processes are introduced with major emphasis on commonly occurring acute and chronic illnesses and their therapeutic interventions. Major classes of drugs that are used to support organ function are explored. The physiologic and pathophysiologic rationale for each drug indication, mechanisms of drug action, individualized dosing implications, and adverse drug events will be explored for prototypical agents used in the selected cases. The course will enhance the student's comprehension of the scientific complexity of therapeutic interventions in various conditions and will build upon the foundational sciences.

L/L 163. Integrated Anatomy, Physiology, and Physical Assessment I. (B) Scanga; Quigley. Prerequisite(s): NURS 061; NURS 062; NURS 063; (or equivalent Science Sequence Courses). 2.0 course units.
This is the first part of a two-semester course designed to provide a comprehensive study of the structure and function of the human body along with essential embryology and maturational physiology. Histological and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms that enable the human body to maintain homeostasis. Within each system, deviations from normal are considered to situate the student's understanding of health problems and to foster an appreciation for the complexity of the human organism. Integrated into each topic are the correlated physical assessment parameters and related procedural skills. Laboratories exercises and case study analysis provide a contextual base to acquire and use domain-specific knowledge of concern to the practice of nursing.

L/L 164. Integrated Human Anatomy, Physiology & Physical Assessment II. (A) Scanga; Quigley. Prerequisite(s): NURS 163. 2.0 course units.
This is the second part of a two semester course designed to provide a comprehensive study of the structure and function of the human body along with essential embryology and maturational physiology. Histological and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms that enable the human body to maintain homeostasis. Within each system, deviations from normal are considered to situate the student's understanding of health problems and to foster an appreciation for the complexity of the human organism. Integrated laboratories and case studies provide a contextual base to acquire and use domain-specific knowledge that includes physical assessment, and procedural.

L/L 165. Integrated Pathophysiology, Pharmacology, and Therapeutics. (B) Boullata. Prerequisite(s): NURS 164 (or Equivalent). 2.0 course units.
Pathophysiologic concepts and processes are introduced with major emphasis on commonly occurring acute and chronic illnesses and their therapeutic interventions. Major classes of drugs that are used to support organ function are explored. The physiologic and pathophysiologic rationale for each drug indication, mechanisms of drug action, individualized dosing implications, and adverse drug events will be explored for prototypical agents used in the selected cases. The course will enhance the student's comprehension of the scientific complexity of therapeutic interventions in various conditions and will build upon the foundational sciences.

L/L 215. Nursing of Women and Infants. (B) Guidera; O'Hare; Hill-O'Neill. Prerequisite(s): NURS 101; NURS 102; NURS 103; NURS 164 (Traditional) or NURS 106 (Accelerated).
This course emphasizes the child-bearing cycle, and the related issues of maternal and infant mortality and morbidity. It also explores women and infant's health care and health promotion needs across the lifespan. It provides a global perspective, and uses the United Nations' Pillars of Safe Motherhood and World Health Organization's Millennium Development Goals as the vehicles to enable students to understand the interrelationships among issues of health and health promotion; social, economic, political and environmental contexts; and the care of women across the lifespan. Clinical experiences provide opportunities for students to understand the connections between the local and the global; to use their developing knowledge base to affect the health of women and their infants. Students will have opportunities for hospital-based care of child-bearing women and their infants. In addition, community-based experiences with individual women and with groups of women across the life cycle will be provided in order to enhance teaching, interviewing and assessment skills.

L/L 225. Pediatric Nursing. (C) Hickerson. Prerequisite(s): NURS 215. Corequisite(s): NURS 235. Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly.
This course considers how nursing influences the health and healing capacities of infants, children, adolescents and their families. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses pediatric nursing phenomena of concern and major final common pathways of pediatric illness from infancy through
adolescence using a using a developmental and systems approach. Emphasis is placed on family-centered care through transitions in the illness and recovery phases. The course emphasizes clinical reasoning; family centered strategies for optimizing health and maintaining individuality; promoting optimal developmental, physiological, and psychological functioning; and enhancing strengths within the context of family. Clinical experiences at various children's hospitals and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration.

230. Statistics for Research and Measurement. (A) Tulman. This course examines statistical methods used by scientists in the analysis of research data. The fundamental theorem for this course is the “square root law” (central limit theorem). Students become literate in statistical terminology and symbols and knowledgeable of assumptions for statistical tests. Fundamental statistics include basic theorems and principles, sample, population and data distributions, measures of central tendency, correlational techniques, and commonly used parametric and nonparametric statistical tests. Parameters for inferential and descriptive statistics are examined as the basis for explaining the results from research studies. Students apply chance models in estimating confidence intervals of percentages and means, and in hypothesis testing. This content is taught in the context of nursing research and measurement of nursing phenomena. Examination of research publications enable students to apply their knowledge to reading and understanding data analyses used in studies. Students evaluate tables and graphs as ways to summarize research findings. Course content prepares students to examine statistical and clinical significance of research findings.

L/L 235. Psychiatric Nursing. (C) Staff. Prerequisite(s): NURS 215. Corequisite(s): NURS 225. Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly. This course examines how nursing influences the health and healing capacities of individuals and families experiencing severe psychiatric distress. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. The course addresses nursing phenomena of concern related the meanings of an illness experience, the development of healing relationships with or within individuals, families, and groups, and on the advanced communication strategies needed to engage individual and families in mental health promotion strategies. It also provides the tools to enable students to construct effective treatment groups with patients; work groups with disciplinary and inter-professional colleagues; and to understand the healing dimensions of environments. Clinical and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care and clinically situated knowledge integration.

L/L 245. Nursing of Young and Middle Aged Adults. (C) Walsh-Brennan. Prerequisite(s): NURS 215. Corequisite(s): NURS 255. Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly. This course considers how nursing influences the health and healing capacities of young and middle aged adults who experience functional status impairments as a result of serious illness or injury. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern, including risk factors for illness or injury, strategies to overcome barriers and support personal health resources, alleviate suffering and reduce the impact of illness or injury on the functioning of the person. Content and clinical experiences integrate developmental and role issues; policy, cultural and ethical considerations. Clinical experiences in acute care hospital units and simulation experiences provide opportunities for clinical reasoning, clinical care, and knowledge integration.

L/L 255. Nursing of Older Adults. (C) Matura. Prerequisite(s): NURS 215. Corequisite(s): NURS 245. Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly. This course considers how nursing influences the health and healing capacities of older adults. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern including the unique set of principles and body of knowledge and skills necessary to the practice of nursing with older adults. Students are provided with the theoretical background necessary to understand health system issues affecting older adults. Students will attain the knowledge necessary to complete a comprehensive assessment of the older adult's physical, functional, psychosocial, and cognitive capacities. Common problems associated with cardiovascular, respiratory, neurological, musculoskeletal, sensory, and genitourinary systems that affect older adults will be discussed. In addition, principles of continuity of care, rehabilitation, nutritional and pharmacodynamic changes, cultural diversity and ethics will be integrated throughout the course. Clinical experiences in acute care hospitals and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care, and knowledge integration.

Special emphasis is placed on transitional care for older adults across the health care continuum.

299. Independent Study in Nursing. (C) Prerequisite(s): Permission of instructor and NURS 106. An opportunity to develop and implement an individual plan of study under faculty guidance.

303. (GSWS303, HSOC332, NURS503) Contemporary Issues in Human Sexuality and Health. (B) Stevens. Course content emphasizes theories of sexual development and factors influencing sexual behavior within the continuum of health and illness. Common sexual practices of people are studied within the context of lifestyle and situational life crises. Concepts of normal sexual function and dysfunction are examined. Contemporary sexual issues are explored.

304. Contemporary Issues in Global Women's Health. (B) Im. Prerequisite(s): Nursing Students must have completed NURS 215. Freshmen and Sophomores need Instructor Permission. This undergraduate elective course will provide an introduction to contemporary issues in global women's health and multiple theoretical perspectives related to global women's health. This course will examine and analyze various women's health issues across the globe within historical, social, cultural, economic, political and environmental contexts. This course will have particular emphasis on intensive analyses of gender equity and cultural sensitivity issues in providing appropriate and adequate care for women across the globe.

312. Nutritional Aspects of Disease. (B) Hayes, M. Prerequisite(s): NURS 112. This course provides an advanced understanding of the role of nutrition in
integrated biological systems. Students will develop a rigorous comprehension of major clinical disorders, including the underlying pathophysiology and conditions that are affected by nutrition and how optimization of nutritional variables may modulate these processes. A critical overview of the role of nutrition in disease prevention, management and treatment, and in health maintenance will be emphasized throughout the course.

313. (NURS513) Obesity and Society. (A) Comp'er.
This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

This course is intended for students interested in U.S./Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture.

This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.

316. (NURS516) International Nutrition: Political Economy of World Hunger. (B) Chrzan. Prerequisite(s): Junior-year or higher; at least one background course in nutrition, anthropology, sociology or economics.
A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition.

SM 318. (GSWS318, HSOC341) Race, Gender, Class and the History of American Health Care. (A) Fairman. For Benjamin Franklin Scholars & Nursing Honors Students.
This multidisciplinary course surveys the history of American health care through the multiple perspectives of race, gender, and class, and grounds the discussions in contemporary health issues. It emphasizes the links between the past and present, using not only primary documents but materials from disciplines such as literature, art, sociology, and feminist studies that relate both closely and tangentially to the health professions and health care issues. Discussions will surround gender, class-based, ethnic, and racial ideas about the construction of disease, health and illness; the development of health care institutions; the interplay between religion and science; the experiences of patients and providers; and the response to disasters and epidemics.

Skills for document analysis and critique are built into the course as is the contextual foundation for understanding the history of health care. This course satisfies both the Society & Social Structures and the Histories & Traditions sectors for the Nursing Class of 2012 and beyond.

319. (NURS519) Etiology and Treatment of Contemporary Chronic Diseases in America: Focus on Obesity and Cancer. (B) Glanz; Jacobs, L.; Sarwer.
This course will focus on two of the major public health problems in the United States—obesity and cancer. These diseases will be considered from a variety of perspectives: epidemiological, environmental, physiological and behavioral. In addition, the course will focus on the range of interventions being developed to treat as well as prevent both diseases.

This course explores the impact of historical ideas, events, and actors pertaining to the history of children's health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children's health care policy and the delivery of care.

This course satisfies the History & Traditions Sector for Nursing Class of 2012 and Beyond.

330. Theoretical Foundations of Health Care Ethics. (C) Perlman; Ulrich.
The theoretical foundations of health care ethics including definitions of ethics, history of bioethics and nursing ethics, and the influence of religion, psychology of moral development and philosophy in the development of ethical theory. Nursing code of ethics, changing ideas in ethics, and discussion of the developing profession of nursing are included.

L/R 331. (NURS531) Forensic Mental Health. (A) Brown, K.; Sabella.
Forensic mental health is the interface between the law and mental health. This course examines the components of human behavior that bring people into a judicial setting. Content will cover: criminal personalities, forensic interview, and the role of forensic psychiatry. Domestic violence offenders, sex offenders, stalkers, gang members, and offenders who commit homicide will be discussed. Definitions and dynamics of criminal motherhood and the psychodynamics of violent juvenile offenders will be presented. Use of the internet by offenders will also be discussed. This course also offers a field experience in which student's interview incarcerated individuals.

As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

332. (NURS534) Forensic Science I. (B) Cronin, G.
This course discusses the interface of law and science. Forensic science is the application of scientific principles in the legal arena. This course examines the contribution of forensic science to criminal and civil investigation. Crime scene analysis is accomplished via disciplines within forensic science. The role of the medical examiner, the structure and function of crime laboratories, death investigation and the role of health care personnel in forensic cases is discussed.

As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

333. (NURS533) Victimology. (C) Cronin G.
This course examines the wide range of victimization experiences from the perspective of the victim, their families and
society. Crimes to be studied include workplace violence, corporate crime, robbery, burglary, assault, rape, stalking, domestic violence, homicide, suicide, elderly abuse and child sexual abuse and exploitation. The role of the medical examiner, health care providers and the FBI as they relate to victims of crime will be discussed. Emphasis will be given to exploring the elements of each crime and response patterns to victimizations. Services available to victims of crime will be discussed.

As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

L/R 334. (NURS540) Public Policy and the Nation's Health. (B) Sochalski.
This course examines health care and social policy from domestic and international perspectives. It is designed to engage undergraduate students in critical thinking about health policy issues as they affect our health care, employment, taxes, and social investments. The current national debate on health care reform is used as a frame of reference for examining the strengths and weaknesses of health care services in the U.S. from the perspectives of patients/families, health professionals, health services providers, insurers, employers, and public policy makers, and the pros and cons of a range of prescriptions for system improvement from across the political spectrum. About a third of the course focuses more specifically on global public health challenges and the policy strategies for reducing health disparities worldwide.

L/R 335. (ANTH335, ANTH635, NURS635) Global Food Security for Ten Billion. (B) Spooner; Compher; Muecke; Chrzan. Cross Currents Course.
This is an interdisciplinary course on the problems of food demand and consumption, production and supply in our increasingly globalized and urbanizing world. Special attention will be given to the intersections of current technologies of food production, current nutritional problems, environmental change and resource degradation, and the changing quality of human social life under globalization. Where and how will sufficient nutritious food be produced sustainably and how can the politics and economics of equitable distribution in such large urban populations be achieved?

336. (NURS336) Current Topics in Pain. (A) Polomano. Prerequisite(s): Junior or senior status in the nursing curriculum or by permission of the instructor.
This course focuses on biopsychosocial aspects of the pain experience and interpatient differences and how these form the basis for understanding pain perception, physiological and behavioral reactions and response to pain interventions. Content includes an integrated overview of the neurobiology of pain, measurement pain, pharmacological and nonpharmacological approaches for acute and chronic pain syndromes, health policy and care delivery models for improving pain assessment and management. Peripheral processing, neuroanatomical pathways and central integrating mechanisms involved in nociception and pain are examined. The roles of individual biochemical mediators, neurotransmitters and neuromodulators are examined and linked to the effectiveness of pharmacological and alternative methods for pain control. The challenges of pain assessment and pain management in special clinical populations are considered. Relevant topics of special interest to course participants will be introduced for class discussion in the form of student presentiations.

This course is an intensive and focused introduction to social gerontology as a trans-disciplinary lens through which to examine aspects of social structure, actions, and consequences in an aging society. A variety of sources are employed to introduce students from any field focused on human behavior and interaction to classical notions of social gerontology and current scholarly inquiry in gerontology. Field work in the tradition of thick description creates a mechanism to engage students in newly gerontological understandings of their life worlds and daily interactions. Weekly field work, observing aspects of age and representations of aging and being old in every day experiences forms, is juxtaposed against close critical readings of classical works in social gerontology and current research literature as well as viewings of film and readings of popular literature as the basis for student analysis. Student participation in the seminar demands careful scrutiny and critical synthesis of disparate intellectual, cultural, and social perspectives using readings and field work and creation of oral and written arguments that extend understandings of the issues at hand in new and substantive ways. Emphasis is placed on analysis of field work and literature through a series of media reports and a final term paper. Creative approaches to identifying literature, analyzing field work and representing critique are encouraged. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

This honors course examines the psychological gerontology of advancing age and identity in the 21st century. Examination emphasizes gendered notions of beauty and sexuality in ageing and the life span to foster discourse around historical notions and images of beauty and ugliness in late life in contrast to contemporary messages of attractiveness and age represented by both women and men. The course is designed to create intellectual foundations as place from which to critique socially mediated and personally conveyed images and messages from a variety of media and their influence on intrapersonal and interpersonal constructions and social processes. Contemporary and historical ideas encompassing stereotypical and idealized views of the older person are employed to reflect dialogue around readings and field work.

Classical and contemporary scholarship from gerontology, anthropology, biomedicine and surgery, nursing, and marketing among other disciplines as well as select lay literature are critiqued and compared with interpretation of field work to build understandings of diverse individual, familial, and cultural impressions of aging and identity. Skills for participant observer field work in the tradition of thick description are built to allow reflection and analysis of discourse about aging, beauty, sexuality, and other relevant aspects of human identity. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

consideration of how to achieve partnership and create alliances with parents and youngsters.

359. Case Study: Quality Care Challenges in an Evolving Health Care Market. (B) Pinola; Sparrow. Prerequisite(s): NURS 104, 106. Quality care is an issue for consumers, providers, purchasers, and policy makers. This case study examines the multiple challenges that surround the quality of health care in the evolving United States health care marketplace. Through classroom discussion and special project experience, the student will become familiar with the concept of health care quality and approaches to the measurement and management of quality. Using Donabedian's construct of structure, process and outcomes, strategies to improve quality while containing or reducing costs are reviewed, including the contributions of clinical practice guidelines. The evolving dominant structures for providing health care services, managed care and integrated delivery systems, and their approaches to quality management and reporting will be explored.

360. Case Study: Nursing Practice with HIV+ Patients. (A) Vincent. Prerequisite(s): NURS 104, 106. This course is directed at the need to improve quality while containing or reducing costs are reviewed, including the contributions of clinical practice guidelines. The evolving dominant structures for providing health care services, managed care and integrated delivery systems, and their approaches to quality management and reporting will be explored.

361. Case Study: Breast Feeding & Human Lactation. (A) Spatz. Prerequisite(s): NURS 104, 106. Human milk is recognized universally as the optimal diet for newborn infants. The health benefits of breastfeeding are so significant that a National Health Objective set forth by the Surgeon General of the United States for the year 2010 is to increase the proportion of mothers who breastfeed their babies in the postpartum period. Through classroom and clinical experiences, this course will provide an in depth examination of the anatomy and physiology of lactation, essential aspects of establishing and maintaining lactation, and the nurses' role in counseling the breastfeeding family. Emphasis will be placed on current research findings in the content area.

362. Case Study: Aggressive Behavior in Healthcare: Assessment Prevention and Treatment. (B) Coleman. Prerequisite(s): NURS 104, 106. The escalating incidence and prevalence of aggression in the health care setting requires that providers acquire a new set of pragmatic competencies for managing its complex sequelae. This course presents theoretical frameworks for understanding, predicting, preventing and responding to aggressive behaviors across the life span. Historical, bio-behavioral, social, and cultural explanations for aggression will be synthesized and analyzed within the context of multiple points of entry into the health care system across clinical settings. Personal self-awareness, debriefing, and stress management techniques exemplify techniques to prevent untoward consequences in providers. This course also uses exemplars and a range of experiential learning strategies, including skill development, situation analysis, concept mapping, unfolding case studies and cooperative learning, to examine the assessment, prevention, treatment, and response to aggressive behavior in patients and management of its consequences in self and others.

364. Case Study: Cancer. (B) Hollis. Prerequisite(s): NURS 104, 106. This elective case study offers students the opportunity to learn about the etiology, diagnosis, and management of cancer across the lifespan. Building on existing clinical knowledge and skills, students will explore cancer care from the perspectives of prevention, early detection, treatment, survivorship, and death. Observational clinical experiences and selected case studies will enhance students' understanding of patients' and families' cancer experience.

365. Case Study: Case Analysis in Clinical Nutrition. (B) Dolan. Prerequisite(s): NURS 104, 106. This course is designed for present and future nurse professionals who wish to increase their knowledge of nutrition and expertise and application of knowledge to achieve optimal health of clients and themselves. Principles of medical nutrition therapy in health care delivery are emphasized in periods of physiologic stress and metabolic alterations. Individual nutrient requirements are considered from pathophysiologic and iatrogenic influences on nutritional status. Nutritional considerations for disease states will be explored through epidemiological, prevalence, incidence, treatment and research data. Understanding application
of medical nutrition therapy are included through case analysis and field experiences

366. (NURS566) Case Study: Living with Dementia. (M) Strumpf; Kagan; Cotter. Prerequisite(s): NURS 104, 106 or Permission from Instructor.

Living with Dementia provides a two fold experience: guided observation of an individual with dementia and a seminar series on dementia - neuropsychology, assessment, care and treatment. Students will interact with a person with AD and his/her caregiver. The goal is to understand the demented individual's functional abilities and impact of environment on performance and behavior. A further goal is to develop an appreciation of the primary caregiver's role and the strengths and limitations of community support systems. Each team of two to three will be assigned a family unit for study. In so far as possible, teams will be interdisciplinary.

367. (NURS557) Case Study: Principles of Palliative Care. (A) Ersek. Prerequisite(s): NURS 104, NURS 106.

This course prepares students to collaborate effectively with an interdisciplinary team in assessing patients and families, and planning and evaluating palliative and end of life care for diverse populations with progressive illness in multiple health care settings. Course content and assignments focus on the nurse's role in addressing the complex assessment and responses to the psychosocial and spiritual concerns of patients and caregivers across the trajectory of advanced illness.

368. (NURS550) Case Study: Home Health Care. (A) Doyle. Prerequisite(s): NURS 104, NURS 106.

This course examines the major aspects of home-based care across patients' life spans from acute to long term care. New trends, advances, and issues in home management of complex conditions, innovative delivery systems and legal, ethical and policy consideration will be explored.

375. Nutrition Throughout The Life Cycle. (I) Berman-Levine. Prerequisite(s): NURS 54, or NURS 112, comparable nutrition course, or approved introductory course.

Understanding and meeting nutritional needs from conception through adulthood will be addressed. Nutrition-related concerns at each stage of the lifecycle, including impact of lifestyle, education, economics and food behavior will be explored.

376. Issues in Nutrition, Exercise, and Fitness. (B) Compfer; Dougherty.

An examination of the scientific basis for the relationship between nutrition, exercise and fitness. The principles of exercise science and their interaction with nutrition are explored in depth. The physiological and biochemical effects of training are examined in relation to sports performance and prevention of the chronic diseases prevalent in developed countries.

L/L 380. Nursing in the Community. (A) Staff. Prerequisite(s): NURS 225; NURS 235; NURS 245; NURS 255. Clinical 16 hours Weekly and 2 hours Simulated Laboratory Weekly Also Offered Summer Session (12 Weeks).

This course considers how nursing influences the health and healing capacities of both communities as a whole (populations) and of groups, families, and individuals living within particular communities locally and globally. It addresses the complexity of nursing practice using a public health paradigm. It requires students to draw from prior class and clinical knowledge and skills and apply this practice base to communities across care settings, ages, and cultures with different experiences of equity and access to care. It provides the tools needed to engage in collaborative community work and to give voice to the community's strengths, needs, and goals. It also moves students from an individual and family focus to a population focus for health assessment and intervention. Students consider the science, policies, and resources that support public health, and community based and community-oriented care. Clinical and simulated experiences in community settings provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration in community settings. Students will have opportunities to care for patients and populations within selected communities.

SM 386. Nursing Honors Research Project. (M) Kagan; McCauley, K. Prerequisite(s): NURS 260 or NURS 637, NURS 385H. Enrollment in Nursing Undergraduate Honors Program Required.

This course is an advanced seminar for individual student's honors project. The residency offers students opportunities to experience at any level systematic methods for research, or service-based clinical inquiry or quality improvement. This mentored residency can be fulfilled by one of the following options: 

* Research-based practicum in basic science, clinical research, nursing history, healthcare policy, ethics, or informatics. 
* Inquiry-based Service practicum such as conducting quality improvement procedures or program evaluations in an affiliated healthcare institution. 
* Taking one of the University's Academically Based Community Service (ABCS) courses with prior approval by the Steering Committee. 
* Individualized study abroad experience with prior approval by the Steering Committee.

SM 390. Leadership in the Complex Healthcare System. (C) Staff. Prerequisite(s): NURS 380. Clinical 16 hours Weekly and 2 hours Simulated Laboratory Weekly.

This two-part course provides the didactic and clinical experiences in increasingly complex nursing care situations and environments which facilitate the students' transition to independent practice. In the lecture component, the focus is on the integration of knowledge and skill for nursing practice and develops the ability of students to see nursing practice as part of a
complex system. It examines systems thinking and complexity, development of a leadership role and skills, inter-professional communication and teamwork, and leading change in healthcare organizations. This course also examines the nurse's role in improvement science and patient care delivery, focusing on quality improvement processes, patient safety, nurse sensitive process and outcome metrics with micro-systems. This course also allows students to develop the capacity for clinical expertise, leadership, and for translating the science of the profession into practice. Students also are assigned to a seminar component that is correlated with their selected site for the specialty clinical practicum. This aspect of the course allows the student to develop additional expertise in a specialty area of practice and to develop competences specific to that population of patients.

These seminar components are adult health and illness; adult critical care, obstetrics/labor & delivery, psychiatric/mental health, and pediatrics. Advanced simulation experiences and extensive clinical practice in an area of the students' choice provide multiple opportunities to synthesize the multidimensional aspects of nursing, and provide the environment which facilitates transition to professional nursing practice. Students select from a variety of settings in which to refine their practice skills. Principles of leadership, accountability and change will be applied to clinical practice as the student begins to operationalize the professional nursing role. Emphasis is placed on the nurse as a knowledgeable provider of health care who is both a change agent and advocate.

399. Faculty Directed Research Practicum. (C) Prerequisite(s): Permission of instructor and completion of a research course (NURS 260 or NURS 637).

SM 400. Advances In Health Systems Research And Analysis. (K) Sochalski; McHugh, M. By Permission Only. Capstone Course for NURS/WH Joint Degree Students.

500. (PUBH502) Introduction to Principles and Methods of Epidemiology. (B) Schmitz. Prerequisite(s): Elementary statistics. This course provides an introduction to epidemiologic methods and overview of the role of epidemiology in studies of disease etiology and in the planning, delivery and evaluation of health services. The population-based approach to the collection and analysis of health data will be emphasized throughout the course. Through textbook reading, problems sets, class discussion and review of the recent literature, students will become acquainted with the basic designs of epidemiologic studies in theory and in practice. Students will develop the basic skills necessary to use epidemiologic knowledge and methods as the basis for scientific public health practice.

503. (GSWS303, HSOC332, NURS303) Contemporary Issues in Human Sexuality and Health. (B) Guidera; Villari. Junior and Senior undergraduates. Open to all graduate students. Emphasizes the theories of sexual development and sexual behavior within the continuum of health and disease. Common sexual practices of people are studied in relation to life-style and/or situational life crisis. Contemporary issues in sexuality and health will be examined.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

509. The Medically Fragile Child. (L) Deatrick. Summer Session II. This course is designed to assist prospective practitioners develop advanced skills in identifying the needs and interventions for medically fragile neonates, children and their families.

511. Loss, Grief and Bereavement. (L) Sabella. Summer Session II. Loss, grief and bereavement are pervasive aspects of the human experience. The content of this course provides a basis both for personal development and professional growth. Through a series of seminars, key issues surrounding loss, death, dying, grief and bereavement will be examined.

513. (NURS313) Obesity and Society. (A) Compher. Prerequisite(s): Undergraduates by permission of instructor. This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

515. (NURS315) Sociocultural Influences on Health. (B) Wall. This course is intended for students interested in U.S/Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture.

This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.

516. (NURS316) International Nutrition: Political Economy of World Hunger. (B) Chrzan. Graduate Students Only. A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

517. Advanced Nutrition and Metabolism. (B) Compher. Prerequisite(s): NURS 54 or NURS 112 (Students with extensive background in life sciences by permission of faculty). Essentials of nutritional biochemistry from the molecular level to the level of the whole human organism. Nutrient functions and inter-relationships are explored with attention to the association between nutrients and disease risk. Topics include energy metabolism and regulation of fat storage, new functions of vitamins and minerals, gene nutrient interactions and current research topics.

518. (GSWS518) Nursing and the Gendering of Health Care in the United States and Internationally, 1860-2000. (B) Wall. This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and
patients; changing role expectations and realities for nurses; changing midwifery practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.

519. (NURS319) Etiology and Treatment of Contemporary Chronic Diseases in America: Focus on Obesity and Cancer. (A) Glanz; Jacobs, L.; Sarwer.
This course will focus on two of the major public health problems in the United States—obesity and cancer. These diseases will be considered from a variety of perspectives: epidemiological, environmental, physiological and behavioral. In addition, the course will focus on the range of interventions being developed to treat as well as prevent both diseases.

The objective of the course is to integrate the nutrition knowledge obtained from previous course work in nutrition and provide the student the opportunity to explore, analyze and formulate implications of the research and related literature on a self-selected topic under the guidance of the faculty coordinator. Current topics and controversies in nutrition will be discussed weekly. Readings will be assigned in coordination with each discussion topic and students will be required to seek out other sources of information to add to the class discussion. Topics will change from year to year to reflect the most recent interests and issues.

523. Advanced Nutrition: Molecular Basis of Nutrition. Prerequisite(s): NURS 065 or 112. Essentials of nutritional biochemistry of macronutrient (protein, carbohydrate, lipid) metabolism from the molecular level to the level of the whole human organism. Linkages between energy and nitrogen balance and states of health and disease are examined. Topics include energy metabolic pathways, nutrient transportation, nutrient catabolism, nutrient anabolism, body composition, and biomarkers.

524. Advanced Human Nutrition and Micronutrient Metabolism. Prerequisite(s): NURS 605 or NURS 112 or Special Permission. Essentials of vitamin and mineral digestion, absorption, metabolism, and function in humans during states of health and disease are examined. Linkages between key vitamins and their function in biological systems, such as bone health, energy metabolism, hematopoetic function, and immune function, are explored in depth. Topics include pertinent research methodologies, biomarkers, deficiency and toxicity states, and requirements across the life cycle.

525. Ethical Aspects of Health and Technology. (B) Ulrich.
Interdisciplinary approach to the study of the interface between ethics and law in the provision of health and illness care. This course draws upon the disciplines of philosophy, law, biomedical engineering and nursing in examining such concepts as the use/nonuse of biomedical technology, who and how one decides what shall be done for a given "patient," and the "rights" and responsibilities (accountability) of all persons involved in health/illness care decisions. The interplay of ethical theory, personal value systems, law and technology will be stressed throughout. Lectures, seminars and case studies will be used.
This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

526. Child and Adolescent Mental Health. (A) Brawner. Prerequisite(s): Matriculation in a MSN Program or permission of instructors. Priority will be given to Psychiatric Mental Health NP students.
This course is designed to prepare advanced practice registered nurses to address mental health concerns of children, adolescents and their families from a biopsychosocio-cultural perspective. Prevention, assessment, and treatment of psychiatric disorders affecting children and adolescents in a variety of settings will be presented in the context of mental health, school and primary health care delivery systems. Students will explore both pharmacologic and nonpharmacologic treatment strategies, as well as methods to identify and implement evidence-based practice in child and adolescent populations. Mental health policy, as well as the unique needs of special populations (e.g., youth in the juvenile justice system) will also be discussed.

L/R 531. (NURS331) Forensic Mental Health. (A) Brown, K.
Forensic mental health is the interface between the law and mental health. This course examines the components of human behavior that bring people into a judicial setting. Content will cover: criminal personalities, forensic interview, and the role of forensic psychiatry. Domestic violence offenders, sex offenders, stalkers, gang members, and offenders who commit homicide will be discussed. Definitions and dynamics of criminal motherhood and the psychodynamics of violent juvenile offenders will be presented. Use of the internet by offenders will also be discussed. This course also offers a field experience in which student's interview incarcerated individuals.
As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

Cognitive therapy will be studied as it has been adapted to treat a broad spectrum of clinical disorders including depression, anxiety, phobias, substance, obesity, marital problems, sexual dysfunction, and psychosomatic disorders. Students will have an opportunity to study and observe the crucial link between thoughts and emotions and the sense of competency patients can develop through self-help techniques. The course utilizes didactic, experiential and observational techniques.

533. (NURS333) Victimology. (C) Cronin, G. Offered Fall, Spring & Summer I.
This course examines the wide range of victimization experiences from the perspective of the victim, their families and society. Crimes to be studied include workplace violence, corporate crime, robbery, burglary, assault, rape, stalking, domestic violence, homicide, suicide, elderly abuse and child sexual abuse and exploitation. The role of the medical examiner, health care providers and the FBI as they relate to victims of crime will be discussed. Emphasis will be given to exploring the elements of each crime and response patterns to victimizations. Services available to victims of crime will be discussed.
As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

534. (NURS332) Forensic Science I. (B) Cronin, G.
This course discusses the interface of law and science. Forensic science is
he application of scientific principles in the legal arena. This course examines the contribution of forensic science to criminal and civil investigation. Crime scene analysis is accomplished via disciplines within forensic science. The role of medical examiner, the structure and function of crime laboratories, death investigation and the role of health care personnel in forensic cases is discussed.

As of Spring 2016, students in the College of Arts and Sciences are not permitted to enroll in this course.

535. Comparing Health Care Systems in an Intercultural Context: Study Abroad. (B) Kagan; Stringer; Muecke. Prerequisite(s): Permission of instructor. Seminar held in Spring, study abroad field experience held intra-session. 

This course offers students an opportunity to: 1) expand their knowledge base in health care systems; 2) develop intercultural competency skills and 3) shape a conceptual framework for improving the quality of health care for the individual, the family, the community and society at large. Emphasizes the relational, contextual nature of health care and the inseparability of the notions of the health of individuals and the health of family, society, and culture. Includes field experience.

L/R 540. (NURS334) Current Issues In Health and Social Policy. (L) Sochalski; McHugh, M.

Analysis of key contemporary issues in health and social policy that will provide students with a deeper understanding of the design and structure of the U.S. health care system, the policy initiatives that have shaped it, and the roles of the government, the private sector, and consumers and advocacy groups in setting the policy agenda. Seminars will examine the origins of each issue, the policies enacted and their effects, both intended and unintended, and will propose and debate the merits of alternative policy solutions. The role of health services and policy research in informing the policy debate and directions will be highlighted.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

544. (NURS344) Etiology and Treatment of Contemporary Chronic Diseases in America: Focus on Obesity and Cancer. (B) Glanz; Sarwer; Jacobs, L.

This course will focus on two of the major public health problems in the United States - obesity and cancer. These diseases will be considered from a variety of perspectives: epidemiological, environmental, physiological and behavioral. In addition, the course will focus on the range of interventions being developed to treat as well as prevent both diseases.

545. Maternal and Infant Care in the Americas. (B) Guidera; Durain. Registration By Permission of Instructor.

This clinical elective will provide an intensive historical, sociopolitical, and cultural perspective of health and health care delivery in the Americas with a special emphasis on Latin America and the Caribbean. Classroom, direct clinical care and field experiences are designed to provide students with a broad view of the history and culture system of the country of focus. The delivery of health care to women and children will be explored from a sociopolitical, cultural and historical context. Service learning experiences are an integral component of this course. The course includes 5 seminars on campus and 10-14 days on site in the country of focus. The country of focus may vary each semester.

547. Scientific Inquiry for Evidence-based Practice. (C) Spatz; Kutney-Lee; Polomano. Prerequisite(s): NURS 230.

This course is designed to advance students' understanding of the research process, methods of scientific inquiry, and analytical techniques. Students acquire knowledge of systematic approaches used by scientists to design and conduct studies. Course content prepares students to appraise quantitative and qualitative research, and evaluate the scientific merit and clinical significance of research for translation into practice. Evidence-based guidelines are examined and rated for strength of evidence and expert consensus using evidence grading systems and defined criteria. Students engage in variety of creative learning experiences to facilitate appreciative inquiry, clinical reasoning, and evidence-based practice. Quality improvement, comparative effectiveness analyses, information science, and electronic health systems technology demonstrate the capacity for measurement and surveillance of nursing-sensitive and other outcomes used to evaluate quality nursing care and test interventions. Ethical, legal and health policy implications for research are explored. This course serves as the basis for scientific inquiry about human experiences to address important problems that require solutions and to expand the research and the evidence base for professional nursing practice.

548. Negotiations in Healthcare. (A) Burke, K.; Prerequisite(s): Undergraduates must have permission of instructor.

This course examines the process that leads to change in health care settings and situations. Students will develop skills that lead to effective negotiations in interpersonal and organizational settings. Included in the discussion are: concepts of organizational structure and power, negotiating in difficult situations, and the role of the health care professional in negotiation and change. The course also examines techniques leading to successful implementation of negotiated change in the practice setting.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

This course examines the major aspects of home-based care across patients' life spans from acute to long term care. New trends, advances, and issues in home management of complex conditions, innovative delivery systems and legal, ethical and policy consideration will be explored.

551. Applied Health Informatics. (H) Bowles. Prerequisite(s): Experience in using the Internet to retrieve information. Basic knowledge of Microsoft Access is expected.

Catalogue Description: This course is designed to address issues related to the impact of information technology on health care practitioners and consumers of all ages. Students will learn about and gain experience with practical applications of information technology (Access, handheld devices, telehealth, Internet resources) that improve the quality of health care communication and delivery and facilitate health care research. Class projects include working with clinical databases and evidence based information sources.

552. Health Care and Social Policy. (A) Aiken.

This course is an area study or survey of social policy issues in contemporary health care. Topics include social contexts of health care and health policy; the organization and financing of health services; the health professions; health and illness over the life cycle; achieving equitable access to health services; the interface between health and social services. Health problems of national significance will be addressed including infant mortality, teenage pregnancy, AIDS,
the chronically mentally ill and homeless, health impaired elderly.

553. INNOV & APPLD TECH II. (B)

555. (GSWS555) Women and Incarceration. (A)

This elective course will afford students the opportunity to develop and implement health education workshops for incarcerated women in the Philadelphia jail system. Students will explore the social and historical framework and trends in the incarceration of women, as well as the needs of this population, and will identify specific areas that need to be addressed by particular disciplines or professions. Students will have direct contact with the jail system, its staff, and female inmates.

557. (NURS567) Principles of Palliative Care. (A) Ersek.

Prerequisite(s): Undergraduate Students Need Permission. For Graduate Students and Junior and Senior Undergraduate Nursing Students (with Course Faculty Permission).

This course examines national and global perspectives and clinical issues in the delivery of palliative care with diverse populations in multiple health care settings. Students focus on the care of persons with life-threatening, progressive illness, emphasizing respect for patients' and families' beliefs, values, and choices. Students also explore psychosocial and spiritual dimensions of palliative care. Historical, sociocultural, economic, legal, and ethical trends in palliative care are discussed. Factors affecting health care systems and societal attitudes are considered in evaluating the delivery of care during advanced illness and at the end of life. Students engage in the critical analysis of literature, research, and observational experiences concerning biopsychosocial needs of patients and families. Students acquire competencies in patient/family assessment, communication, decision-making, and interdisciplinary collaboration in palliative care.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

This course will examine the use of complementary and alternative medicine (CAM) in health promotion and disease prevention, as well as in acute and chronic health conditions, through evidence-based research and practice. Implications of CAM on culture, health disparities, society, economics, safety, legal, ethical, and health policy issues will be explored and discussed.

566. (NURS566) Living with Dementia. (M) Strumpf; Cotter.

Living with Dementia provides a two fold experience: guided observation of an individual with dementia and a seminar series on dementia - neuropsychology, assessment, care and treatment. Students will interact with a person with AD and his/her caregiver. The goal is to understand the demented individual's functional abilities and impact of environment on performance and behavior. A further goal is to develop an appreciation of the primary caregiver's role and the strengths and limitations of community support systems. Each team of two to three will be assigned a family unit for study. In so far as possible, teams will be interdisciplinary.

567. An Evidence-based Approach to Managing Symptoms in Advanced Illness. (B) Meghani; Ersek.

Prerequisite(s): Junior and Senior undergraduate students may be admitted with course faculty permission.

This course uses an evidence-based approach towards systematic assessment and management of common symptoms and symptom clusters accompanying progressive, life-limiting illnesses within a framework of nationally recognized standards and guidelines for palliative and end-of-life care. Students are prepared to apply principles of palliative management to diverse patient populations across clinical settings including acute, primary, long-term, and community care. Refer to course syllabus or email course faculty for respective requirements.

570. (PUBH500) Introduction to Public Health. (A) Buttenheim; Nguyen.

Prerequisite(s): Undergrads Need Permission.

This course will provide a foundational overview of the field of public health and grounding in the public health paradigm. Content will include the history of public health, an introduction to the basic public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental public health, policy and management and prevention of chronic and infectious diseases and injuries, future directions for public health and an introduction to issues in international health, ethics, context analysis (specifically the notion of urban health), health promotion and disease prevention paradigms.
development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods.

588. (GSWS588) The Politics of Women's Health Care. (B) McCool; Durain; Lewis, L.
This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

600. Principles and Practice of Transformative Nursing Education. (A) McHugh; Keim; Klenke-Borgmann. Prerequisite(s): Baccalaureate in Nursing plus a Master's Degree in Nursing or in a Health Related Area. Current Master or Doctoral Students with permission of the Program Director and the Course Director.
This course is designed to provide expert advanced practice nurses and midwives, currently holding faculty positions, with a theoretical and practice base to promote excellence in classroom teaching. The focus of the course is theories and principles of teaching and learning related to adult learning. Personal and educational philosophies and their relationship to the learner are explored. Basic components of curriculum development are integral to the course. A designated mentor teacher at the home university with a Masters or Doctorate degree, nominated by the student and approved by the Course Director, works in partnership with the student and Penn faculty.

601. Integrating Classroom and Clinical Pedagogies in Nursing Education. (B) McHugh; Keim; Klenke-Borgmann. Prerequisite(s): NURS 600.
This course builds on the knowledge attained in NURS 600 as well as the knowledge and skills of the expert clinician. The focus of the course is clinical teaching for the advanced practitioner, percept and preparation and issues related to establishing and maintaining clinical sites. Academic responsibilities of faculty members, ethical and legal issues in education and educational effects of professional trends, health care policies and rapidly changing environments are also explored.

607. Advanced Physiology and Pathophysiology. (A) Tkacs. Prerequisite(s): Completion of undergraduate courses that include Biochemistry, Nutrition, Anatomy and Physiology or permission of the instructor.
This course will integrate advanced physiology with pathophysiology and clinical implications across the lifespan for advanced nursing practice. Organ systems function and dysfunction from the level of the cell through organized organ levels will be presented, and the genetic basis of disease will be discussed. Recent scientific advances will be discussed with application to new approaches to disease and symptom management. The interrelationships between basic physiology, clinical pathophysiology, and genetics are emphasized through lecture and case studies.

608. Advanced Pharmacology and Therapeutics for Nursing Practice. (C) Boulatta; Carey; Manning. Prerequisite(s): NURS 607 or NURS 685.
Advanced principles of clinical pharmacology and therapeutics are applied to the nursing care of individuals across the life-stage spectrum. It focuses on the content and knowledge employed by the advanced practice registered nurse in the management of various conditions and disease states. The course builds on the pharmacology knowledge base acquired in the baccalaureate nursing program. The advanced pharmacology and therapeutics of several common diseases or conditions found in the acute care and primary care setting is presented. This is supplemented with pharmacotherapy modules to meet program specific needs.

610. Concepts in Healthcare Economics. (B) Piper, A.
This course examines health care from an economic perspective tailored for the nurse manager and executive. Emphasis is on the allocation of health care resource policies in the United States with examination of different health care programs. Within the health care industry, focus is on public and private health care funding in addition to the role of managed care systems with relation to financing and delivery of health services.

This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

612. (HPR 504) Principles and Practice of Healthcare Quality Improvement. (A) Myers; J.; Burke, K.
Healthcare delivery is complex and constantly changing. A primary mission of leading healthcare organizations is to advance the quality of patient care by striving to deliver care that is safe, effective, efficient, timely, cost-effective, and patient-centered (Institute of Medicine). The goal of this interprofessional course is to provide students with a broad overview of the principles and tools of quality improvement and patient safety in healthcare as well as to address the knowledge, skills and attitudes as defined by the Quality and Safety Education for Nurses (QSEN) guidelines. It will provide a foundation for students or practicing clinicians who are interested in quality improvement and patient safety research, administration, or clinical applications.

Content will address the history of the quality improvement process in healthcare, quality databases and improvement process tools and programs. Through the use of case studies and exercises students will become familiar with the use of several quality improvement programs and tools. For example, the Plan-Do-Study-Act (PDSA) cycle, Six Sigma and the Toyota Production System known as Lean Production processes will be addressed. Students can use this course to identify the tools and design the methods that they plan to employ in a quality improvement or patient safety project in their area of interest.

This course explores the various routes of anesthetic administration addressing the potential benefits and risk of each. Special emphasis is placed on the monitoring of patients during the intra-operative phase. The responses to the common complications that occur during the intra-operative phase are discussed utilizing a case study approach.

618. Principles of Nurse Anesthesia Practice II. (B) Magro; Lynn. Prerequisite(s): NURS 617.
This course explores the indications, contraindications and considerations...
regarding the administration of regional, epidural and spinal anesthesia. Anatomical and physiological considerations regarding the administration, monitoring and reversing of anesthetic agents are reviewed. Common side effects and adverse effects are discussed and the effective treatments of each are explained. Factors leading to substance abuse are identified and discussed. Opportunities to practice spinal needle placement and administration of anesthetics are provided in the simulation laboratory.

619. Principles of Nurse Anesthesia Practice III. (L) Magro; Lynn; Winner. Prerequisite(s): NURS 618. 12-Week Summer Session.

This course explores the special considerations of pediatric, obstetric, and geriatric patients undergoing anesthesia. The pre-anesthesia assessment of these patients is discussed with particular emphasis on the commonly occurring complications and how to anticipate and manage them. Monitoring for anesthetic effect, hemodynamic effect and potential adverse reactions is reviewed using a case study approach.

620. Principles of Nurse Anesthesia Practice IV. (A) Magro; Lynn. Prerequisite(s): NURS 619.

This course provides a systems approach to examining specialty surgical procedures and the anesthesia requirements for each. Analysis of the pre-anesthesia assessment, the intraoperative monitoring and the post-anesthesia care required for patients undergoing the surgical procedure will be presented. Population specific considerations will be emphasized.

621. Principles of Nurse Anesthesia Practice V. (B) Magro; Lynn. Prerequisite(s): NURS 620.

This course provides a systems approach to examining specialty surgical procedures and the anesthesia requirements for each. Analysis of the pre-anesthesia assessment, the intraoperative monitoring and the post-anesthesia care required for patients undergoing the surgical procedure will be presented. Population specific considerations will be emphasized.

622. Pathogenesis of Mental Disorders Across the Lifespan. (A) Hanrahan; Tkacs.

The conceptual and practice application of brain-behavior relationships for individuals with mental health and psychiatric conditions is developed in this course. Students learn interview and differential diagnostic skills to screen for neuropsychological etiologies of mental disorders such as schizophrenia, bipolar disorders, mood disorders and anxiety disorders. The course reviews specific theories of etiology and diagnostic classifications found in the Diagnostic and Statistical Manual of Mental Disorders-Fourth Edition-Text Revision (DSM IV-TR). Students develop the ability to make critical decisions as they learn finer points of differential diagnosing of mental disorders using a case based method of learning, allowing students to focus on specific populations such as aged, adults, adolescents, anchildren.

625. Clinical Modalities Across the Life Cycle in Advanced Practice Psychiatric Mental Health Nursing. (L) Coleman, C.

Crisis intervention, brief psycho-therapy, group processes and practices, milieu therapy, and intervention with families are examined as they relate to nursing practice in mental health.

626. Family and Organizational Systems Across the Life Span. (L) Pollack, F. Summer Session I.

This course presents Bowen Family Systems Theory as it applies to families over the life and organizations over time. This is a theoretical course whose purpose is to provide the student with a broad, systemic perspective on human functioning. The course begins with a detailed presentation of Systems Theory, from both a family and organizational perspective. As presented there is a continual compare and contrast to other dominant theories of human functioning. It then applies the concepts of Systems Theory to the understanding and assessment of the stages of the normal family life cycle from a multi-generational, multi-cultural perspective. This is followed by discussions of the theory's application to the emotional problems of children, adolescents, adults and their families. Likewise, application to organizational behavior is made, including health care organizations. Relevant research is discussed throughout.

628. Mental Health and Aging. (B) Cacchione; Evans.

An examination of the psycho-socio-cultural processes which influence the behavior patterns, coping, and adaptation of older adults. The course emphasizes strategies to promote mental health as well as assessment, presentation, and intervention in the major acute and chronic psychiatric disorders affecting the older adult.

629. BAS PRIN NURSANESTHES1. (A)

637. Introduction to Research Methods and Design. (C) Tulman; Polomano; Spatz; Hatfield. Prerequisite(s): Undergraduate Statistics Class. Must hold an RN license. Also offered in 6 week Summer Session I and 12 week Summer Session I & II.

The relationships among nursing theory, research and practice will be examined. An emphasis will be placed on research competencies for advanced practice nurses (APNs), including understanding nursing research methods and strategies in order to evaluate research results for applicability to practice and to design projects for evaluating outcomes of practice. An understanding of statistical techniques will be integrated into the course and build on the required undergraduate statistics course. Published nursing research studies will be evaluated for scientific merit and clinical feasibility, with a focus on evidence-based practice.

640. (PUBH551, SOC1640, SWRK793) Global Health and Health Policy. (M) Aiken; Voet; McLaughlin.

This participatory interdisciplinary seminar course examines contemporary issues in public health policy and global health. The organizing framework is social determinants of health. We consider evidence that inequalities in education, income, and occupation influence health status, and the policy dilemma that broad interventions to improve population health may increase health disparities. We critically examine whether prevention is always better than cure, and what modern medicine has to offer in terms of health. We explore the public policy process in health using the "tobacco wars" as a case example, of how politics, policy, law, commercial interests, and research intersect to affect the public's health. We examine whether global health is in a state of decline, and the extent to which failures in public health, public policy, and foreign policy have contributed to increasing threats to world health. Likewise we will examine the potential for greater integration of health into foreign policy to create global infrastructure upon which to advance health. We will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.

There are no prerequisites. The course is designed for graduate students in the social and behavioral sciences, health professions, public health, business and
law. Advanced undergraduate students will be admitted with permission.

641. Autism Spectrum Disorder: Prevalence, Etiology, Screening and Assessment. (A) Pinto-Martin; Souders. Prerequisite(s): Post-BSN students only. Junior and senior undergraduate students may be admitted with course faculty permission.

Through classroom and clinical experiences, this course provides an overview of the public health problem of autism spectrum disorder (ASD). Content addresses the natural history, etiology, rising prevalence, risk factors, and core features. Changes in prevalence statistics and possible causes are outlined. These subjects are described in general terms for an overall picture of the disorder. Taking a developmental approach, students begin case management and follow a family through screening, diagnosis and treatment planning. Key information is elaborated through case studies. The course highlights the important and evolving role of nurses in the care of people with ASD. Content is supported by the scientific literature.

Students' clinical experiences start with the identification and collaborative work with a family that has a young child with ASD. The student follows that family and the child through diagnosis, treatments and long-term planning. This case approach allows the student to work with the same family over the entire post-masters program to learn the value of interdisciplinary, contiguous care.

642. Health and Behavioral Care Planning and Intervention for Autism Spectrum Disorder. (B) Pinto-Martin; Souders. Prerequisite(s): NURS 641.

Through classroom and clinical experiences, this course focuses on the application of various treatment approaches to the management of acute and chronic problems of autism spectrum disorder. Approaches to behavioral, psychological and medical co-morbidities are explored, practiced and evaluated. Students' clinical experiences build on the previous semester and continue with the application of class instruction to patient and family care. The student works closely with behaviorists, psychologists and occupational therapists to integrate nursing care planning with other services. This case approach continues, and exposure to a second family is added to expand learning opportunities and develop nursing services.

643. Leadership, Advocacy, and the Practice of Integrated Nursing Care of ASD. (L) Pinto-Martin; Souders. Prerequisite(s): NURS 642. Spring and/or Summer Offering.

Emphasis is on the synthesis of course content practice. Through classroom and clinical experiences, students critically examine the role of nursing in the life-long care of people with ASD, and identify ways to expand the scope of nursing care for this vulnerable population. Students explore the availability of services in the community and discuss approaches to patient advocacy. Students have opportunities to select an area of specialization to develop specific practice expertise. Such areas are Diagnosis and Referral Practices (e.g. ADOS Training), Behavioral Therapy Training (e.g. Applied Behavioral Analysis), and clinical research.

Practical issues of collaboration and reimbursement for services are explored. Students' clinical experiences are designed to facilitate scholarship, independence and advanced specialization in a chosen component of ASD care, for example, behavioral analysis, screening and/or diagnosis, or an agenda for research. Students identify and implement an independent project.

644. Health Care in an Aging Society. (B) Bradway.

Individual and societal influences on the care of older adults are examined in detail within the context of an emerging health care system. Normal changes in physical and psychological health are explored in depth. Significant issues affecting care of older adults and their families at the global and national level are discussed.

645. Psychopharmacology Across the Lifespan. (B) Hanrahan. Prerequisite(s): NURS 622.

This course focuses on the development of knowledge and skills related to the use of psychopharmacologic agents to treat mental illness by the advanced practice nurse. Using a case study method to encourage the application of knowledge to clinical practice, the course addresses culturally diverse client populations, across the lifespan, who present with a range of symptom manifestations, at all levels of severity. The course emphasizes evidence-based practice, research-based clinical decision making and a wholistic approach to integrating the science and biology of the mind with social and behavioral interventions. The case base method allows students to focus on specific populations such as older adults, adults, adolescents, and children.

646. Primary Care: Diagnosis and Management of Adults Across the Lifespan. (A) Bradway; Cotter. Prerequisite(s): NURS 657. Corequisite(s): NURS 646.

This course focuses on development of critical thinking skills to address health care problems of adults across the lifespan, with an emphasis on middle-aged and older adults, develop differential problem solving skills and determine appropriate management interventions. The management of common acute and chronic health conditions will include evidence based primary prevention, drug and treatment therapeutics, and referral to other health care providers. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the health problems of adults across the lifespan.

647. Primary Care Clinical Practicum: Diagnosis and Management of Adults Across the Lifespan. (A) Cross; O'Sullivan. Prerequisite(s): NURS 657. Corequisite(s): NURS 646.

Management and evaluation of primary care problems of middle-aged and older adults in a variety of ambulatory and occupational settings. Opportunity to implement the role of the nurse practitioner with middle-aged and older adults and their families in the community. Interdisciplinary experiences will be pursued and collaborative practice emphasized. Students are expected to assess and begin to manage common chronic health problems in consultation with the appropriate provider of care. The initiation of health promotion & health maintenance activities with individuals and groups is stressed. Includes 16 hours a week of clinical experience with a preceptor.

648. Primary Care: Complex Diagnosis and Management of Adults across the Lifespan. (B) Cotter. Prerequisite(s): NURS 646, 647.

This course will build on concepts presented in the Diagnosis and Management of Adults across the Lifespan (NURS 646) course. The focus is on refining health assessment skills, interpreting findings, developing and implementing appropriate plans of care to meet common health maintenance needs of adults and promote the health of adults with more complex health problems with an emphasis on the frail adult. The student will gain increased expertise in communication skills, health assessment skills, interpreting findings, epidemiological concepts and developing...
and implementing plans of care. The emphasis will be placed upon managing an aging population with complex, chronic healthcare needs and promoting healthy behaviors across the lifespan.

649. Primary Care Clinical Practicum: Complex Diagnosis and Management of Adults across the Lifespan. (B) Cotter; Taylor. Prerequisite(s): NURS 646, 647. Corequisite(s): NURS 648.

The focus of this course is the application of concepts presented in the Complex Diagnosis and Management of Adults Across the Lifespan (NURS 648) including initial workups of new patients, and the evaluation and management of patients with self-limiting acute problems, or stable chronic illnesses. Students will gain increased clinical expertise in a variety of community-based clinical settings including but not limited to health maintenance organizations, community clinics, long term care, assisted living, continuing care retirement communities, occupational health settings, and private practice. The student will gain increased expertise in communication skills, health assessment skills, interpreting findings, applying epidemiological concepts and developing and implementing plans of care for adults across the lifespan with health maintenance needs, and/or common acute and chronic health problems.

650. Systems Thinking in Patient Safety. (B) Keim; Burke, K.

This blended online/in-classroom graduate level course integrates principles of systems thinking with foundational concepts in patient safety. Utilizing complexity theories, students assess healthcare practices and identify factors that contribute to medical errors and impact patient safety. Using a clinical microsystem framework, learners assess a potential patient safety issue and create preventive systems. Lessons learned from the science of safety are utilized in developing strategies to enhance safe system redesign. Core competencies for all healthcare professionals are emphasized, content is applicable for all healthcare providers including, but not limited to, nurses, pharmacists, physicians, social workers and healthcare administrators, and may be taken as an elective by non-majors.

651. Nursing Informatics. (L) Bowles; Maffei. Prerequisite(s): Basic Computer Skills.

This course is designed to introduce the student to fundamental concepts and issues surrounding technology and information management in today’s rapidly changing health care environment. Emphasis will be placed on defining informatics and the models and theories used in its development. To prepare the student to take a leadership role in information system design and selection the class will study the process of information systems analysis, implementation and evaluation involving functional, organizational and human aspects.

652. Applied Healthcare Accounting and Business Planning. (B) Keim; Fuir.

This course focuses on the management of financial resources in the healthcare industry particularly in inpatient and ambulatory care settings. Specific emphasis is on applied accounting, budgeting, capital planning, nursing staffing/scheduling and variance analysis. Additionally, students will apply concepts in developing a business/program plan including completion of an environmental scan, cost-benefit analysis and marketing plan. Students will engage in strategic planning, stakeholder analysis and benchmarking efforts.

655. Nursing Administration Practicum. (C) Keim, DiMichele. Prerequisite(s): NURS 699.

This administrative practicum will be individually tailored to meet each student's career goals. Students will be placed with an expert role model who in most instances will be a practicing nurse executive. The setting may vary according to the student's interests and objectives. Examples include acute care, home care, long term care, occupational health, community based clinics, consulting groups and political/legislative experiences.

656. Professional Role Issues for Nurse Practitioners. (A) O'Sullivan; Bryan. Corequisite(s): NURS 657.

This course is intended for students planning a career that involves primary health care delivery. It includes lectures, discussions, readings, and projects focused on health, social, economic and professional factors influencing health care delivery in the community.

L/L 657. Advanced Physical Assessment and Clinical Decision Making. (A) Buzby; Reger; Sherry.

This is a laboratory/clinical course designed to help prospective nurse practitioners develop advanced clinical assessment skills. Provider-patient interaction, data collection, and hypothesis formulation are emphasized. All participants engage in actual practice with fellow students, and/or models, and consenting patients.

658. Clinical Management of Primary Care with Young Families. (C) O'Sullivan. Prerequisite(s): NURS 656, 657. Corequisite(s): NURS 659.

Assessment and treatment of the young child in ambulatory care settings is the focus of this developmentally organized course. This course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, the maturational tasks and problems of children and their families in relation to illness and health are explored.

659. Clinical Practicum: Primary Care with Young Families. (C) O'Sullivan. Prerequisite(s): NURS 656, 657. Corequisite(s): NURS 658.

Management and evaluation of primary care problems of children in a variety of ambulatory settings. Opportunity to implement the role of nurse practitioner with children and their families in the community occurs under the guidance of faculty and experienced preceptors. The initiation of health promotion and health maintenance activities with individuals and groups is stressed. Collaborative, interdisciplinary practice is emphasized as students assess and manage common problems in consultation with an appropriate provider of care. 20 hours a week of clinical experience with a preceptor is arranged.

SM 660. Clinical Practice with Select Populations: Adolescents. (L) O'Sullivan. Prerequisite(s): NURS 656, 657, 658, 659. Summer Session I.

Focus on assessment and treatment of adolescents in a variety of settings. Didactic emphasis is on the special needs encountered among adolescents. This course adds to the student's previous knowledge and skill in the delivery of primary care. Working with this specific population the student gains necessary knowledge and experience in assisting individuals with most common health problems, including acute episodic illness and stable chronic disease, as well as health promotion needs.
661. Clinical Management of Primary Care with Adults. (L) O'Sullivan. Prerequisite(s): NURS 646, 647 or NURS 658, 659. Summer Session I.

Assessment and treatment of younger adults in ambulatory care settings is the focus of this clinical course. The course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with most common health problems, including acute episodic illness. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, maturational tasks and problems of the adult and family in relation to illness and health are explored.

663. Advanced Concepts in Primary Care. (L) O'Sullivan. Prerequisite(s): NURS 660 or NURS 661. Summer Session II.

In conjunction with the development of advanced clinical skills, students focus on advanced practice role development and the study of issues in health service delivery related to the practice of primary health care. Economics, case management and cultural/ethical aspects of care are discussed.

664. Advanced Practice Nursing for Oncology Care. (A) Holli; Polomano. Prerequisite(s): NURS 607; NURS 637. Summer 12 Week Session; Permission to take this course as an elective must be approved by the course faculty.

Students are introduced to cancer epidemiology and pathophysiology, cancer genetics, prevention, risk assessment and reduction for specific cancers, screening techniques, diagnostic procedures and criteria, and local and systemic therapies used to treat cancer. The influence of individual characteristics on health promotion, health behaviors, population cancer risk, and cancer detection are explored in the context of biological, psychological, socioeconomic and sociocultural factors across age groups from adolescents to older adults. Evidence-based practice guidelines and research are applied to promote healthy lifestyles, monitor cancer risk, address psychosocial issues, facilitate access to care, and reduce health care disparities for populations at risk and diagnosed with cancer, and cancer survivors.

666. Effects of Cancer and Cancer Therapy. (B) Walker; Prechtl-Duphy. Prerequisite(s): NURS 646, 664. Corequisite(s): NURS 667.

Principles of cancer treatment, associated responses and symptom management are presented. Emphasis is on the development of advanced clinical decision making skills in identifying multiple alterations resulting from cancer and cancer therapy.

667. Oncology Nursing: Assessment, Diagnosis, & Cancer Management. (B) Polomano; Walker; Prechtl-Duphy. Prerequisite(s): NURS 664, NURS 666. Corequisite(s): NURS 666. $60 Lab Fee.

Emphasis is on the application of critical thinking and diagnostic reasoning skills in advanced clinical decision making. Students access, diagnose, and manage the care of oncology patients with a variety of cancers. The delivery of care and evaluation of role effectiveness within the health care system are examined.

670. Principles of Adult Gerontology Acute Care I. (A) Pawlow; Elgart; Becker; Doherty.

This didactic course examines the epidemiologic, assessment, diagnostic, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. Students explore the dynamic interplay between the pathophysiologic basis of disease and the psychosocial and socio-cultural responses to illness and injury across the adult age continuum as they develop clinical decision-making skills. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Content focuses on special adult and older adult patient populations with commonly encountered health problems.

672. Principles of Adult Gerontology Acute Care III. (L) Pawlow; Elgart; Becker; Doherty.

This didactic course examines issues related to the epidemiology, assessment, diagnosis, management and evaluation of acute, critical and complex chronically ill adults across the adult-older adult age continuum. Students explore the dynamic interplay between the pathophysiologic basis of disease and the psychosocial and socio-cultural responses to illness and injury across the adult age continuum as they develop clinical decision-making skills. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Content focuses on special adult and older adult patient populations with commonly encountered health problems.

673. Advanced Clinical Decisions in Adult Gerontology Acute Care. (A) Pawlow; Griffith; Becker. Prerequisite(s): NURS 607, 657. Corequisite(s): NURS 670.

This didactic and fieldwork course focuses on development of a systematic approach to advanced physical assessment, the use and interpretation of diagnostic technologies and development of diagnostic reasoning as it applies to patient management of the adult-older adult acutely ill or injured patient. Emphasis is placed on development of competence to perform a comprehensive history and physical examination, incorporating the analysis of biotechnological data trends. Building fundamental skills in developing differential diagnoses and clinical decision making for acutely ill patients across the adult age continuum is a focus of this course.

674. Adult Gerontology Acute Care NP: Professional Role and Clinical Practicum I. (B) Becker; Griffith. Prerequisite(s): NURS 673.

This didactic and clinical fieldwork course explores issues relevant to the role of the Adult Gerontology Acute Care Nurse Practitioner within the complex U.S. health care system. Role development, reimbursement issues, provision of quality
and ethical care and evidence-based nursing and medical interventions are introduced and discussed in the classroom. Clinical fieldwork focuses on assessment of complex acute, critical and chronically ill patients for urgent and emergent conditions, using both physiologically and technologically derived data, to evaluate for physiologic instability and potential life-threatening conditions, development of differential diagnoses, application of diagnostic reasoning and formulation, implementation, evaluation and modification of individualized plans of care including pharmacological and non-pharmacological modalities. Development of advanced clinical competencies and clinical decision making abilities about adults across the age continuum is emphasized.

675. Adult Gerontology Acute Care NP: Professional Role and Clinical Practice II. (L) Becker; Griffith; Doherty. Prerequisite(s): NURS 670, 671, 672, 673, 674. Summer I & II - 12 Week Course.

This didactic and fieldwork course focuses on the role of the Adult Gerontology Acute Care Nurse Practitioner and the expansion of advanced clinical competencies and clinical decision making abilities. Clinical experiences in acute care settings provide the student with opportunities to refine history and physical examination techniques, diagnostic reasoning, formulation, implementation, evaluation and modification of individualized management plans. Specific attention is given to the unique presentation of syndromes and constellation of symptoms that may be typical or atypical presentation of complex acute, critical and chronic illness in adults and older adults. Facilitating transition of patients at varying life stages through the complex health care system is encouraged exploring the multiple governmental, social and personal resources available to acutely ill adults across the age continuum. The application of advanced nursing, medical and biopsychosocial knowledge in the management of patients and the collaboration between the nurse practitioner and the patient, family and interprofessional healthcare team are emphasized.

677. (PUBH530) Environmental Toxicology: Risk Assessment and Health Effects. (A) Liu. Undergraduates Need Permission.

This course presents general principals of toxicology and the disposition of toxins in the body. Case studies of the effects of environmental and occupational toxins on individuals will be analyzed. This course is designed for students who desire a strong foundation in toxicological concepts and principals and provides an overview of major toxins in our environment and their association with human health.

This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the respiratory and cardiovascular systems and related anesthesia implications. The concepts of ventilation and perfusion as they relate to oxygen and anesthetic delivery and metabolism are examined. The effects of compromised cardiac and pulmonary function and their implications for the patient and anesthesia plan are reviewed. The impact of anesthesia on the structure and function of the heart as a pump as well as the characteristics of systemic circulation will be explored. The effect of surgery and anesthesia on the respiratory and cardiovascular systems will be emphasized.

682. Applied Physiology for Nurse Anesthetists II. (A) Magro; Lynn; Libonati. Prerequisite(s): NURS 681. Corequisite(s): NURS 607.

This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the hepatic, renal, nervous, hormonal, immunologic and hematological systems and related anesthesia implications. The focus of discussion will be on the special considerations when delivering anesthetic agents to patients. Emphasis will be placed on the assessment of the patient with common disorders of these systems. Nurse anesthesia care related to patients undergoing surgeries involving each system will be discussed.

683. Applied Science Related to Anesthesia. (B) Magro; Lynn; Scang. Prerequisite(s): NURS 607, 681, 682.

This course is an in-depth analysis of the chemical and physical principles as they apply to nurse anesthesia practice. Aspects of organic and biochemistry including the chemical structures of compounds and its significance in pharmacology will be explored. Applications of the laws of physics as they pertain to nurse anesthesia practice will be reviewed with specific examples. Emphasis on the dynamics of the anesthesia delivery system and related equipment will be presented.

685. Advanced Developmental Physiology and Pathophysiology. (A) Trimarchi; Marino. Prerequisite(s): Undergraduate course in Anatomy & Physiology.

This course will address advanced human embryology, physiology and pathophysiology. Biochemical genetics and the genetic basis of disease will be discussed. Normal fetal development and physiology of organ systems will be used as the foundation for understanding the pathophysiology of disease across the lifespan.

L/R 686. (NURS736, NURS781) Well Woman Health Care. (A) Durain; Grube; Nagtalon-Ramos. Prerequisite(s): NURS 657.

This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in in meeting the primary women's health care needs in contemporary society. Social influences that have an impact on women's lives are also explored.

The dramatic rise in the use of complementary and alternative medicine (CAM) by the American public requires that the contemporary health care practitioner have an awareness of CAM therapies and modalities currently available. The end result of this is course will not be proficiency in the practice of any of these modalities in particular, but rather a basic understanding of each approach to common conditions and their potential contribution to health and well-being. The focus of the CAM modalities discussed in this course will center on their use in women's health care provision.

690. Family Focused Primary Care of the Middle-Aged and Older Adult. (B) O'Sullivan. Prerequisite(s): NURS 656, 657. Corequisite(s): NURS 691.

This course focuses on primary care problems encountered by middle-aged and older adults and their families. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the complex health problems of middle-aged and older adults.
691. Clinical Practicum: Family Focused Primary Care of the Middle Aged and Older Adult. (B) O'Sullivan. Prerequisite(s): NURS 656, 657. Corequisite(s): NURS 690.

The focus of this course is the evaluation and management of primary care problems in middle-aged and older adults. Students will have an opportunity to implement the role of the nurse practitioner in the clinical setting. Interdisciplinary collaborative experiences will be essential to the clinical practicum. The initiation of health promotion and health maintenance activities with individuals, groups, and families is stressed. Students are expected to assess and manage common chronic health problems in the clinical setting.

693. Professional Issues in Midwifery. (A) McCool; Reale; Guidera. Prerequisite(s): NURS 787, 788. Corequisite(s): NURS 786.

In depth discussion of current issues facing the profession of nurse-midwifery which impact on professional education, certification, and practice. Includes ethical, legal, and political aspects of nursing midwifery practice.

697. Leadership in Advanced Oncology Nursing Practice. (L) Keim; Prechtel Dunphy; Sherry; Walker. Prerequisite(s): NURS666 and all requisite nursing courses in the Nursing & Healthcare Administration (NADM) program. May be taken concomitantly with NURS699 or at the discretion of the NADM Program Director.

Students explore the diagnosis and treatment of common cancers in a multidisciplinary approach. The broad array of bio-medical and psychosocial issues that result from the disease itself across the illness continuum are studied. Quality of life, rehabilitation and palliative care issues related to cancer care are addressed. Additionally, students complete an administrative practicum with a nursing leader in an oncology specialty area within a healthcare organization.

698. Practicum: Quality Improvement in Healthcare. (A) Piper; Keim. Prerequisite(s): NURS 650, NURS 537, NURS 612. Summer and Fall Placement.

Building on coursework that provided a broad overview of the principles and tools of quality improvement and patient safety in healthcare, students will apply this knowledge through completion of a mentored quality improvement project in a healthcare organization. In collaboration with faculty and health organization preceptors, students will identify a quality improvement opportunity and develop specific project objectives including, but not limited to, the use of appropriate tools, identification of measurable aims and evaluation methods, sustainable recommendations for process improvement and a comprehensive report of findings and recommendations. This course is part of the Quality Improvement and Safety Processes in Healthcare Minor and should be completed by the student as the capstone course in that minor; students engage in 192 hours of on-site project work.

699. Advanced Roles in Administrative Nursing Practice. (L) Rich; Keim. Prerequisite(s): For Students of the Nursing Administration and Healthcare Leadership Only. Summer II Semester.

Offered at the end of the Nursing and Health Care Administration or Health Care Leadership programs, this course prepares the graduate for entry into a myriad of administrative or leadership roles. Students will explore role responsibilities for various levels of management positions; health care consultants; health policy advocates; global health leaders; staff development directors; and administrators in non-traditional settings i.e., journal editors, professional associations etc.

SM 705. Advanced Practice Nursing Practice: Psychiatric Mental Health NP I. (A) Leahy; Mulligan; Josey.

Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Focus is on clinical assessment/diagnosis and decision-making. A minimum of 16 hours of practice and 3 hours of small group supervision is required.

SM 706. Advanced Practice Nursing Practice: Psychiatric Mental Health NP II. (B) Leahy; Mulligan; Josey.

Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Refinement and development of clinical intervention with an increasingly diverse caseload. A minimum of 16 hours of practice and 3 hours of small group supervision is required.

707. Advanced Practice Nursing Practice: Psychiatric Mental Health NP III. (L) Leahy; Mulligan; Josey. Summer Session I.

Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Outcome evaluation, termination and professional role development. A minimum of 16 hours of practice and 3 hours of small group supervision is required.

This course will explore the philosophy and growth of public policy that has directed the American Health Care System in its ever expanding movement toward universal health care for all citizens. Analysis of health policy and systems content will assist the students to identify the knowledge and skills needed for the health or human service provider to assume leadership roles in the formulation of public policy for change; this includes system restructuring, service delivery and funding of health care. Emphasis will be on the effect of policy on the individual/family user of health care services rather than the effect on professional health care providers or health care delivery systems. Special attention will be given to the effect of policy on populations, both urban and rural, living near and below the poverty level.

714. Management of Critically Ill Children with Acute and Chronic Conditions: Nursing of Critically Ill Children Advanced Clinical. (L) Verger; Bartke. Prerequisite(s): NURS 712, 713. Summer Session II.

This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.

This course examines the unique contribution made by nurses with advanced clinical skills into the care of children with oncologic and hematologic disorders, and their families, from the time of diagnosis
throughout the treatment period and beyond. The course provides the student with the most recent advances in knowledge about cancer in childhood. While the focus is on oncology, hematologic disorders as well as AIDS will be discussed. Recent methods of treatment and the nursing management of children and their families will be addressed.

**720. Nursing of Children Theory I: Child and Family Development. (A)** Deatrick; Murphy, K.

This course focuses on developmental theories and concepts that form the basis for nursing assessment and intervention with children and families. Emphasis is given to current research and issues in child and family development and functioning.

This clinical course is designed to help prospective advanced practice nurses develop advanced skills in physical and developmental assessment of children in a variety of well-child, clinic and hospital settings. Data collection, data interpretation, and hypothesis formulations are emphasized for the purpose of clinical decision making. The role of the advanced practice nurse in assessment of primary health care issues and health promotion is incorporated throughout the course. Collaboration as an integral part of assessment will be an ongoing focus.

**731. High-Risk Neonate, Theory. (B)** Verger; Steele. Prerequisite(s): NURS 684, 720, 721. Corequisite(s): NURS 733. Summer Session I

This course focuses on the care of high-risk neonates within the context of the family unit. The biological and psychosocial aspects are studied as a basis for nursing practice. Emphasis is placed on the role of the Advanced Practice nurse in improving services to high-risk neonates with the purpose of decreasing mortality and morbidity rates and improving the quality of life of high-risk newborns and infants.

This clinical course focuses on the care of the high risk infant within the context of the family unit. Clinical experiences provide students with opportunities to expand their skills in managing the care of infants, both acutely ill and growing neonates. Students continue their experiences with neonatal nurse practitioners to examine role issues of these individuals.

**734. Intermediate Principles of Pediatric Acute Care. (B)** Murphy, K.; Verger. Prerequisite(s): NURS 720; NURS 721; NURS 685 or NURS 607. Corequisite(s): NURS 735.

This course focuses on evidenced based care for infants, children, and adolescents with complex acute and chronic health conditions. Emphasis is placed on developing a framework for practice based on a synthesis of knowledge from biological, behavioral, and nursing sciences through the process of advanced clinical decision making. The student gains the necessary clinical management skills to provide specialized patient centered care across the entire pediatric age spectrum from complex chronic illness to physiologic deterioration and life threatening instability with emphasis on the patient and family as a full partner in decision making.

**735. Pediatric Acute Care Nurse Practitioner: Professional Role and Intermediate Clinical Practice. (B)** Verger; Lipman; Schucker; Campisciano. Prerequisite(s): NURS 720; NURS 721; NURS 685 or NURS 607. Corequisite(s): NURS 734.

This course focuses on the implementation of the professional role of the Pediatric Acute Care Nurse Practitioner (PNP-AC). Particular emphasis is placed on the role components of the nurse practitioner in pediatric acute care. Applications of nursing, biological and behavioral science are emphasized in the advanced clinical assessment, clinical decision making and management skills needed to care for complex, unstable acutely and chronically ill children and their families.

The seminar will provide students with the skills necessary to provide primary health care to high risk infants in ambulatory settings. Course material will include detailed physical assessment skills of the infant through the first year of life. The clinical component will include home visits and experience in the ambulatory and long term care settings.

**741. Management of Children with Acute and Chronic Conditions: Nursing of Children in the Community Advanced Clinical. (L)** Deatrick; Lipman; Murphy, K. Prerequisite(s): NURS 724, 725. Summer Session II

This clinical course focuses on the implementation of the role of the advanced practice nurse with particular emphasis on providing continuity of care for children with specialized health needs across their transitions in sites of care delivery and throughout phases in the cycle of their illnesses. Application of nursing, biological and behavioral science is emphasized in the community aspects of clinical assessment and management of children with health care needs and their families.

**743. Fetal Evaluation. (B)** Stringer. Prerequisite(s): NURS 607.

This course focuses on identifying at risk and high risk maternal fetal dyads,
developing knowledge relating to assessment of fetal well being, and understanding the implications of obstetric, non obstetric, and fetal complications on the management of the high risk pregnancy. Additionally the course provides an understanding of the scientific basis for new technologies used to evaluate at risk and high risk populations. Information about the physics of ultrasound, pulse echo imaging, and doppler techniques will be provided. Students must be able to practice ultrasound skills while in this course.

746. Evidence-Based Practice for Nurse Anesthetists I. (L) Magro; Lynn; Gidaro. 12 Week Summer Session. This course examines the evidence-based research to determine whether the procedures and techniques performed by nurse anesthetists are supported by the literature. Population specific topics of concern to nurse anesthetists are discussed. Student led seminars will guide the classroom discussions.

747. Evidence-Based Practice for Nurse Anesthetists II. (A) Magro; Lynn; Gidaro. Prerequisite(s): NURS 746. This course examines the evidence-based research to determine whether the procedures and techniques performed by nurse anesthetists are supported by the literature. Population specific topics of concern to nurse anesthetists are discussed. Student led seminars will guide the classroom discussions.

748. Leadership Development in Healthcare. (A) Fidyk. This course will provide the conceptual and theoretical framework for examining the concept of leadership within the contexts of health systems, health professionals and health policy. It will focus on characteristics of personal and professional leadership, change theory, and the application of critical thinking to the analysis of work environments, systems and the politics of health.

749. History, Health and Social Policy. (B) D’Antonio. This course explores the impact of historical ideas, events, and actors on current issues in health and illness care. Topics include the movement from hospitals to health care systems; the changing definitions of professionalism and professional practice patterns; and the ways historical context shapes definitions of leadership roles and theoretical knowledge.

750. Inquiry and Nursing. (A) Richmond. For doctoral students in nursing. This course introduces students to the process of intellectual inquiry. It explores the intellectual foundations of scholarly disciplines in general and the discipline of nursing in particular. Emphasis is placed on the process of knowledge development, with particular emphasis on historical, philosophical, positivist, and gendered and phenomenological ways of knowing. Emphasis is also placed on having students develop their particular intellectual approach to disciplinary inquiry and on formulating ideas for publications and presentations.

753. Evolving Nursing Science. (B) Sommers; Riegel. Prerequisite(s): NURS 750. For doctoral students in nursing. A consideration of contemporary nursing research as it pertains to the current state of the art and directions for future study. Advanced analysis of methodology, assumptions, and theoretical structures that underpin the work.

754. Quantitative Research Design and Methods. (B) Pinto-Martin; Meghanzi. Prerequisite(s): Students must have completed at least one doctoral-level statistics course. The current doctoral recommendations include: SOCI 535; SOCI 536; STAT 500; STAT 501; PUBH 501; EPID 524; EPID 525. Please contact course faculty for permission for courses taken outside of the above recommendations. For doctoral students in nursing. This one semester survey course provides an overview of quantitative clinical research design and methods. Ethical and legal considerations in human subjects research, access to patient populations, sampling designs and power analysis, experimental and non-experimental designs, measurement of variables, data collection techniques, and data management are included. This course is intended for doctoral students in the health sciences.

L/R 764. Advanced Technologies & Clinical Decisions in Acute Care. (A) Becker; Griffith; Bartke. Prerequisite(s): NURS 607, 657. This fieldwork course focuses on development of a systematic approach to advanced physical assessment, the use of diagnostic technologies and the development of a diagnostic reasoning as it applies to patient management of the acutely ill and injured. Emphasis is placed on development of competence to perform a comprehensive history and decision making for the management of acutely ill patients.

768. Role of the Clinical Nurse Specialist. (A) Becker; Pawlow; Fisher. This clinical course provides students the opportunity to apply CNS theory to practice and enables students to develop strategies to overcome barriers to safe, quality healthcare delivery. Students acquire knowledge and skills characteristic of CNS practice particularly as it relates to clinical judgment, facilitation of learning, advocacy and moral agency, caring practice and response to diversity.

769. Clinical Nurse Specialist Clinical I. (C) Becker; Dubendorf; Muller. Prerequisite(s): NURS 657. Corequisite(s): NURS 768. This clinical course provides students the opportunity to apply CNS theory to practice and enables students to develop strategies to overcome barriers to safe, quality healthcare delivery. Students acquire knowledge and skills characteristic of CNS practice particularly as it relates to clinical judgment, facilitation of learning, advocacy and moral agency, caring practice and response to diversity.

770. Clinical Nurse Specialist Clinical II. (L) Becker; Dubendorf; Muller. Prerequisite(s): NURS 657, NURS 768, NURS 769. Also Offered in Summer 12 Week Session. This clinical course focuses on the application of CNS theory to practice. Students focus on furthering the development of the knowledge and skills related to the core competencies of the CNS. Strategies to improve provider and system issues related to the provision of care to the population of interest are developed, implemented and evaluated. Developing leadership in the development of system-wide or healthcare policy is promoted. Advocating for the individual, family, caregiver and population of interest needs within the context of clinical practice and policy making is encouraged.
requirements for certification as a Family Psychiatric Mental Health Nurse Practitioner. This clinical practicum and seminar will complement previous education in advanced practice Psychiatric Mental Health nursing. The focus of the course is on skill development in therapeutic relationships with clients, interviewing, assessing client strengths and needs for mental health services, selecting and implementing interventions including psychopharmacologic agents, and maintaining a role in a mental health setting which allows active collaboration with other health professionals. A minimum of 16 precepted practicum hours per week is required in a selected community or institutional setting and a minimum of 250 total precepted clinical hours during the semester is required. In addition, there will be on-campus seminars and individual and group supervision conference calls throughout the semester.

776. High Risk Neonate Theory II. (L) Verger; Steele. Prerequisite(s): NURS 731, 733. Corequisite(s): NURS 777.
This course examines specific pathophysiological mechanisms which may result in body system failure. Strategies for clinical management are examined based on a synthesis of biological, behavioral, medical, pharmaceutical, and nursing knowledge. Theoretical analysis of the roles of the advanced practitioner with critically ill patients is emphasized.

777. High Risk Neonatal Clinical II. (L) Verger; Steele. Prerequisite(s): NURS 731, 733. Corequisite(s): NURS 776.
This clinical course is designed with emphasis on continued development of advanced clinical skills in the care of critically ill children. Emphasis is placed on integration of the roles of the advanced practitioner. This course adds to the student's previous knowledge and skills in advanced practice and prepares them to manage care of critically ill children.

778. High Risk Neonatal Clinical III. (L) Verger; Steele. Prerequisite(s): NURS 776, 777.
This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.

780. Health Care of Women and Primary Care. (L) Grube; Nagtalon-Ramos. Corequisite(s): NURS 657.
The focus of this course is a clinical approach to primary care problems commonly encountered by women in an ambulatory setting. This course provides the women's health care nurse practitioner and midwifery student with the knowledge and problem solving approach to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum.

781. (NURS686) Well Women Health Care, Theory. (A) Durain; Grube; Nagtalon-Ramos. Prerequisite(s): NURS 607, 657, 780. Corequisite(s): NURS 782.
This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in meeting the primary women's health care needs in contemporary society. Social influences that have an impact on women's lives are also explored.

782. Well Women Health Care, Clinical. (A) Durain; Grube; Nagtalon-Ramos. Prerequisite(s): NURS 607, 657, 780. Corequisite(s): NURS 781.
This clinical course further prepares students in understanding and developing the Women's Health Care Nurse Practitioner and Nurse-Midwifery roles. This clinical course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care needs of women from adolescence through post-menopausal years. Emphasis is placed on promoting and maintaining wellness, clinical decision making, systematic health interview, physical assessment, interpretation of laboratory findings, and diagnosis and treatment of gynecological problems.

783. Health Care of Childbearing Women, Theory. (B) Trout; Lewis, J.; Grube. Prerequisite(s): NURS 781, 782. Corequisite(s): NURS 784.
The antepartum course builds upon the well-woman health care course. The focus is management of prenatal care for the childbearing family. Conceptual threads of public policy and ethics are integrated within the content to help students to identify broader implications for prenatal care. Content includes theory and practice related to nurse-midwifery/ nurse practitioner management of the normal pregnant woman, and nurse-midwifery/ nurse practitioner management and strategies to reduce selected obstetric complications.

784. Health Care of Childbearing Women, Clinical. (B) Trout; Lewis, J.; Grube. Prerequisite(s): NURS 781, 782. Corequisite(s): NURS 783.
This course focuses on the management and evaluation of the childbearing women and their families in primary care settings. The course presents the opportunity to implement the role of the Nurse Practitioner with the childbearing woman and her family. The focus is on comprehensive physical, psychosocial and educational management of women and their families during pregnancy and postpartum.

785. Integration I. (L) Stringer; McCool; Reale; Nagtalon-Ramos. Prerequisite(s): NURS 783, 784.
Intensive integration of theory and clinical practice in women's health care with emphasis on ambulatory care. Clinical practice in all areas of ambulatory women's health care, teaching rounds, case presentations, and seminars with professional colleagues.

786. Integration II: Midwifery Integration. (A) McCool; Reale. Prerequisite(s): NURS 783, 784. Corequisite(s): NURS 785.
Intensive integration of theory and clinical practice in women's health care with emphasis on intrapartum, postpartum, and newborn care. Clinical practice during the intrapartum and postpartum, teaching rounds, case presentations, and seminars with professional colleagues.

787. Intrapartum / Postpartum / Newborn Care, Theory. (L) McCool; Reale; Stringer. Prerequisite(s): NURS 783, 784. Corequisite(s): NURS 788.
Anatomy and physiology relevant to the care of the women and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications.

788. Intrapartum / Postpartum / Newborn Care, Clinical. (L) McCool; Reale.
Clinical care and management of women, newborns and their families during the intrapartum, postpartum and newborn periods. Includes management of selected
obstetrical emergencies and medical complications. Clinical assignments related to module objectives.

**SM 791. Clinical Fieldwork in Nurse Anesthesia Practice I. (A)** Magro; Lynn; Briel.
This course provides students the opportunity to integrate theory into practice within the clinical setting. The focus is on the development of diagnostic, therapeutic, ethical and cultural judgments with the perioperative patient. Students progress from the care of healthy patients undergoing minimally invasive surgical procedures to the more complex patient with multiple health issues. The student begins to develop an advanced practice nursing role that integrates role theory, nursing theory, and research knowledge through weekly seminars. Scope of practice, role development and nursing interventions will be introduced and explored in the classroom, and principles will be applied in the clinical practicum.

**SM 792. Clinical Fieldwork in Nurse Anesthesia Practice II. (B)** Magro; Lynn; Briel. Prerequisite(s): NURS 791.
This course provides the opportunity for students to integrate theoretical knowledge and research finding into practice within the clinical setting. Students progress by providing anesthesia care for patients with more complex health problems. Techniques for managing the acute pain of clients are emphasized. Anesthetic requirements as dictated by patient assessment including the surgical procedure are studied in greater depth. The student now possesses the ability to combine theories and skills in selected clinical situations. The guidance of CRNA faculty preceptors contributes to the development of the student's critical thinking.

**SM 793. Clinical Fieldwork in Nurse Anesthesia Practice III. (L)** Magro; Lynn; Briel. Prerequisite(s): NURS 792. 12 Week Summer Session.
This course focuses on the delivery of anesthesia care within advanced nursing practice in a broad range of clinical situations for patients with multiple, complex health problems. Through refinement of assessment and management skills, critical thinking is further developed. Students progress by providing anesthesia care for special populations of patients with simple and complex health problems. The guidance of CRNA faculty preceptors contributes to the development of the student's critical thinking. Collaborative practice within a care team model is emphasized and with supervision, the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience.

**SM 794. Nurse Anesthesia Residency I. (A)** Magro; Lynn; Briel. Prerequisite(s): NURS 793.
This course is the first of two residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.

**SM 795. Nurse Anesthesia Residency II. (B)** Magro; Lynn; Briel. Prerequisite(s): NURS 794.
This course is the second of two residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.

**SM 796. Diagnosis and Management of Adult Gerontology Acute Care Patients I. (A)** Becker. For Streamlined Adult Gero Program Students Only.
This on-line, didactic course is designed for the practicing nurse practitioner or clinical nurse specialist who seeks to gain additional knowledge and skills related to the care of adult gerontology acutely ill patients with a specific focus on cardiovascular and pulmonary systems, thoracic issues, infectious processes, wound healing and diabetes. Particular focus is placed on specific issues related to the older adult such as frailty, dehydration, loss of functional mobility, falls, and other geriatric syndromes. The basics of ECG, CXR and PFT interpretation, ABG analysis and ventilator modes are highlighted. This course examines the epidemiologic, assessment, diagnostic, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized.

**SM 797. Diagnosis and Management of Adult Gerontology Acute Care Patients II. (B)** Becker. For Streamlined Adult Gero Program Students Only.
This online didactic course, designed for the practicing nurse practitioners or clinical nurse specialists seeking to gain knowledge and skills relative to care of adult gerontology acute care patients, focuses on the medical and surgical issues of the neurological, renal, gastrointestinal, hematological, oncologic and orthopedic systems. This course examines the epidemiology, assessment, diagnosis, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. An evidence-based, interprofessional team approach to the nursing and medical management of patients is emphasized.

**SM 798. Adult Gerontology Acute Care NP: Professional Role & Clinical Practicum for Primary Care Prepared Providers. (C)** Becker. Prerequisite(s): NURS 796 completion. For Streamlined Adult Gero Program Students Only.
This online didactic course and accompanying clinical fieldwork focuses on issues essential to the implementation of the role of the Adult Gerontology Acute Care Nurse Practitioner. Clinical fieldwork focuses on the unique assessment, diagnosis, management and evaluation of acutely, critically and complex chronically-ill adults, across the adult age continuum,
experiencing acute, urgent and emergent conditions, using both physiologically and technologically derived data. Evaluating for physiologic instability and potential life-threatening conditions is emphasized. Attention is given to the typical and atypical presentation of syndromes and constellation of symptoms exhibited by adults and older adults experiencing complex acute, critical and complex chronic illness. Issues related to the transition of patients through the health care system are explored. Collaboration between the nurse practitioner, patient, family and interprofessional healthcare team are encouraged.

799. MSN Clinical Remediation. (M)
Students whose clinical performance would benefit from additional clinical exposure in order to demonstrate the expected competencies are, with course faculty and faculty advisor approval, eligible to register for NURS 799. This experience will be allotted no more than one credit unit and must be completed in a time frame not to exceed one academic semester. A course may be remediated only one time.

SM 800. Dissertation Seminar I. (A)
Bowles, K.; Lake. Prerequisite(s): NURS 750, 753, 754, 813, 2 semesters of Statistics, plus six concentration courses. For doctoral students in nursing. Advanced study and research in nursing leading to the completion of the dissertation proposal.

SM 803. Clinical Scholars in the Discipline of Nursing. (E) Clinical Educators from the Standing Faculty. Prerequisite(s): Selection as a Hillman Scholar in Nursing Innovation or at the recommendation of the student's PhD academic advisor. First Fall-Spring post-BSN semesters in the PhD program for Hillman Scholars.
This 2-semester course is designed to enhance the understanding of the practice of nursing as an intellectual discipline for doctoral students who have limited clinical practice experience prior to pursuing the PhD. It consists of individualized clinical experiences that are integrally related to the student's area of research interest and which are facilitated by clinician guides in a variety of settings. Students actively participate in seminars that focus on examining the health needs of individuals and vulnerable patients, the praxis of nursing and its place within the complex health care delivery system, health policy and society at large. Research informing practice and practice informing research are highlighted using the clinical practice experiences as case exemplars.
NURS 803 is a course designed specifically for two groups of PhD students: the Hillman Scholars in Nursing Innovation and post-baccalaureate students completing an MS in passing who have limited clinical experience as a professional nurse. This course is designed to expose students to carefully selected clinical experiences that provide opportunities to build a clinical appreciation of the practice of nursing as an intellectual discipline, to gain an enhanced understanding of the health care delivery system, and to examine the intersection of research, policy, and practice at the frontlines of nursing practice. To this end, this course combines the clinical experiences with a weekly seminar facilitated to dissect common issues experienced by vulnerable patients and families across care settings and specialties, to critically examine the contributions of nursing science to that care, and to examine how the health care system contributes or detracts from optimal care.

SM 811. Historical Thought in Nursing. (B) Fairman. For doctoral students in nursing.
A seminar open to enrolled doctoral students who plan to conduct historical research as some aspect of their program. Meets for one semester on a schedule determined by participants and faculty.

SM 813. Qualitative Paradigm Empirical Nursing Research. (A)
Deatrick. Prerequisite(s): NURS 750. For doctoral students in nursing.
Study of selected qualitative paradigm empirical research approaches, including design and methodology. Critique of selected qualitative research reports from the literature of nursing and related disciplines. Fieldwork exercise and research proposal required.

A critical review of the theoretical and empirical literature dealing with bioethics, nursing ethics, moral development, women's ethics and specific ethical concerns in health and illness care. Students will study topics related to their own interests/needs, guided by the instructor in relation to the discipline of ethics.

SM 817. Theoretical Perspectives of Growth and Development: A Health Care Perspective. (A) Medoff-Cooper; Deatrick; Lipman; O'Sullivan.
This seminar will explore issues related to the theoretical perspectives of growth and development during childhood. Areas of emphasis will include: methodological issues related to research of childhood growth and development, the analysis of developmental data, and measurement issues common to research of development. Included in the discussion will be an analysis of theories in relationship to research of childhood development. The seminar will conclude with an agenda for future directions of research of growth and development.

SM 818. Families and Research. (J)
Deatrick. For doctoral students in nursing.
This seminar will explore issues related to research of families. Included in the ongoing discussion will be an analysis of nursing and other theories in relationship to research of families. Methodological issues related to research of families will be discussed, as will the analysis of family data and measurement issues common to research of families. The seminar will conclude with an agenda for future directions to research of families.

This course will involve a guided review of the pertinent literature relating to the history of technology in 20th century America. The focus will include a critical examination and review of the social origins and implications of technological development and diffusion in healthcare. Various theoretical frameworks in the history of technology will be closely examined in attempt to assist the student in the development of their own framework.

SM 821. (SOCI821) Proseminar in Health Outcomes Research. (K) Lake; Aiken. Prerequisite(s): Prior coursework at undergraduate or masters level in statistics and quantitative methods.
This the first of a two-course sequence designed for doctoral students interested in conducting health outcomes research. The first course (821) focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research; the second course (822) focuses on applying health outcomes research through the development and implementation of a research project. In the first course Penn faculty researchers will use their ongoing studies to illustrate
how study design, sampling, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research. In the second course, students will design and implement a health outcomes research project.

SM 822. (SOCIO822) Applications of Health Outcome Research. (C) Aiken. Prerequisites: Prior coursework at undergraduate or masters level in statistics and quantitative methods, Nursing 821/Sociology 821 is preferred.

This the second of a two-course sequence designed for doctoral students interested in conducting health outcomes research. The first course (821) focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research; the second course (822) focuses on applying health outcomes research through the development and implementation of a research project. In the first course Penn faculty researchers will use their ongoing studies to illustrate how sampling, study design, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research. In the second course, students will design and implement a health outcomes research project.

SM 823. (PUBH539) Designing Interventions to Promote Health and Reduce Health Disparities. (K) Jemmott; Teitelman. Doctoral Students Only.

Advanced analysis, design and evaluation of interventions to promote health and reduce health disparities with a focus on underserved vulnerable minority or ethnic populations, through culturally competent research, education and clinical practice. Areas to be evaluated include: -- Health disparities as it relates to health promotion and disease prevention behavioral intervention research in vulnerable communities; -- Concepts of marginalization, race, ethnicity, class, gender and culture as it relates to health disparities; -- Social-psychological theoretical and research approaches related to developing culturally congruent health promotion interventions to reduce health disparities for vulnerable populations; -- The use of elicitation, focus groups and ethnographic techniques to tailor health behavior theory to meet the needs of the population; -- Culturally competent research methodologies, involving education and/or clinical practice, e.g. culturally competent measures, recruitment, retention, and informed consent in hard to reach populations; -- Community participatory research as a strategy for working with the community to build research partnership and build capacity for sustained health promotion initiatives; -- Health promotion intervention strategies for reducing health disparities in vulnerable communities; -- Strategies to evaluate the effectiveness of interventions using randomized controlled trials (RCTs) in community and clinical settings; -- Strategies for tailoring successful evidenced-based health promotion interventions to a variety of different populations for use in clinical trials and community settings; -- Examine approaches for the translating and disseminating evidenced-based intervention research.

The course focuses on advanced analysis and evaluation of theories, concepts, and methods related to health equity. Topic areas include models and frameworks of health equity; linguistic choices related to equity, disparity, and vulnerability; role of economics, class, gender, sex, sexuality, race, and ethnicity; health equity in special populations; and issues in health policy, research ethics, and research methods. Emphasis is on advanced discourse and analysis of health equity theory and research.

SM 825. Proseminar on Integrative Science in Aging. (B) Cacchione; Ersek. For Doctoral Students Only.

SM 826. Advanced Qualitative Research Methods. (B) Kagan. For Doctoral Students Only.

The course extends beginning qualitative research methods skills to a more advanced level. Students planning a dissertation or career focus in qualitative or mixed methods may use the course to refine interest and skill. The focus of the course centers on interactionist perspectives and collective analysis though methods tangential to these perspectives. Standpoint and participatory methods and analysis may be considered given sufficient student interest. Students are actively involved in selection and critique of seminal and critical readings. Students must have at their disposal a suitable dataset with commensurate permissions or have plans to collect qualitative data amenable to analysis during the course term. This data base can be from previous research proposals and fieldwork can be used as the building blocks for the course assignment(s). The course will focus on data collection, analyses, interpretation, and presentation of results. Skill building will center on collection and management of data; analytic technique including comparative, narrative, and text analysis; development and management of coding schemes; abstraction and development of situation specific theory; and dissemination and diffusion of findings, theories, and relevance to similar phenomena and use in practice.

SM 827. Self-Care of Chronic Illness. (M) Riegel. For PhD Students Only.

This course introduces the history, definitions, predictors, measurement, and outcomes of self-care in chronic illness. Historical, classic and current literature from various disciplines will be studied to give students a broadened perspective of the self-care construct and the issues that patients face when dealing with chronic illness.

SM 828. Response to Chronic Illness: Theory and Research. (A) Riegel. Prerequisite(s): Permission of faculty.

Millions of people of all ages live with chronic illness(es). A diagnosis of a chronic illness is a life-changing event, causing disruption and a sense of loss for many. Common early responses are stress, anxiety, depression, fear, and anger. Over time, with support and experience with the illness, many adjust. But, others report persistent feelings of loss due to physical, emotional, spiritual/existential, social, occupational, and/or financial influences of chronic illness. Those who adjust the best typically find a way to return a sense of normalcy to their lives. Loved ones and caregivers are equally affected by chronic illness and much has been written in recent years about caregiver burden. However, some individuals (caregivers and patients) report positive responses to illness, including a deepened purpose for living and a reordering of life priorities.

The focus of this course is on individual responses to chronic illness-the person diagnosed and his/her loved ones. This course is intended to complement N818, which focuses on families and dyads dealing with chronic illness. In this course we will explore the major theoretical perspectives that underlie this field. The literature describing common responses of both those diagnosed and their loved ones as well as the social and cultural context that helps explain the responses of individuals facing chronic illness will be
examined. Methods used to study chronic illness will be explored in depth.

SM 829. Measurement of Physiologic Variables Related to Health Outcome Disparity. (H) Sommers. For Pre-Doctoral and Post-Doctoral students interested in describing health disparities and developing and testing interventions in vulnerable women, children, and families.

This graduate course is an advanced exploration of biometric methods (branch of science that includes the measurement of physiological variables and parameters) and their use in quantitative research. A particular focus will be on biological measures that can be used as outcome variables to evaluate interventions to promote health and health equity, and reduce health outcome disparities in vulnerable or marginalized populations.

Areas to be evaluated include:* Measurement theory and instrument science as they relate to biological signals; role of biometrics in health outcome disparities research * Ethical considerations and how they relate to biometrics; mitigating perceived threats (profiling, stereotyping); the role of human subjects considerations; the responsible conduct of research * Derivation and types of biologic signals; time-based characteristics * Accuracy and precision of biologic measures; random and non-random error; application and exemplars of strategies to determine accuracy and precision * Role of biological rhythms in biometric measurement; analysis of multiple data points and repeated measures of biological variables * Methods relative to vulnerable women, children, and families; genetics; environmental contaminants; digital image analysis; hormones, metabolites; drugs and alcohol

SM 830. (GSWS830) Conducting Research in Global Women's Health. (A) Teitelman. Prerequisite(s): Completion of course in global health (this may include a reputable online course eg: Coursera), or equivalent background (eg. global health field experience). Permission of Instructor. For graduate and professional students from any field with an interest in global women's health; Masters students by permission of instructor.

An introduction to theoretical and methodological issues as they relate to conducting research in global women's health. Advanced analysis of historical, social, cultural, economic, political, technological and geographical contexts as they influence the health of girls and women across the lifespan and thier relation to health care systems as both clients and providers. This includes contextual issues that constrain the provision & receipt of adequate healthcare.

A critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls formal and informal structures of health care delivery as those needing and/or seeking health care, and as those providing health care to others. Students will examine the multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. Students will focus their examination on the implications of seeking and providing health care for women's and girls' health and well-being. By examining issues in local and global contexts and across geographical boundaries, students will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women's health.

831. Advanced Topics in Health Informatics. (B) Bowles. Prerequisite(s): NURS 651, NURS 551, SYS 528, or permission of instructor. This course is designed to survey a broad range of advanced topics in the field of health informatics. Course faculty and invited speakers will provide the content for weekly meetings conducted in a blended environment (both on-line and in the classroom). Each week, students will listen to a lecture and then participate in a group discussion. Approximately half of these lecture/discussion sessions will take place in a "live" classroom, while the remainder will be available asynchronously in an online setting (i.e. using Blackboard). There will be no textbook, however each speaker will provide links to web-based resources that provide either background information or further elaboration of their topic. A group of students (depending upon size of class, probably 2-3 per topic) will take the lead for each topic, communicating with the speaker and facilitating the class discussion. As a final project, these student groups will also develop a more complete web resource for their selected topic.

SM 832. Laboratory Based Biological Measures. (A) Libonati; Muthukumaran. Prerequisite(s): Biology, Chemistry, Physiology, and Permission of Instructor. For Doctoral and Post-Doctoral students interested in biobehavioral research and measurement techniques used in nursing research. This course will provide an opportunity to gain a broad-based understanding of laboratory methodology, biomarkers, and translational research. Concepts of biological sample processing, storage, quality assurance and control and analysis will be covered. Laboratory measurements with a focus on genetic regulation of biomarkers related to stress, pain, and sleep/fatigue will be covered.

SM 833. Measurement of Health-Related Behavior and Determinants. Karen Glanz. This one semester seminar will provide a detailed overview of measurement of health-related behaviors and determinants of behavior. The course will cover characteristics of measures, data collection, and how to apply the science of measurement to specific health research questions. The course will emphasize This one semester seminar will provide a detailed overview of measurement of the intersection of self-report measures with biological and physical measures, and the use of newer technologies to collect data and improve data quality. Students will integrate concepts and topics covered in the course as they work on a measurement project in their specific area(s) of interest and engage in problem-solving with their peers. This course is intended for doctoral students and advanced masters-level students in the health sciences.

SM 836. Patient-Reported Symptoms & Outcomes for Clinical Research. (A) Richmond. Patient-reported symptoms and outcomes are central to health science and have assumed increasing importance in the broader research arena. The research goal, conceptual clarity of variables, participant characteristics, instrument psychometrics, degree of coarseness/specificity, and participant burden are all essential to consider in selecting patient-reported symptom and outcome measures. This course focuses on linking study needs, design considerations, theoretical concepts, empirical measures, data collection strategies, and analytic approaches to patient-reported symptoms and outcomes for clinical research. Specific symptoms
and outcomes examined in detail may include functional status, quality of life, health status, well-being, sleep, fatigue, weight, pain, shortness of breath, depression, stress, and nausea, but each semester will be tailored to the research interests of the seminar participants.

SM 837. Web-based Research Methodology. (A) 1hm. Prerequisite(s): Enrollment in a Doctoral Program. This doctoral elective course will provide an introduction to Web-based research methods in health-related disciplines. This course will examine research methods that have been adapted to the study of human subjects through the Web. This course will have particular emphasis on quantitative and qualitative empirical methods using the Web as a data collection medium. Another important feature of this course will be intensive analysis of ethical and methodological issues conducting research through the Web. Areas to be analyzed include: types of Web-based research; advantages and disadvantages of Web-based research; vehicles (e.g. funding, mentoring) that have supported Web-based research; human subject protection issues; issues/concerns in recruitment and data collection in Web-based research; and professional vehicles (e.g. scholarly publication, lay publications, speaking forums) that have helped disseminate the knowledge derived from Web-based research.

890. Nursing Doctoral Teaching Residency. (A) Designated Member of the School of Nursing Grad Group. For Nursing Doctoral Students Only. The purpose of this required one semester teaching residency is to enhance the expertise of students in the role of educator. The residency will be tailored to the student's individual learning needs. At the minimum, students with no or minimal prior teaching experience will gain a beginning level of expertise in course planning, course evaluation, dealing with difficult student situations, test construction, paper assignment construction and grading, content delivery methods, as well as other aspects of the faculty teaching role. Students with more extensive teaching experience will tailor their residencies with their residency supervisor to enhance their expertise in these various areas.

897. Nursing Doctoral Research Residency. (A) Designated Member of the School of Nursing Grad Group. For Nursing Doctoral Students Only. The purpose of this required one semester research residency is to enhance student research training early in the doctoral program by providing a mentored research experience. The residency is designed to be a tailored hands-on experience to provide students with exposure and the opportunity to participate in one or more aspects of an on-going research project. Research residencies are experiential activities designed to meet the student's individual learning needs. At the minimum, students with no or minimal prior research experience will gain a beginning level of experience on a variety of components of an ongoing research project. Students with more extensive research experience will tailor their residencies with their residency supervisor to enhance their expertise in these various areas.

900. Directed Study. (C) Must be arranged with the written permission of the sponsoring faculty member prior to registration.

995. Dissertation. (C) Dissertation General Tuition
knowledge and tools to utilize information systems to pursue a firm's strategic and organizational goals. The course has no prerequisites other than a general interest in the applications of information technology.

221. (ESE 522) Operations Strategy and Process Management. (C) Staff. Cross listed with ESE 522. This course examines how organizations can develop and leverage excellence in process management. The first module focuses on operations strategy. In these classes, we examine what constitutes an operations strategy and how organizations can create value by managing complexity, uncertainty, and product development. In the second half of the course, we discuss recent developments in both manufacturing and service industries. Specifically, we examine initiatives in quality, lean manufacturing and enterprise-wide planning systems. The course is recommended for those interested in consulting or operations careers, as well as students with an engineering background who wish to develop a better understanding of managing production processes.

222. (LGST222) Internet Law & Policy. (C) Staff. cross listed with LGST 222. The Internet has become central to business and daily life. This course looks at how courts, legislatures, and regulators confront the major legal issues that the Internet poses. The fundamental challenge is that law comes from governments and other institutions in specific places, but the Internet is global and virtual. Conflicts such as the shutdown of the Napster peer-to-peer file-sharing service and the debate over "network neutrality" regulations for broadband access illustrate the challenge. How does the legal system think about Google, Skype, Twitter, and Facebook? How should it?

223. Service Operations Management. (C) Staff.

240. (LGST240) Gamification for Business.

For Spring 2015 - If Risk Analy & Env Mgmt is closed after the pre-registration period, please e-mail Kyle Dix at kyle.dix@wharton.upenn.edu to be added to the wait list for the class. Please be sure to include your Name, Student ID #, what section you are interested in (OPIM, BPUB, or ESE) and list what class level you are in. We will do our best to accommodate as many students as possible on the wait list.

This course examines environmental and energy issues from an economist's perspective. Over the last several decades, energy markets have become some of the most dynamic markets of the world economy, as they experienced a shift from heavy regulation to market-driven incentives. First we look at scarcity pricing and market power in electricity and gasoline markets. We then study oil and gas markets, with an emphasis on optimal extraction and pricing, and geopolitical risks that investors in hyrocarbon resources face. We then shift gears to the sources of environmental problems (many of which are energy-related), and policy makers can intervene to solve some of these problems. We talk about the economic rationale for a broad range of possible policies: environmental taxes, subsidies, performance standards and cap-and-trade. In doing so, we discuss fundamental concepts in environmental economics such as externalities, valuation of the environment and the challenge of designing international agreements. At the end of the course, there will be special attention for the economics and finance of renewable energy and policies to foster its growth. Finally, we discuss the transportation sector, and analyze heavily debated policies such as fuel-economy standards and subsidies for green vehicles.

290. Decision Processes.

Prerequisite(s): STAT 101 or equivalent strongly recommended.

This course is an intensive introduction to various scientific perspectives on the processes through which people make decisions. Perspectives covered include cognitive psychology of human problem-solving, judgment and choice, theories of rational judgment and decision, and the mathematical theory of games. Much of the material is technically rigorous. Prior or current enrollment in STAT 101 or the equivalent, although not required, is strongly recommended.

291. (LGST206, MGMT291, OIDD691) Negotiations. (C)

Negotiation is the art and the science of creating good agreements between two or more parties. This course develops managerial negotiation skills by mixing
lectures and practice, using cases and exercises in which students negotiate with each other. The cases cover a wide range of problems and settings: one-shot deals between individuals, repeated negotiations, negotiations over several issues, and negotiations among several parties (both within and between organizations). Class participation and case studies account for half the course grade. Students will also write about a negotiation experience outside of class.

This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course builds upon and assumes familiarity with the negotiation concepts covered in the prerequisite for this course: "Negotiations." In this course, we extend the study and practice of negotiations, and we develop a deeper understanding of how specific aspects of the negotiation process impact outcomes. Through course lectures, readings, and exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

299. JUDG & DEC MAKING RES IM. (A)
This class provides a high-level introduction to the field of judgment and decision making (JDM) and in-depth exposure to the process of doing research in this area. Throughout the semester you will gain hands-on experience with several different JDM research projects. You will be paired with a PhD student or faculty mentor who is working on a variety of different research studies. Each week you will be given assignments that are central to one or more of these studies, and you will be given detailed descriptions of the research projects you are contributing to and how your assignments relate to the successful completion of these projects. To complement your hands-on research experience, throughout the semester you will be assigned readings from the book Nudge by Thaler and Sunstein, which summarizes key recent ideas in the JDM literature. You will also meet as a group for an hour once every three weeks with the class's faculty supervisor and all of his or her PhD students to discuss the projects you are working on, to discuss the class readings, and to discuss your own research ideas stimulated by getting involved in various projects. Date and time to be mutually agreed upon by supervising faculty and students. The ICU version of this course will involve approx. 10 hours of research immersion per week and a 10-page paper. The 0.5 CU version of this course will involve approx 5 hours of research immersion per week and a 5-page final paper. Please contact Katy Milzman if you are interested in enrolling in this course: kmilzman@wharton.upenn.edu

311. Business Computer Languages. (C)
This course is taught with the more descriptive title of "Scripting for Business Analytics." "Business Analytics" refers to modeling and analysis undertaken for purposes of management and supporting decision making. The varieties of techniques and methods are numerous and growing, including simple equation-based models, constrained optimization models, probabilistic models, visualization, data analysis, and much more. Elementary modeling of this sort can be undertaken in Excel and other spreadsheet programs, but "industrial strength" applications typically use more sophisticated tools, based on scripting languages. Scripting languages are programming languages that are designed to be learned easily and to be used for special purposes, rather than for large-scale application programming. This course focuses on the special purposes associated with business analytics and teaches MATLAB and Python in this context. MATLAB and Python are widely used in practice (both in management and in engineering), as are the business analytic methods covered in the course. Prior programming experience is useful, but not required or presumed for this course.

314. (OIDD662) Enabling Technologies. (C) Staff.
Conducting business in a networked economy invariably involves interplay with technology. The purpose of this course is to improve understanding of technology (what it can or cannot enable) and the business drivers of technology-related decisions in firms. We will be discussing some of the new and most disruptive technologies right now to stimulate thought on new applications for commerce and new ventures, as well as their implications to the tech industry as a whole. Topics include social media, online advertising, big data, and cloud computing.

The course will take a layered approach (from network infrastructure) to data infrastructure to applications infrastructure, or direct enablers of commerce) to first, understanding and then, thinking about technology enablers. Network infrastructure layers include fundamentals of wired and wireless infrastructure technologies such as protocols for networking, broadband technologies - for last (DSL, Cable etc) and other miles (advances in optical networking) and digital cellular communications. Data infrastructure layers include usage tracking technologies, search technologies and data mining. Direct application layers include personalization technologies (CRM), design technologies for content and exchanges, software renting enablers, application service provision, agents and security mechanisms. Finally some emerging technology enablers (such as Bluetooth, biometrics and virtual reality) are identified and discussed.

315. Data Base Management Systems. (C) Staff.
Organizations continue to increase their reliance on computerized database management and information retrieval systems. Whether purchasing airplane tickets, managing retail merchandise, processing financial trades or simply sending email, data management defines the modern firm. This course aims to provide students with both a practical and theoretical introduction to the design, implementation, and use of such systems. Students are introduced to the fundamental concepts and principals of data management and gain practical experience by designing and deploying a working system. Throughout the course, case studies are used to illustrate theoretical concepts while acquainting students with innovative commercial uses of these systems.

316. (OIDD661) Systems Analysis, Design, and Implementation. (C) Staff.
At its surface this course introduces students to the management and technical issues associated with planning and designing large-scale computer systems. It does so in part as an elaboration of Fred Brooks's observation that "The technology, the surrounding organization, and the traditions of the craft conspire to define certain items of paperwork." But if that were our only goal, we would soon find ourselves mired in (and probably arguing about) the minutiae of how such paper items ought to be constructed - not a very helpful pedagogical exercise. So then, at a deeper level we seek to understand why the conspiracy endures, and why in spite of it, systems still take too long and cost too much to build as a systems project's team members struggle to understand one another across disparate discourse communities and world views, differences in experience and training, and over long
periods of time. More than anything else, within the context of working with the main tools and techniques of systems analysis and design, this course treats communication, corroboration, and thinking within the boundaries of a technology-oriented project as its primary subjects.

SM 319. Advanced Decision Systems: Evolutionary Computation. (C)
This course is taught with the more descriptive title of "Agents, Games, and Evolution." It explores applications and fundamentals of strategic behavior. Strategic, or game-theoretic, topics arise throughout the social sciences. The topics include--and we discuss--trust, cooperation, market-related phenomena (including price equilibria and distribution of wealth), norms, conventions, commitment, coalition formation, and negotiation. They also include such applied matters as design of logistics systems, auctions, and markets generally (for example, markets for electric power generation). In addressing these topics we focus on the practical problem of finding effective strategies for agents in strategic situations (or games). Our method of exploration will be experimental: we review and discuss experiments, principally computational experiments, on the behavior of boundedly rational agents in strategic (or game-theoretic) situations. Course work includes readings, discussions in class (organized as a seminar), examinations, and a course project on a topic chosen by the participants.

321. Introduction to Management Science. (C) Staff.
Understanding how to use data and business analytics can be the key differential for a company's success or failure. This course is designed to introduce fundamental quantitative decisionmaking tools for a broad range of managerial decision problems. Topics covered include linear, nonlinear, and discrete optimization, dynamic programming, and simulation. Students will apply these quantitative models in applications of portfolio management, electricity auctions, revenue management for airlines, manufacturing, advertising budget allocation, and healthcare scheduling operations. Emphasis in this course is placed on mathematical modeling of real world problems and implementation of decision making tools.

325. (PHIL203) Computer Simulation Models. (C) Staff.
This course focuses on agent-based computational models in the social sciences, especially in economic, in commercial and in strategic (game-theoretic) contexts. This relatively recent and now rapidly-developing form of computer simulation seeks to explain and predict complex social phenomena "from the ground up", through interactions of comparatively simple agents. The course reviews experimental and theoretical results, and exposes the students to modern development environments for this form of simulation. Students have the opportunity to design and implement agent-based simulations. Programming, however, is not required. This course aims to integrate various topics in agent-based simulation, while developing an appreciation of the problems that are particularly characteristic of this form of simulation so that students will understand its promise and potential.

353. (OIDD653) MATH MDLNG APPL IN FNCE. (C) Tsoukalas. Prerequisite(s): OPIM321 (or a similar optimization class). Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the increased globalization of the financial markets, the proliferation of information technology and the rise of high-frequency traders, etc. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and other derivatives are studied. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB. This course is quantitative and will require extensive computer use. The course is intended for students who have strong interest in finance. The objective is to provide students the necessary practical tools they will require should they choose to join the financial services industry, particularly in roles such as: derivatives, quantitative trading, portfolio management, structuring, financial engineering, risk management, etc. Prospective students should be comfortable with quantitative methods such as basic statistics and the methodologies (mathematical programming and simulation) taught in OPIM612 Business Analytics and OPIM321 Management Science (or equivalent). Students should seek permission from the instructor if the background requirements are not met.

397. (OIDD697) Retail Supply Chain Management. See description under OIDD 697.

398. (OIDD698) Retail Supply Chains. The course will examine how retailers understand their customers' preferences and respond with appropriate products through effective supply chain management. The course class sections will deal with the following major items: (1) linking finance and operations in retailing, (2) what assortment of products should a retailer carry in each store, (3) optimizing the inventory carried of each SKU in each store, (4) markdown pricing, (5) store execution and (6) supply chain design. In addition, we will consider a broad range of issues facing two retailers, Mothers Work, and Best Buy, when we are visited by current and past senior executives from these firms.

The course is highly recommended for students interested in careers in: (1) Retailing and retail supply chains, (2) Businesses like banking, consulting and information technology that provide services to retail firms, (3) Manufacturing companies that sell their products through retail firms. Even if you don't expect to work for a retailer, this course can be useful to you in two ways. First, because retailers are such dominant players in many supply chains today, it is important that the processes they follow be understood by manufacturers and distributors, or by the consultants and bankers that service retailers and their suppliers. Second, the problems retailers face (e.g., making data accessible, interpreting large amounts of data, reducing lead-times, eliciting the best efforts from employees, and so forth), are shared by firms in many other industries. It's easier to understand these issues through case studies in retailing because we all experience the industry as consumers and can readily relate to chronic problems such as stock outs and markdowns.

The course will be highly interactive, using case discussions in more than half of the classes and including senior retail executives in a number of the class sessions.

399. Supervised Study. (C) 1 c.u. By appointment.
Decision science majors read and report on a bibliography of works in their field of specialization provided by a faculty member.
410. (OIDD672) Decision Support Systems. (C) Staff. Crosslisted with OPIM 672. See description under OPIM 672.

412. Intro to Computer Programming. (C)

415. (IPD 515, MEAM415) Product Design.
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Students will work in teams to propose and design initial ideas for a new product and culminate in the creation of a prototype. The course is open to juniors and seniors in SEAS or Wharton.

416. (IPD 517) Design and Development of Web-Based Products and Services.
In this course, students will study innovation and new product development in the context of Web-based products and services. This course lies at the intersection of product design and information technology; it is intended for students with general interests in the design of new products and/or information technology management. The course builds from a general product design methodology. For example, students begin with opportunity identification and analysis of user needs. However, the course also extends principles and practices used in innovation and new product development to information technologies in general and the Web in particular. For example, design-for-manufacturing is addressed with open-source software and Web services. Robust Engineering and Design of Experiments is applied to paper prototyping and server log analysis. The course is an interdisciplinary, integrative project-based course. Through weekly assignments, students apply the tools and techniques to the design of a new product, culminating in the initial roll-out of a working service. The course is open to juniors and seniors in SEAS or Wharton.

469. Information Strategy and Economics. (C)
The course is devoted to the study of the strategic use of information and the related role of information technology. The topics of the course vary year to year, but generally include current issues in selling digital products, intermediation, and disintermediation, designing and competing in electronic markets, outsourcing, and technology project management. Heavy emphasis is placed on utilizing information economics to analyze new and existing businesses in information-intensive industries. Technology skills are not required, although a background in information technology management (equivalent to OPIM 210), strategic management or managerial economics is helpful.

611. Quality and Productivity. (A)
Matching supply with demand is an enormous challenge for firms: excess supply is too costly, inadequate supply irritates customers. In the course, we will explore how firms can better organize their operations so that they more effectively align their supply with the demand for their products and services. Throughout the course, we illustrate mathematical analysis applied to real operational challenges—we seek rigor and relevance. Our aim is to provide both practical knowledge and high-level insights needed by general managers and management consultants. We will demonstrate that companies can use (and have used) the principles from this course to significantly enhance their competitiveness.

612. Business Analytics. (B)
"Managing the Productive Core: Business Analytics" is a course on business analytics tools and their application to management problems. Its main topics are optimization, decision making under uncertainty, and simulation. The emphasis is on business analytics tools that are widely used in diverse industries and functional areas, including operations, finance, accounting, and marketing.

613. Managing the Productive Core of the Firm: Information and Business Transformation. (B)
Information technology has transformed many industries, including media, financial services, and retailing, among others. These technologies have changed not only how we produce services (e.g., outsourcing and offshoring, and their newest extension, cloud computing) but what services we offer (virtual experiences, online advertising, long tail products and services, and social networking). The purpose of this course is to improve understanding of how information technologies enable transformation of business models within existing organizations as well as the development of completely new business models and new organizational forms. The course will serve as an introductory course on information technologies and will serve as a foundation on which students can explore more advanced technology concepts.

614. Innovation. (A)
The course is first and foremost an intensive, integrative, project course in which student teams create one or more real businesses. Some businesses spun out of the course and now managed by alumni include Terrapass Inc and Smatchy Inc. The project experience is an exciting context in which to learn key tools and fundamentals useful in innovation, problem solving, and design. Examples of these tools and fundamentals are: problem definition, identification of opportunities, generating alternatives, selecting among alternatives, principles of data graphics, and managing innovation pipelines. The course requires a commitment of at least 10 hours of work outside of class and comfort working on unstructured, interdisciplinary problems. Students with a strong interest in innovation and entrepreneurship are particularly encouraged to enroll. Please read carefully the syllabus posted on-line before registering for this course.

615. Operations Strategy. (B)
Operations strategy is about organizing people and resources to gain a competitive advantage in the delivery of products (both goods and services) to customers. This course approaches this challenge primarily from two perspectives: 1) how should a firm design their products so that they can be profitably offered; 2) how can a firm best organize and acquire resources to deliver its portfolio of products to customers. To be able to make intelligent decisions regarding these high-level choices, this course also provides a foundation of analytical methods. These methods give students a conceptual framework for understanding the linkage between how a firm manages its supply and how well that supply matches the firm's resulting demand. Specific course topics include designing service systems, managing inventory and product variety, capacity planning, approaches to sourcing and supplier management, constructing global supply chains, managing sustainability initiatives, and revenue management. This course emphasizes both quantitative tools and qualitative frameworks. Neither is more important than the other.
621. Decision Models and Uncertainty. (A) Lecture and discussion, with case studies and problem assignments. The applicability and use of management science models have increased dramatically in recent years due to the extraordinary improvements in computer, information, and communication technologies. Personal computers and friendly interfaces have become effective "delivery vehicles" for powerful decision models that were once the exclusive province of experts. This core course in management science has a twofold purpose. First, it seeks to introduce simple models and ideas that provide powerful (and oftentimes surprising) qualitative insights about a large spectrum of managerial problems. Its main topics include linear and integer programming, decision making under uncertainty, and simulation. Second, it aims to give a feeling for the kinds of problems that can be tackled quantitatively, the methods and software available for doing so and the difficulties involved in gathering the relevant data. The emphasis is on models that are widely used in diverse industries and functions areas, including finance, operations, accounting, and marketing.

632. (LAW 517) Operations Management: Supply Chain Management. (B) Lectures, cases, class discussions.

Matching supply with demand is a primary challenge for a firm: excess supply is too costly, inadequate supply irritates customers. Matching supply to demand is easiest when a firm has a flexible supply process, but flexibility is generally expensive. In this course we will 1) learn how to assess the appropriate level of supply flexibility for a given industry and 2) explore strategies for economically increasing a firm's supply flexibility. While tactical models and decisions are part of this course, the emphasis is on the qualitative insights needed by general managers or management consultants. We will demonstrate that companies can use (and have used) the principles from this course to significantly enhance their competitiveness.

Inactive

Why can't work be fun? Leading firms are engaging in the practice of gamification, using the techniques of digital game designers to serve objectives as varied as marketing, human resources management, productivity enhancement, training, innovation, and customer engagement. This course will examine the mechanism of gamification and provide an understanding of their effective use in the modern firm. Cross-listed with LGST 640.

The course will draw upon interdisciplinary source material as well as real-world case studies and production game environments to identify effective analytical models, strategies, techniques, and metrics for the application of games to business. It will also identify a number of significant pitfalls to the successful implementation of gamification techniques, notably legal and ethical issues, the difficulty of making things fun, and the problems with implementing radical change in established firms. The course will include both in-person meetings and web-based online sessions.

642. Analytics for Services.

Prerequisites: Students who have already taken OIDD 611, OIDD 612, and STAT 613 should be well-equipped for the class. Other students should have a solid understanding of elementary probability, statistics and linear programming. For questions regarding the specifics of your background, please contact the instructor. Class participation, case write-ups, online quizzes, self-study exercises and a final exam.

This course covers a range of analytical methods that are useful tools for capacity management in services, and it will provide you with insights into the economics of a range of services businesses including (i) High-level planning models that account for multiple dimensions of service capacity, (ii) Low-level models of system congestion that capture the relationship between capacity choices, quality of service and, in some cases, system revenue, (iii) Statistical estimation and forecasting models to characterize key measures of future supply and demand.

652. Advanced Management Science: Models and Applications. (M) Prerequisite(s): OPIM 621.

This course will cover applications of decision models to managerial problems in a variety of business functions. The course will use management science techniques such as mathematical programming (LP/IP/NLP), Monte-Carlo simulation, decision trees, probability theory and statistical analysis as the vehicle for applying diverse management theories to real-world problems. Potential in-class applications include product-line selection, risk management, corporate real options, and supply-chain restructuring. The course will emphasize the practical application of these techniques; problems will be solved using popular packages such as Excel, and Crystal Ball.

653. (OIDD353) Mathematical Modeling and its Application in Finance. (C) Tsoukalas. Prerequisite(s): Either OPIM321 or OPIM612 (or a similar optimization class).

Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the increased globalization of the financial markets, the proliferation of information technology and the rise of high-frequency traders, etc. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and other derivatives are studied. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB. This course is quantitative and will require extensive computer use. The course is intended for students who have strong interest in finance. The objective is to provide students the necessary practical tools they will require should they choose to join the financial services industry, particularly in roles such as: derivatives, quantitative trading, portfolio management, structuring, financial engineering, risk management, etc. Prospective students should be comfortable with quantitative methods, such as basic statistics and the methodologies (mathematical programming and simulation) taught in OPIM612 Business Analytics or OPIM321 Management Science (or equivalent). Students should seek permission from the instructor if the background requirements are not met.

654. Product Design and Development. (B) Staff. Lectures, case and problem analyses, group presentations, the development of a new product to the prototype stage.

The course provides the student with a number of tools and concepts necessary for creating and managing product development processes. The course consists of two interwoven parts. First, it presents the basic steps that are necessary for moving from a "cool idea" to a product sufficiently mature to launch an
entrepreneurial start-up. This includes cases, lectures, and exercises on topics like identifying customer needs, developing a product concept as well as effective prototyping strategies. The capstone of this first part is a real project in which student teams conceptualize and develop a new product or service up to the completion of a fully functional prototype.

Second, the course discusses a number of challenges related to product development as encountered by management consultants, members of cross-functional development teams as well as general managers. We will analyze several cases related to, among others, resource allocation in R&D organizations, organizational forms of product development teams, as well as managing development projects across large geographic distances.

655. (MKTG655) Operations, Marketing, and Design Integration. (B) Staff. Prerequisite(s): MKTG 621, MKTG 622, OPIM 631, OPIM 632. Crosslisted with MKTG 655.

This course covers topics that span marketing and operations management. Students will examine issues and decisions that require significant coordination between managers in marketing and operations. Topics include channel management, supply chain design, product variety management and service operations pricing and control.

656. (ESE 522) Operations Strategy. (C) Staff. Prerequisite(s): OPIM 621, OPIM 631, and OPIM 632 or equivalent. Crosslisted with ESE 522.

This course examines how organizations can develop and leverage excellence in process management. The first module focuses on operations strategy. In these classes, we examine what constitutes an operation strategy and how organizations can create value by managing complexity, uncertainty, and product development. In the second half of the course, we discuss recent developments in both manufacturing and service industries. Specifically, we examine initiatives in quality, lean manufacturing and enterprise-wide planning systems. The course is recommended for those interested in consulting or operations careers, as well as students with an engineering background who wish to develop a better understanding of managing production processes.

658. Service Operations Management. (C) Staff. Prerequisite(s): Courses in operations management, linear programming, probability and statistics. The service sector represents the largest segment of most industrial economies. In the U.S., for example, it accounts for approximately 70% of GDP and 70% of employment. In addition to this "pure" service sector, the operations and competitive positions of many manufacturing firms are becoming increasingly service-oriented. While operational excellence is critical for success in most industries today, in a wide range of service industries this is particularly true. For example, recent, significant deregulation in banking, health care, and communications has led to intensified competition and pressure on operations. At the same time, the rapid evolution of information technology has enabled firms to operate in a fashion - and offer a level of service - that has not been previously possible. Elements common to most services make the management of their operations complex, however. In particular, services are intangible, not storable or transportable, and often highly variable. Frequently their delivery involves distributed operations with a significant amount of customer contact. All of these factors make service operations end up looking quite a bit different than manufacturing operations, and the task of achieving excellence in them requires specialized analysis frameworks and tools.

This course covers a mix of qualitative and quantitative models that provide the necessary tools. The class will focus on simple models that should help you to better understand both the difficulty of managing and the underlying economics of the service operations being considered. You will have the opportunity to apply these course tools in a group service assessment field project.

659. Advanced Topics in Quantitative Methods and Operations Management. (C) Staff. Prerequisite(s): OPIM 631 and OPIM 632.

The specific content of this course varies from semester to semester, depending on student and faculty interest. Recent topics have included global operations, product design and development, quality management, and logistics strategy. See department for course description.

662. (OIDD314) Enabling Technologies. Lectures, discussions, assignments and class participation.

This course is about understanding emerging technology enablers with a goal of stimulating thinking on new applications for commerce. No prerequisite or technical background is assumed. The class is self-contained (mainly lecture-based) and will culminate in a class-driven identification of novel businesses that exploit these enablers.

No prerequisite or technical background is assumed. Students with little prior technical background can use the course to become more technologically informed. Those with moderate to advanced technical background may find the course a useful survey of emerging technologies. The course is recommended for students interested in careers in consulting, investment banking and venture capital in the tech sector.

664. Database and Information Management Systems. (C) Staff.

Data and information are critical to the modern organization. Whether used in knowledge management, business intelligence, enterprise resource planning (ERP), product design, marketing, personalization and other aspects of managing customer relationships (CRM), the underlying principles of data management are the same. This course aims to provide a practical introduction to the fundamental principles. Examples and exercises will cover the relational database tools at the core of ERP, CRM, and on-line exchanges and portals. However, the course will also use the same basic foundations to consider emerging technologies and standards such as XML, ebXML, UDDI, etc.

Inactive

665. Operations Management in Health Care. Faculty. Prerequisite(s): OPIM 631.

In an era where health care systems around the world face rapidly rising costs and quality issues, organizations large and small are looking into the operational side of health care for solutions. Likewise, the abundance of unfulfilled needs in the health care marketplace has led to an array of technology ventures with innovative new products and services. In this course, we apply the tools of operations management to analyze the health care value chain. The course consists of four modules: (1) the management of productivity, quality, and variability by care providers, (2) capacity and investment decisions under uncertainty confronting pharmaceuticals, (3) the design of health insurance by health plans and the
The past few years have seen an explosion in the use of software packages to build models. Businesses and have witnessed enabling technologies such as database systems, client-server computing and artificial intelligence reach industrial strength. These trends have spawned a new breed of systems that can support the extraction of useful information from large quantities of data. Understanding the power and limitations of these emerging technologies can provide managers and information systems professionals new approaches to support the task of solving hard business problems. This course will provide an overview of these techniques (such as genetic algorithms, neural networks, and decision trees) and discuss applications such as fraud detection, customer segmentation, trading, marketing strategies and customer support via cases and real datasets.

673. Global Supply Chain Mgmt.
Several forces, ranging from technology that has dramatically reduced the cost of communication, to political developments such as the opening up of China, Vietnam, and Eastern Europe, have created an avalanche of outsourcing and offshoring and lead to supply chains that stretch halfway around the world. This course will study the many questions that arise in the management of such global supply chains, including: Which design and production activities to do in-house and which to outsource? Where to locate various activities around the world? How to forecast the many factors that influence these decisions, including inflation in cost factors such as labor and freight, and the likelihood of future government regulation or political instability? How to keep the supply chain flexible so as to adapt to change? How to manage a geographically dispersed supply chain, including what relationships to have with vendors to ensure low cost, high quality, flexibility, safety, humane labor practices and respect for sustainability of the environment? The course is highly interactive, using case discussions in most classes and senior supply chain executives in many sessions. Students will also study how IT has enabled firms to define new markets in ways that were not possible until recently. This is an advanced elective that covers several essential topics in information strategy - IT and market structure, impact of IT on knowledge-intensive products and services and creating hybrid markets that span multiple channels. Students will compete in simulated electronic markets, different market mechanisms and formulate information-based strategies. Students will also study how IT has enabled the globalization of services through the outsourcing of processes (BPO) and how quasi market structures which combine elements of organization and markets are emerging in knowledge-intensive service industries.

690. (MGMT690) Managerial Decision Making. (C) Staff. Crosslisted with MGMT 690.
The course is built around lectures reviewing multiple empirical studies, class discussion, and a few cases. Depending on the instructor, grading is determined by some combination of short written assignments, tests, class participation and a final project (see each instructor's syllabus for details).

691. (LGST806, MGMT691, OIDD291) Negotiations. (C) Staff. Prerequisite(s): LGST 606, MGMT 691. Lectures, cases, presentations, and written assignments. Negociation is the art and science of creating good agreements. In this course we will work on both, studying economics...
and psychology for the science, and practicing actual negotiations for the art. Throughout we think of negotiation in general terms, relevant not only to salary negotiations and home buying, but performance evaluations, speeches, group collaborations and interpersonal relationships. We practice these kinds of negotiations in 2-, 3-, 4-, and 6-person exercises. Potential reasons to skip this particular negotiation course: 1) We have a strong attendance policy, 2) We have strong no-computers/phones policies, 3) the course is very discussion oriented, 4) We survey your work colleagues about your influence tactics, and 5) you have a short assignment due almost every class.

Beginning with the second week of class, if you miss one class you lose a letter grade. If you miss two classes you fail. We have this policy because it is an experiential class, and because your attendance directly affects classmates you are paired with. For some weeks you can attend another section if necessary. Cross-listed with MGMT691 and LGST806.

693. (LGST693) INFLUENCE. (C)

695. Semester in San Francisco Regional Seminar. (C) As part of the Wharton Semester in San Francisco (SSF) program, this course is designed to (i) provide integrative material that emphasizes links between finance, marketing, product design, negotiations, and other themes in the SSF academic curriculum; (ii) link classroom theories and principles to actual practice by reflecting on the academic literature and (iii) highlight the unique characteristics of, and the programs proximity to, the Bay Area economy. All students participating in the SSF are required to register for this Regional Seminar.

697. (OIDD397) Retail Supply Chain Management. (C) Lectures, case discussion, guest speakers. Class participation, papers, and a term project.

This course is highly recommended for students with an interest in pursuing careers in: (1) retailing and retail supply chains; (2) businesses like banking, consulting, information technology, that provides services to retail firms; (3) manufacturing companies (e.g. P&G) that sell their products through retail firms. Retailing is a huge industry that has consistently been an incubator for new business concepts. This course will examine how retailers understand their customers' preferences and respond with appropriate products through effective supply chain management. Supply chain management is vitally important for retailers and has been noted as the source of success for many retailers such as Wal-mart and Home Depot, and as an inhibitor of success for e-tailers as they struggle with delivery reliability. See M. L. Fisher, A. Raman and A. McClelland, "Rocket Science Retailing is Coming - Are You Ready?", Harvard Business Review, July/August 2000 for related research.

698. (OIDD398) Value Networks. (M) Staff.

This is a project-based course run in a seminar format to explore current trends and opportunities for integration and coordination in IT-enabled value-chain networks. The curriculum is structured around a live case; students will work in teams to synthesize data from the live case and evaluate possible operational strategies and IT enablers in the context of a real, ongoing business restructuring decision. Students will review a set of operations strategies affecting production, fulfillment, procurement product design, and support that may prove relevant e.g., postponement, Mass Customization, Customer Service Differentiation, Buyer/Supplier Coordination. We also consider functionality that underlies relevant information technologies like Enterprise Resource Planning (ERP) or Customer Relationship Management (CRM), e.g. data integration, information quality, and security. Finally, we invite different vendors into the class to provide students with the opportunity to compare and contrast state-of-the-art IT and Operations Management solutions.

Inactive

761. (BEPP261, BEPP761, BEPP961, OIDD261) Risk Analysis and Environmental Management. (C) Staff. Cross listed with OPIM 261, BPUB 261, 761, 961, and ESE 567.

This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnerships in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem. Cross-listed with BPUB 761.

762. Environmental Sustainability and Value Creation. (C) Staff. MBA mini elective. This course is one of the set of mini-elective courses satisfying the core requirement. Lecture and discussion including guest speakers. Class discussion, presentations, and final project. This course approaches environmental issues, and sustainable development more largely, from the standpoint of business. It emphasizes the trends in corporate practices and uses case studies to examine the interactions between the environment and the firm. Value creation focuses on new innovative services and financial products in this fast growing sphere. This course has three objectives: to increase your knowledge as future top decision makers on key environmental questions; to recognize environmental concerns as competitive opportunities; to teach students to think strategically and act entrepreneurially on environmental issues. You will leave the class with a tool-kit for action.

763. (BEPP763) ENERGY MARKETS & POLICY.

898. Advanced Topics. (M)

900. (PSYC608) Foundations of Decision Processes. (C) Staff. Prerequisite(s): STAT 510 or 550. The course is an introduction to research on normative, descriptive and prescriptive models of judgement and choice under uncertainty. We will be studying the underlying theory of decision processes as well as applications in individual group and organizational choice. Guest speakers will relate the concepts of decision processes and behavioral economics to applied problems in their area of expertise. As part of the course there will be a theoretical or empirical term paper on the application of decision processes to each student's particular area of interest.

904. (BEPP904) Experimental Economics. (M) Staff. Prerequisite(s): OPIM900 or permission of the instructor. Many theories in economics can be tested usefully in experiments in which researchers control parameters that are uncontrolled in natural settings. This course presents the theory of the experimental method and validity along with several examples of experimental testing: simple competitive equilibrium, intertemporal competitive equilibrium, asset markets, futures markets, bargaining models, tournaments, reputation-building in repeated games, etc.
SM 906. Proseminar in Operations and Information Management. (M) Staff.

Introduction to mathematical programming for PhD students who would like to be intelligent and sophisticated consumers of mathematical programming theory but do not plan to specialize in this area. Integer and nonlinear programming are covered, including the fundamentals of each area together with a sense of the state-of-the-art and expected directions of future progress.

913. Advanced Linear Programming. (M) Prerequisite(s): OPIM 910/ESE504 or equivalent.

914. Advanced Non-Linear Programming. (M) Staff. Prerequisite(s): OPIM910 or equivalent.

915. Advanced Graph Theory. (M) Staff. Prerequisite(s): OPIM910 / ESE504 or equivalent.
Deals mainly with algorithmic and computational aspects of graph theory. Topics and problems include reachability and connectivity, setcovering, graph coloring, location of centers, location of medians, trees, shortest path, circuits, traveling salesman problem, network flows, matching, transportation, and assignment problems.

916. Advanced Integer Programming. (M) Staff. Prerequisite(s): OPIM 910 or equivalent.
In-depth review of solution methods: Lagrangean relaxation and column generation, Benders partitioning, cross-decomposition, surrogate relaxation, cutting planes and valid inequalities, logical processing, probing, branch-and-bound, branch-and-price. Study of special problems and applications: matching, location, generalized assignment, traveling salesman, forest planning, production scheduling.

Empirical research in Operations Management has been repeatedly called for over the last 10-15 years, including calls made from the academic thought leaders in the field as well as by many of the editors of the top academic journals. Remarkably though, most researchers in the field would be pressed to name even three empirical papers published in such journals like Management Science or Operations Research. But, has there really been so little published related to empirical Operations Management (you might be surprised to learn that all five bullets listed above has been addressed by Management Science papers)? What types of problems in operations are interesting and worthwhile studying from an empirical viewpoint? How can one get started with an empirical research project in Operations Management? These are the questions that are at the heart of this course.

Specifically, the objective of this course is to (a) expose doctoral students to the existing empirical literature and (b) to provide them with the training required to engage in an empirical study themselves.

930. Stochastic Models. (A) Staff. Prerequisite(s): STAT510 or 550 or equivalent.
This course introduces mathematical models describing and analyzing the behavior of processes that exhibit random components. The theory of stochastic processes will be developed based on elementary probability theory and calculus. Topics include random walks, Poisson processes, Markov chains in discrete and continuous time, renewal theory, and martingales. Applications from the areas of inventory, production, finance, queueing and communication systems will be presented throughout the course.

931. (STAT901) Stochastic Processes II. (B) Staff. Prerequisite(s): OPIM930. Crosslisted with STAT 901.
Extension of the material presented in OID930 to include renewal theory, martingales, and Brownian motion.

932. Queueing Theory. (J) Staff. Prerequisite(s): OPIM930 and OPIM931.
This course presents the mathematical foundations for the analysis of queueing systems. We will study general results like Little’s law and the PASTA property. We will analyze standard queueing systems (Markovian systems and variations thereof) and simple queueing networks, investigate infinite server models and many server approximations, study GI/G/1 queues through random walk approximations, and read papers on applied queueing models.

934. Dynamic Programming and Stochastic Models. (B) Staff. Prerequisite(s): OPIM930.
The course goal is to provide a brief but fairly rigorous introduction to the formulation and solution of dynamic programs. Its focus is primarily methodological. We will cover discrete state space problems, over finite or infinite time horizon, with and without discounting. Structured policies and their theoretical foundation will be of particular interest. Computational methods and approximation methods will be addressed. Applications are presented throughout the course, such as inventory policies, production control, financial decisions, and scheduling.

937. Methods Stumblers: Pragmatic Solutions to Everyday Challenges in Behavioral Research. (C) Staff.
This PhD-level course is for students who have already completed at least a year of basic stats/methods training. It assumes students already received a solid theoretical foundation and seeks to pragmatically bridge the gap between standard textbook coverage of methodological and statistical issues and the complexities of everyday behavioral science research. This course focuses on issues that (i) behavior researchers are likely to encounter as they conduct research, but (ii) may struggle to figure out independently by consulting a textbook or published article.

940. Operations Management. (C) Staff. Crosslisted with ESE 620.
Concepts, models, and theories relevant to the management of the processes required to provide goods or services to consumers in both the public and private sectors. Includes production, inventory and distribution functions, scheduling of service or manufacturing activities, facility capacity planning and design, location analysis, product design and choice of technology. The methodological basis for the course includes management science, economic theory, organization theory, and management information system theory.

941. Distribution Systems Seminar. (B) Staff. Prerequisite(s): OPIM940.
Seminar on distribution systems models and theory. Reviews current research in the development and solution of models of distribution systems. Emphasizes multi-echelon inventory control, logistics management, network design, and competitive models.
943. Retail Operations.

950. Perspectives on Information Systems. (C) Staff.
Provides doctoral students in Operations and Information Management and other related fields with a perspective on modern information system methodologies, technologies, and practices. State-of-the-art research on frameworks for analysis, design, and implementation of various types of information systems is presented. Students successfully completing the course should have the skills necessary to specify and implement an information system to support a decision process.

SM 951. Seminar on Logic Modeling. (M) Staff. Prerequisite(s): Permission of the instructor and some prior knowledge of logic or Prolog.
Seminar on the elements of formal logic necessary to read and contribute to the Logic modeling literature, as well as the implementation principles for logic models. The primary topics include elements of sentence and predicate logic, elements of modal logics, elements of semantics, mechanical theorem proving, logic and database, nonmonotonic reasoning, planning and the frame problem, logic programming, and metainterpreters.

SM 952. Computational Game Theory. (M) Staff. Prerequisite(s): Permission of instructor and knowledge of logic and Prolog or Lisp.
Seminar on principles of knowledge-based systems including expert systems. Topics include basics of expert systems, knowledge representation, meta-level reasoning, causal reasoning, truth maintenance systems, model management, planning systems and other applications.

This course provides an overview of some of the key Information Systems literature from the perspective of Information Strategy and Economics (ISE) and Information Decision Technologies (IDT). This course is intended to provide an introduction for first year OIDD doctoral students, as well as other Wharton doctoral students, to important core research topics and methods in ISE and IDT in order for students to do research in the field of Information Systems. While it is intended as a "first course" for OPIM doctoral students in ISE and IDT, it may also be useful for students who are engaged in research or plan to perform information technology related research in other disciplines.

960. Research Seminar in Information Technology - Economic Perspectives. (A)
Explores economic issues related to information technology, with emphasis on research in organizational or strategic settings. The course will follow a seminar format, with dynamically assigned readings and strong student contribution during class sessions (both as participant and, for one class, as moderator.)

This is the advanced doctoral-level research in information strategy and economics that builds on the foundations developed in OPIM960. Much of the content will be focused on current research areas in information strategy such as the information and organizational economics, information technology and firm performance, search cost and pricing, information and incentives, coordination costs and the boundary of the firm, and the economics of information goods (including pricing and intellectual property protection). In addition, promising empirical approaches such as the use of intelligent agents for data collection or clickstream data analysis will be discussed.

992. Conflict Mgmt Seminar. (B)
ORGANIZATIONAL DYNAMICS (AS) {DYNM}

SM 500. Foundations of Research and Scholarship. Barstow, Greco, and Shapiro. Prerequisite(s): Non-DYNM students must complete a course permit request form: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: F.

This course offers the concepts and methods of research and writing in the history and philosophy of research, creativity in thinking forms and metaphors that inform organizing so that we can virtually see more robust and complex perspectives can create costly tugs of war or constricted judgment without our minds (and hearts) and in organization dynamics, persuasive, and often hidden, divergence in thinking offers great opportunity for learning, creativity, and sound decision-making. This course offers several robust, practical techniques for bringing the value of diverse perspectives in politically productive ways to leadership thinking, communications, and organization dynamics. This course will meet between May 24th and June 21st.

SM 501. Perspectives on Organizational Dynamics. (C) Greco. Prerequisite(s): Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: F; DYNM Concentrations: LMC, GL, OC, SD.

"Perspectives" is both a fundamental and integrating course intended for MSOD students at any point in the program who wish to understand and deploy a multiplicity of dynamics operative in organizations and in the minds that create and inhabit them. It is particularly useful for those in their first year and for non-MSOD students. One key focus is on understanding the implicit mental and emotional frameworks or metaphors that "inform" organizing so that we can virtually see more robust and complex approaches to effectiveness and to leadership within them. Several faculty members highlight their specialties. One special theme examines new management models and thinking frameworks designed to prevail in a 21st century context. Lectures, discussion, and experiential learning are used to build an informed grounding in the history, philosophy, theory and practice of Organizational Dynamics. The course requirements are active class participation, potential application projects/weekly journal, a midterm paper and a final paper.

SM 542. Theories & Models That Inform Coaching. (C) Orenstein. Prerequisite(s): Permits for Non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Course Category: F; DYNM Course Concentrations: LMC, OC.

This course will examine how theory guides the effective practice of coaching. Students will be introduced to a theory and model that encompasses a multidisciplinary approach to coaching in an organizational setting. With this framework as a basis, students will select, research, and present a theoretical model of their own choosing and design a coaching application that demonstrates theory in action. Students will leave the course with an array of theoretical frameworks and practical techniques that will enhance their own coaching capabilities as managers and consultants. Undergraduates may enroll in 500-level courses only with permission of the instructor. This course will meet on the following weekends: May 21-22; June 11-12; June 18-19. The final class on 6/19 will be 8:45 to 12:30 pm.

SM 551. Devil's Advocate: Power of Divergent Thinking. (C) Greco. Prerequisite(s): Permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Course Category: A; DYNM Course Concentration: LMC.

Short-term or long-term? Us or them? Build or buy? Margin or volume? My way or the highway! Ad infinitum, apparent forced choices--or no choice--and limited perspectives can create costly tugs of war or constricted judgment without our minds (and hearts) and in organization dynamics, persuasive, and often hidden, divergence in thinking offers great opportunity for learning, creativity, and sound decision-making. This course offers several robust, practical techniques for bringing the value of diverse perspectives in politically productive ways to leadership thinking, communications, and organization dynamics. This course will meet between May 24th and June 21st.

SM 552. Strategic Crowdsourcing & Business Models. (C) Villarroel. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu/od.cgi.

This online course offers insight on how innovative firms are organizing strategically to gain advantage from engaging online with the value distributed resources held by a global pool of individuals. Through cases derived from original research, including Amazon, Facebook, Netflix, oDesk, Kiva, Wikipedia, among others, this course unveils the business models that these organizations use to create new value by working with "crowds" online. Open, distributed, online approaches to work and innovation have been widely studied over the past decade in the context of the computer and software industry (e.g. Benkler 2002; Chesbrough 2003; von Hippel and von Krogh 2003). Many of those concepts have since then permeated other industries, eventually giving birth to a distributed organizational paradigm referred to as "crowdsourcing" (e.g. Howe 2008; Villarroel 2008). The crowdsourcing model has proven valuable for innovation, work, entrepreneurship, among other applications. For example, in 2011, a crowd innovation initiative involving 57,000 individuals solved a decade-old scientific problem in molecular biology in only 3 weeks. In 2012, the top 3 crowd labor platforms brought skilled work to 6 million people in over 200 counties. In 2013, US $5 billion are expected to be invested in crowd-funded projects around the world.

The aims of this course are (1) to gain a solid understanding of the business models in crowdsourcing; (2) to benefit from first-hand experience with the "power of the crowd", (3) to critically analyze the potential and limitations of this new organizational paradigm.

553. Becoming a Courageous Follower. (C) Eldred. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu/od.cgi.

This course will examine both personal and professional behaviors that constitute effective followership. While the leadership literature is saturated with books on becoming better leaders, there is a dearth of awareness on finding and supporting those who follow those leaders effectively. Students will use surveys from the limited literature on effective followership to profile their own organization's dynamics on styles of followership, and stories of success and failure in confronting organization mistakes and leadership errors will be researched. The outcome of the class will be a personal profile on followership style and an organizational profile on its followership culture.
SM 555. The Idea of Nationalism. (C)
Steinberg. Prerequisite(s): Permits for non-DYNM students:
https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: A; DYNM Concentration: GL.
Nationalism has been the most important geo-political phenomenon of the past two hundred years. Its continuing power has been amply demonstrated by recent events in many parts of the world. The principle of national self-determination and closely related notions of individualism and human rights shape the global context in which businesses, governments, organizations, and individuals must operate in the 21st century. This seminar course will explore the ideology of nationalism through the lens of institutions and organizations, corporations, nonprofits, government, NGOs, unions, religious communities, etc.

Starting with concrete examples from students own experiences and the contemporary conflicts confronting governments, organizations, and businesses, we will examine the ideology of nationalism, its meaning and content, its philosophical foundations, its underlying assumptions about the nature of human identity, and its contemporary expressions in nationalist movements and ethno-political conflicts around the world. In the process, we will explore such questions as: What is a nation? Does every identifiable ethnic or national group have a valid claim to a nation-state of its own? How are claims to national self-determination justified? Why do nationalist movements seem so often to engender political extremism and violent ethno-political conflicts? Is national self-determination compatible with our commitments to individualism, rationality, and universal human rights? What are the best strategies to cope with the persistence of nationalism in the 21st century?

Prerequisite(s): Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: A; DYNM Concentration: LMC.
If you don't yet believe in the social media revolution, then watch this:
http://www.youtube.com/watch?v=ZQzsQkMFgHE Facebook. Twitter. Pinterest. Tumblr. Path. Delicious. Digg. Youtube.LinkedIn. It's been less than a decade since many of these social media services have launched, yet they've transformed society in many significant ways. Social Media and the Organization will deepen your understanding of and offer real time practical experience with social media. The course will examine the current trends and use of social media in marketing, product development, customer service, networking and other facets of organizational policy and practice. Students will have hands-on participation online with the class blog, http://upennsocialbook.wordpress.com sharing relevant case studies, analyzing social media campaigns and critiquing their own organization's culture and values surrounding social media including social media policy, staff challenges, and evaluation of challenges and opportunities in its use.

559. Research Methods to Develop Dynamic Expertise. Freeman. For additional information, please see our website at:
It's not enough to be competent, educated, smart and professional. Globalization, technology, and vastly improved communications have increasingly led to "Winner Take All" markets. Consider the local opera house: 100 years ago, Iowa alone had more than 1,500 of them. Thousands of sopranos earned adequate, if modest, livings from the live performances, but now, thanks to mp3s and ipods, the world's best soprano can be literally everywhere at once. And since it costs no more to transmit mp3s of Renee Fleming's Mozart arias than her understudy's, most opera fans listen to Fleming. Thus, Fleming earns several million dollars a year while most other sopranos, many of whom are almost as talented, struggle to get by. The same is increasingly true of other professions: Those who are recognized for being the best at what they do can sell their services anywhere and everywhere at top dollar, whereas those who lack such recognition find their services valued less and less--if they are valued at all. As graduate students at the University of Pennsylvania, you have an extraordinary opportunity to become the leading expert in a given domain in a few short years, maybe less.

SM 601. Gender Issues in Organizational Leadership. (C)
Vanderslice. For additional information, please see our website at:
This seminar will explore the intersection of gender and organizational behavior as it has evolved and in the current social and economic context in this country. We will examine the social, cultural and structural dynamics within organizations that differentially affect women and men, as well as the gender-linked resources each brings to organizations. Topics that will be addressed include the debate over the current situation of women in the workforce; the social construction of gender; the relationship of gender and power in understanding gender dynamics in the workplace; the intersection of gender and class; gender issues in organizational leadership; policy and practice as reinforcers of gendered dynamics; the interaction of culture and organizational structure; and restructuring organizations to better meet the needs of women and men in today's culture. The course will 1) address the development of a theoretical framework for understanding gender issues in the workplace; 2) explore more specific ways in which policies and practices have different effects on employees and managers by virtue of gender and; 3) focus on alternative conceptualizations, structures, policies and practices that could make it possible for both men and women to be successful in the workplace and to avoid gender-based discrimination.
In this last section, we will specifically discuss various organizational change processes that address gender issues within organizations.

SM 602. Leader-Manager as Coach. (C)
Russo. Prerequisite(s): Course permits for Non-DYNM students:
https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: A; DYNM Concentrations: LMC, OC.
Course Schedule: 9/24; 10/8 & 29; 11/12 & 19.
New work technologies, increased competition and employees' desire for more involvement in their work are changing the traditional role of the manager. Rather than directing, planning and controlling the work, managers and leaders are facilitating processes and coaching and developing their employees. Team-based organizations are built on coaching as a core requirement of the team leader role. This course explores the theory and practices of individual coaching as leadership behavior. The focus is on helping managers develop their skills and improve their performances as coaches. We will examine the need to provide others with successful performance strategies, timely feedback on strengths and on development needs and growth opportunities in order to challenge others to reach their potential. We will explore workplace environments that foster the growth and achievement of those we lead.
Council on Systems Engineering, and by for Project Management, International Processes advanced by the Project project/operational ri
content is valuable in roles, organizations, control project environments. Course deterministic approaches are explored as and adaptive (agile) project framewo unexpected events in predictive (classic) risk and uncertainty by examining causes of increase both awareness and knowledge of matter experts worldwide. This participant of thought leadership vetted DYNM 605 is a uniquely blended content Course Schedule: 9/10, 17; 10/1, 15, 29; DE, A; DYNM Concentrations: LMC. Unexpected. (C) Risk, Uncertainty, and the SM LMC. Can operations undertake effective risk management in our globalized, inextricably networked economy? What risk management role do we play in our organizations? We will apply readings and engage in case studies to discuss whether our organizations do or should manage risks as strategically as opportunities. We'll also examine our involvement with risk management in our organizations. By the conclusion of the course, you should have a strong understanding of organizational risk and a framework for addressing risk in your organization. This course includes webinar calls on several weeks during the semester in addition to the weekly Wednesday evening classroom meetings.

SM 605. (GAFL605) Managing Project Risk, Uncertainty, and the Unexpected. (C) Horshom. Prerequisite(s): Course permits for Non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dy namics/course-permit. DYNM Categories: DE, A; DYNM Concentration: LMC. DYDN 605 is a uniquely blended content of thought leadership vetted by subject matter experts worldwide. This participant-centered seminar is an opportunity to increase both awareness and knowledge of risk and uncertainty by examining causes of unexpected events in predictive (classic) and adaptive (agile) project frameworks. Successful applications of non-deterministic approaches are explored as antidotes to constrained command and control project environments. Course content is valuable in roles, organizations, and sectors of all types. Prominent project/operational risk management methodologies are included in this seminar. Processes advanced by the Project Management Institute, U.K. Association for Project Management, International Council on Systems Engineering, and by the International Organization for Standardization are contrasted with industry specific practices, including the U.S. Food and Drug Administration, NASA, and the Departments of Defense and Energy. Case examples are based on relevant experience. Participants perform hands-on implementation of processes in realistic team working sessions and facilitated dialogue. Optional quantitative tools workshops and tutorials will be available beyond scheduled course work for those who are interested.

SM 607. Psychodynamics of Organizations. (C) Hirschhorn. Prerequisite(s): Course permits for Non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dy namics/course-permit. DYNM Categories: DE, A; DYNM Concentration: LMC. As an area of study, the psychodynamics of organizations draws out attention to the tacit, implicit, and unconscious dimensions of organizational life. It presumes that a person takes up his or her role at work by drawing on both individual history and the organizational context that helps define a role, its boundary, and the resources available to take it up. In both these aspects, the organizational context, and one's individual biography, people are often unaware of the thoughts and feelings that animate their behavior. This course will introduce students to some basic concepts of psychoanalysis, which focuses on individual motivation, and systems psychodynamics, which focuses on group dynamics and group psychology. System psychodynamics also emphasizes how an organization's primary task, or its "reason for being," influences individual experience. Readings include case studies as well as expositions of theory. The instructor will also draw on his own consulting cases. This course meets Thursdays from September 15th to November 3rd. In addition there will be two 8-hour Saturdays on October 15th and November 12th.

SM 608. Organizational Dynamics of Working in a Global Marketplace. (C) Tsoeghl. For additional information, please see our website at: http://www.organizationaldynamics.upenn. This course examines some of the sources of confusion, conflict, misperception and error that arise when representatives of U.S. organizations interact and work in the global marketplace. The aim is to heighten awareness, help avoid personal or professional pitfalls, and to more effectively manage some of the organizational and business challenges that arise when operating across dissimilar environments. We will focus on areas including: ethics, culture, language, ethnicity, religion, gender, the political and legal systems, labor, corruption, and corporate organization. Each class session will begin with a short, interactive introductory lecture, followed by discussion around assigned readings and mini-cases.

SM 610. Knowing Yourself: The Coach as an Instrument of Change. (C) Napier. Prerequisite(s): Non-DYNM students must complete a course permit request form: https://www.sas.upenn.edu/lps/graduate/dy namics/course-permit. DYNM Category: A; DYNM Concentrations: LMC, OC. Course schedule: January 16 & 17; February 27 & 28; April 2. Note: This class is predicated on the assumption that prior to offering coaching assistance, a coach should have a good understanding of his or her own behavior and its impact on a client. Utilizing validated tools and strategies available for coaches, the students practice sets of coaching skills on each other. This includes practice in interviewing and observational skills. In addition, students will have the opportunity to give and analyze 360 degree feedback data, as well as use a variety of other instruments that can be foundational for a useful coaching experience. Premise: Coaching others is very serious business. Intrepid individuals willing to take on this responsibility should be willing to answer the following questions: Who am I as a leader and helper? What are the assets I bring to the coaching relationship? What are my deficits, overused strengths, or underutilized skills and behaviors? What historical influences from my family of origin influence my capacity to build a positive relationship with my coaching client? Are there discrepancies in relation to my self-perceptions and those who know me well—family members, peers, colleagues, friends, boss, and direct reports? As a result, are these specific areas of personal development that I need to address as I move?

Similar to most traditional programs where the focus is on the management of change, the course is organized to: 1) A diagnostic phase in which the values, history, assumptions, and behaviors of the client will be assessed. In this case the client will be the student/coach. 2) The applied phase in which analysis,
interpretation, and formal learning will be the central focus. The end result will be individuals with a deep and abiding understanding of their own psychodynamics and their personal impact. Finally, by modeling many of the tools and strategies useful in any effective coaching effort and practicing them on themselves and their student peers, it is hoped that the experiential nature of the course will allow maximum transference to the real work of coaching.

Effective collaboration requires a combination of strong self-awareness and an ability to make adjustments at the individual and group level. This course provides tools for building teams that leverage individual strengths and a mutual learning process to continuously addressing collaboration barriers to improve team performance.

This seminar/lab is designed to extend each participant's analytical skills and gain practice implementing high performance practices through a team-based simulation. Specific learning objectives are to: 1. Understand leading-edge frameworks for building effective teams. 2. Learn and apply tools for diagnosing barriers to collaboration. 3. Develop implementation plans for teams and organizations consistent with best practices. 4. Provide tools for self-assessment of participants to leverage their strengths for teamwork success. 5. Apply learning from classroom-based teamwork simulation to participants' real life experiences.

The course will be conducted in a university classroom and use several breakout rooms for teamwork among participants. Case study teams will use web-based communication software (TBD) for inter-session collaboration on projects. Weekly facilitated discussions by course instructors will be conducted at each weekend session.

SM 612. Mastering Organizational Politics and Power. (C) Eldred. Prerequisite(s): Course permit requests for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: F; DYNM Concentration: LMC.

The purpose of this course is to explore, enhance, and expand the participants' competence in organizational politics. Students will observe political dynamics as they occur in their own organizations and will interview senior managers in other organizations to learn how political realities vary from one organization to another. Theoretical ideas about a dimension of organizational politics of particular interest to each individual participant will be analyzed in a term paper. In addition, each participant will keep a personal diary of political dynamics in his or her own workplace. The course will also explore ways to master the political skills of networking, negotiating, influencing, leading, and following, as well as developing a political strategy.

SM 613. Is Bigger - Inevitable, Better or Worse in Organizations?. (C) Licht. Prerequisite(s): Non-DYNM students must complete a course permit request form: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: F; DYNM Concentration: LMC. Course Schedule: 1/16, 23, 30; 2/6, 13, 20 & 27. 1/16 is 9 to 12; all other meetings are 9 to 5.

Is the modern large corporation alienating, inflexible, unproductive? Is the small organization or work team engaging, innovative or creative, productive? Has it always been this way in the U.S.? Is change possible? In this unique, informal, "turbo" seminar, we will examine the large corporation in terms of history, governance and control, and delivery of (office) work. We will consider whether "bigness" and bureaucracy are inevitable, and how organizations of the present, and probably the future, are affected by those of the past. This seminar has been structured to cover a good deal of ground in a short time. The seminar will meet on six Saturdays. The subject matter of the seminar is the large-scale organization. Questions to be raised include: 1) Is the modern large corporation alienating, inflexible, and unproductive? 2) Are bigness and bureaucracy inevitable? 3) Is the small organization or work team engaging, innovation, creative, and productive? 4) What does the historical record for the United States reveal? 5) Are organizational alternatives and change possible?

Environmentalist Paul Hawken challenged a class of 2009 college graduates that they would have to "figure out what it means to be a human being on earth at a time when every living system is declining, and the rate of decline is accelerating." That theme is at the heart of this course. While we have seen the notion of sustainability gaining some traction in recent years, our quality of life in the near future very likely hinges on the development and implementation of sustainable solutions to enormously complex environmental and social problems. This course is designed to foster the thinking that is needed to address those enormous problems. It involves focusing on a critical global problem with sustainability and social dimensions - in this case, the need to balance global food, water, and energy needs in a manner that allows the world to feed 9.6 billion citizens by 2050 while preserving the environment for future generations.

PENNovation is a course about innovation, idea generation, collaboration, leadership, communication, research, decision-making, sustainability, sustainable solutions, creative thinking, leading change, and complex problem-solving. Class members take a deep dive into a major sustainability challenge while also gaining experience in how to lead global teams.

The nexus: the world faces the imminent challenge of feeding roughly 9.6 billion citizens by 2050, an increase of about 2.3 billion (31%) from 2015. Yet we are not successfully feeding the global population today. FAO reports that about 800 million global citizens are hungry, and nearly 2 billion suffer from micronutrient deficiencies. The World Economic Forum reported that global freshwater demand is expected to exceed current supply by over 40% by 2030-- just 15 years from now-- while evidence of shortages is increasingly clear in heavily populated areas such as California, Sao Paolo, and China. Demand for energy continues to rise; the International Energy Agency notes that global energy demand is set to grow by 37% by 2040. An increasingly affluent population is straining the world's already scarce resources, particularly in end goal of this course will be to produce a world-class product including the quest for animal
protein, yet we continue to waste vast amounts of food (between 1 and 2 billion tons annually) and exacerbate social and environmental problems in the process. How can the world balance all of these challenges, meeting global needs for food, water, and energy security while protecting the quality of the environment and preventing social unrest? What approaches are needed? How can the needed changes be implemented?

In 2016 the PENNovation class will focus on the many challenges and opportunities involved in balancing the world's food, water, and energy needs. The group will take a systems approach to the problem, aided by contributions from several thought leaders from business, NGOs, and non-profits in a unique class format. Our expectation is that the world will benefit from their work. Deliverables can include: final group apper, a website, an awareness-raising event, a social media campaign, or presentation.

SM 617. Economics of Human Behavior and Organizational Life. (L) Handy. Prerequisite(s): Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: F; DYNM Concentrations: LMC, SD.

As a society, we choose many different ways to organize different aspects of our lives. The institutions and organization we choose to provide us with the necessities and comforts of life range from the fundamental institutions of family and religious organizations, to firms in the capitalistic market and democratically elected governments. We respond to this environment in unique ways: we marry, we worship, we buy and sell goods and services, and we vote. The primary goal of this course is an examination of the various aspects of human behavior in the context of organizational and institutional life from an economic perspective. We recognize that the choices we make are sensitive to the costs and benefits of different actions and use this economic perspective to gain insights into social, economic and political behavior in our daily lives. We start the course with an examination of how micro economists view the world and examine their favorite toolkit. We discuss concepts such as: efficiency, opportunity cost, marginal analysis, externalities, incentives, free-riding, rent-seeking, and transaction costs. These concepts are fundamental if an economic perspective and they will be presented using every day examples.

Before concluding the course, we will look at several topics such as: Human capital and investment in education (Should you invest in an Ivy League school education?); Law and enforcement (When is it profitable to break the law?); Bribes and gifts (Quid pro quo?); Economics of information (Used cars and the market for "lemons"); Why we discriminate against minorities?; Property rights and externalities (The tragedy of the commons: Should we have smoke-free environments?); and Free-riding (Should I vote in the next election? Should I volunteer to clean up?)

SM 618. Strategic Crowdsourcing and Business Models 2.0. (M) Villarroel. This course will be in a hybrid in-person and online course.

Crowdsourcing is among the most impactful innovations in organization of the 21st century, enabling the rise of distributed organizations. In this course, we will learn the radical business models used by a new generation of companies that transcend the format boundaries of the firm--e.g. Uber, oDesk, Kickstarter, among hundreds of such distributed organizations. The crowdsourcing economy is rapidly expanding, with at least 117 distributed work companies receiving venture capital in 2013--up from 17 in 2009 and 55 in 2011 (The Economist, 2015).

Entrepreneurs taking this course will understand how crowdsourcing startups made big strides in the global economy. For example, five-year-old Uber--founded in 2009--developed operations in more than 50 countries, reaching sales of $1 billion in 2014. It received $3.3 in venture capital, valued at more than $41 billion in December 2014 (The Wall Street Journal, 2014). Uber offers an online platform connecting self-selected drivers and users who use a smartphone app to interact with the service. Any interested driver, who has a car and a smartphone, can sign up to be an Uber driver.

Managers taking this course will learn why, when, and how crowdsourcing--as a new organizational extension of the firm--enables established companies to streamline their traditional business functions. From making everyday work more efficient, to solving challenging R&D problems, to exploring new markets. Innovative firms embracing crowdsourcing gain a competitive advantage from engaging with online crowds who hold valuable resources otherwise not available to "traditional" competing firms--e.g. knowledge (e.g. InnoCentive), services (e.g. oDesk), etc. This course fulfills the following requirements: Categories: DE, A Concentrations: LMC

Akin to the moving assembly line characteristic of the industrial revolution, crowdsourcing is a revolution in the organization of knowledge work, which is already changing the fabric of business and society on a global scale. Through case studies, project work, and online discussion of original research, this hands-on course provides concepts and frameworks that explain the business models of a new generation of distributed organizations.

SM 619. Organizational Project Management. (C) Choudhury. Prerequisite(s): Non-DYNM students must complete a course permit request form: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Categories: F, A; DYNM Concentration: LMC. Course schedule: TBA.

The course provides an overview of the concepts, procedures and fundamental processes of project management for working professionals. Participants are introduced to the principles, tools and techniques of project management within an integrative framework. The course emphasizes that, for most organizations, projects are the primary means for implementing strategic initiatives.

Course Objectives: 1) Understand and critically evaluate expectations, procedures and processes of program management as currently practiced in large for-profit enterprises; 2) Understand the content and processes and standards of project management as defined by the Program Management Institute (PMI); 3) Understand how to build and manage effective project teams; 4) Become familiar with the critical components of effective project plans. In addition to the scheduled meeting dates, additional class activities will be planned between faculty and students.

SM 620. The Coach: Applying Tools and Skills in the Field. (C) Napier. For additional information, please see our website at: http://www.orgizationaldynamics.upenn.edu. Coaching insinuates change, and most meaningful change is, at some level, therapeutic. This course will explore the dynamics of change as a therapeutic process. Whenever individuals have the nerve to "help" others, self-understanding must come front and center. As a master coach once said, "Who in the hell do we think we are helping others unless we are willing to take a very hard look at ourselves-our behavior, our impact, our projections and biases?" Not only must we ask hard questions of ourselves and resolve our own issues that could corrupt our
effectiveness, but we also need to model the most productive behaviors possible. The questions for students of this course include: 1) Are you willing to look? 2) Are you willing to be fiercely honest with yourself and with your fellow students? 3) Are you prepared for the responsibility that goes with mucking around in someone else’s life? What makes this particular coaching course unique is that it affords students the opportunity to experience a full range of coaching practices in a relatively short amount of time. The expectation is that the students will have identified a potential client that will be discussed during the first class (although no firm agreement would have to be reached prior to that time).

The student/coach will be guided each step of the way through the coaching process which will include a) contracting with the client; b) engaging in a thorough diagnostic exercise for the client including interviews, observations and a complete 360 feedback cycle, c) analyzing the data, d) feeding the results back to the client, e) engaging the client in problem solving and an action plan designed to help increase the client’s effectiveness.

**SM 621. Project Portfolio Management. (C) Bayney.**

Prerequisite(s): Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Course Category: A; DYNM Course Concentration: LMC.

The primary objective of this course is to enable participants to gain a thorough understanding of and appreciation for the discipline of Project Portfolio Management. Ill-defined and poorly utilized in many organizations, Portfolio Management has struggled to become inculcated within the fabric of these cultures without direct intervention and sponsorship from the highest levels of Senior Management. Beginning with a decidedly strategic focus, the course brings together the very essence of Portfolio Management—technically robust analytics—with the softer elements of communication and decision-making to enable portfolio value maximization. The course is structured in such a way that it follows a unique Portfolio Management framework—CREOPMTM—created by the authors Bayney & Chakravarti in their book titled Enterprise Project Portfolio Management: Building Competencies For R&D and IT Investment Success. In each of the first 6 classes, the framework is followed sequentially and is then applied holistically to a case study in the final classes. The impact of risk and uncertainty to the quantification of project, program, and portfolio value is addressed through classic program and portfolio optimization. Students will be expected to apply many of the principles taught in this course to their own organizations and to deliver class presentations that address portfolio strategy, linkages between organizational plans, decomposing complex decisions, project prioritization, portfolio optimization, and Stage Gate Review (SGR) processes. In their final paper, students will be presented with a choice of analyzing their organizations portfolio health or a selected Kellogg School of Management case study in Portfolio Management using the CREOPMTM framework.

**SM 624. Program Management Skills and Systems. (C) Heaslip.**

Prerequisite(s): Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Course Category: A; DYNM Course Concentrations: LMC, OC.

The objective of Program Leadership Skills is to provide students with an understanding of current principles and best practices in the maturing field of Program Management. Students will investigate the relationships between Program Management, Project Management and Portfolio Management as separate but co-dependent disciplines and examine the importance of each to the successful achievement of organizational goals. Focusing on Program Management, the course will examine the unique challenges that are faced when managing organizational activities that principally pursue strategic goals and that must be responsive both to the outcomes of activities being pursued and changes in strategic direction. The course will provide a forum for discussing the various types of Programs that organizations pursue and for understanding how Program Management best practices can be applied to each type of Program. The course will explore the need to adapt Program Management principles in a context-specific way to ensure that Programs deliver their expected organizational value. Moreover, it will examine how—despite qualitative differences between Programs—common approaches can be used to assess Program Management maturity and performance and to define the skills required of a successful Program Leader.

At the conclusion of the course, students will be expected to understand current best practices in Program Management and to determine how to initiate or improve upon Program Management practices in their own organizations.

**SM 625. Ethnography of Everyday Life: A Master Class. (L) Eldred.**

Ethnography is a fundamental method within the social sciences that concerns the systematic study of culture. It involves a "thick description" of how people actually live their everyday lives, personal or professional. Ethnographers study how human groups form institutions and how these structures grow, function, maintain themselves, and persist. Also at issue is how people share their understandings and develop ideologies pertaining to these processes. Social negotiation and the development of "local knowledge" in the culture of interpersonal affairs will be emphasized, particularly as it is transmitted from one generation to the next. Through direct observation and discussion, students will treat Philadelphia as an "urban laboratory" and seek to identify, to study, and to learn about local people and places. In this vein, the class will visit communities and organizational settings to gain exposure to ordinary people but, particularly, to apply ethnographic methods to the complexities of the modern workplace as well as to everyday life of the city. The final paper will be a synthesis of ethnographic literature and observations of local urban life and culture, particularly as these issues apply to understanding and organization or a local community.

**SM 626. Leading the Professional Service Organization. (C) Eldred.**

For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu/

The purpose of this seminar is to understand appropriate leadership behaviors for professional services. Students will gain first hand exposure to prominent leaders of diverse service organizations, and will research how those leaders both develop and deploy their leadership agenda. This course fills the following Organizational Dynamics requirements: Categories: A Concentrations: LMC.
SM 627. Classics of Organizational Behavior. (C) Barstow. For additional information, please see our website at: https://www.organizationaldynamics.upenn.edu.

The purpose of this seminar is to critique the thought and practice of several "big names" in organizational behavior, while establishing the continuing relevance of their work to today's organizations. Federick Taylor (Scientific Management), The Hawthorne Studies (Human Relations), Kurt Lewin (Group Dynamics), Eric Trist (Socio-Technical Systems) and others will be read in their primary sources, giving participants the opportunity to form their own opinion of these classic field studies.

Participants will read primary sources in the field as well as more recent critical scholarship. They will then present short papers to the class in the model of an academic conference, followed by discussion. Participants will debate their own views in this conference atmosphere as if both the founders and their critics were present. In addition to the readings and discussion, participants will view a taped oral-history interview with Eric Trist and a film of Kurt Lewin's famous experiment on leadership styles. Each participant will present two brief papers to the class and will submit a longer final paper.

SM 628. Organizational Diagnosis: Diagnostic Strengths for Effectiveness. (C) Kaminstein. Prerequisite(s): Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Categories: DE; A; DYNM Concentration: LMC.

This seminar is designed to help participants learn multiple approaches to diagnosing the complex ways in which issues and/or problems manifest themselves in organizations. Frequently, when organizations find themselves in trouble, i.e., there are rumblings in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to frame the problem(s) simplistically and/or locate blame in a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help students understand how problems which appear at one level of the system (for example, at the personal or interpersonal level) often represent problems at other levels of the system (e.g., at the group and/or institutional level) or signify a range of inter-related issues. It will provide students with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationships between diagnosis, organizational reflection and appropriate action.

SM 629. Organizational Consulting: Proseminar in Organizational Development. (C) Starr. Prerequisite(s): Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Categories: F; DE; DYNM Concentration: LMC.

This course describes and examines Organization Development (OD) and Change (ODC) competencies through the lens of the guidelines promoted by the worldwide Academy of Management and professional OD societies such as the OD Network. We read and discuss from the academic and practice literature how these competencies emerge from models and theories and about how they "should" be applied. At the same time, OD&C consulting practitioners, theorists, and corporate officers visit our class to describe how they actually do select and apply their models and their competencies which include, for example, establishing and managing organizational coaching programs; applying different OD models in large-scale organization change initiatives; managing change in virtual and global teams; managing change in cultures outside North America; and using change methodologies such as Appreciative Inquiry (a blend of positive psychology and systems thinking) to create idealized development and growth. Students interested in organization development and change, internal or external management consulting, or how to better manage in their own developing and changing environments will benefit from this course.

SM 630. The Discipline of Value-driven Business Process Management: Strategy Execution in a Digital World. (A) Kirchner and Naidoo. Prerequisite(s): Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: A; DYNM Concentration: LMC.

Business strategies and operations are driven by scores of ever-shifting factors: from demographic changes and capital availability to technological innovations and increasing regulation. Static business models are rarely able to keep pace with such dynamic change; and this is why companies need a management approach that fits to this environment. In effect, they need to know how and when to modify or enhance their business processes, which processes are optimal candidates for intervention, and how to move rapidly from business strategy to execution. Business Process Management (BPM) helps organizations master change successfully and create immediate as well as durable competitive advantage. BPM has become a management discipline that delivers significant business value. It is implemented through the "process of process management" that addresses all aspects of the lifecycle of a business process: design, implementation, execution and controlling of processes.

This seminar discusses how organizations master the "process of processes management" to achieve the right BPM maturity level to move efficiently and effectively from business strategy to execution, achieving goals like transparency, agility and compliance, quality and efficiency, internal integration and external networks. It addresses topics like creating a BPM roadmap, innovation, process governance and centers of excellence, integration of business and IT, the value-driven use of process repositories, as well as selected aspects of process automation including the concept of Service Oriented Architectures (SOA) and the "Enterprise 2.0." In this course framework, approaches, methods and software for achieving and maintaining a high performance business will be discussed using real live examples and case studies. Business Process Management (BPM) is introduced as a holistic management discipline.

SM 633. Leadership from the Middle of the Organization. (C) Stankard. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

Durable organizations have learned to encourage innovation from within. This course's objective is to give Organizational Dynamics graduates the skills and practical knowledge to organize change and improve from a middle position within an existing organization. The course seeks to prepare students to assume responsibility for acting without authority by becoming the leader they have been looking for. The course's learning objectives are: (a) to gain a working understanding of the pragmatic, ethical/moral, and cognitive foundations for leading informally from middle organization; (b) to adapt an existing Leading from the Middle (LrM) process to each student's actual situation; and (c) to carry out small
scale actions in accordance with the process between classes, and in each class to coach students in learning by doing leadership arts and skills such as negotiating, maximizing the feasibility of change plans, enlisting and coordinating cooperation on a team, identifying and addressing stakeholder points of view, maintaining legitimacy of an initiative, and credit all who help.

Students who take this course should already be concerned about one or more important opportunities or upsetting challenges in their present or previous organizational surroundings. The instructor will coach the class in functioning as an idealized design team. The design process has two phases, a base case projection and an idealized design. Phase 1, the base case projection, formulates the current reality without change, and projects the likely undesired effects and outcomes of maintaining status quo. Phase 2, idealized design, creates a leadership approach that all stakeholders would wish for, if all their feasible, sustainable and adaptable wishes could come true today. By participating in a design process, the class itself models many group dynamics of an actual LiftM situation. Scholarly Commons describes the work done in this class with examples. (Please see Stankard, Martin (2011). Guest speakers from earlier years are invited to share experiences with course content and answer questions. This course fills the following Organizational Dynamics requirements: Categories: DE, A Concentrations LMC, OC

Prerequisite(s): Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Categories: DE, A; DYNM Concentration: LMC. Course Schedule: TBA.

Process improvement as taught in this course often provides high-leverage, high visibility opportunities for showcasing coaching and leadership skills as a member, coach or leader of cross-functional process improvement teams. Cross-functional process improvement teams (running lean and six sigma projects) have evolved into a major pathway for developing leadership and coaching talent in such organizations as Baptist Healthcare, Federal Express, Ritz Carlton, Toyota Motor Co, General Electric and Motorola.

Process improvement project leaders and team members use specific tools and capabilities to analyze as-is processes and to define and deploy new or improved processes that deliver better outcomes and customer satisfaction with less non-value added effort. Leading or serving on cross-functional process improvement teams creates opportunities to work and network with people from other parts of your organization and creates opportunities for visibility to executives and managers sponsoring strategic improvements. Participating in or leading process improvement is also a great leadership, coaching and professional development activity.

**SM 635. Organizational Essentials for Leadership. (L)** Choukroun. 
Prerequisite(s): Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Course Category: F; DYNM Course Concentration: LMC. Course meeting schedule: 6/11 & 25; 7/9, 16, & 23.

Through presentations by expert speakers, case discussions, and participation in team projects, students will review and evaluate critical issues from across the frames of business, including general; human resource; marketing; information and stakeholder management; leadership; corporate culture; communications; organizational behavior; sales, marketing and public relations; finance and financial reporting; ethics and social responsibility; unions and government relations; and business law. Each of these elements will be studied in light of changing environmental conditions, including the economy; society; consumer behavior; market trends; regulation; politics, unpredictable events such as 9/11; organizational change; history; and internationalism.

Coaching has been used to support high-level leadership, to develop high potential talent, to overcome or remediate deficiencies or unproductive behaviors, and to support or manage performance during periods of change. As the use of organizational coaching has grown over the last decade, globalization of the economy has transformed organizational markets, operations, and workforces so that "culture" routinely influences interpersonal, group, and organizational interfaces. In this context leadership requires an ability to recognize and leverage the "cultural diversity" inherent in teamwork, communication, collaboration, conflict, and change. Coaching, as a leadership development practice, must help leaders grow in their ability to recognize and leverage the national, professional, functional, and organizational cultures that influence workforce engagement, productivity, satisfaction, and innovation.

This course is intended for students with an interest in culturally complex leadership and organizational development. This course has a dual purpose. First, through reading, class discussion, and written reflection, the course will enhance student understanding of coaching models, methods, and cases informed by cross-cultural psychology, intercultural communication, anthropology, and international business disciplines. Secondly, through guided practice, students will develop their skills in coaching across cultural differences. Students will coach one another through a self-assessment, development planning process, and initial movement toward their objectives using Rosinski's global coaching process as one illustrative example of this kind of coaching. This course is a hybrid of online and in-person meetings on the following schedule: 6/1: In-person and online; 6/25 & 26; 7/23 & 24: In-person; 8/10: In-person and online.

This course will be offsite in Pennsylvania, August 5th through 10th, 2016. This course will have an additional course fee to cover lodging and other program logistics. Registration permits will be issued upon signed Travel Agreement being returned to the Organizational Dynamics program office. This course is limited to 12 students.

This five-day, offsite program is more about the "how" to develop high performing teams than the intellectual "what" of such teams. For five days the twelve members will immerse themselves into what differentiates a high performing team from the dysfunctional teams with which we are familiar. We will take a deep dive into the fundamentals of any group or team in our efforts to become such a team. We will, along the way, learn about the art of design -- internalizing the skills and tools essential for building strategic interventions
into a team in real time. Not only will we design them, but also we will be critiqued in relation to the quality of our efforts as well as to the facilitation skills we used during the process.

This course is not for the faint of heart, with participants leaving their names and histories at the door. We will learn by doing and relate what we learn to both theory and research. Everything done during the five days will be "intentional," with a keen eye toward the consequences of our behaviors and their impact on the evolving team. That will mean long days and an occasional long evening. While not a walk in the park, it will be full of laughter and personal insights that should have a lasting impact on the student as leader, far after the program ends. The course is limited to twelve students, and each must be interviewed to make certain that this experience is what they are ready for. After all, the course involves dealing with challenging group dynamics and accompanying issues of power and authority, with dominating personalities; managing differences; building trust; and dealing with the myriad issues that often drive groups, teams, and meetings into dysfunction.

SM 638. THE PRACTICE OF ORGANIZATIONAL LEADERSHIP. 
(M) WING.

This is a practical course designed to help participants engage in reflective practice regarding their own leadership and their relationship to leadership by others. Students will present for discussion case material from their workplaces or other settings and we will also explore leadership through in-class experiential exercises. Foundational readings will provide a common language and conceptual framework. Along the way, we will revisit the fundamental questions: What is leadership? What is good leadership? What do I intend to do differently going forward?

640. Virtual Collaboration. (C) Reyes. Prerequisites: Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Course Category: A; DYNM Course Concentrations: LMC, GL.

NOTE: Logitech ClearChat Headphones and Logitech QuickCam Pro9000 are required for this course. Please see the syllabus for other requirements. Across the globe companies, both large and small, are increasingly conducting culturally complex work through technology channels and virtual personnel transfers, making multi-cultural organization and virtual work inextricably intertwined. In this context electronically mediated collaboration and communication capabilities across time, distance, organization, culture, and other knowledge boundaries have become necessary for the everyday work of telecommuters, virtual teams, remote managers, professional knowledge communities, and electronic marketplaces.

This course is primarily intended for students with an interest in globally distributed work and collaborative virtual organizations. The purpose of this elective is to enhance student understandings of virtual forms of human collaboration and to develop student abilities to work jointly with others via electronic tools. This course design makes typical social patterns encountered in virtual organizations visible, so that students can learn from participating and collectively reflecting on their course experiences. This course has an online course fee of $150.

SM 650. Outdoor Dynamics. (C)
Barstow/Havely. DYNM Course Category: A; DYNM Course Concentrations: LMC, SD. Travel Course Dates: 8/5 to 8/13. This course explores the implications of past and future changes in land use and population changes over time in one of the least densely populated areas of the country, but which serves as both a winter and summer playground for millions of urban residents each year. Set in the White Mountains of New Hampshire, only a day's drive for over 10 million Americans, the area boasts some of the most pristine and exotic microenvironments in the world, left from the last Ice Age. Over 250,000 people visit the summit of Mt. Washington, the region's highest peak, every year, driving, hiking or riding the cog railway to the top. The focus of this course is the growing interest in promoting "sustainable development," which most people envision as protecting the environment and the wild species from human encroachment and pollution. The course will examine the human sphere and the natural sphere as common ground in the analysis of competing issues; areas of compatibility; and future plans to promote a sustainable environment in this region. The course will focus on three themes: 1) how the people and institutions tasked with being the environment's guardians go about their jobs; 2) how the area is used by visitors; and 3) how industry and its stakeholders have worked with local regulators and politicians to create jobs and promote growth.

The course will ask students to overlay the principles of sustainability and issues management, in managing the increasing concern that the trajectory of land use and industrial growth will compromise the region's native ecology and wilderness and backcountry attractiveness. Left to its own momentum, how will the future of the area fare versus promoting and implementing more sustainable goals? Changes in behavior will be needed to bring the two into line, and that leads to organizational dynamics. How will stakeholders resolve the natural tensions of the institutions' (primarily those that operate in the region) mission and development goals with outsiders' desires? What leverage do they and others have in the debate over the future of the region? In addition to an active outdoor week in the White Mountains, participants will meet with key players and leaders from the area and come away with a deeper understanding of the major issues in the tenetions between "the place no one knew and the place that got loved to death."

SM 651. Group Team Dynamics: Understanding the Overt and Covert Dynamics that Support Effective Work. (C) Kaminstein. Prerequisite(s): Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Categories: DE, A; DYNM Concentrations: LMC, OC. Although groups and teams are often lauded as the mechanisms that provide the competitive edge for organizations in today's challenging economic environment, there is often little attention paid to the deeper social and psychological currents influencing group and team dynamics. Organizational leaders and facilitators frequently lack an in-depth understanding of how work groups, multifunctional teams, and cross-national executive groups operate, accomplish their goals--or not--and end. Team members often struggle to make meaning of the myriad spoken, as well as unexpressed, factors influencing the process and outcomes of the groups of which they are a part. This course, by emphasizing both theory and practice, provides students with a thorough grounding in the ways groups and teams develop and learn. The class will also examine approaches to building group and team competencies related to effective communication, conflict-resolution, and solving complex strategic problems as well as ways to manage the range of intentional and more hidden dynamics that both support and challenge high performance.

The course is designed to include seven 3-hour classroom meetings across the semester and two extended sessions that
will afford students the opportunity to explore various theoretical frameworks. In addition to drawing on the extensive literature and research in group dynamics and team building, the class will rely on experiential methods to help students develop keener understanding and insight into the ways in which their own leadership and followership dynamics, as well as the dynamics of the group-as-a-whole, influence their team’s ability to accomplish its tasks.

SM 653. Coaching Others to Manage Conflict. (C) Napier. Prerequisite(s): Course permits for non-DYMN students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYMN Category: A; DYMN Concentration: OC. Meeting Schedule: 8/27 & 28; 10/1, 2, & 22.

Not a day goes by when you or I, or a person we are coaching, is not faced with some tantalizing, challenging conflict. It may be with someone we love, a conflict in a team, a struggle between two direct reports, a difference with our boss or the challenge of a difficult, perhaps aggressive person in a meeting we facilitate. The problem is not that there is a conflict. The problem is that most of us have a very thin, often inadequate repertoire of responses to the conflicts that engage us on a daily basis. The result is that all too often we are predictable in our responses. Thus, if we take these same limited skills and attempt to provide them to a client in our role as a coach, the consequences will more than likely be similar.

This course is about expanding your repertoire of responses to a wide array of conflict situations. In the process, you will increase your understanding of the theoretical constructs that underlie successful conflict management. Not only will your strategies for managing a variety of conflicts expand, but you will be better able to design unique responses that relate to the particular situation with which your client is faced. How you translate these ideas to your clients and, in the process, provide them the confidence to use them, will be a central theme throughout the course. There is an attempt to provide a balance between intellectual theory, skills, and applied strategies along with the time to practice them.

SM 655. (GAFL555) Using the Political Process to Effect Organizational Change. (C) Gale and Brady. Prerequisite(s): Course Permits for non-DYMN students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYMN Category: A; DYMN Concentration: LMC.

At one time or another, each of us has said something like, “I know what to do to make some really effective—and possibly even profitable—changes in this organization, but the politics make it almost impossible to get anything done.” The sense is that, although there are changes that should be made to improve organizational performance, politics (internal, external, governmental) simply obstructs our ability to make a difference. Frustrations notwithstanding, depending on how it is employed, politics can be either an impediment or, more importantly, a source of opportunities for improving organizations. Politics is the art and science of coordinating individuals, departments, management, markets—the entire organizational environment—to effect a balance between the organization's objectives and the methods used to achieve them. As with the other factors that are employed to affect organizational performance—the methods used to improve manufacturing, marketing, sales, finance, and so on—the political factors of organizations can use to initiate and maintain critical personal and institutional relationships.

One of the seminar readings—Latimer’s "Why Do They Call It Business If It's Mostly Politics?" is used to provide illustrations of the ambiguous nature of much of what is regarded as organizational politics. What is critical to understand and appreciate from the outset, however, is that politics is not an external factor that is imposed on organizations. Politics is not only a means for achieving personal or institutional power; it is also a method for developing and maintaining personal and institutional relationships within and among individuals and organizations of all types. This seminar will discuss organizational politics and the ways that it is used to identify, characterize, and effect change—both within and among organizations. After reviewing several perspectives on organizations and the roles that political processes play in decision-making, a series of cases is presented that illustrate the contexts and conditions for effective political communication and coordination.

This course examines the social construction of race and ethnicity, including relations within and across groups, with a particular focus on their implications for organizational culture and management. In a very real sense, the workplace is a microcosm of the larger society; a place where our individual experiences, beliefs, and biases related to race and ethnicity intersect, creating both opportunities and challenges. Our capacity to understand the different backgrounds and experiences that individuals and groups bring to the organization, as well as recognizing our own biases and the biases of others are directly implicated in our ability to both manage and be managed in the organizations that we are a part of. A primary objective in this course is to increase our capacity to first understand the contours of racial and ethnic diversity in twenty-first century America by investigating (1) the historical context that influences present-day understandings of racial/ethnic diversity (2) how and why individuals from different racial/ethnic backgrounds can "see" the same thing but interpret it very differently, depending on experience, culture, and social position relative to race/ethnicity (3) the meaning and importance of dominant and minority groups, the degree to which a racial hierarchy exists, and the implications of that hierarchy for important outcomes (4) the degree to which the workplace is, indeed, a microcosm of the larger society (5) the pitfalls of "colorblindness" (6) the nature of stigma and its workplace implications and (7) the benefits and drawbacks of affirmative action policy in the workplace.

The importance of organizational culture as a factor that can influence organizational performance either positively or negatively gained renewed attention beginning in the mid-1990’s. The success of high-profile firms with “quirky cultures” like Ben &
Jerry's, the entrepreneurial cultures of high tech firms that countered the cultures of traditional corporations, a recognition that organizational culture can be a major factor in organizational performance and the related emergency of "high performance organizations", acknowledgment that organizational culture can trump the implementation of organizational strategy, differences in values of workers from different generations, competition among companies to attract the best employees, and the failure of many once-promising mergers and acquisitions all pointed to the importance of understanding and intentionally managing organizational culture.

This course will address many of the major debates about organizational culture as well as provide students with tools for better assessing and understanding organizational culture and managing culture change. Course material and discussions will consistently address issues related to both theory and practice.

SM 662. Entrepreneurship and Leadership: Creating Winners. (C) Keech. Prerequisite(s): Course permits for non-DYMN students: https://www.sas.upenn.edu/ps/graduate/dynamic/course-permit. DYNM Category: A; DYNM Concentrations: LM, SD.

Peter Drucker once famously said that "entrepreneurs innovate." The course looks at how innovation drives the entrepreneurial process in both large organizations and in startup ventures. It stresses the importance of bringing entrepreneurial vision and energy to all organizations: profit and non-profit, as well as government and institutional. The course examines the characteristics of successful entrepreneurs. Participants will learn how to develop their own entrepreneurial instincts and how to encourage an entrepreneurial culture in their organizations. The course examines the challenges of startup ventures and provides practical information to participants who are considering an entrepreneurial venture. It explores strategies for identifying opportunities, creating successful business models, and valuing a business, raising capital and managing the business.

The course builds understanding of how a culture of entrepreneurship and innovation are critical to any organization that wants to survive and prosper in the future. The course discusses how sustainability is becoming a global force for change, creating exceptional entrepreneurial opportunities. The course looks closely at the leadership roles of both the CEO in a large organization and the entrepreneur in a venture. The course examines how leaders in all kinds of organizations set priorities, identify game-changing opportunities, shape the organizational culture and motivate their teams to achieve outstanding performance or, sometimes, fail. The course stresses the leadership responsibilities of the board of directors in providing governance and oversight in both for-profit and non-profit organizations.

SM 663. Green Skepticism: Communicating and Implementing Sustainable Business. (C) Heller. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

Green initiatives are creating competitive advantage for businesses. Smart companies are integrating environmental stewardship into their strategies, operations, marketing, and product innovation. Companies that successfully embed sustainability in their core business strategy and culture--rather than "bolting it on" as a peripheral activity - are gaining the most value added. Embedding sustainability requires the active engagement of all organizational stakeholders, many of whom may be green skeptics, dubious of the need to change. "Many people who feel passionately about sustainability cannot relate to those who have a harder time understanding the need for a change..." - Corporate associate & MBA candidate. The business case for sustainability has been made many times, yet skepticism about the need for change remains widespread. While adopting sustainable business practices must make sense financially, an economic argument alone may not be enough to convince people to purchase green business products and services or to implement sustainability practices. The course is based on the assumption that "task significance" is an important factor for implementing sustainable business practices. This means helping people see the connection between small tasks they are being asked to do and the big picture of global sustainable business. The first part of the course focuses on understanding sustainability driven changes in the global business landscape through a coherent framework. The second part of the course focuses on what those changes mean for business fundamentals: consumption, production systems, innovation, and emerging economies. The third part of the course focuses on communicating and implementing sustainable business strategies and initiatives. Students will have the opportunity, with a team, to design a communication and implementation program for an organization. Throughout the course, strategies and tactics that work to engage skeptics who do not understand the need for change, as well as tactics that don't work, will be studied. The course is based on the instructor's experience leading hundreds of business and environmental professionals from skepticism to enthusiasm for sustainable business over the past decade. This course is designed for everyone tasked with engaging others in implementing sustainable business practices and for entrepreneurs selling green business products and services. It will provide strategies for enhancing a technical and economic sales pitch. The course is also for those who may be skeptical themselves, and want to reconsider their skepticism. Categories: A Concentrations LMC, SD.

SM 664. Organizational Culture and Learning. (C) Barstow. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

What is organizational culture? What is organizational learning? How do organizations learn effectively and change their culture? A learning organization is skilled at creating, acquiring, and transferring knowledge, and at modifying its behavior to reflect new knowledge (Garvin, 1993). According to Ray Stata, Chairman of Analog Devices, "The rate at which individuals and organizations learn may become the only sustainable competitive advantage." However we define and prioritize organizational learning, we must still struggle with how to do it. This is a tougher question. The thesis of this seminar is that an enriched understanding of culture can enhance organizational learning. Participants will explore the concept of culture, study the work of Chris Argyris, and discover practices and behaviors that promote organizational learning and culture change. The objective of this seminar is to help participants get beyond highly abstract philosophy and develop a deeper understanding and useful skills based on these concepts.

This course will meet on the following Wednesdays: May 27th; June 3rd, 10th, and 17th; July 22nd and 29th.
SM 666. Systems and Design Thinking. (A) Pourdehnad. 
Prerequisite(s): Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: F; DYNM Concentrations: LMC, SD.
This class is designed to challenge the traditional thinking of basic management strategy and practice. Through a series of lectures, interactive cases, and group discussions, faculty will challenge participants to rethink their assumptions and move beyond the traditional practice of management strategy formulation and execution. The prevailing pattern of thought employed by management is analytical. Analysis has come to dominate thought in the western world. But no amount of analysis can explain systemic interaction and organizational behavior. A new pattern of thought is required: synthetic. Systems Thinking involves both analysis - to produce knowledge of organizations (systems) - and synthesis to provide understanding. Without both, effective solutions to problems cannot be obtained. To go beyond understanding to wisdom requires awareness of the difference between doing things right (efficiency) and doing the right thing (effectiveness). The better we do the wrong thing, the more wrong we become. Today a great deal of energy is expended by organizations in an effort to increase the efficiency with which wrong things are done.

SM 667. Building a Business Case for Sustainability. (C) Barstow. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.
What are the systemic changes that an organization must undergo in order to become sustainable? (Sustainability is defined here to mean that no aspect of business operations is harmful to the planet or future generations.) We will examine the issues of sustainability using Peter Senge's work on learning organizations, the Swedish sustainability model, The Natural Step, and Russell Ackoff's idealized design as our frameworks for building a business case for sustainability within an organization or department.
Class participants will be asked to build a business case for sustainability within an organization or department and to prepare an interim progress report (5-7 pages) plus a final paper (15-20 pages) using the concepts and principles covered in this course and then will present their case to the class in the last sessions of the course.

SM 669. The Power of Confusion. (C) Stankard. Prerequisite(s): Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: A; DYNM Concentrations: LMC, OC. 
Course Schedule: TBA.
Confusion is a lack of clarity about some situation that matters to you, which causes you to feel so uncertain or uncomfortable that you have a hard time making decisions. You may be confused about whether you fit into an organization; or about what work makes you feel great versus work that you are good at or about the right thing to do when you are frightened. The power of confusion is that it forces you to stop and seek clarity in your life and career. This seminar addresses seven types of personal and organizational confusion encountered in organizational life during a professional career: 1) confusion over which personal ethics, skills, and talents you find most meaningful; 2) confusion over discovering what is really going on in an organization; 3) confusion of who is in charge--leadership and which direction we are moving toward? 4) confusion over 'what's in it for me?' How motivation and satisfaction relate to incentives and pay schemes; 5) confusion caused by blaming, rather than developing skills needed to make lasting changes and improvements; 6) confusion about how teams pull together 7) confusion caused by committing random acts of improvement instead of building a system for making customer-oriented organizational innovations and improvements.
You were not born with any inherited knowledge or wisdom, yet you are certain to face fear and confusion during your lifetime. You were born with curiosity and the ability to ask 'why?' when you face a confusing situation. You were also born with the ability to think for yourself, listen to others, and learn from experience. Confusion spurs you to use these abilities to gain the clarity that leads to understanding and wisdom; you will need tools to guide your learning. This seminar will show you how to use simple tools to achieve that clarity.

SM 671. Workplace Ethics: Ownership, Participation, Productivity. (B) Lamas. Prerequisite(s): Non-DYNM students must complete a course permit request form: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: F; DYNM Concentration: LMC.
In this course, you will have the opportunity to: 1) examine ethical, religious, legal, technological, and economic bases for different ownership systems from early human history through the 20th century; 2) develop a theoretical framework for understanding ownership issues in the contemporary workplace; 3) review social science concerning ownership and the related organizational issues of motivation, performance, productivity, profitability, culture, diversity, and equity; 4) analyze a variety of cases to measure ownership's effects across many industries and business situations; 5) learn about various forms of ownership and compensation in use today in small and large organizations, both public and private; 6) utilize a diagnostic tool for assessing the ways in which your own organization's culture and business outcomes are impacted by the firm's ownership system; 7) describe your own experiences of the different ownership systems with which you may have engaged, including: family, schools, little leagues and professional sports, volunteer service organizations, charities, religious institutions, professional service providers (e.g., doctors, lawyers, veterinarians), the places where you shop (e.g., think about Genuardi's before and after it was sold to Safeway), and the different places you have worked...as a way of systems; 8) assess and refine your views regarding ownership in light of your own social, political, religious, and ethical commitments. Who is going to own what we all have a part in creating? The history of American business is an evolving answer to the question of ownership. Of all the issues relevant to organizational dynamics, ownership is arguably the most important and least understood. Matters of ownership have also been and remain of intimate concern to ordinary Americans-the slave yearning to be free, the young couple with a dream of home ownership, the entrepreneur who wants to be his own boss, the consultant who wants to form a partnership with her best friends, and the indebted, mid-level manager reviewing last year's 401(k) statement.
SM 672. A Systems Approach to Crisis Preparation and Organizational Resilience. (C)
Brian Shapiro. DYNM Category: A; DYNM Concentration: LMC.
Prospective students need permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Categories: DE, A; DYNM concentrations: LMC, SD. Course Schedule: 9/10, 17; 10/1, 15, 29; 11/5, 19; 12/3, 17. This course will have a software fee, TBA.
SM 673. A Systems Approach to Crisis Preparation and Organizational Resilience. (C)
DYNM Category: A; DYNM Concentration: LMC.
This course will have a software fee, TBA.
SM 674. Human Capital and Human Nature: Sources of Creativity and Innovation. (C)
Bauer. DYNM Category: A; DYNM Concentration: LMC, GL.
The seminar focuses on the implications for our work and personal lives as we reinvent ourselves, our organizations, and our society in what is often called "the new normal." We begin with a realistic exploration of the relationship of the global economy to the widely different political systems which provide individuals with safety nets. We compare the United States to China and Europe and the ways in which our different systems both compete and support each other. Each participant will research a portion of the regional job market, analyzing the source of investments, patents, required skill level and experience of employees, and competitive outlook. The final presentation and paper will fit their regional analysis into the global picture. Where does it fit? What are its risks?
SM 675. Communication Competence: Extracting Value in Key Organizational Interactions. (C)
Brian Shapiro. DYNM Course Category: A; DYNM Course Concentrations: LMC.
Often an organization can facilitate its own success by employing fundamental communication practices during value-latent interpersonal interactions. In the course we explore the direct relationship between competent communication and the ability to extract maximum value in most Key Organizational Interactions. Starting off on a personal development note and building off time-tested principles, participants will conduct their own communication skills assessment to determine their own communication strengths and identify specific areas for improvement. Qualities such as effective empathy and active listening are also explored. Moving into the organizational realm, together we define then locate those Key Organizational Interactions, both within and external to the organization, that significantly impact how that organization is perceived. We explore all the possible value points within these Key Organizational Interactions, how they tie into the organization's strategic objectives, and how to best approach them interpersonally.
SM 676. Communication Competence: Extracting Value in Key Organizational Interactions. (C)
Brian Shapiro. DYNM Category: A; DYNM Concentration: LMC.
This course will have a software fee, TBA.
SM 677. Human Capital and Human Nature: Sources of Creativity and Innovation. (C)
Bauer. DYNM Category: A; DYNM Concentration: LMC, GL.
The seminar focuses on the implications for our work and personal lives as we reinvent ourselves, our organizations, and our society in what is often called "the new normal." We begin with a realistic exploration of the relationship of the global economy to the widely different political systems which provide individuals with safety nets. We compare the United States to China and Europe and the ways in which our different systems both compete and support each other. Each participant will research a portion of the regional job market, analyzing the source of investments, patents, required skill level and experience of employees, and competitive outlook. The final presentation and paper will fit their regional analysis into the global picture. Where does it fit? What are its risks?

Prerequisite(s): Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. DYNM Category: F; DYNM Concentrations: LMC, GL, SD.
The economy is global and every successful business in every nation must operate with awareness of its place in the interconnected dynamics of local, national, and global issues. This course uses many lenses, such as history, culture and economy to understand the global issues, their interconnections, and the impact they may have in different places, on different organizations, and in our personal decisions. Each of us needs to be able to engage systems thinking as we aim to understand others from the inside and ourselves from the outside. The centrality relationship in the global new normal is the United States and China. The weekly readings begin with recognition of the centrality of a liberal for the United States and the effect that has on China and the cultures of East Asia. This sets up three frames of reference: Human Rights, Democracy, and Capitalism. Current and potential Organizational Dynamics students with interest in Global Studies, particularly those focusing on Systems Thinking, (Sustainable) Development Policy, and international courses will find this course helpful. MPhil students with MSOD background can use this course as a foundation for advanced research in Global Studies.

SM 692. Innovation in Organizations. (C) Freeman. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.
Most serious study of innovation has focused on its dynamics and how these dynamics can be managed. A broader range of studies also consider the nature of creativity and techniques to facilitate innovation. We survey these areas, emphasizing the relationship between innovation and organization, which are central to innovation both as facilitators and impediments. More generally, we consider the process of Organizing Innovation, the role of individuals, teams and organizations in effecting change and realizing its benefits. I cover one additional theme—improvisation—because it provides insight into dealing with novel situations, and also as antidote to the relentless organizational and institutional pressures that crush the "impulsivity" and "deviance" that we need for creativity and innovation. In the end, though, the core of the course are the real issues of your life and work. Creativity begins with questions, innovation begins with problems, and education begins with you. Reflect on the central issues of your life and work and come prepared to share them with the class. The success of your experience rests on a willingness to explore your core interests and take a leadership role in molding the course to meet them. This course fills the following OrganizationalDynamics requirements: Categories: A Concentrations: LMC, SD

SM 693. (INTS693) The Global Leader. (C) Taheripour. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.
The "Global Leader" is a co-listed INTS/DYNM course, developed as part of the Lauer Institute's new Global Program that will prepare students for leadership roles in international and culturally diverse environments. The course will focus on developing skills through a hands-on approach that includes using case students, in-class exercises, movie clips, and class discussion, with readings that emphasize theory and application. The course is comprised of two modules. The first module - Globally Capable Leadership - will introduce students to the core qualities of leadership that transcend cultures, as well as examine how cultural context influences leadership efficacy. The second module - Managing Across Borders - will teach students how to negotiate effectively in a variety of contexts, including conflict resolution, transactional settings, conflict resolution, and across borders, such as those of gender, ethnic identity, national culture, and differences in values and beliefs.

SM 705. Capstone Course. (C) Barstow and Russo. DYNM Category: Capstone. Section -001 is all in-person. Section -002 is an online and in-person hybrid course.
This course requires the student to study a topic of their own choice, discuss their progress with the class in regular meetings and to deliver a final paper that meets the following criteria: (1) Makes an argument, describes or summarizes a position that is unique, original, or which directly applies to the student; (2) Uses primary sources or applies to a primary organization as much as possible; (3) Conforms to the style and format of good academic writing and the MSOD Capstone Presentation Guidelines; (4) Allows a student to demonstrate competencies gained from the courses completed in the Organizational Dynamics program.
The role of the capstone professor is to coordinate the development of each student's capstone committee, to offer facilitation during peer-review discussion discussion of student work as the capstone is written, and to post the final grade. The course professor may also be the student's primary advisor, or a reader. For details about the capstone course, including delivery dates, please see the DYNM Canvas community site.

SM 720. Foundations of Organizational Consulting and Executive Coaching. (C) Berger/Pennington/Russo. Prerequisite(s): This course is for OCEC Cohort members only. DYNM Category: F; DYNM Concentration: OCEC. Course Schedule: 9/8-9/13.
This first course in the cohort program of the Organizational Consulting and Executive Coaching concentration is an introduction to group dynamics, the helping relationship in coaching and consulting, and the adult development journey. It begins on Thursday night with dinner and runs 8:30 am through dinner on Friday, Saturday, and Sunday, concluding on Monday at noon.
This course is a residential course. This course will have an additional course fee to cover lodging and other program logistics. Registration permits will be issued upon a signed Travel Agreement being returned to the Organizational Dynamics program office.

SM 722. Making Meaning from Organizational Experience and Establishing Frameworks for Consulting and Coaching. (C) JACOBS. Prerequisite(s): This course is for OCEC Cohort members only. DYNM Category: F; DYNM Concentration: OCEC. Course Schedule: TBA.
The cohort will reconvene to collectively "unwrap" the five-day intensive. Using their journals and observations, participants learn how to apply relevant theory and concepts to make meaning of their experiences and to analyze and interpret behavior at multiple levels. Then, using their knowledge of applying theory to practical experience, participants will develop a theory-guided consulting and coaching framework. Here they research, present and apply a framework of their own choosing.
This course fulfills the following Organizational Dynamics requirements: Categories: A Concentrations: OEC

**SM 723. Consulting and Coaching Process: Knowing Yourself. (C)**
Pennington. Corequisite(s): This course meets on the following weekends: March 19 to 21; April 16 & 17; June 4. DYNM Category: A; DYNM Concentration: OEC.

Participants learn to be coaches by being coaches to one another. Over a two-month period, cohort members expand their repertoire of skills and tools, share their experiences, and together scrutinize the client/coach relationship.

This course will offer a conceptual comprehension of the tools and techniques used in effective internal and external organizational consulting engagements. By contrasting the theory and practice of alternative coaching models, we will build tools and techniques for effective coaching as a leadership competency. Through an analysis of the coaching relationships in your organization, you will learn to develop a personalized approach to coaching and expand upon within organizational settings.

Participants learn the "how and why" as well consulting frameworks. Additionally, the relevant and often symbiotic connection between consulting and coaching will be studied. What process tools are most useful to today's executive coach in a consultative environment? How do approaches to consulting and coaching differ? How are they similar? How can a confluence of coaching and consulting lead to more effective decision making and wide-scale organizational performance?

DYNM 724 will be presented over five class meetings. The class sessions will be taught utilizing lectures, case studies, structured small group discussions, individual, and team presentations, faculty and participant experiences, and guest speakers.

**SM 725. Interpretation & Problem-Solving & Managing Conflict. (C)**
Napier. Corequisite(s): DYNM726. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

Participants explore sources of problems and conflicts, identify the range of choices for resolution, and spend time in the field identifying and resolving conflicts at the personal and team levels.

**SM 726. Expanding Coaching/Consulting Tools and Skills.** Russo/Napier/Orenstein. Corequisite(s): DYNM725. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

Competencies are expanded into more complex aspects of team and organizational change. Having experienced the art of design at a micro level, they now examine it as a means of enhancing larger system change. The cohort explores the nature of system change and how it relates to changing teams and individuals.

**SM 727. Practicum Experience in Consulting and Coaching. (C)** Russo/Napier/Orenstein. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

Participants integrate everything they have learned by contracting with a client to provide consulting/coaching services. Individual supervision is provided on a weekly basis by a core faculty member and peer supervision is provided in two clinics, where cohort members share their experiences and learning with one another and, at the conclusion of the second clinic, bid the cohort farewell as members are now ready for their internship experiences. This course is open to OEC students only. This course fills the following Organizational Dynamics requirements: Categories: A Concentrations: OEC

**SM 729. Executive Coaching Internship. (C)** Jacobs/Pennington/Russo. DYNM Category: A; DYNM Concentration: OEC.

In this course, each participant is exposed to a variety of executive coaching opportunities designed to enable them to utilize their skills in multiple situations and contexts. Access to an advisor/coach during this period ensures that each participant's advanced learning will be provided in a timely and individualized manner.

**SM 730. Capstone Portfolio Preparation and Proposal. (C)** Russo/Napier/Orenstein. Corequisite(s): DYNM729. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

In this course, students demonstrate their consulting and coaching mastery and scholarship by creating their capstone/thesis summary proposal. Throughout the program, participants will have systematically codified their learning experiences through the delivery and accumulation of various papers, project results, and other measures of performance. These will be contained in a Personal Portfolio which includes a record of understanding the assigned literature and classroom-based theory and experiences. In addition, each individual's personal coaching philosophy is framed in a theoretical and model developed over the course of the program. Personal reflections and insights are an essential aspect of the ongoing record of learning. Using all of these as source material, the participant writes and assembles a full case history drawn from the Practicum (DYNM 727) and the Internships (DYNM 728 and DYNM 729).

Corequisite(s): DYNM 754. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

The course will focus on the reforms and international openness that have transformed China during the last quarter century, and their political, social and legal contexts and consequences. Several specific topics will receive detailed attention, including reforms to China's economy (including the creation of a market economy, and changes in enterprise ownership and management and financial institutions), the role of foreign trade and investment and other channels of external influence, rising affluence and inequality, political reform and liberalization, and the development of the legal system. Students will experience contemporary urban China firsthand and see important cultural and historical sites and artifacts, providing a basis for assessing the influence of Chinese traditions and legacies in the People's Republic today. In China, we will meet with foreign and Chinese business people, government officials, academics and others.

Corequisite(s): DYNM 753. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

The course will focus on the reforms and international openness that have transformed China during the last quarter
century, and their political, social and legal contexts and consequences. Several specific topics will receive detailed attention, including reforms to China's economy (including the creation of a market economy, and changes in enterprise ownership and management and financial institutions), the role of foreign trade and investments and other channels of external influence, rising influence and inequality, political reform and liberalization, and the development of the legal system. Students will experience contemporary urban China firsthand and see important cultural and historical sites and artifacts, providing a basis for assessing the influence of Chinese traditions and legacies in the People's Republic today. In China, we will meet with foreign and Chinese business people, government officials, academics, and others.

SM 758. Sweden: Strategies for Thriving in the 21st Century. (L) Barstow. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

Neutral during WWI, and claiming a "Middle Way" between east and west in the post-war twentieth century, Sweden - its people, institutions, and culture - has left its mark on our global society. In today's world, the influence of Swedish ideas and innovations can be seen in government structures, health and social policies, business organizations, working life, education, science, art, literature, and, of course, the design and style of many products and services which enjoy high demand. These are impressive impacts from a nation-state of only eight million people. What lessons are there for Americans and our institutions as we enter the twenty-first century where our leadership position, ability to determine the rules and control the agenda of world economic and political affairs are diminished? In this course, we focus on "the people philosophy" of Sweden, its government, businesses and organizations. We cover healthcare issues and policy, government, businesses and organizations.

SM 766. Perspectives on Change in the Czech Republic. (L) Steiner. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

Students will have the opportunity for a brief "professional match" while abroad. Prior to departure, the domain of professional practice of each student will be identified in order to determine a match with a person or organization in Prague. A person working in the financial sector or in human resources, for example, will have an opportunity to spend time with a colleague working in a similar area in the Czech Republic. Course objectives are: 1) Understand the high points of the previous history, culture and economics within the region; 2) Understand the routes of the transformation process from an organizational perspective; 3) Understand how the current changes in the economy, culture, and structure influence society and the transition to democracy; 4) Appreciate the environments of a major Central European city and regional towns; 5) Study with representatives of the region's academic, political, cultural, and business environment in order to compare these processes to those in the U.S.; 6) Demonstrate understanding of the issues presented in this course by writing a final paper.

SM 770. Global Communications. (C) STEINER. For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu.

Says an Indian businessman to his American counterpart: "In your country you give money to politicians before they pass legislation and you call it lobbying. In my country we do so afterwards, and you call it corruption." This anecdote illustrates well the cultural relativity of all concepts: what one society considers a legitimate "profit" is elsewhere "usury" or exploitation. This is the problem faced by American companies considering expansion into any new foreign market. National identities expressed through subtle customs, laws, institutions and behaviors are not always obvious, even when there are no apparent language problems. Understanding the complex regional influences of geography, history, religion, and culture is key to anticipating how local norms are reflects in market preferences, social, political and economic institutions, and work attitudes. This seminar will explore various topics of cultural studies and how they affect values and behavior. Participants will be encouraged to focus on a specific foreign culture and, through assigned readings, film, and literature, analyze its various aspects. Alternatively they may develop, either in teams or individually, a questionnaire about cultural attitudes and carry out a pilot survey in their own organizations. A significant portion of the course will take place in Montreal, one of North America's oldest cities, a veritable turnstile of peoples from around the world, whose cultural relations are to some degree regulated by Canadian multicultural policies.

This 2CU course includes travel and study in Bangalore, Mangalore and Mumbai, India, a country acknowledged as the world's largest democracy with a population of over 1 billion. India has a thriving microfinance industry that has come under scrutiny in the past year. While microfinance has been touted by many as the panacea in helping raise people out of poverty, empower women and aid in development from the grassroots level, it has come with some serious attendant costs. This course will discuss a variety of different models of microfinance and review the new trends of financial inclusion for the poor. We will start in Bangalore and continue to Mangalore, where we will visit local development projects, microfinance women's groups, and meet organizational leaders. We will see firsthand how and if microfinance and financial inclusion "work effectively" to achieve the goals of alleviating poverty. While in Mangalore, students will attend and participate in a conference: Micro Finance in India: The Past, Present and Future, being held at Nitte University. We will hear experts speak on current issues and how new legislation in India may change the face of microfinance. We will end the program in Mumbai, one of the most populous urban regions in the world and the richest city in India with the highest GDP of any city in South, West or Central Asia.

In the interconnected world of global corporations, studying Project Management from the standpoint of U.S. firms is not
Broadening perspectives is the goal of the seminar in Paris, France. Dr. Jean-Marc Choukroun will lead Organizational Dynamics students in a study of European approaches to the challenges of large project management, particularly those involved in public-private and other multi-group projects. Dr. Choukroun notes that "In today's global economy, managing multi-national, multi-cultural teams, devising innovative financing arrangements and securing public-private cooperation are increasingly becoming standard requirements for complex projects. European integration has made dealing with these issues a priority with many European organizations. Students will be exposed to new ideas, and new ways of applying time-tested methods and techniques that European organizations, have developed to address these issues. Properly adapted, some of these ideas should prove to be readily applicable in the US context. In addition, students will discover how French managers in the public and private sectors frame issues, approach problems and implement solutions."

**899. MPhil Capstone Course.** Starr.

For additional information, please see our website at:

This course requires the student to study a topic of their own choice, to discuss their progress with the class (in regular meetings) and to deliver a final paper that meets the following criteria: 1) Makes an argument, describes, or summarizes a position that is unique, original or which directly applies to the student; 2) Uses primary sources or applies to a primary organization as much as possible; 3) Conforms to the style and format of good academic writing and the MPhil Capstone Project presentation standards; 4) Allows a student to demonstrate competencies gained from the courses completed in the Organizational Dynamics program.

The role of the MPhil Capstone course professor is to coordinate the development of each student's capstone committee, to offer facilitation during peer-review discussion of student work as the capstone is written, and to post the final grade. The course professor may also be a student's primary advisor or a reader. For details about the MPhil capstone course, including delivery dates, see the MPhil capstone course page.

**733. SEM CLS ARAB P/P.**
The final section covers information relevant to understanding biological processes that may be abnormal in neuropsychiatric illnesses, such as stress, sleep, and circadian rhythms, as well as quantitative genetics.

564. (CBE 564) DRUG DELIVERY.
In this course, students will learn about drug delivery systems with emphasis on targeted therapeutics and translational nanomedicine. The course will be directed and taught by Miriam Wattenbarger (CBE) and Vladimir Muzykantov (PHRM).

Lectures will also be given by other faculty from the Penn School of Engineering and Applied Science and the School of Medicine. The four main topics for the course are traditional drug delivery, drug delivery systems and nanocarriers, targeted and smart drug delivery systems, and translational aspects of drug delivery systems. There will be a midterm, final, and a group project for the course.

570. Principles of Cardiovascular Biology. (B) Drs. Vladimir Muzykantov and Emer Smyth. Prerequisite(s): Permission of course director.

Lectures to be presented by various Medical School faculty members. Topics covered include: general principles of vascular biology and hemodynamics, endothelial cells and integral vascular functions, signaling in the cardiovascular system, angiogenesis, hemostasis and thrombosis, platelets, platelet/vascular interactions, vascular integrins and adhesion molecules, vascular inflammation and oxidative stress, white blood cells, vasoactive compounds and drugs, mechanisms of atherosclerosis, cholesterol and lipid metabolism, hypertension, novel vascular directed gene and enzyme therapies.

580. Topics in Pharmacogenetics. (B) DR. A. STEVEN WHITEHEAD. Prerequisite(s): Permission of course director.

This is a "literature-based" course (i.e. a seminar course/literature survey). It will survey the emerging technologies and computational advances that have permitted the field of pharmacogenetics to mature into a major biomedical discipline over the past few years. It will consider the likely impact on disease target identification, the development of new drugs for established and "niche" markets, the advent of "personalized medicine", including the selection of therapies that have maximum efficacy and minimum side-effect profiles. This course will also touch on some of the ethical issues associated with the routine genetic testing of patients to facilitate treatment choices and clinical monitoring.
600. Medical Pharmacology BIOM 600. Axelsen and staff. This course focuses on the mechanism of action of various classes of agents used in the therapy of human disease. Drug classes covered include neuropsychiatric drugs, anesthetics, sedatives and hypnotics, cardiovascular and hematological drugs, drugs affecting renal function, inflammation and immune modulation, anticancer drugs, antimicrobial drugs, endocrine and metabolic drugs. The course is comprised of four 1-hour lectures per week by faculty with special interests and expertise in the topic being presented. Student evaluation is based on four short answer exams. This course is intended for non-PGG students with an interest in molecular basis of drug action. Prerequisite(s): Cell Biology (BIOM 600). Prerequisite(s): Permission of the instructor. Class meets four days a week.

This course will review basic human physiology pertinent to drug action, and then focus on the mechanisms of action of the various classes of agents used in the therapy of human disease. It consists of lectures by an array of faculty with special interests and expertise in the topic being presented. Drug classes covered include: Neuropsychiatric drugs, cardiovascular and hematological drugs, anticancer drugs, antimicrobial drugs, endocrine and metabolic drugs.

623. (REG 623) Fundamentals of Pharmacology. (A) Dr. David Manning and staff. Prerequisite(s): Permission of course director. Meets three times per week.

This course is designed to introduce students to basic pharmacological concepts with special emphasis on the molecular actions of drugs. Subject matter includes use of microcomputers to analyze pharmacological data.

624. MEDICAL PHARMACOLOGY. Axelsen and staff. This course is centered on the molecular basis of drug action. It is comprised of four 1-hour lectures per week (as described for PHRM 600) and supplemented with weekly problem sets and readings designed to reinforce and expand upon materials presented in lecture. Student evaluation is based on four exams and weekly problem sets. PHRM 624 is required of all 2nd year PGG students. PGG students must co-enroll in PHRM 532/CAMB 532 (Human Physiology). Prerequisites: Cell Biology (BIOM 600).

630. (BMB 700, CHEM700) Frontiers in Bioorganic and Medicinal Chemistry. (A) Dr. Ian Blair, Dr. Barry Cooperman, Dr. Dewey McCafferty. Prerequisite(s): Permission of the courses directors.

This advanced course for graduate students will be based primarily on didactic lectures from three Penn faculty. Permission for a student to participate should first be obtained from one of the participating faculty. A solid background in chemistry and biochemistry will be required. Overviews of current and emerging topics in bioorganic and medicinal chemistry will be presented. Students will be given short "take home" problem sets, two formal interim examinations, and a formal final examination during the semester. Topics that will be covered over the semester include: Mass spectrometry of DNA and RNA adducts, Synthetic peptides/peptide mimics/proteins, including the expansion of the genetic code; methods of synthesis and applications, Synthetic RNAs, DNAs and nucleic acid mimics: methods of synthesis and applications, Synthetic nucleosides and nucleotides: methods of synthesis and applications, Combinatorial chemistry, Enzymology of translation, Antibiotic biosynthesis, Introduction to drug metabolism, Characterization of drug metabolites, Characterization of reactive metabolites from drugs and endogenous molecules, DNA-adducts from drugs and endogenous molecules, Lipidomics in drug development.

SM 632. (CAMB632) Cell Cont Sig Trans Path. (B)

640. Topics in Cancer Pharmacology. (B) Dr. Judy Meinkoth and Dr. Wenchao Song. Prerequisite(s): permission of course directors. Class meets Wednesdays, 1:00 - 3:00; Fall semester.

Reviews of current literature on topics such as cancer cell signaling, cancer genetics, hormonal carcinogens, environmental carcinogens, chemo- and gene therapy of cancer, cancer epidemiology and prevention. New hypotheses in cancer etiology, prevention and treatment will be discussed as they appear in the literature. The aim of the course is to introduce the students to the latest development in the above areas related to cancer pharmacology.

SM 650. (BMB 650, CAMB702) Topics in Cardiovascular Pharmacology.

657. (ENVS657) HAZ WASTE HEALTH EFFECTS.

660. Frontiers in Cancer Pharmacology. (A) Dr. Ian A. Blair. Prerequisite(s): Permission of the course director.

This advanced course for graduate students combines didactic lectures from Penn faculty with oral presentations and oral assignments from the students. Students should have either completed PHRM 560, Principles in Cancer Signaling and Therapeutics or PHRM 640, Topics in Cancer Pharmacology or equivalent classes. The faculty will present overviews of current and emerging topics in cancer pharmacology. Emphasis of the presentations will be on the translation of basic science discoveries into therapeutic agents. Students will choose related topics to explore in more detail. In consultation with Dr. Blair, students will prepare a 45-minute presentation (using Power Point slides). Each student will give at least two presentations during the semester. The faculty teaching the course will be available for help with the presentations. The written assignment will involve a 10-page double spaced paper (exclusive of references) with a maximum of 25 references. The assignment will consist of a literature review in the area of one of the presentation topics chosen by the student. Additional information can be obtained from the Center for Cancer Pharmacology web site: http://www.med.upenn.edu/ccp/

699. Laboratory Rotation.

799. Independent Study. (C)

899. Pre-Dissertation Lab Rotation.

999. Research in Pharmacology. (C) Prerequisite(s): Permission of staff member.

Independent or collaborative research in various fields of pharmacology arranged individually with members of the staff.
PHILOSOPHY (AS) {PHIL}

335. STUDY ABROAD.

SM 343. Philosophy of Mind. (M) Staff.

SM 408. (SARS409) TRUTH & CONCEALMENT. (M)

Introductory Courses

Philosophers ask difficult questions about the most basic issues in human life. Does God exist? What is reality? What can we know about the world? What does it mean to have a mind? Do I have free will? What should I do? How should we live together? Do our lives have meaning? This course is an introduction to some of these questions and to the methods philosophers have developed for thinking clearly about them.

Ethics is the study of right and wrong behavior. This introductory course will introduce students to major ethical theories, the possible sources of normativity, and specific ethical problems and questions. Topics may include euthanasia, abortion, animal rights, the family, sexuality, bioethics, crime and punishment and war.

L/R 003. (CLST103) History of Ancient Philosophy. (A) History & Tradition Sector. All classes. S.Meyer.

This course is an introduction to philosophy in the ancient world. While today, philosophy is considered a branch of academic inquiry, many of the ancient Greeks and Romans, however, held a radically different conception of the discipline. For them, philosophy was nothing less than an entire way of life—not just a set of doctrines or arguments, but an orientation and set of lived practices, a conscious and continual reforming of the self in light of some principle or principles. In this course, we will examine the major movements and figures of ancient philosophy. Major figures will include Socrates, Plato, Aristotle, the Stoics, the Epicureans, and the Skeptics.

L/R 004. (GSWS006) History of Modern Philosophy. (B) History & Tradition Sector. All classes. Hatfield, Detlefsen.

This course is an introduction to a few central themes in philosophy in the 17th and 18th centuries, and to some of the crucial thinkers who addressed those themes. Topics to be covered may include, among others, the nature of the human being (including the human mind), the relationship between God and the created world, the nature of freedom, and the relations among natural sciences, philosophy and theology in this rich period of human history.

005. (LGIC010, PHIL505) Formal Logic I. (C) Domotor, Weinstein. This is a Formal Reasoning course.

This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.

006. (PHIL506) Formal Logic II. (B) Weinstein.

An introduction to first-order logic including the completeness, compactness, and Lowenheim-Skoolem theorems, and Godel's incompleteness theorems.

007. Critical Thinking. (M) Staff.

This course will provide the student with informal techniques for identifying and analyzing arguments found in natural language. Special attention will be paid to developing the ability to assess the strength of natural language arguments, as well as statistical arguments.

L/R 008. (PPE 008) The Social Contract. (B) Society Sector. All classes. Freeman,Tan.

This is a critical survey of the history of western modern political philosophy, beginning from the Early Modern period and concluding with the 19th or 20th Century. Our study typically begins with Hobbes and ends with Mill or Rawls. The organizing theme of our investigation will be the idea of the Social Contract. We will examine different contract theories as well as criticisms and proposed alternatives to the contract idea, such as utilitarianism. Besides the above, examples of authors we will read are Locke, Rousseau, Hume, Mill and Marx.

SM 010. (PPE 210) Topics in Philosophy I. (M) Tan.

Topics in Philosophy: Philosophy through Great Books: In this seminar we will approach and examine different philosophical issues by reading some of the so-called "great books", including central western philosophy works by Plato, Descartes, Hobbes, and Mill as well as books like The Epic of Gilgamesh, The Bhagavad Gita, and The Analects. We read these canonical works because they are among the key and enduring works of humanity, and to learn how their authors understand and approach philosophical and practical problems that continue to confront us. Topics to be discussed include the idea of justice, what is the good life, the possibility and basis of knowledge, nature vs society, social obligations, and morality and conflict.

015. Logic and Formal Reasoning. (B) Domotor.

This course offers an introduction to three major types of formal reasoning: deductive, inductive (probabilistic and statistical), and practical (decision-making). The course will begin with the study of classical sentential and predicate logics. It will move on to elementary probability theory, contemporary statistics, decision theory and game theory.

SM 024. Philosophy of Biology. Staff.

Why was Darwin's theory of evolution revolutionary? What actually evolves: genes, individuals or groups? What factors other than natural selection determine evolution and how important are they? To what extent do genes affect our behavior? Does the race have a biological basis? What is biodiversity and why should we care about it? In this course we will examine these questions from a philosophical point of view. This course will have two parts. In the first part we will examine the foundations of evolutionary theory, starting off with Darwin's own formulation. We will then look at external and interal criticisms of evolutionary theory. Topics will include creationism and intelligent design, adaptationism, and the units of selection debate. In the second part of the course we will apply this knowledge to contemporary ethical issues. We will focus on biological theories of race and gender and examine their criticisms. We will also discuss the possibility of grounding ethics in evolutionary theory, the emergence of ecosystem ecology and the concept of biodiversity and its role in environmental policy. Please note that no previous knowledge of philosophy or biology is required to attend this course.
L/R 025. Philosophy of Science. (C)
Natural Science & Mathematics Sector.
Class of 2010 and beyond.
Weisberg, Spencer.

What counts as a scientific theory? What counts as evidence for a scientific theory? Are scientific inferences justified? Does science give us truths or approximate truths about a world that exists independently of us? How can we know? Does it matter? These are all perennial questions in the philosophy of science, and the goal of this course is to look at how philosophers have answered these questions since the scientific revolution. In addition to reading classic work by philosophers of science, we will read material from living and dead scientists in order to gain a deeper appreciation of the philosophical questions that have troubled the most brilliant scientists in Western science.

This course provides an introduction to the philosophy and intellectual history of space-time and cosmological models from ancient to modern times with special emphasis on paradigm shifts, leading to Einstein’s theories of special and general relativity and cosmology. Other topics include Big Bang, black holes, stellar structure, the metaphysics of substance, particles, fields, and superstrings, unification and grand unification of modern physical theories. No philosophy of physics background is presupposed.

Offered through the College of General Studies.

Feminist theory grows out of women’s experience. In this course we will investigate how some contemporary feminist thinkers’ consideration of women’s experience has caused them to criticize society and philosophy. Traditional philosophical areas addressed may include ethics, social and political philosophy, aesthetics, philosophy of religion, and epistemology.

SM 029. Philosophy of Sport. (M)
M. Meyer.

This is an introductory philosophy course that uses philosophical tools to understand and answer questions that arise in and about sports. The central question to be answered is what constitutes cheating in sports, especially by methods that enhance athletic performance. Other topics may include the nature of competition in sport, the appropriate competitors in sporting events, and the ethics of team loyalty.

SM 032. Topics in Contemporary Philosophy. (M) Varying instructors.

Transhumanists seek to extend the capacities of the human mind beyond the bounds of the human brain and body through technology. Indeed, for them, such an extension of human thinking and feeling represents the next big step in human cognitive evolution. In this course, we will examine the philosophical conception of a mind that underpins this movement to extend the human mind beyond human biology. Through an examination of the hypothesis that there can be non-biological thinking and feeling, we consider whether technologies that enable or enhance human mental faculties might one day completely supplant the biological machinery of the human body. We will also consider the moral issues surrounding the creation of transhumans. The questions that we consider in this course will get to the heart of what it means to possess a human mind and indeed to be a human being.

L/R 034. (RELS011) Philosophy of Religion. (M) Steinberg.

An introductory philosophical examination of questions regarding the nature of religious experiences and beliefs; arguments for and against the existence of God; the problem of evil; the relationships of faith, reason and science; the possibility of religious knowledge; the role of religious communities, etc. Readings from the history of philosophy, 20th century and contemporary analytic philosophy, and the European phenomenological, existential, and hermeneutic traditions.

Scope and limits of computer representation of knowledge, belief and perception, and the nature of cognitive processes from a computational perspective.

SM 045. Animal Minds. (M) Staff.

In this course, we will examine philosophical issues in nonhuman animal cognition. We will consider questions such as the following: Do nonhuman animals use concepts? How do we assess different interpretations of their behaviour? What is the role of anthropomorphism in thinking about nonhuman animal cognition? How are intelligence and sociality related?

L/R 050. (RELS155, RELS455, SAST150, SAST152) Introduction to Indian Philosophy. (M) History & Tradition Sector. All classes. Staff.

This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India -- arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C. to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

054. Contemporary Continental Philosophy. (M) Staff.

An introduction to 20th century continental European philosophy, focusing on the origins and development of phenomenology and existentialism and their influence on contemporary thought. The course will include an introduction to the phenomenology of Edmund Husserl and examine the subsequent development of modern philosophic existentialism by critics of Husserl, such as Martin Heidegger, Jean-Paul Sartre or Maurice Merleau-Ponty. Finally, the important influence of phenomenology and existentialism on contemporary trends in French, German, and American philosophy will be explored, including hermeneutics, deconstruction, post-modernism, and post-analytic philosophy. No previous study of philosophy is required.

L/R 055. Existentialism. (M) Staff.

This course treats "existentialism" as an historical, philosophical, and literary phenomenon. In addition to close readings of philosophical texts by Nietzsche, Kierkegaard, Heidegger, Sartre, Simone de Beauvoir, and Camus, we will read literary works by Dostoyevsky, Ibsen, Kafka, Beckett, Knut Hamsun, and Richard Wright. There will also be semi-regular film screenings. Topics include death, anxiety, resentment, and will-to-power, authenticity, faith, the absurd, racism and sexism, sources of art and morality, and the nature of human existence.

067. (GRMN248) 19th Century Philosophy. (M) Jarosinski.

"God is dead." This famous, all too famous death sentence, issued by the 19th-century
German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine both the "modernity" of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us "how to philosophize with a hammer."

L/R 072. (HSOC101, PPE 072) Biomedical Ethics. (M) Society Sector. All classes. Gibbons. This course is an introduction to bioethics, focusing on ethical questions arising at the beginning and end of life. Topics will include procreative responsibilities, the question of wrongful life, and prenatal moral status as well as questions of justice related to markets for sperm, eggs and gestation. We will also attend to dilemmas at the end of life, including the authority of advance directives, euthanasia and the allocation of life-saving therapies.

SM 073. (ENVS073, PPE 073) Topics in Ethics. (M) Gibbons, M. Meyer. This course examines some of the central theoretical and applied questions of ethics. For example, what is the good life? By what measure or principles do we evaluate the rightness and wrongness of actions? How does ethical reasoning help us understand and address real world problems such as world hunger, social injustice, sex and race discrimination, allocation of scare resources and the like. The course can be organized around an applied topic or practical issue such as global ethics, just war, biomedical ethics or environmental ethics.

SM 074. Business Ethics. (M) Staff. In this course we will begin by examining practical ethical dilemmas facing businesses. Since usually people, not businesses, face ethical quandaries, we will consider how a business can face an ethical dilemma at all. Maybe it doesn't even make sense to attribute responsibilities, liabilities, or agency to corporations. If businesses do indeed have moral responsibilities, perhaps that means that employees have corresponding rights against their employers. With a better understanding of how the ethical world intersects with the business world, we can thoughtfully discuss the place of the corporation in society.

L/R 077. Philosophy of Law. (M) Society Sector. All classes. Freeman, Guerrero, Tan. This course is an introduction to the Philosophy of law. The central question of the course is this: why have law? Answering that question requires engaging with another question: what is law? We will approach those two questions in a variety of ways throughout the semester. In the first section of the course, we will begin by discussing one important feature of law: its close connection to coercion and punishment. Many have argued that the close relationship between law and coercion creates a demand for justification: what can or does justify law, given that law involves coercion? We will explore answers to that question. We will also consider a more general question: what is law? (if we didn't have law, why might we want it?) The second section of the course engages with these same issues but in more concrete settings: the areas of criminal law and property law. We will consider what, if anything, is distinctive about those two areas of law, and we will consider whether the purported purpose(s) of law in general that we discuss in the first section make more or less sense when we consider these two specific areas of law. We will also consider distinctive aspects of the sources of law in these two areas of law: democratically enacted statutes, in the case of criminal law; and judge-made common law, in the case of property law.

The third and final section of the course will consider an unusual and particularly significant kind of law: constitutional law. We will consider the purpose(s) of constitutions, how constitutionalism relates to democracy, and how constitutions ought to be understood and interpreted, in light of our answers to these first two questions. Throughout the course, we will engage with both classic and contemporary work, reading work by Michelle Alexander, Jeremy Bentham, Angela Davis, Ronald Dworkin, John Hart Ely, H.L.A. Hart, Thomas Hobbes, John Locke, John Stuart Mill, Robert Nozick, Martha Nussbaum, Richard Posner, Jeremy Waldron, and others.

SM 079. Environmental Ethics. (M) Kovaka. In this course we will investigate some of the ethical issues that arise from our relationship with the environment. We will examine important issues in environmental ethics, supplementing our discussions by considering how the latest scientific results affect environmental thinking and policy. Topics covered will include (but not be limited to): What are our responsibilities toward the environment, as individuals and as members of institutions? How do our responsibilities toward the environment relate to other ethical considerations? Do non-human animals/species/ecosystems have intrinsic value? What should conservationists conserve (Conservation vs restoration, keystone species vs ecosystems)?

L/R 080. Aesthetics. (M) Arts & Letters Sector. All Classes. Staff. This course examines philosophical issues centering on the nature and value of the arts. Some questions we'll consider are: What is art? What does it mean to have an aesthetic experience? How are aesthetic experiences different from non-aesthetic ones? What is the relation between art and truth? How do the moral qualities in a work of art affect its aesthetic qualities? Why are emotions important in our interpretations of artworks? What is the relation between art and expression? Do forgeries necessarily have less aesthetic value than original artworks? What are aesthetic judgments, and are they merely expressions of taste? Lecture and discussion will center on both classical and contemporary works in aesthetics.

155. Continental Philosophy. (M) Staff. In this course we read various texts in the Enlightenment tradition and more recent ones critical of modern distortions of this tradition. We shall begin briefly with Kant and Marx, two exemplars of this tradition, and then we shall study in some detail the views of the Frankfurt School (especially the writing of Horkheimer and Adorno), Foucault, and Derrida. Background readings from Nietzsche and Saussure shall also be assigned to place the material from Foucault and Derrida in its proper context.
Intermediate Courses

SM 202. Topics in Ethics I. McNinch.
As an account of the standard of right conduct, consequentialism is sometimes said to be the view that the rightness of an act is determined entirely by the value of its consequences. Since the 1970s, consequentialism and its most widely-endorsed version, utilitarianism, have been the subjects of a number of influential critiques. Philosophers have contended that consequentialism cannot account for the distinctive values of justice and fairness, for the significance of character, for the agent-relativity of some moral demands, and for the action-guiding function that moral theories are thought to possess. These critiques recommend a close study of the alternative, deontological ethical framework from which many of these critiques originate a framework contending that the right is prior to the good, in John Rawls's words. But these critiques have also prompted spirited responses from consequentialists and sophisticated modifications to their theories; these responses are also worth exploring. The focus of this course is to consider and assess some of the important strands in this debate, including the suggestion that neither moral framework adequately captures human concerns about morality and value.

We will begin by looking at some of the historical antecedents to the contemporary debate, starting with work by Bentham, Mill, and Sidgwick. We will then move forward to the contemporary debate, reading important critiques by John Rawls, Bernard Williams, Thomas Nagel, Philippa Foot and others, as well as responses by Peter Railton, Samuel Scheffler, and others. Finally, we will look at recent work by Susan Wolf that provides an alternative perspective on morality, value, and meaningfulness.

The readings in this class are challenging, but we will approach them carefully and collaboratively.

When a flu pandemic strikes, who should get acinated first? What's our best strategy for minimizing the damage of global climate change? Why is Philadelphia racially segregated? Why do most sexually reproducing species have two sexes, in roughly even proportions? These and many other scientific and practical problems required us to get a handle on complex systems. And an important part of deepening our understanding and sharpening our intuitions requires us to think with models. Students in this laboratory-based course will learn about the varied practices of modeling, and will learn how to construct, analyze, and validate models.

L/R 205. What is Meaning?. (M) Staff.
This course will survey several central topics in philosophy of mind and language, as well as investigate how these areas of philosophy interact with the scientific study of the mind. Among the questions we'll be asking are: What is it to have a mind? What is consciousness? What is it to think, to perceive, to act, to communicate, to feel emotions? What is the relationship between the mind and the brain? Can there be a science of the mind? Of language? What can it tell us? What can philosophy contribute to cognitive science?

SM 209. Introduction to Plato. (M) S.Meyer.
This course involves a close reading of the most important dialogues written by Plato, one of the greatest philosophers of all time. We will examine a wide range of topics in metaphysics, epistemology, and ethics: What is the nature of the soul? Is there an afterlife? What are the fundamental entities in the world? What are Plato's "forms"? What is knowledge and what can be known? Are we born as a blank slate or is something innate in us? What is the good life? What is the best way for us to live our lives? We will see how Plato attempts to answer these questions in his early, middle, and late dialogues, and we will ask whether and how exactly he is self-critical and changes his views over time.

210. (CLST210) Introduction to Aristotle. (M) S.Meyer.
Aristotle (384-323 BCE) was one of the most important philosophers in Classical Greece, and his legacy had unparalleled influence on the development of the Western philosophical thought through the medieval period. We will study a selection of his works in natural philosophy, metaphysics, epistemology, psychology, ethics and politics. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required.

SM 211. (CLST211) Ancient Moral Philosophy. (M) Society Sector. All classes. S.Meyer.
The Nicomachean Ethics is considered to be Aristotle's major ethical work, and it is still counted among the most influential ethical texts altogether. This course will focus on Aristotle's Nicomachean Ethics with a special emphasis on questions that are systematically relevant for problems discussed in contemporary approaches to virtue ethics. These questions concern, for example, the Aristotelian conception of virtue, the scope and nature of practical wisdom, and the relationship between virtue and justice.

SM 220. (MATH220) Proof in Mathematics, Philosophy and Law. (M) Weinstein. Prerequisite(s): MATH 103 or PHIL 005.
Proofs are vital to many parts of life. They arise typically in formal logic, mathematics, the testing of medication, and convincing a jury. How do you prove that the earth is essentially a sphere (in particular, not flat)? In reality, proofs arise anywhere one attempts to convince others. However, the nature of what constitutes a proof varies wildly depending on the situation -- and on whom you are attempting to convince. Convincing your math teacher or a judge is entirely different from convincing your mother or a jury. The course will present diverse views of Proof. On occasion there may be guest lecturers.

SM 221. Philosophy East and West. (M) Staff.
This course is an introduction to philosophy through a comparative examination of texts from ancient Indian and Greek philosophical traditions. These traditions share fundamental, metaphysical beliefs about the nature of the universe and of the self, but we can also observe substantial differences in their treatments of the problems of philosophy as well as the solutions they offer to these. We will thus read primary sources in both traditions with an eye to the similarities and the differences at play between them. Our readings will cover questions of cosmology (How did the universe come into being?), metaphysics (What exists?), epistemology (What is knowledge?), and ethics (What is the good life? What is the right thing to do?). Among some representative pairings: the Rig Veda and Hesiod's Theogony (cosmogony); the fragments of Parmenides and the Katha Upanishad (metaphysics); Outlines of Pyrrhonism and the Madhyamaka (epistemology); Aristotle's Categories and the Vaishesika Sutra (ontology); the Dhammacakavattana Sutta and Stoic ethical fragments (ethics).

All readings will be in English translation. Assessment will be in the form of weekly responses, participation, and one term paper.
The course starts with a discussion of theories of visual perception and their relation to philosophy. We survey the history of visual theories from Euclid to Marr and Rick, with stops to include Ibn Al-Haytham, Descartes, Berkeley, Helmholtz, and Gibson. We then consider selected philosophical topics, such as the nature of object perception, or the representational relation between images and things imaged (e.g., between pictures and what they represent).

SM 225. (STSC108) Introduction to Philosophy of Science. (C) Domotor.
A discussion of some philosophical questions that naturally arise in scientific research. Issues to be covered include: The nature of scientific explanation, the relation of theories to evidence, and the development of science (e.g., does science progress? Are earlier theories refuted or refined?).

This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory: Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues including adaptation, the units of selection, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory.

SM 227. Conceptions of the Self. (M) Staff.
Investigation of such topics as the unity of consciousness and personal identity. Some attention will be given to the relations between conceptions of the self and conceptions of morality.

L/R 228. (PPE 204) Philosophy of Social Science. (M) Weisberg, Bicchieri.
Prerequisite(s): PPE 008, ECON 001, ECON 002, PSCI 182, PPE 153, PPE 201.
This course is about the foundations of contemporary social science. It focuses on the nature of social systems, the similarities and differences between social and natural sciences, the construction, analysis, and confirmation of social theories, and the nature of social explanations. Specific topics may include: What are social norms and conventions? What does it mean to have one gender rather than another, or one sexual orientation rather than another? Should social systems be studied quantitatively or qualitatively?

L/R 231. Epistemology. (M) Singer.
Two basic assumptions of academic research are that there are truths and we can know them. Epistemology is the study of knowledge, what it is, how it is produced, and how we can have it. Metaphysics, the study of the basic constituents of reality, the study of being as such. In this introduction to metaphysics and epistemology, we will ask hard questions about the nature of reality and knowledge. No philosophy background is required for this course.

233. (PPE 233) Philosophy of Economics. (M) Staff.
In this course, general philosophy of science issues are applied to economics, and some problems specific to economics are tackled. While analytical questions like "What is economics?" or "What is an economic explanation" must be pursued, the ultimate goal is practical: What is good economics? How can economists contribute to a better understanding of society, and a better society? How can we make economics better? Topics to be discussed include the following: specific object and method of economics as a social science; its relation with other disciplines (physics, psychology and evolutionary theory); values in economics (welfare, freedom, equality and neutrality); the role of understanding and possible limits of a quantitative approach to human behavior (purposefulness, freedom, creativity, innovation); prediction, unpredictability and the pretension of prediction; causation in econometrics and in economic theory (equilibrium); selfishness and utility maximization (cognitive and behaviorist interpretations); economic models and unrealistic assumptions (realism and instrumentalism); empirical basis of economics (observation and experiment); microeconomics and macroeconomics (reductionism and autonomy); pluralism in economics (mainstream economics and heterodox schools).

SM 234. (RELS204) Philosophy of Religion. (M) Staff.
This course will focus on arguments for and against the existence of God. It will begin by examining the ontological, cosmological, and design arguments for the existence of God. Included will be a discussion of purported evidence for the existence of God from modern biology and cosmology. It will then examine arguments against the existence of God based on human and animal suffering, followed by arguments against the existence of God arising from the scarcity of credible miracle claims.

SM 242. Freedom of the Will. (M) Staff.
A discussion of various challenges to our self-understanding that arise from thinking about persons and their actions as part of the order of nature. Questions to be considered include: what it is to be a free agent and what it means to have a free will, the degree to which our beliefs about physical causality undermine our beliefs about agency, the nature and importance of moral responsibility, and the relationship between freedom and responsibility. Readings are drawn from both historical and contemporary sources.

SM 243. Topics In Metaphysics. (M) Domotor. Prerequisite(s): PHIL 001 or PHIL 003 or PHIL 004, or permission of instructor.
In this class we employ science fiction thought experiments as a means of reflecting on questions like: What is reality? What is the nature of the self and mind? Might you be in a computer simulation (e.g., as in The Matrix)? Is time travel possible? Can your mind survive the death of your brain by uploading? Is time real or is it merely an illusion?

L/R 244. (PPE 244, VLST221) Introduction to Philosophy of Mind. (C) Domotor, Miracchi.
This course will survey several central topics in philosophy of mind, as well as investigating how philosophy of the mind interacts with scientific study of the mind. Among the questions we'll be asking are: What is it to have a mind? What is the relationship between the mind and the brain? Can there be a science of the mind? What can it tell us? What can philosophy contribute to a science of the mind? What is consciousness? What is it to think, to perceive, to act? How are perception, thought, and action related to one another?

SM 245. Philosophy & Science Fiction. Staff.
In this class we employ science fiction thought experiments as a means of reflecting on questions like: What is reality? What is the nature of the self and mind? Might you be in a computer simulation (e.g., as in The Matrix)? Is time travel possible? Can your mind survive the
death of your brain by uploading? Is time real or is it merely an illusion?

Precious few, if any, communist states exist today as Karl Marx would have imagined them. Indeed, almost every part of the 19th-century culture Marx put under his philosophical microscope has in one way or another vanished or been radically transformed: the state, the school, even sex have been fundamentally altered during a long 20th century filled with revolutions of culture. This class asks: is there a future for a philosopher whose political projects seem so precarious—if they have not failed outright—in the face of global capitalism? We will try to answer this question by examining the origins and the implications of Marx's writings, but also his complex legacy, from Lenin through Guevara to Foucault and Zizek. The course will conclude with a consideration of the role of the radical in today's global politics and cultural sphere.

L/R 249. (EDUC576, GSWS249) Philosophy of Education. (M) Detlefsen.
The philosophy of education asks questions about the foundational assumptions of our formal institutions for the reproduction of culture. It ranges therefore, from epistemology and philosophy of mind to ethics and political philosophy. For instance: What is the nature of learning and teaching? How is it possible to come to know something we did not know already—and how can we aid others in doing that? How, if at all, should formal institutions of education be concerned with shaping students' moral and civic character? What is the proper relation between educational institutions and the state? We also ask questions more specific to our own time and context. For example: how, in a multicultural state, should we educate students of varied social identities, like race, gender, and religion? What is the relationship between education and justice.

SM 252. (AFRC254, AFRIC552, PHIL552) African American Philosophy. (B) Allen-Castellitto.
A new field has slowly begun to emerge within the traditional discipline of academic philosophy: African-American Philosophy. "African American Philosophy" refers here to conceptually and analytically rigorous philosophical studies of topics closely related to the social, legal, economic, historical, and cultural experiences of US peoples of African descent. The field has appeared in tandem with a striking increase in the number of professionally trained philosophers of African descent holding the Ph.D. in philosophy, and employed as full-time teachers and scholars. A recent estimate puts the number of philosophers of African descent working in the US at about one hundred; and about twenty of these are African-American women. A significant body of scholarship now describes, explains, critiques, and evaluates African American culture, slavery, oppression, discrimination, integration, segregation, equality, gender politics, labor, families, health, mental health, and the significance of race to identity, morality, ethics, politics, democracy, public policy, law, science, technology, the humanities and the arts. This unique lecture course will be a thematic introduction to African American Philosophy since 1960. Weekly topics will be chosen from among these clusters: Slavery, Colonialism, Oppression and Freedom; Segregation, Integration and Equality; Gender, Sex and Sexualities; Reproductive Rights and Responsibilities; Religion and Spirituality; Rebellion, Protest, Social Movements and Citizenship; Economic Welfare, Labor and Inequality; Violence, Crime and Punishment; Education, Affirmative Action and Diversity; Reparations and Forgiveness; Identities and Stereotypes; Nature, Science and Health; Psychology, Psychiatry and Mental Health; Pragmatism; Existentialism; and the Sociology of Philosophy. We will read works by Cornel West, Adrian Piper, Charles Mills, Lewis Gordon, Anita Allen, Anthony Appiah, L��us Outlaw, Naomi Zack, Lawrence Thomas, Bill Lawson, Michele Moody Adams and others. For most undergraduate students, evaluation in the course will be based on a mid-term and final exam with essay and objective components. Advanced students and graduate students enrolled in the course will have an opportunity to write a substantial supervised paper on a topic of their own choosing in lieu of the exams.

SM 255. (GRMN255) Topics in Continental Philosophy. (M) Staff.
Martin Heidegger is counted among the most controversial thinkers of the 20th century. He is best known, however, for his early book "Being and Time". This unfinished project was supposed to be completed by several works on major figures of western philosophy, one of which is Kant. In fact, only shortly after Being and Time, Heidegger published his first book on Kant: Kant and the Problem of Metaphysics. With this book Heidegger's so-called metaphysical phase (which lasted at least until the mid 1930's) was initiated. In this course, we will read and discuss not only large parts of Being and Time but also a selection of these later works that are primarily concerned with the nature and object of Metaphysics.

SM 267. Kant and the 19th Century. (M) Staff. Prerequisite(s): PHIL 004.
After an orientation to Kant's philosophy, we will examine Hegel, Feuerbach, Marx, and Nietzsche.

This course is an introduction to some of the central problems in global justice. Samples of these topics include: What are our duties to respond to world poverty and what is the basis of this duty? Is global inequality in itself a matter of justice? How universal are human rights? Should human rights defer to cultural claims at all? Is there a right to intervene in another country to protect human rights there? Indeed can intervention to protect human rights ever be a duty? Who is responsible for the environment? We will read some influential contemporary essays by philosophers on these topics with the goal of using the ideas in these papers as a springboard for our own further discussion and analysis.

SM 272. (PPE 272) Ethics & the Professions. (M) Tan. Prerequisite(s): At least one of: PHIL 002, PHIL 009, PHIL 008 or equivalent.
Since Louise Brown, the first so-called "test tube baby" was born in 1978, reproductive technologies have generated many new ways to "make" babies. These technologies mean that a number of difficult ethical questions are inescapable, not only for individuals who otherwise couldn't have children (due to biological and/or social constraints) but for the larger society.

This course will consider the prenatal moral status and identity of the fetus. It explores prenatal (and pre-implantation) genetic interventions and their possible effects on the autonomy of the child later in life as well as the possible eugenic implications of such interventions. It examines the potential conflict between a mother's autonomy and an infant's prenatal harm in the larger context created by new kinds of parents and new forms of kinship. Finally, it investigates the market for sperm, eggs, embryos and gestation and reflects on the questions of justice they imply.
This introductory course considers the ethical issues and challenges that arise in the professions. Topics may include Legal Ethics, Business Ethics, Medical Ethics, and Political Ethics. No prior background in Philosophy or Ethics is presupposed.

The course will focus on the philosophical background to the individual rights protected by the U.S. Constitution, including 1st Amendment freedoms of religion, expression, and association; the 14th amendment guarantee of Due Process and the rights of privacy, abortion, assisted suicide, and marriage; the Equal Protection clause and equal political rights and the legitimacy of affirmative action; and the Takings and Contract clauses and their bearing on rights of private property and economic freedoms. In addition to Supreme Court decisions on these issues, we will read works by political philosophers and constitutional theorists, including J.S. Mill, Ronald Dworkin, Cass Sunstein, Martha Nussbaum, Katherine MacKinnon and others.

This course will examine contemporary theories of justice, including libertarianism, liberalism, contemporary Marxism and feminism. Examples of topics we will examine are distributive justice, liberty, human rights, republicanism, and global justice. Philosophers we will read include John Rawls, Ronald Dworkin, Robert Nozick, Michael Walzer, Martha Nussbaum, Susan Moller Okin, and G.A. Cohen.

What is beauty? What is the relationship between beauty and goodness? What does aesthetic judgment tell us, if anything, about the world? This course addresses these and other questions by focusing predominantly on Kant's highly influential aesthetic theory. It situates this text in the context of other works on aesthetics. We begin with Plato's view expressed in The Symposium that beauty is a form to which humans gain (some) access through love. We then turn to essays by Shaftesbury and Hume that introduce key aesthetic notions that Kant will elaborate (and revise) -- including those of taste, common sense, harmony, and aesthetic disinterest. We also read selections from the work of Friedrich Schiller, John Dewey, and A. K. Coomaraswamy who offer alternative accounts of the relationship between beauty and ethical life -- a relationship that Kant acknowledges but considers to be importantly limited. The question of the relationship between ethics and aesthetics will form the backdrop for this semester's reading overall.

SM 291. Philosophy of Race. (M) Spencer.

Historically, philosophical questions about race have been about the nature and reality of race, the nature of racism, and social or political questions related to race or racism. In fitting with that history, the first part of the course will focus on the nature and reality of race, as understood in biology and as understood by ordinary people. We will begin by looking at biological race theories from Francois Bernier in 1684 to Pigliucci and Kaplan in 2003. Next, we will look at the philosophical work that has been done on the nature and reality of race as ordinarily understood in the contemporary United States. We will discuss racial anti-realism, social constructionism about race, and biological racial realism from well-known philosophers of race like Anthony Appiah, Sally Haslanger, and Joshua Glasgow. The second part of the course will focus on the nature of racism and social or political questions related to race or racism. In our discussion of racism, we will cover intrinsic v. extrinsic racism, the volitional account of racism, institutional racism, and implicit racism. In our discussion of social or political issues related to race or racism, we will address the issue of whether race-based preferential treatment in college admissions is an instance of racism.

SM 294. (ENGL394) The Human Animal. (M) Staff.

To ask "what is an animal?" entails wondering about what is being human. We have become increasingly aware that animals are not to be relegated to the category of pure otherness, can be disposed of and slaughtered at will, and that they may even have some rights. Taking a philosophical point of departure with Derrida (The Animal that therefore I am) and Agamben (The Open: Man and Animal), we will explore a literary corpus (with Aesop, Cervantes, Poe, Soske, Ted Hughes, Marianne Moore, Kakfa, J.M. Coetzee) as well as a few films, (The Fly, Grizzly Man) so as to question our usual assumptions about the limits separating humanity from animality.

SM 299. Independent Study. (C) Staff.

Student arranges with a faculty member to pursue a program of reading and writing on a suitable topic.

SM 300. Research Methods. Staff.

An intensive research seminar for undergraduates, aimed at developing philosophical skills in the context of a supportive student community. Students will learn to present, discuss, and write philosophy, drawing on canonical texts in a range of philosophical areas and methods, along with readings which they identify in the course of articulating their own philosophical interests. The course may be taken alone or as part of a two-semester sequence, and with or without a stand-alone honors thesis. In addition to philosophy majors, the course is also suitable for less advanced students or majors in related fields who want to sharpen their analytic skills. Admission is by application only. Students should have demonstrated philosophical interest and ability, whether through past enrollment in upper-division philosophy courses or through other means; and should submit a transcript, the names of 1-2 supporting faculty, and a brief statement (300 words) describing how they expect the course to contribute to their philosophical and intellectual development, to Professor Karen Detlefsen (detlefsen@sas.upenn.edu) by November 2, 2012.

301. Directed Honors Research. (C)

Open only to senior majors in philosophy. Student arranges with a faculty member to do an honors thesis on a suitable topic.

SM 325. Topics in Philosophy of Science. (C) Weisberg. Department Majors Only.

Topics will vary.

Taking our perceptual experience as a given, what causes it? In a realistic mood, we accept that objects in the environment, or in the "external world," cause us to have the perceptual experiences that we do (as of a table with food, or as of a garden with flowers in it). Yet on this realistic view, our perception is the result of a causal chain that leads from object to eye to brain to experiences, and we are only given the last element: the experience. So how do we really know how our experiences are caused, and where do we get the idea that they are caused by an external world of physical objects? The seminar will focus on the problem of the external world as
examined by David Hume, Thomas Reid, G. E. Moore, and Bertrand Russell, along with recent authors.

SM 331. Epistemology. (M) Staff. Department Majors Only.
A seminar for philosophy majors on some main problems of contemporary epistemology, with readings on justification, contextualism, non-conceptual content, normativity of rationality, and related topics. Student presentations are required as are regular attendance and active participation. There are brief written assignments on the readings and a final term paper on a topic approved by the instructor.

Various topics in Metaphysics.

SM 344. Wittgenstein: Mind and Language. (C) Staff. Department Majors Only.
In this class, we will engage in a close reading of Wittgenstein's major writings: the Tractatus Logico-Philosophicus and the Philosophical Investigations. Some of the main topics to be considered include: how language relates to the world; what philosophy is and what it can accomplish; the nature of understanding; what is involved in following a rule; and the phenomenon of seeing-as.

A distinctive feature of Wittgenstein's approach to philosophy is his commitment to philosophy as an activity rather than a set of doctrines. In keeping with this, the main goal of this class is for you to learn to do philosophy: to read closely, to grapple with foundational questions, and to talk seriously with others. This class is very much a seminar, and I will avoid lecturing as much as possible.

This is an undergraduate research seminar covering interdisciplinary research in psychology, philosophy, sociology and behavioral economics related to social norms. Social norms are informal institutions that regulate social life. We will devote particular attention to the following questions: 1. What is a good, operational definition of social norms? 2. Is there a difference between social and moral norms? 3. How can we measure whether a norm exists, and the conditions under which individuals are likely to comply with it? 4. Are behavioral experiments a good tool to answer question 3? 5. How do norms emerge? 6. How are norms abandoned? 7. What is the role of trendsetters in norm dynamics?

SM 361. Ancient Philosophical Figures. (M) Kahn, S. Meyer. Prerequisite(s): PHIL 003. Department Majors Only.
A study of selected topics, texts, and figures from classical Greek philosophy.

Various topics in 17th-18th century philosophy.

We will examine the main theses of Kant's theoretical and practical philosophy and the role of Hegel's criticisms in them in the development of the latter's system of philosophy. Subjects will include Kant's theory of space, time, substance, and causation; his transcendental idealism; and his analysis of the fundamental principles of morality and his defense of freedom of the will. We will then examine Hegel's attempt to overcome the dichotomies of Kant's theoretical philosophy in his objective idealism and his criticism of the formalism of Kant's practical philosophy.

SM 368. Topics in German Idealism. (M) Horstmann. Department Majors Only.
The course will start with a brief review of some features of Kant's philosophy, will focus on Fichte and Schelling, and will end with a discussion of the reaction to Idealism by Schopenhauer and Nietzsche.

SM 372. Topics in Ethics. (M) Freeman. Prerequisite(s): PHIL 002 (or consent of the instructor). Department Majors Only.
This is a special course on topics in ethics. The content of the course will vary from semester to semester, but will focus on issues in applied ethics. Because of the interdisciplinary nature of the topics, readings may come from philosophy as well as other fields including sociology, public health, biology, and complex systems research. PHILOSOPHY MAJORS ONLY.

The course will focus on contemporary works on liberalism, democracy, capitalism, and distributive justice. Among the questions to be discussed: Which rights and liberties are fundamental in a constitutional democracy? What is equality and what requirements does it impose? Are economic rights of property and freedom of contract equally important as personal liberties of speech, religion, and association? Does capitalism realize a just distribution of income and wealth? What is socialism and is it potentially just, or necessarily unjust? Readings from works by John Rawls, Robert Nozick, Milton Friedman, and others.

SM 377. (PPE 377) Philosophy and the Constitution. (C) Freeman. For Philosophy and Philosophy, Politics, and Economics Majors (PPE) Only.
The aim of this course is to investigate the philosophical background of our constitutional democracy. What is the appropriate role and limits of majority legislative rule? How are we to understand First Amendment protections of freedom of religion, speech, and assembly? What is the conception of equality that underlies the 14th Amendment's Equal Protection Clause? Is there a right of privacy implicit in the Constitution? Do rights of property deserve the same degree of protection as other constitutional rights? To investigate these and other constitutional issues, we will read from both Supreme Court opinions and relevant philosophical texts.

Various topics in political philosophy.

SM 380. Topics in Aesthetics. (M) Staff. Department Majors Only.
This course will study particular periods in the history of aesthetics and the philosophy of art or particular current problems in the field. Examples of the former would be ancient, eighteenth-century, nineteenth-century, or twentieth-century aesthetics; examples of the latter would be the definition of art, the nature of representation and/or expression in the arts, and art and morality.

Advanced Courses

SM 405. Philosophy of Language. (M) Miracchi. Prerequisite(s): PHIL 005 or PHIL 505 or permission of instructor.
This course provides an overview of 20th century analytic philosophy of language. Here are some of the questions we will ask: How do words refer? How do they combine to express thoughts? How do words relate to concepts or to thoughts more generally? What do words and sentences mean? How do we use them to communicate with each other? How does word and sentence meaning depend on the contexts in which they are spoken or heard, or on stable features of environments of linguistic
Speakers? Prerequisites: This course will be most suitable for advanced undergraduates and graduate students in philosophy or linguistics; others need instructor's permission. Familiarity with symbolic logic is highly recommended, but not required.

A study of Aristotle's main writings on language, reality, knowledge, nature and psychology. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required, although previous work in philosophy is strongly recommended.

SM 410. (LGIC310, MATH570) Introduction to Logic and Computability. (M) Weinstein.
Prerequisite(s): Math 371 or Math 503.

SM 412. (CIS 518, LGIC320, LGIC499, MATH571, MATH670) Topics in Logic. (M) Weinstein.
This course will examine the expressive power of various logical languages over the class of finite structures. The course begins with an exposition of some fundamental results about first-order logic in the context of finite structures and then proceeds to consider various extensions of first-order logic including fixed-point operators, generalized quantifiers, infinitary languages, and higher-order languages. The expressive power of these extensions will be studied in detail and connections with the theory of computational complexity and with combinatorics will be explored.

The course will focus on the development of the foundations and philosophy of mathematics from the late nineteenth-century through the present day. Topics will include logicism, formalism, intuitionism, and the foundations of set theory. Ample consideration will be given to some of the fundamental results of mathematical logic, such as the Godel incompleteness theorems and the independence of the Continuum Hypothesis from Zermelo-Fraenkel set theory; that have had a profound impact on contemporary approaches to the philosophy of mathematics.

Prerequisite(s): Either two philosophy courses OR Biology 101/102 (or equivalent).
This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theories of Richard Dawkins and Richard Lewontin. The remainder of the course will deal with a number of foundational issues and may include discussions of adaptation, what constitutes a species, evolutionary progress, the concept of fitness, the units of selection, the alleged reduction of classical genetics to molecular genetics, and the possibility of grounding ethics in evolutionary theory. The evolution of altruism will also be discussed, time permitting.
PREREQUISITES: Either two philosophy courses OR Biology 101/102 (or equivalent)

SM 423. (VLST223) Philosophy and Visual Perception. (C) Hatfield, Connolly.
The course starts with some central issues in the philosophy of perception from the modern period, which many include what we perceive, the meaningful content of perception, and its relation to a mind-independent external world. It will then focus on two or three more specific topics, yet to be chosen. These may include: (1) color perception and color metaphysics; (2) object perception in its interplay between Gestalt organizational factors and background knowledge; (3) the role of ecological regularities in the formation of our visual system and in the ongoing tuning of the system to the environment; (4) the geometry of visual space and the phenomenology of visual appearances of size and shape; (5) the problem of how visual scenes are experienced by means of images and the representational relation between images and things imaged, including the characteristics of linear perspective and its status as arbitrary convention or optically and naturally based system. Readings from authors such as Bertrand Russell, R. W. Sellars, Tim Crane, Evan Thompson, Robert Swartz, Wolfgang Metzger, Nelson Goodman, Richard Wollheim, and William Hopp, among others.

SM 425. (STSC325) Philosophy of Science. (C) Domotor. Prerequisite(s): Background in elementary logic and some rudiments of science.
This self-contained course (presupposing no substantive prior background in philosophy nor any extensive knowledge of science) provides an advanced introduction to the central philosophical questions concerning the nature of scientific knowledge and its relation to experience, and the metaphysical assumptions underlying the natural sciences. Topics to be covered include: science versus pseudoscience, laws of nature, causation, determinism and randomness, theories and models in science, scientific explanation, underdetermination of theories by observation and measurement, realism and antirealism, reductionism and intertheory relations, objectivity and value judgments in science, hypothesis testing and confirmation of scientific theories, and classical paradoxes in scientific methodology.

SM 426. (STSC426) Philosophy of Psychology. (M) Hatfield.
An examination of major trends of thought in experimental psychology in relation to philosophy and the philosophy of science. Questions to be asked include: What is the subject matter and object of explanation of experimental psychology? What is the relation between psychology and neuroscience? How is scientific psychology related to traditional philosophical investigations of the mental? The course covers the classical systems and schools of psychology, starting with Wundt and James, and proceeding to behaviorism, Gestalt psychology, cognitive and perceptual psychology, and cognitive science. The second half of the course examines contemporary problems, including: introspection and consciousness; philosophical foundations of cognitive science (computation vs. information); theories of the extended and embodied mind; methodological and conceptual problems in investigating the evolution of mind, brain, and culture; and the relation between neuroscience and psychology, using cases from particular areas such as attention and memory. Readings will include works by Koehler, Skinner, Fodor, Shapiro, and others.

SM 428. Philosophy of Social Science. (M) Staff.
An examination of fundamental philosophical issues concerning forms of social organization. Consideration of philosophical critiques of society.
SM 430. Philosophy of Mind. (M) 
Miracchi.
This course studies particular topics in contemporary philosophy of mind and cognitive science. Examples include: the nature of consciousness, naturalistic accounts of intentionality, the nature scope of scientific explanation in studying the mind, the intersection of philosophy of mind and epistemology, and theories of agency. Typically, readings include both philosophy and empirical work from relevant sciences. Prerequisites: This course will be most suitable for advanced undergraduates and graduate students in philosophy or related sciences; others need instructor's permission.

SM 431. Theory of Knowledge. (M) 
Domotor.
This course introduces students to the field of formal epistemology. Although some formal methods will be used, the principal objective is to explore various conceptual issues arising in modeling and representing knowledge. Topics include: bridging the gap between mainstream and formal epistemology by exploring various versions of the familiar tripartite definition of knowledge (knowledge as justified true belief) in light of folkly examples and counterexamples, basic logical and probabilistic models of knowledge (Hintikka, Aumann, and Bayesian) and their multi-agent variants, logical omniscience and other problems (including the epistemic closure principle), attempts at formalizing joint and common knowledge, resource-bounded knowledge, knowledge under limited logical powers, and empirical knowledge obstructed by system complexity. There are no prerequisites for this course, except some logical maturity.

436. (CLST436) Hellenistic Philosophy. (M) S. Meyer.
Prerequisite(s): This course will be most suitable for advanced undergraduates and graduate students in Philosophy or Classics; others need instructor's permission.
A survey of the natural philosophy, ethics, and epistemology of the three major schools of post-Aristotelian philosophy in the West in the period up to approximately 200 CE: the Stoics (followers of Zeno of Citium), the Epicureans (followers of Epicurus), and the Sceptics--both the “Academics” (later members of Plato’s Academy) and the “Pyrrhonists” (inspired by Pyrrho of Elis). Although I essentially well known today, the Stoics, in particular, were influential in the development of early Christian philosophy, and all three schools were highly influential in the development of early modern philosophy. Authors to be read include Cicero, Seneca, Lucretius, Sextus Empiricus, and Stobaeus. All texts will be read in English translation. No Latin or Greek is required.

SM 441. Metaphysics. (M) Staff.
Fictionalism: There are fictionalist accounts of morality, possible worlds, mathematical objects, and even truth. In this course we will examine these accounts and the metaphysical repercussions that the fictionalist strategy commits us to. We will be covering various case studies of fictionalism, and assessing the validity of such accounts. Authors read will include Sainsbury, Kalderon, Everett, and Friend.

SM 442. Origins of Analytic Philosophy. (M) Staff. Prerequisite(s): PHIL 005 and one other philosophy course, or permission of instructor.
This course will explore the history of analytic philosophy through the lens of two of its most influential figures: Gottlob Frege and Ludwig Wittgenstein. In the first half of the course, we will explore Frege's project in *The Foundations of Arithmetic* to ground the truths of mathematics in the truths of logic and the wider contributions to the philosophy of language and mind he made in attempting to carry out this project. In the second half of the course, we will explore Wittgenstein's *Philosophical Investigations* with particular attention to the skeptical worries about rule-following and its implications for the social basis of mental and linguistic representation. In addition to an in-depth study of these primary texts, secondary readings will be drawn from the work of Tyler Burge, Michael Dummett, Meredith Williams, Peter Hacker and others. The ultimate goal of the class is to both introduce students to the work of Frege and Wittgenstein, and to highlight the ways in which their different philosophical methodologies continue to animate debates in analytic philosophy.

SM 444. Wittgenstein. (M) Staff.
A study of the later philosophy of Ludwig Wittgenstein.

SM 448. (GRMN525) 19th Century Philosophy. (M) Horstmann.
After an orientation to Kant's philosophy, we will examine Hegel, Feuerbach, Marx, and Nietzsche.

This course is an introduction to philosophical work from Africa, Latin America, and the indigenous peoples of North America, covering topics in ethics, metaphysics, epistemology, philosophy of mind, aesthetics, social philosophy, and political philosophy. The course aims to give work from these traditions greater exposure and to provide a chance for students to encounter work that might spark an interest in future research. We will cover in some depth views held by Akan, Aztec, Blackfoot, Dogon, Iroquois, Lakota, Navajo, Ojibwa, and Yoruba peoples. We will also read work by a number of philosophers, including: Kwame Anthony Appiah, Kwame Gyekeye, Julius Nyerere, Sor Juanna Ines de la Cruz, Simon Bolivar, Jose Marti, Jose Vasconcelos, Enrique Dussel, Gregory Cajete, Anne Waters, and many others. Throughout, we will also engage with related meta-philosophical issues that emerge with work from all three areas, allowing for interesting cross-discussion.

Are these really proper subfields of philosophy? How do we make sense of the idea of African (or Latin American, or Native American) Philosophy as a field? Are there philosophically important differences between oral traditions and written traditions? How should we understand ethnophilosophy and cultural worldviews as philosophical contributions? How should we think of the "sage" figure in relation to philosophy? How do these traditions engage discussions of identity, autonomy, and post-colonialism? Should this work be incorporated into the mainstream philosophical canon?

SM 460. Continental Rationalism. (M) Hatfield, Detlefsen. Prerequisite(s): PHIL 004 or permission of instructor.
In this course, we will read closely some of the definitive texts of seventeenth century European philosophy, using the concept of the human being as our focal point. We will concentrate primarily on the human considered as a biological being (thus developing our understanding of the scientific advances of this century), as a conscious being (thus developing our understanding of theories of mind in this century), and (where relevant) as a moral being. We will focus our attention on Descartes, Spinoza and Leibniz, but draw as well upon texts from other thinkers, particularly Elisabeth, Malebranche and Cavendish. There will be two lectures per week, and discussion is strongly welcome.

SM 463. British Philosophy I. (M) Staff. Prerequisite(s): PHIL 004 or permission of instructor.
A study of epistemology and metaphysics in classical British philosophy. Authors
studied included Bacon, Hobbes, Locke, Berkeley, Hume, Reid, and Mill.

SM 464. British Philosophy II. (M) 
Staff. Prerequisite(s): PHIL 002 or PHIL 004 or permission of instructor. 
A study of moral philosophy, political philosophy, and aesthetics in classical British philosophy. Authors studied include Hobbes, Locke, Hutcheson, Hume, Kames, Adam Smith, and Reid.

SM 465. (GRMN551) Kant I. (M) 
Hatfield, Horstmann. Prerequisite(s): PHIL 004, one advanced Philosophy course, or permission of instructor. 
The course will concentrate on the Critique of Pure Reason and discuss in detail Kant's conception of knowledge and experience, his criticism of traditional metaphysics and the resulting project of a system of transcendental philosophy.

SM 466. (GRMN552) Kant II. (M) Staff. Prerequisite(s): PHIL 002, PHIL 004, or permission of instructor. 
This course is a study of Kant's moral and political philosophy. The central theme of the course is Kant's conviction that freedom or "Autonomy" is our most basic value, and that the fundamental law of morality as well as the more particular principles of both justice and personal virtue are the means that are necessary in order to preserve and promote the existence and exercise of human freedom. Central questions will be how Kant attempts to motivate or prove the fundamental value of freedom and the connection between this normative issue and his metaphysics of free will. Texts will include Kant's Lectures on Ethics, Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and Metaphysics of Morals. Written work for the course will include one short paper and one term paper.

L/R 467. (GRMN567) Topics in History of Philosophy. (M) Hatfield, Detlefsen. Prerequisite(s): Previous course in Philosophy or History and Sociology of Science. 
In this course, we will study figures and themes from the 17th through the 18th centuries, an especially fertile period in the history of philosophy. Topics will vary from year to year. Please see individual course descriptions.

SM 468. (GRMN583) Hegel. (M) 
Horstmann. 
Hegel is famous (or rather infamous) for entertaining and endorsing startling and obscure claims like 'Contradiction is the rule of truth'. The Truth is the whole', 'What is rational is real, and what is real is rational'. Before one is in the position to evaluate, to criticize (and to dismiss) these claims one has to become familiar with their philosophical background. The aim of the seminar is to find out what is meant with claims like these and why Hegel thought of them as reasonable. In order to achieve this aim one has to get acquainted with the basic metaphysical assumptions of his philosophy and with the problems these assumptions are supposed to solve.

The seminar will focus primarily on some of Hegel's early Jena writings, his Phenomenology of Spirit, on passages from different versions of Hegel's Logic and (maybe) on aspects of his Philosophy of Right. Topics that are dealt with include: (1) Hegel's conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel's criticism of traditional metaphysics, (5) his notion of a 'concept' (Begriff), his theory of the Idea. Other topics might become of interest as well.

SM 472. Survey of Ethical Theory. (M) 
Lord. 
Moral theory is a way of defining, analyzing, and evaluating moral claims. Everyone has reason not to torture their neighbor. Having inconsistent preferences is irrational. On these matters we agree. But what do we mean when we say these things? What state of mind are we in when we think these things? What, is anything, do these claims refer to in the world? Is it the same kind of things that we investigate when we do science? Do we know these things? If so, how? Are these claims even true? If they are ever true, are they true for everyone? These are some of the core questions of metaethics. This course is an investigation of the main questions and problems in metaethics since the turn of the 20th century. We will investigate questions about the metaphysics of morality, the philosophy of language of moral talk, the philosophy of mind of moral thought, the epistemology of morality, and the objectivity of morality.

SM 473. (PHIL273) Topics in Ethics. (C) Chappell. 
Is abortion wrong? Or euthanasia? Are we justified in eating animals? Why, or why not? We will explore these and other "life and death" ethical problems in a systematic way, seeing how the reasons we give in answer to one question may influence what we can consistently say about others.

SM 475. (PPE 475) Political Philosophy. (M) Freeman, Bicchieri. 
This is a research seminar covering interdisciplinary research in psychology, philosophy, cognitive science and behavioral economics. Our focus will be on identifying and discussing issues of philosophical significance raised by recent work in moral psychology, experimental economics and behavioral decision making.

This first half of the course will provide an introduction to the main currents of thought about the nature and function of law. It will consider, among other things, the classic problem of the source of law's authority, exploring whether an unjust law is still a law, and whether law does or ought to bear a close relation to morality. Should Nazi officials or East German border guards be punished if they were "just following orders"? What about the judges who enforced the implementation of such laws? Do the conclusions we would reach in the foregoing contexts apply to the conduct of Americans in dealing with suspected terrorists or other detainees? We will consider the divergent answers to these questions suggested by the work of J.L. Austin, H.L.A. Hart, Ronald Dworkin, Joseph Raz, and others. After addressing these traditional jurisprudential inquiries, we will turn to more recent philosophical inquiries in philosophy of law. What is the justification for punishment and how do the various debates in this area play out in specific controversial cases? Is torture ever permissible, whether as part of a scheme of punishment or as part of a system of law enforcement? Is targeted killing a permissible part of just war theory? What should be our stance to government officials who violate the law?

As we shall see, each one of these applied topics divides into deontological theorists, on the one hand, and utilitarian, or economic, theorists on the other. We will raise the question of whether these two theories exhaust the possible moves one might make on these various topics, or whether other approaches, such as a contractarian approach, are viable options. The course will require a final, take home exam, as well as attendance, preparation and participation in discussion. The latter will count towards roughly 10% of students' grades. This course is cross listed with LAW 544.

SM 479. Modern Political Philosophy. (M) Freeman. 
A survey of several works in modern political philosophy, including Thomas
Hobbes's, Leviathan; John Locke's, Second Treatise on Government and Letter Concerning Toleration; David Hume's 'Of the Original Contract' and 'On Justice'; John Stuart Mill's Utilitarianism, On Liberty, and The Subjection of Women; excerpts from Karl Marx's Capital and other writings; and John Rawls's A Theory of Justice.

SM 480. (COML582, GRMN580) Topics in Aesthetics. (M) Staff.
Walter Benjamin: Art, Philosophy, Literature. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on cultural studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a new four-volume collection of his works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies in language and allegory, and continues with his autobiographical work, his writings on art and literature, and finally on the imaginary space of the nineteenth-century.

SM 485. (GSWS485) Topics in Gender Theory. (M) Staff.
This course seeks to assemble some of the philosophical evidence for feminist claims that traditional political theories are fundamentally inadequate because they have not, and presumably cannot, deal with basic facts of gender and the oppression of Women. We will begin by examining the nature of the distinction between sex and gender. This will take us through discussions of: the meaning and significance of categories being socially constructed, the possibility that sexual differences (and inequalities) are in some sense natural and what normative force this has. We will then consider various attempts to describe the nature of women's oppression. What is it? How does it manifest itself in the lives of women? This will take us through discussions of freedom, constrained choice, ideology, "consciousness raising", androcentrism and the relation between, and methodological importance of, ideal and non-ideal theory. Along the way we will be constructing a version of the feminist framework known as the dominance approach and seeing how it analyzes three presumed sites of oppression: sexuality, reproduction and work/family. Among the authors we will be reading are: Elizabeth Anderson, Marily Frye, Sally Haslanger, Rae Langton, Anthony Laden, Catherine MacKinnon, and Susan Okin.

The prerequisite for UNDERGRADUATES taking this course is: two philosophy courses (ONE of which is in moral or political philosophy) OR ONE of the following Gender Studies courses: GSWS/PHIL 028, GSWS/PoliSci 280, GSWS 320. There will be one short paper (6-8 pages) with revision, a longer final paper (15 pages) and weekly one-page reflections on a topic from the previous week's discussion.

SM 488. The Idea of Nationalism. (M) Steinberg.
Nationalism has been the most important geo-political phenomenon of the past two hundred years. Its continuing power has been amply demonstrated by recent events in many parts of the world. This seminar course will explore the ideology of nationalism, what it means, its philosophical foundations, underlying assumptions about the nature of human identity, moral implications, and political consequences. In the process, we will explore such questions as: What is a nation? Does every identifiable ethnic or national group have a valid claim to a nation-state of its own? How are claims to national self-determination justified? How do nations differ from states, peoples, groups, communities, and citizenships? How does nationalism relate to notions of "chosenness" or ethnic and cultural superiority? Why do nationalist movements seem to so often engender political extremism and violent ethnic-political conflicts? Is national self-determination compatible with our commitments to individualism, rationality, and universal human rights?

SM 489. Ethnicity, Identity and Nationhood. (M) Staff.
Contemporary public discourse -- in politics, in the media, on the Internet, and throughout our culture -- gives expression to intense, sometimes violent, disagreements and conflicts that often frustrate the solution of important public policy questions, curtail productive public deliberation and dialogue, and profoundly challenge our leaders and institutions. This course will deepen our understanding of the role that political and cultural ideologies -- such as liberalism, conservatism, nationalism, totalitarianism, fundamentalism, etc. -- play in these conflicts and the psychology of ideological thinking that makes them so difficult to resolve.

We will begin by considering a series of case studies in contemporary political, social and cultural conflict, drawn from contemporary events such as the 2012 political campaigns, the 2011 debt ceiling debate in Congress, nationalist movements around the globe, etc. We will identify and examine the ideologies driving such conflicts, and from these we will draw out the common philosophical characteristics and psychological features of ideological thinking. Throughout, we will seek to understand the deep attraction of ideological commitments and why they tend to push public discourse and behavior to extremes and even violence. Finally, we will consider efforts to reduce or resolve ideological conflicts through strategies of political compromise, dialogue, toleration, and democratic deliberation.

Graduate Courses

This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantification logic, and logical decision problems.

506. (MATH570, PHIL006) Formal Logic II. (B) Weinstein. Undergraduates Need Permission.
An introduction to first-order logic including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel's incompleteness theorems.

SM 508. Early Plato. (M) Staff.
Undergraduates Need Permission.
A study of Plato's earlier dialogues, from the Apology to the Republic, focusing on the moral and political background motivating the doctrine of Forms, and tracing the emergence of that doctrine first as a theory of essences (in the dialogues of definition) and finally as a metaphysical theory in the Symposium, Phaedo and Republic. UNDERGRADUATES NEED PERMISSION

SM 510. Late Plato. (M) Staff.
Undergraduates Need Permission.
Tracing the development of Plato's metaphysics from the Parmenides to the Timaeus, including key passages from the Theaetetus and Sophist.

SM 513. Plotinus. (M) Staff.
Undergraduates Need Permission.
An introduction to the thought of the major philosopher of late antiquity, founder of Neo-Platonism. Readings will include generous selections from the Enneads.
521. (PHIL226, PPE 225) Philosophy of Biology. (C) Weisberg. Undergraduates need permission. This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory: Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues including adaptation, the units of selection, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory. UNDERGRADUATES NEED PERMISSION

SM 522. (CIMS502) Philosophy and Film. (M) Detlefsen. Undergraduates Need Permission.

SM 525. (COMLS525, HSSC527) Topics in the Philosophy of Science. (M) Weisberg, Bicchieri. Prerequisite(s): Familiarity with behavioral game theory and psychology. Undergraduates Need Permission.

For the last four centuries, scientific research has provided our most reliable understanding of the world. Although the scientific revolution started modestly with attempts to understand stellar movement, we now know the age and constitution of the universe, the basis of heredity, and we can make and break chemical bonds at will. By all appearances, science seems to have made substantial progress from the scientific revolution to the global scientific enterprise of the 21st century. This course is about how science has generated this knowledge, and whether it has been as progressive and reliable as it seems. We will consider methodological issues such as the sources of scientific knowledge, objectivity, the growing importance of computation in the natural sciences, and the nature of modeling. We will examine products of scientific research: explanations, models, theories, and laws of nature. And we will discuss questions about science and values, including whether non-scientific values can and should enter scientific research, the relationship between science and religion, and the role of the public in guiding the scientific enterprise.

SM 526. (GRMNS27) Philosophy of Psychology. (M) Hatfield, Steinberg. Undergraduates Need Permission.

The seminar will consider selected episodes in the interaction between philosophy and psychology. It starts with an intensive study of Descartes' machine psychology (in the Treatise On Man), which should complicate our picture of the history of such interactions. We then proceed, partly in response to student interest, to interactions involving Kant and nineteenth-century Kantians, Rylean "behaviorism", and recent work on the embodied mind (Wheeler, others).

Quantum theory provides the fundamental underpinning of modern physical science, yet its philosophical implications are so shocking that Einstein could not accept them. By following the historical development of 20th century quantum science, the student should gain an appreciation of how a scientific theory grows and develops, and of the strong interplay between scientific observation and philosophical interpretation. Although students will not be expected to carry out mathematical derivations, they should gain an understanding of basic quantum findings. Students enrolling in 527 must register for the recitation section that is reserved for that number, which is for graduate students.

SM 528. Philosophy of Social Science. Bicchieri. Prerequisite(s): Familiarity with behavioral game theory and psychology. Undergraduates Need Permission.

SM 530. Philosophy of Mind. (M) Hatfield, Miracchi. Undergraduates Need Permission.

Agent Architectures: In philosophy of mind, we spend a lot of time asking about particular kinds of mental states—about the nature of perception, belief, desire, intention, etc. But what about how it all fits together? How do you put the pieces together to get an intelligent agent out of it. And what does that in turn tell us about the nature of mental states? We will spend the first part of the course discussing some of the classical positions in philosophy of mind and artificial intelligence—especially functionalism and the classical "sandwich model" of AI. Then we will explore some new alternatives. We will investigate the possible role of the body, the environment, competences, and emotions in determining agent architectures. Of particular interest to us will be the question of whether we can understand the architecture of intelligent agents in a way that helps to explain how they might be improved upon and made more sophisticated (e.g. by evolution). UNDERGRADUATES NEED PERMISSION.

SM 531. Social Norms. (M) Bicchieri. Undergraduates Need Permission.

This is a graduate research seminar covering interdisciplinary research in psychology, philosophy, sociology and behavioral economics related to social norms. Social norms are informal institutions that regulate social life. We will devote particular attention to the following questions: 1. What is a good, operational definition of social norms? 2. Is there a difference between social and moral norms? 3. How can we measure whether a norm exits, and the conditions under which individuals are likely to comply with it? 4. Are behavioral experiments a good tool to answer questions 3? 5. How do norms emerge? 6. How are norms abandoned? 7. What is the role of trendsetters in norm dynamics?

SM 532. Topics in Epistemology. (M) Singer. Undergraduates Need Permission.

This graduate seminar will cover some topics of interest to contemporary epistemologists. Possible topics may include skepticism, accounts of knowledge and justification, virtue epistemology, formal epistemology, social epistemology, feminist epistemology, meta-epistemology, and epistemic normativity. This course will be aimed at philosophy graduate students. Other graduate students and undergraduates should consult with the instructor before enrolling.

SM 536. Stoicism. (M) S.Meyer. Undergraduates Need Permission.

A study of some major texts in Ancient Greek Skepticism. We will begin with Plato's Academy, more than a century after the death of its founder, when the head of the school Aricleslus (315-240 BCE) advocates a turn away from "doctrinal Platonism" (that is, working out and defending the tenets of Plato's philosophy) and a return to the critical stance of Socrates in many Platonic dialogues, who advances no doctrines himself but criticizes the claims of others. Much of the intellectual activity of the so-called "Sceptical Academy" is directed at contesting the doctrines of their contemporaries in Hellenistic Athens: Stoic, Epicurean, and Peripatetic philosophers, with particular emphasis on the Stoic doctrine of the "cognitive impression", which the Stoics invoked as the foundation of all knowledge. Many of these debates are reported in Cicero's On Academic Scepticism, which is the first
In this course, we will study. By the late first century BCE, the Academy departed far enough from this "skeptic stance" that in reaction, the Academic Aenesidemus left that institution to found Pyrrhonism, which takes the fourth-century figure Pyrrho of Elis (360-270 BCE) as its symbolic figure head. The fullest account of Pyrrhonist Scepticism is in the writings of a 2nd century CE physician, Sextus Empiricus, whose Outlines of Pyrrhonism and Against the Ethicists will be the other major texts studied in this course. All readings will be in English translation. No knowledge of Greek or Latin is required.

SM 540. Topics in Philosophy of Language. (M) Staff. Undergraduates Need Permission.

Expressivism: Emotions, Evaluations, and Linguistic Meaning: In this seminar, we will explore the virtues and drawbacks of expressivism, broadly construed. Most contemporary philosophers of language analyze meaning in terms of truth-conditional content: how the world would have to be for an assertion or other speech act to be satisfied. But in many cases, it's unclear just what ontologically respectable facts could make our utterances true. Further, much of our communicative activity appears to be aimed at affecting our interlocutors' hearts and actions as much as their minds. If some aspects of conventional linguistic meaning involve the expression of evaluative or emotional attitudes rather than just truth-conditional content, how should a theory of meaning analyze this? We'll begin with classic discussions of moral emotivism (e.g. Ayer, Hare) and more recent versions of expressivism in ethics (e.g. Gibbard, Blackburn), paying special attention to the Frege-Geach problem. Next, we'll turn to recent discussions of epithets, especially racial slurs, in the philosophy of language (e.g. Williamson, Branden, Hornsby), tracing out similarities and contrasts with moral expressivism.

SM 547. Leibniz/Locke. (M) Detlefsen. Undergraduates Need Permission.

This course focuses on topics in philosophy of the 17-18th centuries. Topics may include one of the following, according to the interests of the class.

An examination of the development of a few topics in natural philosophy in the early modern period, such as: method (the evolution of hypotheses and their reception, the relation of theory to empirical work, and the importance of different kinds of empirical work, e.g. observation, experiment, use of instruments); the relation of metaphysics to the 'sciences' (including what is meant by "metaphysics", and what falls under the scope of the various sciences); and the special role played by the life sciences.

A study of various social, political, and ethical issues, including the role that women played in these issues, and the nascent forms of feminism that emerged in the early modern era.

SM 550. Topics in Philosophy of Education. (M) Detlefsen. Undergraduates Need Permission.

In this course, we will examine some of the most pressing problems in contemporary philosophy of education. These problems include: how much control over a child's education ought to be allocated to parents and how much to the state; what role, if any, ought religion to play in education; how do race and gender impact individuals' educational experiences and how should such issues be addressed in the classroom; what sort of (if any) civic education ought to be taught in schools (especially in wartime such as in the post 9-11 USA); and how should schools be funded? We will deal with a number of case studies, mostly recent, but some crucial historical cases as well. Our readings will be primarily philosophical texts, supplemented with those from other fields, such as psychology, history and sociology, in order to provide empirical context to the theoretical problems facing education today. As a seminar, the instructor welcomes student participation, including students bringing their own interests in educational theory to the classroom. At the same time, the instructor will lecture to the extent necessary to make classroom discussion especially rich.

Women, liberty, feminisms and ways of approaching the history of philosophy.

In this course, we'll look at the various ways women and men of the early modern period thought about liberty, most particularly as it related to women as individuals and in their social-political roles. We will draw upon texts that are clearly 'philosophical' (in the way we think about philosophy in contemporary Anglo-Analytic philosophy departments) as well as texts that are not so typically 'philosophical'. In addition to looking at the concept of liberty as it pertains to women, there will be two meta-themes to the course. First, does it make sense to think of thinkers writing 300 years ago as feminists, or is that just a "vile anachronism" as some scholars believe? And if it does make sense, what forms of feminism can we discern in the early modern period? Second, what are the best ways to integrate atypical philosophy texts into a study of the history of philosophy?

SM 552. (AFRC254, AFRC552, PHIL252) African American Philosophy. (B) Allen-Castellitto.

A new field has slowly begun to emerge within the traditional discipline of academic philosophy: African-American Philosophy. "African American Philosophy" refers here to conceptually and analytically rigorous philosophical studies of topics closely related to the social, legal, economic, historical and cultural experiences of US peoples of African descent. The field has appeared in tandem with a striking increase in the number of professionally trained philosophers of African descent holding the Ph.D. in philosophy, and employed as full-time teachers and scholars. A recent estimate puts the number of philosophers of African descent working in the US at about one hundred; and about twenty of these are African-American women. A significant body of scholarship now describes, explains, critiques and evaluates African American culture, slavery, oppression, discrimination, integration, segregation, equality, gender politics, labor, families, health, mental health, and the significance of race to identity, morality, ethics, politics, democracy, public policy, law, science, technology, the humanities and the arts. This unique lecture course will be a thematic introduction to African American Philosophy since 1960. Weekly topics will be chosen from among these clusters: Slavery, Colonialism, Oppression and Freedom; Segregation, Integration and Equality; Gender, Sex and Sexualities; Reproductive Rights and Responsibilities; Religion and Spiritualism; Rebellion, Protest, Social Movements and Citizenship; Economic Welfare, Labor and Inequality; Violence, Crime and Punishment; Education, Affirmative Action and Diversity; Reparations and Forgiveness; Identities and Stereotypes; Nature, Science and Health; Psychology, Psychiatry and Mental Health; Pragmatism, Existentialism; and the Sociology of Philosophy. We will read works by Cornell West, Adrian Piper, Charles Mills, Lewis Gordon, Anita Allen, Anthony Appiah, Lucius Outlaw, Naomi Zack, Lawrence Thomas, Bill Lawson, Michele Moody Adams, and others. For most undergraduate students, evaluation in the course will be based on a mid-term and final exam with essay and objective components. Advanced students and
graduate students enrolled in the course will have an opportunity to write a substantial supervised paper on a topic of their own choosing in lieu of the exams.

SM 554. (GRMN580) Contemporary Continental Philosophy. (M) Staff. Undergraduates Need Permission.

This seminar course is an introduction to twentieth-century continental European philosophy, focusing on the origins and development of phenomenology, existentialism, hermeneutics, and deconstruction. The centrality of phenomenology (and its interpretation) to an understanding of these movements and other contemporary trends in European thought will be emphasized throughout. No previous background in philosophy is required. Human beings live in a world permeated and defined by meanings. How we create, communicate, and comprehend meaning has been one of the central questions of continental European philosophy over the past century. In this course, we will explore why meaning plays such a central role in all attempts to understand human experience and how this insight has profoundly influenced major trends in contemporary thought. We will begin the semester with an introduction to the phenomenology of Edmund Husserl and the contemporary debate over its proper interpretation. This will be followed by an examination of three existentialist critics of Husserl, whose philosophies have influenced much of recent continental thought: Martin Heidegger, Jean-Paul Sartre, and Maurice Merleau-Ponty.

Finally, we will examine the important influence of phenomenology and existentialism on contemporary trends in continental philosophy as exhibited in works by Paul Ricoeur, Hans Georg Gadamer, Jacques Derrida, Hannah Arendt, and Emmanuel Levinas.

This course is an exploration of traditional philosophical questions concerning objectivity in science. We will start by addressing central questions in feminist philosophy of science, such as what is objective reality and what is objective knowledge? Next, we will explore whether science discovers objective real entities or relations, which is a central topic in the scientific realism debate. We will also explore whether scientific knowledge is objective. We will read mostly 20th and 21st century philosophers of science, such as Goodman, Kuhn, Psillos, and Longino. We will also apply what we learn to at least one case study. UNDERGRADUATES NEED PERMISSION

In this course, we will undertake an intensive study of the thought of Descartes, one of philosophy's most important figures. We will read his major works - Rules for the Direction of the Mind, The World, Discourse on Method, Meditation on First Philosophy, Principles of Philosophy, and Passions of the Soul - as well as some less well-known works and some of his correspondence. We will study his ideas on method and epistemology, metaphysics, physics and the life sciences, medicine, the nature of the human being, and value theory. While our primary aim will be to understand his philosophy as a whole and how his thoughts developed and changed through his life, we will devote some time to evaluating his legacy.

SM 562. MLA Proseminar in Philosophy. (M) Detlefsen.

In sixteenth century Europe, what we now think of as philosophy, science and religion were all part of a single integrated way of studying the world. By the late eighteenth to early nineteenth century, these three areas of study had, to a large degree, diverged into distinct disciplines. In this course we will study this separation of disciplines in order to come to some understanding about how and why this radical shift in western thought occurred.

SM 565. (PHIL362) Kant's Critique of Metaphysics. (M) Staff. Prerequisite(s): PHIL 465 or permission of instructor. Undergraduates Need Permission.

A study of Kant's critique of metaphysics and theory of regulative ideas in the "Transcendental Dialectic" and related texts such as CRITIQUE OF JUDGEMENT, ONLY POSSIBLE PROOF OF THE EXISTENCE OF GOD, and LECTURES ON PHILOSOPHICAL THEOLOGY. Collateral readings in such authors as Descartes, Leibniz, Spinoza, Wolff, Baumgarten, Mendelssohn, Bayle, and Hume.

This course will start with a brief review of some features of Kant's philosophy and will focus on Fichte and Schelling, and will end with a discussion of the reaction to Idealism by Schopenhauer and Nietzsche.

Hegel's "Lectures on Aesthetics" are a seminal work in the philosophy of art. They conceptualize the different kinds of art, and they understand art in the context of a philosophy of history that is centered on the concept of freedom. We will explore the intellectual background of Hegel's thinking, especially Kant, Schiller, and Schlegel, and investigate the conceptual articulation of art with which Hegel provides us.

SM 572. Contemporary Ethics. (M) Freeman, Meyer. Undergraduates Need Permission.

A venerable idea throughout the history of ethics is that rationality is a fundamental or foundational part of the metaphysics of the normative. The course will be an investigation of several different strains of this rationalist idea. We'll discuss four rationalist views of the nature of normative reasons (Kantian, Humean, Aristotelian, and new-fangled constructivism). Our aim will be to investigate the plausibility of these rationalist views against the backdrop of a more recent hypothesis about the metaphysics of the normative--viz., the claim that normative reasons themselves are the fundamental constituents of the normative.

This class will be dedicated to investigating topics related to rationality in its many forms. Potential areas of study are metaethics, epistemology, moral psychology, and the philosophies of mind, language and action. UNDERGRADUATES NEED PERMISSION.

SM 577. (LAW 918, LAW 946, LAW 949, LAW 992) Topics in Philosophy of Law. (M) Guerrero, Perry, Berman, Finkelstein. Undergraduates Need Permission.

This seminar will examine leading academic theories of constitutional interpretation, starting with classic texts by (for illustration) Thayer, Wechsler, Ely, Bobbitt, Dworkin, and Scalia, and emphasizing current debates within originalism and between originalists and their critics. While the focus will be on American constitutional interpretation, we will also see how that literature is currently running up against, and possibly contributing to, more "philosophical" or "jurisprudential" accounts of the contents of law. Consistent with the nature of the
material, the reading load is likely to be somewhat heavier and more demanding than in the average seminar. Students will be expected to read the assigned material carefully and to participate actively in class discussions; they will have the option of submitting either a single research paper or several shorter papers.

SM 578. (LAW 946) Topics in Political Philosophy. (M) Freeman, Tan. Undergraduates Need Permission.
This course examines the special problems culture and cultural membership pose for the liberal conception of justice. Liberal justice is supposedly impartial while cultural claims are thought to be partial and particular. And whereas liberal justice is concerned primarily with the individual, cultural claims are commonly thought to be group-based. How are these conflicting values to be understood? We will examine the problem of culture and justice as it arises in the domestic context (e.g., in the context of the liberal state) and in the global context. Some of the more specific questions we will examine include: Should our conception of justice be influenced by cultural claims? Should cultural differences shape our understanding of human rights? Or should justice transcend culture? What is the relationship between individual freedom and cultural membership? Are there, or should there be, such things as cultural rights? If cultural diversity ought to be tolerated and even celebrated, what are the limits of cultural toleration? Is nationalism justifiable?
Authors we will read include John Rawls, Charles Taylor, Amy Gutmann, Will Kymlicka, Martha Nussbaum, and Susan Moller Okin. This course is open only to students in the MLA program.

During the last dozen years there has been an explosion of interest in empirically informed moral psychology. In this seminar, we will review some of the cutting empirical and theoretical work that is being done in moral psychology and explore its philosophical implications. About half of the sessions of the seminar will be led by Professor Bicchieri, Professor Harman or Professor Stitch. The other half will be led by leading philosophers and scientists from other departments and other universities.

SM 600. Proseminar. (A) Staff.
An intensive seminar for first-year doctoral students, with readings drawn from recent and contemporary epistemology and metaphysics, broadly construed. Students will develop their abilities to present and discuss philosophical texts, and to write and revise their own papers.

601. Consortium Course. (C) Staff. Graduate Students Only.
For graduate students taking courses at other institutions belonging to the Philadelphia area Philosophical Consortium.

SM 607. (CLST607) Presocratic Philosophy. (M) Staff.
Close study of fragments and doxography for the earliest Greek philosophers in the original texts.

SM 609. (CLST609, COML609, GREK606) Plato's Republic. (M) Staff.
A close reading and discussion of Plato's work. As much as possible of the text will be read in Greek.

SM 610. Plato's Symposium and Phaedrus. (M) Staff.
A close reading and analysis of Plato's two major dialogues on love.

SM 611. Plato's Philebus. (M) Staff.
A close reading of the text of one of Plato's latest and most difficult dialogues. Questions to be discussed include: the unity of the dialogue, relation to other late dialogues (such as the TIMAEUS), relation to the doctrine of Forms, relation to the "unwritten doctrines". Knowledge of Greek is not required.

SM 612. Topics in Hellenistic Philosophy. (M) S.Meyer.
Topics will vary.

SM 613. (LAW 618) Topics in Medieval Philosophy. (M) Staff.
Close reading of selected texts in medieval philosophy.

An examination of selected problems at the intersection of philosophy of psychology, philosophy of mind, and metaphysics.

SM 626. Topics in Philosophy of Psychology. (M) Hatfield.
We will investigate the notions of function, adaptation, and teleology as found in biology and as analyzed in the philosophy of biology; we will then apply these notions to selected problems in the philosophy of psychology pertaining to representation and content.

SM 630. Topics in Philosophy of Mind. (M) Hatfield.
Topics will vary, and may be historical or contemporary.

SM 633. (HIST610) Colloquium in American History. (M) Kuklick, B.
HIST 610 is a topics course. When the subject is appropriate, the course will be cross-listed with Philosophy. Please refer to the current timetable.

SM 642. Contemporary Metaphysics. (M) Staff.
This course will deal with the nature of necessity, essentialism, idealism and the concept of truth from a contemporary perspective.

SM 643. Carnap. (M) Staff.
A survey of Carnap's writings, with special attention to The Logical Construction of the World and The Logical Syntax of Language.

SM 644. Quine. (M) Staff.
A survey of Quine's philosophy with special attention to the critique of analyticity, truth and reference, indeterminacy of translations, ontological relativity, and physicalism.

SM 645. Reference. (M) Staff.
Contemporary discussions of reference with special attention to referential inscrutability, first person authority, and anti-individualism. Readings from Quine, Davidson, Putnam, Field, Wallace, Burge, and McDowell.

SM 646. Topics in Early Analytic Philosophy. (M) Staff.
Selected interpretive and philosophical issues from Frege, Russell, and early Wittgenstein.

SM 662. Hume's Philosophy of Mind. (M) Hatfield.
An examination of Hume's theory of mind, focusing on the Treatise and first Enquiry.

SM 665. Kant's Theoretical Philosophy. (M) Staff.
This course will study not Kant's system of philosophy but his philosophy of system, that is, the role of the concept of systematicity throughout his philosophical work. Special topics will include the role of systematicity in empirical knowledge and science, practical reasoning, and metaphysics, where systematicity functions as the criterion of the adequacy of philosophical theories themselves. Some prior acquaintance with the main themes of
Kant's theoretical and practical philosophy will be assumed.

**SM 672. Topics in Ethics. (M)** S.Meyer.
Phil 672 will be a workshop on writing papers for submission to either conferences or journals. Papers may address any topic in value theory, broadly construed, and some participants may choose to revise papers written for previous seminars. All participants will be responsible for generating short bibliographies and then leading class discussions on their topics, providing drafts of their papers for critique by the class, and presenting their papers to the class. Students who have passed their prelims are encouraged to participate as auditors.

**674. (BIOH574) Topics in Bioethics. (M)** Staff.
Topics will vary.

**SM 678. Advanced Topics in Political Philosophy. (M)** Tan.
In this course, we will examine various problems and questions in political philosophy. The focus will be on contemporary topics. This is an advanced seminar for graduate students who want to develop a professional-level paper on a particular subject, and the course will consist of readings on selected topics (selected by students) and students presenting their own papers (in various stages) on these topics. For graduate students in Philosophy only.

**SM 679. Liberalism and its Critics. (M)** Freeman.
This course will examine some of the fundamental these of liberalism and some of the criticisms they have encountered. In particular, we will examine the classical formulation of liberal theory in Immanuel Kant as well as his near-contemporaries Moses Mendelssohn and Wilhelm von Humboldt, and criticisms of this view by writers like G.W.F. Hegel and F.H. Bradley; we will then examine modern versions of liberalism in John Rawls and Ronald Dworkin, and its criticism, especially by "communitarians" like Michael Sandel, Charles Taylor, Alasdair MacIntyre, and Michael Walzer. We will be concerned with differences between the classical (Kantian) and contemporary (Rawlsian) foundations of liberalism as well as with the validity of the criticisms which have been made of each.

**SM 680. (COML681) History of Aesthetics. (M)** Staff.
A study of 18th century aesthetics focussing on Kant, his contemporaries, and successors.

**SM 681. Philosophy of Literature. (M)** Staff.
This course will begin with a survey of current topics and writings in the philosophy of literature: what is a narrative? what makes literary language expressive? what can we learn from fiction or poetry? The text here will consist largely of selected readings from the new Blackwell Companion to the Philosophy of Language. We will then explore the relation between philosophy and literature in more depth by discussing Eva Dadlez's new book, "Mirrors to one another: emotion and value in Jane Austen and David Hume."

**699. Independent Study. (C)** Staff.
Directed readings in consultation with individual faculty members.

**SM 700. Dissertation Workshop. (E)** Freeman, Hatfield, Singer.
Registration required for all third-year doctoral students. Fourth year students and beyond attend and present their work in the Dissertation Seminar. From time to time, topics pertaining to professional development and dissertation writing will be discussed.

**990. Masters Thesis. (C)** Staff.

**995. Dissertation. (C)** Staff.
Ph.D. candidates, who have completed all course requirements and have an approved dissertation proposal, work on their dissertation under the guidance of their dissertation supervisor and other members of their dissertation committee.

**998. Teaching Practicum (Independent Study). (C)** Staff.
Supervised teaching experience. Four semesters are required of all Doctoral students in philosophy.

**999. Independent Study. (C)** Staff.
May be repeated for credit.
PHILOSOPHY, POLITICS, AND ECONOMICS  
(AS) {PPE}

Additional courses, fulfilling the distributional and level requirements of this major, are listed under Philosophy, Political Science, and Economics.

Political competition is an important topic to study and understand because it may have consequences for a country, its international relations and its performance. The aim of the course is to introduce the students to what political competition is, how political competition and market competition differ, to measure conditions and to use data and methodological techniques available to investigate the importance of political competition within and across countries. During the course the theory explained will be accompanied by examples and articles that will help to clarify the concepts, to understand how to use available data to study political competition and its effects on e.g. economic performance of countries.

In reality, our understanding of different mechanisms and (economic) relationships is hampered by the lack of data. More often than not, either the observation itself is difficult or the data is not reliable. Over the last decades, economic experiments have become a vital part of the scientific discourse, facilitating our understanding of the world we live in (much like in Biology, Chemistry, Physics or the like). Economic experiments allow exploring economic behavior under controlled conditions by generating observations under different experimental designs and controlled conditions. Pioneering this field of research, Daniel Kahneman and Vernon Smith were awarded the Nobel memorial prize in recognition of their work on behavioral and experimental economics. In this course, we provide you with the methodology of how to develop a research idea and a proper experimental design that allows to explore this idea. Essentially, you will learn how to think about ideas, generate predictions, and how to use economic experiments to test them.

Introductory Courses
L/R 008. (PHIL008) The Social Contract. (B) Society Sector. All classes. Freeman, Tan.
This is a critical survey of the history of western modern political philosophy, beginning from the Early Modern period and concluding with the 19th or 20th Century. Our study typically begins with Hobbes and ends with Mill or Rawls. The organizing theme of our investigation will be the idea of the Social Contract. We will examine different contract theories as well as criticisms and proposed alternatives to the contract idea, such as utilitarianism. Besides the above, examples of authors we will read are Locke, Rousseau, Hume, Mill and Marx.

L/R 072. (HSOC101, PHIL072) Biomedical Ethics. (M) Society Sector. All classes. Staff.
A survey of moral problems in medicine and biomedical research. Problems discussed include: genetic manipulation, informed consent, infanticide, abortion, euthanasia, and the allocation of medical resources. Moral theory is presented with the aim of enabling students to think critically and analytically about moral issues. The need for setting biomedical issues in a broader humanistic perspective is stressed.

SM 073. (PHIL073) Topics in Ethics. (M)
L/R 140. (CIS 140, COGS001) Introduction to Cognitive Science. (A) Staff. Prerequisite(s): An introductory course in Computer Science, Linguistics, Neuroscience, Philosophy or Psychology. This is a Formal Reasoning course.
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness.

Intermediate Courses
030. (ECON030) Public Policy Analysis. (C) Staff. Prerequisite(s): ECON 001 and 002 or ECON 010. Credit cannot be received for both ECON 030 and 231.
This course provides an introduction to the economic method for analyzing public policy questions. It develops the implications of this method for the role of government in a market economy and for the analysis of specific public projects.

033. (ECON033) Labor Economics. (B) Staff. Prerequisite(s): ECON 001 and 002. Credit cannot be received for both ECON 033 and 233.
The course begins with an extensive discussion of models of labor market demand and supply. The rest of the course addresses a variety of related topics including the school-to-work transition, job training, employee benefits, the role of labor, unions, discrimination, workforce diversity, poverty, and public policy.

034. Economics of Family & Gender. (A) Staff. Prerequisite(s): ECON 001, 002, or 010 and ECON 103.
The course will use economic theory and econometric analysis to explore issues regarding decision making and allocation of resources within the family. The impact of gender roles and differences on economic outcomes will be discussed. We will study some feminist criticism of the economic tools for understanding household allocations and gender differences. The US economy will serve as the reference point though developing countries will also be discussed.

035. (ECON035) Industrial Organization. (C) Staff. Prerequisite(s): ECON 001 or ECON 010. Credit cannot be received for both ECON 035 and 235.
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, moral hazard and adverse selection. These theories are then applied to the study of various industries, antitrust cases, and regulatory issues.

036. (ECON036) Law and Economics. (A) Staff. Prerequisite(s): ECON 001 or ECON 010. Credit cannot be received for both ECON 036 and 234.
The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making.

062. (RUSS189) Soviet & Post-Sov Econ. Vekker.
The course will cover the development and operation of the Soviet centrally planned economy—one of the grandest social experiments of the 20th century. We will review the mechanisms of plan creation, the push for the collectivization and further development of Soviet agriculture, the role of the Soviet educational system and the
performance of labor markets (including forced labor camps--GU Lags). We will discuss the strengths and weaknesses of the Soviet system and the causes of its collapse. Privatization, called by some "piratization," will be one of the central issues in our consideration of the transition from central planning to a market economy in the early 1990s. Even though our main focus will be on the Soviet economy and post-Soviet transition, we will occasionally look back in time to the tsarist era and even further back to find evidence to help explain Soviet/Russian economic development.

153. (PSYC253) Judgment and Decisions. (C) Staff. Prerequisite(s): One semester of statistics OR microeconomics. An LPS section may be given. Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases.

L/R 225. (PHIL226, PHIL521, STSC128) Philosophy of Biology. (M) Natural Science & Mathematics Sector. Class of 2010 and beyond. Domotor, Spencer, Weisberg. This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin’s formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory: Richard Dawkins’ and Richard Lewontin’s. The remainder of the course will deal with a number of foundational issues including adaptation, the units of selection, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory.

232. (ECON232) Political Economy. (B) Staff. Prerequisite(s): ECON 101; MATH 104 and MATH 114 or MATH 115. ECON 103 is recommended. This course examines the political and economic determinants of government policies. The course presents economic arguments for government action in the private economy. How government decides policies via simple majority voting, representative legislatures, and executive veto and agenda-setting politics will be studied. Applications include government spending and redistributive policies.

L/R 244. (PHIL244) Introduction to Philosophy of Mind. (M) Domotor, Miracchi. This course will survey several central topics in philosophy of mind, as well as investigating how philosophy of the mind interacts with scientific study of the mind. Among the questions we’ll be asking are: What is it to have a mind? What is the relationship between the mind and the brain? Can there be a science of the mind? What can it tell us? What can philosophy contribute to a science of the mind? What is consciousness? What is it to think, to perceive, to act? How are perception, thought, and action related to one another?

L/R 270. (PSCI271) Constitutional Law: Public Power & Civil Rights to 1912. (C) Smith. This course explores the creation and transformations of the American constitutional system's structures and goals from the nation's founding through the period of Progressive reforms, the rise of the Jim Crow system, and the Spanish American War. Issues include the division of powers between state and national governments, and the branches of the federal government; economic powers of private actors and government regulators; the authority of governments to enforce or transform racial and gender hierarchies; and the extent of religious and expressive freedoms and rights of persons accused of crimes. We will pay special attention to the changing role of the Supreme Court and its decisions in interpreting and shaping American constitutionalism, and we will also read legislative and executive constitutional arguments, party platforms, and other influential statements of American constitutional thought.

SM 271. (PHIL271) Global Justice. (M) Tan. This course is an introduction to some of the central problems in global justice. Samples of these topics include: What are our duties to respond to world poverty and what is the basis of this duty? Is global inequality in itself a matter of justice? How universal are human rights? Should human rights defer to cultural claims at all? Is there a right to intervene in another country to protect human rights there? Indeed can intervention to protect human rights ever be a duty? Who is responsible for the environment? We will read some influential contemporary essays by philosophers on these topics with the goal of using the ideas in these papers as a springboard for our own further discussion and analysis.

SM 272. (PHIL272) Ethics and the Professions. (M) Tan. Prerequisite(s): At least one of PHIL 002, 008, 009 or equivalent. Since Louise Brown, the first so-called "test tube baby" was born in 1978, reproductive technologies have generated many new ways to "make" babies. These technologies mean that a number of difficult ethical questions are inescapable, not only for individuals who otherwise couldn't have children (due to biological and/or social constraints) but for the larger society.

This course will consider the prenatal moral status and identity of the fetus. It explores prenatal (and pre-implantation) genetic interventions and their possible effects on the autonomy of the child later in life as well as the possible eugenic implications of such interventions. It examines the potential conflict between a mother's autonomy and an infant's prenatal harm in the larger context created by new kinds of parents and new forms of kinship. Finally, it investigates the market for sperm, eggs, embryos and gestation and reflects on the questions of justice they imply.

275. (PSYC275) Introduction to Political Psychology. (C) Tetlock. Prerequisite(s): PSYC 001 or COGS 001. NOTE: Students who are more interested in business-related issues may want Wharton 276x which is a modified version of this course specifically for Wharton undergraduates.

This course will explore psychological approaches to understanding political beliefs, attitudes, and actions at the levels of both individual citizens and national leaders. It will also explore the possibility that psychological science itself is not immune to the political debates swirling around it. Specific topics will include: the workings of belief systems (and their power to shape what we "see"), cognitive biases (and their power to cause miscalculations), sacred values and their role in stabilizing belief systems and social interaction, personality and ideology (the linkages between the personal and the political), and clashing conceptions of morality and distributive and corrective justice (striking variations among people in what they consider to be fair). We shall also explore some topics that have sparked controversy in the psychological research literature and that tend to polarize opinion along political lines, including work on intelligence and unconscious bias.

L/R 277. (PHIL277) Justice, Law and Morality. (M) Freeman, Allen. The course will focus on the philosophical background to the individual rights protected by the U.S. Constitution, including 1st Amendment freedoms of religion, expression, and asociation; the 14th amendment guarantee of Due Process
and the rights of privacy, abortion, assisted suicide, and marriage; the Equal Protection clause and equal political rights and the legitimacy of affirmative action; and the Takings and Contract clauses and their bearing on rights of private property and economic freedoms. In addition to Supreme Court decisions on these issues, we will read works by political philosophers and constitutional theorists, including J.S. Mill, Ronald Dworkin, Cass Sunstein, Martha Nussbaum, Katherine MacKinnon and others.

**Advanced Courses**

201. (ECON013) Strategic Reasoning. (A) Dillenberger.
Prerequisite(s): Some high school algebra, ECON 001. This course may NOT be taken concurrently or after Econ 212.
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only pre-requisites are some high-school algebra and having taken Econ 1. However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective).

This course integrates economic, ethical and political perspectives. It examines competing theories, models, and analytical frameworks for understanding policymaking. The course will focus on: 1. How public problems are framed and described; 2. What criteria are useful in developing and assessing policy choices; and 3. How policy choices and outcomes are mediated and influenced by individuals, organizations and political institutions.

203. (PSYC265) Behavioral Economics and Psychology. (C) Bhatia. Prerequisite(s): ECON 001. Prerequisite: ECON 1.
This course will introduce you to the study of choice, and will examine in detail what we know about how people make choices, and how we can influence these choices. It will utilize insights from psychology and economics, and will apply these insights to domains including consumer choice, risky decision making, and prosocial decision making.

L/R 204. (PHIL228) Philosophy of Social Science. (B) Bicchieri, Weisberg. Prerequisite(s): ECON 001, ECON 002, PHIL 008 and PPE 201.
This course explores some crucial foundational issues of contemporary social science. It focuses on various types of explanation, the construction of social models, and their validation. Specific topics will include: 1. Rational choice models (including game-theoretic ones) and alternative models of bounded rationality; 2. Experimental models in economics and psychology and whether they present a radical departure from traditional economic models; 3. Evolutionary models of the emergence of institutions, and agent-based simulations of such dynamics. In particular, we will explore theoretical and empirical models of trust, reciprocity, cooperation and fairness, asking what motivates individuals to engage in pro-social behavior and how such behavior can emerge and persist. This course will cover some of the material presented in other Core courses, with particular attention to foundational and explanatory issues that are not usually discussed in a typical social science course.

299. Independent Study. (C) Staff.
Student arranges with a faculty member in Philosophy, Economics or Political Science to pursue a program of reading and writing on a suitable topic.

301. Directed Honors Research. (C) Staff. Open only to senior majors in PPE. Student arranges with a faculty member in Philosophy, Economics or Political Science to do an honors thesis on a suitable topic.
PHYSICS
(AS) {PHYS}

008. Physics for Architects I. (I)
Physical World Sector. All classes. Prerequisite(s): Entrance credit in algebra and trigonometry. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 091 or 093 who complete PHYS008 will thereby surrender the AP or Transfer Credit.

An introduction to the classical laws of mechanics, including static equilibrium, elasticity, and oscillations, with emphasis on topics most relevant to students in architecture. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 091 or 093 who complete PHYS008 will thereby surrender the AP or Transfer Credit.

009. Physics for Architects II. (J)
Physical World Sector. All classes. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 092 or 094 who complete PHYS008 will thereby surrender the AP or Transfer Credit.

A continuation of PHYS 008 introducing waves, sound, light, fluids, heat, electricity, magnetism, and circuits, with emphasis on topics most relevant to students in architecture. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 092 or 094 who complete PHYS008 will thereby surrender the AP or Transfer Credit.

016. Energy, Oil, and Global Warming. (C) Natural Science & Mathematics Sector. Class of 2010 and beyond. Prerequisite(s): Algebra and Trigonometry. May be counted as Science Studies for students in Class of 2009 and prior. Target audience: Non-science majors (although science/engineering students are welcome).

The developed world's dependence on fossil fuels for energy production has extremely undesirable economic, environmental, and political consequences, and is likely to be mankind's greatest challenge in the 21st century. We describe the physical principles of energy, its production and consumption, and environmental consequences, including the greenhouse effect. We will examine a number of alternative modes of energy generation - fossil fuels, biomass, wind, solar, hydro, and nuclear - and study the physical and technological aspects of each, and their societal, environmental and economic impacts over the construction and operational lifetimes. No previous study of physics is assumed.

050. Physics Laboratory I. (C)
Prerequisite(s): AP score of 5 on the Physics B or Physics C - Mechanics exam, or transfer credit for PHYS 91 or PHYS 93. Only for students with above prerequisites. Course carries .5 course unit and student receives grade. Permit required. Only for students with above prerequisites. Experiments in classical mechanics.

051. Physics Laboratory II. (C)
Prerequisite(s): AP score of 5 on the Physics B or Physics C - Electricity and Magnetism exam, or transfer credit for PHYS 92 or PHYS 94. Only for students with above prerequisites. Course carries .5 course unit and student receives grade. Permit required. Only for students with above prerequisites. Experiments in electromagnetism and optics.

L/L 101. General Physics: Mechanics, Heat and Sound. (S) Physical World Sector. All classes. Prerequisite(s): Entrance credit in algebra and trigonometry, and a background in calculus. Corequisite(s): PHYS 101 LAB. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 101 will thereby surrender the AP or Transfer Credit.

An introduction to the classical laws of motion requiring a background in calculus. Suggested for students in a pre-health program. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 101 will thereby surrender the AP or Transfer Credit.

L/L 102. General Physics: Electromagnetism, Optics, and Modern Physics. (S) Physical World Sector. All classes. Prerequisite(s): PHYS 101. Corequisite(s): PHYS 102 LAB. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 102 will thereby surrender the AP or Transfer Credit.

A continuation of PHYS 101 emphasizing an introduction to classical electricity and magnetism, relativity theory, optics, and the quantum theory of matter, requiring a background in calculus. Suggested for students in a pre-health program. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 102 will thereby surrender the AP or Transfer Credit.

137. Community Physics Initiative. (A)
This is an Academically Based Community Service Course (ABCS). It will be aligned to the Philadelphia School District curriculum in introductory physics at University City High School (UCHS). The UCHS curriculum roughly parallels the contents of first semester introductory physics (non-calculus) at Penn.

140. Principles of Physics I (without laboratory). (C) Corequisite: MATH 104. For Engineering students whose course of study does not require a physics laboratory course. Those who are enrolled in a dual degree program with the College must register for the lab-based version of this course, PHYS 150. Classical laws of motions; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion. Engineering students only.

L/R 141. Principles of Physics II (without laboratory). (S)
Prerequisite(s): PHYS 140. Corequisite(s): MATH 114. For Engineering students whose course of study does not require a physics laboratory course. Those who are enrolled in a dual degree program with the College must register for the lab-based version of this course, PHYS 151. Electric and magnetic fields; Coulomb's, Ampere's, and Faraday's laws; Maxwell's equations; emission, propagation, and absorption of electromagnetic radiation; interference, reflection, refraction,
scattering, and diffraction phenomena. Engineering students only.

L/L 150. Principles of Physics I: Mechanics and Wave Motion. (C)
Physical World Sector. All classes.
Prerequisite(s): Math 104 is a pre-req. Corequisite(s): PHYS 150 LAB. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 150 will thereby surrender the AP or Transfer Credit.

This calculus-based course is recommended for science majors and engineering students. Classical laws of motion; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 150 will thereby surrender the AP or Transfer Credit.

L/L 151. Principles of Physics II: Electromagnetism and Radiation. (S)
Physical World Sector. All classes.
Prerequisite(s): PHYS 150 or PHYS 170, Math 114 is a pre-req. Corequisite(s): PHYS 151 LAB. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 151 will thereby surrender the AP or Transfer Credit.

The topics of this calculus-based course are electric and magnetic fields; Coulomb's, Ampere's, and Faraday's laws; Maxwell's equations; emission, propagation, and absorption of electromagnetic radiation; interference, reflection, refraction, scattering, and diffraction phenomena. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 151 will thereby surrender the AP or Transfer Credit.

SM 170. Honors Physics I: Mechanics and Wave Motion. (A)
Physical World Sector. All classes.
Prerequisite(s): MATH 104 or permission of the instructor. Corequisite(s): MATH 114 or permission of instructor. Benjamin Franklin Seminar. Credit is awarded for only one of the following courses: PHYS 008 PHYS 101, 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 170 will thereby surrender the AP or Transfer Credit.

This course parallels and extends the content of PHYS 150, at a significantly higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Classical laws of motion: interaction between particles; conservation laws and symmetry principles; rigid body motion; noninertial reference frames; oscillations. Credit is awarded for only one of the following courses: PHYS 008 PHYS 101, 150, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 170 will thereby surrender the AP or Transfer Credit.

SM 171. Honors Physics II: Electromagnetism and Radiation. (B)
Physical World Sector. All classes.
Prerequisite(s): MATH 114 and PHYS 150 or PHYS 170, or permission of instructor. Corequisite(s): MATH 240 or permission of instructor. Benjamin Franklin Seminar. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 171 will thereby surrender the AP or Transfer Credit.

This course parallels and extends the content of PHYS 151, at a somewhat higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Electric and magnetic fields; Coulomb's, Ampere's, and Faraday's laws; Maxwell's equations, electromagnetic radiation. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 171 will thereby surrender the AP or Transfer Credit.

230. Principles of Physics III: Thermal Physics and Waves. (A)
Prerequisite(s): PHYS 150/151 or PHYS 170/171 and MATH 104, MATH 114 or 116. Corequisite(s): MATH 240.

Elementary thermodynamics and statistical physics including heat engines and the Maxwell-Boltzmann distribution, independent and forced harmonic motion, coupled oscillators, normal modes, longitudinal and transverse sound and light waves, interference and diffraction, and elementary Fourier analysis and the uncertainty principle.

240. Principles of Physics IV: Modern Physics (without laboratory). (B)
Prerequisite(s): PHYS 151 or 171. Corequisite(s): MATH 240.

Special relativity, an introduction to the principles of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei.

L/L 250. Principles of Physics IV: Modern Physics. (B) Prerequisite(s): PHYS 150/151 or PHYS 170/171. Corequisite(s): MATH 240. PHYS 250 students take a two-hour lab.

Special relativity, an introduction to the principle of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei.

280. (BCHE280) Physical Models of Biological Systems. (A) Prerequisite(s): PHYS 101 (or higher), MATH 104-MATH 114 or MATH 104-MATH 115 or MATH 116. Recommended: previous or concurrent PHYS 102; basic background in chemistry and biology.

Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of making estimates, using them to figure out which physical variables and phenomena will be most relevant to a given system, finding analogies to purely physical systems whose behavior is already known, and embodying those in a mathematical model, which is often implemented in computer code. Topics may include bacterial genetics, genetic switches and oscillators; systems that sense or utilize light; superresolution and other newmicroscopy methods; and vision and other modes of sensory transduction.
299. Independent Study. (C) Repetitive credit.
Special projects and independent study under the direction of faculty member.

L/R 314. (ENVS312, ENVS640) Ocean-Atmosphere Dynamics and Implications for Future Climate Change. Marinov. Prerequisite(s): MATH 114 or permission of the instructor.

This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).

351. Analytical Mechanics. (B)
Prerequisite(s): PHYS 150/151 or PHYS 170/171, MATH 104/114, and MATH 240, or permission of instructor.

An intermediate course in the statics and dynamics of particles and rigid bodies. LaGrangian dynamics, central forces, non-inertial reference frames, and rigid bodies.

361. (PHYS561) Electromagnetism I: Electricity and Potential Theory. (A)
Prerequisite(s): PHYS 151 or 171, and MATH 241.
An intermediate course. Electrostatic fields and potentials, dielectrics, and direct currents.

362. (PHYS562) Electromagnetism II: Magnetism, Maxwell’s Equations, and Electromagnetic Waves. (B)
Prerequisite(s): PHYS 361.
A continuation of PHYS 361. Magnetic fields and potentials, electromagnetic induction, Maxwell’s equations, electromagnetic waves, and radiation.

364. (PHYS564) Laboratory Electronics. (A) Prerequisite(s): Familiarity with electricity and magnetism at the level of PHYS 102, 141, 151 or 171. A laboratory-intensive survey of analog and digital electronics, intended to teach students of physics or related fields enough electronics to be comfortable learning additional topics on their own from a reference such as Horowitz and Hill. Specific topics will vary from year to year from the selection of topics listed below. Analog topics may include voltage dividers, impedance, filters, operational amplifier circuits, and transistor circuits. Digital topics may include logic gates, finite-state machines, programmable logic devices, digital-to-analog and analog-to-digital conversion, and microcomputer concepts. Recommended for students planning to do experimental work in physical science.

401. (PHYS581) Thermodynamics and the Introduction to Statistical Mechanics and Kinetic Theory. (A)
Prerequisite(s): PHYS 240 or 250. Temperature, entropy and generalized potentials, phase transitions, and introduction to ensemble theory and distribution functions.

411. (PHYS511) Introduction to Quantum Mechanics I. (A)
Prerequisite(s): PHYS 150 or 170, 240 or 250, and MATH 241.
An introduction to the principles of quantum mechanics designed for physics majors and graduate students in physics-related disciplines. The Schrodinger equation operator formalism, central field problem, angular momentum, and spin. Application to one-dimensional and central field problems.

412. (PHYS512) Introduction to Quantum Mechanics II. (B)
Prerequisite(s): PHYS 411. Perturbation theory, variational principle, application of the quantum theory to atomic, molecular, and nuclear systems, and their interaction with radiation.

414. (PHYS521) Laboratory in Modern Physics. (B) Prerequisite(s): PHYS 411.
Supervised experiments in modern physics.

421. (PHYS529) Modern Optics. (J) Prerequisite(s): PHYS 240 or 250 and 362, or permission of instructor.
Interaction of light with matter. Interference and diffraction, absorption and dispersion, stimulated emission and coherence, spectroscopy, non-linear processes.

433. Order of Magnitude Physics. (C) Prerequisite(s): Prerequisites: PHYS 411 or permission from instructor.

This course focuses on the art of estimating physical quantities to within the nearest factor of ten. Problem solving techniques such as dimensional analysis and scaling relations will be covered and applied to a wide range of topics including fluid mechanics, waves and sound, atomic physics, material properties, astrophysics, everyday life, and more. The course is intended for advanced undergraduate students.

499. Senior Honor Thesis. (C) Prerequisite(s): PHYS 412 and 414.
Experimental and theoretical research projects in various areas of physics planned by student in consultation with a member of faculty. A written thesis and an oral presentation and defense are required.

500. (MATH594) Mathematical Methods of Physics. (A)
A discussion of those concepts and techniques of classical analysis employed in physical theories. Topics include complex analysis. Fourier series and transforms, ordinary and partial equations, Hilbert spaces, among others.

501. Introduction to Research. (C) Taken by all first-year graduate students. This is a required seminar that does not carry credit or a grade.
Introduction to research in particle, nuclear, condensed matter and astrophysics. Selected current topics from journals.

503. General Relativity. (C)
This is a graduate level, introductory course in general relativity. The basics of general relativity will be covered with a view to understanding the mathematical background, the construction of the theory, and applications to the solar system, black holes, gravitational waves and cosmology. The latter part of the course will cover some of the basic modern topics in modern
cosmology, including the current cosmological model, the accelerating universe, and open questions driving current research.

505. Introduction to Cosmology. (M)
Prerequisite(s): Graduate standing in physics or permission of instructor.
Introduction to physical cosmology emphasizing recent ideas on the very early evolution of the universe. The course will introduce standard big bang cosmology, new theories of the very early universe, and the key observations that have tested and will be testing these ideas. No prior knowledge of astrophysics, cosmology, general relativity, or particle physics will be assumed, although aspects of each will be introduced as part of the course. The course is intended for graduate students and advanced undergraduates.

516. Electromagnetic Phenomena. (B)
Survey of electrodynamics, focusing on applications to research done in the Department. Topics include mathematical structure and relativistic invariance properties of Maxwell equations, tensor methods, and the generation and scattering of radiation, in vacuum and in materials. Applications vary from year to year but include optical manipulation, astrophysical phenomena, and the generalizations from Maxwell's theory to those of other fundamental interactions (strong, electroweak, and gravitational forces).

517. Particle Cosmology. (C)
This introduction to cosmology will cover standard big bang cosmology, formation of large-scale structure, theories of the early universe and their observational predictions, and models of dark energy. It is intended for graduate students or advanced undergraduates. No prior knowledge of general relativity or field theory will be assumed, although aspects of each will be introduced as part of the course.

518. Introduction to Condensed Matter Physics. (B)
Prerequisite(s): Undergraduate training in quantum mechanics and statistical thermodynamics.
An introduction to condensed matter physics designed primarily for advanced undergraduate and graduate students desiring a compact survey of the field. Band theory of solids, phonons, electrical magnetic and optical properties of matter, and superconductivity.

521. (PHYS414) Advanced Laboratory. (B)
Directed experiments in classical and modern physics designed to acquaint the student with modern laboratory instrumentation and techniques.

522. Introduction to Elementary Particle Physics. (M) Prerequisite(s): Permission of instructor required.
An introduction to elementary particles (photons, leptons, hadrons, quarks), their interactions, and the unification of the fundamental forces.

525. Special Projects. (C) Repetitive credit.
Special projects under the direction of a faculty member.

526. Astrophysical Radiation. (H)
This is a course on the theory of the interaction of light and matter designed primarily for graduate and advanced undergraduate students to build the basic tools required to do research in astrophysics. Topics to be discussed include structure of single- and multi-electron atoms, radiative and collisional processes, spectral line formation, opacity, radiation transfer, analytical and numerical methods, and a selection of applications in astrophysics based on student research interest.

528. Introduction to Liquid Crystals. (C)
Overview of liquid crystalline phases, their elasticity, topology, and dynamics.

530. Modern Optical Physics and Spectroscopy. (K) Prerequisite(s): Working knowledge of electricity and magnetism and quantum mechanics. Graduate level course designed for beginning or intermediate graduate students in physics, but it is likely to be of use to a broader community including beginning graduate students whose research involves light scattering in electrical engineering, chemistry, and biophysics, and advanced undergraduates.
Introduction to contemporary optics. Topics include propagation and guiding of light waves, interaction of electromagnetic radiation with matter, lasers, non-linear optics, coherent transient phenomena, photon correlation spectroscopies and photon diffusion.

531. Quantum Mechanics I. (A)
Prerequisite(s): A minimum of one semester of quantum mechanics at the advanced undergraduate level.
Wave mechanics, complementarity and correspondence principles, semi-classical (WKB) approximation, bound state techniques, periodic potentials, angular momentum, scattering theory, phase shift analysis, and resonance phenomena.

532. Quantum Mechanics II. (B)
Prerequisite(s): PHYS 531.
Spin and other two dimensional systems, matrix mechanics, rotation group, symmetries, time independent and time dependent perturbation theory, and atomic and molecular systems.

533. Topics in Cosmology. (M)
This course aims to survey three or four topics of current research interest in cosmology, mostly at the level of review articles. The topics will be covered in greater depth and with more connections to ongoing research than the introductory cosmology course, ASTR 525. The course will be largely accessible to first and second year graduate students. Some exposure to cosmology and general relativity will be helpful but the first two weeks will attempt to bridge that gap. The topic selection will be done in part with input from the students. For the Fall 2009 semester, Dark Energy will be the first topic, Nonlinear Dynamics the likely second topic and Gravitational Lensing (focus on strong lensing) is a possible third topic. A few short problem sets and a presentation/write-up on a topic of interest, based on a review article or selected papers, will make up the course requirement.

SM 535. (BIOL535) Topics in Theory of Living Systems. (M) Kim, Goulian, Akcay, Balasubramanian, Raj, Mossel. Prerequisite(s): Permission of instructor.
The goal of this course is to discuss broad conceptual theories that address complex phenomena of living systems. Example questions include: what is the molecular architecture of information processing in cells and developing organisms? What is the functional architecture of cooperative organization from molecules in a cell to whole organism social interactions? How is complex multi-factorial information represented in organisms? The course will meet once a week and students will research relevant papers, lead discussions, and generate synopsis of group discussions. At the end of the semester, faculty and students are expected to co-author a review report of the discussed topics.
564. (PHYS364) Laboratory Electronics. (A)
A laboratory-intensive survey of analog and digital electronics, intended to teach students of physics or related fields enough electronics to be comfortable learning additional topics on their own from a reference such as Horowitz and Hill. Specific topics will vary from year to year from the selection of topics listed below. Analog topics may include voltage dividers, impedance, filters, operational amplifier circuits, and transistor circuits. Digital topics may include logic gates, finite-state machines, programmable logic devices, digital-to-analog and analog-to-digital conversion, and microcomputer concepts. Recommended for students planning to do experimental work in physical science.

580. (BCHE580) Biological Physics. (M) Prerequisite(s): MATH 240 and MATH 241 (or equivalent preparation), PHYS 401 or familiarity with statistical mechanics and thermodynamics. Recommended: Basic background in biology.

581. (PHYS401) Thermodynamics. (A)

582. (BE 580) Medical Radiation Engineering. (A)
This course in medical radiation physics investigates electromagnetic and particulate radiation and its interaction with matter. The theory of radiation transport and the basic concept of dosimetry will be presented. The principles of radiation detectors and radiation protection will be discussed.

585. (BE 530, BIBB585, NGG 594, PSYC539) Theoretical and Computational Neuroscience. (B)
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.

601. Introduction to Field Theory. (A)
Elementary relativistic quantum field theory of scalar, fermion, and Abelian gauge fields. Feynman Diagrams.

611. Statistical Mechanics. (A)
Prerequisite(s): PHYS 401, 531, or equivalent.
Introduction to the canonical structure and formulation of modern statistical mechanics. The thermodynamic limit. Entropic and depletion forces. Gas and liquid theory. Phase transitions and critical phenomena. The virial expansion.

Quantum statistics. Path integrals, the Fokker-Planck equation and stochastic processes.

612. Advanced Statistical Mechanics. (M) Prerequisite(s): PHYS 611 or equivalent.
In depth study of classical and quantum lattice spin models, perturbation techniques, and the renormalization group.

622. Introduction to Elementary Particle Physics. (M) Prerequisite(s): PHYS 601.
Introduction to the phenomenology of elementary particles, strong and weak interactions, symmetries.

632. Relativistic Quantum Field Theory. (M) Prerequisite(s): PHYS 601.
Advanced topics in field theory, including renormalization theory.

633. Relativistic Quantum Field Theory. (M) Prerequisite(s): PHYS 632.
A continuation of PHYS 632, dealing with non-Abelian gauge theories.

661. Solid State Theory I. (M)
This course is intended to be an introductory graduate course on the physics of solids, crystals and liquid crystals. There will be a strong emphasis on the use and application of broken and unbroken symmetries in condensed matter physics. Topics covered include superconductivity and superfluidity.

662. Solid State Theory II. (M)
A continuation of PHYS 661.

696. Advanced Topics in Theoretical Physics. (M)

990. Masters Thesis. (C)

995. Dissertation. (C)

999. Independent Study. (C)
SM 009. (WRIT076) Critical Writing Seminar in Political Science. (M) Staff
This is a critical writing seminar. It fulfills the writing requirement for all undergraduates. As a discipline-based writing seminar, the course introduces students to a topic within its discipline but throughout emphasizes the development of critical thinking, analytical, and writing skills. For current listings and descriptions, visit the Critical Writing Program's website at http://writing.upenn.edu/critical.

SM 010. (AFRC010, LALS107) Freshman Seminars. (C) Staff
Freshman seminars are small, substantive courses taught by members of the faculty and open only to freshmen. These seminars offer an excellent opportunity to explore areas not represented in high school curricula and to establish relationships with faculty members around areas of mutual interest. See www.college.upenn.edu/admissions/freshmen.php

L/R 105. The Study of Politics. (C) Society Sector. All classes. Staff
This course introduces fundamental political questions, including the nature of political authority and political rights, the relationship between power and values, variation in the role and quality of government, origins of political institutions, and dynamics of international politics. Substantial consideration is given to contributions by classical political thinkers as well as contemporary political scientists. Attention is also paid to how the systematic study of politics -- American politics, comparative politics, international politics and political philosophy -- can deepen our understanding of complex public policy questions.

L/R 110. (PSCI412) Introduction to Comparative Politics. (C) Society Sector. All classes. Staff
This course is designed to introduce students to comparative political analysis. How can the political behavior, circumstances, institutions, and dynamic patterns of change that people experience in very different societies be analyzed using the same set of concepts and theories? Key themes include nationalism, political culture, democratization, authoritarianism, and the nature of protracted conflict.

SM 113. (PSYC251) INTRO TO DECISION THEORY. (M)

115. Comparative Western European Politics. (C) Kennedy
Comparative analysis of the political systems of Britain, France and West Germany, focusing on the making and implementation of public policy.

L/R 116. Political Change in the "Third World". (C) Society Sector. All classes. Sil.
This is a comparative politics course that examines political and socio-economic change in the so-called "Third World," defined here as post-colonial developing areas in Asia, Africa and Latin America. The course is not as concerned with keeping up with current events as with analyzing the relationships between colonial legacies, the initial challenges of post-colonial political and socioeconomic development, and how these interact with contemporary problems and global trends. Although chiefly concerned with "political change" within countries, it will also devote substantial attention to economic, sociocultural and international factors. The course is divided into three parts. The first examines the common and distinctive features of colonial rule in different regions as well as the varying challenges of political and economic development in diverse post-colonial settings. The second part focuses on elaborating on the themes developed in the first by looking more closely at the developmental experiences of Brazil, India, Algeria, Iran, Nigeria, and South Korea (with passing references to other countries as comparative referents). The third part focuses on trends and challenges that have emerged over the last two decades - including market reforms, democratization, and problems related to gender and the environment -

L/R 130. Introduction to American Politics. (C) Society Sector. All classes. Staff
This course is intended to introduce students to the national institutions and political processes of American government. What are the historical and philosophical foundations of the American Republic? How does American public policy get made, who makes it, and who benefits? Is a constitutional fabric woven in 1787 good enough for today? How, if at all, should American government be changed, and why? What is politics and why bother to study it? If these sorts of questions interest you, then this course will be a congenial home. It is designed to explore such questions while teaching students the basics of American politics and government.

L/R 131. American Foreign Policy. (C) Horowitz, Vitalis
This course analyzes the formation and conduct of foreign policy in the United States. The course combines three elements: a study of the history of American foreign relations; an analysis of the causes of American foreign policy such as the international system, public opinion, and the media; and a discussion of the major policy issues in contemporary U.S. foreign policy, including terrorism, civil wars, and economic policy.

L/R 133. (PPE 202) Introduction to African American Politics. (A) Staff
This course is designed to provide an introduction to contemporary African American politics. We will examine how the underlying theory and structure of American political institutions affect African Americans' efforts to organize for effective political action. We will also analyze some of the political behaviors and strategies utilized by African Americans as they seek to impact the political system.

134. United States Political Parties. (B) Staff
This course is an analysis of parties in the United States, with special attention to democratic theory, the electoral process, electronic media, as well as political organizations and their influence on government decisions.

Students will use course readings and their community service to analyze the institutions, ideas, interests, social movements, and leadership that shape the "politics of food" in different arenas. Service opportunities include work with the Urban Nutrition Initiative, Community School Student Partnerships, and the possibility of other placements as approved by the professors.

136. (AFRC136, URBS136) Urban Politics in the United States. (B) Society Sector. All classes. Reed
This course explores the political character of contemporary urban American life. Particular attention is given to the relationship between urban politics and policymaking -- including the structural and ideological factors (e.g., dynamics of political economy, race, ethnicity, pluralism and gender) that constrain the policy context and shape the urban
environment as a terrain for commingling, competition and conflict over uses of space. It makes considerable use of case studies to throw into relief the complex and sometimes subtle processes that shape urban life.

SM 138. (GAFL138) Policymaking in the US. (A) Martinez.
This course is an opportunity for students to combine the major theoretical perspectives on the policy process with practical application to current policy issues. Students will gain the theoretical tools to explain policy change, a comprehensive understanding of the actors that influence policymaking and politics, an overview of the major policy issues being debated, and experience writing policy documents.

This academically based community service seminar will explore the ideas and theories, alliances and opposition that have shaped policy and organizing efforts addressed to the problems associated with urban poverty in the United States. There will be a special focus on the issues of increasing inequality, education, low wage work, health and nutrition, welfare reform and social security. Students will evaluate contemporary policy debates and programs in the light of selected case studies, readings, and their own experience working with community groups, institutions, and federal programs in West Philadelphia.

144. (EEUR153, RUSS134) COMMUNISM. (M)

L/R 150. Introduction to International Relations. (C) Society Sector. All classes. Mansfield, Stanton.
This course is an introduction to the major theories and issues in international politics. The goals of the course are to give students a broad familiarity with the field of international relations, and to help them develop the analytical skills necessary to think critically about international politics. The course is divided into four parts: 1) Concepts and Theories of International Relations; 2) War and Security; 3) The Global Economy; and 4) Emerging Issues in International Relations.

This lecture course introduces students to the subfield of international security or strategic studies. In order to grasp the usefulness of the theoretical ideas presented in readings and lectures, abstract concepts are linked with a study of the national security policies states have adopted in the decades following World War II. Topics include current debates about nuclear proliferation, terrorism, the Iraq war, Europe's changing international role, the rise of China, Asian "flashpoints" (Korea, the Taiwan Strait), and US security policy for the 21st century - considering some of the main strategic alternatives to the US as well as their implications for the types of forces deployed (the impact of the "revolution in military affairs," the future of missile defense, and the economic burden to be shoulerded).

This course examines the politics of international economic relations. The course will analyze the interplay between politics and economics in three broad areas: international trade, international finance, and economic development. In each section, we will first discuss economic theories that explain the causes and consequences of international commerce, capital flows, and economic growth. We will then explore how political interests, institutions, and ideas alter these predictions, examining both historical examples and current policy debates.

L/R 153. International Law & Institutions. (C) Stanton.
This lecture course examines the role that international law and institutions play in international relations. The course begins by exploring broad theoretical questions - questions about why states create international law and international institutions; how states design institutions; the impact that institutional design may have on the effectiveness of international institutions; and the conditions under which states are likely to comply with the rules set out by international institutions and the dictates of international law. Specific topics include collective security institutions such as the League of Nations, the United Nations, and NATO; human rights law; the laws of war; international intervention and peacekeeping; international justice and the International Criminal Court; environmental law; international trade law and the World Trade Organization; economic development and the World Bank; and international finance and the role of the International Monetary Fund.

This course explores the emerging politics of global ecological decay and restoration occurring at the individual, local, national, state, and international levels.

SM 156. Terrorism. (C) Staff.
This course is designed to stimulate an interest in the philosophy and methods of terrorism; to illustrate the varieties of conditions under which methods of terrorism are used; to outline the institutional conditions which permit and support the use of terrorism; and to understand the problems involved in "solving" the terrorism dilemma.

L/R 180. (CLST185) Ancient Political Thought. (M) History & Tradition Sector. All classes. Kennedy, Norton.
Through reading texts of Plato (Socrates), Aristotle, Augustine and Aquinas, the student encounters a range of political ideas deeply challenging to--and possibly corrosive of--today's dominant democratic liberalism. Can classical and medieval thinking offer insight into modern impasses in political morality? Is such ancient thinking plausible, useful, or dangerous?

This course will provide an overview of major figures and themes of modern political thought. We will focus on themes and questions pertinent to political theory in the modern era, particularly focusing on the relationship of the individual to community, society, and state. Although the emergence of the individual as a central moral, political, and conceptual category arguably began in earlier eras, it is in the seventeenth century that it takes firm hold in defining the state, political institutions, moral thinking, and social relations. The centrality of "the individual" has created difficulties, even paradoxes, for community and social relations, and political theorists have struggled to reconcile those throughout the modern era. We will consider the political forms that emerged out of those struggles, as well as the changed and distinctly "modern" conceptualizations of political theory such as freedom, responsibility, justice, rights and obligations, as central categories for organizing moral and political life.

L/R 182. Contemporary Political Thought. (A) Green, Hirschmann.
This course is intended as a general introduction to political theory since 1900, examining prominent theorists of politics.
including Max Weber, Hannah Arendt, Carl Schmitt, Isaiah Berlin, Jurgen Habermas, John Rawls, Michel Foucault, and Jacques Derrida. Our theme for the Fall 2012 course will be: The Disenchantment of the World? Topics include: the nature of the the political and the concern, particular to the last century, that politics is itself under attack; the spread of liberal democracy across the globe and a critical appraisal of the moral meaning of this regime; contemporary theories of social justice; and an exploration of various issues pertaining to violence and the politics of security.

Whether America begins with the Puritans and the Mayflower Compact, or with the Declaration of Independence and the Revolution, it is founded in resistance to empire. In the generations between, Americans have desired, dreaded and debated empire. This course will focus on empire and imperialism in American political thought. We will read primary texts addressing empire: from the departure and dissent of the Puritans, and Burke's Speech on Conciliation with the Colonies, to twentieth and twenty-first century debates over America's role in the world. These texts will include political pamphlets and speeches, poetry, novels, policy papers and film.

SM 198. Selected Topics in Political Science. (C) Staff.

Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: The Analysis of Presidential Elections, Conservative Political Economy, and Political Geography.

L/R 201. Politics, Society and Social Science. (A) Difulio.

Everyday human behavior poses puzzles that political scientists, economists, sociologists, and other social scientists have attempted to answer. Often their respective answers or "theories" differ widely; and sometimes even their most widely agreed-upon answers seem to defy common sense or ask us to believe in highly improbable findings. This new lecture course familiarizes students with different approaches to understanding politics, society, and social science in relation to everyday questions, intriguing puzzles, and improbable findings about human behavior. It focuses on contemporary American politics and society, and draws mainly on literatures featuring work by leading U.S. social scientists. In addition, the course explores the conceptual boundaries between the political, social, and economic domains in which people interact with one another; the differences among and between different much-acclaimed models for understanding human behavior; and the philosophical underpinnings and moral implications associated with schools of thought about how best to describe, analyze, and evaluate what people do--and why they do it!

204. Political Participation. (A) Gillion.

The course offers a broad understanding of the political tactics citizens implement to voice their policy preferences to government. This course introduces students to the mode, scope, and theoretical perspectives of political engagement. Analyzing political behavior that ranges from voting behavior to political protest, the course will address a variety of questions: Who engages in politics and why? What are the individual factors that hinder or facilitate engagement in the political arena? How have citizens political actions changed over time? While the course will mainly focus on the United States setting, it does offer a comparative perspective by considering politicaengagement in non-democratic regimes.

This class provides an introduction to contemporary African politics. The core questions that motivate the course are (i) to what extent are political outcomes in contemporary Africa a consequence of its history, culture and geography? (ii.) Why are state structures and institutions weaker in Africa than elsewhere? (iii.) What accounts for Africa's relatively slow economic growth? (iv.) Why have some African countries been plagued by high levels of political violence while others have not? (v.) What explains the behavior of key African actors: parties or politicians?

L/R 211. (JWST211) Politics in the Contemporary Middle East. (C) Vitalis or Lustick.

This course is an introduction to the most prominent historical, cultural, institutional, and ideological features of Middle Eastern politics. Typical of the questions we shall address are why processes of modernization and economic change have not produced liberal democracies, why Islamic movements have gained enormous strength in some countries and not others, why conflicts in the region--between Israel and the Arabs, Iran and Iraq, or inside of Lebanon--have been so bitter and protracted; why the era of military coups was brought to an end but transitions to democracy have been difficult to achieve; why Arab unity has been so elusive and yet so insistent a theme; and why oil wealth in the Gulf, in the Arabian Peninsula, and in North Africa, has not produced industrialized or self-sustaining economic growth.

This course examines the politics and policies of contemporary Japan, applying a range of theoretical perspectives to analyze both recent history and current events. We will survey the core political institutions of the postwar era, examine patterns of political interaction, and investigate current debates over policy. The 1990s have been marked by political change at many different levels in Japan and the course will investigate the significance of these changes, as well as enduring continuities. Recent changes have included the introduction of a new electoral system, shift from one party rule to coalition government rule, breaking the bureaucracy, a financial crisis and prolonged economic stagnation. In the latter part of the course, we will focus in particular on the puzzle of how Japan's political economic structures and policies could have proven so successful for so long and yet so disastrous of late. Throughout the course, students will be encouraged to think about Japanese politics in a comparative context and to consider the functioning of the Japanese political system in the context of more theoretical debates in political science.

L/R 213. (LALS213) Latin American Politics. (C) Falleti.

This course examines the dynamics of political and economic change in twentieth century Latin America, with the goal of achieving an understanding of contemporary politics in the region. We will analyze topics such as the incorporation of the region to the international economy and the consolidation of oligarchic states (1880s to 1930s), corporatism, populism, and elitist pacts (1930s and 1940s), social revolution, democratic breakdown, and military rule (1960s and 1970s), transitions to democracy and human rights advocacy (1980s), makret-oriented reforms (1990s), and the turn to the left of current governments (2000s). The course will draw primarily from the experiences of
This course examines the interplay between politics and economics in East Asia. A major course objective is to reconcile the region's past success with the difficulties experienced in many of these countries more recently. Another primary objective is to consider in what ways and to what degree the growth experiences of the high-performing economies in East Asia shed light on the prospects for long-term success of reforms currently underway in China and Vietnam. The first half of the course begins by exploring the causes and consequences of the rise of industrial Asia. The second half of the course examines the challenges to sustained growth faced by many countries in this region in recent years. The course concludes by examining the challenges faced by China and Vietnam today in their attempt to embrace more market-oriented economic systems.

L/R 215. The European Union. (M) O'Leary.
This lecture course, after introductory sessions which outline the EU's core institutions, is built on an exposition of the works of major thinkers who have reflected on the European Union's origins, outcomes and significance. It critically reviews their arguments, especially their relevance to major recent crises, notably: the failure of the European Constitution, the current crisis of credibility facing the Euro. Whether the European Union is a confederation, a federation, an empire, or a novel political formation shall be examined. Whether its recent major widening signals an end to its institutional deepening will be discussed. Whether the Union has "a democratic deficit" is examined, as is the claim that in external relations it represents a novel form of soft power.

216. Government and Politics of East Asia. (C) Staff.
The course will examine the relationship between culture, state, and economy of Japan, North Korea, and South Korea. It will also analyze the nature and workings of political institutions (including political parties and bureaucracy).

L/R 217. (PSCI517, RUSS217) Russian Politics. (B) Sil.
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implications of economic reform, and prospects for Russia's future in the Putin and post-Putin era.

L/R 218. Politics of Post War Western Europe. (M) Lynch.
This course examines political institutions, processes and events in postwar Western Europe. The focus will be a comparative analysis of such topics as political parties and systems, electoral behavior, as well as social and economic policy. We will also examine the way in which domestic processes and policies interact with membership in the European Union.

L/R 219. Contemporary Chinese Politics. (C) Goldstein.
This lecture course introduces students to the politics of the Peoples Republic of China. Complementing offerings in other departments, this course emphasizes events in the period since the Chinese Communist Party established its regime in 1949. In addition to surveying the political history of contemporary China, we will assess the meaning of these events by drawing upon theories about the nature and significance of ideology and organization in communist regimes, factionalism and its relationship to policy formulation and implementation, and general issues of political and economic development. Although the principal focus is on the domestic politics of the PRC, the course includes several lectures examining Chinas international relations.

220. (SAST223) Comparative South Asian Politics. (M) Frankel.
The comparative study of South Asian politics begins with many antecedent questions. What are the reasons why a strong national political identity in the Indian subcontinent was no consolidated and territorial boundaries defined until the advent of the British Raj? Alternatively, given major regional diversities, why did the subcontinent not become differentiated into a large number of national states on the model of Europe? To what extent was the movement toward a unified territorial state weakened by colonial policies that recast social groups in terms of new pan-Indian categories based on caste and religious identities? What factors led to the partition of the subcontinent at the time of independence on the basis of religion, and what consequences did partition have for the strategies adopted by each state to develop an overarching national identity and universal principles of legitimate state power? Although the greater part of the course will address these questions by analyzing the social and political dynamics of democracy in India, they are equally relevant for understanding the difficulties encountered by Pakistan in defining a core identity and a stable form of government.

SM 221. Comparative Health Politics. (M) Lynch.
This course examines the relationship between politics and the health of populations in the worlds rich democracies, including the United States. The key questions the course addresses are how and why countries differ in their health care policies, public health policies, and policies that affect the social determinants of health. There are no prerequisites, but prior coursework in comparative politics at the 100 or 200 level will be helpful.

SM 223. (GSWS225) ISSUES COMP POL/GENDER. (M)
Struggles over gender roles and rights have been prominent in the Middle East and North Africa since the 19th century and continue to mark contemporary political and social discourses. Since the colonial period, gender categories and sexualities have been critiqued and negotiated on behalf of empire, the nation, modernity, personal freedom; today debates and struggles over global rights, Islamic law, and modernity continue to mark politics. Despite the particularity of ideas and events in the region, a comparative framework helps to overcome exoticization of the region and develop a more acute understanding. The topics of the course include engagement with the discourse of the Exotic Other, the effects of modernity, the role of nationalism and the state, state-society negotiation, Islamic formulations, and continuously, the question: where does...
change come from? Issues of the veil and islamic dress the expansion of anti-gay laws, the disciplining of bodies in state and social settings - these issues of gender and sexuality extend the realm of the political into intimate spaces. Assignments include a midterm and a short paper that develops research and analytical skills. The course is 200 level. While background in the study of the Middle East or gender is not necessary, an introductory political science or social science course is required.

The course surveys some of the principal themes in the political economies of lower income countries. The questions we shall seek to address cover a broad terrain. Who are the key actors? What are their beliefs, interests and motivations? What are their constraints? How are these being affected by closer economic linkages between national economies? While there is no single integrative framework or paradigm into which these themes neatly fit, a common thread is the changing dynamics and interplay between the local, the national, and the global. A familiarity with basic economic concepts will be helpful, but is not necessary.

226. ETHNIC CONFLICT.

This is an advanced course on the main issues of contemporary Chinese politics, economy and social change. There is a strong focus on the reform period (post 1978). We will spend considerable time and energy on understanding the major themes and challenges of China's reforms, including the political system, the legal system, the inequality, foreign direct investment, village elections, lawmaking, environmental degradation, social opposition, corruption, and religion. We also investigate the many political and social consequences of reform and changing landscape of Chinese politics. A prior course on Chinese politics (for example, PSCI219) is a prerequisite of the course, or permission from the instructor is needed.

232. (COMM226) Introduction to Political Communications. (M) Jamieson.
This course is an introduction to the field of political communication, conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates' and office-holders' uses of news. The focus of this course is on the interplay in the U.S. between television and politics. The course includes a history of televised campaign practices from the 1952 presidential contest onward.

233. Introduction to African American Politics. (M) Reed.
This course is an historical survey of the main bases and substances of politics among black Americans and the relation of black politics to the American political order. Its two main objectives are: 1) to provide a general sense of pertinent historical issues and relations as a way of helping to make sense of the present and 2) to develop criteria for evaluating political scientists' and others' claims regarding the status and characteristics of black American political activity.

This course provides a comparison of policymaking in the United States. Throughout the course, we explore how interests compete within institutions to turn ideas into public policies. We explore a variety of different questions, including how many influences there are in the political process, what role interest groups play, and why policy is so difficult to change.

This course surveys the institutional development of the American presidency from the Constitutional convention through the current administration. It examines the politics of presidential leadership, and how the executive branch functions. An underlying theme of the course is the tensions between the presidency, leadership, and democracy.

L/R 238. Congress. (C) Lapinski.
This course is designed to introduce students to the study of Congress and of legislative behavior generally. The course will examine legislative procedures, congressional institutions (committees, subcommittees, leadership structure), campaigns and elections, legislative behavior (voting, constituency service, policy leadership), and the policymaking environment (interest groups, executive branch, media). Particular emphasis will be placed on consideration of whether and how electoral concerns affect legislative behavior and the structure of congressional institutions. In addition, the course will consider congressional behavior within the broader context of representation. There are no prerequisites for this class, but students are expected to have at least a rudimentary understanding of American politics and government.

242. Business Govt & Pub Pol. (M)

L/R 244. Elections & Engagement.

L/R 251. (JWST248) ARAB ISRAELI RELATIONS. (C) Lustick.
In this course the Arab-Israeli dispute from 1948 to the present will serve as a vehicle for understanding how domestic and global political processes interact to shape, contain, or aggravate Middle Eastern wars between states and non-state actors. Particular stress will be placed on understanding how wars affect international politics in states and political organizations and how ideological and structural features of states and organizations find expression in wars and complicate or enable the search for peace. In addition, the key features of the conflict will be interpreted as both a clash between the political interests of national and/or religious groups and as a reflection of global political power struggles. Attention will be given toward the end of the course to alternative ideas about possible resolution of the conflict as well as to the increasingly prominent argument that, in this case, there is no solution.

L/R 252. War, Strategy and Politics. (C) Horowitz.
This class examines the strategy and politics of warfare, focusing on the way actors plan military campaigns and the factors that are likely to lead to victory and defeat. The course readings center in particular on the factors driving changes in warfare and civil-military relations. The course will cover a wide range of topics from theories of war-fighting to historical military campaigns to insurgency warfare, terrorism, and the future of war.

L/R 253. (JWST253, PSCI553) International Politics of the Middle East. (B) Lustick.
This course will focus primarily on epiphanies of external intervention by Great Powers in the politics of Middle Eastern states. We shall begin by examining the emergence of the Middle Eastern state system after the disappearance of the Ottoman Empire in the early part of the 20th century. This discussion will provide opportunities to develop key concepts in the study of international politics and will serve as
crucial historical background. We shall then turn our attention to the primary concern of the course - a systematic consideration of the motives, operational results, and long-term implications of a number of important examples of intervention by Great Powers in the Middle East. Among the episodes to be considered will be British policies toward the end of World War I, in Palestine in the 1930s, and, along with the French, in Suez in 1956. Soviet intervention in the first Arab-Israeli war, in 1948, will be analyzed along with Soviet policies toward Egypt in the early 1970s. American intervention in Iran in 1953 and in the Gulf War in 1991 will also be examined.

This course explores the political economy of European integration. It is organized in three parts: First, we analyze the political and economic forces that have driven the process of European integration since World War II. We review the milestones of European integration in historical perspective and discuss different theoretical perspectives explaining the path and outcome of European integration. Second, the course takes an in-depth look at the institutions and decision-making processes of the European Union (EU). It analyzes the structure and operation of the Council of Ministers, the European Commission, the European Parliament, and the European Court of Justice, and explores how these institutions interact to shape EU policy. Third, we examine EU policymaking in key policy areas, including regulatory policies, distributive politics, economic and monetary affairs, and external relations.

The existence and endurance of war provides one of the most important puzzles of politics: why is it that people keep making use of such a destructive and painful way of resolving their disputes? This course addresses this question and the related question of what factors contribute to peace, focusing on both academic and popular explanations for conflict, including among others anarchy, over-optimism, shifting power, diversionary war, the malevolent influence of war profiteers, and a variety of explanations grounded in culture, religion and other ideational variables. In this discussion, we will focus on both interstate and civil wars, and on both the onset and the eventual termination of war. At various points in the course we will discuss a wide range of historical and contemporary cases, including the World Wars, Vietnam, the Gulf War, the Iraq War, the various Arab-Israeli wars, the India-Pakistan rivalry, and a number of recent civil conflicts such as the wars in Yugoslavia, Congo, and Sudan. The course concludes with a discussion of strategies for managing ongoing conflicts and for securing peace in post war settings.

256. (PSCI458, SAST284) International Relations of States and Asia. (C) Frankel.
This course is one of the first arising out of scholarship on cold war international history. It draws on declassified government documents and other archival records to provide a window into the world-view of decision-makers who need to make national security policy based on incomplete information about ambiguous threats. The materials reveal a great deal about the importance of divergent historical perspectives and strategic cultures in the foreign policy-making process. The main focus of the course is on the intersection of the cold war and the rise of Asian nationalism. At the core of the analysis is the clash between America's global strategy of military containment against the Soviet Union and the assertion of Indian, and Chinese nationalism, concerned with preventing the United States from succeeding to Great Britain's imperial rule. The course examines new patterns of power after the Cold War, especially the emergence of two major powers in Asia - China and India - and the issues raised by the U.S. unilateralist use of military power to preserve its predominant position.

257. (SAST256) International Relations of South Asia. (C) Frankel.
One of the great accidents of history is the Partition of the subcontinent into the two states of India and Pakistan, and the onset of the cold war as a global struggle between the United States and the Soviet Union. Indo-Pakistani wars over Kashmir, the dismantling of Pakistan by India and the creation of Bangladesh, Pakistan's support for Al Qaeda and other terrorist groups, and the acquisition by both countries of nuclear arsenals has marked the region as potentially the most dangerous area in the world. This course analyzes the changing security environment from 1947 until the present including the involvement of the United States, Soviet Union/Russia and China, and assesses the prospects for averting chaos in greater South Asia.

L/R 258. (PSCI558) Human Rights. (C) Doherty-Sil.
What exactly should be considered a fundamental "human right"? What is the basis for something is a fundamental human right? This course will examine not only broad conceptual debates, but will also focus on specific issue areas (e.g., civil rights, economic rights, women's rights), as well as the question of how new rights norms emerge in international relations.

SM 259. Chinese Foreign Policy. (M) Goldstein. Prerequisite(s): MUST HAVE TAKEN PSCI 219 OR EQUIVALENT.

267. (EUEUR152, RUSS213) INT'L AFF:RUSSIA&EASTEUR.

This course explores the creation and transformations of the American constitutional system's structures and goals from the nation's founding through the period of Progressive reforms, the rise of the Jim Crow system, and the Spanish American War. Issues include the division of powers between state and national governments, and the branches of the federal government; economic powers of private actors and government regulators; the authority of governments to enforce or transform racial and gender hierarchies; and the extent of religious and expressive freedoms and rights of persons accused of crimes. We will pay special attention to the changing role of the Supreme Court and its decisions in interpreting and shaping American constitutionalism, and we will also read legislative and executive constitutional arguments, party platforms, and other influential statements of American constitutional thought.

This course examines American constitutional development from the eve of WWI through the second Obama administration. Topics include the growth of the New Deal and a Great Society regulatory and redistributive state, struggles for equal rights for racial and ethnic minorities, women and GLBT Americans, contests over freedoms of religion and expression, criminal justice issues, the Reagan Revolution and the revival of federalism and property rights, and issues of national security powers after September 11, 2001. Lectures are on videos and class time is devoted to in-depth discussions.

This seminar offers an introduction to Muslim political thought. Chronologically the course ranges from the medieval period...
to the present. Particular attention will be given in the later part of the course to the renaissance of Muslim political thought in recent years and to the development of political Islam, including the work of such thinkers as Said Qutb and Hasan Turabi. We will also study the roots of this renaissance in classical philosophy of the medieval period (Al Farabi, Al Ghazali, Ibn Khaldun, Ibn Tufayl) and the liberal age.

This course is designed to provide an overview of the variety of ideas, approaches, and subfields within feminist political thought. Readings and divided into three sections: contemporary theorizing about the meaning of "feminism"; women in the history of Western political thought; and feminist theoretical approaches to practical political problems and issues, such as abortion and sexual assault.

Professionals - in business, medicine, law, and politics - face myriad ethical dilemmas in their daily work life that challenge, and sometimes conflict with, the moral commitments that guide their everyday life. This course systematically examines the ethical dimensions of these four professional roles, asking questions such as: Are there limits to what we should sell? How far should competitors go to "win"? Who should get ventilators in a flu pandemic? Is it morally permissible for physicians to assist in suicide? Should lawyers represent terrorists or child killers? How far does attorney-client privilege go? Is it morally justifiable to torture enemy combatants? Should politicians lie?

SM 298. Selected Topics in Political Science. (C) Staff.

Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Leadership & Democracy; Conservative Regimes.

SM 312. (AFST312) Democracy in Africa. (M) Staff.

In this course, we will examine the impact of historical context, leadership, constitutionalism, political parties, civil society, economic reform, regime legitimacy, and the international community of the democratic transition process in sub-Saharan Africa. Specific country case studies will be examined both comparatively and regionally, given the increasingly interdependent nature of political and economic transition on the continent. The goal of the seminar is to provide students with the tools necessary to understand the democratic transition process in Africa in a way that is also relevant to other regions in the world.

What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for public office and will discuss the various influences on getting elected, including: Campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania.

SM 327. (PSCI527) MODERN INDIA.

This seminar is taught in Washington D.C. for students enrolled in the Washington Semester Program. It includes an orientation to observation and research in the Washington Community and a major independent research project on the politics of governance.

SM 331. (LALS331) Latino Politics.

Survey research is a small but rich academic field and discipline, drawing on theory and practice from many diverse fields including political science and communication. This course canvases the science and practice of survey methods, sampling theory, instrument development and operationalization, and the analysis and reporting of survey data. Major areas of focus include measurement and research on survey polling, new frontiers in data collection, overall development of data management and introductory statistics.

SM 335. (HSOC335) Healthy Schools. (M) Summers.

This Fox Leadership and academically based community service seminar will use course readings and students' own observations and interviews in their service learning projects in West Philadelphia schools to analyze the causes and impact of school health and educational inequalities and efforts to address them. Course readings will include works by Jonathan Kozol, studies of health inequalities and their causes, and studies of No Child Left Behind, the CDC's School Health Index, recess, school meal, and nutrition education programs. Course speakers will help us examine the history, theories, politics and leadership behind different strategies for addressing school-based inequalities and their outcomes. Service options will focus especially on the West Philadelphia Recess Initiative. Other service options will include work with Community School Student Partnerships and the Urban Nutrition Initiative.

SM 337. PRES.PRIMARIES&ELECTIONS.

SM 338. Statistical Methods PSCI. (M) Meredith.

The goal of this class is to expose students to the process by which quantitative political science research is conducted. The class will take us down three separate, but related tracks. Track one will teach some basic tools necessary to conduct quantitative political science research. Topics covered will include descriptive statistics, sampling, probability and statistical theory, and regression analysis. However, conducting empirical research requires that we actually be able to apply these tools. Thus, track two will teach how to implement some of these basic tools using the computer program Stata. However, if we want to implement these tools, we also need to be able to develop hypotheses that we want to test. Thus, track three will teach some basics in research design. Topics will include independent and dependent variables, generating testable hypotheses, and issues in causality. Students are expected to have...
What are some effective ways to reduce RCTs to inform core policy debates (e.g. demonstrating how schools have used behavioral concepts from both Practical Guide. In addition, we will read Glennester and Takavarasha's research in developing countries. In part, we will be bolts of running field experiments / RCTs devoted to understanding the "nuts and bolts" of experimental design and political outcomes, in the context of international development.

SM 374. (COMM374) COMMUNICATION & CONGRESS. (M) Felzenberg.

SM 397. Topics in International Politics. (C) Staff.
Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Sustainable Environmental Policy & Global Politics; Shakespeare and Political Theory.

SM 404. (COMM404) Media and Politics. (C)

SM 410. (COMM403) Compar Pol Communication. (B) Staff.

SM 413. (GAFL530) Evidence Based Policies of Economic and Political Development. (C) Grossman.
This class provides a "hands-on" introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development.

This course has three parts: the first is devoted to understanding the "nuts and bolts" of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha's Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or--for those interested--in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.

SM 415. (COMM433) COMM & DEMOCRATIZATION. (C)

SM 418. (PPE 476) Evolution, Politics and Computer Simulation. (C) Lustick.
In this course we shall explore how recent developments in evolutionary theory relate to larger questions raised by students of complexity and complex adaptive systems. We shall study how they together provide a basis for important critiques of standard approaches in political science and enable fascinating and powerful understandings of politics and political phenomena -- including national identity and identity change, state formation, revolution, globalization, and leadership. An important vehicle for the application of these insights for understanding politics is computer simulations featuring agent-based modeling. Students will use "PS-I" an agent based computer simulation platform, to develop their own models, conduct experiments, test hypotheses, or produce existence proofs in relation to popular theoretical positions in contemporary political science. No knowledge of computer programming is required.

SM 419. (LALS419) Democ & Decentralization. (M)
Are decentralization reforms fostering local community participation and improving the quality of democracy in Latin America? Are they, indeed, posing a threat to democracy and development? In the last thirty years, Latin American countries have undergone major reforms that devolved fiscal resources, administrative responsibilities, and political authority from the central government to the states and municipalities. These decentralization reforms have radically altered the political landscape in Latin America, even in those countries that have since then tried to centralize power, such as Venezuela. What were the main causes of the decentralization movement? Who were the main national and international actors who pushed forward these reforms? Have the main political, fiscal, and policy consequences of decentralization been?

These are some of the questions this course will focus on. The experiences of decentralization in Argentina, Brazil, Colombia, Bolivia, Venezuela, and Mexico will be studied. Although prior knowledge of Latin American politics is not required, additional readings will be assigned to the students who have not taken at least one introductory course in Latin American politics, history or cultures.

SM 431. Leadership & Democracy.

SM 433. (AFRC433) SOCIAL MOVEMENTS. (M)

This seminar is designed to serve as a "capstone" experience for advanced undergraduates interested in American politics. It exposes students to some of the issues currently being studied and debated by the leading scholars in the field. For each topic we will read works that take competing or opposing positions on an issue; for example we will examine the current controversy over the causes and and consequences of divided government. Students will write a research paper analyzing one of the debates.

SM 436. Political Psychology. (M) Margolis.
How do campaign advertisements influence voters' perceptions and behavior? What roles do emotions play in politics? Do we all harbor some measure of racism, sexism, or homophobia, and what role do these stereotypes play in political behavior? How and why do ideologies form, and how does partisanship influence the way that voters understand the political world? How do people perceive threat, and what are the psychological consequences of terrorism? These questions, and many others, are the province of political psychology, an interdisciplinary field that uses experimental methods and theoretical ideas from psychology as tools to examine the world of politics. In this course, we will explore the role of human thought, emotion, and behavior in politics and examine the psychological origins of citizens' political beliefs and actions from a variety of perspectives. Most of the readings emphasize politics in the United States, though the field itself speaks to every aspect of political science.

Why are African Americans and some other minority groups disproportionately...
incarcerated and subjected to penal sanctions? What are the political, social and economic consequences for individuals, communities, and the wider society of mass incarceration in the United States? What types of reforms of the criminal justice system are desirable and possible? This advanced seminar analyzes the connection between race, crime, punishment, and politics in the United States. The primary focus is on the role of race in explaining why the country's prison population increased six-fold since the early 1970s and why the United States today has the highest incarceration rate in the world. The class will likely take field trips to a maximum-security jail in Philadelphia and to a state prison in the Philadelphia suburbs.

SM 439. (COMM498, PSCI635) EXPER METHODS OF INQUIRY. (M)

SM 441. THEORY PRACTICE&PURPOSE.

SM 470. (URBS470) Executive Power in Metropolitan American Politics. (M) Rendell;Siskind.

Focusing on presidents, governors, and big-city mayors, this course will explore a wide range of historical and recent examples of executive leadership and decision-making. How do their actions in office shape and get shaped by long-term historical and political forces? How and why do executive office holders use (and occasionally abuse) their power? What opportunities exist to transform both policy and public opinion? What kinds of constraints circumscribe the options available and limit the impact of executive choices? Exploring presidents such as Franklin Roosevelt, Lyndon Johnson and Barack Obama, governors including Ronald Reagan, Nelson Rockefeller and Bill Clinton and mayors like Richard Daley, Sr. and Jr., Ed Koch, and Ed Rendell, this course at once examines the personalities and predicaments of individuals as well as the political ideas and institutions that shape their time in office.

Registration in this course is by permission of the instructors only. To seek a permit for the course please provide a short personal statement of not more than one page with the following information: your name and contact information; your year; your major; other courses you have taken on related subjects; how this course would fit into your larger academic and intellectual development; any other personal or extenuating circumstances you think it would be useful for us to know about you. Email personal statements to Peter Siskind (siskind@sas.upenn.edu) no later than April 3 and enrollment decisions will be made by April 18.

SM 481. Political Theory & Public Policy. (M) Hirschmann.

This course will explore the relevance of canonical work in modern political theory - Locke, Kant, Mill, and Marx - to various public policy and practical political issues. We will consider what political philosophy has to contribute to practical issues: not only what philosophy can tell us about the ethics of practical issues, but also how public policy makers might utilize political philosophy to create better policy. We will also explore whether and how reading political philosophy in light of specific concrete issues encourages us to look at both the theories and the policies differently than if each were considered on their own.

SM 496. DCC RESEARCH SEMINAR. (M)

SM 497. Political Science Honors. (C) Doherty-Sil.

This is a mandatory seminar for all students planning to submit an honors thesis for the purpose of possibly earning distinction in Political Science upon graduation. The course is aimed at helping students identify a useful and feasible research question, become familiar with the relevant literatures and debates pertaining to that question, develop a basic understanding of what might constitute "good" and "original" research in different subfields, and set up a plan for conducting and presenting the research. The course is also aimed at building a community of like-minded student researchers, which can complement and enrich the honor student's individual experience of working one-on-one with a dedicated faculty thesis advisor. Students apply in the spring of their junior year for admissions to the honors program and enrollment in PSCI497.

SM 498. Selected Topics in Political Science. (C) Staff.

Consult department for detailed descriptions. Recent topics include: Globalization; Race & Criminal Justice; Democracy & Markets in Postcommunist Europe.

SM 504. Urban Politics. (M) Staff.

The intention of this course is to prepare students for urban research in any setting. It is a graduate level course, which reviews the intellectual traditions of the field and endeavors to establish the present state of research. It is oriented to theory rather than case studies. It is comparative and international in perspective though many of the sources are American. The latter reflect the intellectual milieu of political science in the country where this University is located.

SM 505. The American Legislative Process. (M) Staff.

The theory of legislative process with a focus on the American Congress and its antecedents. The evolution of legislative rules will be stressed. The evolution will be used to analyze Congressional "reform." The course format is a combination of lectures, discussions, and guest speakers.

This course examines alternative arrangements by which democracies choose leaders, representatives, and governments through competitive elections. Some of the material is also relevant to voting on policies in legislatures, committees, and referendums. The treatment is comparative and theoretical, but students may focus on particular systems through reports and papers.

SM 511. (SAST528) Society and Politics in India. (M) Kapur, Frankel.

This course examines the experience of representative democracy in India and the country's development record in a historical framework. It will ask questions such as: How did representative democracy emerge in India, and what explains its persistence? What are the sources of its vulnerability? What kind of a sense of nationhood does this democratic experience rest upon? What are the exclusions built into this conception of nationhood? What is the relationship between India's development experience and its democratic experiment? How have India's "traditional" institutions adapted or failed to adapt to modern circumstances? Why has India performed well in certain economic sectors even while its record in providing basic social services has been dismal? How have the Indian State and its public institutions managed and coped with these changes? And how has India's self-perception about its place in the world changed in recent years, and what are its implications?

This course begins by exploring the causes and consequences of the rise of industrial Asia, paying particular attention to the role played by political institutions. It then examines the political economic challenges faced in recency by many countries in this region. What explanations may be
given for the rapid growth experienced in the region? And, how can we reconcile the success of the past with the difficulties experienced in more recent years? The role of national financial systems in supporting or undermining growth and the politics of financial crisis management and financial system reform will be explored in depth.

SM 515. (PSCI215) Political Institutions and Economic Performances. (C) Staff. Fulfills Quantitative Data Analysis requirement. Comparative study of whether and how political institutions (political regimes, constitutional rules, party and electoral systems) affect economic performance (economic growth, investment, income distribution). This course fulfills the University's quantitative skills requirement.

SM 516. (AFST515) African Political Econ. (M)

L/R 517. (PSCI217) Russian Politics. (B) Sil.
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implications of economic reform, and prospects for Russia's future in the post-Yeltsin era.

This course may also be taken as a graduate seminar (PSCI 517) with the permission of the instructor and the completion of additional requirements.

SM 519. (URBS519) Cities in the Global Econ.

SM 521. Comparative Business-State Relations. (M) Staff.
History and theory of the state's role in formation of modern industrial capitalism. Comparative industrial policies, comparative industrial structure, business-state and state-labor relations, and foreign economic relations. Emphasis on Western Europe but includes the United States and East Asia.

This course focuses on three principal functions of leaders in public organizations: establishing and instilling purpose, motivating cooperative effort, and making decisions based on undistorted communication.

SM 525. (COMM525) Intro to Pol Comma.

SM 527. (PSCI327) MODERN INDIA.

SM 532. The Political Economy of North-South Relations. (M) Staff.
This course concerns the political economy of "North-South" relations. The seminar will investigate key concepts and perspectives about the political economy of North-South relations by examining a variety of attempts at economic transformation in Asia, Latin America, Africa, and Eastern Europe.

SM 533. Comparative Political and Economic Change. (M) Staff.
A comparative exploration of the politics and economics of the formation of states and the development of capitalism, both historical and contemporary, and an examination of contending theoretical perspectives about them. Examples will be taken from Europe since the sixteenth century, nineteenth and twentieth-century Latin America and Asia, and contemporary Africa.

SM 534. (AFRC533) Political Culture and American Cities. (M)

SM 535. (AFRC524) INEQUALITY & RACE POLICY. (M)

SM 545. (EDUC595) POLITICS & EDUCATION.

SM 552. Game Theory. (M) Weisger.
This course provides an introduction to non-cooperative game theory and its applications to political science. The goal of the course is to provide students with the background and understanding necessary to read published game-theoretic work in political science journals. To that end, the course covers the basic concepts of game theory, including Nash equilibrium and its main refinements, simultaneous and sequential games, repeated games, evolutionary game theory, and games of incomplete and private information. In addition, we will cover some of the central models used in political science, notably models of public choice (such as the median voter theorem) and models of bargaining.

SM 554. (LALS554) Politics of Global Environment. (M) Staff. Prerequisite(s): Open to undergraduates with permission of the instructor.
Research seminar on public security via the constraint of power (violence, states, arms) in domestic and international politics. Examines devices (virtue, balance, separation, mixture and Constitutions); applications in city-states (Greece & Rome), naval mercantile politics (Venice & Britain), the "Republic of Europe," the USA (1787-1861), and nuclear arms control; and theorists (Polybius, Michiavelli, Publius, Calhoun et al).

556. (PSCI152) American Foreign Policy. (M) Staff.
A detailed study of our foreign policy issues with special emphasis on (1) the international realities of the 21st Century (2) the strategic challenges to our national security (3) the diplomatic options available for regional conflict and (4) the moral imperatives of our global leadership.

SM 557. Politics of the Soviet Successor States and Eastern Europe. (M) Staff.
This course is an advanced research seminar on Soviet and post-Soviet politics. Students will be expected to develop and complete a substantial research paper. Class sessions will center on recent developments in the study of the politics of Russia and other Soviet successor states and on student presentations of research in progress.

SM 560. The Organization of World Politics. (M) Staff.
This course examines the organizational features of international life. Instead of focusing on one or several international organizations by means of an institutional analysis the scope of this course is more analytical; it explores the role of norms in structuring interactions (informal organizations) as well as the organizational designs of formal international organizations.
SM 566. Government and Politics of East Asia. (C) Staff.
This course will explore the changing character of the state in Japan and Korea (North and South), and its relationship with the society and economy. The nature of politics in these countries will be studied through political parties, pressure groups, and elections? Questions explored will include the following: "Who governs?" How does the state in Japan and Korea differ from those in Western nations? How did the state in these countries evolve and how did its relationship with the society evolve? What role did the state play in developing respective economies?

SM 567. East Asian International Relations. (C) Staff.
This course will begin with an examination of the changing context of East Asian International Relations & will survey the foreign policy strategies employed by the United States, the Soviet Union, China, Japan and Korea since the turn of the century. This will be followed by analyses of interaction among these countries. What were the forces, assumptions and motives behind each strategy? Who chose the policy and why? How effective were various strategies? What are the problems underlying various sets of relationships now? Who makes the decisions, and under what domestic and foreign environment? What are the future prospects?

SM 568. Politics and Society in Modern India. (M) Frankel.

SM 580. Contemporary Political Philosophy. (M) Staff.
Significant contributions to political philosophy in the twentieth century. This course will alternate with PSCI 581.

SM 582. (GSWS582) Gender Power and Feminist Theory. (M) Hirschmann.
This seminar will take up some of the "foundational" texts in contemporary feminist theory as well as some of the newest work, to explore the ways in which power operates through gender and sex. Subsidiary themes that will be developed include: the still relevant modernism/postmodernism debate as it relates to feminism; the intersectionality of race, gender, sexuality and class and how feminists can and do talk about "women"; the role of "the body" in relation to social constructivism; the relevance of feminist theory to policy issues, and which theoretical approaches are the most appropriate or have the most powerful potential. Room will be left on the syllabus for student input into the readings. This course is open to undergraduates who have had some prior course work in GSWS and/or political theory; undergraduates are advised to contact the professor to discuss their preparation before enrolling.

SM 583. American Political Thought. (M) Staff.
A consideration of one or a few topics, individuals, or eras in American political thought.

SM 584. (GSWS584) Political Philosophy. (M) Staff.
An examination of basic theoretical problems of political science divided into three parts. First, specific features of social sciences will be examined and three most important general orientations of social sciences (analytical, interpretative and critical) will be compared and analyzed. Second, basic concepts of social and political sciences will be studied: social determination, rationality, social change, politics, power, state, democracy. Third, the problem of value judgments will be considered: Is there a rational, objective method for the resolution of conflicts in value judgments? Is morality compatible with politics?

A consideration of a fundamental political concept, justice, in the works of selected political philosophers.

SM 590. The Nature of Political Science. (M)
The origins, development, and current status of the discipline and profession of political science.

SM 596. Hegel and Marx. (M) Kennedy.

SM 598. (PPE 475) Selected Topics. (C) Staff.
Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Race Development and American International Relations, Hegel and Marx, and Logic of the West.

SM 600. International Relations Theory. (M) Staff.
This purpose of this course is two-fold. First, the survey course is designed to introduce students to a wide range of theories of international politics. During the course of the semester we will examine neo-realism, power transition theory, hegemonic stability theory, the modern world system, international regimes and interdependence, the democratic peace, bureaucratic politics, organizational theory, constructivism, and decision making theory. Second, the course will sharpen students' research design skills. The written assignments require students to take the often abstract theories presented in the readings and develop practical research designs for testing hypotheses derived from the theories. The papers will not include data collection or the execution of actual tests. Rather, they will focus on the conceptual problems of designing tests which eliminate competing hypotheses, operationalizing variables, and identifying potential sources of data. Student's grades will be based on five short research designs and discussion leadership.

SM 609. (COMM609) Comparative Pol Comm. (M)

SM 610. Comparative Political Analysis. (M) Sil.
This seminar is aimed primarily at graduate students planning to take doctoral exams in comparative politics. It provides a critical survey of the field of comparative politics, tracing the intellectual history of the field, examining shifts in conceptual frameworks and research traditions, and comparing alternative methodological approaches. The first half of the course generally examines how processes of political, economic, and social change have been theorized in the social sciences from the mid-19th century to the present. In this process, particular attention is paid to the bifurcation between theories that emphasize the "universal" (e.g. the homogenizing effects of specific processes or variables) and the "particular" (e.g. the persistence of distinctive historical legacies and trajectories). Since this bifurcation is reinforced by distinct styles and methods of research, the seminar also probes the recent battles between rational-choice, cultural, and structuralist scholars, while considering the trade-offs between varieties of formal, quantitative, and qualitative methods. In the second half, the focus shifts to the range of substantive problems investigated by scholars in the field of comparative politics.
These topics cover the complex relations among nations, states and societies; the origins, consolidation, and patterns of democratic governance; political economy in relation to development processes and social policies; the intersection of international/global economy and domestic politics; the dynamics of revolutions and social movements; and alternative problematiques constructed from the point of view of real actors such as workers, women, and local communities. In all cases, As a whole, the course is designed to provide an introduction to important issues and
debates that comparativists have regularly engaged in; to help you understand the assumptions behind, and differences between, particular approaches, methods, and styles of research; to examine whether current debates are spurring new or better research in a given field in light of past approaches; and to gauge whether there has been progress, fragmentation, or stagnation in the field of comparative politics as a whole.

SM 614. Political Identity & Political Institution. (M) Staff.

SM 615. (COMM635) Political Economy of Development. (M) Staff.

This course examines the debate in development studies arising from recognition that economic models, theories, methods, and strategies abstracted from the specific experience of western societies and cultures do not have general applicability. A broader social science approach is adopted, one which emphasizes the need to understand the social structures and cultures of the developing countries, the capabilities of weak versus strong states, and the links with the international system that influence transformative processes to which industrializing economies are subjected. The readings offer an overview of the most influential theories of development and underdevelopment that structured debate from the 1960's through the 1990's, and focus on the elements of these approaches that advance understanding of development and stagnation in several key countries, including Brazil, Mexico, India and selected countries in East and Southeast Asia.

This graduate level seminar explores the evolving political dynamics of 'FINANCIAL STATECRAFT'. We will examine the relationship between financial flows and traditional foreign policy concerns, seeking to understand why and how governments have attempted to harness or constrain financial markets and institutions in the service of foreign policy goals. Specific topics include the introduction of capital flow guarantees or restrictions, imposition of financial sanctions on non-state actors, underwriting of foreign debt in currency crises, currency unions and other forms of currency cooperation, and foreign exchange reserve management.

Examination of the relationship between the international, political, and economic systems from a variety of theoretical perspectives that have emerged in the postwar period, including liberalism, transnationalism, statism, Marxism, and dependency.

SM 619. Strategic Studies Seminar. (M) Goldstein.

This seminar offers graduate students an introduction to the subfield of international relations labeled strategic studies (or security studies). In addition to exploring key theoretical issues, we consider their usefulness for understanding relevant events in international politics since World War II. Although the course emphasizes the distinctive features of great power strategy in the nuclear age, we also look at the continuing role of conventional forces, the strategic choices of lesser powers, and selected security problems in the post-Cold War world (e.g., proliferation, terrorism).

SM 621. Power and Resistance in the United States. (M) Staff.

This is a course on the categories and construction of gender, sex and sexuality. The literature is so vast, the debate so vigorous, and the changing shape of thought so rapid that the absurdity of the pretense to provide a "comprehensive" or a "definitive" account is more than usually evident. The course foregrounds works that put gender, sex and sexuality - and with them the subject - in question. One set of works is drawn from political and feminist theory and includes writings by Judith Butler, Lacques Lacan, Guy Hocquenham, Monique Wittig, and Nancy Fraser. Through the use of works from comparative politics and cultural studies, the interrogation of the sexual subject reveals itself as an interrogation of political economies and political institutions. This aspect of the course addresses the question of gender in relation to race, class, and diverse political situations, including those of colonialism and liberalism, welfare policy and immigration law.

SM 631. American Political Development. (C) Gottschalk.

Analyzes important patterns of continuity and change in American politics by examining the development of the American State from a comparative and historical perspective. Covers issues and debates central to not only the subfield of American politics, but also the discipline of political science more broadly. These include the role of the state, political culture, interests, ideas, and institutions in political development, and the role of history in political analysis. Open to advanced undergraduates with the permission of the instructor.

An important strain within contemporary political science has been the attempt to explain how power is exercised through the manipulation or exploitation of consciousness, habits, and cultural predispositions. One of the key concepts in the study of these issues is that of "hegemony" --the establishment of particular beliefs as commonsensical presumptions of political life. In this course that notion will be systematically explored. Of particular interest will be how authors who conduct hegemonic analysis cope with the problem of analyzing the effect of what the objects of their analysis, by definition, do not and, in some sense, cannot, think about. Illustrations of hegemonic phenomena and attempts to analyze them will be drawn from a variety of fields, such as political theory, historiography, comparative politics, American politics, rational choice theory, agent based modeling, and epistemology.

SM 635. (COMM615, PSCI439) Exp Design & Iss Causal. (M)

SM 637. Survey American Institut. (M)

SM 638. (PSCI437) Race & Criminal Justice. (M)

SM 649. Chinese Politics. (M) Goldstein.

This course is designed to provide a high-level introduction to the study of Chinese politics. After surveying China's political history, we turn to a closer examination of several key issues in the contemporary study of Chinese politics. The themes we cover include issues of political legitimacy, political participation, policy formulation and implementation, revolutionary and reformist strategies of political change, and the domestic and international influences on a regime's foreign policy.

A political and historical interpretation of current American political institutions and practice focused on the federal system, the
main national institutions, and various regime questions.

SM 652. American Politics. (M) Staff.
This seminar will survey the literature in a variety of subfields of American politics but will focus primarily on American political institutions. Emphasis will be on exposing graduate students in the seminar to the field of American politics, the methodologies employed in its study, the work of leading scholars, and the topics currently being debated by those scholars. The course is also designed to lay the groundwork to enable students to conduct original research. As such, the preparation of a research design proposal will be a key part of the seminar.

SM 655. (LALS655) Democracy in Comparative Perspective. (M) Staff.

This seminar explores a series of interrelated debates that have important implications for the design of democratic institutions, the expectations by which they are judged, and the spirit that animates actions within them. The course makes no attempt to survey a vast literature, but the principal readings have been selected because of their outstanding quality and influence.

SM 680. Constitutional Thought. (M) Staff.
A broadly theoretical approach to the constitutional dimension of the study of politics, with emphasis on the problems of constituting a political form, the nature and authority of a constitution, and systematic standards of interpretation, using the United States Constitution as an exemplar.

SM 681. (PSCI181) Modern Political Theory. (M)

SM 689. The Logic of Social Inquiry. (M)
An introduction to the nature and development of theoretical knowledge in the social sciences with emphasis on political science.

L/R 692. (GAFL611) Advanced Statistical Analysis. (M) Staff.

SM 693. Research Methods in Political Science. (M) Staff.
An introduction to the design and execution of research to generate information about the nature and behavior of political actors, organizations and systems. Techniques covered include unobtrusive measures, case studies, direct observation, experimentation, content analysis and survey research. Historical and interpretive approaches may also be covered.

SM 694. Advanced Research Method. (C) Staff.
The purpose of this class is three-fold. First, the course is designed to introduce students to a wide range of statistical models (e.g., event count models, limited dependent variables, and survival analysis) as well as problems associated with statistical research (e.g., heteroscedasticity, autocorrelation, and selection bias). Second, the course is designed to give students practical experience in data analysis. Students will complete a number of assignments using a wide variety of well known data sets (e.g., Polity III, World Value Systems, National Election Studies, Democratic and Local Governance, Correlates of War, Militarized Interstate Disputes, International Crisis Behavior, Penn World Tables, General Social Survey, United Nations Crime Survey). Third, the course will explore the relationship between qualitative and quantitative analysis. Requirements will include weekly assignments, discussion leadership, and a final paper. While PSCI692 is not a prerequisite for this course, some prior exposure to statistical analysis (including regression) is recommended.

SM 798. (COMM798) Selected Topics in Political Science. (C) Staff.
Consult department for detailed descriptions. More than one section may be given in a semester. Recent titles have included: Interpreting the Canon; State, Self, & Society; U.S. Policy in Europe; and Dissertation Writing.

SM 805. (COMM706, COMM805) ANALYSIS ELECTION DATA. (M)
VIPER
(AS) {VIPR}

SM 120. Vagelos Integrated Program in Energy Research (VIPER) Seminar, Part I. (B) John M. Vohs, Andrew M. Rappe and Kristen L. Hughes. Prerequisite(s): Admission to VIPER program.
This is the first part of the two-semester seminar designed to introduce students to the VIPER program and help them prepare for energy-related research. Research articles on various energy-related topics will be discussed, and students will be guided toward their research topic selection. Library research, presentation of data, basic research methods, research ethics, data analysis, advisor identification, and funding options will also be discussed. Sample energy topics discussed will include: Applications of nanostructured materials in solar cells; Solid oxide fuel cells; Global climate modeling: radiant heat transfer; Nanocrystal-based technologies for energy storage; Photo-bioreactor systems for mass production of microalgae; Advanced rare earths separations chemistry; Modeling of oxides for solar energy applications; and Electronic transport in carbon nanomaterials.

SM 121. Vagelos Integrated Program in Energy Research (VIPER) Seminar, Part II. (A) Andrew M. Rappe, John M. Vohs, and Kristen L. Hughes. Prerequisite(s): VIPR120.
This is the second part of the two-semester seminar designed to introduce students to the VIPER program and help them prepare for energy-related research. In this semester we will continue to discuss research articles on various energy-related topics, best practices for library research, presentation of data, basic research methods, research ethics, data analysis, and funding options. A large focus of the course will also be on presenting (in both written and oral form) the work from the students’ summer research internships.
127. (BIBB227) Physiology of Motivated Behaviors. (C) Grill. Prerequisite(s): PSYC 001.
This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbook as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for: obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.

L/R 149. (BIBB249) Cognitive Neuroscience. (C) Epstein. Prerequisite(s): PSYC 001 or COGS 001.
The study of the neural systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.

151. Language and Thought (formerly titled Cognitive Psychology). (C) Staff. Prerequisite(s): PSYC 001 or COGS 001.
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.

L/R 160. Personality and Individual Differences. (C) Staff. Prerequisite(s): PSYC 001.
This course provides an introduction to the psychology of personality and individual differences. Many psychology courses focus on the mind or brain; in contrast to those approaches of studying people in general, the focus in this course is on the question "How are people different from each other?" It will highlight research that take a multidimensional approach to individual differences and attempts to integrate across the biological, cognitive-

162. Abnormal Psychology. (C) Ruscio. Prerequisite(s): PSYC 001. The Psychology Department does NOT issue permits for College of Liberal and Professional Studies (LPS) courses. The concepts of normality, abnormality, and psychopathology; symptom syndromes; theory and research in psychopathology and psychotherapy.

170. Social Psychology. (C) Society Sector. All classes. Staff. Prerequisite(s): PSYC 001.
An overview of theories and research across the range of social behavior from intra-individual to the group level including the effects of culture, social environment, and groups on social interaction.

181. Intro to Developmental Psychology. (C) Brannon. Prerequisite(s): PSYC 001.
The goal of this course is to introduce both Psychology majors and non-majors majors to the field of Developmental Psychology. Developmental Psychology is a diverse field that studies the changes that occur with age and experience and how we can explain these changes. The field encompasses changes in physical growth, perceptual systems, cognitive systems, social interactions and much more. We will study the development of perception, cognition, language, academic achievement, emotion regulation, personality, moral reasoning, and attachment. We will review theories of development and ask how these theories explain experimental findings. While the focus is on human development, when relevant, research with animals will be used as a basis for comparison.

193. Study Abroad.
L/R 207. (CIS 140, COGS001, LING105, PHIL044) Introduction to Cognitive Science. (C) Brainard/Ungar. Prerequisite(s): An Introductory Course in Computer Science, Linguistics, Neuroscience, Philosophy, or PSYC 001. Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce undergraduates from many areas to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception,
Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between such modules. The course shows how the different views from the parent disciplines interact, and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories, and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.

L/R 217. (BIBB217, VLST217) Visual Neuroscience. (B) Staff. Prerequisite(s): PSYC 109.

An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.

225. (BIBB270) Drugs, Brain, and Mind. (B) Nelson. Prerequisite(s): PSYC 109 or BIBB 109.

The course will begin with a review of basic concepts in pharmacology: routes of drug administration, drug metabolism, the dose response curve, tolerance, and sensitization. Following a brief overview of cellular foundations of neuropharmacology (cell biology, synaptic and receptor function), the course will focus on various classes of drugs used to treat neuropsychiatric disorders including, among others, depression, schizophrenia, and anxiety. We will additionally consider mechanisms mediating the mind-altering, addictive and neurotoxic effects of abused drugs.

231. (BIBB231, BIOL231) Animal Behavior. (C) Seyfarth/Cheney. Prerequisite(s): PSYC 001 or BIOL 102 or COGS 001.

The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territory and communication.

235. (LING135) Psychology of Language. (C) Dahan. Prerequisite(s): PSYC 151 or LING 001.

This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. The course raises and discusses issues such as whether language ability is innate and unique to humans, whether there is a critical period for the acquisition of a language, and how linguistic and conceptual knowledge interact.

239. (BIBB260) Neuroendocrinology. (C) Flanagan-Cato.

This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates.

247. (BIBB247, PSYC549) Neuroscience and Society. (C) Farah. Prerequisite(s): PSYC 109 or PSYC 149.

Cognitive, social, and affective neuroscience have made tremendous progress in the last two decades. As this progress continues, neuroscience is becoming increasingly relevant to all of the real-world endeavors that require understanding, predicting and changing human behavior. In this course we will examine the ways in which neuroscience is being applied in law, criminal justice, national defense, education, economics, business, and other sectors of society. For each application area we will briefly review those aspects of neuroscience that are most relevant, and then study the application in more detail.

253. (PPE 153) Judgment and Decisions. (C) Staff. Prerequisite(s): One semester of statistics OR microeconomics. Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases.

265. (PPE 203) Behavioral Economics and Psychology. (C) Bhatia. Prerequisite(s): Microeconomics, AND PSYC 001.

This course will introduce you to the study of choice, and will examine in detail what we know about how people make choices, and how we can influence these choices. It will utilize insights from psychology and economics, and will apply these insights to domains including consumer choice, risky decision making, and prosocial decision making.

L/R 266. Introduction to Positive Psychology. (B) Staff. Prerequisite(s): PSYC 001.

An introduction to the study of positive emotions, positive character traits, and positive institutions. The positive emotions consist of emotions about the past (e.g., serenity, satisfaction, pride), about the future (e.g., hope, optimism, faith), and emotions about the present (pleasure and gratification). The distinction among the pleasant life, the good life, and the meaningful life is drawn. The positive traits include wisdom, courage, humanity, justice, temperance, and spirituality, and the classification of these virtues is explored. The positive institutions are exemplified by extended families, free press, humane leadership, and representative government.

275. (PPE 275) Introduction to Political Psychology. (C) Tetlock. Prerequisite(s): PSYC 001 or COGS 001. NOTE: Students who are more interested in business-related issues may want Wharton 276x which is a modified version of this course specifically for Wharton undergraduates.

This course will explore psychological approaches to understanding political beliefs, attitudes, and actions at the levels of both individual citizens and national leaders. It will also explore the possibility that psychological science itself is not immune to the political debates swirling around it. Specific topics will include: the workings of belief systems (and their power to shape what we "see"), cognitive biases (and their power to cause miscalculations), sacred values and their role in stabilizing belief systems and social interaction, personality and ideology (the linkages between the personal and the political), and clashing conceptions of morality and distributive and corrective justice (striking variations among people in what they consider to be fair). We shall also explore some topics that have sparked controversy in the psychological research literature and that tend to polarize opinion along political lines, including work on intelligence and unconscious bias.

280. Developmental Psychology. (C) Staff. Prerequisite(s): PSYC 001. PSYC 280-601 is a LPS class.

This course will cover theory and research related to the development of attachment, emotional regulation, peer and intimate relationships, personality, moral reasoning, and emotional and behavioral disorders. The course will emphasize the degree to which family, peer, and community contexts influence development from
infancy into adulthood. Efforts will be made to integrate biological and environmental accounts of development across the lifespan.

281. Cognitive Development. (C)
Swingley or Weisberg. Prerequisite(s): PSYC 001 or COGS 001.

What infants and young children come to know about the world, and how they learn it. Topics will include changes in children's thinking, perceptual development, language acquisition, and current theories of cognitive development.

SM 311. (VLST212) Research Experience in Perception. (C) Rust.
Prerequisite(s): One semester of statistics, and one of the following: PSYC 111, 149, 151, 217, or permission of instructor. Dept permission required. Undergraduates only.

In this research course, students will begin by first replicating earlier experiments to measure human visual memory capacity. After several class discussions to discuss ideas, each student will design and conduct their own experiment to further investigate visual and/or familiarity memory.

SM 327. Research Experience in Behavioral Neuroscience. (C) Grill.
Prerequisite(s): PSYC 127 and one semester of statistics. Dept permission required.

Students conduct supervised experiments on the physiological basis of motivation. Topics will be chosen from the intersection of issues in taste and nutrition, such as the ability of animals to take in specific food substances needed to maintain themselves. Class meets for lecture, discussion, and conduct of an experiment.

SM 362. Research Experience in Abnormal Psychology. Dr. Melissa Hunt. Prerequisite(s): PSYC 162 and one semester of statistics. Psych majors only. Instructor permission required. PSYC 362-301 is a two-semester course starting in the Fall.

PSYC 362-301 is a two-semester course starting in the Fall. Class size limited to 8 students.

Prerequisite(s): PSYC 170 AND one semester of statistics. Dept permission required. Psychology majors only.

In this course, students will work in small groups to develop, empirically test, and report on a research question within one of the domains of social psychology. Depending on the nature of the project, students will employ survey, experimental, or observational research methodology, and learn how to to conduct and report the appropriate statistical tests with Excel and/or SPSS (typically, correlations, t-tests, ANOVA and ANCOVA, multiple regression, factor analysis, and measures of reliability). Class discussions will help students craft their projects, and in-class presentations will provide the opportunity to develop and refine presentation skills. Psychology majors only. Class size is limited to 14 students.

399. Individual Empirical Research. (C) Dept permission required.

Individual research involving data collection. Students do independent empirical work under the supervision of a faculty member, leading to a written paper. Normally taken in the junior or senior year.

SM 400. Senior Honors Seminar in Psychology. Thompson-Schill.
Prerequisite(s): acceptance into the Honors Program in Psychology. Dept permission required.

Open to senior honors candidates in psychology. A two-semester sequence supporting the preparation of an honors thesis in psychology. Students will present their work in progress and develop skills in written and oral communication of scientific ideas.

SM 407. (BIBB451) Behavioral Genetics. (C) Price. Prerequisite(s): Basic statistics or permission of instructor.

This course will cover basic principles of human and animal behavior genetics, including the genetics of normal variation as well as extreme phenotypes represented by behavioral, psychiatric and neurologic disorders. The course will focus on methods necessary to critically evaluate research findings on normal and abnormal human behavior. Animal models will also be reviewed.

SM 411. Seminar in Perception. (C)
Stocker. Prerequisite(s): PSYC 111.

421. (BIBB442, BIOL442, NGG 575) Neurobiological Basis of Learning and Memory. (C) staff.

This advanced course focuses on the current state of our knowledge about neurobiological basis of learning and memory. Students will explore the molecular and cellular basis of learning in vertebrates and vertebrates from a behavioral and neural perspective.

SM 423. (BIBB423) Seminar in Motivation. (C) Staff. Prerequisite(s): Permission of the instructor.

SM 429. Seminar Human Memory. Kahana. Prerequisite(s): A background in (a) elementary statistics and (b) computer programming, preferably using Matlab.

Advances in brain recording methods over the last decade have generated vastly more brain data than had been collected by neuroscientists during the previous century. To understand the human brain, scientists must now use computational methods that exploit the power of these huge data sets. This course will introduce you to the use of big data analytics in the study of human memory and its neural basis. Through hands-on programming projects, we will analyze multi-terabyte data sets both to replicate existing phenomena and to make new discoveries. Although the course has no formal neuroscience or psychology prerequisites it does require a background in (a) elementary statistics and (b) computer programming, preferably using Matlab.

SM 431. (BIBB432, BIOL432) Seminar in Animal Cognition. (C) Cheney.
Prerequisite(s): PSYC 231/Biol 231/ BIBB 231.

The aim of this course will be to provide advanced undergraduates with a detailed review of a number of research areas in behavioral ecology. Topics will change each year, and students will be able to take the course more than once.

Prerequisite(s): PSYC 151, or PSYC 235, or LING 001, or permission of instructor.

SM 439. (BIBB460) Neuroendocrinology Seminar. (C)
Flanagan-Cato. Prerequisite(s): PSYC 109.

This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.

440. SLEEP AND SLEEP DISORDER.

SM 449. Seminar in Cognitive Neuroscience, staff. Prerequisite(s): PSYC 109 or PSYC 149, or PSYC 547. PSYC 449-601 is an LPS course. PSYC 449-301 is a Psych Dept course. Topics vary each semester.
SM 451. (BIBB431) Seminar in Cognitive Psychology. (C) Staff. Prerequisite(s): PSYC 231. Topics vary each semester.

SM 453. (PPE 475) Seminar in Decision Making. (C) Staff. Prerequisite(s): PSYC 253 (formerly PSYC 153). Undergraduates only. Topics vary each semester.

SM 462. Seminar in Abnormal Psychology. Staff. Prerequisite(s): PSYC 162. Undergraduates only. Topics vary each semester.

SM 464. Seminar in Personality. (C) Staff. Prerequisite(s): PSYC 160. Topics vary each semester.

SM 466. Seminar in Positive Psychology: Imagination and Creativity in Psychology. Forgeard and Seligman. Prerequisite(s): PSYC 001. Instructor permission required. Course does not fulfill the research requirement for psych majors.

By forming mental representations of things not immediately present to the senses (imagination), and/or simulating possible futures (prospection), humans can generate novel ideas and products (creativity) that contribute to human progress and flourishing. This course will specifically focus on imagination and creativity within the field of psychology. Students will learn about the cognitive, motivational, and social processes that shaped important creative insights (or big moments) in the history of the discipline. In addition, students will be given the opportunity to apply knowledge gained from the course by designing their own original creative research proposal as the final project for the course. Note: This course constitutes a research study designed to investigate how scientific creativity can best be taught to undergraduate students. Student participation in the research study is voluntary, subject to informed consent, and will not affect their performance in the course.

SM 470. Seminar in Social Psychology. (C) Staff. Prerequisite(s): PSYC 170. Undergraduates only. Topics vary each semester.

SM 472. Behavioral Biology of Women. (C) Apicella. Prerequisite(s): PSYC 272 or permission of instructor. Department permit required.

A course that explores female behavior focusing on evolutionary, physiological, and biosocial aspects of women's lives from puberty, through reproductive processes such as pregnancy, birth, lactation to menopause and old age. Examples are drawn from traditional and modern societies and data from nonhuman primates are also considered.

SM 473. (BIBB473, NGG 706) Neuroeconomics. (C) Kable. Prerequisite(s): PSYC 149, 253, or 265. This course will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. A particular focus will be on how evidence about the neural processes associated with choices might be used to constrain economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, reinforcement learning, strategic interactions and games, and social preferences.

SM 474. Cultural Psychology. Staff. Prerequisite(s): PSYC 170 or PSYC 272. Humans are a cultural species, constantly navigating a complex web of culturally bound practices, norms, and worldviews. This seminar will survey the theory and research of the young but rapidly expanding field of cultural psychology. In the seminar, we will explore how culture shapes and is shaped by an array of psychological domains, ranging from perception, information processing, and language, to concepts of the self, motivations, emotion, morality, and physical and mental health.

SM 475. (PPE 475) Behavioral Law and Economics. (C) Staff. Prerequisite(s): PSYC 253 or PSYC 265. Undergraduates only. Topics vary each semester.

SM 476. Seminar in Animal Behavior. (C) Staff. Prerequisite(s): PSYC 131/231. Seminar in Animal Behavior: Social Brains, Social Behavior, and Social Evolution. This course will take an integrative approach to the study of social behavior across a variety of animal species. We will primarily take an ecological approach to studying social behavior at different levels of analysis, including physiological mechanism, development, and function.

SM 478. (PPE 475) Obedience. Royzman. Prerequisite(s): PSYC 170. Though almost half a century old, Milgram's 1961-1962 studies of "destructive obedience" continue to puzzle, fascinate, and alarm. In this seminar, we will take an in-depth look at these famous studies (along with the more recent replications) and explore their various psychological, historical, and philosophical ramifications. This course has a number of intellectual goals that go beyond simply rarifying one's understanding of a particular content area (important and generative as it may be). One such a goal is to enable you to think critically (though not disparagingly) about other people's research and theoretical claims that ensue from it, all with the hope that you can then apply the self-same critical acumen to your own future work. Second, this course will offer a hospitable environment for developing (and exchanging) creative ideas of your own. Your work on your individual reaction papers and on the term paper in particular will be a key element in achieving this goal.

SM 480. Seminar in Developmental Psychology. Staff. Prerequisite(s): PSYC 001. Undergraduates only.

SM 481. Seminar: Cognitive Development. Swingley. Prerequisite(s): PSYC 281 or PSYC 280.

511. PROB MODELS OF PERCEPTION.

L/R 547. FNDTIONS SOC COG NEUROSC.

549. (PSYC247) NEUROSCIENCE AND SOCIETY.

579. EXP METHODS PERCEPTION.

671. (CRIM671) Violence: A Clinical Neuroscience Approach. (A) Raine. Graduate students only. Developed for both Psychology and Criminology graduate students, this interdisciplinary course outlines a clinical neuroscience approach to understanding violence in which the tools of neuroscience- neuroanatomy, neurophysiology, neurocognition, neuroendocrinology, neuropharmacology, molecular and behavioral genetics- are used to help inform the etiology and treatment of violence. Clinical components include psychopathy, proactive and reactive aggression, homicide, domestic violence, conduct disorder, oppositional defiant disorder, antisocial personality disorder, crime, and delinquency as well as their
comorbid conditions (schizophrenia, drug abuse, hyperactivity). The interaction between social, psychological, and neurobiological processes in predisposing to violence will be highlighted, together with neurodevelopmental perspectives on violence focusing on prospective longitudinal and brain imaging research. Key implications for the criminal justice system, neuroethics, forensics psychology, and intervention will also be outlined.

SM 712. REGRESSION & ANOVA II. (C)

SM 790. (COMM890) SELF-REGULATION & BEHAV. ALBARRACIN.
This seminar will cover psychological theories of goals, research on self-control, and models of behavior change, tailored to the interests of the students. We will read classic and contemporary research related to goal setting, conscious and unconscious goal processes, and mechanisms of behavior change.

251. (PSCI113) INTRO TO DECISION THEORY. (C) staff.

SM 270. CULTURAL PSYCHOLOGY. (C)

First-Year Graduate Courses

This two-semester sequence will provide basic mathematical modeling and algorithmic tools for interdisciplinary research in animal, human or machine communication, in association with the IRCS IGERT program. Topics include signal processing, statistical modeling and machine learning, information theory, game theory, and formal language theory. The courses will be taught in a laboratory setting, and will emphasize practical skills as well as basic concepts.

This two-semester sequence will provide basic mathematical modeling and algorithmic tools for interdisciplinary research in animal, human or machine communication, in association with the IRCS IGERT program. Topics include signal processing, statistical modeling and machine learning, information theory, game theory, and formal language theory. The courses will be taught in a laboratory setting, and will emphasize practical skills as well as basic concepts.

539. (BIBBS585, NGG 594, PHYS585) Theoretical and Computational Neuroscience. (M) Balasubramanian.
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.

SM 600. (NGG 589) Proseminar in General Psychology. (C) Staff. Dept permission required.
Choice of half or full course units each sem. covering a range of subjects and approaches in academic psychology.

SM 603. (NGG 595) Behavioral Neuroscience. (H) Grill. Fulfills the "Brain" requirement.
Current research on the neural basis of behavior is organized in six subsections: animal communication, sex behavior, circadian rhythms, variety energy and water balance, synaptic plasticity and learning, and communication, addiction. Topics are selected based on excitement surrounding recent research developments. Each topic is analyzed initially at thermal receptors behavioral level, followed by the systems and the cell and molecular control of levels. Throughout the course, attention is paid to the analysis of behavior interesting stereotyped behaviors, e.g., bird song, lordosis, licking, whose description and neurology has provided insights into the neural basis systems that contribute to overall neural control of behavior. Attention is also paid to the development of understanding of the neuroanatomy of selected neural systems.

SM 604. (NGG 592) Cognitive Neuroscience. (C) Farah.
Review of what has been learned about the neural mechanisms underlying intelligent behavior in humans and animals. Traditional topic areas of cognitive science are covered, specifically: vision (early vision through object recognition), attention, learning and memory, motor control, planning and problem-solving, and language. Attempts are made to integrate results of different neuroscience approaches to each topic, including the study of human neurological patients, lesion studies in animals, single unit recordings, neural network modelling, and functional imaging techniques.

605. (NGG 582, PHRM540) Behavioral Neuropharmacology. (C) Lucki and Staff. Prerequisite(s): Permission of course director.
The effects of various drug classes on animal behavior are examined. Behavioral studies identifying the neurochemical mechanisms of action of psychotropic drugs are reviewed. Animal models of neurological and psychiatric illnesses are discussed.

608. (OIDD900) Judgment and Decisions. (C) Baron.
Thinking, judgment, decision making, beliefs, and probability, with emphasis on fallacies and errors.

609. (NGG 573) Systems and Integrative Neuroscience. (A) Staff. Fulfills the Brain requirement.

611. (BSTA550, STAT500) Statistics for Psychologists. (A) Staff.

612. (STAT501) Introduction to Nonparametric Methods and Log-linear Models. (B) Staff.

SM 630. (NGG 630) Cognitive Neuroscience of Memory. (C) Staff. Fulfills the Brain requirement.
This course will review the neural mechanisms of learning and memory. Readings will include both seminal and cutting-edge papers on topics ranging from perceptual memory to higher order functions, including working memory, declarative memory, skill learning, and semantic memory. Within each topic we will attempt to integrate the results of different neuroscience approaches, including the study of human neurological patients, lesion studies and single unit recordings in animals, neural network modeling, event-related potentials, and functional imaging techniques.

We will survey, and as far as possible, synthesize, three bodies of literature on emotion and the brain, specifically: (1) neuroimaging and pharmacologic studies of emotion and the normal human brain; (2) the neuroscience of affective disorders in humans; and (3) relevant studies of reinforcement and learning in animals.

632. (NGG 632) Cognitive Neuroscience of Vision. (C) Epstein.

This course will review the neural basis of visual cognition. Emphasis will be placed on linking cognitive theory to neuroscientific methods. Topics will include object and face recognition, scene perception, visual attention, mental imagery, and visual awareness.

699. Individual Research for First-Year Graduate Students. (E)

SM 705. Neuroethics. (C) Farah. Dept permission required.

Neuroscience is increasingly affecting all aspects of human life, from the relatively familiar medical applications in neurology and psychiatry, to new applications in education, business, law, and the military. Today's neuroscience graduate students will be among the scientists, citizens, and policymakers who will lead society through the maze of decisions regarding the appropriate uses of neuroscience. This course provides a survey of the key ethical, legal, and social issues at the intersection of neuroscience and society. It will include a combination of traditional classroom lectures, discussion and debates, as well as an online component coordinated with a course at Wisconsin's Neuroscience and Public Policy graduate program.

SM 715. Teaching Seminar. (C) Rozin. Prerequisite(s): For graduate students in Psychology.

This course is designed to aid graduate students in developing fundamental teaching skills. The focus will be on lecturing, applicable to job talks as well as classroom lectures, but there will also be some attention to discussion sections and handling of questions.

Seminars

SM 703. Special Topics in Psychology. (C) Staff.

SM 704. Research Methods and Statistical Procedures for Social and Clinical Sciences. (C) Staff.

This course has three primary objectives: (1) developing criteria and strategies for strong inference of causal relationships in social and clinical psychology research; (2) examining the array of research designs employed in the social/clinical sciences together with the threats to internal and external validity associated with each; and (3) learning and applying statistical analytical methods appropriate for questions in the social/clinical sciences. The course will employ a seminar format and a project-oriented approach to learning. Students will be encouraged to utilize examples from their own research programs in applying the design and analysis concepts covered in the course.

SM 709. Special Topics in Clinical Psychology. (C) Staff. Graduate students only.

In this seminar we will survey substantive, methodological, and statistical issues that arise in the planning, conduct, and interpretation of empirical inquiries about the effects of psychotherapies. Challenges presented in efforts to disseminate evidence-based clinical practices will also be addressed.

SM 711. Basic Problems in Developmental II. (C) Staff.

SM 719. Experimental Methods in Perception. Brainard. This is an IGERT foundational course. This IGERT foundational course covers experimental methods and data analysis techniques used in the study of human perception.

SM 730. Special Topics in Motivation. (C) Staff.

SM 733. Special Topics in Vision. (C) Staff.

SM 736. Special Topics in Language. (C) Staff.

SM 739. Special Topics in Perception. (C) STOCKER.

Probability theory has become an increasingly popular and successful framework for modeling human perceptual and cognitive behavior. This course will provide a careful introduction to probability theory and the various ways it has been applied in psychology and neuroscience. Goal is to make students understand the most important state-of-the-art probabilistic models in perception and cognition, what they reveal about the brain's underlying computations and strategies in dealing with uncertainty, and how such computations can potentially be performed by populations of neurons.

SM 745. (NGG 583) Special Topics in Cognitive Neuroscience. (C) Staff.

750. (NGG 576, PHRM550) Special Topics in Neuropsychopharmacology. (C) Lucki and Staff. Prerequisite(s): Permission of Instructor.

Biological issues relevant to neuropsychiatric illnesses are covered in detail in four sections. The first section covers clinical aspects of major psychiatric disorders and includes some contact with patients. The second section presents the neuroanatomy of the limbic system. In the third section, emphasis is on the mechanisms of action of psychotropic drugs, including antidepressants, antipsychotics, anxiolytics, and stimulants. The final section covers information relevant to understanding biological processes that may be abnormal in neuropsychiatric illnesses, such as stress, sleep, and circadian rhythms, as well as quantitative genetics.

SM 751. Special Topics in Cognitive Psychology. (C) Staff.

SM 770. (PSCI770) Special Topics in Social Psychology. (C) Staff.

SM 801. Psychodiagnostic Testing. (A) Staff.

SM 811. Psychodiagnostic Interviewing. (A) Staff.

SM 815. Introductory Practicum. (B) Staff.

SM 820. Advanced Practicum. (C) Staff.

Intensive studies of single individuals including interviews, tests, and experiments; also clinical experience at appropriate community agencies.

999. Individual Study and Research. (C)
500. (NURS570) Foundations of Public Health. (A)
This course will provide a topical overview of the interdisciplinary field of public health and provides grounding in the public health paradigm. Through a series of lectures and recitation sessions, students will learn about the history of public health and the core public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental health, and policy and management. Other topics include ethics in public health, context analyses (specifically sociographic mapping and urban health), community participation in research, public health promotion, and the prevention of chronic and infectious diseases.

501. Introduction to Biostatistics. (C)
Shofer, Hanlon.
Introduction to Biostatistics This course is designed to provide a broad overview of biostatistics methods as well as applications commonly used for public health research. Topics covered include measurement and categorizing variables, use and misuse of descriptive statistics, testing hypotheses, and applying commonly used statistical tests. An emphasis will be placed on the practical application of data to address public health issues, rather than theoretical and mathematical development. Students will learn how to choose and apply statistical tools to data sources, and how statistical tools can be used to analyze data, and how to interpret others' quantitative studies. Students will gain experience using online datasets and the STATA statistical software package.

502. (NURS500) Introduction to the Principles and Methods of Epidemiology. (C) Smith, Cannuscio.
Epidemiology is a combination of a subject matter science and research methodology. Introduction to Principles and Methods of Epidemiology focuses on the latter component. The course introduces study designs applied to human populations, including randomized trials and four types of observational studies (cohort, case-control, cross-sectional, ecological). Because cause-and-effect relations are at the heart of epidemiologic research, numerous related topics are taught, including causal inference, and bias.

This course will provide a broad introduction to the scientific basis of occupational and environmental health. Content will address issues in the ambient, occupational and global environments as well as the tools, concepts and methods used in environmental health.

504. Public Health Theories & Frameworks. (C) Ruggieri, Fleisher.
This course provides students with a solid foundation in behavioral and social science theory, research, and interventions as they pertain to public health. Content will provide exposure to a broad range of theories, including the theoretical foundations of social science applications for help-seeking, gender, race, ethnicity and social class. These theories will be discussed using examples of their applications to numerous public health problems including HIV/AIDS, violence, cancer, cardiovascular diseases, obesity, and diabetes.

505. Public Health Policy and Administration. (A) Noonan, Klusaritz.
This course is an introduction to health policy and management. It examines both the historical and current state of health policy in America and integrates these concepts within the context of public health practice. We will examine key concepts in understanding US health care organization, financing and delivery, our current political and economic debate on health care reform, examining the role and management issues of public health departments, and case studies in public health policy and management.

This is a course designed around modules whose objective is to provide students with greater familiarity in a range of methods essential to public health practice. The course will be framed around and in-depth capacity and needs assessment and community public health planning in Philadelphia. Topics covered will include data collection and evaluation, both quantitative and qualitative, uses of informatics in public health, analysis of vital statistics, working with communities, methods for developing and facilitating solutions to public health problems, including concepts of advocacy and policy formation and development of interventions. The course demonstrates how core public health competency areas in data analysis and communication provide foundations for applications for both practice and practice-based research.

What is best - or, at least, seems best -- for the public's health is not always consistent with society's view of what is legal, ethical, or good policy. This course introduces key concepts of legal, ethical, and policy analysis and attempts to demonstrate with current examples how these forces empower, guide, and constrain public health decision-making and actions. The course will combine lecture, Socratic dialogue, and group discussion in an informal setting. The course will feature guest lectures by several distinguished experts from Penn and from other universities.

The Capstone is a culminating experience required for graduation in the Master of Public Health Program. In two Capstone seminars, students will have an opportunity to synthesize the knowledge and public health competencies they have developed through their coursework. Capstone students will apply their knowledge and skills to public health problems in a chosen area of interest. They will engage their peers in scholarly discussion, drawing from relevant scientific literature and public health experience in order to begin to develop a common grounding and identity as public health professionals. The Capstone incorporates two semester-long seminars and a research project. Over the course of the Castone, students will develop, propose, revise, implement, and present their projects. As their projects successfully come to fruition they will also advise their junior colleagues still in the proposal stage.

515. (CPLN622) Community Development. (B)

This course will provide an introduction to GIS in public health research and practice. Through a series of lectures and labs students will explore theories linking health and the environment, spatial analysis and spatial epidemiology, and applications of GIS-related data collection and analysis.
L/R 519. Issues in Global Health. (A) McLaughlin. Prerequisite(s): Undergraduates must have completed HSOC-010-401.

This course presents an overview of issues in global health from the viewpoint of many different disciplines, with emphasis on economically less developed countries. Subjects include: millennium goals; measures of disease burden; population projections and control; environmental health and safe water; demography of disease and mortality; zoonotic infectious diseases; AIDS and HIV prevention; vaccine utilization and impact; eradication of polio virus; chronic diseases; tobacco-associated disease and its control; nutritional challenges; social determinants of global health; harm reduction and behavioral modifications; women's reproductive rights; health economics and cost-effective interventions; health manpower and capacity development; bioethical issues in a global context.

There are many public health programs developed to promote change. The question most funders have for public health programs is: what outcomes do you expect? This course is designed to review the principles of identifying short term, mid term and long term outcomes and methods of measurement. Students learn about the application of data collection skills to all phases of developing a public health program or service innovation, from needs assessment to analysis of finding to implementation of changes based on results. Students learn to appreciate how these skills can be used as practical tools for identifying public health problems, program development, program implementation including taking a reflective practice approach, ensuring equity and fairness in program delivery (i.e. combating disparities), and generally promoting public health through effective and efficient programmatic efforts.

525. Developing Effective Public Health Programs Using a Humans Rights Based Approach. (L) Voet.

This course will engage students in discussion of how a human rights approach, informed by international human rights declarations and covenants as well as gender theory, can more comprehensively inform the development of a variety of public health programs. Specifically, the class will discuss how health policies, programs and practices can impact on human rights (e.g. mandatory reporting of certain communicable diseases, quarantine, accessibility of services, etc.); how violations of human rights affect health (e.g. torture, discrimination, etc.) and how health and human rights are ultimately inextricably linked and programming for public health must use a framework that ensures a balance of interests between the two disciplines.

526. (ANTH426) Anthropology and Public Health. (M) Barg. In this course, we examine three types of relationships between anthropology and public health. Anthropology and public health will examine complementary and competing concepts fundamental to each discipline and ways that these concepts make it essential and difficult for the disciplines to work together. Anthropology on public health takes a critical look at assumptions in public health praxis. Anthropology in public health will focus on ways that anthropology theory and methods inform the practice of public health. Using these three approaches, we will examine topics in public health such as mental health, health promotion/disease prevention communication, cancer disparities, reproductive health, violence and infectious disease. Students will learn and apply anthropologic research methods to these problems.

SM 527. Media, Advocacy and Public Health. (M) TBA.

This course will examine the ways in which the media can be used as a tool to improve health. It will also investigate the ways in which the media has had anegative impact on health behaviors in the population. Looking at specific topics like tobacco, food and nutrition, and HIV/AIDS, we will explore the intersection of media, advocacy, advertising and entertainment and the impact of media broadly on health behavior and society. The course will also provide students the opportunity to practice strategically working with the media to address health problems.

SM 528. (ANTH623) Class, Inequality and Health: Ethnographic Perspectives. (B) Bourgeois. This seminar examines anthropological approaches to the concept of class and social inequality through a close reading of a dozen ethnographies that deal with a broad definition of health, illness, and social suffering. Readings span many of the theoretical, political, sub-disciplinary and area studies debates in anthropology and the largers fields of poverty, social inequality, international development, violence studies, science studies, governmentality, and social policy interventions over the past century.

529. Topics in Family Planning. (A) Bennett, Schreiber.

This course will survey a range of key current and historic topics in family planning nationally and internationally. Policy, epidemiological, clinical practice, advocacy, and service delivery topics will be covered through presentations and conversations with leaders in the field of reproductive health. The course will provide students with a broad general introduction to family planning which is appropriate for those interested in either public health or clinical aspects of the field. For students who wish to pursue a focused career in this area this course is a necessary introduction, while students who will be working in related areas of public health will have a broad general understanding of family planning. Students will participate through an interactive seminar style and will prepare an oral presentation on a relevant topic of their choice.

530. (NURS677) Environmental Toxicology: Risk Assessment and Health Effects. (A) Liu. Undergrads need permission.

This course presents general principals of toxicology and the disposition of toxins in the body. Case studies of the effects of environmental and occupational toxins on individuals will be analyzed. This course is designed for students who desire a strong foundation in toxicological concepts and principals and provides an overview of major toxins in our environment and their association with human health.

531. PUBLIC HEALTH NUTRITION.

SM 534. (CRIM415, CRIM615, HSOC471) Guns and Health. (A) Sorenson. The purpose of this course is for students to gain an understanding of the role of guns in population health. We will approach the topic with a healthy skepticism about the assumption and ideologies that dominate formal and informal discourse about the topic. We will view guns as a consumer product (and examine the life span of the product beginning with design and manufacture) and review the health outcomes of gun use. In addition, we will address key aspects of the social context in which firearms exist and within which firearm policy is made.
SM 535. (ANTH625) Urban Poverty and Violence. (M) Bourgeois. This seminar examines anthropological approaches to poverty and violence through a close reading of eight ethnographies. Readings span many of the theoretical, political, sub-disciplinary and area studies debates in anthropology and the larger fields of poverty, social inequality, international development, and violence studies over the past century. My hope is to bring the subjects of urban poverty, violence, social suffering and a critique of neoliberal governmentality into the center of the disciplines of anthropology and public health specifically, and the social sciences, humanities and medicine more broadly. In the seminar we will be bringing students from anthropology, and other social science and humanities disciplines in dialogue with students in public health, science studies, and clinical medicine.

537. (HPR 610) Evidenced-Based Health Policy. (B) Gerdes, Zlotnik. Prerequisite(s): HPR 606 and PUBH 505 or permission of instructor. Achieving Evidence-Based Health Policy examines how research can influence health policy. Individual sessions will be devoted to topics such as the NurseFamily Partnership program, health insurance, smoking, and early childhood mental health. Sessions will examine how selection of research methods may influence results; the dialectical relationship between research and policy; and the role of various stakeholders (the media, foundations, government, advocates) in both research and policy debates. Didactic topical research presentations will be followed by interactive discussions examining how research finds translates (or, as the case may be, do not translate) into policy. Guest speakers will include research and policy experts from the public and private sectors. Prerequisites are Fundamentals of Health Policy (offered through the Master's of Science in Health Policy); PUBH 505 Public Health Administration and Policy; or permission of instructor. Enrollment limited to 12.

538. (HPR 503) Qualitative Methods in Health. (L) Barg, Shea. The purpose of this course is to expose students to a variety of qualitative approaches/methodologies that may be used in health services/policy research. In didactics we will discuss the pros and cons of various methods, explaining how the method is actually implemented (with multiple experts presenting their approaches), and pair the presentation with a broader discussion in which we compare and contrast health oriented articles in which the method was used.

SM 539. (NURS823) DESIGNING INTERVENTIONS.

540. GO GLOBAL.

541. SOCIAL EPI.

551. (NURS640, SWRK793) Global Health Policy and Delivery. (B) McLaughlin and Voet. This participatory interdisciplinary seminar course examines contemporary issues in global health policy and delivery. The overall organizing framework for the class is the social determinants of health. The class will consider evidence that inequalities in education, income, and occupation influence health status. Students will develop skills in policy analysis, policy brief development, and policy impact monitoring. The public policy process will be explored using a variety of contemporary global health case studies which focus content areas such as maternal health, HIV policy, refugee health and global healthcare delivery. Finally, we will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.

553. SCIENCE & POLI OF FOOD.

558. HEALTH & DISEASE FOR PH.

575. (SWRK775) INTIMATE VIOLENCE.

580. IMPLEMENTING THE ACA.

588. (NURS587) Advanced Leadership Skills in Community Health. (B) Margo; Klusaritz; Lipman. Prerequisite(s): Enrollment in a Masters or Doctoral program. Undergraduates with permission of the instructor.

Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discuss ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods.

589. PUB HEALTH & COG AGING.

597. History of Public Health. (A) Barnes. This masters-level seminar examines the health of human populations and the science of improving it in historical perspective. Special attention is given to the city of Philadelphia as a living laboratory of public health in the past and present. Lectures, readings and discussions cover various societies’ attempts to respond to and prevent disease since antiquity. Case studies focus on the roots of contemporary public health knowledge and policy in the nineteenth and twentieth centuries. Topics include responses to epidemics, the Bacteriological Revolution, racial and economic disparities in health, the development of policy infrastructures, and global health. Periodic field trips will be arranged to public health-related historical sites in Philadelphia and vicinity.

598. Immersion Experience in Global Public Health. (C) Nguyen. This independent educational experience seeks to provide motivated students with the opportunity to expand their knowledge in global health through focused experiential learning at international sites that provide direct public health services. Such learning will allow students to gain real-world experience concerning the core competencies of public health (health policy, behavior/social sciences, environmental health, epidemiology, or biostatistics).

599. Independent Study in Public Health. (C)
Prerequisite(s): Enrollment limited to master degree or doctoral degree students only; pubh502 or permission of the instructor required. This course will provide an overview of current topics in cancer epidemiology and prevention. The course will survey cancer incidence and mortality trends in the U.S. and abroad. Several major cancer risk factors will be examined, such as tobacco exposure, diet and obesity, environmental exposures, viruses, and genetics, along with primary prevention strategies. In addition, the course will review important concepts in cancer screening such as sensitivity, specificity, and lead time bias. Current issues in cancer screening will be discussed, along with controversies surrounding national cancer screening guidelines. In addition, the course will explore racial/ethnic and socioeconomic disparities in cancer incidence and mortality. A main focus of the course will be how epidemiologic evidence is used to identify causes of cancer and inform cancer prevention strategies on the individual and population level.
REAL ESTATE

204. (LGST204, LGST804, REAL804) Real Estate Law. (C) Staff.
This course examines the fundamentals of real estate finance and development from a legal perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking.

The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments.

This course considers a range of local policies in cities and regions. Examples include: clusters and other local development initiatives, large scale regional policies, employment zones and other targeted policies. More traditional urban policies such as zoning and planning and constraints, transportation pricing, and parking policies among many others will also be considered. Practical examples will be extremely diverse and include the Silicon Valley and attempts to copy it, the Tennessee Valley Authority, housing restrictions in developing countries such as Brazil, congestion pricing in London, etc. Students will be expected to actively participate and make presentations. The course emphasizes the importance of the economic context, the understanding of the underlying rationale for policies, and how the private agents respond to public incentives. The main learning goals are the following: be able to use simple empirical tools of economic evaluations, be able to articulate a critical analysis of competing viewpoints and assessments, and be able to integrate various analytic steps into an overall assessment of economic policies that relies on sound principles and is well argued.

208. (BEPP208, BEPP708, REAL708) Housing Markets. (B) GYOURKO.
Prerequisite(s): Managerial Economics (BEPP 250) or equivalent. Lecture with discussion required.
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGE 611 and 612 for MBA's. Non-Wharton students should have taken the equivalent course in the College.

209. (FNCE209, FNCE721, REAL721) Real Estate Investment: Analysis and Financing. (C) Ferreira, Sinai, Wong, Handbury. Prerequisite(s): FNCE 100.
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two midterms, (depending on instructor).

215. (REAL724, REAL945) Urban Real Estate Economics. (C) Wachter. Prerequisite(s): FNCE 100 & 101.
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and an optional second exam.

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent financial crises, local services and taxes as important determinants of real estate prices, the infrastructure crises, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

236. (BEPP236, BEPP836, REAL836) International Housing Comparisons. (B) Wachter. Prerequisite(s): FNCE 101
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and potential market-oriented and public policy solutions.

240. (REAL840) Advanced Real Estate Investment and Analysis. (B) Gyourko. Prerequisite(s): REAL 209.
This course is designed for majors in Real Estate, but is also open to finance-oriented students who wish a deeper analysis of real estate investment and investment analysis issues than that offered in REAL/FNCE 209. The class will contain a mixture of lectures, guest speakers and case discussions. Academic research is paired with recent industry analysis of key issues in order to marry sound theory and empirical results with current events and practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lectures from industry professionals who will focus on a specific application of the principles introduced in the lectures.
321. (ARCH768, REAL821) Real Estate Development, (see REAL 821). (B)

399. Independent Study. (C) Staff.
All independent studies must be arranged and approved by a Real Estate department faculty member with the exception of the Annual Student Research Competition.

Annual Student Research Seminar:
This class meets in the Spring semester to analyze how to conduct research in the real estate market - where to find data; how to critique research; how to frame research questions; how to write a business research report; how to present a business research report. Topics are provided each year. For more information regarding the Annual Student Research Competition see the Real Estate Department's website: http://real-estate.wharton.upenn.edu/.

708. (BEPP208, BEPP708, REAL208) Housing Markets. (B) GYOURKO.
Prerequisite(s): Microeconomics for Managers (MGEC 611) and Microeconomics for Managers (Advanced) (MGEC 612) or equivalent. Lecture with discussion required.

This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy and analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGEC 611 and 612 for MBA’s. Non-Wharton students should have taken the equivalent course in the College.

Prerequisite(s): FNCE 611 or FNCE 612. Lecture with discussion required.

This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and some mid-terms, (depending on instructor). Cross-listed with FNCE 721.

723. INTRODUCTION TO REAL ESTATE. (C) Sinai. WEMBA COURSE.

724. (REAL215, REAL945) Urban Real Estate Economics. (C) Wachter.
Prerequisite(s): MGEC 621, Managerial Economics. Lecture.
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam.

730. (BEPP773, FNCE730) Urban Fiscal Policy. (A) Inman. Prerequisite(s): MGEC 621. Lecture, discussion.
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crises, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

772. (BEPP206, BEPP772, REAL206, REAL972) Urban Public Policy & Private Economic Development. (B) Gilles Duranton. Prerequisite(s): Microeconomics, basic familiarity with Statistics.
This course considers a range of local policies in cities and regions. Examples include: clusters and other local development initiatives, large scale regional policies, employment zones and other targeted policies. More traditional urban policies such as zoning and planning and constraints, transportation pricing, and parking policies among many others will also be considered. Practical examples will be extremely diverse and include the Silicon Valley and attempts to copy it, the Tennessee Valley Authority, housing restrictions in developing countries such as Brazil, congestion pricing in London, etc. Students will be expected to actively participate and make presentations. The course emphasizes the importance of the economic context, the understanding of the underlying rationale for policies, and how the private agents respond to public incentives. The main learning goals are the following: be able to use simple empirical tools of economic evaluations, be able to articulate a critical analysis of competing viewpoints and assessments, and be able to integrate various analytic steps into an overall assessment of economic policies that relies on sound principles and is well argued.

804. (LGST204, LGST804, REAL204) Real Estate Law. (C) Staff. Although some of the material is presented by lecture, the instructor expects considerable class participation.
This course examines the fundamentals of real estate finance and development from a legal perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Format: Although some of the material is presented by lecture, the instructor expects considerable class participation. Cross-listed with LGST 804.

821. (ARCH768, REAL321) Real Estate Development. (B) Nakahara.
Prerequisite(s): REAL/FNCE 721. The prerequisite is STRICTLY enforced for this class unless it is undersubscribed. Predominately case analysis, discussion, some lectures, and project visits.
This course evaluates "ground-up" development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and
the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as "specialty" uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Course lessons apply to all markets but the class discusses U.S. markets only. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process. Format: predominately case analysis and discussion, some lectures, project visits.

836. (BEPP236, BEPP836, REAL236) International Housing Comparisons. (B) Wachtler. Prerequisite(s): FNCE 613 Macroeconomics and the Global Economic Environment.
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on development of securitization markets and addresses current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and potential market-oriented and public policy solutions.

840. (REAL240) Advanced Real Estate Investment and Analysis. (B) Gyourko. Prerequisite(s): REAL/FNCE721. This course, is designed for majors in Real Estate, but is also open to finance-oriented students who wish a deeper analysis of real estate investment and investment analysis issues than that offered in REAL/FNCE 721. The class will contain a mixture of lectures, guest speakers and case discussions. Academic research is paired with recent industry analysis of key issues in order to marry sound theory and empirical results with current events and practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lectures from industry professionals who will focus on a specific application of the principles introduced in the lectures. Format: Lecture, industry speakers.

SM 890. (REAL390) International Real Estate Comparisons. (A) Staff. Prerequisite(s): REAL/FNCE 721 or comparable knowledge/work experience. This class is offered in the second half of the semester.
As a truly non-U.S. focused course, we explore the world of cross-border real estate development, with a focus on fast growing emerging market economies. Topics will emphasize the importance of strategy and implementation in cross-border real estate investment and include: the rationale, opportunities and risks of international real estate investing; the macro factors that influence the performance of real estate markets across countries; market specific factors that impact RE investment performance (property rights, taxes, transparency, planning procedures); the qualitative aspects of identifying and achieving successful projects; and the growing market for international RE securities and strategies for portfolio management.
Classes will combine a lecture on specific aspects of global cross-border RE in the first half of the class and international case presentations in the second half. Cases will be presented by leading executives in charge of major international RE projects or funds. Cases have been selected to cover different types of RE development-residential, office, retail, hospitality and logistics- important emerging market countries/continents (East/South Asia, Latin America, Sub-Saharan Africa, the Middle East) and different development and investment strategies.

891. (REAL396) Real Estate Entrepreneurship. (A) Staff. Offered in the first half of the semester.
What makes a successful entrepreneur in the real estate industry? This half semester mini-course exposes undergraduates and MBA students to the broad entrepreneurial aspects of creating and executing real estate investments. The course consists of lectures by the professor, case discussions and guest lectures by leading entrepreneurs. Lectures and discussions will emphasize real estate entrepreneurship, leadership and challenges often encountered in creating successful real estate investments rather then development processes. Cases will be used to illustrate investment decision-making and financial evaluations. Short written responses to questions raised in each case will be assigned. Class members are expected to engage the speakers with questions and discussion as well as explain their views on cases. Class participation and writings will each represent 50% of the grade.

899. Independent Study. (C) Staff. All independent studies must be arranged and approved by a Real Estate Department faculty member with the exception of the Annual Student Research Competition. Annual Student Research Seminar: This class meets in the Spring semester to analyze how to conduct research in the real estate market, where to find data; how to critique research; how to frame research questions; how to write a business research report; how to present a business research report. Topics are provided each year. For further information regarding the Annual Student Research Competition see the Real Estate department's website: http://real-estate.wharton.upenn.edu/

SM 900. Real Estate Proseminar. (C) Staff.
Real estate is a rapidly changing and evolving field. Traditional course offerings are not always able to incorporate the most recent advances in the many areas that make up the field of real estate. In this course, the participants - both faculty and students - research and present current topics and recent advances in real estate. The content will vary depending on the participants' interests and areas of expertise, but will typically cover urban economics, spatial issues, the economics of housing and commercial real estate markets, and real estate finance and investment.
This course is intended to expand students' awareness of current topics in real estate and to prepare them to conduct their own academic quality research. The proseminar is organized as a series of lectures by faculty and students on topics of their own choosing. These lectures may involve well-known areas of knowledge, research, and methodology, as well as subjects currently under study. The main course requirements are preparing and presenting a series of lectures on a real estate topic (subject to the organizing faculty member's approval) and writing a research proposal that describes a workable project building upon or extending one of the topics covered in the course.

944. (FNCE721, FNCE944, REAL721) Real Estate Investment: Analysis and Financing. (C) Ferreira, Sinai, Wong, Handbury. Prerequisite(s): FNCE 611 or FNCE 612.
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision
making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two mid-terms, (depending on instructor).

All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.

945. (REAL215, REAL724) Urban Real Estate Economics. (C) WACHTER. Prerequisite(s): MGEC 601. Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam.

All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.

946. Advanced Topics in Urban Economics. (C) FERREIRA, DURANTON. Prerequisite(s): The course assumes that students have familiarity with standard first year econometrics and microeconomics. All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements. This course addresses advanced topics in urban and real estate economics. The course will mix theory and empirics and will cover a broad range of topics including the modeling and estimation of agglomeration economies, land use and urban costs, transportation in cities, urban growth, migration between cities etc. The classes will mix formal presentations made by the instructor and student-led discussions of recent academic papers. In addition to presentations, students will be expected to complete a series of assignments including a short original research paper.

947. Advanced Real Estate and Urban Economics. (C) Ferreira. This course covers fundamental and cutting-edge topics in urban economics and real estate as well as the most important econometric issues that arise in the estimation of urban economics and real estate models. The first part of the course focuses on the application of modern econometric methods to analyze empirical questions in the broad urban economics field, which includes topics from public economics and local finances, such as household sorting and valuation of public goods. This part of the course is especially concerned about dealing with non-experimental data, and also provides a guide for tools that are useful for applied research. The second and third parts of the course examine the economic modeling and intuition of a range of topics in urban economics and real estate, such as spacial equilibrium, supply and demand of space, housing prices and cycles. In addition, special emphasis is given to how the understanding of economic theory and institutions can help any empirical analysis. At the end of the course students should have a firm grasp of theory and econometric tools that lead to convincing empirical applications.

All Ph.D. students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.

SM 962. (BEPP962) Applied Economics Seminar. (F) Fernando Ferreira. Prerequisite(s): None. The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented. After attending the seminar and the ensuing discussion of the paper, students will prepare follow-up evaluations of their referee report reports, due one week after the seminar.

972. (BEPP206, BEPP772, REAL206, REAL772) Urban Public Policy & Private Economic Development. (B) DURANTON. Prerequisite(s): Microeconomics, basic familiarity with Statistics. This course considers a range of local policies in cities and regions. Examples include: clusters and other local development initiatives, large scale regional policies, employment zones and other targeted policies. More traditional urban policies such as zoning and planning and constraints, transportation pricing, and parking policies among many others will also be considered. Practical examples will be extremely diverse and include the Silicon Valley and attempts to copy it, the Tennessee Valley Authority, housing restrictions in developing countries such as Brazil, congestion pricing in London, etc. Students will be expected to actively participate and make presentations. The course emphasizes the importance of the economic context, the understanding of the underlying rationale for policies, and how the private agents respond to public incentives. The main learning goals are the following: be able to use simple empirical tools of economic evaluations, be able to articulate a critical analysis of competing viewpoints and assessments, and be able to integrate various analytic steps into an overall assessment of economic policies that relies on sound principles and is well argued.

All PhD students will be expected to complete a research paper in addition to the examination requirements.

973. Urban Fiscal Policy. (A) Imman. Prerequisite(s): MGEC 621. The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

All PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.

990. Masters Thesis. (C)

999. Independent Study. (C)
Cuban Lukumi (Santeria), Brazilian pejorative ways, this course seeks to dispel such as American Horror Story presented and the Caribbean. While television shows African Diaspora. Special attention will be paid to gender, ritual, and performance, and the growth of these religions in the United States in immigrant communities and the African American community. Film clips and YouTube videos will accompany our readings and fuel our discussion. Course requirements will include regular participation, readings, short response papers, quizzes, and a final research paper. 028. RELIGION IN AMERICA.

This course offers a thematic introduction to the history of New Religious Movements (NRM) from the mid-19th century to the present day. Often labeled as "cults" by the state and established religious institutions, new religions offer modern believers alternative spiritual and ideological solutions to age-old problems. In this class, students will be introduced to the teachings and practices of prominent NRMs in North America, Europe, Asia, and Australia, from wide-spread movements such as Scientology, Mormonism, and the Unification Church to lesser known groups such as the Church of the Almighty God, Neo-Paganism, and Raelism. We will explore the emergence of the anti-cult campaign in the second half of the 20th century, the relationship between apocalyptic sects such as the Peoples Temple and the Branch Davidians and political and social protest, and the role of Asian religions such as the Maharishi Mahesh Yogi's Transcendental Meditation in the development of New Age religiosity. In addition, we will learn how new religious movements such as Wicca and the Children of God helped reshape gender roles and changed mainstream views about sexuality, and how developments in mass media and popular culture contributed to the creation of new groups such as the Star Wars inspired Temple of the Jedi Order (Jedism), the Church of the Latter-Day Dudeism), as well as UFO religions such as Heaven's Gate. Throughout the semester, students will be exposed to a wide variety of primary and secondary sources, from academic articles and scholarly essays to documentaries, feature films, and TV shows. No previous knowledge in Religious Studies is required. 032. RELIGION AND VIOLENCE.

SM 031. Religion and Violence.

Perhaps nothing haunts modern politics more than religious violence. Killing sprees done in the name of God reveal the limits of political power. What spaces left for the rule of law when appeals to dogma and the divine supersede reason? The causes and nature of divinely motivated violence are so mystifying that they are a constant topic of debate among academics, political parties, and news commentators. What really motivates religious violence? Is it just economic of class grievances in disguise? Are all religions prone to violence? Are some religions more violent than others? Or, are religions only violent when they go awry, denying their true messages? And does religion need to be quarantined and privatized, to keep us all safe? In this course, we'll probe the dividing line separating religion from politics in an effort to better understand the causes and nature of religious violence. How do we know the difference between religious violence and political violence? What makes religion violent, and what makes violence religious?
and the 'Englishman' from the 19th to 20th century will thus be revealed to students. This part focuses upon, on the one hand, the role of Islam and pious Muslims in the colonial army, and on the other hand, Muslim initiatives to educate an Islamic 'modernism', 'traditionalism', 'fundamentalism' and 'Sufism', and appropriate print technologies for the creation of public spheres. Students will be introduced to historical scholarship revelatory of how these Muslim pedagogies and print initiatives were based upon sophisticated transcultural networks and exchange.

In the third part of this course, students will be encouraged to engage with contemporary literature on South Asian Muslim political philosophy and nationalism and the transcultural intellectual exchanges that produced key Muslim political ideologies.

172. (EALC008) EAST ASIAN RELIGIONS.
This course will focus on the Multicultural Renaissance (1980-2000) when literary masterpieces appeared from African American, Native American, Asian American, and Latina/o writers such as Toni Morrison, Leslie Marmon Silko, Maxine Hong Kingston, and Rudolfo Anaya. As these writers were accepted into the canon of "American Literature," they forced the country to rethink the myth of the Manifest Destiny by updating ancient stories of Buddhism, Native American ceremonies, African religions, brought over on slave ships, and the unique blend of Christianity and indigenous spirituality that animates Mexican American Catholicism. In the 21st century, the Multicultural Renaissance continues, albeit in new forms. Television shows like "Orange is the New Black" and "Ru Paul's Drag Race" make visible and empower LGBT cultures; "Catfish" explores how cultural identities become ever more fluid in the age of the internet. Stand up comedians Key & Pee, Margaret Cho, and Ahmed Ahmed explore issues of religion, race, ethnicity, sexuality. This course will unfold against the backdrop of the 2016 election, as issues of cultural diversity divide the country, even as it becomes ever more multicultural.

SM 230. (JWST230) TOPICS IN EUROPEAN HIST. (C)

SM 231. (JWST233) JESUS AND JUDAISM. (M)

SM 232. READING THE APOSTLE PAUL. (M)

244. (JWST244) From Miracles to Mindfulness. Steve Weitzman and Phil Webster.
In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and scholars such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fields--neuroscience, psychoanalysis, phenomenology, psychology, anthropology, to name only a few--to present their cutting-edge research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00 will open consideration of the subject with help from relevant readings 2) a guest lecture series every Tuesday from 5:00-6:30, featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions.

251. (SAST250) History of Hinduism. Sreenivasan. This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacerdotal kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

SM 259. (JWST249) ULTIMATE MEANINGS. Arts & Letters Sector. All Classes. Weitzman. Does life have some ultimate meaning? In their search for an answer to this question, people tell stories--stories about the creation of the world, about great human beings confronted with the mysteries of existence, about what happens to people after death. To explore the role of stories in finding meaning in life, we will focus on some of the most meaningful stories ever composed: the biblical stories of Adam and Eve, Abraham and his family, the Exodus, Job and his friends, and the life and death of Jesus. One of our goals is to try to retrieve the original meaning of these narratives, what their authors intended, but we will also explore what they have come to mean for readers in our own day for believers and skeptic's, scientists and artists, fundamentalists and feminists.

267. FOOD & RELIGION.

SM 273. (EALC036) Buddhist Literature. McDaniel. This course seeks to introduce students to the diversity of texts, textual practices, and textual communities in Buddhist Asia. We will look at cosmological, historical, narrative, psychological, grammatical, magical, didactic, and astrological genres to gain an understanding of how Buddhist writers from various places and times have expressed their views on the inner workings of the mind, the nature of action, the illusion of phenomena, the role of the ethical agent, the origin of chaos, the persistence of violence, the contours of the universe, and the way to Enlightenment.

SM 343. (NELC330) Islam in Eurasia. (M) Garipova. This course will explore the historical development of Islam in Central Eurasia from its origins until the present day. Islam in this region has centuries-long presence and a rich variety of traditions and practices. The aim of this course is to show that Islam in various parts of this larger region - Central Asia, North
Caucasus and Transcaucasia, the Crimea, the Kazakh steppe and the Volga-Ural region was not a homogenous, static, and dogmatic creed. Rather, it presents a variety of Muslim identities and practices shaped by specific religious institutions within the context of their particular interaction with the state. The Russian imperial rule made Islam function in a qualitatively different environment, provided a new context for mutual impact of Muslim peoples on each other, transformed old and created new religious institutions which led to religious change. We will analyze Islamic institutions and their relations with state structures as well as the impact this interaction had on the religious authority of the ulama, Islamic law and society.

This course will focus on the development of Islamic law in the modern context. The functioning of traditional Islamic law (shari‘a) in pre-modern times substantially from its counterpart in the nineteenth and twentieth centuries. Imperial, colonial and modern states in different geographies had a transformative impact on the practice of shari‘a, replacing the traditional order and institutions in which shari‘a formed and developed with the new ones. In different contexts, intervention and pressure of states produced different outcomes for the communities and for those who represented traditional legal authority. We will analyze legal developments in various geographies with a focus on both state policies and local responses. We will also look at how Muslims understood shari‘a in the twentieth century, how they employed it as ideology and how they tried to rethink its relevance in the contemporary time.

Weekly seminar explores expressions of Jewish political thought—and, where possible, political action—from biblical times to the present. Themes include the leadership of biblical priests, prophets and kings; covenant as the basis of the theocratic polity the status of outsiders in biblical and rabbinic societies; constructions of political authority; changing understandings of Jewish “nationhood”; messianism; medieval Jewish ruminations on ideal government; the non-sovereign Jewish community's relationship to rulers; manifestations of Jewish communal autonomy; tensions between rabbinic and lay leadership; biblical Israel as a model for governance in early modern political thought; debates over Jewish Emancipation; expressions of Jewish socialism; varieties of pre-state Zionist thought; contemporary messianic Zionism; contemporary manifestations of Jewish political concerns. Primary sources (English translation) include readings from Hebrew Bible, ancient rabbinic texts, Jewish communal decrees, Moses Maimonides and other medieval Jewish thinkers; Baruch Spinoza, Moses Mendelssohn, Ber Baruchov, Theodor Herzl, Martin Buber, Rabbi Abraham Isaac Kook, Yeshayahu Leibovitz and contemporary writers. One session will take place in the Rare Book Room of Van Pelt Library. No prior knowledge is assumed.

SM 446. (HIST446) Digital Humanities. Tim Powell.
Penn recently opened the Price Lab for Digital Humanities as part of the university's new strategic plan, so it is a very exciting moment for DH at Penn. This class might be considered an advanced introduction to the relatively short history of DH. It will focus on one of the questions that has vexed the field from the beginning: Why are the Digital Humanities So White? as Tara McPherson put it rather bluntly in a chapter of Debates in the Digital Humanities. The class will provide an overview of some of the foundational texts of DH, but the primary focus of the class will be involving students in a new DH project to construct an interactive timeline, built in Omeka. The spatio-temporal timeline seeks to represent Iroquois history as seen from the perspective of Iroquois scholar and Faithkeeper, Richard Hill. Hill is the director of the Deyohahage: Indigenous Knowledge Centre on the Six Nations reserve in the Grand River region of Ontario and one of the most highly regarded traditional knowledge keepers of his generation, so it is a great honor to be able to work with him.

On a more theoretical level, the class will be addressing the relationship between cultural codes and digital codes. In other words, how to represent Iroquois spiritual history (i.e., mythical events) on a chronological timeline? How to represent indigenous space on maps created by the people who colonized the Iroquois (e.g., the boarder between Canada and the US cuts the Iroquois traditional homeland in half)? Students will learn how to evaluate a complex and challenging project like this, which is still in its earliest stages. On a more practical level, students will learn skills in the exhibit building software Omeka. The class will engage many different forms of history from archival documents to YouTube videos, in its study of how digital technology makes it possible to represent the indigenous oral tradition much more accurately than is possible on the printed page.

This advanced course for Religious Studies majors and minors approaches the study of religion through material objects. By looking at both sacred and everyday objects like rosaries melted in atomic blasts, magical amulets used in healing rituals, temple murals defaced by invading armies, manuscript stained by hold water, we will explore the many ways people express their spiritual aspirations and existential fears through objects. Not only will a different object from a variety of religious traditions be examined each week (eleven in total), but we will also explore different methodological and theoretical approaches to the study of religion. Psychological, phenomenological, bio-genetic, sociological, art historical, discursive, post-modern, and narrative approaches will be discussed.

498. ADVANCED RESEARCH PROJECT. (C)

540. (JWST541) DAVID AND SOLOMON.

SM 549. (RELS149, SAST102, SAST302) The Mullah & The Englishman - Islam in Modern South Asia. (C) Sevea.
This course introduces students to Islam in modern South Asia, with a particular focus on the development of ‘new’ Muslim religious idioms, orientations, pedagogies and movements in 19th and 20th century South Asia. This course is divided into three parts. In the first part of this course, students are provided with an overview of: Muslim institutions and spaces in pre-colonial South Asia, the historical emergence of South Asia as a prominent global center of Islam, and the development of Urdu as an Islamic idiom. The second and main part of this course introduces students to academic literature concerning sophisticated encounters between the Muslim elite in north India and modern political and technological developments. The intimate interactions of the ‘Mullah’ and the ‘Englishman’ from the 19th to 20th century will thus be revealed to students. This part focuses upon, on the one hand, the role of Islam and pious Muslims in the colonial army, and on the other hand,
Muslim initiatives to educate an Islamic 'modernism', 'traditionalism', 'fundamentalism' and 'Sufism', and appropriate print technologies for the creation of public spheres. Students will be introduced to historical scholarship revelatory of how these Muslim pedagogies and print initiatives were based upon sophisticated transcultural networks and exchange.

In the third part of this course, students will be encouraged to engage with contemporary literature on South Asian Muslim political philosophy and nationalism, and the transcultural intellectual exchanges that produced key Muslim political ideologies.

This course will explore the history of the religion(s) designated by the term Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlit both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

This class looks at the history of Islam across South Asia, East Asia, and Southeast Asia with a focus on the last three centuries. Contrary to the popular perception that the Middle East defines Islam, Asia has been the source of some of Isams most important social and reform movements. Students will contrast different Muslim societies over the last three centuries, examine points of confluence for geographically- or culturally-distinct Muslim peoples, and in their writing assignments focus on the history of one society in a wider Islamic context.

This course focuses on the historical and cultural relationship between Africans and their descendants abroad.

SM 629. Wisdom in the Hebrew Bible. (M) Crantz.

SM 632. (SAST632) HINDUISM&COLONIAL MDRNTY. (C)

This seminar deals with the question of modernity in South Asia, with a specific focus on the construction, dissemination, and politicization of Hinduism in nineteenth and twentieth century India. It focuses on three central heuristic lenses--namely those of European imperialism, Orientalism, and nationalism--to study modernity and its discontents. What was at stake in the encounter between colonial modernity and India's religions in nineteenth and early twentieth centuries? How did colonial and native discourses on "reform" and "revival" shape Indian religions as we understand them today? Howis modern "Hinduism" inextricably hinged to early forms of cultural transnationalism, Orientalism, and incipient forms of nationalism? This seminar approaches questions such as these and others, with an eye to understanding how nineteenth and early twentieth century discourses continue to shape contemporary understandings of Hinduism in deep and highly politicized ways.

What makes Persian culture distinctive within broader Islamic intellectual history, and what constitutes the historical and geographical boundary of the Persianate intellectual and cultural zone? These questions lie at the center of inquiry in this seminar in which participants will read and discuss a broad range of works from the 1 Ith to the 20th centuries. Readings will include works on philosophy and language, Sufi epic poems, religious and cultural geographies, accounts of natural and manufactured wonders, urban and political histories, as well as other kinds of texts. All readings will be in English for the regular meeting of the seminar; students with a reading knowledge of Persian and an interest in participating in an additional meeting to read the assignments in their original language should register for the higher of the two numbers listed for this course.

SM 670. (SAST640) Religious Bodies and Sex in South Asia. (C) Sevea.

This graduate-level course introduces students to the writings of key religious scholars in modern South Asia who associated the regeneration of Hinduism, Islam, and Sikhism with the cultivation of bodies and sexual practices. Particular attention will be paid towards religious texts produced in modern India, Pakistan and Bangladesh pertaining to sexual bodies, excercises and health; celibacy; body-building; the transmission of sexual knowledge; and the political roles of the 'Hindu', 'Muslim' and 'Sikh' body. In this course, students will be encouraged to engage with a range of sources including religious-sexual manuals, autobiographies, novels, speeches, pamphlets, official records, recipes and films. Moreover, students will be introduced to the academic literature on South Asian religious scholars and 'sex gurus' in South and Southeast Asia; religious sexuality in South Asia, Southeast Asia, the Middle East and Europe; and, the transcultural literary networks that led to the production of religious texts in modern South Asia.

SM 702. (ARTH740, SPAN630) Topics in Medieval Art. (M) Guerin.

Spring 2017: For the Christians of Medieval Europe, pilgrimages were one of the key embodied experiences of faith. Reliquaries, churches with their welcoming portals, manuscripts and music: all were crafted to augment the corporeal experience of the divine. This seminar will take the material culture surrounding the relic and its veneration as a lens for exploring the Middle Ages, from the Early Christian to the High Gothic. Cross-disciplinary methodologies and cross-cultural examples will be considered to advance our understanding of these phenomena. While proceeding comparatively, each week will focus on a distinct strategy for shaping the interaction between faith and matter.

SM 743. (NELC713, RELS643, SAST633) The Persian Intellectual Tradition. Elias. Prerequisite(s): To take course as RELS743 prior knowledge of Persian is required.

What makes Persian culture distinctive within broader Islamic intellectual history, and what constitutes the historical and geographical boundary of the Persianate intellectual and cultural zone? These
questions lie at the center of inquiry in this seminar in which participants will read and discuss a broad range of works from the 11th to the 20th centuries. Readings will include works on philosophy and language, Sufi epic poems, religious and cultural geographies, accounts of natural and manufactured wonders, urban and political histories, as well as other kinds of texts. All readings will be in English for the regular meeting of the seminar; students with a reading knowledge of Persian and an interest in participating in an additional meeting to read the assignments in their original language should register for the higher of the two numbers listed for this course.

745. VISUAL CULTURES IN ISLAM.
SM 771. READINGS PALI BUDDHISM. Justin McDaniel.
This course is an intensive reading course in Pali literature from South and Southeast Asia. Students who wish to take the course must have at least 3 years of Sanskrit and a knowledge of at least one Southeast Asian language. Reading will be in philosophical, narrative, magical, medical, historical, and ritual texts.

This is an advanced PhD seminar in which the students will need advanced proficiency in Pali and at least one Southeast Asian Language (Burmese, Thai, Khmer, Lao, Leu, Khoen, Shan, and/or Lanna). Original manuscripts from Penn's collection of Southeast Asian religious, medical, botanical, historical, art, and literary archives will be examined and discussed.

Comparative Religion

L/R 001. (EALC004) Religions of Asia. (C) History & Tradition Sector. All classes. Vose.
Summer 2012 Description: This course is an introduction to the religious traditions of Southern and Eastern Asia. It surveys the beliefs, rituals, and thought of major traditions—Hinduism, Buddhism, Confucianism, Taoism—and less well known traditions—Jainism, Zoroastrianism, Sikhism, Shintoism. The focus of the course will be on the lived experience of each tradition, looking at the worldviews, motives and aspirations of religious figures. Further, we will trace historical developments by examining moments of sharing and contestation of religious, political, and social ideas between traditions in order to question their boundaries and integrity. Special emphasis is placed on the role of the visual in each religious culture. As religions often do not draw the same boundaries between the sacred and profane as western traditions do, we will also interrogate the ways we approach the study of religion and problematize the very study of "Asian Religions" and "World Religions" in general. This course seeks to foster effective skills and to promote critical and independent inquiry into the ways the sacred has been and continues to be made, and how the vicissitudes of life are made meaningful in Asia.

L/R 002. (JWST122) Religions of the West. (C) History & Tradition Sector. All classes. Reed. This course surveys some of the core beliefs and practices within Judaism, Christianity, and Islam. To do so, we will focus on history and memory, exploring how key figures and formative events from the past have been made present, from generation to generation, through scripture, ritual, liturgy, and remembrance. Special attention will be given to points of interaction between Jews, Christians, and Muslims, as well as to the impact of their intertwined histories on the formation and development of Western cultures. Fulfills History & Tradition Sector.

A consideration of how great works of literature from different cultural traditions have reclaimed and reinterpreted compelling religious themes. The focus this semester will be on themes of creation, especially the creation of human beings, from ancient myths of different cultures to modern science fiction. This course fulfills the General Requirement in Sector 3, Arts and Letters.

L/R 004. (ANCH102, ARTH121) Art and Religion. (C) Muravchick.
What is religious art and what makes art religious? This course will survey a wide variety of artistic expressions from a number of religious traditions which draw on spiritual themes, are inspired by religious experiences or texts, and which serve an important role in religious practice and belief. Some of the themes which this course will explore are: visualization and action within the cosmos, passion and religious ecstasy, the material culture of personal devotion, icons and iconoclasm, depictions of the miraculous, and the relationship between word and image. Objects and images from Christianity, Islam, Judaism, and Buddhism and will be explored along with examples from other traditions.

005. (FOLK029, GSWS109) Women and Religion. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Garipova. This course looks at the contrast between the model of the virtuous woman, and the instructive power of the uncontrollable woman, from 1800 to present in Hinduism, Christianity, and Islam. Drawing examples from a variety of historical contexts and traditions, this course will touch on issues of religious empowerment, piety, leadership, and theoretical questions involving gender, spirituality, the body and the intersection of class status and religious performance.

007. (AFRC001, HIST007) Introduction to Africana Studies. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Staff. The aim of this course is to provide an interdisciplinary examination of the complex array of African American and other African Diaspora social practices and experiences. This class will focus on both classic texts and modern works that provide an introduction to the dynamics of African American and African Diaspora thought and practice. Topics include: What is Afro-American Studies?; The History Before 1492; Creating the African Diaspora After 1500; The Challenge of Freedom; Race, Gender and Class in the 20th Century; From Black Studies to Africana Studies: The Future of Afro-American Studies.

SM 010. Religion in Public Life. (C) Staff. This seminar is an introduction to several aspects of the hotly debated relation between religion and public life in America. In the first half of the course we will study two books by law professors, one Jewish and the other Christian. Their debate will introduce us to the legal and historical background, and to the continuing challenges of church-state separation in America. The second half of the course will examine the claim that we now live in a "new religious America," one in which the increasing presence of Hindus, Buddhists and Muslims has created a new pluralism and a new set of challenges. We will then consider the argument of one historian that diversity and difference have characterized religious groups in America since at least the 19th century, and that this has resulted in a number of paradoxical social situations. Finally, we will close with a brief look at the claim that there
exists in America a "civil religion," one that unites all citizens despite their other religious differences.

SM 012. Introduction to Religion. (C) Matter.
This course is an introduction to the study of religion as an academic discipline. We will consider issues such as the role of religion in human societies, how religion addresses perennial questions of life and death, and how religious traditions change, evolve, and influence one another. Although this is NOT a primarily an introduction to different religious traditions in sense of a "world religions" survey course, students will become acquainted with major teachings of several faith traditions. Our focus, though, will be the big questions: Does religion do more good than harm or is it the other way around?
Has the modern emergence of a more secular worldview been an improvement or a diminishment? Can we know or experience who or what "ultimate reality" is, or is "it" really beyond us? How can we explain the relationship between religion, peace, and violence? Is suffering and meaningfulness so pervasive that no traditional concept of a loving and powerful God can be affirmed credibly? What kinds of provocative and perhaps enduring answers have people given to these questions in the past? Has something changed as we've moved from ancient to modern times in terms of our own worldviews, so that the the ways people used to think about God must be radically revised if not abandoned entirely?

or are there ways for modern women and men to become or remain religious without ceasing to be modern? The goals of this freshman seminar include: 1. an enhanced working knowledge of some significant elements of religion, especially symbol, doctrine, experience, and systems of cosmic, social and order, as they are manifested in several religious traditions. 2. an enhanced capacity to make critical comparisons among religious traditions across time. 3. a greater capacity to analyze and reflect on the meaning of religious beliefs and practices. 4. a greater capacity to read and critically interpret religious and scholarly texts. 5. development of your written and verbal communication skills.

014. (ANCH046, NELC046) Myths and Religions of the Ancient World. (B) History & Tradition Sector. All classes. Frame.
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focussing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death and destruction. The course will cover not only the better known cultures from the area, such as Egypt and Mesopotamia, but also some lesser known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example the relationship between religion and magic, and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals and liturgies.

015. (ENGL033) The Bible as Literature. (M) Hall.
Successive generations have found the Bible to be a text which requires—even demands-extensive interpretation. This course explores the Bible as literature, considering such matters as the artistic arrangement and stylistic qualities of individual episodes as well as the larger thematic patterns of both the Old and New Testaments and the Apocrypha. A good part of the course is spent looking at the place of the Bible in cultural and literary history and the influence of such biblical figures as Adam and Eve, David, and Susanna on writers of poetry, drama, and fiction in the English and American literary traditions.

057. Study Abroad.

SM 103. Approaches to the Study of Mysticism. (C) Staff.
Introduction to "mysticism" as a subject of academic investigation and to selected representations in various religious traditions. Special attention to problems of definition and historical context.

105. (CIMS105) Religion and Film. (C) Staff.
Introduction to different ways in which religion is represented in film. Emphasis upon religious themes, but some attention to cinematic devices and strategies. Although most films studied will deal with only one of the major historical religious traditions (Hinduism, Buddhism, Judaism, Christianity and Islam), the selection will always include at least two of those traditions.

106. Modern Religious Thought. (C) Staff.
Evil and its justifications, theodicy, are a dominant and recurring problem for modern religious thought. We will examine various explanations for the nature and origin of evil in the writings of Leibniz, Kant, Nietzsche, Arendt, and Camus along with other philosophers and religious thinkers both ancient and modern. Through close readings of primary sources and secondary materials we will trace this problem of evil from its ancient formulations to its modern instantiations. The question, "whence evil?" becomes most pertinent in an era when many ills are surmountable through education and technological improvements yet ills persist and the greatest volumes of people in human history have been slain in mass-kilings.

Weekly lectures (some of which will be illustrated) and a field trip to the University Museum's Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic religious art and architecture, and the religion of daily life.

115. (COML053, MUSC053) Art and Archaeology in Greek and Roman Religion. (M) Muller.
Survey of the pagan religion of Greece and Rome in which the major expressions of cultic activity from Mycenaean-Minoan times (ca. 1600-1200 B.C.) until the establishment of Christianity (ca. A.D. 300) will be examined. Utilizing artifacts from the University of Pennsylvania Museum and elsewhere, the course will work with the mythological, literary and archaeological records for the cults of ancient Athens, Delphi, Olympia, Rome and other key centers. Participants will be introduced to the Museum's research and storage facilities normally not accessible to the public.

SM 116. (FOLK025, HIST025, HSOC025, STSC028) Science, Magic, and Religion, 1500 to the present. (C) History & Tradition Sector. All classes. Staff.
Throughout human history, the relationships of science and religion, as well as of science and magic, have been complex and often surprising. This course will cover topics ranging from the links between magic and science in the seventeenth century to contemporary anti-science movements.
199. Independent Study. (C)

Course explores attitudes toward monotheists of other faiths, and claims made about these "religious Others" in real and imagined encounters between Jews, Christians and Muslims from antiquity to the present. Strategies of "othering" will be analyzed through an exploration of claims about the Other's body, habits and beliefs, as found in works of scripture, law, theology, polemics, art, literature and reportage. Attention will be paid to myths about the other, inter-group violence, converts, cases of cross-cultural influence, notions of toleration, and perceptions of Others in contemporary life. Primary sources will be provided in English.

Graphic novels and comic books express a variety of popular conceptions concerning religion and, as such, are capable of showing us where (and how) religious identities and phenomena exist in modern societies. Viewing comics as material-semiotic objects with multiple origins, audiences, and effects, this course investigates how religions, religious identity, and religious phenomena are expressed in and through the comic book. Situated at the intersection of religious studies, critical theory, media studies, and literary analysis, the course asks students to consider a number of issues and concerns, including: the appropriateness of the medium to express religious ideas, practices, texts, and histories; the different ways in which narratives of salvation and spiritual transformation are visualized; the role of alternative comix in the critique of pop culture; the use of comics as a means to proselytize, confess, memorialize, and historicize; and the cultural status of comics as material objects of religious import.

205. (ARTH226, ARTH626, CLST221, CLST621) American Folklore. (M) Staff.
American folklore encompasses an astonishing array of cultural groups and artistic forms: African-American oral poetry and Franco-American fiddle tunes, Irish-American songs and Italian-American food, Native American jokes and German-American quilts, ancient old-country recipes and the latest and most bizarre Urban Legend. In this course, we will survey some of the groups that we call "American" and some of the expressive traditions that we call "folklore." We will discuss how these traditions originate, how they develop over time, and especially how they become part of--or remain separate from--American popular culture. Along the way, we will raise important questions about the meanings that folklore holds for "Americans," for smaller cultural groups, and for individuals.

L/R 236. (CIMS352, COML241, GRMN256, RUSS188) The Devil's Pact in Literature, Music and Film. (C) Arts & Letters Sector: All Classes. Richter.
For centuries the pact with the devil has signified humankind's desire to surpass the limits of human knowledge and power. From the reformation chap book to the rock lyrics of Randy Newman's Faust, from Marlowe and Goethe to key Hollywood films, the legend of the devil's pact continues to be useful for exploring our fascination with forbidden powers.

309. Honors Thesis Seminar. (B)
Required of honors majors who choose the research option.

SM 311. (JWST335, NELC335) Muslim, Christian, and Jewish Relations in the Middle East and North Africa. (M) Sharkey.
This class is a reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers.

399. Directed Reading. (C)
Students arrange with a faculty member to pursue a program of reading and writing on a suitable topic.

409. (AFRC409, ANTH409) Native American Spirituality, Health, and Contemporary Concerns. (C) Powell.
Spring 2014 Topic: "Native American Spirituality, Health, and Contemporary Concerns" will focus on traditional and contemporary conceptions of Health in four Native American communities—Lakota or Sioux, Navajo or Dine, Cherokee, and Ojibwe or Anishinaabe. The methodology will be interdisciplinary, drawing upon writings from the fields of health care, anthropology, literature, history, film studies, and religious studies. Students will learn about the complex interrelationships between traditional knowledge systems and modern, western conceptions of "medicine." Some examples of this include the Lakota Ghost Dance, Navajo sand paintings, Cherokee protocols regarding sacred knowledge, and Anishinaabe herbal medicine. The readings will include anthropological studies of these forms of "medicine," a history of Indian Health Services, first hand accounts of a female Navajo doctor trained in western medicine who then returned home to practice on the Navajo reservation, studies of historical trauma resulting from the massacre of Lakota at Wounded Knee, and contemporary studies of health care on Indian reservations. Students will be evaluated on the basis of in-class presentations and two research papers.

The class will also participate in an ongoing project to develop a Cultural Sensitivities workshop that is being implemented at the Indian Health Care clinic at the Cass Lake Hospital on the Leech Lake Ojibwe reservation.

410. American Religion and the LGBTQ Experience. (C) Philip Francis.

Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha'i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the
Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

SM 500. (GRMN554) Theories of Religion. (M) Staff.
A study of the various ways of interpreting religion as a phenomenon in human life. Analysis of the presuppositions involved in psychological, sociological, and phenomenological approaches. Authors include James, Weber, Freud, Otto, Eliade, and contemporary writers offering historical, anthropological, and philosophical perspectives.

Many faculty in academia, especially at a research university, think of themselves as scholars first and teachers second. The emphasis on scholarship is essential for a position at a research university, but what the culture of such institutions can obscure is the importance of teaching as part of the academic vocation. The purpose of this course is to help prepare graduate students to teach academic religious studies, not to teach them how to teach, a skill developed through experience and feedback, but to encourage students to plan in advance for their work as educators and to develop their teaching aspirations and approach in dialogue with issues and debates in Religious Studies, the Humanities and the field of Education.

In the first half of the course, we will examine the theoretical question of whether modern liberal societies need a civil religion - an idea first proposed in the late eighteenth century by writer who feared that without some unifying ideal or principle the centrifugal forces at work in modern societies would lead them to disintegrate. We will examine various authors who have defended the idea of civil religion in these terms (including J.J. Rousseau, J.G. Herder, and G.W.F. Hegel) as well as several who (implicitly or explicitly) have rejected the argument (Max Weber, Michael Oakeshott, Daniel Bell, and Niklas Luhmann). In the second half of the class, we will turn to the American context and explore the way these arguments have played themselves out from the time of the constitutional frames to today. In this part of the class, we will read and discuss excerpts from the Federalist Papers and Tocqueville's Democracy in America, selected presidential speeches, nineteenth- and twentieth-century debates surrounding Manifest Destiny and American Exceptionalism, John Dewey/ Richard Rorty's proposal for a religion of democratic "common faith," and the neoconservative case for a civil religion of "national greatness."

Along the way we will also have occasion to examine sociological treatments of civil religion by such authors as Emile Durkheim, Robert Bellah, and Seymour Martin Lipset.

SM 605. (COML662, FOLK629, NELC683) Theories of Myth. (B) Ben-Amos.
Theories of myth are the center of modern and post-modern, structural and post-structural thought. Myth has served as a vehicle and a metaphor for the formulation of a broad range of modern theories. In this course we will examine the theoretical foundations of these approaches to myth focusing on early thinkers such as Vico, and concluding with modern twentieth century scholars in several disciplines that make myth the central idea of their studies.

SM 609. (COML609, GREEK609) Divination and Semiotics. (M) Struck.
This course will trace a history of signs, using Greek divination as the primary focus. We will explore ancient and contemporary sign theories and their usefulness in illuminating ancient practices of divination—or the reading of signs thought to be embedded in the world. Participants in the seminar will be expected to contribute an expertise in one (or more) of three general areas: Greek literature, Greek and Roman religions, and contemporary theory in the humanities. The course is open to graduate students without Greek as well as classicists—though please register appropriately. The particular areas we cover will to some extent be determined by the interests of the participants, but will surely include: divination by dreams, entrails, and oracles as attested by literary and (to a lesser extent) archaeological evidence; Platonic, Aristotelian, Stoic and Neoplatonic theories of signs; and contemporary semiotics as articulated mainly by Saussure, Barthes, and Eco. Ancient authors will include: Homer, Xenophon, Sophocles, Cicero, Artemidorus, and Iamblichus.

999. Independent Study. (C) See department for section numbers.

Religion in America

117. (AFRC117) African American Religion. (C) Butler.
The unique history and experiences of African Americans can be traced through religion and belief. Through the mediums of literature, politics, music, and film, students will explore the religious experience of people of the African Diaspora within the context of the complex history of race in American history. The course will cover a broad spectrum of African American religious experience including Black Nationalism, urban religions, the "black church" and African religious traditions such as Santeria and Rastafarianism. Special attention will be paid to the role of race, gender, sexuality, and popular culture in the African American religious experience.

SM 208. (ANTH208, CIMS208, ENGL208) Native American Religion and Literature. (M) Powell.
This course will examine films by and about Native Americans. From the very beginnings of film history, Native Americans have been a centrally important subject. While much of the writing about Native American films tends to focus on the perpetuation of stereotypes, this class will concentrate on four primary themes: 1) the role that film plays in helping the audience to understand the exceedingly complex place of indigenous people in "American" identity (with "American" signifying, in this instance, a hemispheric sense of identity); 2) the myriad of ways that indigenous people have been involved in the history of film as extras, actors, directors, producers; 3) how representations changed when Native Americans took control of production; 4) the ways in which films by and about Native Americans have helped to heal the historical trauma resulting from the "Indian Wars" that have gone on for 500+ years on the North American continent.

211. (AFST211) African Religion in America. (M) Staff.
This survey course focuses on African Religious culture in Nigeria and in the African Diaspora. Students will be introduced to the ritual and philosophical foundations of Yoruba religion and culture. This course emphasizes the incorporative nature and heterogeneity of problematize essentialisms and stereotypes about these religious systems by paying close attention to the ethnographic details, historical contexts, philosophical underpinnings, and political developments of each religion in their region. Traditions we will be
exploring are: Ifa Divination in Nigeria and Benin; Santeria and Regla de Ocha in Cuba and the United States; Vodoun in Haiti; Shango in Trinidad; Candomble and Umbanda in Brazil; and the American Yoruba Movement in the United States. Course readings will provide a theoretical and informative basis for dealing with the concepts of syncretism, creolization, and ethnicity.

SM 310. (AFRC308) American Jesus. (M) Anthea Butler.
Images and beliefs about Jesus have always been a compelling part of American life. This course seeks to examine the social, political, religious and artistic ways that Jesus has been appropriated and used in American life, making him a unique figure for exploring American religious life. Special attention will be given to how Jesus is used to shape social and political concerns, including race, gender, sexuality, and culture.

SM 400. The Religious Right in America. (A) Butler.
From the Scopes Monkey Trial to Sarah Palin, conservative religion figures and groups have attempted to define and shape government and public policy in the United States. This course will look at the impact of conservative religion in American Politics and the ideas, personalities, and policy it has shaped. Special attention will focus on the 2008 and 2012 Election cycles, the use of media in the Religious Right, political personalities, and grassroots organizing integral to the Religious Right and its impact on American politics.

This seminar will engage works of autobiography in the African American tradition with particular attention to the spiritual and religious contexts of the authors. We will discuss recurring themes, scriptural motifs, and religious and social tensions expressed in the works. Gender, political ideology, social activism, and religious identification will also be explored.

SM 517. (AFRC518, FOLK517) Topics in American Religion. (M) Butler.
From Marvin Gaye, to Tammy Faye Baker, to Sarah Palin and James Baldwin, Pentecostalism has influenced many, including politicians, preachers, writers, and the media. One of the fastest growing religious movements in the world, Pentecostalism continues to have a profound effect on the religious landscape. Pentecostalism's unique blend of charismatic worship, religious practices, and flamboyant, media-savvy leadership, has drawn millions into this understudied and often controversial religious movement. This course will chronicle the inception and growth of Pentecostalism in the United States, giving particular attention to beliefs, practices, gender, ethnicity, and Global Pentecostalism.

This undergraduate-level course introduces students to the multi-religious complexion of South Asia as a region, with a particular focus upon key religious traditions and the resemblances and interactions between them. This course is divided into two parts. In the first part of this course, students are introduced to key religious traditions of South Asia, Hinduism, Buddhism, Jainism, Islam and Sikhism. Students will be encouraged to survey academic works pertaining to, on the one hand, the literature, doctrines, cosmologies, rituals and histories of, and prominent places of worship in, the Hindu, Buddhist, Jain, Muslim and Sikh religious traditions. On the other hand, the development of South Asia into a distinctive space and spiritual "homeland" for multi-religious communities. Whilst the first part of the course focuses upon religious traditions autonomously, the subsequent section of the course is thematic and encourages students to make comparisons, and discover sophisticated relationships and dynamic interactions between religious traditions in South Asia. Students are introduced to scholarly writings that are revelatory of the materiality of religious traditions in pre-modern and modern South Asia; everyday forms of piety in South Asia; gender positions in religious traditions; encounters of religious traditions with European colonialism; and, perceptions of the 'other' in pre-modern religious traditions. Herein, students will find multiple sites of resemblances or differences, and cultural negotiations, engagements and contests, within religious traditions in South Asia.

SM 610. Religion in Public Life. (M) Staff.
This seminar is an introduction to six of the most debated areas involving religion in public life: diversity in American religions; church-state relations and the Constitution; issues in specific eastern and western religions; religious dimensions of contemporary ethical and social debates (abortion, euthanasia, minority and gender roles); religious symbolism in the public sphere; and the prevailing understandings of religion in the media and modern society. Teachers, school administrators, journalists, public policy specialists, social workers, lawyers, and health care professionals all encounter situations in which the religious sensitivities of "clients" (students, parents, readers, etc.) affect the ways in which they discharge their duties. This seminar serves as an introduction to the Religion in Public Life concentration within the Master of Liberal Arts Program, which is designed to provide professionals with an understanding of the many historical, social and legal issues that complicate discussions of religion in public situations.

Jewish Studies

024. (ANTH124, JWST124, NELC155) Archaeology and the Bible. (M) Zettler.
The Hebrew Bible (Tanak) and archaeological research provide distinct, and at times conflicting, accounts of the origins and development of ancient Israel and its neighbors. Religion, culture and politics ensures that such accounts of the past have significant implications for the world we live in today. In this course we will discuss the latest archaeological research from Israel, the Palestinian Territories and Jordan as it relates to the Bible, moving from Creation to the Babylonian Exile. Students will critically engage the best of both biblical and archaeological scholarship. Open discussions of the religious, social and political implications of the material covered will be an important aspect of the course.

The Babylonian Talmud (Bavli), a product reflecting the collaborative effort of generations of sages, is the foundational legal and ethical document of rabbinic Judaism. Both the methods of interpreting this text --and their theoretical frameworks have varied dramatically, evolving creatively throughout the generations. In the past century, theories of how to read the Talmud and hypotheses about its formation and redaction have opened up new avenues for understanding what the text says and, more importantly, how it works. Through in-depth examination of demonstrative legal passages, this course will contrast the insights generated by the major critical schools of the past century and with the interpretations of selected medieval scholars, the Rishonim. English
translational help alongside the original texts. Previous study of the
Talmud is helpful.

120. (HIST139, JWST156, NELC051, NELC451) Jews and Judaism in
Antiquity. (B) History & Tradition Sector. All classes. Staff.
The course is an overview of Jewish history, culture, and society from its
biblical settings through the Hellenistic-Roman, and rabbinic periods. We will
trace the political, social, and intellectual-religious, and literary development of
Judaism from its beginnings through the Second Temple period to the formation and
evolution of Rabbinic Judaism. Topics to be covered include: the evolution of
biblical thought and religious practice over time; Jewish writing and literary genres;
varieties of Judaism; Judaism and Imperialism; the emergence of the rabbinic
class and institutions.

121. (HIST140, JWST157, NELC052, NELC452) Med and Early Mod Jewry.
(A) History & Tradition Sector. All classes. Ruderman.
Exploration of intellectual, social, and
cultural developments in Jewish civilization
from the rise of Islam in the seventh
century to the assault on established
conceptions of faith and religious authority
in 17th century Europethat is, from the age
of Mohammed to that of Spinoza.
Particular attention will be paid to the
interaction of Jewish culture with those of
Christianity and Islam.

122. (HIST141, JWST158, NELC053) History of Jewish
Civilization: 17th Century to the
Present. (B) History & Tradition Sector. All classes. Wenger.
This course offers an intensive survey of the
major currents in Jewish culture and society from the late middle ages to the
present. Focusing upon the different
societies in which Jews have lived, the
course explores Jewish responses to the
political, socio-economic, and cultural
challenges of modernity. Topics to be
covered include the political emancipation of Jews, the creation of new religious
movements within Judaism, Jewish
socialism, Zionism, the Holocaust, and the
emergence of new Jewish communities in
Israel and the United States. No prior
background in Jewish history is expected.

123. (JWST123, NELC283)
Introduction to Judaism. (M)
Dohrmann.
Introduction to Judaism is a broad
introduction to Judaism-touching on key
religious themes, ideas, and practices as
they develop throughout Judaism's long
history. Our major emphasis will be to see
the religion as an evolving dialogue that
happens across and within its diverse
corpus of sacred and central texts from the
Bible and Talmuds, through Medieval
Kabbalah and Medieval Philosophy, and
into Modern Jewish literatures.

124. (HIST150, JWST130) American
Jewish Experience. (C) Wenger.
This course offers a comprehensive survey
of American Jewish history from the
colonial period to the present. It will cover
the different waves of Jewish immigration
to the United States and examine the
construction of Jewish political, cultural,
and religious life in America. Topics will
include: American Judaism, the Jewish
labor movement, Jewish politics and
popular culture, and the responses of
American Jews to the Holocaust and the
State of Israel.

125. (JWST150, NELC150)
Introduction to the Bible (Old
Testament). (A) Humanities & Social
Tigay.
An introduction to the major themes and
ideas of the Hebrew Bible (the Old
Testament), with attention to the
contributions of archaeology and modern
Biblical scholarship, including Biblical
criticism and the response to it in Judaism
and Christianity. All readings are in
English.

126. (JWST102, JWST126, NELC186)
Jewish Mysticism. (M) Arts & Letters
Sector. All Classes. Fishman.
Survey of expressions of Jewish mysticism
from Hebrew Scripture through the 21st
century. Topics include rabbinic concerns
about mystical speculation, the ascent
through the celestial chambers -heikhalot-,
the Book of Creation, the relationship of
Jewish philosophy and mysticism,
techniques of letter permutation,
schematization of the Divine Body, the
prominence of gender and sexuality in
kabbalistic thought, the relationship
of kabbalah to the practice of the
commandments, Zohar, Lurianic kabbalah,
Hasidism, New-Age Jewish spirituality and
the resurgence of Jewish mysticism in the
20th century. All readings will be in
English translation.

127. (JWST152, NELC152) Jewish
Law and Ethics. (A) Staff.
An introduction to the literary and legal
sources of Jewish law within an historical
framework. Emphasis will be placed upon
the development and dynamics of Jewish
jurisprudence, and the relationship between
Jewish law and social ethics.

SM 129. (ANTH129, JWST100,
NELC252, NELC552) Themes in the
Jewish Tradition. (C) History &
Tradition Sector. All classes. Ben-
Amos/Stem/Dohrmann/Fishman.
Course topics will vary; have included The
Binding of Isaac, Responses to
Catastrophes in Jewish History, Holy Men
& Women (Ben-Amos); Rewriting the
Bible (Dohrmann); Performing Judaism
(Fishman); Jewish Political Thought
(Fishman); Jewish Esotericism
(Lorberbaum). Democratic culture
assumes the democracy of knowledge-the
accessibility of knowledge and its
transparency. Should this always be the
case? What of harmful knowledge? When
are secrets necessary? In traditional Jewish
thought, approaching the divine has often
assumed an aura of danger. Theological
knowledge was thought of as restricted.
This seminar will explore the "open" and
"closed" in theological knowledge, as
presented in central texts of the rabbinic
tradition: the Mishnah, Maimonides and
the Kabbalah. Primary sources will be
available in both Hebrew and English.

220. (COML228, HEBR250, JWST256)
Studies in the Hebrew Bible. (B) Staff.
Prerequisite(s): Knowledge of biblical
Hebrew and prior experience studying the
Hebrew text of the Bible. Knowledge of
Greek is not required. Language of
instruction is English.
The aim of this course is to introduce
students to the critical methods and
reference works used in the modern study of
the Bible. To the extent possible, these
methods will be illustrated as they apply to
a single book of the Hebrew Bible that will
serve as the main focus of the course.

SM 222. (JWST222) Topics in
Medieval Jewish Cultures. (M) Mesler.
Spring 2013 Topic: Magic and Sorcery in
Medieval Jewish and Christian Cultures
Magical beliefs, practices, and texts
were widespread in Europe during the
Middle Ages, forming an important, but
often overlooked, aspect of contemporary
Jewish and Christian cultures. In this
seminar, we will explore the historical
evidence for Christian and Jewish magical
traditions, including their sources and
development, the integration of magic into
diverse aspects of medieval culture, and the
condemnation and persecution of those
accused of sorcery. In exploring these
traditions, we will pay special attention to
the points of intersection between Christian
and Jewish magic, which will help us understand different forms of interactions and relations between medieval Christians and Jews. Students in this seminar will learn to read medieval treatises of magic as products of a particular time and place, to recognize the particular rationality underlying magical beliefs, and to assess the relationship between magic, science, and religion in medieval thought. No prior background is necessary, and all readings will be in English.

Katelyn Mesler (Ph.D. in Religious Studies, Northwestern University) is a historian of medieval Europe, with particular interest in Jewish-Christian relations, the history of science and medicine, magical beliefs and practices, apocalyptic thought, mysticism, heretical movements, and angelology. Her research has taken her to manuscript collections throughout the U.S., Italy, France, England, and Israel, where she has investigated unpublished texts and discovered lost sources. This year, Katelyn is a fellow at the Katz Center for Advanced Judaic Studies; afterwards, she will begin a research fellowship at the Hebrew University of Jerusalem.

SM 223. (COML257, JWST153, NELC158, NELC458) Jewish Literature in the Middle Ages. (C) Fishman/Stern.

This course is devoted to introducing and exploring the different genres and types of Jewish literature in the Middle Ages, including poetry, narrative, interpretation of the Bible, liturgy, historiography, philosophy, sermonic, mystical and pietistic writings. Specific topics will vary from semester to semester. Attention will be paid to the varieties of Jewish experience that these writings touch upon. All readings in translation.

SM 224. (COML380, JWST255, NELC250, NELC550) Bible in Translation. (C) Staff.

Spring 2015: The Book of Isaiah spans over two centuries and documents one of the most turbulent periods in the histories of Judah and Israel. In this course, we will study the prophetic voice of Isaiah in the context of their historical settings and in consideration of their theological implications. We will align the biblical texts to ancient artifacts and inscriptions that were created during the time of the prophet. A close reading of the text will allow us to appreciate Isaiah’s message of peace and salvation. We can then ask: how is Isaiah’s message relevant for us today?

SM 225. (JWST225, NELC251, NELC651) Introduction to the Dead Sea Scrolls. (M) Reed.

Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to the known Jewish groups at that time (the beginning of the Common Era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocrypha" and "pseudepigrapha," biblical texts and interpretations.

SM 226. (HEBR257, JWST257) Studies in Rabbinic Literature. (D) Stern/Fishman. Prerequisite(s): Students must be able to read an unpointed Hebrew text.

THE AKEIDAH IN MIDRASH AND IN MEDIEVAL JEWISH BIBLICAL COMMENTARIES The story of the Akeidah (Gen. 22) is one of the most significant and problematic texts in traditional Jewish literature. In this course, we will trace the history of the interpretation of this text in classical Jewish literature, from early post-Biblical interpretations found among the Dead Sea Scrolls, through Rabbinic midrash, and into the various medieval commentators--Rashi, Rashbam, Ibn Ezra, Radak, Ramban, and still others. While the focus of the course will be on the Akeidah, we will also use this text as a test-case to study the history of how Jews read, and why the interpretations of this story differ so radically. Attention will also be paid to contemporary Christian and Islamic interpretations. All texts will be read in the original Hebrew, and students should be able to read unpointed Hebrew texts, but no other previous experience in reading these texts is necessary.

SM 227. (JWST227) Modern Jewish Thought. (C) Staff.

Through a reading of such thinkers as Martin Buber, Gershom Scholem and Franz Rosenzweig, the course will address some of the fundamental issues in modern Jewish thought and experience.

SM 228. (JWST252) Modern Jewish Intellectual and Cultural History. (C) Ruderman.

An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialist thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geiger, Hirsch, Herzl, Achadha-Am, Baeck, Buber, Kaplan, and others. No previous background is required.

God and Nature examines the place of the natural world, medicine, and science in Jewish thought from antiquity to the modern era. It looks especially at a body of primary sources in Hebrew written during the age of the so-called "scientific revolution" and during its aftermath. The course is a seminar open to undergraduate and graduate students with a reading knowledge of classical Hebrew. Students without Hebrew with special interest in the subject might enroll with special permission from the instructor.

SM 426. (HEBR486, JWST426) Rabbinic Writers on Rabbinic Culture. (M) Fishman. Prerequisite(s): Reading knowledge of Hebrew.

The course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period - Midrash, Mishna and Talmud - and in later juridical genres - talmudic commentary, codes and responsa. Attention will be paid to the mechanics of different genres, the role played by the underlying prooftext, the inclusion or exclusion of variant opinions, the presence of non-legal information, the balance between precedent and innovation. Reading knowledge of Hebrew is required.

SM 429. (GRMN581, HIST490, JWST490) Topics in Jewish History. (M) Staff.

Reading and discussion course on selected topics in Jewish history. The instructors are visiting scholars at the Center for Advanced Judaic Studies.

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overly polemical challenges to the law, such as those leveled by Paul, medieval
SM 523. (COML527, HEBR583, HIST523, JWST523) Studies in Medieval Jewish Culture. (C) Fishman. Prerequisite(s): Reading knowledge of Hebrew.

SM 557. (JWST553, NELC557) Seminar in Rabbinic Judaism. (M) Stern, Reed. Prerequisite(s): Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll. May be repeated for credit.

SM 433. Christian Thought From 200-1000. (M) Matter. Prerequisite(s): None--some background in European history helpful.

This course introduces students to the major intellectual issues of Christianity from the period of the formulation of orthodox theology (the third to the fifth centuries), through the early medieval era, to the dawn of scholastic theology around the year 1000. Although the emphasis is on the evolution of Christian thought, several aspects of social and political history will also be considered, for example, the growth of ascetic movements and the monastic ideal, relationship between Christianity and the Roman Empire, and the role of women in Christian history. Readings will be largely from primary sources, with several secondary authors (especially Peter Brown) serving as foils to interpretation. Students will be expected to do independent research in the library and on line, beyond the assigned readings of the course.

SM 434. Christian Thought From 1000-1800. (M) Matter. Prerequisite(s): None--some background in European history helpful.

This course will trace the development of Christian thought (including philosophy, theology, spirituality and mysticism) from the early Scholastic period to early Methodism. Readings will be from both primary and secondary sources. A research paper will be required of each student.

Spring 2014: This course will give an overview of the main currents of Western Christian thought from the first age of reform (that is, the Central Middle Ages) through the Reformations of the sixteenth century, to the eve of the Enlightenment. In these centuries, "Christendom" underwent an almost constant process of internal and external self-definition. The most striking results of this process were the definitive separation of eastern and western Christianity and the division of the western church into what became known as Protestant and Catholic Christianity. Our focus will be on the changing definitions of Christian culture, including theological formulations (definitions of orthodoxy and heterodoxy), trends of spirituality and mysticism, forms of worship, and gender roles and definitions. Attention will also be given to institutional questions such as ecclesiastical hierarchy, monasticism, scholasticism and the rise of universities, and the changing relationship between the secular and religious worlds. Readings will be from both original and secondary sources. Additional primary sources will be available online, attached to the course.

Christianity

SM 133. An Introduction to Christianity. (C) Matter.

A survey of the classical Christian Traditions (Orthodoxy, Roman Catholicism, Protestant groups). The basic perspective is phenomenological, but historical and folkloric considerations are also raised. Topics include the symbols of Christian faiths, perspectives on human nature, and views of evil.

135. Introduction to the New Testament. (C) History & Tradition Sector. All classes. Reed.

What can be known - from historical perspectives - about the life and teachings of Jesus and his earliest followers? Did Jesus see himself as a teacher and/or a revolutionary and/or the messiah? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct "religion"? distinct from Judaism? And how is that this small Galilean and Judean movement came to shape world history and Western culture even to this day? This course explores these questions through a focus on the formation of the New Testament - from the letters of Paul in the early first century CE, to the collection and closure of the canon of Christian Scriptures in the fourth century CE. In the process, we will explore the lived worlds of the first followers of Jesus through readings of texts within and outside the New Testament but also through art, artifacts, and manuscripts at Penn and in Philadelphia.

136. (JWST136) Death and the Afterlife in Ancient Judaism and Christianity. (C) Reed.

This course surveys the development of concepts about death and the afterlife in Judaism and Christianity, exploring the cultural and socio-historical contexts of the formation of beliefs about heaven and hell, the end of the world, martyrdom, immortality, resurrection, and the problem of evil. Readings cover a broad range of ancient sources, including selections from the Hebrew Bible and New Testament, as well as other Jewish and Christian writings (e.g., "apocrypha," "pseudepigrapha," Dead Sea Scrolls, classical rabbinic literature, Church Fathers, "gnostic" and "magical" materials). In the process, this course introduces students to formative eras and ideas in the history of Judaism, Christianity, and Western culture.

Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.
Students will write two papers. The first (due Feb. 8) is a 5-7 pp. analysis of a primary source from the class, for which another text may be substituted by permission of the instructor. The second paper, due at the end of the course, should be a more ambitious research paper (at least 10 pp. for undergraduates, longer for graduate students) that includes some aspect of this history we did not directly study in class.

SM 438. (JWST410) Topics in Medieval History. (C) Treat.
This seminar introduces students to the development of Jewish and Christian biblical interpretation by focusing on ancient, medieval, and modern interpretations of the Song of Songs. Students will encounter a variety of important Jewish and Christian interpreters in English translation, guided by appropriate secondary materials. The Song of Songs is part of Jewish Scripture. It appears to be a collection of poetry on the theme of human love. Studying the developing interpretations of the Song of Songs gives one an unusual opportunity to examine the history of significant ideas in Western culture. The course will touch on issues of gender and religious language, on allegory and interpretation, on mystical and feminist readings of scripture, and on the interplay of the ascetic and the erotic in religion.

This course has no prerequisites. The readings will be made available in English. The class will utilize a combination of lecture, discussion, student presentations, reports, close reading, and a research paper.

SM 533. (HIST533, JWST533) Ancient and Medieval Church History. (C) Matter.
Many historians have argued that the most successful type of religious life in the Christian tradition is that founded by Saint Benedict of Nursia in early medieval Italy. The vision of a devout life in community dominated the medieval Christian landscape, and inspired some of the greatest classics of western Christian spirituality. This course will trace the Benedictine ideal from its roots in the Desert Fathers of the early Church, through Benedict's life and the formation of his Rule, to his role played by Benedictines in the development of medieval secular learning, theology, music, and spirituality. We will end by reading some contemporary works on the Benedictine ideal in the modern world.

SM 535. (COML535) Varieties of Christian Thought before Irenaeus. (K) Reed.
A survey of the known groups and perspectives that emerged in the first 150 years or so of the development of "Christianity" from its roots in Judaism and the hellenistic world(s), with special attention to the primary sources (especially literary) and to modern attempts at historical synthesis.

SM 537. (GRMN510, ITAL530) Medieval Christian Mysticism. (C) Matter.
Selected topics in Christian mystical writings. Authors will be read in English translation. Knowledge of medieval languages is helpful, but not required.

SM 538. Modern Christian Thinkers. (C) Matter.
Close study of selected texts dealing with the relation between Christian ideas and modern thought.

SM 735. (CLST735, JWST735) Seminar in Judaism and/or Christianity in the Hellenistic Era. (F) Reed. Prerequisite(s): Qualified undergraduates may enroll with permission from the instructor. Knowledge of Greek Presupposed. Student may enter either term.
Selected topics from current research interests relating to early Judaism and early Christianity. Fall 2013 Topic: This advanced doctoral seminar will explore the main primary sources and scholarly debates concerning contacts, conflict, and competition between Jews and Christians during the formative era of Late Antiquity. Proficiency in ancient Hebrew and/or Greek and Latin is required. Undergraduates may enroll with special permission from the instructor.

Selected topics in medieval religious studies, especially biblical exegesis. Reading knowledge of medieval Latin required.

Islamic Studies

142. (ANTH142, SAST141) Islam in South Asian Culture. (M) Spooner.
Islam reached South Asia in the eighth century and Muslim rulers held sway over large parts of the Subcontinent for much of the period from the late 12th century until the colonial period. However, the majority of the population never converted to Islam, and since independence in 1947 Islam--its interpretation, relization, and influence--has been a major factor underlying many difficult political issues. This has been true not only in the largest country, India, where Muslims form 12% (unevenly distributed) of the population, but in Bangladesh and Pakistan where non-Muslims are relatively insignificant minorities. This course explores the realities and the perceptions related to Muslim identities and the Islamic heritage in the subcontinent, and sets it in global context by comparison with other parts of the world which share various aspects of the South Asian experience. The course will conclude with an assessment of the larger significance--social, economic and political, as well as cultural--of Islam in South Asia today.

143. (NELC136, SAST139) Introduction to Islam. (C) Karjoo-Ravary.
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

145. (NELC185, SAST145) Islamic History and Culture. (M) Harris.
This course introduces students to the history of Islam as both a religion and as a civilization, from pre-Islamic Arabia to the rise of the gunpowder empires in the 16th century. The course will use key moments, texts, and figures in Islamic history to examine notions of religion, culture, and civilization as they have been understood by Muslims, in a variety of contexts, as well as the problems and politics surrounding the representation of Islamic history and Islam in the contemporary world. Some major topics to be covered include the development of Islamic institutions, the participation of Jews, Christians, and others in Islamic civilization, Arabic and Persian literature,
as well as Europeans' encounters with Islam.

**SM 245. Sufism. (B) Harris.**

This course is a survey of the large complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi philosophies, beliefs, practices, and social organizations have been a major part of the Islamic tradition in all historical periods and Sufism has also served as a primary muse behind Islamic aesthetic expression in poetry, music, and the visual arts. In this course, we will attempt to understand the nature and importance of Sufism by addressing both the world of ideas and socio-cultural practices. We will trace the development of Sufism as a form of Muslim piety linked to key notions in the Quran as well as living practices of venerating the Prophet Muhammad. We will then immerse ourselves in Sufi theoretical writings through a select list of primary sources introducing foundational Sufi concepts concerning the annihilation of oneself in God, and the various stages of the Sufi quest for spiritual union. From there, we will shift to a discussion of the interactions between Sufism and philosophy by looking at the writings of two of the most influential Sufi thinkers, Al-Ghazali and Ibn al-Arabi. We will also study the important role of Sufi poetry through a close reading of a selection of Rumi’s works.

In our discussion of the social and political dimensions of Sufism, we will explore the relations between Sufi movements and religious and political authority, focusing on antinomianism and patronage in the Ottoman Empire, and on Sufi responses to colonial rule. The last part of the course will look at the roles of Sufis and Sufism in contemporary societies from South Asia to North America.

**248. (NELC238) Introduction to Islamic Law. (A) Lowry.**

This course will introduce students to classical Islamic law. Most of the readings will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Qur’an, humanities, and other selected topics.

**SM 249. (SAST249) Topics in Islamic Religion and Society. (C) Terenjit Sevea.**

A course devoted to specific problems in the religion of Islam and Muslim societies. Each semester will focus on one of the following subjects: Muhammad, Women in Islam, Islamic Mysticism, or American Islam. No previous knowledge of Islam required.

**SM 541. (NELC581, SAST541) Religion and the Visual Image. (M) Elias.**

This seminar explores the place of visual religious arts in Islam; we will attempt to get beyond conventional ideas regarding the impropriety of visual representation to examine how Muslims have understood and deployed visual art in a number of historical and cultural contexts. In the process, we will explore the ways in which visuality as a process renders the act of seeing into a religious experience. As such, we will also examine the role of the arts in relation to religion: how does vision affect the understanding and practice of religion, and what do visual arts tell us about religion in ways that texts of speech cannot? Simultaneously, what does the study of religion tell us about visual art that art history cannot?

**542. (RELS242, SARS241, SARS541) Seeing is believing. (E) Jamal Elias.**

Seeing is Believing engages in a historical, theoretical, and cross-cultural analysis of the place of visuality in religion and of religion in visual culture. We will examine images, buildings, places, objects, performances and events. The geographical, cultural and historical scope of the material is broad, including subjects from Europe, the Islamic World, non-Muslim South Asia, the US and Latin America from the medieval period until the present. Theoretical works will be read in conjunction with representative examples to invite intellectual engagement in a socially and historically grounded way. Important issues to be covered include the relationship of visual to material culture; visual theories versus theories of vision; locating religion in human sensory experience; perception at individual and collective levels; authentic, fakes and simulacra; iconoclasm and image veneration; aesthetics, use and utility; and things.

**SM 545. (NELC534) Sufism. (C) Elias. Prerequisite(s): Reading knowledge of Arabic.**

Selected topics, such as Sufi Texts or The Qur’an, in the study of Islamic religion.

**SM 742. (NELC782, SAST763) Topics in Islam. (M) Elias. Prerequisite(s): A reading knowledge of modern Persian (Farsi/Dari/Tajik) is required.**

**Buddhism and Hinduism**

**L/R 155. (PHILO50, RELS455, SAST150) Introduction to Indian Philosophy. (C) History & Tradition Sector. All classes. Staff.**

This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India -- arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

**162. (SAST122) Epic Traditions of India. (C) Staff.**

This course examines various key aspects of the epic traditions of India. The Ramayana and the Mahabharata are two great Indian epics that have deeply influenced the Indian religious and cultural ethos. The course explores methodological studies of the multiple renditions of these epics. The students will view folk performances from various regions in India that continue to bring these epics to life. These performances form a significant part of the epic tradition as they connect the stories in the epics with material realities of the Indian religious and cultural life. The course investigates the role played by the two epics, especially the Ramayana, in the Indian political discourse in both the past and the present. Beyond India, their historical birthplace, these epics traveled to South East Asian regions such as Indonesia and Malaysia. We will also consider the ways in which the traditions in these regions are similar or dissimilar to those in India. Lastly, the students will study the role of the media such as television shows, cinema, and comic books in the manifestation of these epics in popular imagination.

**163. (RELS663, SAST140) Introduction to Hinduism. (C) Vose.**

From scriptures of hallowed antiquity to riveting epics to ever-popular teleserials and internet puja’s? a bewildering array of narratives, technologies, peoples and ideas have been brought together under the label of “Hinduism”. While encyclopedias and guidebooks continue the futile attempts to
provide a checklist of the key features of the entity called "Hinduism", the historical reality repeatedly confounds any single definition of the term. The course will explore this diverse and heterogeneous reality by historicising the term "Hinduism". In other words, it will examine Hinduism within the diverse social, cultural and political contexts in which it has been and continues to be enmeshed. From the early Vedic era to contemporary diasporic Hindu communities, the course will provide an introduction to Hinduism as a fluid, multifaceted, heterogeneous reality that has always been shaped by its many historical contexts.

L/R 173. (EALC015, SAST142) Introduction to Buddhism. (C) McDaniel.
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among aly communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as "Just-War," Women's Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.

Topical study of the Taoist religion and its relations through history to philosophical Taoism, popular religion, and science.

SM 270. (EALC038) Topics in East Asian Religions. (M) Staff.
Spring 2013 Topic: Religion, State, and Society in East Asia. This course examines the relationship between religious institutions and the state in East Asia. Focusing on China and Japan, we will learn about the impact of religious ideas, practices, and organizations on social, political and economic processes and inspect the role of religion in the consolidation of individual, communal, and national identity. Adopting a comparative and transnational approach, we will examine the impact of Asian religious traditions: Confucianism, Daoism, Buddhism, and Shinto, as well as global religions such as Islam and Christianity, on the internal sociopolitical structure of the Chinese and Japanese states and their role in shaping power relations on the international level.

The class will follow a linear chronological line divided into three separate units. The first unit will cover the emergence of the dominant religious traditions and sociopolitical structures in premodern China and Japan. This unit will set the tone for our main discussion of the relationship between religion and the state in the modern and contemporary periods. The second unit begins with the impact of Christianity on the political cultures of East Asia and concludes with the fate of the empires of China and Japan in the early 20thcentury. The third and final unit will focus on the emergence of new religious movements in postwar Japan and the continuing discourse on state control over religion in the PRC and Taiwan.

In addition to covering material from the assigned chapters from the textbook and other secondary sources in greater depth, we will also dedicate our class sessions to close readings of primary historical sources, from imperial edicts and philosophical and religious essays to news interviews and documentary footage. No previous knowledge of Chinese or Japanese is necessary, and all readings will be available in English on the blackboard site in PDF form.

276. (EALC265) Zen Buddhism. (C) Staff.
This course examines the history, doctrines, and practices of Zen Buddhism in China, Japan and the West. Topics include the monastic life, notable Zen masters, Zen's cultural impact, and enlightenment.

SM 356. Living Deliberately: Monks, Saints, and the Contemplative Life. (M) McDaniel. Prerequisite(s): Students must complete an interview with instructor before acquiring a permit.
Students who are not Religious Studies Majors and are not honors students must gain permission from instructor to enroll in this course.
This is an experimental course in which students will experience monastic and ascetic ways of living. There will be no examinations, no formal papers, and very little required reading. However, each participant will need to be fully committed intellectually and participate in the monastic rules in the course involving restrictions on dress, technology, verbal communication, and food. The course subject matter is about ways in which nuns, monks, shamens, and swamis in various religious traditions (Buddhist, Muslim, Catholic, Jain, Taoist, Hindu, Animist, among others) have used poetry, meditation, mind-altering chemicals, exercise, magic, and self-torture to cope with pain and suffering, as well as struggle with spiritual, ethical, and metaphysical questions concerning the nature of the soul, the afterlife, and reality. Through monastic and spiritual practice, this course hopes to provide students with an opportunity to struggle with these questions themselves.

SM 473. (SAST373) Southeast Asian Buddhism. (M) Staff.
This course traces the history and development of Buddhist culture and religion in Southeast Asia. It is a discussion seminar course that examines the role of foundational texts like the Traibhumikatha and Mulasasana, as well as debating the role of kingship, magic, politics, economics, and art in the growth of Buddhism and Buddhist teachings in the region. It is open to undergraduates and graduates.

SM 562. Religions of Southern India. (M) Staff.
Critical examination of selected problem areas in the interpretation of religious texts, traditions, institutions, and practices in South and Southeast Asia.

SM 571. (ARTH510, EALC718) Advanced Topics in Buddhism. (M) McDaniel.
This is an advanced course for upper level undergraduates and graduate students on various issues in the study of Buddhist texts, art, and history. Each semester the
theme of the course changes. In recent years themes have included: Magic and Ritual, Art and Material Culture, Texts and Contexts, Manuscript Studies.

Fall 2013 Topic: Buddhist repertoires (idiosyncratic and personal assemblages of beliefs, reflections, wonderings, possessions, and practices) for a large part, material and sensual. Buddhists are often sustained by their collection, production, and trading of stuff amulets, images, posters, protective drawings, CDs, calendars, films, comic books, and even Buddhist-themed pillow cases, umbrellas, and coffee mugs. Aspirations are interconnected with objects. Beliefs are articulated through objects. Objects are not empty signifiers onto which meaning is placed. The followers and the objects, the collectors and their staff, are overlooked in the study of religion, even in many studies in the growing field of material culture and religion. What is striking is that these objects of everyday religiosity are often overlooked by art historians as well. Art historians often remove (through photography or physical movement to museums or shops) images and ritual implements from their ritual context and are seen as objets d’art.

While art historians influenced by Alfred Gell, Arjun Appadurai, and Daniel Miller have brought the study of ritual objects into the forefront of art historical studies, in terms of methodologies of studying Buddhist art, art historians have generally relegated themselves to the study of either the old and valuable or the static and the curated. This course aims to 1) bring a discussion of art into the study of living Buddhism. Art historians have primarily concentrated on the study of images, stupas, manuscripts, and murals produced by the elite, and primarily made before the twentieth century; 2) study art as it exists and operates in dynamic ritual activities and highly complex synchronic and diachronic relationships; 3) focus on the historical and material turn in the study of images, amulets, and murals in Buddhist monasteries and shrines.

**Western Traditions**

**112. (AFRC115) Religious Ethics and Modern Society. (C) Butler.**

Religious beliefs of Malcolm X and MLK formed their social action during the Civil Rights for African Americans. This seminar will explore the religious religious biographies of each leader, how religion shaped their public and private personas, and the transformative and transgressive role that religion played in the history of the Civil Rights movement in the United States and abroad. Students in this course will leave with a clearer understanding of religious beliefs of Christianity, The Nation of Islam, and Islam, as well as religiously based social activism. Other course emphases include the public and private roles of religion within the context of the shaping of ideas of freedom, democracy, and equality in the United States, the role of the “Black church” in depicting messages of democracy and freedom, and religious oratory as exemplified through MLK and Malcolm X.

**113. (AFRC113, GSWS113, JWST113) Major Western Religious Thinkers. (C) Staff.**

Introduction to the writings of one or two significant western religious thinkers, designed for those who have no background in religious thought. Possible thinkers to be studied: Augustine, Maimonides, Spinoza, Luther, Teresa of Avila, Edwards, Mendelsohn, Kierkegaard, DuBois, Bonhoeffer, King.
ROMANCE LANGUAGES

SM 308. TOPICS IN FRENCH CULTURE. (C)
How did France go from a nation with a monarch styled the Most Christian King

SM 310. LITERARY HISTORY. (M)
Please see the French department's website for the course description.
https://www.sas.upenn.edu/french/pc

L/R 386. (CIMS386) PARIS IN FILM. (M)
See the Romance Languages Department's website at http://ccat.sas.upenn.edu/roml for a current description.

SM 537. (COML546, ENGL546, GSWS536) THE NOVEL AND MARRIAGE.

SM 560. (COML561, ENGL545) STUDIES IN THE 18TH C. (C)
Please check the French department's website for the course description.
https://www.sas.upenn.edu/french/pc

SM 105. SICILIAN LANGUAGE & CLTR. Prerequisite(s): There are no prerequisites for ITAL 105: Sicilian Language and Culture.
Occupied over the centuries by the Greeks, Romans, Arabs, Normans, French, and Spaniards, Sicily is a region of many histories and many traditions. Birthplace and crossroad of cultures and artistic movements, the Sicilian land has shaped the imagination of its inhabitants and has never ceased to fascinate its visitors. Its language and culture have also been exported abroad, through the many Sicilians who left the island and settled all over the world. This course is an introduction to Sicilian Language and Culture. We will study spoken Sicilian and cultural artifacts ranging from film to literature, to music and food, in order to learn to recognize and understand the unique sounds and features of “siciliano” and to converse in Sicilian with native speakers and with one another.

This course is delivered in an online format, with occasional face-to-face meetings. Class sessions are offered through a course website and include live lectures and interactive discussions. Between classes, the learning experience is extended through assignments, lectures and discussions.

SM 230. (HIST230) TOPICS IN EUROPEAN HIST. (C)
Please check the website for a current course description.
http://www.sas.upenn.edu/italians/courses

SM 318. (HIST318) ITAL HIST 1789-PRESENT. (M)

SM 384. (CIMS387, COML384) HOLOCST ITAL LIT & FILM. (M)

SM 583. POST-HUMAN LANDSCAPES. (M)

SM 687. PASOLINI & CALVINO. (M)

SM 201. STUDY ABROAD.

SM 523. MODERN NOVEL. (M)

SM 543. (COML544, ENGL584, ENVSS543, GRMM543) ENVIRONMENTAL HUMANITIES.

FRENCH (FREN)

Basic Language Courses

SM 110. Elementary French I. (C)
French 110 is the first semester of the elementary-level sequence designed to develop functional proficiency in the four skills and gain familiarity with French and Francophone culture. The primary emphasis is on the development of the oral-aural skills, speaking and listening. Readings on topics in French culture as well as frequent writing practice are also included in the course.

As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class which will expose you to rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small group and pair work which simulate real-life situations. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and taped conversations between native speakers. Out-of-class homework will require practice with CDs as well as regular writing practice. The course will also invite you to explore the Francophone world on the Internet.

SM 112. Accelerated Elementary French. (A)
French 112 is an intensive elementary language course covering the equivalent of French 110 and 120 in one semester. Students must have a departmental permit to register. The course is normally open only to students who have no previous knowledge of French, and who have already fulfilled the language requirement in another language.

SM 120. Elementary French II. (C)
Prerequisite(s): French 110.
French 120 is the second semester continuation of the elementary-level sequence designed to develop functional proficiency in the four skills and gain familiarity with French and Francophone culture. The primary emphasis is on the development of the oral-aural skills, speaking and listening. Readings on topics in French culture as well as frequent writing practice are also included in the course.

As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class which will expose you to rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small group and pair work which simulate real-life situations. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and taped conversations between native speakers. Out-of-class homework will require practice with CDs as well as regular writing practice. The course will also invite you to explore the Francophone world on the Internet.

SM 121. Elementary French for "False Beginners". (A)
French 121 is an intensive one-semester language course for students who have had some French before but who can benefit from a complete review of elementary French. Students with an SATII score between 380-440 or a placement score between 18-29 should enroll in French 121. This course will provide a re-introduction of the basic structures of French with intensive work on speaking and listening designed to prepare students to take Intermediate French. Due to the nature of the course, the first half will progress rapidly with much more difficult material being presented after the midterm period.
As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class that will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small group and pair work activities which simulate real-life situations. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and taped conversations between native speakers. Out-of-class homework will require frequent practice with audio and video material, and will include daily written assignments. The course will also invite you to explore the Francophone world on the Internet.

**SM 130. Intermediate French I. (C)**
Prerequisite(s): Completion of French 120 or 121, or placement into third-semester French.

French 130 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material.

As in other French courses at Penn, class will be conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as role-plays, problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Through the study of authentic materials such as articles, poems, songs, films, videos, you will deepen your knowledge of the French-speaking world. Daily homework will require listening practice with audio and video material, in addition to regular written exercises in the workbook and frequent composition practice.

Students who have completed French 120, or with an SATII score of 450-540 or a lacemnt score between 30 and 35 should enroll in this course.

**SM 134. Accelerated Intermediate French. (B)**
An intensive two-credit course covering the first and second semester of the intermediate year. See descriptions of French 130 and 140. Students must have a departmental permit to register. Also offered in the summer Penn-in-Tours program in France.

**SM 140. Intermediate French II. (C)**
Prerequisite(s): Completion of French 130 or placement into fourth-semester French. French 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material.

This course focuses on the culture of French-speaking countries beyond the borders of France. Along with your classmates, you will explore the cities of Dakar, Fort-de-France and Marrakesh, investigating the diversity of the francophone world through film, literature and music. As in other French courses at Penn, class is conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Daily homework will require researching in the library and on the Internet, listening practice with video clips, in addition to regular written exercises in the workbook.

**SM 180. Advanced French in Residence. (E)**
Corequisite(s): Residence in Modern Language House.
Open only to residents in La Maison Francaise. Participants earn 1/2 c.u. per semester.

**Undergraduate-Level Courses**

**SM 202. Advanced French. (C)**
Prerequisite(s): Open to students who have completed the language requirement. Students who are continuing from French 134 or 140 should take French 202 before moving on to more advanced French courses.

French 202 is a one-semester third-year level French course. It is designed to prepare students for subsequent study in upper-level courses in French and francophone literature, linguistics, civilization, cinema, etc. It is required for students who have completed 140 and recommended for those with an equivalent level, wishing to continue in more advanced French courses or preparing for study abroad. Exceptions can be made with permission of the undergraduate chair.

It is also an appropriate course for those students who have time for only one more French course and wish to solidify their knowledge of the language by continuing to work on all four skills—speaking, listening, reading and writing. Students' work will be evaluated both in terms of progress in language skills and ability to handle and engage in the content areas.

This course does not include a systematic review of French grammar (that is done in FREN 212). Nevertheless, through the diverse writing assessments (e.g., creative writing; essays), the various textual and visual references (e.g., novels; articles; films; clips), the communicative approach, the students will play an active role in their learning process and consequently will be led to consolidate and deepen their grammatical competence.

The class studies two thematic units dealing with a wide variety of magazine articles, literary texts, historical documents, movies, songs, etc. In the first dossier, students get a chance to expand their knowledge of French history, with one major focus on World War II and the German occupation of France. In the second dossier, students study contemporary France focusing on issues such as the modern family, education, pop culture. While touching upon issues of identity in France, the class engages the students into an intercultural dialogue which enables them to be more aware of the differences and similarities between the two countries.
SM 211. French for the Professions I. (C) Prerequisite(s): Intermediate-high/advanced level of French (French 202 highly recommended). No business background necessary.

This content-based language course, taught in French, introduces economic, business and professional terminology through the study of the following topics: financial institutions (banking, stock market and insurance); business practices (business letters and resumes); trade and advertising; the internal structure and legal forms of French companies. The course also emphasizes verbal communication through three components: 1) In-class activities such as problem-solving tasks, discussions and debates. 2) The study of authentic materials such as newspapers and magazines' articles, video clips, and radio shows. 3) A series of students' presentations.

Finally, in order to use and practice the new economic and business terminology studied in this course, and to also further explore the structure, the management, and the operations of the French companies, students will work in pairs on a research project about a major French company of their choice.

One of the other goals of this course is to also prepare the students to take one of the exams offered by the Paris Chamber of Commerce and Industry: the Diplome de Francais Professionnel, Affaires, C1. This exam will be held on campus in April.

SM 212. Advanced French Grammar and Composition. (C)

Intensive review of grammar integrated into writing practice. A good knowledge of basic French grammar is a prerequisite (French 202 or equivalent is recommended). Conducted entirely in French, the course will study selected grammatical difficulties of the French verbal and nominal systems including colloquial usage. Frequent oral and written assignments with opportunity for rewrites.

Articles from French newspapers and magazines, literary excerpts, and a novel or short stories will be used as supplementary materials in order to prepare students to take content courses in French in disciplines other than French.

SM 214. Advanced French Composition and Conversation. (C) Prerequisite(s): French 202 and or 212 recommended.

Entitled "Contemporary French Society through its Media," this course is intended to improve speaking and writing skills by offering extensive practice in a variety of styles and forms. It will also help students better understand contemporary French culture, thought and modes of expression. The content is organized around current events and the themes of identity and art. Activities include the study, analysis and emulation of model texts as well as discussion and debates about events and social issues as covered by the French news media (television, print, Internet sources). Students will practice oral skills in a variety of ways, including video blogs and group presentations on selected current events. Written practice will comprise reflective journals, essays and collaborative work on Web projects.

The goal of this course is to help students attain the Advanced level of proficiency in speaking and writing (by ACTFL standards). The specific language functions we will work on are narration, description, offering and soliciting advice and opinions, expressing feelings, critique and analysis, argumentation.

(Recommended for students who are planning to study abroad in France)

SM 217. French Phonetics. (C)

This course is designed to provide students with a solid foundation in French phonetics and phonology. Part of the course will be devoted to learning how to produce discourse with native-like pronunciation and intonation. The course will also focus on improving aural comprehension by examining stylistic and regional differences in spoken French.

SM 220. Contemporary France. (C)

This course focuses on the major cultural and political events that have transformed French society from 1945 to the first decades of the new millennium. Using a wide range of print, visual, and online media, this class allows students to examine and research contemporary France by way of the main issues, movements and debates that have marked the last decades. Among these are: France's postwar International relations; Memory and national identity; Migration, immigration and multiculturalism; Religion and/in the Republic; Civil society; Intellectual movements and cultural productions.

SM 229. (LING229) French in the World. (C)

Le Francais dans le monde/French in the World provides a survey of the sociolinguistics of the French language in the contemporary world in order to elucidate how societal changes influence the manner and the contexts in which the French language is spoken. Case studies focus on various parts of the Francophone world, including Africa, Southeast Asia, and the Americas. The course considers questions such as the following: What effect does contact with other languages have on the way French is spoken? Which variety (or varieties) of French represents "good" or standard language use? How do political forces and movements affect the evolution of French? What is the present and future role of the French language in the face of globalization? How are language attitudes similar and different among French-speaking and English-speaking regions of the world? In what ways does the language we speak and the way we speak it shape our identities? Readings and class discussions are in French.

L/R 230. (CIMS245) Masterpieces of French Cinema. (A)

This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the "auteur" film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g. "le realisme poétique," "la Nouvelle Vague," etc.), their "auteurs," the nature of the French star system, the role of the other arts, as well to the critical debates they have sparked among critics and historians. Students will acquire the analytical tools in
French to discuss films as artistic and as cultural texts.

Please note: This course follows a Lecture/Recitation format. The Lecture (FREN 230-401/CINE 245-401) is taught in English. For French credit: please register for both FREN 230-401 (lecture) and FREN 230-402 (recitation); the FREN 230-403 recitation is conducted in French. For Cinema Studies credit: please register for CINE 245-401 (lecture) and CINE 245-403 (recitation); both are taught in English.

**SM 231. (COLL221, COML218) Perspectives in French Literature.**

(A) Arts & Letters Sector. All Classes.

This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Students are expected to take an active part in class discussion in French. French 231 has as its theme the presentation of love and passion in French literature.

This course was previously offered as French 221.

**SM 290. The French Short Story.** (M)

**SM 301. (CIMS301, GSWS301) French Identity in the Twentieth Century.** (C)

Topics vary. Please see the French Department's website for a description of the current offerings: https://www.sas.upenn.edu/french/pc

**SM 311. (COML309) French Thought After 1968.** (C) Yue Zhuo.

**SM 313. French for the Professions II.** (B) Prerequisite(s): An intermediate high to advanced level of French. French for the Professions I (211) highly advisable. No business background necessary.

The course, conducted entirely in French, emphasizes verbal communication in business professional situations through three components. First, a series of student's presentations, in-class activities (using newspapers’ articles, technical readings, radio shows and films), and debates on the following topics (list not exhaustive) related to France's economy and society: The role of the State in France's economy; the French fiscal system; Labor (impact of the 35-hour work week, "conges," women in the workplace, etc.); Regions of France (production); major French industries/companies/brands; France's major imports/exports; "Green business"; Business of pop culture.

Second, as effective communication is based not only on linguistic proficiency but also on cultural proficiency, cultural differences mostly between Americans and French will be explored.

Finally, throughout the semester, students will work in groups on the creation of their own business, association, or other organization and will be invited to present their project to the class at the end of the semester. On completion of the course, students will also have the opportunity to take the Diplome de Francais Professionnel-DFP Affaires (C1) administered by the Paris Chamber of Commerce and Industry.

**SM 322. France and the European Union.** (B)

This course aims to provide an understanding of the European Union as a complex entity: its history, institutions, challenges and future. After reviewing the history of European integration and describing the Community's institutions, common programs and market, we will consider a wide variety of themes important to Europe: economics, business, science, education, immigration, the environment, social issues, national and European identity, a Federal Europe vs. a Europe of nations, European social/cultural models vs. American liberalism, relations between the EU and the rest of the world. Students will be responsible for pursuing substantive research on these and other topics and participating actively in debates. We will also follow and discuss current events that are pertinent to the EU in general and to France in particular.

This class will be conducted entirely in French and is designed to improve cross-cultural understanding and communicative skills in the presentational, interpretive and interpersonal modes.

**SM 325. Advanced French Translation.** (B) Prerequisite(s): French 212 or equivalent recommended.

This course provides an introduction to the theory and practice of translation and is designed to help foster a critical understanding of differences between French and English syntactical and lexical patterns. It will introduce students to theoretical concepts and problems of translation, with the ultimate goal being to improve their ability to communicate in more authentically-sounding French. Students will have the opportunity to practice translation individually and to work with their peers on a variety of projects (advertising, journalistic and literary texts, movie and broadcast news subtitling) and to engage in critique and discussion of others' translations. This course will help students refine their language skills and navigate more proficiently between these cultures and language systems.

(Designed for students who already have a solid foundation in French and English grammar)

**SM 330. (GSWS330) Medieval Literature.** (M)

An introductory course to the literature of the French Middle Ages. French literature began in the 11th and 12th centuries. This course examines the extraordinary period during which the French literary tradition was first established by looking at a number of key generative themes: Identity, Heroism, Love, Gender. All readings and discussions in French.

**SM 340. French Renaissance Literature.** (C)

This course introduces a diverse and fascinating era, which marks the beginning of the early modern period. It examines the political, historical, and social context of France and investigates how contemporary writers and poets translated the discoveries of Humanism into their works. Authors to be studied include the poets Clement Marot, Maurice Sceve, Louise Labé, Pernette Du Guillet, Ronsard and Du Bellay. In addition, a number of stories from Marguerite de Navarre's rewriting of the "Decameron" (L'heptameron), as well as Rabelais's comic work "Pantagruel" and some essays of Montaigne will be analyzed.

**SM 350. 17th Century French Literature.** (C)

We will read a number of the masterpieces of the Golden Age of French literature, including works by Moliere, Racine, Lafayette, and La Fontaine. We will place special emphasis on the social and political context of their creation (the court of Versailles and the most brilliant years of Louis XIV's reign).

**SM 360. (GSWS360, HIST211) French Literature of the 18th Century.** (M)

Topics vary. For current course description, please see French Department's webpage: https://www.sas.upenn.edu/french/pc

**SM 370. French Literature of the 19th Century.** (M)

Topic changes each semester.

**SM 379. Short Narratives in Fantastic Literature.** (M)

This course will explore fantasy and the fantastic in short tales of 19th and 20th century French literature. A variety of approaches - thematic, psychoanalytic,
cultural, narratological - will be used in an attempt to define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the "real," making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other, will be considered.

Readings usually include "recits fantastiques" by Merimee, Gautier, Nerval, Villiers de l'Isle-Adam, Maupassant, Breton, Jean Ray, Mandiargues and others.

SM 380. (COML381) Literature of the Twentieth Century. (M)
This course, the theme of which changes from semester to semester, provides an introduction to important trends in twentieth-century literature. Please check the French Department's website for the course description:
https://www.sas.upenn.edu/french/pc

L/R 382. (CIMS382, COML372) Horror Cinema. (C) Met. The course will be taught in English. French credit by arrangement with Instructor.

The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionist masterworks of the silent era, the Universal classics of the 30's and the low-budget horror films produced by Val Lewton in the 40's for RKO in the US, the 1950's color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60's, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics,...).

SM 384. The French Novel of the Twentieth Century. (M)
Please check the French department's website for the course description:
https://www.sas.upenn.edu/french/pc

SM 385. Modern French Theater. (M)
A study of major movements and major dramatists from Giraudoux and Sartre to the theater of the absurd and its aftermath.

SM 389. France and Its Others. (M)
A historical appreciation of the impact of the exploration, colonization, and immigration of other peoples on French national consciousness, from the 16th century to the present. Emphasis is on the role of the Other in fostering critiques of French culture and society. Readings include travel literature, anthropological treatises, novels, and historical documents. Oral presentations and several short papers are included in the course.

SM 390. (AFRC391, AFST390) Survey Francophone Literature. (M)
A brief introduction about the stages of French colonialism and its continuing political and cultural consequences, and then reading in various major works -- novels, plays, poems -- in French by authors from Quebec, the Caribbean, Africa (including the Maghreb), etc. Of interest to majors in International Relations, Anthropology and African Studies as well as majors in French. Taught in French.

SM 391. Litterature Quebecoise. (M)
SM 394. (AFRC293) Topics in Caribbean Literature. (M)
This course will introduce students to the literature of the French-speaking Caribbean (West Indian Literature) in the context of literary history and modern culture. Select works will be examined individually and in relation to each other. We will explore the themes that link these works, comparisons and contrasts in literary techniques, and approaches to language.

398. Honors Thesis. (C)
399. Independent Study. (C)
See instructor for permission.

Graduate Level Courses

SM 500. Proseminar. (M)
This course will provide a forum for collective preparation for the Master's exam.

SM 512. History of Literary Theory. (M)
An exploration of literary theory centering on a few concepts (tradition, textuality, interpretation, ideology, authority) and problematizing the ways in which we read literature.

SM 550. (COML549) Etudes sur le XVII siecle. (M)
The specific topics of the seminar vary from semester to semester, depending on the instructor and his/her choice. Among the topics previously covered, and likely to be offered again, are the following: The Theatre of Jean Racine, Fiction of Mme de Lafayette, The Moralists (La Bruyere, La Rochefoucauld, Perrault ), Realistic Novels (Sorel's Francion, Scarron's Le Roman Comique, Furetire's Le Roman Bourgeois). Students Give oral and written reports, and write a term paper.

SM 573. (ARTH573, CIMS515, COML570, ENGL573, GRMN573) Topics in Criticism and Theory. (M)
SM 580. Studies in 20th-Century French Literature. (M)
SM 582. (COML589) Fantastic Literature 19th/20th Centuries. (M)
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches -- thematic, psychoanalytic, cultural, narratological -- will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the "real," making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include "recits fantastiques" by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.

SM 590. (AFRC591, AFST560, COML596) Introduction to Francophone Studies. (M)
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.

SM 591. Francophone Cultures. (M)
SM 595. Travel Literature. (M)
Within the context of the ill-defined, heterogeneous genre of the travelogue and of today's age of globalization, CNN and the Internet, this seminar will examine the poetics of travel writing based largely albeit not exclusively on travel notebooks, or journaux/carnets de voyage, spanning the XXth century from beginning to end. One of the principal specificities of the texts studied is that they all evince to a lesser or greater degree a paradoxical resistance both to the very idea of travel(ing) as such and to the mimetic rhetoric of traditional travel narratives. We will therefore look at how modern or postmodern texts question, revisit, subvert or reject such key notions of
travel literature as exoticism, nostalgia, exile, nomadism, otherness or foreignness vs. selfhood, ethnology and autobiography, etc.

Authors considered will include Segalen, Morand, Michaux, Leiris, Levi-Strauss, Butor, Le Clezio, Baudrillard, Bouvier, Jouanard, Leuwers.

SM 600. Old French. (B)

A systematic study of the structure of Old French including phonology, morphology, syntax, and lexicon as well as intensive practice in reading Old French texts with an emphasis on 12th- and 13th-century texts. By the end of the semester, students should be able to read works in Old French with the aid of a dictionary. Attention will be paid to the chronological differences between earlier and later Old French as well as to the major dialectal differences. Students will also be familiarized with the major research tools, dictionaries and grammars for working on Old French.

SM 601. (ITAL690, ROML690, SPAN609) Language Teaching/Learning. (M)

Please check the French department's website for the course description: https://www.sas.upenn.edu/french/pc

SM 602. Theory and Criticism. (M)

Please see the department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 603. Poetique Du Recit.

SM 604. Postcolonial Theory. (M)

SM 610. Intro to French Cinema. (M)

SM 611. (CIMS611) Topics in Cinema Studies. (M)

SM 612. Film Noir. (M)

Topics vary. Please see the French department's website for the current course description: https://www.sas.upenn.edu/french/pc

SM 619. (COML619) Poetique du Recit. (M)

SM 620. (COML625, HSPV620) Global Perspectives in French Studies. (A)

Topics vary. Please see the department's website for the current course description: https://www.sas.upenn.edu/french/pc

SM 625. (COML625, ITAL625) Introduction to Medieval French Literature. (M)

Topics vary. Previous topics include The Grail and the Rose, Literary Genres and Transformations, and Readings in Old French Texts. Please see French department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 631. Epic and Romance. (M)

Topics will vary. Please see French department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 634. Le Roman de la Rose. (M)

SM 635. (COML714) Late Medieval Literature. (M)

One possible topic is "History and Allegory: Problems of Representation." Considers several privileged cases of the relationship between the contemporary historical subject (dangerous, unstable) and the allegorical mode of representation (literary-philosophical, distancing, cerebrally interpretive). Texts to be studied include the "Roman de Fauvel!" and the spectacular corruption of Philippe le Bel's court in early 13th-century Paris; Christine de Pizan's "Epistre Othéa" and "Jehanne d'Arc" (and mythographic-allegorical treatments of the "crisis of the Hundred Years War" in the late 14th and early 15th centuries); as well as Froissart and de la Sale. Please see French department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 636. (COML638, MUSC710) Topics: Medieval Culture. (M)

Topics will vary. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 640. (COML643, GWS640) Studies in the Renaissance. (M)

SM 641. French Poetry of the 16th Century. (M)

SM 650. (COML651, GRMN651, HIST651) Studies in the 17th Century. (M)

Topics of discussion will vary from semester to semester. One possible topic is "The Royal Machine: Louis XIV and the Versailles Era." We will examine certain key texts of what is known as the Golden Age of French literature in tandem with a number of recent theoretical texts that could be described as historical. Our goal will be to explore the basis of "the new historicism," a term that is designed to cover a variety of critical systems that try to account for the historical specificity and referentiality of literary texts. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 652. (COML652, GWS652) Early Modern French Women Writers. (M)

Topics of discussion will vary from semester to semester. One possible topic is "Masterpieces of the Enlightenment." We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment--for example, the meditations on freedom of religious expression that Voltaire contributed to "affaires" such as the "affaire Calas." We will also discuss different monuments of the spirit of the age--its corruption (Les Liaisons dangereuses), its libertine excesses and philosophy (La Philosophie dans le boudoir). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment? Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 660. (COML660, ENGL748, GWS748) Studies in the Eighteenth Century. (M)

Topics of discussion will vary from semester to semester. One possible topic is "Masterpieces of the Enlightenment." We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment--for example, the meditations on freedom of religious expression that Voltaire contributed to "affaires" such as the "affaire Calas." We will also discuss different monuments of the spirit of the age--its corruption (Les Liaisons dangereuses), its libertine excesses and philosophy (La Philosophie dans le boudoir). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment? Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 661. (COML661) The Epistolary Novel. (M)

From the Regency to the Revolution, the French 18th century was obsessed with the present moment. In literature, this obsession manifests itself most clearly in the epistolary novel, which became the privileged form of expression chosen by all the major authors of the age. Because of the rise of epistolarity, the art of "writing to the moment," in Richardson's memorable formulation, must be seen as one of the Enlightenment's principal voices. And, for
the first time, the letter became a highly valued means of communication, in both the private and the public domains.

We will read most of the major epistolary novels beginning with the genre's first classic, "Lettres portugaises," and ending with its masterpiece, "Liaisons dangereuses." We will consider some real correspondences--for example, Sevigne's and Diderot's--to see how the urge to turn them into novels proved irresistible, to editors and authors alike. Finally, we will read several examples of what was known as the "public" letter, philosophical texts that used the epistolary form (for example, Diderot's "Lettre sur les aveugles"), to see how the transition of epistolarity survived the transition into the realm of the polemical.

SM 670. (COML669) 19th-Century Studies. (M)
Topics will vary. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 671. 19th-Century French Poetry. (M)
Topics of discussion will vary from semester to semester. A representative description follows: Rimbaud, Lautreamont, Mallarme. One half of the course will be devoted to Rimbaud and Lautreamont, the second half to Mallarme. We will attempt to focus on such points as the revolution in poetic language, the textual body, the (en)gendering of the subject. Students will be required to read critical and theoretical writings on these questions, and discuss them in class presentations. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 672. Major Authors 19th Century. (M)

SM 673. 19th Century Literature and the Arts. (M)
Topics will vary. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 674. The 19th-Century French Novel. (M)
The development of the French novel in the 19th-century: structure and theory, ideological and historical questions. Focus may vary.

SM 675. Topics in 19th Century Literature. (M)
Topics will vary. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 676. Science and Literature. (M)

SM 680. (CIMS680, COML595) Studies in the 20th Century. (M)
Topics will vary. Please see the French department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 681. Studies in Modern French Poetry. (M)
How does one approach the modern poetic text which ever since the Mallarmean "crise de vers" appears to have cut loose from all referential anchoring and traditional markers (prosody, versification, etc.)? This course will present an array of possible methodological answers to this question, focusing on poetic forms and manifestations of brevity and fragmentation. In addition to being submitted to precise formal and textual inquiries, each text or work will be the point of departure for the analysis of a specific theoretical issue and/or an original practice - e.g., genetic criticism, translation theory, the poetic "diary", aphoristic modes of writing, quoting and rewriting practices, etc. Texts by key modern poets (Ponge, Chazal, Du Bouchet, Jourdan, Jabes, Michaux).

SM 684. The French Novel of the 20th Century. (M)
Topics vary. Please check the French department's website for the course description. https://www.sas.upenn.edu/french/pc

SM 685. Studies in 20th Century French Theater. (M)

SM 686. Major Authors 20th/21st Century. (M)

SM 687. Studies in 21st Century. (M)
Topics will vary.

SM 688. Contemporary French Culture. (M)
Topics will vary. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 690. Francophone Studies. (M)
Topics will vary. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 692. Caribbean Studies. (M)

SM 693. (AFRC693, AFST693) Topics in Postcolonial Studies. (M)
Topics will vary. Please see French department's website for current course description: https://www.sas.upenn.edu/french/pc

SM 694. Francophone Africa. (M)

999. Independent Study. (C)
Designed to allow students to pursue a particular research topic under the close supervision of an instructor.

ITALIAN (ITAL)

Basic Language Courses

SM 110. Elementary Italian I. (C)
A first semester elementary language course for students who have never studied Italian or who have had very little exposure to the language. Students who have previously studied Italian are required to take the placement test. Class work emphasizes the development of the oral-aural skills, speaking and listening. Readings on topics in Italian culture as well as frequent writing practice are also
included. Out-of-class homework requires work with the Internet, audio and video materials.

**SM 112. Accelerated Elementary Italian. (C)** Prerequisite(s): Proficiency in another foreign language.

An intensive two-credit course covering the first and second semester of the elementary year for students who have never studied Italian before but have already fulfilled the language requirement in another modern language, preferably a romance language. Students who have fulfilled the language requirement in a language other than a romance language will be considered on an individual basis. All students must have departmental permission to register.

Class work emphasizes the development of the oral-aural skills, speaking and listening. Readings on topics in Italian culture as well as frequent writing practice are also included. Out-of-class homework requires work with the Internet, audio and video materials.

**SM 120. Elementary Italian II. (C)** Prerequisite(s): Completion of Italian 110 or placement into 2nd semester Italian.

This course is the continuation of the elementary level sequence designed to develop functional competence in the four skills. Class work emphasizes the further development of the oral-aural skills, speaking and listening. Readings on topics in Italian culture as well as frequent writing practice are also included. Out-of-class homework requires work with the Internet, audio and video materials.

**SM 130. Intermediate Italian I. (C)** Prerequisite(s): Completion of Italian 120 at Penn or placement score between 450 and 540 on the Achievement Exam (SAT II).

Italian 130 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these on your own. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.

**SM 134. Accelerated Intermediate Italian. (C)** Prerequisite(s): Italian 112 or departmental permit; proficiency in another foreign language.

Italian 134 is the intensive and accelerated course that combines in one semester the intermediate sequence (130 and 140). It will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these on your own. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.

**SM 140. Intermediate Italian II. (C)** Prerequisite(s): Completion of Italian 130 at Penn or placement into Italian 140.

Italian 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these on your own. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of analogies and differences between your native culture and the Italian world. The course will move beyond stereotypical presentations of Italy and its people to concentrate on specific social issues together with cultural topics.

**SM 180. Italian Conversation in Residence. (E)** Must be resident of the Modern Language House.

**SM 682. (CIMS682) Topics: Literature and Film. (M)**

**SM 685. (ARTH786, CIMS685, COML786) 20th Century Italian Culture. (M)**

**Undergraduate-Level Courses**

**SM 080. (COML080) Introduction to Italian Cinema. (C)** Arts & Letters Sector. All Classes.

Italian national cinema from the Golden Age of silent film and classics of Neorealism to present, covering work of a dozen major directors. Films discussed in context of history from the Unification, national vs. regional identity, gender roles, contemporary politics. Readings in Italian history, Italian film history, and theory of cinema. Taught in English.

**SM 100. (CIMS014, COML107, GWS100) Topics: Freshman Seminar. (C)**

Topics vary. See the Department's website at https://www.sas.upenn.edu/italians/courses for a description of current offerings.

**SM 200. (HIST230) Medieval Culture. (M)**

Topics will vary.

**SM 201. Advanced Italian I. (C)**

Prerequisite(s): Open to students who have satisfied the language requirement in Italian. ITAL 201 or equivalent is a prerequisite for all other courses taught in Italian at the 200/300 level.

Italian 201 will focus on a recent movie by Italian director Tullio Giordana, La meglio gioventu (2002), which will be used as a point of departure to explore contemporary Italian culture following its development since the 1960s. Another recent movie, Mio fratello e figlio unico (2007), will be viewed and analyzed at the conclusion of the course as compared to La meglio gioventu. Pertinent literary texts, newspaper articles, as well as material in other media will complement the analysis of the film and allow an in-depth discussion of the most important topics. The cultural material explored in the course will be also used as a basis for a review of the most difficult grammar structures, with an emphasis on those necessary to express opinion and formulate hypothesis.

Audiovisual materials and readings have been carefully chosen to develop student's comprehension and production in Italian, and to enable them to function in an academic setting in which competence at the advanced level is required. Class work will center primarily on conversation to improve students' fluency, vocabulary, and accuracy in speaking in the formal register. Homework will consist primarily, but not exclusively, of paragraph-length blog entries and 1.5-2 page compositions to improve students' ability to express
through the Renaissance (Machiavelli's political theory and Ariosto's epic poem), and then through Romanticism (Leopardi's lyric poetry and Manzoni's historical novel), up to the 20th century (from D'Annunzio's sensual poetry to Calvino's post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 203 is mandatory for Minors in Italian Literature and Majors in Italian Literature. If necessary, ITAL 201 can be taken at the same time as ITAL 203.

SM 204. (CIMS206, COML206) Italian History on Screen: How Movies Tell the Story of Italy. (C) Arts & Letters Sector. All Classes.
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy's rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy.

SM 208. Business Italian I. (M)
Prerequisite(s): Open to students who have completed ITAL 201 or equivalent.
The course is conducted entirely in Italian and should be taken after completion of ITAL 201 or equivalent. It is designed to enable students to acquire language proficiency in the current Italian business and labor world. Business terminology will be used in specific business situations such as banking, trade, communications, etc. The course will examine Italian business practices, cultural differences such as the attitude towards money, work, leisure and consumerism through websites, newspaper and magazine articles and video clips. Students will learn to read business publications, write and compose business texts, and participate in business-related conversations. Additionally, guest lecturers from the local business world with ties to Italy will provide students with information about internship and job opportunities and the knowledge necessary to navigate international and Italian commercial routes.
SM 232. (COML234) The World of Dante. (M)  
Dante's masterpiece in context of 14th century culture. Selected cantos will connect with such topics as books and readers in the manuscript era, life in society dominated by the Catholic church (sinners vs. saints, Christian pilgrimage routes, the great Franciscan and Dominican orders), Dante's politics as a Florentine exile (power struggles between Pope and Emperor), his classical and Biblical literary models, his genius as a poet in the medieval structures of allegory, symbolism, and numerology. Field trip to University of Pennsylvania Rare Book Collection. Text in Italian with facing English translation.

SM 250. (FREN250, GSWS253) Female Bodies, Different Bodies. (M)  
This course examines how women and gays have been depicted and interpreted in the most recent Italian novels and films. Moreover, this class analyzes the most important aspects of Italian Feminist thought. A selection from Rosi Braidotti's "Patterns of Dissonance" will be read in class. We shall read novels by Natalia Ginzburg ("Family Sayings"), Aldo Busi ("Seminar on Youth"), Pier Vittorio Tondelli ("Separate Rooms"), Alberto Moravia ("Two Women"). We shall discuss the following films: "Ernesto", "Mary Forever", "Portrait of a Woman", "The City of Women", "Forgetting Venice". Course conducted in English.

SM 260. Worldviews in Collision. (M)  
This course explores the radical conflicts that developed in the 16th and 17th century Europe when Protestant reformers, scientific discoveries, and geographical explorations challenged a long-held Medieval worldview and the authority of the Roman Catholic Church. These historical developments will be studied in comparison with parallel modern issues, such as Darwinism, separation of church and state, multicultural religious conflicts. Historical readings: Machiavelli's comic play Mandragola, the vitriolic polemic involving Martin Luther, Thomas More, and King Henry VII; Thomas Campanella's Utopian dialogue The City of the Sun, selections from the scientists Copernicus and Galileo, and from The History of the Council of Trent by the Venetian Paolo Sarpi. Modern texts: Osborne's Luther, Brecht's Galileo, and a classic Hollywood film Utopia, Frank Capra's Lost Horizon. In introductory and final units, we shall consider how 16th and 17th century poetry and visual arts mirrored their turbulent times, with an attention to the Petrarchan tradition (Vittoria Colonna, Marino) and stylistic changes in Italian painting, sculpture, and architecture from Renaissance to Mannerist to Baroque.

SM 280. Films From Literature. (M)  
Topics vary.

SM 288. (CIMS240) Modern Italian Culture. (M)  
Topics will vary.

SM 300. (ARTH301, CIMS300, COML300) Topics in Italian History, Literature, and Culture. (M)  
Topics will vary.  
Topics vary. Please check the department's website for course description: http://www.sas.upenn.edu/italians/courses

SM 310. (COML310, GSWS310) The Medieval Reader. (M)  
Through a range of authors including Augustine, Dante, Petrarch, Galileo, and Umberto Eco, this course will explore the world of the book in the manuscript era. We will consider 1) readers in fiction-male and female, good and bad; 2) books as material objects produced in monasteries and their subsequent role in the rise of the universities; 3) medieval women readers and writers; 4) medieval ideas of the book as a symbol (e.g., the notion of the world as God's book); 5) changes in book culture brought about by printing and electronic media. Lectures with discussion in English, to be supplemented by visual presentations and a visit to the Rare Book Room in Van Pelt Library. No prerequisites.

SM 322. (CIMS340, COML280) Italian Cinema. (M)  
The course will consist of a broad and varied sampling of classic Italian films from WWII to the present. The curriculum will be divided into four units: (1) The Neorealist Revolution, (2) Metacinema, (3) Fascism and War Revisited, and (4) Postmodernism or the Death of the Cinema. One of the aims of the course will be to develop a sense of "cinematic literacy"--to develop critical techniques that will make us active interpreters of the cinematic image by challenging the expectations that Hollywood has implanted in us: that films be action-packed wish-fulfillment fantasies. Italian cinema will invite us to re-examine and revise the very narrow conception that we Americans have of the medium. We will also use the films as a means to explore the postwar Italian culture so powerfully reflected, and in turn, shaped, by its national cinema. Classes will include close visual analysis of films using video clips and slides. The films will be in Italian with English subtitles and will include works of Fellini, Antonioni, De Sica, Visconti, Pasolini, Wertualler, Rossellini, Rossellini, Bertolucci and Moretti.  
Students will be asked actively to participate in class discussion, and to write a series of critical papers keyed to the units around which the course will be organized. Substantial Writing Component.

SM 333. (COML333, ENGL332) Dante's Divine Comedy. (M)  
When crosslisted with ENGL 323, this is a Benjamin Franklin Seminar.

In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian text the original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required.

SM 340. (HIST338) Topics in the Renaissance. (M)  
Content Varies. Possible contents may be: Renaissance Women Writers, Love and Sexuality in the Renaissance.

SM 341. (ARTH301) Topics: Italian Art. (M)  

SM 351. Mad Love. (M)  
The history of an emotion and how it emerges in Italian literature, music and film.

SM 360. (CIMS363) Semiotics and Rhetoric. (M)  
A survey of major currents in the modern theory of signs and languages, ranging from linguistics through the perspectives of semiotics, rhetoric and hermeneutics. Readings from modern works on semiotical and rhetorical theory as well as analysis of primary texts in Italian literature from Dante to Svevo, as well as other forms of communication including advertising, journalism, film and television. All readings in English.
SM 380. (CIMS379, COML382) Italian Literature of the 20th Century. (M)
Topics vary, covering a range of genres and authors.

The reading material and the bibliographical references will be provided in a course reader. Further material will be presented in class. Requirements include class attendance, preparation, and participation, a series of oral responses, and a final oral presentation.

SM 383. 20th-Century Italian Novel. (M)

SM 385. Modern Theater. (M)
A study of theater in Italian, beginning with Pirandello.

398. Honors Thesis. (C)

399. Independent Study. (C)

499. Independent Study. (A)

Graduate-Level Courses

SM 501. (COML503) Italian Literary Theory. (M) Taught occasionally. This requirement is normally satisfied by taking the Comparative Literature course in literary theory.

Basic issues in literary theory.

The development of a new authorial subject in Medieval and Early Modern first-person narrative.

SM 530. (COML601, ENGL524, RELS537) Medieval Italian Literature. (M)

Medieval Italian society, art, intellectual and political history. Please check the department's website for the course description.
http://www.sas.upenn.edu/italians/graduate/courses

SM 531. (COML533, ENGL531, ITAL333) Dante's Commedia I. (M)
This course may be taught as the first part of a two-semester sequence.

"Divine Comedy" in the context of Dante's medieval worldview and culture. Please check the department's website for the course description.
http://www.sas.upenn.edu/italians/graduate/courses

Dante Visualizing: Dante Visualizing and Dante Visualized. Dante's Commedia has inspired art, but at the same time art is present within the Comedy itself, through images, metaphors, descriptions and even more concrete examples. This course aims at discussing these aspects, taking into consideration also the philosophical, political and religious background of these motifs. While analyzing images in and from the Commedia, we will look at illustrations and artistic interpretations, spanning from medieval illuminations and Renaissance printed books (mainly from Van Pelt Library) to contemporary examples, and focusing on artists such as Giotto, Botticelli, Michelangelo, Blake, Dore, and Dali. The course will be taught in English.

SM 532. (COML532) Divina Commedia II. (M) Prerequisite(s): Italian 531.

"Divine Comedy" in the context of Dante's medieval worldview and culture.

SM 534. (COML534, GSWS534) Women in Poetry. (M) Prerequisite(s): Reading knowledge of Italian.

SM 535. (COML524) Petrarch. (M)
Petrarch's life and work in the context of Italian and European culture and society.

SM 537. (COML521, GSWS537) Boccaccio. (M) Brownlee.
Boccaccio's life and work in the context of Italian and European culture and society.

SM 539. (COML548) Cracking the Code: Numerology and Literature. (M)

In English. This course reconstructs traditions of Western number symbolism from antiquity (Plato, the Pythagoreans) to the early modern period with readings both in encyclopedic treatises on Arithmetic (Macrobius, Martianus Capella, Rhabanus Maurus) and in literary texts that are numerical compositions (Augustine's Confessions, Petrarch's epistle on the ascent of Mt. Ventoux, Dante's Vita Nuova and Commedia, Boccaccio's Diana's Hunt, the Old French Vie de St. Alexis, and Umberto Eco's The Name of the Rose). Discussion will focus on numerology as it relates to the medieval esthetic of order, the literary text as microcosmic counterpart to God's macrocosm, veiled meaning, and "difficult" poetics. We shall also consider the end of the tradition and what changes in science and culture brought about the disappearance of number symbolism in literature, except for a few moderns (e.g. Thomas Mann). Cross-listed with COML 548.

SM 540. (COML540, ENGL540, SPAN540) Topics: Renaissance Culture. (M)

Renaissance Italian society, art, intellectual and political history.

The development of courts is usually described as one of the main factors in the flourishing of Renaissance art, thanks to the patronage of the lords of some of Italy's most important city-states. But this patronage influenced not only painting, sculpture and architecture, but also literature, poetry and philosophy. This course will analyze some of the most significant literary masterpieces of this vibrant period, by focusing on the particular characteristics of centers like Florence, Rome, Urbino, Ferrara, Naples, as well as on the broader circulation and impact of many of these works and ideas in Europe. The authors considered will include Poliziano, Castiglione, Ariosto, and Machiavelli. The course will be taught in English, though readings will also be available in Italian upon request.

SM 562. (COML508) World Views in Collision. (M)
The impact of paradigm shifts on Italian and European culture.

SM 584. (CIMS584, COML576) 20th-Century Italian Novel and Film. (M)
The course will involve an exploration of a number of works of prose fiction and, when possible, the screening of their filmic adaptations. We will consider such genres as the historical novel (Tomasi di Lampedusa's II gattopardo), biography (Dacia Mariani's La lunga vita di Marianna Ucra), autobiography (Gavino Ledda's Padre padrone), the mystery novel (Leonardo Sciascia's A ciascuno il suo), the epistolary novel (Oriana Fallaci's Lettera ad un bambino mai nato), the political thriller (Antonio Tabucchi's Sostiene Pereira), "anthropological" memoir (Carlo Levi's Christ Stopped at Eboli), the psycho-political case study (Alberto Moravia's II conformista) and the regional short story (selections from Luigi Pirandello's Novelle per un anno). The class will be conducted as a seminar requiring a great deal of student participation.

SM 586. (CIMS548) Italian Women Directors. (M)

In Peter Bondanella's book, "Italian Cinema, from Neorealism to the Present," only two Italian women directors are mentioned: Lina Wertmuller and Liliana Cavani. However, in recent years, the Italian cinema has generated a new wave of Italian women directors who have significantly made their mark on the
national cinematic imagination. Francesca Archibugi, Roberta Torre, Cristina e Francesca Comencini, Antonietta De Lillo, Fiorella Infascelli, Anna Negri, Laura Muscardin among other established themselves as important voices of the last generation of Italian filmmakers in feature films, Angela Ricci Lucchi in the realm of non-fiction films and Alina Marazzi in the realm of documentary. In this course, we are going to explore their films, in connection to feminist and post-feminist culture in Italy, examining the originality of their approach and their relationships to the challenges offered by the advent of new technologies. The course will be taught in Italian.

SM 588. (CIMS548, COML587) Cinema and the Sister Arts. (M)
Cinema as a pan-generic system constructed of other art forms, including fiction, theater, painting, photography, music and dance.

SM 601. Time and Literature. (M)
The perceptions of Time differ according to various societies, conceptions of history, religious and literary traditions. Literature not only inhabits Time, but forges it. The course will focus on representations and elaborations of time throughout the Italian culture from Dante to the XX Century. We will deal also with the theoretical issues connected with the relation between time and history. The course will be taught in Italian. Undergraduates need permission.

SM 602. (COML602) Tools of the Trade. (M)
Theoretical and practical aspects of academic research. Please check the department's website for the course description.
http://www.sas.upenn.edu/italians/graduate/courses

SM 603. Sociolinguistic Varieties. (M)
SM 630. (COML630, ENGL795, FREN630) Medieval Italian Literature. (M)
Medieval Italian society, art, intellectual and political history. Advanced level course.

SM 631. (COML632) Dante's Commedia. (M)
"Divine Comedy" in the context of Dante's medieval worldview and culture. Advanced level course.

SM 634. Woman's Place. (M)
Poetry by women and about women. Advanced level course.

SM 640. (COML641, HIST620) Studies in the Italian Renaissance. (M)
Renaissance Italian society, art, intellectual and political history. Advanced level course.

SM 660. 18th Century Italian Culture. (M)
18th century Italian society, art, intellectual and political history.

SM 672. Narrativa '800-'900. (M)
Modern and contemporary Italian fiction.

SM 681. (CIMS684) Represent Women Ita
Cine. (M)

SM 684. (CIMS684) 20th-Century Novel. (M)
Contemporary Italian fiction

990. Masters Thesis. (C)

995. Dissertation. (C)

998. Tutorial. (C)

999. Independent Study. (C)

Undergraduate Level Courses

101. Italian Survival Kit: The Language and Culture of getting around in Italy. Veneziano Broccia.
The following course is delivered in a fully online format in order to allow more flexibility for LPS students. Class sessions are offered through a course website and include live lectures and interactive discussions through both direct messaging and voice over internet. Between classes, the learning experience is extended through assignments, threaded discussions and office hours. For additional information, please visit http://www.sas.upenn.edu/lps/online
This online course provides the flexibility of distance-learning and content that is taught efficiently in order to be used practically. If you are going to Italy and questioning how you will survive your total immersion experience, this course will provide you with the linguistic and cultural survival skills you will need to effectively function in Italy and fully enjoy its wonders. In this course, you will learn and practice the language you need to talk about: yourself; others; travel; public transportation; housing; food; shopping; technology; health; money, etc. Class meetings combine original as well as online, authentic content. Adobe Connect allows students to engage in collaborative interaction under the instructor's supervision. Students participate in conversations that replicate day-to-day life in Italy thereby developing the skills needed for face-to-face and online situations.

This course is open to students who have never taken Italian and who don't intend to satisfy the language requirement by taking courses in Italian.

PORTUGUESE (PRTG)

Basic Language Courses

SM 110. Elementary Portuguese I. (A)
Portuguese 110 is a first-semester introductory language course for students who have not studied Portuguese before, or who have had very little exposure to the language. The course will emphasize the development of foundational reading, writing, listening and speaking abilities within a cultural context. Students will participate in paired and group activities designed to elicit meaningful and accurate exchanges of information. The course will introduce students to Portuguese and Lusophone culture through a variety of authentic materials, including texts, songs, films and other audio and video material. Classes will be conducted in Portuguese.

SM 114. Portuguese for Spanish Speakers. (C)
Portuguese 114 is designed for students who have studied Spanish. The course begins with exposure to basic vocabulary and structures, advancing at an accelerated pace. Classroom activities will emphasize pronunciation, spoken production as well as language structures and vocabulary. Students will participate in pairs, small groups and whole-class activities that focus on the meaningful and accurate exchange of information. The class will be conducted in Portuguese.

SM 120. Elementary Portuguese II. (B) Prerequisite(s): PRTG 110 or equivalent.
This class continues the development of a basic proficiency that will help reinforce the student's abilities and confidence. A broad range of lively, high-interest readings such as newspaper and magazine articles in current events on Brazilian culture will allow the student to gain a genuine sense of current usage. A Brazilian movie is presented and discussed in groups. Daily homework assignments involve writing exercises, short compositions and group projects.
SM 130. Intermediate Portuguese I. (A) Prerequisite(s): PRTG 120 or instructor's permission.  
This is an intermediate course designed, in a four-course strand, for students who have taken at least two semesters of Portuguese. Classroom activities will emphasize pronunciation, spoken production as well as language structures and vocabulary with the objective to develop your skills in Portuguese. In addition, students will explore movies, music and other media to further develop reading, speaking and interpretive skills in Portuguese. The course will be conducted in Portuguese.

SM 140. Intermediate Portuguese II. (B) Prerequisite(s): PRTG 130 or instructor's permission.  
This is a forth-semester intermediate course, in a four-course strand, designed for students who have taken at least three semesters of Portuguese. Classroom activities will emphasize pronunciation, spoken production, grammar and language structures, and vocabulary at the advanced intermediate level. Students will explore movies, readings, news, music and other media as they further develop speaking, writing, reading and interpretive skills in Portuguese. The course will be conducted in Portuguese.

Undergraduate-Level Courses

SM 202. Advanced Portuguese. (M) Prerequisite(s): PRTG 134, PRTG 140 or instructor's permission.  
This course is designed for students who have already taken basic and intermediate levels of Portuguese. It complements students' knowledge of Portuguese by emphasizing the use of advanced grammatical structures and vocabulary. Classes will focus on practicing such advanced language structures by reading a diverse range of texts, including short stories by different authors of the Lusophone countries, and two novels; speaking and writing about a variety of contemporary texts; watching movies and documentaries; and listening to news, songs and other authentic audio material. The emphasis will be on language usage and culture. This course will be conducted in Portuguese.

Portuguese for the Professions is designed for advanced-level students to develop their ability to use a wide technical vocabulary. The course will cover an array of topics in the areas of Economy, Politics, Science, Technology, Law and others as they pertain to the societies and cultures of the Lusophone countries, with particular emphasis placed on Brazil. Through readings, movies, discussions, essays and presentations, students will enhance their ability to write about and discuss these topics while employing the appropriate technical vocabulary.

SM 216. Business Portuguese I. (A) 
SM 217. Portuguese for the Professions II. (B) Prerequisite(s): PRTG 202.  
Portuguese for the Professions II is a second-semester course designed to provide advanced-level students with exposition to, and practice in, a wide variety of technical vocabulary, and to develop their communicative skills on topics related to Brazil's economic, social and historical context. Classroom activities will be based on the readings and discussions of articles, papers, the viewing of documentaries and other visual media, covering an array of topics within the proposed themes. The course will be conducted in Portuguese.

SM 221. (COLL223, LALS231) Perspectives in Brazilian Culture. (M) Mercia Flannery. Prerequisite(s): Portuguese 202.  
Topics vary. For current course description, please see department's webpage: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

SM 240. (CIMS232, COLL223, LALS240) Topics in Brazilian Culture. (C) Prerequisite(s): Prerequisite is Portuguese 202.  
Topics vary. For current course description, please see department's webpage: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

ROMANCE LANGUAGES (ROML)  

Basic Language Courses

SM 250. (HIST179) GOLDEN AGE SPAIN. (C) 

Undergraduate Level Courses

SM 112. Beginning Haitian Creole. (M) Staff. Prerequisite(s): none. offered as a hybrid course with an online component.  
This course is introduction to Haitian Creole language. Students will explore the complex narrative of Haiti and its people. The class draws on a variety of methods and media to develop students' abilities in oral and written communication. Students with research, professional, or personal interests in Haiti or Haitian Diaspora are encouraged to enroll.

SM 113. Haitian Creole.

SM 218. SA: Miscellaneous - Lit.

SM 290. (COML284, ENGL270, LALS291) Lat American Literature. (M) 

Graduate Level Courses

SM 512. (CLST511, COML501, ENGL571, GRMN534, SLAV500) History of Literary Theory. (M) 

SM 690. (FREN601, FREN690, ITAL690, SPAN609) Applied Linguistics and Language Teaching. (M) 
This is a year long course required of all first-year Teaching Assistants in French and Italian. It is designed to provide new instructors with the necessary practical support to carry out their teaching responsibilities effectively. It will also introduce students to various approaches to foreign language teaching as well as to current issues in second language acquisition.

SM 691. (EDUC673, GRMN517) Technology and Foreign Languages. (M) Prerequisite(s): Romance Languages 690 or its equivalent.
This course will introduce participants to the field of technology and foreign language teaching and learning. It will review the pertinent theoretical underpinnings for the pedagogically-sound use of technology in the teaching of languages starting with a brief overview of the historical development of the field. Students will learn to evaluate existing programs and applications with a critical eye through a systematic examination of projects which have been implemented both here at Penn and elsewhere. The course will also have weekly hands-on workshops to introduce participants to the design and development of multimedia materials, including image, video and sound editing. The focus will be primarily on Web-based design and delivery. All participants will select a project to work on during the course of the semester; in addition they develop an online teaching portfolio.
SPANISH (SPAN)

Basic Language Courses

SM 110. Elementary Spanish I. (C)
Prerequisite(s): A score below 380 on the SAT II or below 285 on the online placement examination.

Spanish 110 is a first-semester elementary language course designed for students who have not previously studied Spanish or who have had very little exposure to the language. This course emphasizes the development of foundational reading, writing, listening, and speaking skills while exploring the rich cultural mosaic of the Spanish-speaking world. Students will participate in pair, small-group and whole-class activities that focus on meaningful and accurate communication skills in the target language.

Students who have previously studied Spanish but have not taken the SAT II exam must take the online placement examination.

SM 120. Elementary Spanish II. (C)
Prerequisite(s): Successful completion of Spanish 110 or 115 or permission of the course coordinator.

The continuation of Spanish 110, Spanish 120 is a second-semester elementary language course. See the description of Spanish 110.

SM 112. Elementary Spanish I and II: Accelerated. (A)
Prerequisite(s): Permit required from the course coordinator.

Spanish 112 is an intensive course designed for students who have already satisfied the language requirement in another language and have not previously studied Spanish. By combining the curriculum of Spanish 110 and 120, Spanish 112 seeks to develop students' reading, writing, listening, and speaking abilities while exploring the rich cultural mosaic of the Spanish-speaking world. Students will participate in pair, small-group and whole-class activities that focus on meaningful and accurate communication skills in the target language.

SM 115. Spanish for the Medical Professions, Elementary I. (A)
Prerequisite(s): A score below 380 on the SAT II or below 285 on the online placement examination. Offered through the Penn Language Center.

Spanish 115 is a first-semester elementary medical Spanish language course and the first in the Spanish for the Medical Professions sequence. It is designed for students with no prior coursework in Spanish. This course teaches beginning students the fundamentals of practical Spanish with an emphasis on medical situations and basic medical terminology. In this course, particular attention will be given to developing speaking and listening skills, as well as cultural awareness. It incorporates activities, vocabulary, and readings of particular interest to healthcare practitioners, while adhering to the goals and scope of Spanish 110, the first-semester Spanish language course.

Students who have previously studied Spanish but have not taken the SAT II exam must take the online placement examination.

SM 121. Elementary Spanish I and II: Advanced Beginners. (C)
Prerequisite(s): A score of 380-440 on the SAT II or 285-383 on the online placement examination.

Spanish 121 is designed for students who have some prior experience in Spanish. This course provides a quick-paced review of material normally covered in a first-semester Spanish course and then proceeds to introduce new material so students will be prepared to take Spanish 130 during the subsequent semester.

As other Spanish courses, Spanish 121 emphasizes the development of foundational reading, writing, listening, and speaking skills while exploring the rich cultural mosaic of the Spanish-speaking world. Students will participate in pair, small-group and whole-class activities that focus on meaningful and accurate communication skills in the target language.

SM 125. Spanish for the Medical Professions, Elementary II. (B)
Prerequisite(s): Successful completion of Spanish 110 or 115 or a score of 380-440 on the SAT II or 285-383 on the online placement examination. Offered through the Penn Language Center.

The continuation of Spanish 115, Spanish 125 is a second-semester elementary medical Spanish language course. See the description of Spanish 115.

SM 130. Intermediate Spanish I. (C)
Prerequisite(s): Successful completion of Spanish 112, 120, 121 or 125 or a score of 450-540 on the SAT II or 384-453 on the online placement examination.

Spanish 130 is a first-semester intermediate-level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will participate in pair, small-group and whole-class activities to practice linguistics skills in meaningful contexts. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense, and the development of writing skills at a paragraph level with transitions.

SM 134. Intermediate Spanish I and II: Accelerated. (B)
Prerequisite(s): Spring semester prerequisites: Permit required from the course coordinator.

Summer prerequisites: Successful completion of Spanish 112, 120, 121 or 125 or a score of 450-540 on the SAT II or 384-453 on the online placement examination.

Spanish 134 is an intensive intermediate-level language course that covers the material presented in Spanish 130 and Spanish 140. The course emphasizes the development of the four canonical skills (reading, writing, listening and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will participate in pair, small-group and whole-class activities to practice linguistics skills in a meaningful context. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense and major uses of the subjunctive, and the development of writing skills.

During the spring semester, Spanish 134 is limited to those students who have satisfied the language requirement in another language. During the summer, the course is open to all students who meet placement requirements.

This course satisfies the language requirement in Spanish.

SM 135. Spanish for the Medical Professions, Intermediate I. (A)
Prerequisite(s): Successful completion of Spanish 112, 120, 121 or 125 or a score of 450-540 on the SAT II or 384-453 on the online placement examination. Offered through the Penn Language Center.

Spanish 135 is a first-semester intermediate-level medical Spanish language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking), and the acquisition of medical terminology. Students will be expected to participate in classroom activities such as role-plays based on typical office and emergency procedures in order to develop meaningful and accurate communication skills in the target language. Students will also review and acquire forms and structures useful both inside and outside the medical field.
**SM 140. Intermediate Spanish II. (C)**
Prerequisite(s): Successful completion of Spanish 130 or 135 or a score of 550-640 on the SAT II or 454-546 on the online placement examination.

Spanish 140, the continuation of Spanish 130, is a fourth-semester language course that offers students the opportunity to acquire communicative skills (reading, writing, listening and speaking) while developing their awareness and appreciation of the Spanish-speaking world. Topics studied may include the environment, the arts, social relations, and conflict and violence.

This course satisfies the language requirement in Spanish.

**SM 145. Spanish for the Medical Professions, Intermediate II. (C)**
Prerequisite(s): Successful completion of Spanish 130 or 135 or a score of 550-640 on the SAT II or 454-546 on the online placement examination. Offered through the Penn Language Center.

The continuation of Spanish 135, Spanish 145 is a second-semester intermediate-level medical Spanish language course. See the description of Spanish 135.

This course satisfies the language requirement in Spanish.

**Undergraduate-Level Courses**

**SM 180. Spanish Conversation. (E)**
Prerequisite(s): Residence in Modern Language House.

Must be a resident of the Modern Language College House.

**SM 202. Advanced Spanish. (C)**
Prerequisite(s): Successful completion of Spanish 140 or equivalent.

The purpose of this course is twofold: (a) to develop students’ communicative abilities in Spanish, that is, speaking, listening, reading and writing, and (b) to increase their awareness and understanding of Hispanic cultures and societies. Homework and classroom activities are designed to help students build their oral proficiency, expand and perfect their knowledge of vocabulary and grammatical structures, improve their reading and writing skills, and develop their critical thinking abilities. The material for this class includes short stories, newspaper articles, poems, songs, cartoons, video clips and a novel, such as Sergio Bizzio’s Rabia. At the completion of this course students will feel confident discussing and debating a variety of contemporary issues (cultural and religious practices, family relationships, gender stereotypes, political events, immigration to the USA, etc.).

**SM 208. Business Spanish I. (C)**
Prerequisite(s): Successful completion of Spanish 140 or equivalent.

Spanish for Business I provides advanced-level language students with technical vocabulary and communicative skills covering business concepts as they apply to the corporate dynamics of the Spanish-speaking world, with a special emphasis on Latin America. Through readings, presentations, discussions, and video materials, we shall analyze those cultural aspects that characterize the business environment in the region as well as focus on economies and markets in light of their history, politics, resources and pressing international concerns.

**SM 209. Business Spanish II. (A)**
Prerequisite(s): Permission from the instructor.

Business Spanish II, Advanced Spanish for Business, is specifically designed for advanced speakers of Spanish (e.g., native speakers, heritage speakers, students who have studied in a Spanish-speaking country for at least one semester, and those who have attained an equivalent level of linguistic competency). Students will take an in-depth look at the corporate dynamics of a number of countries in Latin America, focusing on their economies and markets, as well as on the cultural and business protocols of each region. Through the creation of an entrepreneurial project and the writing of a business plan, students will enhance their business and language skills.

**SM 212. Advanced Spanish II: Grammar and Composition. (C)**
Prerequisite(s): Spanish 202 or equivalent.

Spanish 212 is an advanced-level language course that emphasizes the acquisition of the tools necessary for successful written expression in Spanish. These tools include a solid knowledge of the major points of Spanish grammar, an ample vocabulary, control of the mechanics of the language (spelling, punctuation, etc.), and a thorough understanding of the writing process. Throughout the semester, students will use these tools to analyze authentic texts and to produce a variety of written assignments. By the end of the course, students will have developed their awareness of the norms of standard Spanish and learned to incorporate these features into their own writing. The class will be conducted in Spanish and students are expected to speak in Spanish at all times.

**SM 215. Spanish for the Professions I. (C)**
Prerequisite(s): Spanish 202 or equivalent.

Spanish for the Professions is designed to provide advanced-level language students with a wide-ranging technical vocabulary and the enhancement of solid communicative skills within the cultural context of several developing Latin American countries. Focusing on topics such as politics, economy, society, health, environment, education, science and technology, the class will explore the realities and underlying challenges facing Latin America. Through essays, papers, articles, research, discussions, case studies, and videotapes, we shall take an in-depth look at the dynamics of Latin American societies. The course will focus on--but not be restricted--Mexico, Cuba and Argentina.

**SM 219. Hispanic Texts and Contexts. (C)**
Prerequisite(s): Spanish 202 or Spanish 212.

The primary aim of this course is to develop students’ knowledge of the geographical, historical and cultural contexts of the Spanish-speaking world. At the same time that they are introduced to research techniques and materials available in Spanish, students strengthen their language skills through reading, oral presentations, video viewing, and regular writing assignments. The course is designed to give students a broad understanding of Hispanic culture that will prepare them for upper-level course work and study abroad.

**SM 223. Introduction to Literary Analysis. (C)**
Prerequisite(s): Spanish 202 or Spanish 212.

Literature from Spain and Latin America contains a wealth of information about language, history, and culture. The goal of this course is to help students develop skills to carefully read Spanish literary works while preparing them for upper-level courses and study abroad. We begin reviewing the main characteristics of various literary movements and of the four genres (narrative, poetry, theater and essay). During the second part of the semester, students become familiarized with a wide variety of theoretical approaches to the study of literature with the purpose of applying them to their own analytical writing. In the last part of the course students produce their own essays on a text chosen by them and based on research. Sample essays written by other students and included in the textbook will serve as models. Throughout the course
students will have ample opportunities to hone their skills through the close reading and class discussion of varied and stimulating works by Miguel de Cervantes, Jorge Luis Borges, Gabriel Garcia Marquez, Roberto Bolano, etc.

**SM 250. (COML252, LALS252) Major Works of Spanish and Latin American Literature. (C) Arts & Letters Sector. All Classes.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 317. Spanish Phonetics and Morphology. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
An introduction to articulatory phonetics designed to give the student a practical knowledge of the Spanish sound system as compared with English. Also some work in acoustic phonetics. Students learn to use the phonetic alphabet. Basic work is followed by an introduction to the linguistic analysis of sound systems, with concentration on Spanish and English phonology. Some introductory work on regional and social variations of pronunciation in the Spanish-speaking world. Lastly, an introduction to morphological analysis of language, with particular attention to the structure of the Spanish verb and word formation. Lectures and discussion of readings.

**SM 319. History of the Spanish Language. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
A survey treatment of the development of Latin to modern Spanish, with emphasis on relations between external history and the development of grammatical structure and vocabulary, and major sound shifts. Lectures and discussions of reading.

**SM 330. Medieval Literature. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 348. Don Quijote. (M)**
Prerequisite(s): Spanish 219 or Spanish 223.
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 350. (LALS350) Spanish Literature of the Golden Age. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 351. Spanish Poetry of the Golden Age. (M) Prerequisite(s): Spanish 219.**
A study of the major poets of the period including Garcilaso, Fray Luis de Leon, Herrera, San Juan de la Cruz, Gongora, Lope de Vega, and Quevedo.
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 373. Spanish Romanticism, 1770-1870. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 380. (CIMS380, LALS380) Contemporary Spanish Literature. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 384. (CIMS384) Spanish Novel Since 1939. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 386. (CIMS385, GWS386, LALS386) Studies in Spanish Culture. (C) Prerequisite(s): Spanish 219 or Spanish 223.**
This course covers topics in contemporary Spanish Culture, its specific emphasis varying with the instructor. Please see the Spanish Department's website for the course description: course description: https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 390. (CIMS390, COML390, GWS391, LALS396) Introduction to Spanish American Literature. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 392. (LALS392) Colonial Latin American Literature. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 394. (LALS394) Spanish American Fiction. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 395. (LALS395) Hispanic Theater. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 396. (CIMS396, GWS396, LALS397) Studies in Spanish American Culture. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

**SM 397. (CIMS397, GWS397, LALS398) History of Spanish American Culture. (M) Prerequisite(s): Spanish 219 or Spanish 223.**
Topics vary. Please see the Spanish Department's website for the current course description:
https://www.sas.upenn.edu/hispanic-portuguese-studies/pc

SM 698. Workshop on Scholarly Writing. (M)
This course aims to develop awareness about what constitutes effective scholarly prose in Spanish. It proposes to hone the student's handling of writing as a vehicle for the expression of intellectual thought, but also to develop a consciousness of the rhetorical strategies that can be used to advance a critical argument effectively. Extensive writing exercises will be assigned; these will be followed by intense and multiple redactions of the work originally produced. The ultimate goal is to make students develop precision, correctness, and elegance in written Spanish. Students will also work on a class paper written previously, with a view to learning the process of transforming a short, limited expression of an argument into a publishable article.

999. Independent Study. (C)
SLAVIC LANGUAGES
(AS) {SLAV}

L/R 135. (HIST135, RUSS135) COLD WAR: GLOBAL HISTORY. (C)

151. (COML152, RUSS151) Central and Eastern Europe: Cultures, Histories, Societies. (M) Steiner.
The reappearance of the concept of Central Europe is one of the most fascinating results of the collapse of the Soviet empire. The course will provide an introduction into the study of this region based on the commonalities and differences between Austria, Czechia, Hungary, Poland, and Slovakia. The topics will include the history of arts and literature, as well as broader cultural and historical patterns characteristic of this part of Europe.

152. (PSCI267, RUSS123) Russia and Eastern Europe in International Affairs. (M) Society Sector. All classes. Orenstein.
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russia's opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?

153. (PSCI144, RUSS134) COMMUNISM. Orenstein.
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes their successes and failures, critics and dissidents, efforts at reform, and causes of collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.

164. (CIMS164, RUSS164) Russian and East European Film from the October Revolution to World War II. Todorov.
This course presents the Russian contribution to world cinema before WWII - nationalization of the film industry in post-revolutionary Russia, the creation of institutions of higher education in filmmaking, film theory, experimentation with the cinematic language, and the social and political reflex of cinema. Major themes and issues involve: the invention of montage, Kuleshov effect, the means of visual propaganda and the cinematic component to the communist cultural revolutions, party ideology and practices of social-engineering, cinematic response to the emergence of the totalitarian state. Great filmmaker and theorist in discussion include Vertov, Kuleshov, Eisenstein, Pudovkin, Medvedkin and others.

165. (CIMS165, RUSS165) Russian and East European Film after World War II. (M) Todorov.
This course examines the Russian and East European contribution to world cinema after WWII - Stalinist aesthetics and desalinization, WWII in film, the installation of totalitarianism in Eastern Europe and the Cold War in film, the fall of the Berlin Wall, the collapse of the Soviet Union and the post-soviet condition, cinematic representations of Yugoslavia's violent breakup, the new Romanian waive. Major filmmakers in discussion include Kalatozov, Tarkovsky, Wajda, Polanski, Forman, Mentzel, Sabo, Kusturitsa, Konchalovsky, Mikhailov and others.

265. (GRMN265, GRMN565, JWST265, JWST465) YIDDISH IN E. EUROPE.

298. STUDY ABROAD.
SM 430. (CIMS430, RUSS430)
ETHNIC CONFLICT IN FILM. (M)

This course provides a literary and cultural prehistory to contemporary discourses on transgender identity by focusing on the figure of the hermaphrodite in 19th century Russia and the West. Far from a marginal subject, the hermaphrodite and intersex characters played central roles in the novels of Balzac, Tolstoy, Dostoevsky, and many others whose work we will read in this course. Interdisciplinary in nature, this course draws on 19th century discourses in medicine, psychology, opera, religious philosophy, and political theory to understand why characters who exist outside of the male/female gender binary feature so prominently in 19th century literature and cultural texts across a wide range of traditions (Anglophone, French, and Russian, and others.)

123. (EEUR152, PSCI267) Russia and Eastern Europe in International Affairs. (M) Society Sector. All classes. Orenstein.
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russia's opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?
and the U.S. following the abolishment of mass incarceration that emerged in Russia. Attention will also be paid to systems of U.S., particularly in the 19th century. Developed in cinematic sources in an attempt to illuminate their own domestic debates.

During the Cold War, the United States and Russia were locked in an ideological battle, as capitalist and communist superpowers, over the question of private property. So how did these two countries approach the most important question regarding property that ever faced human civilization: how could governments justify the treatment of its subjects, people, as property? In 1862, Russia abolished serfdom, a form of human bondage that had existed in its territories since the 11th century. Just a year later, in 1863, Abraham Lincoln signed the Emancipation Proclamation, declaring America's slaves "then, thenceforward, and forever free." What forces, both domestic and international, both political and cultural, influenced this near simultaneous awakening in which huge swaths of the Russian and U.S. populations were forever free.

While scholars have often sought to compare slavery and serfdom as institutions, this course does not attempt to draw connections between the two. Rather, we will focus on how the slavery/anti-slavery and serfdom/anti-serfdom debates were framed in each respective country as well as how Russia used American slavery and the U.S. used Russian serfdom to shape their own domestic debates.

Though primarily literary in nature, this course will also take into account historical, journalistic, scientific, and cinematic sources in an attempt to illuminate the cultures of and against bondage that dominated Russia and the U.S., particularly in the 19th century. Attention will also be paid to systems of mass incarceration that emerged in Russia and the U.S. following the abolishment of serfdom and slavery.

151. (COML152, EEUR151) Central and Eastern Europe: Cultures, Histories, Societies. (M) Steiner.

The reappearance of the concept of Central Europe is one of the most fascinating results of the collapse of the Soviet empire. The course will provide an introduction into the study of this region based on the commonalities and differences between Austria, Czechia, Hungary, Poland, and Slovakia. The topics will include the history of arts and literature, as well as broader cultural and historical patterns characteristic of this part of Europe.

SM 250. (CIMS250) Tarkovsky’s Passions. (M) Platt.

Andrei Tarkovsky is universally acknowledged to be the greatest Soviet filmmaker of the last half of the twentieth century. In Kurosawas assessment following Tarkovsky’s death in the late 1980s, he had no equal among film directors alive now. In Ingmar Bergmans words, Tarkovsky’s work was a miracle. His films are beautiful, intellectually challenging, and spiritually profound. They range from Ivan’s Childhood, an exploration of wartime experience through the eyes of a child; to Solaris, a philosophical essay in the form of a science-fiction thriller; to Andrei Rublev, an investigation of the renaissance up to the present day. Readings will include works by: Shakespeare, Scott, Tolstoy, Hughes, Eisenstein, Marquez, Eco and others. In the course of the semester, students will gain competence in the interpretation of literary texts from a variety of cultures and periods, and also improve their analytical writing skills.

L/R 217. (PSCI217) RUSSIAN POLITICS. (B)

SM 222. (COML217, NELC222) Imagining Asia: Russia and the East. Staff.

This course examines the important role of the East in Russian literature and nationalism. Focusing specifically on the Caucasus, Central Asia, Iran, and Turkey, this course will analyze how Russian writers connected the East to Russian identity, and how their approaches implicate different artistic periods (Romanticism, Realism, Socialist Realism, Post-Modernism) and different political atmospheres (Tsarist Russia, Soviet Union, Post-Soviet). Students will also ascertain how Russian literature on the East has affected and influenced literature and political movements produced in the East. In particular, students will analyze how Soviet Central Asian writers, Iranian Socialists, and contemporary Turkish writers were influenced by Russian literature and Soviet ideology. Ultimately, this course examines the impact of Russia’s cultural and political history in 20th century Central Asia and the Middle East. Readings will include works by: Pushkin, Lermontov, Tolstoy, Dostoevsky, Platonov, Chingiz Aitmatov, Sadek Hedayat, Orhan Pamuk, and others. All readings in English.

SM 261. (COML255) Russian Thinkers. (M) Staff.

This class focuses on the complex relations between philosophy, history, and art in Russia and offers discussions of works of major Russian authors (such as Dostoevsky, Tolstoy, Khlebnikov), religious and political thinkers (Chiaadaev, Herzen, Berdiaev, Lenin, Bogdanov), avant-garde artists (Filonov, Malevich), and composers (Skrabin) who created and tested in their lives their own, sometimes very peculiar and radical, worldviews. We will consider these worldviews against a broad cultural background and will reenact them in class in the form of philosophical mini-dramas. The only prerequisite for this course is intellectual curiosity and willingness to embrace diverse, brave and often very weird ideas.
from the earliest time to the present day, and their reception in today's scholarship and society. Students learn about Russian historical heritage through the reading of primary sources and analytical essays, as well as examining how this history is used in the present socio-political and ideological discourse. Work on language focuses on matters of style, sentence structure, and vocabulary building.

SM 444. (COML541, RUSS544) Russ Realism in Eur Cntxt. (M)

SM 455. The Living & the Dead: The Great Patriotic War in Russ Cultural Imagination. Staff. Prerequisite(s): Prior language experience required.

This course is dedicated to the 70th anniversary of the Great Patriotic War, 1941-45. Students will explore the cultural myth of the war, created in the 1960-80s. The materials will include literary texts, documentaries, photographs, and films. We will focus on three major themes of this myth: 1. moral strength and courage; 2. respect for Russia's military past; and 3. the rise of national consciousness.

SM 471. Moscow: Cultural History. Staff.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. An extraordinary diverse city, Moscow has acquired a number of names, referring both to its size and role in the national history: The Third Rome, The Whitestone One, The First Throne, The Forty Forties, The Hero City, and even The Big Village. In this course, students will examine the cultural history of the great city from 1147 to the present. The "itinerary" for this imaginary trip will include the Kremlin and the banyas, Saint Basil's Cathedral and the Bolshoi Theater, the Ostankino Tower and the underground palaces of the Metro, the workers' canteen and the dining rooms of the posh restaurants, etc. The course discussions will be centered on literary texts, travelers' accounts, films, and works of art and architecture.

SM 475. Doctor Zhivago in Historical Context. Staff. Prerequisite(s): RUSS361 or comparable language competence.

Russian heritage students are invited to read in original and discuss in class one of the most unusual novels of 20th century Russian literature, Doctor Zhivago. In 1958, the author of this novel Boris Pasternak was awarded the Nobel Prize "for his important achievement both in contemporary lyrical poetry and in the field of the great Russian epic tradition," an event which enraged the Soviet government. Students will follow the main characters of this poetic saga in the most terrible and glorious moments of the Russian history, from the Russian Revolution of 1905 to the beginning of the Great War.

SM 519. History of Russian Literary Language and Culture. Vorkholantsev. Prerequisite(s): Any RUSS 400 level course or comparable proficiency.

This course examines the linguistic, literary, and social history of the Russian language from the medieval period to the modern day. Course topics include: the creation of the Slavic alphabets and the first literary language of the Slavs, Old Church Slavonic; the beginnings and development of writing and literacy in Old Russia; the evolution of the Russian literary language, its styles, and registers; grammatical categories of Russian; features of Russian lexicography; the social history and politics of language use; analysis of texts. Taught in Russian; readings in Russian & English; advanced language proficiency required.

SM 528. (COML528) From Late-Soviet to Non-Soviet Literature and Culture. Platt.

The aims of this course are threefold: to introduce students to some signature literary and cultural texts form roughly the post-Stalin era to the present, to equip them with relevant theoretical approaches and concerns, and finally, to offer a space where they can develop their own research projects. A major theme will be the relations between "Russian" literature and history, in which literature is not only a mimesis of the historical process but often an active agent. Throughout, we will be particularly attentive to the periphery of literature. In the first place, this means an expanded geography, the inclusion of non-Russian Soviet and emigre writers before and after 1991, as well as an effort to theorize their structural position. Secondly, we will adopt the late Formalists' understanding of literary periphery as the genres, cultural forms, institutions, and phenomena that abutted the literary field and affected its processes. Depending on student interest, our attention to these objects of inquiry could be directed toward bardic song and the later lyric-centric Russian rock, samizdat and literary internet, thick journals and literary prizes, Soviet-era dissidence and today's protest culture.

SM 548. Borderland Literature and Minority Nationalism: The Role of Central Asia in Russian-Iranian Relations. (M) Yountchii.

Advanced graduate course on Central Asian and Iranian literature and history. Particular attention is given to the role of literature in Tajik-Iranian cultural exchange, the culture and history of Persian-speaking minorities in late 19th and early 20th century Caucasus and Central Asia, and the relations between center and periphery. Theories concerning Orientalism, minority nationalism and subaltern studies are also examined.

SM 549. (COML550) STALINIST CULTURE. (M)

SM 555. (COML555, HIST555) HIST EMOTIONS RUSS&WEST.

391. SLAVIC LANGUAGE II.

394. SLAVIC LANGUAGE III.

395. SLAVIC LANGUAGE IV.

SM 575. (COML579) Slavic Literary Theory in Western Context. Steiner.

This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.

599. INDEPENDENT STUDY.

SM 619. (COML619) East & West in Medieval Europe: Bohemia as Center in the Age of the Luxemburgs. Brownlee and Vorkholantsev.

The seminar will examine a range of topics in Medieval Studies viewing European medieval civilization as encompassing the whole ("global") geogaphic and cultural space of Europe and ignoring reference to contemporary socio-political division of Europe into "Western" and "Eastern." As a case study, the course focuses on the 14th-century Holy Roman Empire from Henry VII to the Emperor Sigismund, and particularly on the reign of Charles IV, in a context in which Prague becomes the imperial capital and Bohemia a center of Europe.

A detailed examination of this monarch's vision of a "Global Europe" will allow us to explore a network of connections, a network that stretches from
Prague to the farthest western, eastern and southern corners of the European continent. We will examine correspondences and differences between various linguistic, textual, political, and religious communities, while attempting to show how Latin and Slavic European cultures were interwoven. Some of the titles from the reading list are Charles IV’s The Life of St. Wenceslas and Autobiography, The Golden Bull, Dante’s Letters & Monarchia, Machaut’s Judgement of the King of Bohemia, Petrarch’s Epistola & Poems, Froissart’s Prison of Love, Johannes von Tep’s The Plowman of Bohemia, The Life of St. Constantine the Philosopher, fragments from Czech, French, Italian, Polish, Hungarian and Russian medieval chronicles, etc. All reading will be done in English, with original language versions always available.

RUSSIAN (RUSS)

105. Accelerated Elementary Russian. (M) Staff.
TWO IN ONE: This is an intensive two-credit course covering two semesters of the first-year sequence (RUSS001 and 002). The course is designed for students with no background in Russian and develops language competence in speaking, reading, writing and understanding contemporary Russian. Class work emphasizes development of communication skills and cultural awareness. Together with RUSS003 and 004 fulfills Penn Language Requirement.

Introductory Russian Language (001-004)

001. (RUSS501) Elementary Russian I. (A) Staff.
This course develops elementary skills in reading, speaking, understanding and writing the Russian language. We will work with an exciting range of authentic written materials, the Internet, videos and recordings relating to the dynamic scene of Russia today. At the end of the course students will be comfortable with the Russian alphabet and will be able to read simplified literary, commercial, and other types of texts (signs, menus, short news articles, short stories) and participate in elementary conversations about daily life (who you are, what you do every day, where you are from, likes and dislikes).

002. (RUSS502) Elementary Russian II. (B) Staff. Prerequisite(s): RUSS 001 or equivalent.
Continuation of RUSS001. Further work developing basic language skills using exciting authentic materials about life in present-day Russia. At the conclusion of the course, students will be prepared to negotiate most basic communication needs in Russian (getting around town, ordering a meal, buying goods and services, polite conversation about topics of interest) and to comprehend most texts and spoken material at a basic level.

003. (RUSS503) Intermediate Russian I. (A) Staff. Prerequisite(s): RUSS 001 and 002 or placement exam.
This course will develop your ability to use the Russian language in the context of typical everyday situations, including university life, family, shopping, entertainment, etc. Role-playing, skits, short readings from literature and the current press, and video clips will be used to help students improve their language skills and their understanding of Russian culture. At the end of the semester you will be able to read and write short texts about your daily schedule and interests, to understand brief newspaper articles, films and short literary texts, and to express your opinions in Russian. In combination with RUSS 004, this course prepares students to satisfy the language competency requirement.

004. (RUSS504) Intermediate Russian II. (B) Staff. Prerequisite(s): RUSS 003 or placement exam.
A continuation of RUSS003. This course will further develop your ability to use the Russian language in the context of everyday situations (including relationships, travel and geography, leisure activities) and also through reading and discussion of elementary facts about Russian history, excerpts from classic literature and the contemporary press and film excerpts. At the end of the course you will be able to negotiate most daily situations, to comprehend most spoken and written Russian, to state and defend your point of view. Successful completion of the course prepares students to satisfy the language competency requirement.

SM 107. Russian Outside the Classroom I. (C) Yakubova.
Prerequisite(s): At least four semesters of Russian.
The goal of RUSS107 is to provide students of Russian language and students who spoke Russian at home with formalized opportunities to improve their conversation and comprehension skills while experiencing various aspects of Russian culture. There will be no weekly assignments or readings, but all students will be expected to contribute at a level equivalent to their Russian-speaking abilities both in class and on the newsletter final project. The course consists of attending regular conversation hours in addition to a tea-drinking hour in the department (F 4-5pm), film viewings, and a single outside cultural event (e.g., a concert of Russian music at the Kimmel Center).

SM 108. Russian Outside the Classroom II. (C) Yakubova.
Prerequisite(s): At least four semesters of Russian, and RUSS107. Continuation of RUSS107.
This is a half-credit course that consists of a variety of fun and entertaining non-classroom Russian language activities. Students who have taken at least one semester of Russian will take part in: 1. Russian lunch and dinner table; 2. Russian Tea and conversation, featuring cartoons, poetry readings, music listening, news broadcast, games, cooking lessons, and informal visits by guests; 3. The Russian Film Series; 4. field trips to Russian cultural events in the area (symphony, drama, film, etc.); 5. other Russian Program events.

Introductory/Survey Russian Courses (010 - 199)

048. (HIST048) The Rise and Fall of the Russian Empire, 1552-1917. (C) History & Tradition Sector. All classes. Nathans/Holquist.
How and why did Russia become the center of the world’s largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth
century. This course will trace the roots of the world’s first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR’s sudden implosion in 1991. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, and intellectuals; Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

100. Figuring Out Russia: Introduction to Russian Culture. (M) Vorkholantsev.
The course introduces students to major topics in Russian history, literature, art and religion. Students will learn about Russia’s past and present, its myths and beliefs, about its Czars and peasants, its heroes and rebels, about its artists, musicians and intellectuals, about its cities and society. Course materials include short works of major Russian authors, as well as films, musical scores and works of art. This introductory course will prepare students for more advanced and specialized courses in Russian literature and history.

SM 125. (CIMS125, COML127, GSWS125) The Adultery Novel. (C) Arts & Letters Sector. All Classes. Platt. All readings and lectures in English.
The object of this course is to analyze narratives of adultery from Shakespeare to the present and to develop a vocabulary for thinking critically about the literary conventions and social values that inform them. Many of the themes of desire, transgression, suspicion, discovery at the heart of these stories also lie at the core of many modern narratives. Is there anything special, we will ask, about the case of adultery—once called “a crime which contains within itself all others”? What might these stories teach us about the way we read in general? By supplementing classic literary accounts by Shakespeare, Pushkin, Flaubert, Chekhov, and Proust with films and with critical analyses, we will analyze the possibilities and limitations of the different genres and forms under discussion, including novels, films, short stories, and theatre. What can these forms show us (or not show us) about desire, gender, family and social obligation? Through supplementary readings and class discussions, we will apply a range of critical approaches to place these narratives of adultery in a social and literary context, including formal analyses of narrative and style, feminist criticism, Marxist and sociological analyses of the family, and psychoanalytic understandings of desire and family life.

SM 130. Russian Ghost Stories. (C) Staff.
In this course, we will read and discuss ghost stories written by some of the most well-known Russian writers. The goal of the course is threefold: to familiarize the students with brilliant and thrilling texts which represent various periods of Russian literature; to examine the artistic features of ghost stories and to explore their ideological implications. With attention to relevant scholarship (Freud, Todorov, Derrida, Greenblatt), we will pose questions about the role of the storyteller in ghost stories, and about horror and the fantastic. We will also ponder gender and class, controversy over sense and sensation, spiritual significance, and major changes in attitudes toward the supernatural.

We will consider the concept of the apparition as a peculiar cultural myth, which tells us about the "dark side" of the Russian literary imagination and about the historical and political conflicts which have haunted Russian minds in previous centuries. Readings will include literary works by Pushkin, Gogol, Dostoevsky, Turgenev, Chekhov, and Bulgakov, as well as works by some lesser, yet extremely interesting, authors. We will also read excerpts from major treatises regarding spiritualism, including Swedenborg, Kant, Arthur Conan Doyle, and Mme Blavatsky. The course consists of 28 sessions ("nights") and includes film presentations and horrifying slides.

This course covers 19C Russian cultural and social history. Each week-long unit is organized around a single medium-length text (novella, play, memoir) which opens up a single scene of social history (birth, death, duel, courtship, tsar, and so on). Each of these main texts is accompanied by a set of supplementary materials (paintings, historical readings, cultural-analytical readings, excerpts from other literary works, etc). The object of the course is to understand the social codes and rituals that informed nineteenth-century Russian life, and to apply this knowledge in interpreting literary texts, other cultural objects, and even historical and social documents (letters, memoranda, etc.). We will attempt to understand social history and literary interpretation as separate disciplines yet also as disciplines that can inform one another. In short: we will read the social history through the text, and read the text against the social history.

145. Russian Literature to the 1870s. (A) Arts & Letters Sector. All Classes. Steiner.
Major Russian writers in English translation: Pushkin, Gogol, Turgenev, early Tolstoy, and early Dostoevsky.

155. Russian Literature after 1870s. (B) Arts & Letters Sector. All Classes. Steiner.
Major Russian writers in English translation: Tolstoy, Chekhov, Pasternak, Babel, Solzhenitsyn, and others.

165. (CIMS165, EEU165) Russian and East European Film After WWII. (M) Todorov.
This course examines the Russian and East European contribution to world cinema after WWII - Stalinist aesthetics and desalinization, WWII in film, the installation of totalitarianism in Eastern Europe and the Cold War in film, the fall of the Berlin Wall, the collapse of the Soviet Union and the post-soviet condition, cinematic representations of Yugoslavia's violent breakup; the new Romanian waive. Major filmmakers in discussion include Kalatozov, Tarkovsky, Wajda, Polanski, Forman, Muntzel, Sabo, Kusturitsa, Konchalovsky, Mikhalkov and others.

L/R 188. (CIMS352, COML241, GRMN256, RELS236) The Devil's Pact Reloaded: Goethe’s Faust & Bulgakov’s Master i Margarita. (C) Arts & Letters Sector. All Classes. Richter and Staff.
For centuries the pact with the devil has signified humankind’s desire to surpass the limits of human knowledge and power. The legend of the devil's pact has permeated literature, art, and cinema. In this course, students will focus on two masterpieces of world literature in which the devil's pact plays out in surprising ways, Goethe's Faust and Bulgakov's Master and Margarita. Extracts from film, art, music and popular culture will be brought in as needed. Team-taught by professors of German and Russian literature, this course will bring all the devilish details to light.

The course will cover the development and operation of the Soviet centrally planned economy—one of the grandest social experiments of the 20th century. We will review the mechanisms of plan creation, the push for the collectivization and further development of Soviet agriculture, the role of the Soviet educational system and the performance of labor markets (including forced labor camps—GU Lags). We will discuss the strengths and weaknesses of the Soviet system and the causes of its collapse. Privatization, called by some "piratization," will be one of the central issues in our consideration of the transition from central planning to a market economy in the early 1990s. Even though our main focus will be on the Soviet economy and post-Soviet transition, we will occasionally look back in time to the tsarist era and even further back to find evidence to help explain Soviet/Russian economic development.

This course studies the emergence of organized terrorism in nineteenth-century Russia. It examines the philosophy of the terrorist struggle through its methods, causes, various codes, and manifestoes that defined its nature for the times to come. We critique intellectual movements such as nihilism, anarchism, and populism that inspired terrorism defining the political violence and disorder as beneficial acts. The issue of policing terrorism becomes central when we study a police experiment to infiltrate, delegitimize and ultimately neutralize terrorist networks in late imperial Russia.

The discussions draw on the ideology and political efficacy of the conspiratorial mode of operation, terrorist tactics such as assassination and hostage-taking, the cell structure of the groups and underground incognito of the strikers, their maniacal self-denial, revolutionary asceticism, underground mentality, faceless omnipotence, and other attributes-intensifiers of its mystique.

We analyze the technology and phenomenology of terror that generate asymmetrical disorganizing threats to any organized form of government and reveal the terrorist act as a sublime end as well as a lever for achieving practical causes. Our study traces the rapid proliferation of terrorism in the twentieth century and its impact on the public life in Western Europe, the Balkans, and America.

191. (COMML291) Putin's Russia: Culture, Society and History. (M)

Society Sector. All classes. Platt. No prior knowledge of Russian is required.

Winston Churchill famously said that Russia "is a riddle, wrapped in a mystery, inside an enigma." Strikingly, today many informed Russians would agree: no one can provide definitive answers concerning what has driven Russian public life and politics over the past three years, as it ricocheted from the mass protests of 2011 and 2012, into the Pussy Riot scandal, then the Olympics, and most recently to the intense patriotism driving the Russian annexation of Crimea and intervention in Ukraine. In this course we will examine how Russians themselves communicate about and represent Russia and what this reveals about this complex society and its development. We will consider print journalism, novels, films, televised media, and the internet paying close attention both to particular representations and to social institutions for their production, dissemination and consumption. Topics of special concern will include: conspiracy theories, representations of Russian history, collective identity and patriotism, intellectuals and elites, gender and sexuality, consumption and wealth. Putins Russia is an introductory level course for which no prior knowledge Russian history, culture or society is required. All readings and screenings will be in English.

SM 193. (COMML150, HIST149) War and Representation in Russia, Europe and the U.S. (M)

Representations of war have been created for as many reasons as wars are fought: to legitimate conflict, to celebrate military prowess, to critique brutality, to mobilize popular support, to vilify an enemy, and to generate national pride. In this course we will examine literary and cinematic representations of war, produced in Russia, Europe, and the United States. Over the course of the semester we will reflect on the tension between the need for memorialization and the limits of representation: How is war represented in literature and film? How do those mediums both enable and thwart us in our attempt to capture wartime experiences? What is the relationship between perspective, politics, and representation? And finally, how is the experience of being in a war refracted through gender, race, class, and sexuality? Authors we will read in this class might include Leo Tolstoy, Harriet Beecher Stowe, Stephen Crane, Ernest Hemingway, Albert Camus, John Okada, Virginia Woolf, Kurt Vonnegut, Rabih Alameddine, and Toni Morrison.

196. Russian Short Story. (M)

Todorov.

This course studies the development of 19th and 20th century Russian literature through one of its most distinct and highly recognized genres—the short story. The readings include great masters of fiction such as Pushkin, Gogol, Dostoevsky, Tolstoy, Chekhov, Solzhenitsyn, and others. The course presents the best works of short fiction and situates them in a literary process that contributes to the history of a larger cultural-political context. Students will learn about the historical formation, poetic virtue, and thematic characteristics of major narrative modes such as romanticism, utopia, realism, modernism, socialist realism, and postmodernism. We critique the strategic use of various devices of literary representation such as irony, absurd, satire, grotesque, anecdote, etc. Some of the main topics and issues include: culture of the duel; the role of chance; the riddle of death; anatomy of madness; imprisonment and survival; the pathologies of St. Petersburg; terror and homo sovieticus.

197. (COMML197) Madness and Madmen in Russian Culture. (M)

Humanities & Social Science Sector. Class of 2010 & beyond. Staff.

This course will explore the theme of madness in Russian literature and arts from the medieval period through the October Revolution of 1917. The discussion will include formative masterpieces by Russian writers (Pushkin, Dostoevsky, Tolstoy, Chekhov, and Bulgakov), painters (Repin, Vrubel, Filonov), composers (Mussorgsky, Tchaikovsky, and Stravinsky), and film-directors (Protazanov, Eisenstein), as well as non-fictional documents such as Russian medical, judicial, political, and philosophical treatises and essays on madness.

240. (COMML236, HIST333) Napoleonic Era and Tolstoy. (M)

Holquist/Vinitsky. All readings and lectures in English.

In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy's War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and
human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel?

This semester marks the 200th anniversary of Napoleon's attempt to conquer Russia and achieve world domination, the campaign of 1812. Come celebrate this Bicentennial with us! Because we will read War and Peace over the course of the entire semester, readings will be manageable - and very enjoyable.

Intermediate/Seminar Courses (200-299)

SM 201. (COML207) Dostoevsky and His Legacy. (A) Staff.

This course explores the ways Fyodor Dostoevsky (1821-1881) portrays the "inner world(s)" of his characters. Dostoevsky's psychological method will be considered against the historical, ideological, and literary contexts of middle to late nineteenth-century Russia. The course consists of three parts: External World (the contexts of Dostoevsky), "Inside" Dostoevsky's World (the author's technique and ideas) and The World of Text (close reading of Crime and Punishment and The Brothers Karamazov). Students will write three essays on various aspects of Dostoevsky's "spiritual realism."

SM 202. (COML204) Tolstoy. (B) Staff. Ben Franklin Seminar.

This course consists of three parts. The first, How to read Tolstoy? deals with Tolstoy's artistic stimuli, favorite devices, and narrative strategies. The second, Tolstoy at War, explores the author's provocative visions of war, gender, sex, art, social institutions, death, and religion. The emphasis is placed here on the role of a written word in Tolstoy's search for truth and power. The third and the largest section is a close reading of Tolstoy's masterwork The War and Peace (1863-68) a quintessence of both his artistic method and philosophical insights.

This course is about Russian literary imagination, which is populated with saints and devils, believers and religious rebels, holy men and sinners. In Russia, where people's frame of mind had been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Is humility the way to salvation? Should one live for God or for the people? Does God ever exist?

In "Saints and Devils" we read works of great masters of Russian literature and learn about the historic trends that have filled Russia's national character with religious and mystical spirit. We start with old Russian fanciful stories and legends of crafty demons and all-forswearing saints. The master of fantastic writing, Nikolai Gogol, will teach us how to triumph over the devil. Together with Anton Chekhov and Leo Tolstoy, we contemplate an ambivalent cultural image of woman as a victim or a sinful agent of the devil. Immersed in the world of Dostoevsky's The Brothers Karamazov, we follow the characters in their search for truth, faith, and love. In The Master and Margarita, Mikhail Bulgakov will tell us his fantastic and devilish story of Pontius Pilate and we will see for ourselves that "A man will receive his deserts in accordance with his beliefs."

In sum, over the course of this semester we will talk about ancient cultural traditions, remarkable works of art, and the great artists who created them. (No previous knowledge of Russian Literature necessary. All readings are in English.)

SM 220. (COML220, HIST220) Russia and the West. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Staff. From the Other Shore: Russia and the West.

This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life Revolutions, educational system, public executions, resorts, etc. within the context of Russian intellectual history. We will examine how images of the West reflect Russia's own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers' letters, diaries, and historiographical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late Nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussion, short writing assignments, and two in-class tests.

This course offers an overview of the cultural history of Rus from its origins to the eighteenth century, a period which laid the foundation for the Russian Empire. The course takes an interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodoxy viewed in a broader European context. Although this course is historical in content, it is also about modern Russia. The legacy of Medieval Rus is still referenced, often allegorically, in contemporary social and cultural discourse as the Russian, Ukrainian and Belarusian societies attempt to reconstruct and reinterpret their histories. In this course, students learn that the study of the medieval cultural and political history explains many aspects of modern Russian society, its culture and mentality.

How are human behaviors and attitudes shaped in a socialist society? What forms do conformity and dissent take under a revolutionary regime? This course will explore the cultural history of the Soviet Union from the end of the Second World War to the collapse of communism in 1991. We will investigate a variety of strategies of resistance to state power as well as the sources of communisms enduring legitimacy for millions of Soviet citizens. Above all, we will be concerned with the power of the word and image in Soviet public and private life. Assigned texts will include memoirs, manifestos, underground and officially approved fiction & poetry, films, works of art, and secondary literature.

275. (CIMS275) Russian History in Film. (M) Todorov.

This course draws on fictional, dramatic and cinematic representations of Russian history based on Russian as well as non-Russian sources and interpretations. The analysis targets major modes of imagining, such as narrating, showing and reenacting historical events, personae and epochs justified by different, historically mutating ideological postulates and forms of national self-consciousness. Common stereotypes of picturing Russia from "foreign" perspectives draw special attention. The discussion involves the following themes and outstanding figures: the mighty autocrats Ivan the Terrible, Peter the Great, and Catherine the Great; the tragic ruler Boris Godunov; the brazen rebel and royal impostor Pugachev; the notorious Rasputin, his uncanny powers, sex-appeal, and court
machinations; Lenin and the October Revolution; images of war; times of construction and times of collapse of the Soviet Colossus.

299. Independent Study. (C) Staff.

Advanced Russian Language Courses

311. (RUSS511) Russian Conversation and Composition. (A) Staff. Prerequisite(s): RUSS 004 or placement exam.

This course develops students' skills in speaking and writing about topics in Russian literature, contemporary society, politics, and everyday life. Topics include women, work and family; sexuality; the economic situation; environmental problems; and life values. Materials include selected short stories by 19th and 20th century Russian authors, video-clips of interviews, excerpts from films, and articles from the Russian media. Continued work on grammar and vocabulary building.

312. (RUSS512) Russian Conversation and Composition II. (B) Staff. Prerequisite(s): RUSS 311.

Primary emphasis on speaking, writing, and listening. Development of advanced conversational skills needed to carry a discussion or to deliver a complex narrative. This course will be based on a wide variety of topics from everyday life to the discussion of political and cultural events. Russian culture and history surveyed briefly. Materials include Russian TV broadcast, newspapers, Internet, selected short stories by contemporary Russian writers. Offered each spring.

360. Russian for Heritage Speakers I. (C) Staff. Previous language experience required.

This course is intended for students who have spoken Russian at home and seek to achieve proficiency in the language. Topics will include an intensive introduction to the Russian writing system and grammar, focusing on exciting materials and examples drawn from classic and contemporary Russian culture and social life. Students who complete this course in combination with RUSS361 satisfy the Penn Language Requirement.

361. Russian for Heritage Speakers II. (B) Staff. Prerequisite(s): Prerequisites: Russian 360 or at least three and no more than six years of Russian formal schooling, or instructor's permission.

This course is a continuation of RUSS360. In some cases, students who did not take RUSS360 but have basic reading and writing skills may be permitted to enroll with the instructor's permission. Students who complete RUSS361 with a passing grade will satisfy the Penn Language Requirement.

399. Supervised Work. (C)

Hours and credits on an individual basis.

Advanced Courses (400 to 425) in History, Literature and Culture. Taught in Russian.

Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, and combines advanced study of the Russian language with an examination of the fundamental literary movements and figures of nineteenth-century Russian literature and culture. Course materials include prosaic and poetic texts by Pushkin, Gogol', Lermontov, Dostoevsky, Tolstoy, Chekhov, as well as films and art. Language work will be devoted to writing, syntactical and stylistic analysis, vocabulary, academic speech, and listening comprehension.

SM 413. Twentieth-Century Russian Literature, Film and Culture: Utopia, Revolution and Dissent. (M) Bourlatshaya.

Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, and introduces students to major movements and figures of twentieth-century Russian literature and culture. We will read the works of modern Russian writers, and watch and discuss feature films. The course will introduce the first Soviet films and works of the poets of the Silver Age and beginning of the Soviet era as well as the works from later periods up to the Perestroika and Glasnost periods (the late 1980s).

Prerequisite(s): RUSS 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, and is designed to familiarize students with contemporary Russian society, its historical background and its present political and economic structure, and to develop functional proficiency in speaking, writing, reading and listening. The course will focus on a variety of issues central to Russian society since the fall of the Soviet Union, including changing values, political parties and movements, the business climate and businessmen, various nationalities within Russia, women in the family and at work. Course materials will include interviews, articles, essays by leading Russian journalists and statesmen, and contemporary Russian movies.

Prerequisite(s): RUSS312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, while closely studying a representative selection of texts from the modernist period. The course will explore central issues of the period, such as the relationship between literature and revolution, reconceptualizations of society, history and the self. Of particular interest will be authors' experimentation in form and language in order to present anew the experience of life. Textual study is combined with a general overview of the period, including reference to parallel trends in the visual arts, architecture and music, as well as contemporary intellectual movements. Principal writers studied will include Belyi, Sologub, Remizov, Andreev, Artsybashev, Gorky, Zamiatin, Pilnyak, Platonov, Zoshchenko, Babel, Olesha, and Khurms.

418. Russian Culture and Society Now. (L) Staff. Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian, while surveying main social, political and cultural developments in Russia since 1991. In these two turbulent decades Russia has undergone colossal changes ranging from disintegration of the Soviet Empire to the rapid development of new gastronomical tastes and new trends in literature and culture. The course will explore diverse and often conflicting cultural sensibilities in contemporary Russian fiction, poetry, journalism, scholarly writing, performance art, as well as in pop-culture and film. Topics under consideration will include reassessing Russia's luminous cultural heritage as well as traumatic periods in Soviet history; search for identity and the recent drift towards neo-nationalism; gender issues and the contemporary focus on fatherlessness; changing attitudes towards former cultural taboos; dealing with Russia's current political and cultural dilemmas. The course also incorporates
two advanced Russian colloquiums with guest appearances of Prof. Kevin Platt and Ilya Vinitsky.

**SM 419. Russian Song and Folklore.** (M) Verkholyans’ev. Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian. Song and, in particular, folk song is an essential and exciting component of Russian culture and social life, and an important language learning tool. The course offers a general introduction to the history of Russian folklore, song and musical culture. Students will explore the historical trajectory of Russian song and its various genres (from folk to the modern Estrada), examine the poetic and literary principles of song, discuss its aesthetic properties, and analyze the educational, community-building and ideological roles of song in Russian society.

**420. Contemporary Russia Through Film.** (C) Bourlatskaya. Prerequisite(s): Russian 312 or placement exam. Conducted in Russian.

This course continues developing students' advanced skills in Russian and offers intensive study of Russian film, arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia's transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russian society.

**Advanced Courses Taught in English (426 - 449)**

**SM 426. (CIMS365) Chekhov: Stage & Screen.** (M) Zubarev. Forms a part of the LPS Masters in Liberal Arts Program.

What's so funny, Mr. Chekhov? This question is often asked by critics and directors who still are puzzled with Chekhov's definition of his four major plays as comedies. Traditionally, all of them are staged and directed as dramas, melodramas, or tragedies. Should we cry or should we laugh at Chekhovian characters who commit suicide, or are killed, or simply cannot move to a better place of living? Is the laughable synonymous to comedy and the comic? Should any fatal outcome be considered tragic? All these and other questions will be discussed during the course. The course is intended to provide the participants with a concept of dramatic genre that will assist them in approaching Chekhov's plays as comedies. In addition to reading Chekhov's works, Russian and western productions and film adaptations of Chekhov's works will be screened. Among them are, Vanya on 42nd Street with Andre Gregory, and Four Funny Families. Those who are interested will be welcome to perform and/or direct excerpts from Chekhov's works.

**SM 430. (CIMS430, EEUR430) Nationalism and Ethnic Conflict in Film.** (M) Todorov. Forms a part of the LPS Masters in Liberal Arts Program.

This course investigates the cinematic representation of civil wars, ethnic conflicts, nationalistic doctrines, and genocidal policies. The focus is on the violent developments that took place in Russia and on the Balkans after the collapse of the Soviet Bloc and were conditioned by the new geopolitical dynamics that the fall of communism had already created. We study media broadcasts, documentaries, feature films representing the Eastern, as well as the Western perspective. The films include masterpieces such as "Time of the Gypsies", "Underground", "Prisoner of the Mountains", "Before the Rain", "Behind Enemy Lines", and others.

**SM 432. (CIMS432, COML196) Fate and Chance in Literature and Culture.** (M) Zubarev. Forms a part of the LPS Masters in Liberal Arts Program.

In Fate and Chance in Literature and Culture, we will explore these two interrelated concepts in comparative perspective over a broad historical range. As a result, the students will learn how the philosophy of fate and chance has been reflected in works of different Russian authors and in different cultural and political environments. In Russian as well as western systems of belief fate and chance represent two extreme visions of the universal order, or, perhaps, two diametrically opposed cosmic forces: complete determinism, on the one hand, and complete chaos or unpredictability, on the other. These visions have been greatly reflected by various mythopoetic systems. In this course, we will investigate religious and folkloric sources from a series of Russian traditions compared to other Indo-European traditions (Greek, East-European). Readings will include The Song of Prince Igor's Campaign, The Gambler by Dostoevsky, The Queen of Spades by Pushkin, Vij by Gogol, The Black Monk by Chekhov, The Fatal Eggs by Bulgakov, and more.

**434. Media and Terrorism.** (M) Todorov. Forms a part of the LPS Masters in Liberal Arts Program.

This course draws on fictional, cinematic and mass-media representation of terrorism based on Russian as well as Western examples. We study how the magnitude of the political impact of terrorism relates to the historically changing means of production of its striking iconology. The course exposes students to major modes of imagining, narrating, showing, reenacting terrorism and forging its mystique. We examine the emergence of organized terrorism in nineteenth-century Russia as an original political-cultural phenomenon. We trace its rapid expansion and influence on the public life in the West, and on the Balkans.

Historical, political, and aesthetic approaches converge in a discussion of several case studies related to intellectual and spiritual movements such as nihilism, anarchism, populism, religious fundamentalism, and others. The public appearance of the terrorist activism and its major attributes are viewed as powerful intensifiers of its political effect: self-denial, ascetic aura, and stratagem of mystification, underground mentality, and martyrdom. The pedagogical goal of this course is to promote and cultivate critical view and analytical skills that will enable students to deal with different historical as well as cultural modes of (self-)representation of terrorism. Students are expected to learn and be able to deal with a large body of historical-factual and creative-interpreted information.

**Courses in Literature, Culture, and History for Russian Speakers (450 - 499)**

**460. Post-Soviet Russia in Film.** (C) Bourlatskaya. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Film is arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia's transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as
the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russian society.

SM 461. 20th Century Russian Literature: Fiction and Reality. (M) Bourlatskaya. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Russian 461 introduces the major movements and figures of twentieth-century Russian literature and culture, works of modern Russian writers, and feature films. In studying the poetry of Mayakovskiy, Block, and Pasternak, students will become familiar with the important literary movements of the Silver Age. The reality of the Soviet era will be examined in the works of Zamyatin, Babel, and Zoshchenko. There will be a brief survey of the development of Soviet cinema, including films of Eisenstein, Tarkovsky, and Mikhailov. Literary trends in the later Soviet period will be seen in war stories, prison-camp literature, village prose, and the writings of female authors of that time.

SM 464. Russian Humor. (M) Staff. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

One of the most fascinating and most difficult things for a student of foreign culture is to understand national humor, as it is presented in various stories and films, jokes and shows. To an extent, humor is a gateway to national mentality. In the present course we will examine Russian cultural history, from the sixteenth through the twenty-first centuries, through the vehicle of Russian humor. How does Russian humor depend on religion and history? What was considered funny in various cultural trends? What are the peculiarities of Russian humorist tradition? Students will be familiarized with different Russian theories of humor (Bakhtin, Likhachev, Panchenko, Tytuchev, etc.) and, of course, with a variety of works by Russian kings of humor Pushkin and Gogol, Chekhov and Zoshchenko, Bulgakov and Ilf and Petrov, Erfechev and Kibirov, etc. Class lectures will be supplemented by frequent video and musical presentations ranging from contemporary cartoons to high comedies and from comic songs (Chalapins The Flea) to the music of Shostakovich (The Nose).

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language.

465. Singing in the Snow: The History of Russian Song. (M) Verkhonantsev. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Song is an essential and exciting component of Russian culture and social life, and an important language learning tool. The course offers a general introduction to the history of Russian song. Students will explore the historical trajectory of Russian song and its various genres (from folk to the modern Estrada), examine the poetic and literary principles of song, discuss its aesthetic properties, and analyze the educational, community-building and ideological roles of song in Russian society. Among the wide-ranging topics and genres that we will discuss and work with are lyrics of folk songs, romances, Soviet and patriotic songs, Anti-Soviet songs, Russian/Soviet anthems, bard song, film and theater songs, childrens songs, Soviet and Russian Rock and Pop.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. It offers an introduction to contemporary Russian society, its historical background and its present political and economic structure. The course will focus on the political, economic and sociological developments in Russia from Perestroika (late 1980s) to Putin. The course will discuss the society's changing values, older and younger generations, political parties and movements, elections, the business community and its relations with the government, common perceptions of Westerners and Western society, and the role of women in the family and at work. Emphasis will be placed on the examination, interpretation and explanation of peoples behavior and their perception of democracy and reforms, facilitating comparison of Western and Russian social experience.

SM 469. Russian Utopia in Literature, Film, and Politics. (M) Staff. Prerequisite(s): RUSS361 or comparable language competence. Conducted in Russian.

This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. In this course we will undertake a fascinating journey to the Dreamland of Russian culture. Students will read and discuss Russian utopian imagination as presented in a variety of literary texts, paintings, musical works, films, as well as philosophical texts and economic theories. Topics for discussion will include Russian fairy tales and legends, religious prophesies and communist projects, history and imagination, technological and patriarchal utopias.

SM 485. (COLL224) Russian Poetics. (A) Steiner. Prerequisite(s): RUSS312, RUSS361 or comparable language competence. This course is open to all advanced students of Russian (including students who speak Russian at home).

Introduction to the analysis of poetic texts, based on the works of Batyushkov, Lermontov, Tutychev, Fet, Mandelshtam, and others.
Graduate Courses

SM 506. Pushkin. (B) Steiner. Prerequisite(s): RUSS312, RUSS361 or comparable language competence. This course is open to all students of Russian (including students who speak Russian at home).

The writer's lyrics, narrative poems, and drama.

SM 508. Advanced Russian for Business. (M) Bourlatckaya. Prerequisite(s): At least one RUSS400-level course or comparable language competence.

This advanced language course focuses on developing effective oral and written communication skills for working in a Russian-speaking business environment. Students will discuss major aspects of Russian business today and learn about various Russian companies using material from the current Russian business press. In addition, students will be engaged in a number of creative projects, such as business negotiation simulations, and simulation of creating a company in Russia.

SM 544. (COML541, RUSS444) Haunted House: Russian Realism in European Context. (M) Staff.

In this class we will examine works of major Russian Realist writers, painters, and composers considering them within Western ideological contexts of the 1850-1880s: positivism, materialism, behaviorism, spiritualism, etc. We will focus on Russian Realists ideological and aesthetic struggle against Romantic values and on an unpredicted result of this struggle - a final specialization of social and political realities they claimed to mirror in their works. Paradoxically, Russian Realism contributed to the creation of the image of Russia as a house haunted by numerous apparitions: nihilism and revolution, afflicted peasants and perfidious Jews, secret societies and religious sects. The spectropoetics (Derrida) of Russian Realism will be examined through works of Dostoevsky, Tolstoy, Turgenev, Leskov, Chekhov, as well as paintings by Ilya Repin and operas by Mussorgsky and Tchaikovsky. Requirements include one oral presentation, mid-term theoretical survey essay, and a final paper. Relevant theories include M.H. Abrams, Brookes, Levine, Greenblatt, Castle, and Derrida.

SLAVIC (SLAV)

100. (HIST231, RUSS103) Slavic Civilization. (I) History & Tradition Sector. All classes. Verkholantsev.

This introductory course examines selected topics in the cultural and political history of Slavic peoples. Topics include: the origins and pre-history of the Slavs, Slavic languages and literary culture, religions of the Slavs (Orthodoxy, Catholicism, Protestantism, Islam), the origins of Slavic nationalism and Pan-Slavism and the formation of Eastern/Central Europe. The course combines lectures with discussions of literary texts in translation, film, music and art.

109. Central European Culture and Civilization. (M) Steiner. This is Penn-in-Prague course.

This course is normally offered through Penn-in-Prague during summer. The reappearance of the concept of Central Europe is one of the most fascinating results of the collapse of the Soviet empire. The course will provide an introduction into the study of this region based on the commonalities and differences between Austria, Czechoslovakia, Hungary, Poland and Germany. The topics will include the history of arts and literature, as well as broader cultural and historical patterns characteristic of this part of Europe.

399. Independent Study. (C) May be repeated for credit.

SM 500. (CLST511, COML501, ENGL571, GRMN534, ROML512) History of Literary Theory. (M) Copeland/Platt.

Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing and often confrontational dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the professional/study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature we will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism.

There will be no examinations. Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor; it will typically include three or four books and six to eight articles or their equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare position notes each week, which will either be posted on a weblog or circulated in class.

SM 526. (COML526, ENGL705, HIST526) In Defiance of Babel: the Quest for a Universal Language. (M) Verkholantsev.

This is a course in intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language to explain and communicate the essence of human experience. The idea that the language spoken in the Garden of Eden was a language which perfectly expressed the essence of all possible objects and concepts has occupied the minds of scholars for more than two millennia. In defiance of the myth of the Tower of Babel and the confusion of languages, they strove to overcome divine punishment and discover the path back to harmonious existence.

For philosophers, the possibility of recovering or recreating a universal language would enable apprehension of the laws of nature. For theologians, it would allow direct experience of the divinity. For mystic-cabalists it would offer access to hidden knowledge. For nineteenth-century philologists the reconstruction of the proto-language would enable a better understanding of human history. For contemporary scholars, linguistic universals provide structural models both for human and artificial languages. For writers and poets of all times, from Cyrano de Bergerac to Velimir Khlebnikov, the idea of a universal and perfect language has been an inexhaustible source of inspiration. Above all, the course examines fundamental questions of what language is and how it functions. Among the course readings are works by Plato, Aristotle, St. Augustine, Dante, Horapollo, Bacon, Giordano Bruno,
John Wilkins, Cyrano de Bergerac, Jonathan Swift, and Zamenhof.

SM 620. Europe: From Idea to Union. (M) Steiner.

Employing the methods from the humanities and social sciences this interdisciplinary seminar will explore the variety of factors that contributed to dividing and uniting Europe. The continent will be considered as a geographical and cultural space and the construction of its identity will be examined through several historical periods—from the Middle Ages to Modernism—comprising the rich layer of pan-European civilization across the ethnic or national borders.

Finally, the structure of the European Union will be scrutinized including its institutions, decision-making mechanism, shared currency, collective security, and Europe's changing relationship with the USA. Participants will be encouraged to select a particular topic in European studies and research it through assigned readings, film, literature, and other media. The individual projects will be developed through consultations with the instructor into a class presentation leading to a final paper (about 6,000 words).

SM 623. (HIST620) Historiography of Imperial and Soviet Russia. (A) Platt. Prerequisite(s): At least advanced reading knowledge of Russian. Seminar discussion will be conducted in English, but a fair amount of reading will be assigned in Russian.

We will cover the development of Russian historical research and writing from the start of the eighteenth century to the present, focusing on major texts, schools and figures. Alongside this traditional historiographical architecture, segments of the course will be devoted as well to a variety of theoretical models and approaches to research, including: institutional history, cultural history, poetics of history, philosophy of history, "invention of tradition," trauma studies, and others.

SM 651. (COML650) Theories of Representation. (M) Steiner.

The course will examine major Western theories of sign and representation from Socrates to Derrida. Primary focus will be on twentieth-century trends including phenomenology, structuralism, and Marxism. Readings will include: Plato, St. Augustine, Pierce, Husserl, Jakobson, Bakhtin, Voloshinov, Eco, Derrida and others.

SM 655. (COML654, HIST656) History, Memory, Trauma. (M) Platt. All readings and lectures in English.

This course will be devoted to study of the theory and practice of representation of the past in major European traditions during the modern era, with special emphasis on three topics of broad concern: revolution, genocide, and national becoming. The object of inquiry will be construed broadly, to include all manner of historiographic, artistic, filmic, literary and rhetorical representation of the past. Each of the three segments of the course will begin with examination of important theoretical readings in conjunction with case studies in major European traditions that have been among the central foci of this theoretical work (French Revolutionary history, Holocaust, English nationalism). Next we will add analogous Russian cases to the picture (Russian Revolution, Gulag memory, Ivan the Terrible and Peter the Great as national myths). Finally, at the conclusion of each segment students will bring theoretical tools to bear on the national traditions and contexts relevant to their own work. Our readings in the theory and philosophy of history and historiography will include works by: Anderson, Caruth, Guha, Hegel, LaCapra, Putnam, Ricoeur, White and others.

SM 657. (COML657) Formalism, Bakhtin et al. (M) Steiner.

This course deals in depth with the three seminal literary-theoretical trends in Slavic philology during the inter war and the early post-war periods. It starts with Russian Formalism, a school striving to pin down what differentiates literary discourse from all other forms of language and continues with the Prague Structuralism that redefined the tenets of Formalisms from a semiotic perspective. Finally, the Bakhtin circle's key concepts meta-linguistics, dialogue and carnivals are discussed. All readings are in English.

999. Independent Study. (C)

POLISH

SM 392. (AFRC392, ARTH389, COMS392, COML391, ENGL392) Topics in Film Studies. (M)

501. Elementary Polish I. (D) Moscala. Prerequisite(s): No prerequisite. Offered through the Penn Language Center.

This course is for students who want to acquire the linguistic skills necessary for communication in everyday situations and that would constitute a solid base for further study of the Polish language. In addition students will become acquainted with various aspects of Polish culture (including Polish films), history and contemporary affairs. Students will learn through classroom exercises based on a modern textbook, completion of individual and group assignments and work with various audio and video materials. The textbook Hurra - Po Polsku 1 is written in the spirit of the communicative approach, which makes it possible to communicate from the very beginning of the learning process. The special attention, however, will be paid on systematic development of all language skills: listening, reading, speaking and writing.

502. Elementary Polish II. (D) Wolski-Moskoff. Prerequisite(s): SLAV 501 or Instructor's permission. Offered through the Penn Language Center.

This course is a continuation of the SLAV501 680. This is for students who want to acquire the linguistic skills necessary for communication in everyday situations and that would constitute a solid base for further study of the Polish language. In addition students will become acquainted with various aspects of Polish culture (including Polish films), history and contemporary affair. Students will learn through classroom exercises based on a modern textbook, completion of individual and group assignments and work with various audio and video materials. The textbook Hurra - Po Polsku 1 is written in the spirit of the communicative approach, which makes it possible to communicate from the very beginning of the learning process. The special attention, however, will be paid on systematic development of all language skills: listening, reading, speaking and writing.

503. Intermediate Polish I. (D) Wolski-Moskoff. Prerequisite(s): SLAV 502 or placement exam. Offered through the Penn Language Center.

This is a first-semester intermediate -level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will learn through classroom exercises based on a modern textbook: Hurra Po Polsku 2, completion of individual and group assignments and work with various audio and video materials. Major course goals include: the acquisition
of intermediate-level vocabulary, the controlled use of the Polish cases; the aspect of the verbs, the development of writing skills.

504. Intermediate Polish II. (D) Wolski-Moskoff. Prerequisite(s): SLAV 503 or placement. Offered through the Penn Language Center.

This course is a continuation of the SLAV503 680. This is a second-semester intermediate -level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will learn through classroom exercises based on a modern textbook: Hurra Po Polsku 2, completion of individual and group assignments and work with various audio and video materials. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the Polish cases; the aspect of the verbs, the development of writing skills.

505. Polish for Heritage Speakers I. (M) Wolski-Moskoff. Prerequisite(s): Instructor permission required.

STUDENTS WHO COMPLETE TWO SEMESTERS OF THIS COURSE SATISFY THE PENN LANGUAGE REQUIREMENT. Polish is used exclusively in the classroom.

The course is addressed to students who have spoken Polish at home and seek to achieve proficiency in the language. The main goal of this course is to provide instruction directed at students continued development of existing competencies in the Polish language. Students will acquire skills that range from learning grammar and spelling, and developing vocabulary, to interpretation and analysis of different literary genres. Students will explore a broad variety of cultural themes. Topics will include: Polish literature - classic and modern, social life, contemporary affairs and films.

Upon completion of the Polish for Heritage Speakers course, students are expected to confidently understand, read, write and speak Polish with an increased vocabulary and a better command of Polish grammar. They will increase their reading skills through interpretation and analysis of different Polish literary genres. Students will be able to organize their thoughts and write in a coherent manner. They will increase their writing skills by writing personal essays, compositions and others. Students will further their knowledge of the Polish language and will engage in class discussion on various topics. Students will gain a better understanding of the Polish culture.

506. Polish for Heritage Speakers II. (M) Wolski-Moskoff. Prerequisite(s): SLAV505 or placement test.

Continuation of SLAV505

EAST EUROPEAN (EEUR)

121. Elementary Hungarian I. (D) Mizsei. Offered through Penn Language Center.

An introduction to the fundamentals of the Hungarian language, acquisition of conversational, readings and writing skills.

122. Elementary Hungarian II. (D) Mizsei. Prerequisite(s): EEUR 121 or placement. Offered through Penn Language Center.

Continuation of EEUR 121

123. Intermediate Hungarian I. (D) Mizsei. Prerequisite(s): EEUR 121-122 or placement. Offered through the Penn Language Center.

Emphasis on vocabulary building, conversation and reading skills. Grammar review.

124. Intermediate Hungarian II. (D) Mizsei. Prerequisite(s): EEUR 121-123 or placement. Offered through Penn Language Center.

Continuation of EEUR123.

125. Advanced Hungarian I. (M) Staff. Offered through the Penn Language Center.

The basic aim is to enable students, independently or under the guidance of the teacher, to communicate in Hungarian and express their thoughts (orally or in writing) at an advanced level.

126. Advanced Hungarian II. (M) Staff. Offered through the Penn Language Center.

A continuation of Advanced Hungarian I

199. Independent Study. (C)

CZECH (SLAV)

530. Elementary Czech I. (D) Stejskal. Offered through the Penn Language Center.

An introduction to the fundamentals of the Czech language, acquisition of conversational, reading and writing skills.

531. Elementary Czech II. (D) Stejskal. Prerequisite(s): SLAV 530 or Placement. Offered through the Penn Language Center.

Continuation of SLAV 530

532. Intermediate Czech I. (D) Stejskal. Prerequisite(s): SLAV 531 or Placement. Offered through the Penn Language Center.

Emphasis on vocabulary building, conversation and reading skills. Grammar review.

533. Intermediate Czech II. (D) Stejskal. Prerequisite(s): SLAV 532 or Placement. Offered through the Penn Language Center.

Continuation of SLAV 532

534. Advanced Czech I. (D) Stejskal. Prerequisite(s): Two years of Czech or placement. Offered through the Penn Language Center.

Emphasis on advanced vocabulary building, conversation and reading skills. Advanced grammar review.

535. Advanced Czech II. (D) Stejskal. Prerequisite(s): SLAV 534 or placement. Offered Through the Penn Language Center.

Continuation of SLAV 534

UKRAINIAN (SLAV)

590. Elementary Ukrainian I. (D) Rudnytzky. Offered through the Penn Language Center.

An introduction to the fundamentals of the Ukrainian language, acquisition of conversational, reading and writing skills.

591. Elementary Ukrainian II. (D) Rudnytzky. Prerequisite(s): SLAV 590 or Placement. Offered through the Penn Language Center.

Continuation of SLAV 590

592. Intermediate Ukrainian I. (D) Rudnytzky. Prerequisite(s): SLAV 591 or placement test. Offered through the Penn Language Center.

Emphasis on vocabulary building, conversation and reading skills. Grammar review.

593. Intermediate Ukrainian II. (D) Rudnytzky. Prerequisite(s): SLAV 592 or Placement. Offered through the Penn Language Center.

Continuation of SLAV 592
594. Advanced Ukrainian I. (D)
Rudnytzky. Prerequisite(s): SLAV 593 or Placement. Offered through the Penn Language Center.

Emphasis on advanced vocabulary building, conversation and reading skills. Advanced grammar review.

595. Advanced Ukrainian II. (D)
Rudnytzky. Prerequisite(s): SLAV 594 or Placement. Offered through the Penn Language Center.
Continuation of SLAV 594
Social Work (SW) {SWRK}

Master of Social Work courses

601. History and Philosophy of Social Work and Social Welfare. (A)
This course offers a historical perspective for understanding current issues of social welfare and social work. It examines the social, racial, political, and economic forces that explain the development of social welfare and social work in the United States. Particular emphasis is placed on the role of gender and race in shaping social policy. Programs, policies, and issues are analyzed as responses to long-term changes in social and economic conditions in the United States and the needs and demands of oppressed groups for full participation in the life of the country.

602. Human Behavior in the Social Environment. (A)
This course introduces the student to the individual and family components of social interaction in a variety of different milieus. Theories of self and personality are studied, along with theories related to traditional and nontraditional family styles, different social and ethnic groups, and assimilation and acculturation. Emphasis is given to the impact of different cultures and traditions on individual functioning. Additional attention is given to selected social characteristics of the larger society, such as factors of socio-economic class which influence individual and family behavior and functioning.

603. American Racism and Social Work Practice. (A)
This course explores racism in America as a historical and contemporary phenomenon. It emphasizes the development of evidence based knowledge about institutional systems of racism, analytical skill in understanding the complexity of institutional racism and other forms of oppression more broadly defined, self awareness, and the implications of racism for social work services and practices.

604. Foundations of Social Work Practice I. (A)
This is a first of a four course sequence designed to help students develop a professional stance and evidence-based framework for social work services to individuals, groups, families, and communities. It integrates the student's theoretical learning with the experience in the field placement agency. The student is introduced to a holistic process-oriented approach to social work practice and to methods for implementation. The course emphasizes the social context for practice with special attention to agency purpose, functions and structure; the client system and its perceptions of need; goals and resources and the social worker as a facilitator of change.

614. Foundations of Social Work Practice II. (B) Prerequisite(s): SWRK604.
This is the second in a four course sequence and continues the examination and use of practice frameworks and methods for service delivery in working with individuals, groups, families and communities. It emphasizes the eradication of institutional racism and other forms of oppression along with the integration of a culturally sensitive approach to social work practice. Attention is given to understanding client problems in the context of different social work practice approaches and service requirements and to increased use of professional values to guide and inform practice.

SM 615. Introduction to Social Work Research. (B)
This course presents the broad range of research tools that social workers can use to improve the effectiveness and efficiency of their practice. The course emphasizes the process of theory development, conceptualization, and hypothesis formulation across a broad spectrum of social work practice situations. The course includes methodological considerations relating to concept operationalization; research design (experimental, survey, and field), sampling instrumentation, methods of data collection and analysis, and report preparation and dissemination. The course also emphasizes how social work research can help professionals better understand and more effectively impact problems of racism and sexism in contemporary American society.

SM 620. Integrative Seminar. (L) Prerequisite(s): Advanced Standing MSW students only.

701. Health and Mental Health Policy. (C) MSW Elective.
This course provides an overall view of the historical, social and economic dimensions of the health care delivery system: how health policies are developed and implemented, and how such policies influence social work practice, program planning, and research. Key health policy issues such as financing, cost, access, and the allocation of resources are explored in the context of health reform proposals. Students investigate how health policy affects specific population groups such as women and children, persons with chronic mental illnesses, persons with AIDS, older adults, and minorities.

This course focuses on key issues in social work practice in health care settings. Social aspects of health and illness, including cultural variations, health beliefs and behavior, and the impact of illness on the patient and the family, are examined and their relevance for practice is discussed. Appropriate theoretical models for practice are identified and applied to practice in the areas of prevention, primary care, chronic and long-term care. New roles for social work in varied health delivery systems and inter-professional collaboration are explored.

This course focuses on social changes in health care as it impacts the lives of older people and their families. Using Pennsylvania as a model, we will focus on the administrative and legislative systems. Topics will include the recent controversial changes to Medicare, re-balancing of the long-term care system and efficacy of behavioral health treatment programs. Students will learn how to impact social change at the policy level by planning a social marketing campaign. They will develop materials to influence consumer understanding and behavior, such as editorial and legislative briefings. Students will have the opportunity to interact with officials, legislators, and advocates as they build the framework to support a social change agenda.

Building on the foundation established in the foundation social work practice courses, this course introduces advanced theoretical frameworks for clinical practice from which students build conceptual practice frameworks. The course helps students choose and learn the components of a practice approach in the context of social assessment, agency auspices, and the student's developing theoretical framework.
706. Policies for Children and Their Families. (C) Policy Option.
This course examines policies for children and their families with a specific focus on child welfare policy. The course examines the interrelationship between: the knowledge base on child abuse and neglect; evaluations of interventions; programs and policies designed to protect maltreated children; and child welfare policy at the state and national level. The course also examines federal and state laws that govern the funding and operation of child welfare systems; the history of child welfare policies; the operation of child welfare systems; and the legal, political and social forces that influence the structure and function of child welfare systems in the United States.

708. Advanced Macro Social Work Practice I. (A) Required for Macro Practice Concentration.
Advanced Macro Social Work practice builds on the foundation social work practice courses and is composed of three interrelated disciplines: community organization, planning, and administration. In Macro Practice courses, the student develops knowledge and skills for practice in communities, organizations, and/or other social systems. This course, the first of two Macro Practice courses, begins by developing a theoretical framework for macro practice. Knowledge and skill development focuses primarily on social work practice within communities and on the planning of service delivery at the community level. Students learn how to identify community-based social problems, organize and build relationships with communities, and develop programs. Specific skill development includes learning how to conduct needs assessments, staff committees, run meetings, and write grants. The content is integrated with fieldwork and is specific to the service needs of the populations with whom students are working in their field agencies.

709. Heterosexism and Social Work. (C) MSW Elective.
This course builds on the foundation year focus on institutional oppression by applying this model to the status of lesbian, gay, bisexual, and transgender people in U.S. society and in social welfare systems. The course assesses the relationship of heterosexism and homophobia to other forms of institutional oppression, including racism and sexism. The course includes an overview of the treatment of sexual minorities in the U.S. and in the social work profession with a focus on issues related to lesbian, gay, bisexual, and transgender clients as an under-served and mis-served population. The intersection of racism and heterosexism is a focal point to explore the concerns and needs of LGBTQ people of color. Current theoretical frameworks for understanding sexual identity and the unique situations of lesbian, gay, bisexual, transgender and questioning people throughout the life cycle will be identified. Social work strategies for addressing heterosexism in social welfare agencies and communities will be explored by examining both micro and macro social work practice issues. The course will include a critical assessment of the state of social work education on the topic.

SM 712. (URBS454) City Limits: The Impact of Urban Policy. (B)
Prerequisite(s): Students must have taken an introduction to research methods. MSW elective.
This course assesses the changing role of public policy in American cities. In the past, government often believed that it could direct urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - 'player' in a more complex, transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens.

This seminar uses a case-study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region, including Philadelphia's Neighborhood Transformations Initiative and New Jersey's Camden Revitalization plans.

713. Understanding Social Change: Issues of Race and Gender. (B) Prerequisite(s): SWRK 603.
This course builds upon the foundation of historical, psychological, sociological, economic, political, and personal knowledge about institutionalized forms of racism and discrimination developed in SWRK 603, American Racism and Social Work Practice. The course uses understanding elements of oppression to critically examine strategies for addressing racism and sexism in organizations and communities through systematic assessment and planning for social change. The course examines change at three levels: organizations, communities, and social movements.

714. Advanced Clinical Social Work Practice II. (B) Prerequisite(s): SWRK 704. Required for Clinical Practice Concentration.
The focus of learning in this semester is differential intervention and the expansion of the professional role and repertoire. Students extend and refine their practice knowledge and skills and learn to intervene with group systems and selected problems. Students consolidate their identification as professionals and learn to constructively use environment to affect systems change.

715. Introduction to Social Work Research. (A) Required Course.
This course presents the broad range of research tools that social workers can use to improve the effectiveness and efficiency of their practice. The course emphasizes the process of theory development, conceptualization, and hypothesis formulation across a broad spectrum of social work practice situations. The course includes methodological considerations relating to concept operationalization; research design (experimental, survey, and field), sampling instrumentation, methods of data collection and analysis, and report preparation and dissemination. The course also emphasizes how social work research can help professionals better understand and more effectively impact problems of racism and sexism in contemporary American society.

718. Advanced Macro Social Work Practice II. (B) Prerequisite(s): SWRK 708. Required for Macro Practice Concentration.
This course, the second of two Macro Practice courses, helps students develop the knowledge and skills required to become an effective and creative social work manager. Management and behavioral science theories and concepts, as well as techniques
and methods, are introduced. Students also learn how to strategically plan programs at the organizational level and explore how public policy influences service delivery. Students learn to utilize administrative skills to promote social change within a variety of systems that influence the lives of client populations. Students have the opportunity to apply this administrative content to their field agency.

719. Prenatal and Early Childhood Development. (M) MSW Elective.
This course presents a coherent portrait of the development that transforms a person from the prenatal period to infancy to young childhood. The course bridges standard theories of development with new approaches such as social learning, cognitive development, developmental psychobiology, and other psychological theories used to understand the child. Integration of different perspectives on development is geared to demonstrate the interrelated nature of growth in cognition, learning, language, emotions, personality, physical growth and social behaviors. Students research areas of individual interest. MSW Elective

720. Middle Childhood and Adolescence. (M) MSW Elective.
This course focuses initially on growth and behavior in the often overshadowed period of middle childhood, and in greater depth on the adolescent period. Change in the psychological, physical, cognitive and social domains of growth is examined and is related to changing relationships and overt behaviors. The influence of social factors is a continuing theme. Concepts like "adolescent rebellion" are questioned and re-evaluated. Connections between uneven development and social problem behavior are examined. Knowledge is salient to school social work as well as to other practice domains. Students research areas of individual interest. MSW elective

722. Practice with Children and Adolescence. (C) Clinical Practice Elective.
This course provides a foundation for social work practice with children and adolescents. Beginning with an overview of normative child and adolescent development and psychosocial developmental theory, the course covers various methods for helping at-risk children and adolescents and their families. Emphasizing the complex interplay between children and adolescents and their social environments, consideration will be given to biological, temperamental, and developmental status, the familial/cultural context; the school context; and other aspects of the physical and social environment. Particular attention is paid to working with socially, emotionally, financially, and physically challenged and deprived children and adolescents and their families. Clinical Practice Elective.

724. Developmental Disabilities. (C) 
Clinical Practice Elective; required for students in the HSV program.
This course enhances the students' ability to practice social work with and on behalf of people with developmental disabilities and their families. The course provides a base of knowledge about developmental disabilities and differences, their causes and characteristics. Students learn how disabilities and learning differences impact personal, familial, educational, social, and economic dimensions for the individual, family and society, with attention to the person's special life cycle needs and characteristics. The course also emphasizes legislative, programmatic, political, economic, and theoretical formulations fundamental to service delivery. Clinical Practice Elective

726. Brief Treatment and Crisis Intervention. (C) Clinical Practice Elective.
This course focuses on theory and practice of planned brief treatment in social work practice, primarily with individuals but with attention to couples, families and other groupings. The course covers the history of and different approaches to brief treatment. Topics include treatment issues such as criteria for selection of clients, understanding the importance of time in the treatment relationship, the use of history, the importance of focusing, the process of termination and other issues related to brief interventions. Particular attention will be paid to the use of brief treatment approaches in crisis situations. The course presents various methods of assessing an individual's crisis and of helping clients mobilize their strengths to utilize customary methods of coping and learn newer ways of coping. Clinical Practice Elective

727. Practice with Families. (C) Clinical Practice Elective.
This course provides students with assessment and intervention skills for social work practice with varied family/partner configurations. The course begins with a grounding in family systems theory and proceeds to explore patterns of interaction in terms of the wide range of problems that families and partners bring to social agencies. Emphasis is given to exploring ways of supporting change in interaction patterns. Readings are augmented by videotapes of family sessions and simulations of clinical situations from students' field practice. Clinical Practice Elective

729. Social Statistics. (C) Research Option.
This course provides students with a broad range of statistical methods and applications. It introduces social work students to the use of quantitative data for planning and evaluating social programs and social policy. Course topics include conceptualization and measurement of variables and basic techniques and concepts for exploring and categorizing data, for generalizing research findings and testing hypotheses, and for statistical data processing. Students will gain experience in using a Windows-based statistical software package on personal computers. Emphasis is placed on the practical application of data to address social policy and social work practice issues. Students have the opportunity to critique the application of data analysis and presentation in technical reports and professional journals. Research Option

730. Community Mapping. (B) Macro Practice Elective.
Geographic space is important to family and community well-being, as we know. Community Mapping introduces students to geographic information systems (GIS), computer software for making maps and analyzing spatial data. Students will learn how maps have been used in social welfare history as well as how GIS can be used for needs assessments, asset mapping, program evaluation, and program planning. The course builds on research skills developed in SW 715. For the final project, students have an opportunity to apply their GIS skills to creating maps related to their field placement. The use of such maps may lead to both program and policy change in neighborhoods and communities. Macro Practice Elective

Prerequisite(s): Acceptance to the Child Well-Being and Child Welfare Specialization. Clinical and Macro Practice Elective.
Students enrolled in this course will learn about the various contexts in which child welfare practice and policy services take place and the skills and modalities that are used with children, youth, and families who are the focus of child welfare intervention. Students learn about the social conditions
and unmet needs that have typically precipitated child welfare policy and ideological debates informing child welfare policy. How to structure organizations and implement planning in support of strengthening front-line practice is also addressed. Taking stock of these policies and organizational factors, students gain a firm understanding of how they influence, shape, and govern direct clinical practice in child protection and casework. Particular attention will be devoted to developing students' practice skills in safety assessment and safety planning, risk assessment, and permanency planning. Implementation of evidence-based, trauma-informed interventions to promote positive developmental outcomes among the racially/ethnically diverse pool of children and adolescents placed in out-of-home care will also be a focus of attention. Other topics include separation, loss, and identity development; disproportionality and disparity; and self-care in child welfare practice.

In the spirit of bridging connections between macro and clinical practice, course content will delve into how direct casework services influence dependency actions in the juvenile courts. How these direct practices or interventions influence case outcomes as reported by a number of federal data reporting systems will also be discussed. A social justice framework will be applied to understand how child welfare policies and organizational services sustain child and family inequalities, especially for historically oppressed and marginalized populations who are disproportionately represented in the child welfare system.

This capstone course in the Child Well-Being and Child Welfare specialization will integrate direct/micro and macro levels of practice; research in child welfare and related fields, as the research relates to all levels of practice; the relationship of child maltreatment and other social problems; and perspectives from several disciplines, specifically social work, other mental health professions, law, and medicine, as these disciplines address problems of child maltreatment and child welfare. The seminar will highlight issues of social justice, disproportionality - particularly the over-representation of children and families of color in the child welfare system, and disadvantaged populations, including children in general and poor children in particular. Faculty from other disciplines will be features as guest speakers throughout the course.

736. Building Community Capacity. (C) Macro Practice Elective.

This course provides an introduction to community organization and community capacity building. The course encompasses strategies, models, and techniques for the creation of organizations, the formation of federations of existing organizations; and coalition-building, all designed to address problems requiring institutional or policy changes or reallocation of resources to shift power and responsibility to those most negatively affected by current socio-economic and cultural arrangements. The course emphasizes development of strategies and techniques to organize low-income minority residents of urban neighborhoods, and to organize disenfranchised groups across geographic boundaries as the first required steps in an empowerment process. Macro Practice Elective

738. Anxiety and Depression. (C) Clinical Practice Elective.

Anxiety and depression are two of the most common mental disorders seen in social work clients, and frequently they occur concurrently. This course describes the medical and "physical" concomitants and psychosocial factors associated with both conditions and introduces diagnostic and assessment procedures and methods of intervention that social workers use in working with clients with these conditions. The course also considers how culture, social class, gender, and other social differences affect the expression of these disorders and their concomitant treatment. Clinical Practice Elective

739. Introduction to Interdisciplinary Health Care: Collaborative Roles. (C) Clinical Practice Elective.

May be taken undergraduate juniors and seniors. Permit of the instructor is necessary. Contact the registrar, Nancy Rodgers, Room B-22, School of Social Work, Caster Building.

The course addresses basic issues in interdisciplinary collaboration in the health care field including communication, role negotiation, and leadership behaviors among the members of the multidisciplinary team. Case presentation structured exercises, group problem solving, decision making and goal setting will be utilized to demonstrate the roles and functions of several health disciplines.

Students are introduced to the relationship between the attainment of the tasks of the health care team and its internal group processes.

740. Strategic Planning and Resource Development for Public and Nonprofit Organizations. (C) Macro Practice Elective.

Resilient organizations engage in a continuous process of self-review and refocusing. Referred to as "strategic planning," this process requires the active participation of a broad range of agency "stakeholders" who, in their work together, seek to realign the organization's goals, structures, and programs to make them more responsive to the changing needs of their service populations. Building on the content of foundation practice foundation courses, "Strategic Planning and Resource Development" has been designed to strengthen the student's leadership capacity for engaging in strategic planning and resource development practice across a broad range of governmental (GOs) and civil society organizations (CSOs). The importance of organizational flexibility, innovation, and the creation of cooperative public-private partnerships is emphasized throughout the course. Macro Practice Elective

741. (MSSP741) Gender & Social Policy. (B) Baker.

Gender and Social Policy develops an advanced understanding of social policies through a focus on social issues and conditions through the lens of gender, economic and critical theory. The specialized focus on gender and social policy provides students with the opportunity to develop more specialized knowledge about how market dynamics and government policies respond to the needs and risks faced by women. Specific emphasis is placed on utilizing theoretical frameworks to evaluate the intersection between social policy, history and social science in relationship to gender issues. Students are also expected to conduct a policy analysis that includes an evaluation of how current and former social movements surrounding gender issues shaped their policy of interest.

742. Practice with At-Risk Youth. (A) Clinical and Macro Practice Elective; Option for Home and School Visitor Requirement.

The discourse on juvenile justice in the United States, once driven by themes of treatment and rehabilitation, has been dominated in recent years by vocabularies of punishment and incapacitation. The juvenile court, an enterprise founded by social reformers and the social work
profession at the turn of the century to "save children," is now under severe political and legislative pressure to impose harsher penalties on younger and younger offenders who are increasingly portrayed as violent "super-predators," while its most vulnerable segments, children and youth, stand in greatest need of what a social service system can offer. Not surprisingly, those most likely to wind up under supervision are economically poor, under-educated, disproportionately of color and disproportionately at-risk to become victims of violent crimes. How does the profession situate itself in this discourse and what are individual social workers to do? Clinical and Macro Practice Elective; Home and School Visitor Requirement Option

743. Action Research. (B)
Prerequisite(s): SWRK715 or SWRK615. Research Option.
Action research is a form of social research that combines research with intervention. It is characterized by a collaborative relationship between the researcher and a client organization that is in an immediate problematic situation. The research process is directed toward addressing the problem situation and producing knowledge that contributes to the goals of social science. Action research is compatible with many of the values and principles of social work. This course also addresses issues of social work ethics and values encountered by the action researcher.

744. Direct Practice Research. (B)
Prerequisite(s): SWRK 615 or SWRK 715, Introduction to Social Work Research. Research Option.
This course provides graduate social work students with research knowledge and skills aimed at enhancing their direct practice with clients. The course examines methods of assessment, methods for choosing and evaluating techniques of intervention, methods for determining the effectiveness of practice and the use of research in social work decision-making. A successful outcome of the course will be that students perceive a more positive relationship between research and social work practice and possess a set of tools that they will be able to utilize in their future careers as social workers. The course starts from an assumption that students have some familiarity with research and are primarily engaged in direct practice with individuals, families or groups.

746. Political Social Work. (B) Macro Practice Elective.
This course focuses on the role of social workers and the social work profession in advocacy and the political arena. It examines the methods of advocacy (e.g., case, class, and legislative) and political action through which social workers can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative social work roles in the facilitation of purposive change efforts. Topics include individual and group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action. Macro Practice Elective

748. Microfinance and Women's Empowerment in India. (B) Handy. Application required; $650 program fee.
This course examines microfinance and its engagement with marginalized communities such as those in India. It is designed to provide students with an understanding of the phenomena of microfinance and its role in poverty alleviation. By studying the use of self-help groups with NGO facilitation, their impact on women's empowerment will be examined and understood through interaction with women engaged in microfinance activities.

This course offers a unique opportunity to experience the challenges and complexities of coexistence in Israel, the Holy Land for Christians, Jews and Muslims; a key point of interest and dispute for the international community, and the homeland shared and claimed by both Israelis and Palestinians. The course will focus on activities carried out by nonprofit organizations operating within the Israeli civil society, dealing with issues related to coexistence and to the protection and advancement of the civil and social rights of different populations, with special emphasis on the Arab-Palestinian population in Israel. These activities include educational and social services programs, community work and advocacy activities, aimed at creating dialogues and building coexistence among the different populations in the Israeli society and Palestine.

This interdisciplinary course will introduce students to societal problems in the developing world; familiarize them with global professions in social work, education, public health, etc.; identify numerous strategies and skills social workers and other professionals have used to collaboratively build interventions within the human rights, social welfare, education, health care and sustainable community development arenas. The course will expose students to views of development as they relate to individual, interpersonal, family, community, societal and international change. Students will learn about the history of specific global problems, how cultures affect response, different social services delivery systems and initiatives aimed at resolution. Students will explore a specific development issue within a country and community.

756. Human Sexuality. (A) MSW Elective.
The aim of this course is to increase students' ability to deal more comfortably with the sexual aspect of human functioning. Readings, written assignments, and classroom presentations are directed to realizing the diversity, complexity, and range of human sexual expression. Current information about sexuality from the biological and physiological sciences is reviewed to increase comfort and skill in discussion and handling of sex-related behavior, personal and societal attitudes will be explored. A variety of sex-related social problems encountered by social workers in family, education, health, and criminal justice settings are discussed. Diagnostic interviewing and treatment methods are presented in role play, group exercises and case studies.

757. Loss through the Life Cycle. (B) Clinical Practice Elective.
This course considers loss as a central theme throughout the life cycle. Content focuses on the physical, psychosocial, spiritual, and cultural aspects of loss, dying and bereavement processes and the interaction among individuals, families and professionals. Students examine historical trends of family, community, and institutional support for the terminally ill and those experiencing traumatic loss and learn ways to advocate for a system of services that supports full decision-making on the part of the client. Course materials, journals, and special projects identify how self and other factors impact service delivery to individuals, families, and
communities experiencing loss, including ethical considerations prompted by cost, technology, and end of life issues. Clinical Practice Elective

758. Faith-Based Practice and Management. (M) Clinical and Macro Practice Elective.

This course prepares students to work to existing and newly formed faith-based social service agencies. It also serves as a national laboratory to extract new knowledge of best practices and the variability of managing and practicing in faith-based social service agencies. Clinical and Macro Practice Elective

759. Substance Abuse Interventions. (A) Clinical Practice Elective.

This course addresses intervention approaches used in social work practice with individuals, families, and groups who misuse addictive substances themselves or are affected by another's misuse. Students learn about addictive substances, models of intervention, how to engage and assess clients, and how to intervene and evaluate the effectiveness of their interventions. The course incorporates theory and research findings on various strategies of intervention. Clinical Practice Elective

760. Mental Health Diagnostics. (C) Clinical Practice Elective.

This course familiarizes students with mental health and mental disorders within the context of the life cycle, viewed from a biopsychosocial perspective. Prevalent categories of psychiatric disorders are considered with respect to their differentiating characteristics, explanatory theories, and relevance for social work practice, according to the DSM and other diagnostic tools. The course includes biological information and addresses the impact of race, ethnicity, social class, age, gender, and other sociocultural variables on diagnostic processes.

This course strives to seek a balance in exploring the universalistic as well as the pluralistic in relationship to spirituality. Some pluralistic religious and/or spiritual traditions are studied as they exemplify commitments of spirituality and as they intersect with a more universalistic spirituality. The course considers how spiritual and religious systems are related to diversity, including gender, social class, ethnicity and culture, and sexual orientation. Clinical Practice Elective

This course will begin with the history of migration to the US, as well as legal definitions of newcomers, including obtaining documents for lawful permanent residence, refugee status, as well as grounds for exclusion and deportation, and paths to naturalized citizenship. We will then review how a framework of cultural competence, and a strength or asset-based approach can inform service to immigrant clients. The core portion of the course will then focus first on the intersection of immigrants and health, mental health, employment, crimes, public entitlements, and public education. The course will conclude with family issues relevant to immigrant families: women, children, lesbian and gay, and elderly immigrants. Public policy issues will be integrated throughout, and the course will end with specific suggestions on systems change at various levels. By the end of the course students should be able to identify strategies for individual clients advocacy (micro); agency and community strategies (mezzo), and government advocacy (macro) to empower immigrant clients to become full community participants.

765. Supervision and Leadership in Human Services Organizations. (M) Clinical & Macro Practice Elective.

This course builds on social work knowledge, values, and skills gained in foundation practice courses and links them to the roles and functions of social workers as supervisors and managers in human service organizations. Course focus is on providing students with an overview of basic supervisory and human resource development concepts so they may be better prepared as professional social workers to enter agencies and provide direct reports (supervisees) with meaningful and appropriate direction, support, and motivation. Clinical and Macro Practice Elective

768. Social Policy Through Literature. (M) MSW Elective.

This course uses works of fiction that pertain to a specific social issue in order to examine the effect these issues have in human terms on the individual, the family, and the community. Through appreciation of the human condition as portrayed in literature, students learn to frame issues more precisely and present arguments in compelling and convincing ways, thus enhancing the role of social worker as advocate for policy change. MSW Elective

769. Aging: The Intersection of Policy and Practice. (B) Macro Practice Elective; required for students in the PAC program.

This course examines a variety of social welfare policies that affect the rights and interests of older adults. These include policies related to economic security, health, long term care, and civil rights. In addition, the course reviews the policymaking process with a discussion of the influence of legislative sanctions and case law in establishing aging policy in the U.S. The focus of the course is on critical analysis of the key assumptions driving policy and policy change, e.g. social responsibility vs. individual responsibility. Finally, the course includes a critical examination of the intersection between policy and practice, that is, the influence that policy has on the design of interventions and service delivery practices at the state and local level and the impact of changing policies on communities, providers, and older adults. Macro Practice Elective

This course helps students understand the ideal and real functions of the law and recognize the influence of behaviors on the law, and of the law on behaviors. Students have the opportunity to evaluate strengths and limitations of law for empowering historically disadvantaged populations.

771. Social Work Values and Ethics. MSW Elective.

This course is concerned with the influence of ideology, values, and ethics on the development of social welfare policies and social work practice. Particular emphasis is given to the impact of such concepts as freedom, equality, and justice on the creation and implementation of social service programs and on the underlying value structure of alternative modes of social intervention. The course also provides students with a framework to understand and apply ethical concepts such as confidentiality, self-determination, truth-telling, paternalism, conflict of duties, and "whistleblowing," in the daily realities of professional practice. These concepts and their relationship to terminal values are taught through the analysis of cases from the changing environment of policy and practice in the United States.

In this course, students examine the global welfare system and its engagement with marginalized communities. This six-week course in Kolkata, India, centers around a sex workers' collaborative in Sonagachi, one of Asia's largest red light districts. Interviews with the collaborative's workers and study of their grassroots movement are combined with class discussions and research projects in which students engage with texts on HIV, sex work, feminist postcolonial theory and international social work.

773. Mental Health Challenges in Childhood and Adolescence. (C)
MSW Elective.

This course will be an opportunity for the student and the instructor to explore the concept "psychopathology" as it has been and is applied to childhood and adolescence. There are some psychopathological challenges that are unique to childhood and some which can manifest themselves throughout childhood into adolescence and adulthood. The social worker/practitioner will encounter a wide range of symptomatic presentations among his/her clients. At this time in the field of clinical social work, psychology, psychiatry, and psychotherapy there are numerous frameworks available to the practitioner to aid in an understanding of symptoms in children and adolescents.

During the next several weeks three conceptual frameworks will be articulated.

These three frameworks will elucidate the possible meaning, origin, and/or function of the symptoms and offer to the student a vocabulary with which to engage the situation. At the turn of the 19th century into the 20th century, psychoanalysis emerged in Europe as a method of understanding symptoms from the point of view of internal conflict within the child or adolescent. After World War II in the U.S.A., a model of understanding symptoms from a systemic/cybernetic point of view revolutionized the diagnostic processes involved in working with children and adolescents. Since the late 1980's, postmodern ideas, primarily from Europe and Australia, have greatly influenced and informed the understanding of psychopathology in children and adolescents. Narrative, social constructivist, and linguistic usage patterns have become a common vocabulary in the discourse on psychopathology. This course is not intended to be a reading of the history of child psychopathology. It is intended to expose the student to the most influential paradigms in the field of child psychopathology.

This MSW elective builds on knowledge of human behavior over the life cycle gleaned from the two HBSE courses: SWRK 602 and SWRK 612 and the foundation practice courses, SWRK 604 and SWRK 614. It continues to sensitize students to populations at risk and those affected by racism, sexism, and other forms of oppression learned across the foundation curriculum. It informs social work practice with children and adolescents in a variety of settings and practice roles.

774. Program Evaluation. (B)
Prerequisite(s): SWRK 715 or SWRK 615, Introduction to SW Research. Research Option.

This course introduces students to theoretical and practical aspects of social service program evaluation. Students learn about the design and implementation of all phases of an evaluation, from needs assessment to analysis of findings. Skills such as survey construction and budgeting are introduced. Intensive analysis of existing studies illustrates how evaluations are designed and how findings affect social programs and policy.

775. (PUBH575) Intimate Violence. (M) MSW Elective.

The purpose of this course is to familiarize students with the definitions, theories, causes, processes, consequences, and social interventions in intimate violence. The course will attempt to provide insight on the phenomenon of intimate violence by examining the ways in which it affects survivors, perpetrators,, and their children. This will be accomplished by reviewing the current research as well as by exploring how intimate violence is constructed by the participants on the personal, interpersonal, and social structural level. MSW Elective

777. Cognitive Behavior Therapy. (C)
Prerequisite(s): completion of Foundation year curriculum or equivalent. Clinical Practice Elective.

This course provides students with the skills and techniques for providing cognitive therapy to adults, adolescents and children. The course begins with grounding in the cognitive therapy diagnostic assessment process. Students will be instructed how to use the various cognitive therapy psychological testing scales. Emphasis is then placed on learning to use the cognitive therapy model to treat emotional and personality disorders.

Students will be taught how to apply cognitive therapy techniques in both psychotherapy practice as well as in other social work settings such as child welfare, foster care, case management, aging, and hospital social work. Readings will be augmented by videotapes, role plays, and observations of cognitive therapy assessments and cognitive therapy sessions. Clinical Practice Elective

778. Dialectical Behavioral Therapy. (C) Doyle.

In this 5-day intensive course we will examine the underlying theories, empirical foundations, and fundamental skill sets associated with dialectical behavioral therapy (DBT). Students will be expected to participate in role plays, lead mindfulness exercises, and carry out chain analyses. Prior to the class start date, students will have to submit a 15 to 30 page outline of the required text (Linehan, M.M. (1993), Cognitive-behavioral treatment of borderline personality disorder, Guildford Press) and to review and complete the study guide for the HBSE text. Students will not be admitted to the first day of class unless these requirements have been met prior to class. No exceptions; you will be dropped from the class.

SM 780. (MSSP780) Policy and "Difference" in Postmodernity. (C)
Dixon-Roman. Policy Option.

Social constructions of "difference" permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is "difference" and how is "difference" discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varietes of "difference" (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extent does social policy enable the possibilities of freedom, justice, and democracy for the "Other", the deviant, the abject, the marginalized, those of assumed "difference"? And, to what extent does policy constrain those possibilities at the same time?
Qualitative research encompasses a variety of methods that enable the researcher to enter into the "lived experience" of research participants. These methods are particularly sensitive to the voices of populations whose perspectives are silenced by dominant societal discourses. The course begins by giving attention to underlying philosophical issues and traditions of qualitative research and proceeds to examine qualitative research design, methods of data collection, strategies to ensure rigor, data analysis, and presentation of findings. Students will learn about research interviewing, focus groups, and participant observation and ways in which qualitative research can be used to inform and evaluate social work practice and programs. Students will have the opportunity to apply qualitative research methods to in-class activities and individual or group projects.

The United States prison population has risen more than three hundred percent in the last three decades. More people are currently incarcerated than at any other point in the history of the United States, and that of the world. This unprecedented period of incarceration has gone largely invisible although it represents one of the greatest social epidemics in the history of the United States. This course provides a critical analysis of the criminal justice system in the United States from a historical and contemporary perspective. It examines the implications of significant criminal justice policies such as the Rockefeller Drug Laws, 3-Strike Legislations, and Mandatory Minimums on the current state of incarceration, and the phenomenon of "Reentry" and "Recidivism". The intersections of criminal justice and social work practice are unmistakable when examining staples of social work practice such as homelessness, mental health and substance abuse, thus the course is intended to facilitate a more informed/holistic practice for all social work students.

This course integrates trauma theory and practice and expands practice knowledge to include the treatment and assessment of the survivors of trauma. Emphasis is placed on differentiating PTSD from Complex Trauma in order to identify appropriate, evidence-based intervention strategies. Topics covered in the course include an historical overview of the development of our understanding of trauma and the exploration of various types of trauma including war trauma, domestic violence, childhood sexual and physical abuse, natural disasters, the experiences of political refugees and organizational trauma. Among the interventions covered in this course are CBT, EMDR, group and psychodynamic treatment. Students will consider issues that affect those treating the survivors of trauma, such as vicarious trauma, and will explore approaches to self-care. This is an advanced clinical course. Through assignments and class discussions, students are encouraged to use their experiences in the field to deepen their understanding of the material covered in the course.

SM 788. Harm Reduction on the Borders: Substance Use and HIV Treatment in Puerto Rico. (L)

This course examines the U.S.-based substance use and HIV treatment systems, and its engagement with injection drug users in Fajardo, Puerto Rico. It is designed to provide the students with an understanding of the political economy of harm reduction initiatives, and the manner in which it is shaped by the complicated relationship between Puerto Rico and the U.S. Students are expected to gain an understanding of Puerto Rico's welfare environment, the role of social welfare and social workers in such a context, and the interweaving of social control and social change embedded in welfare initiatives in "borderlands" such as Fajardo. During the four week course in Fajardo, students will complete a placement in a needle exchange program, and engage with texts on HIV, substance use, postcolonial theory and international social work.

The purpose of this course is to review the evolution of psychodynamic theory and consider key concepts in psychoanalysis, ego psychology, object relations theory, self-psychology, attachment theory, relational and intersubjective theories and current findings in cognitive neuroscience. Participants will explore human psychological functioning as explained by these various psychodynamic theories and through the biopsychosocial lens that informs social work practice. Students will examine how external factors such as race, class, gender, culture and biology are interwoven with often unconscious, internal psychological determinants, creating the complexities of human behavior that challenge us in our clinical work. Case presentations by students, the instructor and guest lecturers will demonstrate how concepts from psychodynamic theory can be applied to social work practice with diverse clients in varied settings.

793. (NURS640, PUBH551) Global Health and Health Policy. (M) MSW Elective.

This participatory interdisciplinary seminar course examines contemporary issues in public health policy and global health. The organizing framework is social determinants of health. We consider evidence that inequalities in education, income, and occupation influence health status, and the policy dilemma that broad interventions to improve population health may increase health disparities. We critically examine whether prevention is always better than cure, and what modern medicine has to offer in terms of health. We explore the public policy process in health using the "tobacco wars" as a case example, of how politics, policy, law, commercial interests, and research intersect to affect the public's health. We examine whether global health is in a state of decline, and the extent to which failures in public health, public policy, and foreign policy have contributed to increasing threats to world health. Likewise we will examine the potential for greater integration of health into foreign policy to create global infrastructure upon which to advance health. We will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.

There are no prerequisites. The course is designed for graduate students in the social and behavioral sciences, health professions, public health, business and law. Advanced undergraduate students will be admitted with permission.

794. Practice with Older Adults and Families. (A) Clinical Practice Elective.

This course focuses on practice with older adults and families within a life course and resiliency perspective. It examines the nature of the aging process, needs and life issues, the ways in which persons adapt to changes, and the ways in which interventions may assist with these adaptations. Students learn assessment, case management, and intervention skills, including the use of rapid assessment and diagnostic tools, needed to work effectively with older populations and family caregivers in a variety of community-based and institutional settings. The course
emphasizes evidence-based practices that enhance quality of life, dignity, respect for differences, and maximum independent functioning. Clinical Practice Elective

796. Family Economic Mobility. (B) MSW Elective

In this course, the experiences and voices of mothers, fathers, children, employers, children's school teachers, human service workers, educators, trainers, and other in cities across America graphically illustrate "real life" urban poverty and its two remedies: welfare and work. In the context of popular beliefs and individual and institutional practices, these voices dramatically show how poverty, welfare, and work intersect to perpetuate economic inequality for most low-income working families. The labor market, welfare and workforce programs, public schools and social policies are some of the main American (and global) institutions implicated in this intersection. Concepts such as the "work ethic," "family-friendly workplace," and "good jobs" are deconstructed in terms of their meaning for today's families, organizations and policies.

At base, this course examines occupational mobility in America within the broad framework of capitalism, democracy, race, ethnicity, and traditional gender roles. Students read classic and contemporary literature from occupational social work, sociology, cultural anthropology, and political science to explore generative roles for "meso-oriented" clinical, macro and policy professionals.

798. Advanced Topics. (C)

Titles and Topics vary. See department website for descriptions:
http://www.sp2.upenn.edu/programs/msw/courses.html

Social Welfare PhD courses

This seminar traces the evolution of social welfare from ancient to modern times focusing on its implications for the development of contemporary social welfare in the United States. The course examines the development of social welfare systems and the underlying philosophies in the context of the social, economic, political, and cultural environments in which they emerged. Topics include the evolution of modern conceptions of the "welfare state," the role of public, private and voluntary sectors in the social services, trends in social and family history and their relationship to social welfare, the professionalization of social work, and methods of historical and social policy analysis.

811. Social Theory. (C)

Course reading consists of the original works of theorists who offer classical, contemporary and postmodern perspectives on social thought, social interaction and issues germane to social welfare. Through intensive examination of multiple theoretical frameworks, students are expected to increase their analytical and critical orientation to theory. This course is deconstruction of epistemology, underlying assumptions, and theory construction can then be used to inform the student's substantive field of study and methodological orientation to research. This course is conducted in mixed lecture-seminar format. Students have the opportunity to practice pedagogical techniques and exercise class leadership.

852. Social Work Research. (A)

Prerequisite(s): Completion of concurrent enrollment in a course on introductory Social Statistics.

This is the foundation course in social work research. It deals with the nature of scientific inquiry; theory and its relation to research design and hypothesis testing; and various models of data collection, sampling, and analysis of research and is supported in following personal interests within the structure of ethical scientific research. Each student prepares an original study which demonstrates integration of the semester's work. Students learn to work on their own. At the end of SWRK 852, they are prepared to do more advanced coursework in research.

853. Qualitative Research. (B)

Prerequisite(s): SWRK 852 or an equivalent.

This course offers the advanced graduate student an in-depth study of the theory and methods of interpretive qualitative inquiry. Topics include the philosophical assumptions and positions within qualitative research, design issues and alternatives, data collection methods, data sources, sampling, criteria for rigor, data analysis, and reporting strategies. Special attention will be given to grounded theory, ethnography, and the analysis of interviews, as well as methods of identifying and engaging hidden populations. Students will have the opportunity to use qualitative research strategies in class and in field assignments. This course is intended for doctoral students in the social sciences. Master's students will be admitted with permission.

854. Advanced Research Methods. (B) Prerequisite(s): SWRK852 and Introduction to Statistics.

The methodology of accountability research in human service programs is studied. Emphasis is placed on social program evaluation, idiographic research, and secondary data analysis in policy research as specialized methods of social work research. Students undertake a laboratory experience in an ongoing program evaluation project.

861. Policy Analysis. (B)

Prerequisite(s): Must have successfully completed a course in multivariate statistics.

This course examines alternative models of policy development and applies them to current issues in social welfare. It emphasizes frameworks for policy research and secondary analysis of governmental data. Topics include: race, class, and sex in policy outcomes; major social welfare programs; and the design, implementation, and evaluation of social service systems.

899. Independent Study.

Independent studies may be arranged on an individual or small group basis between students and a faculty member. The learning objectives associated with independent studies are highly specialized and must relate directly to the student's individualized educational plan. Students, with the faculty member, share responsibility for the design, structure and content of an independent study. No more than two independent studies may be arranged for an individual student.

SM 968. Social Welfare and Social Economics.

This course examines the social welfare aspects of major economic decisions in the United States. Particular attention is paid to exploring the implications of social choices in relation to the goals of the achievement of increased equity and equality in the distribution of income and power, the elimination of unemployment, and the control of inflation. The growth of public welfare programs and the base of funding for social services are examined in terms of the nation's economic and political objectives.

Doctoral Dissertation
Clinical Doctorate in Social Work courses

804. Methods of Inquiry: Quantitative Research Methods. Prerequisite(s): Must be enrolled in D.S.W. program.

The purpose of this course is to teach the basics of practice research, with an emphasis on intervention research. This course will focus on research ethics, building a conceptual framework, source credibility, question and hypothesis formulation, design, design, sampling, measurement, and scale construction and selection. Special emphasis will be placed on the development of designing feasible and practical research studies to answer questions of importance to social work practice. The course will emphasize the selection and development of outcome measures, intervention manuals, and fidelity measures. It will closely examine the use and development of practice guidelines, evidence-based practice and meta-analytic procedures.

805. Methods of Inquiry: Qualitative Research Methods. Prerequisite(s): SWRK804-001. Must be enrolled in D.S.W. program.

This course will cover the essentials of qualitative research. Students will learn how to "situate themselves" in the research process so as to best capture the lived experience of the subjects under investigation. The course will explore the appropriate use of intensive interviews, grounded theory and ethnography. Mixed methods that employ both qualitative and quantitative approaches, will also be covered.

812. Clinical Theory I. Prerequisite(s): Enrolled in D.S.W. program.

The purpose of this course is to broaden and deepen participants' mastery of several theories of development, personality, and behavior that have contributed to social work's knowledge base across the decades and continue to inform clinical social work epistemology today. Drawing primarily from original sources, we will consider key assumptions, constructs, and propositions of each theory in terms of its congruence with social work's principles, values, and mission and in relation to the profession's person-in-environment perspective. In this first semester, we will study the evolution of theories central to psychodynamic thought, from Freud's early biological model of the mind, through various relational perspectives, to contemporary work in the fields of attachment and interpersonal neurobiology. This examination will constitute a case study of the manner in which theories are socially constructed and will lay the foundation for critical inquiry into the social and political biases inherent in the Western European intellectual tradition from which most theories of human behavior have emerged.

813. Clinical Theory II. Prerequisite(s): SWRK812. Must be enrolled in D.S.W. program.

This course critically examines theories, perspectives, and frameworks informing clinical social work practice. These theoretical perspectives provide means for practitioners to understand a client or client system in context and offer strategies for intervention. The course begins by considering the development of social work practice theory thematically and from a historical perspective. Practice theories that have contributed to the knowledge base of clinical social work practice will be examined within the social, political, and ideological contexts of their times and against the backdrop of the development of the profession. The course will explore debates within the profession (e.g., art vs. science; empirical practice vs. constructivism; what constitutes professionalism) and in related fields (modernism vs. postmodernism) and evaluate the discourse on these topics. As the course moves into contemporary times, recent developments in clinical social work practice theory will be examined. Attention will be paid to factors that influence clinical social work practice now and are likely to influence the profession in the future.

SM 900. Clinical DSW. Staff. Prerequisite(s): Must be enrolled in D.S.W. program.

Topics vary; see department for current course description

SM 920. CLINICAL PRACTICE I.

SM 921. CLINICAL PRACTICE II.

Master of Science in Social Policy Courses (MSSP)

This class explores the origins, development, and possible futures of social policy regimes in the industrialized countries, in the context of broader political and historical trends. Topics include pensions, health care, and poverty alleviation; "families" of welfare states; the relationship between labor markets and social policy; feminist and Marxist critiques of welfare states and welfare state studies. Open to graduate students and qualified undergraduates with permission of the instructor.

628. Policy: Analysis of Issues, Strategy and Process. (C) Prerequisite(s): Enrolled in MSSP program or permission of instructor.

Policy analysis requires an understanding of social problems/social issues and the processes by which policy is developed and implemented. Critical skills in many policy frameworks include: problem definition and analysis, review of relevant research, identification of possible actions, implementation and evaluation, and fiscal analysis. Competency in written and oral communication is also essential. To develop these and related skills, this course utilizes as a base a dynamic social problem analysis framework that addresses issues of equity, equality and adequacy. It also examines multiple theoretical and analytical perspectives. Through the review of contemporary and historical social policy debates and provisions, selected case examples and policy briefs, this course provides students with an understanding of the policy roles of the legislative and executive branches of government, including goal setting, policy rulemaking and enactment, allocation of resources, financing, regulation, and implementation. The policy process at state and local levels of government will also be addressed. The primary focus is on U.S. policy although global policies will be discussed when relevant.

629. Research and Evaluation Design. (B) Prerequisite(s): Enrolled in MSSP program or permission of instructor.

Research and Evaluation Design introduces social research methods in the context of social policy and program evaluation. The course provides a conceptual and practical understanding in the design of experimental, quasi-experimental, and non-experimental research and in the application of quantitative and qualitative methods. Students learn about the application of the research process and skills in all phases of assessing a social policy and developing a social program, including needs assessment, implementation analysis, and evaluation of policy or program effectiveness. Students learn to be critical and informed consumers of research and to apply guidelines of research ethics in social policy settings.
L/L 630. Quantitative Reasoning/Social Statistics. (A)
Prerequisite(s): Enrolled in MSSP program or permission of instructor.

The primary goals of this course are (1) to provide students with a solid understanding of the logic of social science research as well as (2) to provide students with an introduction to a broad range of statistical methods commonly used in social science research. The first portion of the semester concentrates on defining research problems, research design (including sampling, measurement, and causal inference), and assessing research quality. The latter portion of the semester focuses upon data analysis including descriptive statistics, measures of association for categorical and continuous variables, introduction to t-tests, ANOVA and regression, and the language of data analysis. Students will learn how to choose and apply statistical tools to data sources, how to interpret quantitative studies, and will gain experience using SPSS - a statistical software package.

631. Law and Social Policy. (B)
Prerequisite(s): Must be registered in Masters in Social Policy program or permission of instructor.

This course introduces students to the basics of the American legal system, focusing on the interplay between litigation and social policy. Students will learn how law, and particularly case law, is made, how to read case law and evaluate precedent, legal reasoning and argument. This course will utilize various teaching methods including introduction to the "Socratic" lecturing method which is frequently utilized in the study of law. Students will also study the structure of court systems at both state and federal levels as well as the litigation process and the role of law and courts in shaping and addressing social policy issues. Students will also learn the basics of several areas of substantive law, with an eye toward consideration of how that law has been, and can be, used to effect social change.

SM 668. Economics for Social Policy. (A)
Corequisite(s): Students must register for lecture section (001) and ALL 4 corresponding seminar sections (301-304).

This course provides students with theory and tools from the field of economics that are useful for the field of social policy, such as: 1) critical macroeconomic and microeconomic concepts for social policy formation and analysis; 2) information about the Congressional budget process and federal budget, U.S. and global monetary policy, economic measurement indices, and tax policy in relation to social policy values of equity, equality and adequacy; 3) how to apply cost-benefit analysis and/or cost-effectiveness analysis to policy proposals; and 4) the role of nonprofit organizations in the provision of social services and programs that are mandated by federal legislation.

670. Education, Society, and Social Policy. (B)
This course is concerned with interrogating the dualism of schools and society that has been an on-going discourse in philosophy, research, and policy. In education policy, in particular, the question of the educative experiences that go on beyond schooling have been slow to be taken up and often relegated to public and social policy. And due to the siloes of policymaking and implementation there has been very little dialogue or collaborative design between education and social policy, leaving major gaps in the experience and process of education and human development. This course will begin by looking at how educational philosophy and theory has taken up this dualism beginning with Nietzche, Dewey, Durkheim, and Marx, through Ivan Illich, Larry Cremin, Jean Lave, Edmund Gordon, and Herve Varene. Then, we will survey various social and educational research that examine the various spaces outside of schooling that matter for human learning and development including the Coleman Report, and work on poverty, education, and human development. The third part of the course will explore both actual and proposed policy models to address a much broader understanding of education such as Head Start, the Harlem Children's Zone, 21st Century Community Learning Centers, The Broader Bolder Approach, and other supplementary and comprehensive educational services and

710. Democratizing Data: Analytics for Social Change. (M)
With the advent of digital technologies and the increasing power of computational analytics, the proliferation and ubiquity of data production has increased at exponential rates enabling new possibilities for social analysis. This course will examine the emergence of democratizing data -- the movement to make government and other data more widely or publicly available and its potential enabling for democratic possibilities. The types of data being made available, through various analytic systems, and the ways in which their accessibility and inaccessibility is contributing to reconfigured power relations, will be described. The paradigmatic tensions and shifts that have emerged in the debates on "Big Data," such as deductive versus inductive reasoning and the challenges poised to statistical sampling theory, will be interrogated. The appropriation of machine learning and predictive analytic algorithms for social analysis will be critically explored. Issues related to the ethical and legal use of administrative data, particularly data related to patient, client, student, and taxpayer information will be considered, as well as from internet-based sources including social media. Potential solutions to data security challenges will be additionally considered.

Methods for web-scraping of data, analysis of web traffic data, and the use of social networking data in the modeling of social phenomena and public opinion will be examined. Students will learn how to make results accessible to non-technical audiences via data visualization tools, such as web-based data dashboards and web-based maps. These topics will be discussed for the analysis of health, education, and social policy as well as their implications for questions pertaining to race, gender, class, sexuality, disabilities, age and youth culture. This course will develop students’ knowledge of computational data analytics and its applications for social policy analysis.

741. (SWRK741) Gender & Social Policy. (B) Baker.
Gender and Social Policy develops an advanced understanding of social policies through a focus on social issues and conditions through the lens of gender, economic and critical theory. The
specialized focus on gender and social policy provides students with the opportunity to develop more specialized knowledge about how market dynamics and government policies respond to the needs and risks faced by women. Specific emphasis is placed on utilizing theoretical frameworks to evaluate the intersection between social policy, history and social science in relationship to gender issues. Students are also expected to conduct a policy analysis that includes an evaluation of how current and former social movements surrounding gender issues shaped their policy of interest.

Social constructions of "difference" permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and able-able constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is "difference" and how is "difference" discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieties of "difference" (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extent does social policy enable the possibilities of freedom, justice, and democracy for the "Other", the deviant, the abject, the marginalized, those of assumed "difference"? And, to what extent does policy constrain those possibilities at the same time?

L/L 897. Applied Linear Modeling. (B) Prerequisite(s): Introductory Graduate Statistics.

This course deals with the underlying assumptions and applications of the general linear model with social science, education, and social policy related questions/data. The first half of the course begins by covering simple linear regression and the assumptions of the general linear model, assumption diagnostics, consequences of violation, and how to correct for violated assumptions. This will also include methods of incomplete case analysis (i.e. missing data analysis). Then various aspects of regression analysis with multiple independent variables will be covered including categorical explanatory variables (e.g. to estimate group differences), interaction effects, mediating effects (e.g. to estimate the indirect effect of social processes), and non-linear effects. The course will then cover some of the applications of the general(ized) linear model including logistic regression, some elements of path modeling (structural equation modeling), multilevel analysis (hierarchical linear modeling), and longitudinal modeling (growth modeling). The course will be taught using SAS, but students are welcome to use any statistical package of comfort. Pre-requisite: Introductory Graduate Statistics.

Master of Nonprofit Leadership Courses (NPLD)

510. Social Innovation. (B) Frumkin.

Open to graduate and undergraduate students.

This is a class focused on understanding how innovation plays a central role in public problem solving. We will explore how social entrepreneurs develop their ideas, define intended impact, market their solutions, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools that will allow them to be effective problem solvers in diverse settings throughout their careers. The course has five core objectives: 1. To introduce students to the concepts and practices of social entrepreneurship; 2. To introduce students to the components of a successful social enterprise; 3. To equip students with the tools to be able to accurately identify and assess innovation and impact in social enterprises; 4. To train students to view the world from a perspective of social innovation; and 5. To empower students to develop their own innovative solutions to difficult social problems around the world.

Nonprofit organizations have been some of the first adopters of social media tools, and they are increasingly turning to the use of social media to fulfill a range of communications, outreach, and marketing needs. This half credit course will introduce students to the importance of understanding the online space and how it can enhance the work of every nonprofit organization. Students will begin to develop an understanding and awareness of core platforms and tools along with the importance of metrics, feedback loops, and taking an iterative approach based on social media best practices.

This course will provide the tools and framework for helping to understand the role that marketing and brand building can play in the non-profit sector. As such, we will create a shared understanding of the key concepts that help define branding and the classic elements of marketing that will serve as a foundation for discussion and analysis throughout the semester. We will identify the fundamental differences that non-profit organizations face in building their brands and how these challenges differ from tradition/profit brand building. We will identify tools and frameworks that brands/organizations can use to help design and implement marketing strategy. We will utilize current and relevant case studies that help demonstrate the core concepts of this course.

This half credit course will provide a basic understanding of the law that applies to nonprofit organizations, with an emphasis on the law affecting 501(c)(3) public charities. It will focus on ways to obtain and maintain federal tax exempt status, including issues of private inurements and private benefit, limits on advocacy, lobbying and electioneering, unrelated business income tax, and excess benefits taxes. It will show how legal structure and governance procedures affect the answer to the questions "Whose Organization Is It?" Students will review bylaws of multiple organizations to see how differences in structure reflect the great diversity of nonprofits and why "one size does not fit all" within the sector. They will learn how to avoid bad legal drafting that can create problems for dysfunctional organizations. The course will explain the fiduciary duty of officers and directors, explore the extent of potential personal liability, and review necessary insurance and indemnification. It will review Form 990 publicly available tax returns of multiple nonprofits to see why a tax return may be a nonprofit's most important public relations document. It will also review the basics of charitable giving through a mock meeting of university development officers, outline the concepts of planned giving, and discuss the requirements for charitable solicitation registration at the state level. It will explain the legal requirements for maintaining

Page 728
endowments and discuss a series of ethical issues that can face nonprofit executives and their lawyers.

Students will receive one year of free access to Don Kramer's Nonprofit Issues website, and will emerge with a better understanding of key legal issues facing the nonprofit sector that regularly make the news.

Americans gave more than $350 billion to nonprofit organizations last year, the highest total ever recorded. Now, more than ever, it is crucial that nonprofit leaders master the art and science of raising philanthropic capital. Participants in this innovative class will: 1) acquire an understanding of the nonprofit funding landscape; 2) learn proven and creative strategies to secure investments; 3) gain the experience of giving and motivating charitable commitments; and 4) receive peer evaluation and professional consulting feedback. This experiential and interactive learning course will provide students an opportunity to evaluate a nonprofit organization endeavoring to attract voluntary support, and coach students to think through and develop the ideas, skills, and tools required to participate personally in today's philanthropic market.

This spring semester financial budgeting course for nonprofit organizations will focus on strategic issues in nonprofit finance, specifically on capitalization strategies that position nonprofits for greater impact. The foundation of these goals is understanding and applying appropriate budgeting principles and best practices in internal organizational systems. Students will have exposure to a variety of budgeting scenarios including annual operating budgets and zero-based budgeting, program profitability, new facility planning, and transformational growth. The class will utilize a variety of teaching tools: case studies, hands-on budget analysis and development, student applied study with a nonprofit organization, and guest speakers. This course on financial budgeting is open to all graduate and professional school students who have a familiarity of the principles of nonprofit finance.

580. Effective Governance Practices for Nonprofits. (A) Shmavonian. .5 cu course.

Effective governance relies upon consistent and ethical board leadership, yet nonprofit organizations that exemplify truly model governance are few and far between. This course introduces students to broad frameworks of governance, but will focus most deeply on the human dimensions of board leadership. In particular, we will examine real examples and cases of moral and ethical dilemmas faced by nonprofit boards and executive leaders, and the nuanced practices required to achieve effective board governance. This will involve a careful look at several real cases, as well as guest lectures from 3-4 different nonprofit board and CEO leaders. The invited leaders will use their own experiences to guide students through some of the most challenging ethical and managerial situations that can be encountered, with the goal of providing a practical grounding for students who expect to contribute to nonprofit leadership in their careers - either as executive staff or as board members.

Fall 2016 class dates: 8/31, 9/12, 9/19, 10/10, 10/24, 11/7, 5:00-8:00PM

581. Effective Governance Practices for Nonprofits. (B) Shmavonian. .5 cu course.

Effective governance relies upon consistent and ethical board leadership, yet nonprofit organizations that exemplify truly model governance are few and far between. This course introduces students to the broad framework of fiduciary, strategic and generative governance but will focus most deeply on the human dimensions of board leadership. In particular, we will examine real examples and cases of moral and ethical dilemmas faced by nonprofit boards and executive leaders, and the nuanced practice required to achieve effective board governance. This will involve a careful look at several real cases, as well as guest lectures from 3-4 different nonprofit board and CEO leaders. The invited leaders will use their own experiences to guide students through some of the most challenging ethical and managerial situations that can be encountered, with the goal of providing a practical grounding for students who expect to contribute to nonprofit leadership in their careers - either as executive staff or as board members.

582. NGOs and International Development. Thompson.

The course will offer a broad perspective on international development, aid, and the roles of NGOs and social enterprises. The latter half of the course will focus on issues in NGO management: fundraising, staff (expatriate and local), monitoring, and evaluation (including randomized controlled trials). The course is aimed at students with no to moderate experience in international development, but students with extensive work experience with NGOs or development work are also welcome.

This course is organized around two motivating questions: 1) How do we understand the process of development, and what is the NGO's role to be in it? 2) If NGOs can meaningfully contribute to development, what are the exemplar and cutting edge practices for NGO management?

This course is designed for interdisciplinary students with an enthusiastic interest in cultivating flourishing organizations, engaged stakeholders, and inspiring leaders across sectors and especially within nonprofits. Over the past several years, the field of Positive Organizational Scholarship (POS) has proliferated, yielding a compelling body of knowledge on how and when people thrive at work. This course focuses on both the theoretical and practical insights that can be gained from cutting-edge POS research and applied to help practitioners enrich people's experiences at work. Special attention is placed on how this wisdom applies not only across sectors but also specifically to the nonprofit organizational context. Key topics of study include: aligning leadership values, motivation and giving behaviors, facilitation tactics, appreciative inquiry, building high quality connections, job crafting and meaning at work, real-world application.

In particular, the learning objectives of the course provide students with: 1) Knowledge of cutting-edge POS research and leadership practices; 2) Ability to identify opportunities to use positive course.
leadership practices in the workplace to enhance stakeholder engagement, individual and organizational performance, and collective impact; 3) Tools for applying positive leadership concepts in nonprofits, as well as all other organizational domains (e.g., business, government, coaching, the family, etc.); 4) Consulting experience with a local non-profit, including group projects of research and assessment that culminate in presenting to the non-profit organizations strategic recommendations for future success; 5) Techniques and real-life practice in using positive leadership concepts to enrich one's own career, relationships, and life.

Leaders of organizations must often make difficult decisions that pit the rights of one set of stakeholders against another. Having multiple stakeholders or bottom-lines brings with it challenges when conflicts arise, with the perennial question of whose rights/benefits prevail? What trade-offs need to be made between multiple bottom lines? Does the mission of the organization prevail over the privileges of employees/clients? To what extent can large donors influence the mission of the organization? What is an appropriate social return on investment? This course will introduce the factors that influence moral conduct, the ethical issues that arise when pursuing social goals, and discuss the best ways to promote ethical conduct within such organizations. The course will use specific case studies, real and hypothetical, to analyze a variety of ethical issues that arise (including finance, governance, accountability, fundraising, labor (paid and unpaid), client groups, and service provision) among the multiple stakeholders. This course is offered in the fall semester and will conclude by discussing ways that organizations can prevent and correct misconduct, develop a spirit of ethical behavior and institutionalize ethical values in the organization's culture.

590. (NPLD790) Social Finance. (A) Lamas. The course is open to students across the University. All graduate students who take this course must register under NPLD 790. All undergraduate students must register under NPLD 590. Economic analysis and financial accounting are like languages: fluency comes with practice. In-class review of case studies (including in-person discussions with the representatives of diverse agencies and organizations featured in the case studies) will enable students to test and develop their capacity for applying conceptual tools and analytical methods to sometimes messy and always complicated, real-life situations.

The course objective is to develop theoretical understanding, critical judgment, and practical skills for sensitive and effective engagement with financial and economic matters of significance. Students will learn: (a) different ways of thinking about the economic foundations of social policy, (b) the basic terminology, tools, and methods for analyzing the financial statements of a wide range of organizations, and (c) accounting procedures for evaluating business, government, and organizational operations, policies, and practices.

This course is at once macro and micro in its orientation: It provides a conceptual basis - derived from mainstream and alternative perspectives - for thinking about the economic dimensions of human development and social policy, and it introduces a set of core competencies for leadership and financial management of organizations, including conventional enterprises, consulting firms, research institutions, governmental agencies, philanthropies, cooperatives, and other third-sector organizations.

Over the past decade, researchers have identified some of the key skills that people need to succeed in their work and in their lives. These are skills that anyone can develop with practice. In this class, we will teach three of the key skills: resilience (the ability to thrive in difficult times); creativity (the ability to come up with innovative solutions to problems); and productivity (the ability to make the best use of your time and find life balance).

This summer session will take place through dynamic, interactive workshops. During the first session we will learn the key skills. Over the course of the next three weeks, we will practice these skills to see significant improvement in important areas of our daily lives. By the final day of class, we will talk about how to sustain these gains in our personal and professional lives long after the course has ended.

Summer 2016 meeting times: June 4-5, June 11-12, June 25-26, 10am-5pm

592. Collaboration across Sectors. (B) Ren.
Across the world, leaders of organizations from business, nonprofit, and government sectors increasingly recognize the necessity of "working across boundaries" by developing various forms of collaboration. Collaboration across sectors has become more prevalent, important, and complicated. This course will help graduate students understand the theory, policy, and practice of across-sector collaboration. Students will learn the purposes collaborations may serve, the forms they take, what skills and techniques are required, and the steps involved in initiating, sustaining, and evolving them. Students will also learn the characteristics of the three sectors, the roles and contributions each can make to successful collaborations, and the competitive forces that are often at work in the collaborative processes and their possible implications. The course is open to all graduate students and sophomore, junior, and senior undergraduates.

Thinking like a designer can transform the way people and organizations develop products, services, processes, and strategy. This approach, called design thinking, brings together what is desirable from a human point of view with what is technologically feasible and economically viable. It also allows people who aren't trained as designers to use creative tools to address a vast range of challenges.

Design thinking is a deeply human process that taps into abilities we all have but get overlooked by more conventional problem-solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols.

Sarah Lidgus, a writer and strategist with the design firm IDEO and, formerly the non-profit IDEO.org, will lead students through an immersive, hands-on class in order to demonstrate the philosophy and practice of design thinking. Design thinking is something you can learn only by doing, so we'll get out into the world and tackle a design challenge of our own together.

We'll learn how to research by researching, learn how to prototype by prototyping. At the end of the class you should feel confident in your abilities to apply design thinking to any challenges you're facing - and to come up with new ideas and solutions as a result.

Summer 2016 course meeting times: June 9, 10, 17, 9am-5pm; June 18, 10am-6pm; June 24, 9am-1pm.

Prospective and ongoing volunteers, donors, and other supporters are motivated by a strong belief in a nonprofit's mission, confidence in its reputation, and certainty
that the organization is using resources wisely and making a difference. Their belief, confidence and certainty are rooted not only in what nonprofits do, but how they talk about it. In this class, students will learn why storytelling should be at the center of nonprofit communications. What are good stories? How are they structured? Where do you find them and how do you communicate them? Can a nonprofit build a culture of storytelling among its leaders, staff, and the population it serves? Does telling stories really help nonprofits advance their missions? We will use current and relevant case studies that help demonstrate the core concepts of this course.

Studying the behavior of groups and the actions/inactions of people within groups provides a doorway to deeper understanding of ourselves, our families, our friends, our colleagues, our organizations, and our communities. This .5 credit course is designed for Penn Graduate students eager to generate constructive group processes when chairing a committee, managing a work group, teaching in a classroom, conducting a support/therapy group or facilitating strategy formulation. It is easy to look back and see what went right or wrong in a group or when observing what others are doing. But tuning into and gaining a comprehensive grasp of these processes when they are happening and learning how to take constructive actions in the here and now when it can have a meaningful impact, requires a high level of cognitive capability combined with a special form of relational artistry. This weekend course is an amalgam of experiential activities and energizing ways to internalize the rich concepts developed during a hundred years of research. Participants are required to be fully present and fully engaged for the whole weekend, read the equivalent of a book’s worth of material, and write an 8-page (double spaced) paper. Taught by senior groups instructors, including those who have worked in the Small Group Process workshop in the Wharton Leadership Ventures.

The twofold purpose of social impact measurement is to assess and improve the impact of nonprofit programs, and to inform grantmaking practice and effectiveness. In addition to accounting for funds spent and reporting on the actual work carried out, social impact measurement is an essential learning opportunity for grantmaker and grantee. However, choosing an appropriate methodology of measurement is critical. This course will offer an overview of leading social impact measurement methodologies and tools, and an impact measurement field exercise. During the field exercise, student teams will develop an evaluation plan and associated instruments for a local nonprofit using one or more of the methodologies. Teams will present their evaluation plans and offer recommendations for implementation. Lectures will be complemented by class time devoted to field exercise team meetings and off-site field work.

Can you imagine a world without the vitality and diversity of the nonprofit sector? What would it be like? Everything from health care to education, from serving the disadvantaged to protecting and restoring the environment, nonprofit organizations seem to have become an inseparable part of every aspect of our lives. So often they are taken for granted that we seldom pause and reflect on the roles and functions of these vital organizations in our community. This course will introduce you to the various roles that voluntary, philanthropic and nonprofit organizations play in American society. It will cover the theory, size, scope and functions of the sector from multiple disciplinary perspectives including historical, political, economic, and social views. The course also has a “hidden agenda.” Take this class to see and discover what this agenda is!

785. Group Dynamics and Organizational Politics. (A) Smith.
Prerequisite(s): Enrollment in NPLD program or permission of the instructor.
This intensely experiential course, offered in the fall semester, is designed for those providing group and institutional leadership at any level of a human enterprise, managing work groups, serving on special task forces, chairing committees, teaching in classrooms, conducting support groups, facilitating groups in clinical settings, etc. Students will focus on two topics: (1) an in-depth understanding of group dynamics while they are in action, and (2) the organizational relationships between groups with power, groups that experience themselves as powerless and those caught in the middle. With group and inter-group relations it is easy to see what went right or wrong in hindsight, or when observing from a distance, but tuning into these dynamics when caught up in them and taking constructive actions when it can have a meaningful impact, requires complex cognitive and emotional processing and use of multiple logics simultaneously. This educational format also explores the mysteries of counter-intuitive principles, such as “to grow, cut back,” and “to strengthen self, augment other,” are examined. The experiential events that are at the center of this learning occur over two full weekends, one in October and one in November.

This course is designed to introduce students to the fundamental issues in accountability and governance and the administration and management in nonprofit organizations. Through research and analysis, students will understand multiple structures of accountability and the various stakeholders in nonprofits; understand the duties and dynamics of boards of directors in conjunction with other mechanisms of governance (e.g. chief executive officers, advisory boards, etc.); develop an understanding of management techniques and leadership skills for enhancing the effectiveness of nonprofit organizations. Students will be asked to think about the challenges of running nonprofit organizations in a comparative context, with cases drawn from both the U.S. and abroad.

The emphasis of this course is on acquiring operational skills. The course is designed for those who may have had years of experience managing other people and programs in the nonprofit sector but who want to develop a more systematic mastery of this challenge, as well as students from other sectors who aspire to a nonprofit leadership role.

787. Leadership for the New Economy. (A) Smith. Permission required; contact program office with request - adamsaks@sp2.upenn.edu
This course is for individuals whose careers will call upon them to be visionary thinkers, sophisticated system thinkers and enlightened strategic thinkers. It is for women and men who will take transformative leadership actions that can be successfully implemented by people and groups at all levels of organizations and social enterprises. Recent events have shown that established leadership models need to be revitalized, given the
complexities of the contemporary world. Hence this course emphasizes the skills needed to engage in leadership acts relevant to the 21st century, competencies centered on building green technologies, creating sustainable energy, preserving the sanctity of water, fostering environmental-friendly policies, and constructing an economics predicated on principles of abundance rather than scarcity. Case studies of Lincoln, Gandhi, and Mandela will highlight that many of the key leadership lessons required for this era were elegantly crafted by these giants of history in conditions of extreme adversity not unlike the challenges of today. Key topics are decision making under conditions of uncertainty, building meaningful authority systems, using power creatively, harnessing the latent potential contained within conflicts and partnering with competitors and adversaries.

790. (NPLD590) Social Finance. (A) Lamas. The course is open to students across the University. All graduate students who take this course must register under NPLD 790. All undergraduate students must register under NPLD 590. Economic analysis and financial accounting are like languages: fluency comes with practice. In-class review of case studies (including in-person discussions with the representatives of diverse agencies and organizations featured in the case studies) will enable students to test and develop their capacity for applying conceptual tools and analytical methods to sometimes messy and always complicated, real-life situations.

The course objective is to develop theoretical understanding, critical judgment, and practical skills for sensitive and effective engagement with financial and economic matters of significance. Students will learn: (a) different ways of thinking about the economic foundations of social policy, (b) the basic terminology, tools, and methods for analyzing the financial statements of a wide range of organizations, and (c) accounting procedures for evaluating business, government, and organizational operations, policies, and practices.

This course is at once macro and micro in its orientation: It provides a conceptual basis - derived from mainstream and alternative perspectives - for thinking about the economic dimensions of human development and social policy, and it introduces a set of core competencies for leadership and financial management of organizations, including conventional enterprises, consulting firms, research institutions, governmental agencies, philanthropies, cooperatives, and other third-sector organizations.

791. Leadership: Designing the Future. (A) Smith.

This experiential, highly interactive seminar is for those eager to serve in managerial/leadership positions of human systems that create/maintain the organizational and fiscal viability of public, non-profit or private enterprises, including their partnerships. Candidates in all Penn graduate programs are welcome, whether one's ambition is to generate sustainable livelihoods, renewable energy, wealth, clean water, viable environments, robotics, or quality services in fields such as education, health care, AI, or criminal justice. Course Participants are members of decision-making groups that run a computer-based, data-driven, future-creating, socio-economic simulation while synchronously studying the intra and inter-group dynamics inherent in all leadership actions.

Fall 2016 class meetings will be Wednesdays 10/26 and 11/2 from 5:30-8:30pm; Friday 11/4 at 5pm through Sunday 11/6 to 6pm; Friday 11/11 at 6pm through Sunday 11/13 to 6pm; Wednesday 11/16 from 5:30-8:30pm.

SM 792. Social Entrepreneurship. (B) Frumkin.

Social entrepreneurs are individuals with innovative vision seeking to accomplish important public purposes through the creative and aggressive mobilization of people and resources. Using academic theory and research on social entrepreneurship as a framework, student innovators learn to design, develop, and lead social change organizations of their own invention. Students turn their passion for changing the world into concrete plans for launching a venture. Over the course of the semester, we will cover a broad array of topics associated with social innovation and entrepreneurship, including defining the problem/opportunity, refining the mission/vision, developing market research and industry analysis, defining a financial and operating structure, assessing results and progress, and scaling an enterprise. This course is neutral on sector. Graduate students in any of Penn's graduate and professional schools who want to create social value through either nonprofit or for-profit ventures are invited to take the class and develop their ideas. The class will expose students to the process of getting an organization - regardless of sector - off the ground and running.

While this is a class on innovation and entrepreneurship, students do not need to be committed to starting a venture upon graduation. The skills and tools contained in the course have wide applicability in the workplace. Being able to develop a coherent venture plan is great training for anyone who wants to work in government, philanthropy, or the business sector funding or managing existing organizations. The course attempts to convey a picture of what a well-considered and well-executed venture plan looks like with the goal of developing in students an appreciation for clear thinking in the pursuit of the creation of public value.

Students will work throughout the term on a plan for an organization that they devise, with assignments spread out throughout the term. Elements of a venture plan will be drafted through multiple class assignments, and students present formally and informally several times throughout the semester, receiving feedback from faculty, peers, social entrepreneurs, and invited guests. At the end of the term, students will assemble all the pieces they have worked on in the class, revise and hone these elements, and then put them into a coherent venture plan for their organization. This class is ideal preparation for the Dell Social Innovation Challenge (www.dellchallenge.org), which the instructor founded and which awards funds to launch new student social ventures. Entry into the Challenge is not required.

SM 793. Leadership Within & Across Boundaries. (B) Klein.

This spring semester course explores the key elements of individual leadership, team leadership, and cross sector leadership in a highly participative format. Through a series of individual assignments, class discussions, exercises, and simulations, students will explore and understand the potential for acts of leadership at every level (and in every organization) to create wealth and achieve positive social change. The course is taught by the Executive Director of the Wharton Graduate Leadership Program and is open to graduate students throughout the university as well as Penn undergraduate seniors.

In order to create, invoke, and evoke acts of leadership, we must understand ourselves, our teams and organizations, and our environments. From this integrated understanding, a set of possibilities emerge that shape the actions necessary to create positive social change. How can we leverage the abundance of resources available to individuals, teams, organizations, and collective networks? This course will explore leadership in five modules: individual leadership, team
leadership, organizational leadership, leadership across boundaries, and network leadership. This seminar style survey course will blend didactic, dialogic, and experiential methods to build an integrated framework for analysis that identifies and amplifies the opportunities or acts of leadership.

This course will review the everyday tools that nonprofit managers and development officers need to raise funds from individuals and other sources of private philanthropy. Last year, Americans gave approximately $300 million and 83% of it was from individuals. The fundraising profession has created a body of knowledge in the past twenty years that can guide effective fundraising programs so that charitable organizations can support their mission. The sessions will review the theory and practical techniques that development professionals use every day in large and small organizations including annual giving, major gifts, planned giving, cultivation of donors, making your case for support, the Seven Faces of Philanthropy, special events, and prospect research. There will also be discussions of philanthropic trends and current giving patterns. For those who are interested in nonprofit administration, these will be critical tools to understand.

SM 797. **(URBS404) Philanthropy and the City. (B)** Bauer/Goldman.

This course will focus on how urban communities are shaped by the nonprofit sector and the billions of philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on these important questions: (1) Whose responsibility is the public good? How is that responsibility shared by the public, private, and nonprofit sectors? and (2) Given that responsibility for the public good, which individuals and groups make the decisions about how to serve the public good? How are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary philanthropy and the nonprofit sector.
We live in a country which places a premium on individual accomplishments. Hence, all of you worked extremely hard to get into Penn. Yet, social factors also have an impact on life chance. This class provides an overview of how membership in social groups shapes the outcomes of individuals. We will look at a range of topics from the organizational factors which promoted racial inequality in Ferguson, Mo to the refusal of (mostly elite) parents to vaccinate their children. The experience of women and men in the labor market -- and the social factors that lead women to earn less than men -- is another interesting topic taken up in the course. Who gets ahead in America? Course requirements include a midterm, research paper (five to six pages), final and recitation activities. Students are not expected to have any previous knowledge of the topic. Welcome to the course!

SM 002. Social Problems and Public Policy. (M) Bosk, Jacobs.
This course approaches some of today's important social and political issues from a sociological vantage point. The course begins by asking where social problems come from. The main sociological perspectives of Marx, Weber and Durkheim are developed in connection with the issues of inequality, social conflict and community. We then turn to the social construction of social problems by examining how various issues become defined as social problems. This involves a consideration of the role of the media, social experts and social movements. The last section of the course considers how social problems are addressed. Here we discuss the relative strengths and weaknesses of government programs and regulations versus market-based approaches. We also discuss the role of philanthropy and voluntarism. Finally, we consider the risk of unanticipated consequences of reforms. Along the way, we will consider a variety of social issues and social problems, including poverty, immigration, crime, global warming, and education.

L/R 003. Deviance and Social Control. (C) Society Sector. All classes. Bosk.
A sociological analysis of the origins, development, and reactions surrounding deviance in contemporary society. Topics include labeling theory, stigma, social organization, tradition, social power, crime, sexual deviance, drug use, and racism. Theoretical and methodological issues will be discussed and evaluated.

L/R 004. (GSWS004) The Family. (C) Society Sector. All classes. Harknett, Lareau.
Most men and women get married during their lifetimes. In addition, most men and women become fathers and mothers at some point. This class presents social science evidence on the family. For example, it shows how "greedy" workplaces, which require long work hours, creatework-family conflicts for husbands and wives. The class also illuminates how men and women have different experiences within families. The lectures will also examine how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life. They will also have an opportunity to read research on a topic of interest. All are welcome.

What is American Society? The literary critic, Leslie Fielder once wrote, "...to be and American...precisely to imagine a destiny rather than to inherit one; since we have always been, insofar as we are Americans at all, inhabitants of myth rather than history..." The myths that we inherit form the basis of American civil religion. In this course we will explore the elements of the myth that form the basis of the civil religion as well as the facts on the ground that contradict our conceptions of American Society: Examples of mythic elements and their contradiction that we will explore are: A nation founded to pursue liberty and freedom yet allowed slavery, equality of opportunity and persistent structural inequality, and a welcoming of the Immigrant coupled with a suspicion of the outsider.

The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans and multiracials.

007. (URBS265, GSWS007) Population and Society. (C) Society Sector. All classes. Flippen, Harknett, Kohler, Zuberi.
The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political implications of current trends, including: population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.

SM 008. Introduction to Political Sociology. (M) Collins, Zuberi.
This course will introduce students to sociological approaches to politics, broadly understood. The class will begin by discussing the nature of power and authority, the rise of the nation-state and the significance of nationalism. Later topics will include social movements, urban political regimes, globalization and transnationalism, citizenship, revolutions, and the rise (and fall?) of welfare states.

010. Social Stratification. (M) Society Sector. All classes. Jacobs.
In this course we study the current levels and historical trends of inequality in the United States especially in cross-national comparative perspective. We discuss causes and consequences of inequality as well as various policy efforts to deal with inequality. Topics include intergenerational social mobility, income inequality, education, gender, race and ethnicity among others.

This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories of urbanism, as well as more specific areas of inquiry, including American urbanism,
segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed countries.

This course analyses the current state of globalization and sets it in historicit in historical perspective. It applies the concepts and methods of anthropology, history, political economy and sociology to the analysis and interpretation of what is actually happening in the course of the semester that relates to the progress of globalization. We focus on a series of questions not only about what is happening but about the growing awareness of it and the consequences of the increasing awareness. In answering these questions we distinguish between active campaigns to cover the world (e.g. Christian and Muslim proselytism, free-trade agreements, democratization) and the unplanned diffusion of new ways of organizing trade, capital flows, tourism and remote interaction via the Internet. The body of the course deals with particular dimensions of globalization, reviewing both the early and recent history of each. The overall approach is historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world.

The course is taught collaboratively by an anthropologist, an historian, and a sociologist, offering the opportunity to compare and contrast distinct disciplinary approaches. It seeks to develop a general social-science-based theoretical understanding of the various historical dimensions of globalization: economic, political, social and cultural.

The aim of this course is to provide an interdisciplinary examination of the complex array of African American and other African Diaspora social practices and experiences. This class will focus on both classic texts and modern works that provide an introduction to the dynamics of African American and African Diaspora thought and practice. Topics include: What is Africana Studies?; The History Before 1492; Creating the African Diaspora After 1500; The Challenge of Freedom; Race, Gender and Class in the 20th Century; From Black Studies to Africana Studies: The Future of Africana Studies.

033. (STSC003) Technology & Society. (C) Society Sector. All classes. Staff.

Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologoes affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we'll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.

SM 041. (AFRC041, EALC014, GSWS041, URBS010) Freshman Seminars. (D) Staff. Freshman Seminars. Topics vary from semester to semester. See Freshman Seminar and Sociology websites for current offerings.

L/R 100. (HSOC100) Introduction to Sociological Research. (C) Armenta, Harknett, Koppel, Park, Smith, Wilde.

One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them. By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.

L/R 101. (HSOC102) Bioethics. (C) Moreno.

This course will take an historical approach to the development of modern bioethics, which is the study of ethical issues in medicine and the life sciences. The first part of the course will be devoted to an introduction to the standard principles of academic bioethics and the way they have structured the field over the last 35 years. We will then consider topics to which the principles have long been applied, such as the care of gravely ill newborns, death and dying, and the ethics of research involving human subjects. The last part of the course will address more recent life sciences policy areas including genetics, cloning, stem cells, biodefense, and neuroscience in relation to national security. Throughout the course I will emphasize the interplay between the development of bioethics and its cultural context.

L/R 103. (ASAM001) Asian Americans In Contemporary Society. (M) Society Sector. All classes. Kao.

This class will introduce you to sociological research of Asian Americans and engage in the "model minority" stereotype. We begin by a brief introduction to U.S. immigration history and sociological theories about assimilation and racial stratification. The class will also cover research on racial and ethnic identity, educational stratification, mass media images, interracial marriage, multiracials, transracial adoption, and the viability of an Asian American panethnic identity. We will also examine the similarities and differences of Asian Americans relative to other minority groups.

105. INDUS REL & HUM RES MGMT. (C)

Who is rich? Who is poor? This course examines how wealth and income are distributed in the United States, and how its distribution affects individuals, groups, institutions, and society. We will gain a fuller understanding of what social class is and discuss how it affects all aspects of life, including: quality of schooling, access to employment, child rearing, and even tastes, preferences, and identity. In addition to two midterms and a final exam, students will be responsible for completing several assignments and turning in a short research paper.
This course is designed to introduce students to the quantitative study of factors that influence the health of populations. Topics to be addressed include methods for characterizing levels of health in populations, comparative and historical perspectives on population health, health disparities, health policy issues and the effectiveness of interventions for enhancing the health of populations. These topics will be addressed both for developed and developing world populations. The course will focus on specific areas of health and some of the major issues and conclusions pertaining to those domains. Areas singled out for attention include chronic diseases and their major risk factors, such as smoking, physical activity, dietary factors and obesity. Throughout the course, the focus will be on determining the quality of evidence for health policy and understanding the manner in which it was generated.

This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

The material world is shaped and maintained through work, but so is the social world. How work is organized, allocated, and rewarded determines the opportunities people have for developing their own capacities, the kinds of ties they will have with others, and how much control they will have over their own lives.

We will consider various sociological perspectives on work and compare alternative ways of organizing work, with a focus on the contemporary United States.

118. Sociology of Bioethics. (C) Bosk.

The Sociology of Bioethics explores the sociological approach to bioethics. The Sociology of Bioethics is not a course in bioethics itself; rather than discussing the merits of a position (Is assisted suicide ethical?), we will ask how the debate has been framed, who is promoting which arguments, why the debate has arisen now, and how the issue is reflected in policy. In order to do so we will make use of social science research, along with philosophical treaties, legislation, and the popular media. The course is also not designed as a comprehensive treatment of the field; it will focus instead on choice topics that we will explore in depth. Our goal is to understand the nature of the bioethics profession and its modes of argumentation, and to explore the cultural, social, political, and professional underpinnings of bioethical debates.

L/R 120. (AFRC120) Social Statistics. (C) Allison, Charles, Guillot, Koppel, Park, Parrado.

This course offers a basic introduction to the application/interpretation of statistical analysis in sociology. Upon completion, you should be familiar with a variety of basic statistical techniques that allow examination of interesting social questions. We begin by learning to describe the characteristics of groups, followed by a discussion of how to examine and generalize about relationships between the characteristics of groups. Emphasis is placed on the understanding/interpretation of statistics used to describe and make generalizations about group characteristics. In addition to hand calculations, you will also become familiar with using PCs to run statistical tests.

122. (GSWS122) The Sociology of Gender. (C) Society Sector. All classes. Leidner.

Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people’s lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class—interact with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.

This course will cover the founding classics of the sociological tradition including works of Tocqueville, Marx and Engels, Weber, Durkheim, Mauss, Simmel, and G.H. Mead. We will also examine how the major traditions have continued and transformed into theories of conflict, domination, resistance and social change; social solidarity, ritual and symbolism; symbolic interactionist and phenomenological theory of discourse, self and mind. This course satisfies the theory requirement for sociology majors.

126. Contemporary Sociological Theory. (C) Collins.

This course will cover the founding classics of the sociological tradition including works of Tocqueville, Marx and Engels, Nietzsche, Weber, Freud, Durkheim Simmel, and G.H. Mead. We will also examine how the major traditions have continued and transformed into theories of conflict, domination, resistance and social change; social solidarity, ritual and symbolism; symbolic interactionist and phenomenological theory of discourse, self and mind.

128. Introduction to Demographic Methods. (C) Elo, Hannum, Smith.

This course provides an introduction to basic demographic concepts, data, indicators, and techniques. The course emphasizes hands-on applications of techniques in the analysis of population dynamics in the U.S. and elsewhere. Students will learn about the main sources of demographic data, including censuses, surveys, and vital statistics, and methods to estimate demographic processes (e.g. mortality, fertility). Students will leave the course with a solid grounding in a) the sources and limitations of demographic data; b) the construction of
basic demographic indicators; and c) appropriate use of basic demographic techniques to answer questions about human populations.

134. (NURS134) Health and Social Policy. (M) Society Sector. All classes. Aiken, Lake.

Health and Social Policy is an interdisciplinary course examining health care and social policy from domestic and international perspectives. The course is designed to engage students in critical thinking about social determinants of health, the organization and outcomes of health care systems and institutions, global health priorities and challenges, and the implications for public policy. Topics include the social inequalities and health; how organizational context of health care impacts outcomes; management of human resources in health nationally and globally; analysis of medical error, its causes, and consequences; review and critique of public policies in U.S. health care; and global health priorities and international health policy. Issues of current public debate in health and health care will provide a context for learning. There are no prerequisites. The course is intended for general lists as well as for those planning careers in health care.

135. (AFRC135) Law and Society. (C) Bosk, Feti.

After introducing students to the major theoretical concepts concerning law and society, significant controversial societal issues that deal with law and the legal systems both domestically and internationally will be examined. Class discussions will focus on issues involving civil liberties, the organization of courts, legislatures, the legal profession and administrative agencies. Although the focus will be on law in the United States, law and society in other countries of Africa, Asia, Europe and Latin America will be covered in a comparative context. Readings included research reports, statutes and cases.

143. Modern Social Movements. (M) Staff.

Throughout modern times groups of people have come together in an attempt to change their social world. Their successes and failures teach us about society, organizations, and individuals. This course will examine case studies of historical and contemporary social movements. Using these case studies, this course will evaluate different approaches to understanding social movements, and investigate what these different approaches suggest about individuals, the society in which they live, and the potential for social change.

152. (HSOC150) American Health Policy. (M) Linker.

This lecture course will introduce students to a broad range of topics that fall under the heading of American health policy. Its main emphasis will be on the history of health care in America from the U.S. Civil War to Obama care. The primary objective of the course will be to consider why the U.S., until very recently, remained one of the only industrialized nations to have a private, non-nationalized health care system. Some of the themes addressed include: private health insurance(such as Blue Cross/Blue Shield), industrial health and worker's compensation, the welfare state (in Europe, Canada, and the U.S.), women's health, especially maternal and infant care programs, Medicare/Medicaid, the Clinton Health Plan of 1993, injured soldiers and the Veterans Administration.

This course will explore the arrival, establishment and contributions of free and enslaved Africans in Ibero-America, the region presently known as Latin America, and the Spanish Speaking Caribbean. It will look at how these actors and their descendants known today as Afro-Latinos, shaped and built the foun-dations of Latin American society and culture throughout the centuries from colonial period to present. The course will seek to understand Afro-Latinos' agency and negotiations as intellectual contributors to the ideologies that led to independence and the creation of Latin American nations. Likewise, the course will also explore the accomplishments, controversies and tensions in race d ynamics and politics, gender relations, socio-economic issues, among others factors that took and continue to take place as people of African descent negotiate their identity and struggle to uphold their space in Latin America and the U.S.A. today.

Certain new technologies are greeted with claims that, for good or all, they must transform our society. The two most recent: the computer and the Internet. But the series of social, economic and technological developments that underlie what is often called the Information Revolution include much more than just the computer. In this course, we explore the history of information technology and its role in contemporary society. We will explore both the technologies themselves--calculating machines, punched card tabulators, telegraph and telephone networks, differential analyzers, digital computers, and many others--and their larger social, economic and political contexts. To understand the roots of these ideas we look at the prehistory of the computer, at the idea of the post-industrial or information society, at parallels with earlier technologies and at broad historical currents in the United States and the world.

162. ENVIRONMENTAL SOCIOLOGY.

163. EDUCATIONAL INEQUALITY.

175. (HSOC275) Medical Sociology. Society Sector. All classes. Schmitteker.

This course will give the student an introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the
institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. Although we will not explore everything, we will attempt to cover as much of the field as possible through four thematic units: (1) the organization and development of the profession of medicine, (2) the delivery of health-care, especially doctor-patient interaction, (3) the social and cultural factors that affect how illness is defined, and (4) the social causes of illness. The class will emphasize empirical research especially but not only quantitative research.

200. (CRIM200) Criminal Justice. (C)
Society Sector. All classes. MacDonald.
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that each major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.

SM 221. Sample Survey Methods. (M)
Hannum, Parrado.
This course provides an introduction to survey data collection. In meeting this objective, we examine the major planning tasks necessary for conducting surveys, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training and field management, code development and coding of data, and data cleaning and management. We critically explore the the design of surveys and collection of data from epistemological and ethical perspectives. Students will leave the class with a solid understanding of the basic process of survey data collection and a familiarity with its strengths and weaknesses as a method of inquiry into human behavior.

This course is designed to introduce students to field methods in sociological research, with a focus on participant-observation and interviewing. During this course, students will read original research based on field methods and discuss their strengths, limitations, and ethical dilemmas. Most importantly, students will design their own research projects and become ethnographers and interviewers. Students will be guided through the fieldwork process from data collection to analysis, and will turn in multiple assignments and an original research paper.

233. (CRIM100) Criminology. (C)
Society Sector. All classes. Adler.
This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories explaining where, when, by whom and against whom crimes happen. Police, courts, prisons, and other institutions are also critically examined. This course meets the general distribution requirement.

235. (AFRC235) Law and Social Change. (C) Fetni.
Beginning with discussion of various perspectives on social change and law, this course then examines in detail the interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, emphasis will be on the laws of the United States. However, laws of other countries and international law relevant to civil liberties, economic, social and political progress will be studied. Throughout the course, discussions will include legal controversies relevant to social change such as issues of race, gender and the law. Other issues relevant to State-Building and development will be discussed. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.

238. (COMM203) Media Culture & Society in Contemporary China. (C) Yang.
This course studies contemporary Chinese media, culture, and society in the context of globalization. Major topics include Internet expression and censorship, mass media commercialization, entertainment media, middle class and consumerism, environmental degradation, new forms of inequality, and civil society and popular protest. Taking a sociological approach, this course introduces methods anad theories for analyzing media, institutions, inequality, and social change.

Classic theory of religion in Durkheim and Weber, as well as contemporary theories of religious movements. Topics include ritual, magic, and mystical experience; religious ethics and salvation beliefs; the dynamics of cults, sects and mainstream churches; origins, expansion and decline of religions; religions and social class; religions and politics. The spectrum of religions in the contemporary United States will be examined, as well as historical comparisons.

L/R 252. (AFRC252) Human Rights. (C) Zuberi.
Sociology provides a unique way to look at human behavior and the world. We live in a world of diverse and conflicting values in which human rights and respect for human dignity have provided a platform for convergence. One important instance of such convergence has been the development of international norms prohibiting genocide, crimes against humanity, war crimes and ethnic cleansing. While there is agreement on fundeamental prinicples as reflected in the Universal Declaration of Human Rights, differences in interpretation remain. A platform for convergence requires the engagement of a number of constituencies, in particular, state and inter-state entities, corporations, civil society and individuals, as well as the mutual reinforcement of their rights and duties. This course will critically cover the history, practice and social significance of human rights.

This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows, and the impact of these forces on poverty, equity and segregation. Specific topics to be discussed include the factors that make a region competitive, the city's changing role in the region, the impact place has on opportunity, and approaches to revitalizing and improving communities.

Over the last century, we have witnessed dramatic historical change in population incidence and mortality, e.g., rising numbers of women diagnosed with breast cancer and dramatic declines in death from stomach cancer. There has also been a highly visible social patterning of health and disease, such as socio-economic disparities in AIDS, substance abuse, and asthma in the U.S. today or the association of breast cancer with affluence globally. This course will explore the way researchers, activists, politicians and others in different eras have made sense of these changes and patterns and have responded to them.

The course is historical and sociological. At the same time that we examine evidence and theories about the way poverty, affluence, and other social factors influence individual and population health, we will try to understand how social and historical forces have shaped how health and disease have been understood and categorized. In examining our current obesity "epidemic," for example, we will not only consider evidence and claims made about the causal role of market forces and changes in the built environment, but ask why (besides the fact that we are heavier) obesity has become such a visible and important medical and public health issue in the U.S. today.

SM 260. (STSC260) Cybertulture. (M) Staff.

Computers and the Internet have become critical parts of our lives and culture. In this course, we will explore how people use these new technologies to develop new conceptions of identity, build virtual communities and affect political change. Each week we'll see what we can learn by thinking about the Internet in a different way, focusing successively on hackers, virtuality, community, sovereignty, interfaces, algorithms and infrastructure. We'll read books, articles, and blogs about historical and contemporary cultures of computing, from Spacewar players and phone phreaks in the 1970s to Google, Facebook, World of Warcraft, WikiLeaks, and Anonymous today. In addition, we'll explore some of these online communities and projects ourselves and develop our own analyses of them.

This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.

266. (LALS235) Latinos in United States. (C) Parrado.

This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e., Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.

SM 270. (URBS270) The Immigrant City. (M) Society Sector. All classes. Hanson, R. Scott.

Immigration is among the most important yet controversial forces shaping cities, regions, and neighborhoods. The diversity of immigrant and receiving communities means that the dynamics and impacts of migration are varied and complex. This course examines the development of immigrant and receiving communities in the United States. It surveys public policy and community and economic development practices related to migration at the local, regional, national, and transnational scale. Class readings, discussions, and visits to Philadelphia's immigrant neighborhoods explore themes including labor markets, housing experiences, political mobilization, civil society, cultural preservation, and the built environment.

The first half of the course surveys migration and community formation among a broad range of ethnic groups in different parts of the city and suburbs, mainly through history, sociology, and geography; the second half focuses on specific policy and community and economic development initiatives. Ultimately, the class aims to provide students with 1) a broad knowledge of immigration and its impacts on cities and regions; 2) an in-depth understanding of urban policies and institutions working on immigration in U.S. cities; and 3) familiarity with community and economic development strategies for migrant and receiving communities.

275. (HSOC275) Medical Sociology. (C) Schnitker.

This course will give the student an introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. Although we will not explore everything, we will attempt to cover as much of the field as possible through four thematic units: (1) the organization and development of the profession of medicine, (2) the delivery of health-care, especially doctor-patient interaction, (3) the social and cultural factors that affect how illness is defined, and (4) the social causes of illness. The class will emphasize empirical research especially but not only quantitative research.

277. (HSOC277) Mental Illness. (C) Schnitker.

This course is designed to give a general overview of how sociologists study mental illness. We will be concerned with describing the contributions of sociological research and exploring how these contributions differ from those of psychology, psychiatry, and social work. This overview will be done in three parts: we will discuss (i) what "mental illness" is, (ii) precisely how many Americans are mentally ill, (iii) how social factors (e.g. race, gender, class) and social arrangements (e.g. social networks) lead to mental illness, and (iv) how we as a society respond to and treat the mentally ill. Throughout the course, we will be concerned with uncovering the assumptions behind different definitions of mental health and exploring their political, social, and legal implications.
280. (EALC048) Social Issues in Contemporary China. (C) Hannum.

China's transition to a market-oriented society has effected fundamental changes in the lives of citizens. This class will consider pressing social concerns that China must struggle to address as it continues down the path of market reforms. Using topical problems to illustrate broader issues of social inequality along lines of gender, ethnicity, residence status, and poverty status, we will consider questions such as the following: How are women and men faring differently in China's new labor market and workplaces? Are rural peasants and the emerging underclass of urban laid-off workers being left behind by market transition? How are minorities faring in China's transition? How does the emerging digital divide play into the dichotomies of east-west and urban-rural in China? What is the plight of millions of "floaters" migrating into China's cities, with minimal legal rights and protections? Can China's rapidly-changing public health system handle emerging diseases such as SARS and AIDS? How has the one-child policy affected women, children, and society in China? Who are the "missing girls" of China, and what are the social implications of their disappearance? How was the welfare of children and adolescents changed with market reforms? The class will combine lectures, academic readings, case studies, films, and discussions.

This course focuses on science in various institutional contexts and discusses situations ranging widely over time and place. We consider examples drawn from the seventeenth century to the present, the social settings in which science is found (e.g., the prince's court, the society of amateurs, the university, the academic laboratory, industry and in the field, outdoors), and the effects of changes in publishing and patronage. For comparative purposes, we also consider such phenomena as the symphony orchestra, the art market, motion pictures, and literature. Assigned authors range from time-honored authorities, such as Robert Merton, to science writers for The New Yorker.

299. Independent Study. (C) Staff.

Directed readings and research in areas of sociology. Permission of instructor needed.

SM 300. Thesis Workshop. (C)

Leidner. Prerequisite(s): SOCI 100. The purpose of this course is to guide senior sociology majors in writing a research proposal for a senior honors thesis. Students will learn about various research approaches, how to write a focused literature review, and kinds of data necessary to answer a wide variety of research questions, including their own. Throughout the course, students will work on designing a research question, generation researchable hypotheses, and coming up with a design for their proposed study. The final paper for this course will be a research proposal that is the basis for students' independent research project. This course satisfies the research requirement for sociology majors and is designed primarily for seniors who are planning to write an honors thesis.

SM 322. (GSWS322) Advanced Topics in Gender and Sexuality Studies. Staff.

Violence against Women in Conflict: Sexuality, Terrorism, and Human Rights This course explores how women's experiences of violence in conflict are guided by traditional patriarchal views of femininity, and further how this violence impacts their human rights. Through academic texts, documents produced by the U.N. and NGOs globally, and documentaries, we will consider women's experiences of violence in contexts such as: how rape is used to decipher the borders and boundaries of emerging nations, as in the 1994 genocide in Rwanda; the highly complex experiences of women suicide bombers in the Israeli-Palestinian and Sri Lankan conflicts; the relationship between domestic violence in the private/home space and the violence of war in the public space; and sexual violence against women in the U.S. military.

SM 330. (AFRC387, ITAL300) Special Topics. (M)

SM 340. (AFRC387) Special Topics

AFRC Stud. (M)

SM 380. (CRIM280) Neighborhood Dynamics of Crime. (B) Loeffler.

Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in sociodemographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.

398. Senior Research. (C) Sociology Faculty.

Senior Research is for senior sociology majors only. Students are assigned Sociology advisors with assistance from Undergraduate Chair.

399. Senior Thesis. (C) Sociology Faculty.

Senior Thesis is for senior sociology majors only. Students are assigned advisors with assistance from Undergraduate Chair.

This seminar focuses on examining data from experiments in criminology including: randomized controlled trials of criminal justice policies, "natural" experiments in crime, and other quasi-experimental studies. A series of experiments conducted by Penn scholars and elsewhere will be examined. This seminar also guides criminology majors in writing a research proposal for their thesis. Students will learn about how to formulate a research question, develop a review of the literature, and how to apply necessary empirical methods. The final paper for this course will be a research proposal that can serve as the basis for the student's senior thesis and to satisfy the senior capstone requirement. Readings will come from the disciplines of criminology, sociology, psychology, economics, and urban planning.

SM 411. (CRIM411) Field Observations in Criminal Courts. (C) Staff.

The course will serve as an introduction both to qualitative research and to an understanding of the routine workings of the courts in Philadelphia. After a brief discussion of the theoretical underpinnings and practical techniques of ethnography, students will undertake supervised field projects leading to the writing of 5000 words long, examined research reports about different aspects of the social organization of the courthouse and court room.
SM 420. (URBS420) Perspectives on Urban Poverty. (C) Fairbanks.
This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constricts meaningful channels of action in urban poverty policy and practice interventions.

SM 430. (AFRC431, AFRC630, COMM496, SOCIE630, URBS403) Advanced Topics in Sociology. (M) Staff.
Upper level advance topics vary from semester to semester.

SM 431. (HIST233, LALS431) Modern Mexican Society. (M) Staff.
An introduction to social, political, and economic organization of modern Mexico. This course traces to evolution of Mexico's fundamental societal institutions from their birth during the Mexican Revolution of 1910, through their flowering during the 1950's and 1960's, to recent changes under neoliberal administrations. The course ends with a discussion of Mexico's transition to democracy and the election of the first opposition President in 80 years.

SM 435. (URBS457) Globalization & The City. (C) Chattaraj.
Over the past two decades, the public imagination has been gripped by the concept of globalization. Scholars, corporations, advertisers and government officials have latched onto this idea as a defining feature of our current era. These various constituencies use globalization not only to account for epochal shifts in our economy and society, but also to justify new types of business strategy and public policy. This course will examine three interlinked dimensions of globalization: Global economic processes (e.g. the multinational operations of multinational firms that have given rise to a new international division of labor); cultural globalization (e.g. the spread of American brands like Coca Cola, Nike and Hollywood films), and political globalization (e.g. the rise of supranational organizations like the IMF, World Bank and WTO that promote the idea of free markets).

Moreover, we will study globalization in the context of cities because, given their centrality to globalization processes, it is in cities that we can best understand how globalization takes place. In cities, we can study the global economic processes that restructure urban space, giving rise to new financial districts, international art exhibits and post-modern architecture and entrepreneurial strategies that seek to elevate cities to world city status. The course will examine these processes in a comparative light, contrasting urban globalization processes in Europe and North America with those in Latin America, Asia and Africa.

The purpose of this academic-based service learning course is to examine the development of art, culture and media in cities, with an emphasis on how cultural organizations operate in the urban environment. Through classroom readings and discussions, students will explore a variety of sociological approaches to the analysis of urban culture and the creative economy, local arts and entertainment, new media technology and public policy. In addition, students will conduct several hours per week of community service in one of a variety of local nonprofit arts and other cultural institutions in Philadelphia.

How do American cities grow? Studies of urban transformation have focused on anchor institutions, the growth model of big business-generated employment, and "creative class" gentrification. After decades of decline, many major cities like Philadelphia are seeing gains in population again, as well as new commercial activity and street life, spurred by the influx of new immigrant communities. Yet few scholars have asked: What role do immigrants play in the current revival of the American metropolis?

In this Social Science Studio course, 16 students will work collaboratively as in a design studio to conduct research that can answer this important social-scientific question. Students will work on independent projects that engage multiple methods and fields to produce new types of knowledge. They will be introduced to multiple methods drawn from architecture, planning, anthropology and political science, including mapping, interviewing, fieldwork, socio-economic surveys, sketching, photography and web design to develop independent projects. No prior knowledge is required but students with experience in GIS, STATA, photography, drawing or web design are encouraged to apply.

SM 450. (HIST455, PPE 475) ONLINE TOPICS. (C)

SM 453. (URBS453) Metropolitan Growth and Poverty. (C) Madden.
This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how metropolitan change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.

SM 460. (AFRC420, AFRC620, SOCIE660) Advanced Topics in Africana Studies. (M) Staff.
Advanced Topics in Africana Studies: The Sociology of W E B Du Bois; GIS for Social Science Research

Power is an ability to create change. Without access to power that might otherwise come from political, financial or personal networks, community organizing can often serve as the only viable source of power for the oppressed. Although organizing became a partisan buzzword during the 2008 presidential campaign, it is firmly rooted in the democratic tradition. Organizing campaigns have played a central role in US history, most notably as the foundation of the Civil Rights movement. This course will integrate the
history and theories of community organizing so that each student will have the foundation to develop a transformational praxis to create change in their own communities. Focused analysis of the course material, case study reviews, guest speaker presentations, inquiry-based assessments and problem-posing methods rooted in the student's own context will serve as the primary means of development.

What, if anything, is global in "global health"? Whatever this field might be, it is more often than not actively produced through a range of conflicting ethical commitments of multiple expert cultures, social movements and laypersons. This course explores critical themes in the historical and sociocultural study of global health. Students will engage a number of disciplinary perspectives within the social sciences including the history, sociology, and anthropology of science, and we will pay particular attention to feminist, queer, and postcolonial science studies perspectives. Throughout, we will consider how both global and local cultural transformations have shaped the emergence of this multidisciplinary field of study. To understand the complexity of global health, students will engage with a number of theoretical and ethnographic texts while questioning its stability and coherence as a self-same object given its interdisciplinary character. In doing so, we will explore the ways in which diverse sets of interests converge to constitute as well as contest the ever-shifting boundaries of global health.

SM 524. (DEMG524) Advanced Topics in the Sociology of the Family. (M) Staff.

The course will review a series of theoretical issues in the sociology of the family and examine major empirical studies in which theoretical advances have been made. Special attention will be given to work that has a historical and comparative perspective. Opportunities will be provided for original research on the family.

SM 530. (AFCR533, LALS530) Advanced Selected Topics. (C) Staff.

Topics vary from semester to semester. Courses offered in the past were Social Movements and Social Change; Critical Race Theory; Conducting Family Research; Mistakes, Errors, Accidents and Disasters; Sociology of Jewish Bioethics.

This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and—with the permission of the instructor—advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory "lab."

L/R 536. (DEMG536) Quantitative Methods in Sociology II. (B) Allison, Kohler, Park, Schnittker, Smith. Prerequisite(s): SOCI 535 or permission of instructor.

As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results.

SM 541. (DEMG541, GSWS532) Gender, the Labor Force, and Markets. (M) Madden.

Drawing from sociology, economics and demography, this course examines the causes and effects of gender differences in labor force participation, earnings and occupation in the United States and in the rest of the developed and developing world. Differences by race, ethnicity and sexual preference are also considered. Theories of labor supply, marriage, human capital and discrimination are explored as explanations for the observed trends. Finally, the course reviews current labor market policies and uses the theories of labor supply, marriage, human capital and discrimination to evaluate their effects on women and men.

This seminar examines the relevance of gender to the organization and experience of paid and unpaid work. Combining materialist and social constructionist approaches, we will consider occupational segregation, the relation of work and family, gender and class solidarity, the construction of gender through work, race and class variation in work experiences, and related topics.

Feminist activists and academics have posed fundamental challenges to existing approaches to social theory. This seminar explores the development of feminist theory since the 1960s, focusing on approaches that have the most relevance for social science. The relations among feminist theorizing, research, and activism will be emphasized.

This course will study social stratification primarily in contemporary societies. We will examine both the distribution of social rewards as well as process for the allocation of these rewards. Stratification theory and research on social mobility will be considered. Topics include the influence of education, race and gender, and structural and organizational factors on individual success. Acquaintance with stratification theory and quantitative methods would be helpful but not required.

SM 553. (URBS553) Field Methods in Qualitative Research. (C) Bosk, Grazian, Lareau.

This course is designed to introduce graduate students to basic skills and concepts in ethnographic field research, including participant observation, interviewing, field documentation, and the scholarly presentation of qualitative data. Students will learn to apply these skills and concepts through an assigned set of exercises in concert with a semester-long project based on intensive fieldwork at a research site of their choosing. In addition, we will examine exemplars of published fieldwork in both classical and contemporary sociology.

SM 555. Pro-Seminar in Sociological Research. (A) Hannum, Jacob, Kao, Leidner, Smith.

In the non-credit seminar students will be introduce to key areas in sociological research, and a set of professional skills necessary to navigate graduate school and a successful academic career. Students will also be introduced to faculty and resources available at Penn. This course is required for all first-year graduate students in Sociology.

This graduate seminar for first-year graduate students will be a two-semester course covering the major subfields of sociology -- their classical and
contemporary theories, current methods and substance.

SM 561. (COML562) Class Cultures and Historical Change. (M) Collins. Culture as lifestyle, therefore as the immediately visible aspect of social class, as well as the status groups that may cut across class. Examines micro-sociological evidence (including photos and other images; and literary and other textual sources) of how class and status are performed in everyday life. Goffmanian and subsequent theory of interaction rituals applied across long-term historical changes, and their causes. Topics include Norbert Elias's theory of civilizing process; stratification in patrimonial/aristocratic societies; the modern shift to bureaucracy plus private households; the effects of democratization, social movements, wars, revolutions, and status leveling; informalization and antimimicry counter-cultures; youth cultures and cults of mass entertainment. Concluding with what electronic communications are doing to the future of class cultures and self-presentation.

SM 570. (AFRC571) VISUALIZING W. E. B. DU BOIS. (M) Zuberi. This seminar will focus on a project that views history as a result of our contemporary society in which biographical truths are constantly shifting. So the historical biographers write about the way they remembered and visualize the past, and not about the way that it happened. We will take Du Bois's biography in his own words and interrogate his narrative with the visual narratives of his life and influence produced by others. "Visualizing W.E.B Du Bois" focuses on photographic, film, and video representations intended to present some aspect of Du Bois's reality, primarily for the purposes of instruction or maintaining a historical record. Such projects include photos, materials originally shot on film stock, and digital images that can be either displayed in a book or magazine, and moving images made into a film or video for a TV show or released for screening in cinemas, or other broadcast mediums like YouTube and Vimeo.

572. Health Care and Social Policy. (M) Aiken. This course is an area study or survey of social policy issues in contemporary health care. Topics include social contexts of health care and health policy; the organization and financing of health services; the health professions; health and illness over the life cycle; achieving equitable access to health services; the interface between health and social services. Health problems of national significance will be addressed including infant mortality, teenage pregnancy, AIDS, the chronically mentally ill and homeless, and health impaired elderly.

SM 595. (AFRC595) Media, Culture, and Society. (M) Staff. This course will begin by surveying approaches to culture that are characteristic of general theory in sociology. We will then deal in depth with theories of recorded culture that have developed within the sociology of culture and related disciplines, including the role of the media in constructing social reality, the interpretation and reception of texts, recorded culture and the creation of symbolic boundaries, the social construction of art, the organization of cultural industries, sacred symbols and political integration, and the relationship between culture and the state.

SM 596. (ASAM590, SOCI496) Sociology of Education. (M) Kao. This graduate seminar will introduce students to some of the key theoretical and empirical work in the sociology of education. We will examine how schools work to maintain or alleviate inequality, and focus on differences in educational achievement and attainment by race, ethnicity, immigrant status, class, and gender. We will review work on the educational experiences of youth from early childhood to young adulthood.

SM 597. MLA Proseminar.

SM 601. Contemporary Social Theory. (M) Collins. This is a graduate-level seminar structured around the main theoretical debates of contemporary sociology, including the interplay of rationality and emotion, the relationship between structure and agency, the nature of power, and the role of chance and contingency. In considering alternative positions on these debates, we will encounter the major theorists of the past fifty years, including Parsons, Merton, Goffman, Homans, Schutz, Coleman, Bourdieu, Luhmann, Habermas, Collins, and Giddens. Requirements include intensive primary source reading, writing, and participation. The course assumes, and does not provide, prior familiarity with the main theoretical perspectives, and thus does not substitute for the undergraduate theory course (Soci 126).

SM 602. (COML610) Proseminar in Classical Sociology. (C) Collins. This course will cover the founding classics of the sociological tradition including works of Tocqueville, Marx and Engels, Nietzsche, Weber, Freud, Durkheim Simmel, and G.H.Mead. We will also examine how the major traditions have continued and transformed into theories of conflict, domination, resistance and social change; social solidarity, ritual and symbolism; symbolic interactionist and phenomenologic theory of discourse, self and mind.

SM 603. (DEMG707) Master's Research in Sociology. (C) Bosk, Grazian, Jacobs, Kao, Lareau, Leidner, Park, Schnittker. This graduate course is intended to be helpful to students as they produce an MA thesis. The course is structured to provide social support and feedback as students move through the stages in the development of a project (i.e. data analysis, review of the literature, development of a thesis, and revision). Students should begin the semester with a data set in hand; additional data analysis will occur during the term. (In some cases, students may be finishing their data collection.) In addition, the course is intended to provide professional development opportunities for students by providing "insider" information about the publication process. Students will be given examples of journal review (including reviews that reject a paper), copies of papers as they move through the revision process, and guidelines for producing a publishable piece of work. The goal is for students to produce a manuscript that can be submitted for publication in the near future. This is a required course for second year graduate students in Sociology.

604. (DEMG604) Methodology of Social Research. (C) Harknett, Smith, Wilde, Zuberi. This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers' claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the
methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper. The course is required and restricted to second year students in sociology and demography.

607. (DEMG607) Introduction to Demography. (M) Staff.
A nontechnical introduction to fertility, mortality and migration, and the interrelations of population with other social and economic factors.

609. (DEMG609) Basic Methods of Demography. (C) Elo, Guillot, Smith.
The course is designed to introduce students to basic concepts of demographic measurement and modeling used to study changes in population size and composition. The course covers basic measures of mortality, fertility and migration; life table construction; multiple decrement life tables; stable populations; population projections; and age patterns of vital events. Students will learn to apply demographic methods through a series of weekly problem sets.

611. (DEMG611) Structural Equation Models. (M) Allison.
Statistical modeling with multiple equations and latent variables. The first part of the course will focus on linear models that could be estimated with any of the well-known SEM programs (e.g., LISREL, EQS, or Amos). Both Mplus and SAS will be used exclusively in this part of the course. The second part will focus on Mplus models for variables that are categorical, count, or censored. Maximum likelihood methods for missing data will also be covered.

This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyzedata provided by the instructor.

613. (DEMG613) Event History. (M) Allison. Prerequisite(s): SOCI 536 or equivalent.
An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, competing risks, repeated events, unobserved heterogeneity, discrete-time methods.

SM 617. (AFRC617) Theories of Racial and Ethnic Differentiation. (M) Charles.
This course provides an overview of prominent theories and theorists of race and ethnicity, and is concerned with: 1) Understanding the nature and persistence of race and ethnicity as meaningful social groupings in contemporary American society, and 2) Explaining the social significance of these group identities—that is, how these groupings are related to social stratification, to socio-cultural relations, and to the political and economic dynamics in our society.

SM 620. Doctoral Seminar in Sociological Research II. (C) Grazian, Hannum, Jacobs, Schnittker, Wilde. Prerequisite(s): Third year graduate students.
This course is intended to aid in the selection, framing, writing and revising of sociological dissertation proposals. It is also intended to provide a forum for the presentation of dissertation research in progress. The goal is to provide a forum for the acquisition of professional socialization in sociology. We will discuss the framing of research questions, the design of research strategies, and the writing of dissertation proposals. We will discuss the process of submitting manuscripts for conferences and journals, preparing a curriculum vitae, job search strategies, and preparing for effective colloquium presentations. We will also review articles currently under review at the American Sociological Review. It is expected that third year graduate students in Sociology will enroll in this class.

The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race, etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.

SM 622. (DEMG622) Fertility. (M) Kohler, Smith.
The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.

The ethnographic and sociological interpretation of urban life. Conceptual and methodological issues will be thoroughly discussed. Ongoing projects of participants will be presented in a "workshop" format, thus providing participants the opportunity of learning from and contributing ethnographic work in progress. Selected ethnographic works will be read and assessed.

SM 630. (AFRC431, AFRC630, DEMG630, SOCI430) Advanced Special Topics. (C) Staff.
Topics vary from semester to semester. Course titles include: Race, Colonialism & Methods; Mistakes, Errors, Accidents & Disasters, Graduate Research Practicum, Sociology of Violence: Gangs & Organized Crime.

This is one of two courses that serve as an introduction to core areas of demography and important developments in the field. Population Processes I introduces students to broad set of issues in health, mortality, and aging. Readings cover overviews of major topics as well as recent approaches to the subject. Attention is focused on description and explanation of variation in health across time, space and social groups. One consequence of mortality decline is population aging. We will cover some of its implications for individuals, families and societies.
is designed for graduate students in the social and behavioral sciences, health professions, public health, business and law. Advanced undergraduate students will be admitted with permission.

643. (DEMGE634) Social Stratification. (M) Jacobs, Park.
This is an advanced level graduate seminar that we will review contemporary research on social stratification and mobility. We will examine empirical and theoretical studies not only in the US but also in other countries to address how the pattern of social stratification varies across societies and over time. The main topics to be discussed are social mobility, occupational attainment, educational inequality, gender and race, and family processes and stratification. We will also examine studies that address how national contexts mediate social stratification. Advanced undergraduate students will be admitted with permission.

This course provides an introduction to social science research design and methods for students interested in conducting research on issues in bioethics. The course is appropriate for students who, rather than conducting research themselves, will use research findings to make or challenge arguments in policy statements or other writings. Emphasis is placed on the logic of research design as the way to relate topic of inquiry with methods so that evidence produced is pertinent and useful. Students will design research projects and explore a variety of methods available to conduct research. Students will also integrate research ethics into the formulation and design of their inquiries.

Most of the studies of inequality look at poverty and the impact of poverty. This course will be a study of those at the top of the social stratification system. We will take a broad vision of elites of to include the upper-middle-class as well as those in the top 1%. The course will examine the concentration of wealth in American society. It will examine elite families. It will also look at elite education. There will be a unit on the financial industry, the 2008 debacle, and the failure of the government to regulate this important industry. We will also study the influence of race by comparing the black upper-middle-class with white upper-middle-class families. Thus, we will also look at the power of elites in a number of spheres. Finally, we will also read theoretical perspectives including the work of C. Wright Molls, Marx, and Bourdieu. Thus, in addition to the focus on social stratification, this course cuts across sociology of the family, economic sociology, cultural sociology, and race and ethnic relations.

SM 650. Social Inequality. (M) Jacobs.
This course will study social inequality primarily in contemporary societies. We will examine both the distribution of social rewards as well as processes for the allocation of these rewards. Stratification theory and research on social mobility will be considered. Topics include the influence of education, race and gender, and structural and organizational factors on individual success. We will also discuss how societies' stratification systems vary across time and place. Acquaintance with stratification theory and quantitative methods would be helpful but not required.

SM 660. (AFRC420, AFRC620, SOCI460) Advanced Topics in Africana Studies. (C) Staff.
Advanced Topics in Africana Studies: The Sociology of W E B Du Bois; GIS for Social Science Research

662. (DEMG662) PANEL DATA ANALYSIS.

SM 664. (COMM665) DIGITAL MEDIA & SOC THEO. (C)
This seminar explores critical issues in contemporary society through the lens of digital media studies and social theory. Special attention will be given to how social theory may inform the theorizing and empirical analysis of digital culture, digital politics, and digital practices. We will read recent monographs on the meanings and uses of digital media in international development, international migration, state power and popular protest, symbolic violence, and the formation and contestation of identities, communities, and publics. These works will be examined alongside the social theories of Jeffrey Alexander, Ulrich Beck, Bourdieu, Judith Butler, Foucault, Giddens, Goffman, Habermas, Melucci, Victor Turner, and others. A term paper required

The dynamics of interpersonal interaction, especially in face-to-face encounters during limited short periods of time. Topics include: the theory of interaction rituals deriving from Durkheim, Goffman and their contemporary followers; conversation analysis; micro-ethnographic studies of non-verbal behavior and embodied interaction; sociology of emotions;
symbolic interactionist theory and the social nature of mind, self, and inner dialogue; electronically mediated interaction and its effects on social ties; and the relationship between micro and macro sociology.

SM 670. (DEMG670) Family Data. (C) Harknett.
This two semester course will engage each graduate student in an analysis project with qualitative and quantitative components, using a linked qualitative longitudinal data set. Students will use survey data from the baseline and 12 month wave of the Fragile Families study (described at http://crcw.princeton.edu/fragilefamilies/), a national survey of unwed and married parents who have just had a child (with unmarried parents over sampled) They will also use transcripts and coded data from the TLC3 study, which involved qualitative couple and individual interviews conducted with a subset of 75 of the couples in the FF survey in 3 waves: about 3 months after the birth and then again 12 and 24 months after the birth. Most of these are low-income, unmarried, cohabiting parents. The goal of the course is for each student to use these two data sets, and the analytic techniques and literature covered in the course, to write a paper that can be submitted for publication. The spring will also include lots of tips on how to construct a publishable paper. Students should only enroll in this course if they plan to take the spring sequel course as well.

SM 677. (DEMG677) International Migration. (M) Flippens.
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800A1914 as well as during the postwar period from 1945 to the present. The course also centers on a history and evaluation of immigration policies around the world, and devotes significan attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.

SM 680. (CRIM600) Pro-seminar in Criminology. (C) Staff.
This course explores the basic scope, mission and methods of the science of criminology. The course proceeds to cover the current state of theory, research, and accomplishments in both knowledge and policy about criminality and criminal events. Students will read widely and report to the seminar on their readings, as well as assessing key readings and central ideas for their potential guidance of future research. The course focuses primarily on criminology of criminal events, including law-making and law-breaking. The criminology of reactions to crime is covered in the second semester pro-seminar in criminal justice, CRIM 601/SOCI 681.

SM 681. (CRIM601) Pro-seminar in Criminal Justice. (C) MacDonald.
A wide-ranging introduction to theory and research on responses to crime under the rubric of criminal law. Theories of deterrence, procedural justice, reintegrative shaming, defiance and other interactions between legal sanctions and legal conduct will be examined in light of the most recent research. Issues of discrimination, disparity, and fairness in the operation of criminal law will be considered with evidence from around the world. Patterns, causes, and consequences of legal sanctioning patterns will be systematically documented, and major gaps in knowledge will be identified.

SM 685. Sociology of Violence. (C) Collins.
General theory of social conflict, with an emphasis on violent conflict. Specific applications include fights, riots, combat, and gang violence; tribal and modern war; abuse of the weak’ domestic conflict; sexual conflict and rape; homicide; social movements and moral crusades; conflict management and social control; state breakdowns and revolutions; ethnic conflict and genocide.

SM 690. (DEMG707, DEMG708, SOCI691) Sociology Writing Workshop I. Jacobs, Lareau.

SM 691. (DEMG707, DEMG708, SOCI690, SOCI707, SOCI708) Sociology Writing Workshop II.
Jacobs, Lareau.

The topic of this course will be Africa and the African Diaspora. The emphasis will be on readings, class discussions, and seminars to reflect the ongoing discussions in the field. We will provide a series of readings for background to each section.

SM 707. (DEMG707) Second-Year Research Seminar I. (C) Staff.
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.

Prerequisite(s): DEMG 609 and SOCI 536 (or its equivalent).
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Pre-requisites: DEMG 609 and SOCI 536 (or its equivalent).

SM 777. (AFRC777, DEMG777) Special Topics in Demography. (M) Staff.
Topics vary from semester to semester.

796. (DEMG796, ECON791) Demographic, Economic, and Social Interrelations. (M) Madden, Kohler.
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demographic change? How does immigration to the US affect the ethnic composition of the population, the earnings...
of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women’s participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in Dem/Soc 535/536 and 609.

**SM 821. (NURS821) Proseminar in Health Outcomes Research. (M)**
Aiken, Lake. Prerequisite(s): Prior coursework at undergraduate or masters level in statistics and quantitative methods. This course is designed for doctoral students interested in conducting health outcomes research. The course focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research. Penn faculty researchers will use their ongoing studies to illustrate how study design, sampling, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research.

**822. (NURS822) Applications of Health Outcome Research. (C)** Aiken.
Prerequisite(s): Prior coursework at undergraduate or masters level in statistics and quantitative methods, Nursing 821/Sociology 821 is preferred. This the second of a two-course sequence designed for doctoral students interested in conducting health outcomes research. The first course (821) focuses on conceptual, methodological, statistical, feasibility and data issues central to the conduct of health outcomes research; the second course (822) focuses on applying health outcomes research through the development and implementation of a research project. In the first course Penn faculty researchers will use their ongoing studies to illustrate how sampling, study design, measurement, and advanced statistical techniques can be employed to address the various challenges inherent in health outcomes research. In the second course, students will design and implement a health outcomes research project.

**SM 860. (COMM860) GLOBAL MEDIA ACTIVISM.**

**SM 867. (COMM867) Media & Social Movements. (M)**
Yang. Examines the meanings and roles of media and communication in social movements; analyzes media reform activism; studies both historical movements and contemporary protests around the world (Arab Spring, Indignados, Occupy, etc); covers a broad range of theoretical perspectives, especially network and diffusion theories, political economy, narrative theory, and theories of performance. Students are required to submit a final research paper.

**SM 888. (COMM888) SPECIAL TOPICS.**

**998. Independent readings and research. (C)** Staff.
For advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.

**999. Directed Readings and Research. (C)** Staff.
Primarily for advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
SOUTH ASIA STUDIES
(AS) {SAST}

This undergraduate course introduces students to the history of Southeast Asia from the earliest centuries of the Common Era to c.1950. It introduces students to Southeast Asia as religion, constituent historical societies of the region, and to the major academic literature and debates pertaining to the historical development of Southeast Asian societies and the region. Key themes explored include the origins and character of early civilizations, ideas and ideology about power and prowess, material culture, the transformation of ethnic, class, and gender relations, the impact of the arrival of world religions and early European expansion, and the nature of indigenous responses to the diffusion of new beliefs and ideas and intercultural contact.

147. (RELS069) Love, Sex & Power. Elias, J.
This course explores the ways in which some of the biggest issues in human life are dealt with across religious traditions. Beginning with important questions of sexual identity, politics, religion and the individual in contemporary life, we will examine questions of eroticism, sex and love as they are reflected in religious literature, art and history. The concept of divine love and religious devotion will be explored in relation to acts of violence, including human sacrifice and self-sacrifice in the form of martyrdom seen in pre-modern concepts of saintly martyrdom and religious chivalry as well as the religious legitimation of modern self-sacrifice of soldiers in war and terrorist suicides. The course focuses in particular on examples drawn from Christianity, Hinduism, Islam and Mesoamerican Religion, although discussions of contemporary issues will be conducted with a broader sweep. Important questions considered in this course include: how does the body function as the locus in which religion is enacted? What is the conflict between our agency over our bodies and socio-religious claims over the individual? Is violence an integral part of religion? What are religious understandings of the relationship between love and sex? How can a human being love gods erotically?

SM 617. (COML217, HIST670, SAST217) Readings in Modern Indian History. (B) Ali.
This course will introduce students to the major themes and debates of modern Indian historiography. Though the course will not provide a survey outline of events, it will be organized around themes that have a broad chronological sequence. It will touch on key topical themes like the transition to colonialism, the development of the colonial economy, the evolution and significance of colonial knowledge systems, the impact and shape of religious and social reform, the rise of nationalism and communalism, and peasant, labour and subaltern history. The goal of the course will be to provide students with an understanding of the significance of debates around key themes in modern Indian history and a familiarity with the different 'schools' or 'traditions' of historical interpretation, including Nationalist, Marxist, the so-called 'Chicago', and 'Cambridge' schools, as well as the Subaltern collective and post-Subaltern historiography.

This seminar surveys the multiple components of literary culture in South Asia. Students will engage critically with selected studies of literary history and aesthetics from the past two millennia. In order to introduce students to specific literary cultures (classical, regional, contemporary) and to the scholarly practices that situate literature in broader contexts of culture and society, the course will focus both on the literary theories - especially from the nineteenth and twentieth centuries - that position South Asia's literary cultures within broader disciplinary frameworks that use literary documents to inform social, historical and cultural research projects. The aim is to open up contexts whereby students can develop their own research projects using literary sources.

Foundational Courses

001. (HIST089) Introduction to Modern India. (C) History & Tradition Sector. All classes. Ali.
This introductory course will provide an outline of major events and themes in Indian history, from the Mughal Empire in the 16th century to the re-emergence of India as a global player in the 21st century. The course will discuss the following themes: society and economy in Mughal India; global trade between India and the West in the 17th century; the rise of the English East India Company's control over Indian subcontinent in the 18th century; its emergence and transformation of India into a colonial economy; social and religious reform movements in the 19th century; the emergence of elite and popular anti-colonial nationalisms; independence and the partition of the subcontinent; the emergence of the world's largest democracy; the making of an Indian middle class; and the nuclearization of South Asia.

This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia by focusing on significant South Asian cities. With one-fifth of the world's population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research drawn from urban studies, architecture, political science, and history, as well as fiction and film. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality & the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, cultural, and linguistic identities, differences, and violence in South Asia's urban environments. This is an introductory level course appropriate for students with no background in South Asia or for those seeking to better understand South Asia's urban environments in the context of recent globalization and rapid historical changes. No prerequisites. Fulfills College sector requirement in Society and foundational approach in Cross-Cultural Analysis.

L/R 003. (HIST086, RELS164) History, Culture, and Religion in Early India. (C) History & Tradition Sector. All classes. Ali.
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the
"Aryan Invasion" and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India's early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

This course introduces students to the extraordinary quality of literary production during the past four millennia of South Asian civilization. We will read texts in translation from all parts of South Asia up to the sixteenth century. We will read selections from hymns, lyric poems, epics, wisdom literature, plays, political works, and religious texts.

005. (MUSC265) Performing Arts in South Asia. (C) Arts & Letters Sector. All Classes. Miner.
This course is a survey of selected traditions of theater, music, and dance in India and surrounding regions. Topics include ritual practices, theater, classical dance, classical music, devotional music, regional genres, and contemporary popular musics. Readings and lectures are supplemented by audio and visual materials and live performances. The aim of the course is to expose students to a variety of performance practices from this part of the world and to situate the performing arts in their social and cultural contexts. The course has no prerequisites.

Premodern India produced some of the world's greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.

SM 007. (COML007, COML013) Introduction to Modern South Asian Literatures. Mohammad, A.
This course provides an introduction to the literatures of South Asia - chiefly India, Pakistan, and Bangladesh- between 1500 and the present. We will read translated excerpts from literary texts in several languages - Braj, Persian, Hindi, Urdu, Bengali, Marathi, Malayalam, and Tamil - and explore the relationship between these literary texts and their historical contexts. No prior knowledge of South Asia is required.

What makes India INDIA? Religion and Philosophy? Architectural splendor? Kings? Caste? The position of women? This course will introduce students to India by studying a range of social and cultural institutions that have historically assumed to be definitive India. Through primary texts, novels and historical sociological analysis, we will ask how these institutions have been reproduced and transformed, and assess their significance for contemporary Indian society.

009. (RELS119, RELS519, SAST529) An Introduction to Religion in South Asia. (C) Sevea. Prerequisite(s): This undergraduate-level course introduces students to the multi-religious complexion of South Asia as a region, with a particular focus upon key religious traditions and the resemblances and interactions between them. This course is divided into two parts. In the first part of this course, students are introduced to key religious traditions of South Asia, Hinduism, Buddhism, Jainism, Islam and Sikhism. Students will be encouraged to survey academic works pertaining to, on the one hand, the literature, doctrines, cosmologies, rituals and histories of, and prominent places of worship in, the Hindu, Buddhist, Jain, Muslim and Sikh religious traditions. On the other hand, the development of South Asia into a distinctive space and spiritual 'homeland' for multi-religious communities. Whilst the first part of the course focuses upon religious traditions autonomously, the subsequent section of the course is thematic and encourages students to make comparisons, and discover sophisticated relationships and dynamic interactions between religious traditions in South Asia. Students are introduced to scholarly writings that are revelatory of the materiality of religious traditions in pre-modern and modern South Asia; everyday forms of piety in South Asia; gender positions in religious traditions; encounters of religious traditions with European. This undergraduate-level course introduces students to the multi-religious complexion of South Asia as a region, with a particular focus upon key religious traditions and the resemblances and interactions between them. This course is divided into two parts. In the first part of this course, students are introduced to key religious traditions of South Asia, Hinduism, Buddhism, Jainism, Islam and Sikhism. Students will be encouraged to survey academic works pertaining to, on the one hand, the literature, doctrines, cosmologies, rituals and histories of, and prominent places of worship in, the Hindu, Buddhist, Jain, Muslim and Sikh religious traditions. On the other hand, the development of South Asia into a distinctive space and spiritual 'homeland' for multi-religious communities. Whilst the first part of the course focuses upon religious traditions autonomously, the subsequent section of the course is thematic and encourages students to make comparisons, and discover sophisticated relationships and dynamic interactions between religious traditions in South Asia. Students are introduced to scholarly writings that are revelatory of the materiality of religious traditions in pre-
010. CONTEMPORARY S.ASIA. (C)

L/R 150. (PHIL050, RELS155, RELS455) Introduction to Indian Philosophy. (C) History & Tradition Sector. All classes. Patel. D.

This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India -- arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standard problem, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E. to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

Freshman Seminars

Freshman Seminar.

This Freshman Seminar explores the short and long term effects of British colonialism in India and South Asia. It also introduces the historiography of colonialism in South Asia, the different, often contradictory, stories that are told about the nature and impact of colonial rule, and about the process of achieving independence from colonial rule. By focusing on a small set of specific questions, students will learn to analyze primary and secondary historical sources, consider the major schools of South Asian (particularly Indian), history writing, and identify how these various approaches discuss the past differently.

Major questions for this course will include the following: (1) How was Britain, a tiny European island nation, able to come to dominate nearly the entire South Asian subcontinent? (2) Did British rule help India develop technologically and economically or did it cause India to de-industrialize and become more impoverished? (3) Were the widespread Indian rebellions of 1857 and 1858 a Sepoy Mutiny, the first war of Indian independence, or something else? (4) Did British colonialism shape and transform knowledge and identities within South Asia, including the caste system, Hinduism, and conflicts between Hindus and Muslims, or did these all exist in their present forms prior to colonialism?

SM 052. (ASAM012) Indians Overseas: A Global View. (C) Staff.

This course is about the history of Indian emigration. The course will consist of readings, discussions, observations, data collection and analysis. The topics will include cultural preservation and cultural change among East Indian immigrants especially in North America, the Caribbean area, the United Kingdom, the African continent, and some other countries in the Pacific Ocean. The course will encourage organized thinking, observations and analysis of components of the culture that immigrant communities are able to preserve and components that change or get reinterpreted.

SM 053. (ENGL016) Literature and National Trauma: Partition and Independence in South Asia. (C) Kaul.

This course will examine the way in which imaginative literature and film have addressed the difficult socio-political issues leading up to, and following from, the independence and partition of British India. Pakistan and India came into being as nation-states in moments of great national trauma: historians have long argued over the process that led up to Partition, and we will study some of these debates, but for the most part we will examine novels, short stories, poetry, and some films to think about the impact of Partition and Independence on communities and individuals in South Asia. In doing so, we will recognize the continuing role played by these events and experiences in shaping the cultural, social, and political realities of contemporary South Asia. We will also learn about the crucial role played by literary and creative texts in making available to us the full dimensions of human tragedy, especially those precipitated when the imperatives of nation-formation redefine the lives of individuals or of sub-national communities.

SM 057. Planning to be Off-shore?. (C) Gangulee.

In this course we will trace the economic development of India from 1947 to the present. Independent India started out as a centrally planned economy in 1949 but in 1991 decided to reduce its public sector and allow, indeed encourage, foreign investors to come in. The Planning Commission of India still exists but has lost much of its power. Many in the U.S. complain of American jobs draining off to India, call centers in India taking care of American customer complaints, American patient histories being documented in India, etc. At the same time, the U.S. government encourages highly trained Indians to be in the U.S.

Students are expected to write four one-page response papers and one final paper. Twenty percent of the final grade will be based on class participation, 20 percent on the four response papers and 60 percent on the final paper.

Undergraduate Courses

L/R 063. (ANTH063, HIST087) East & West: A Hitchhiker's Guide to the Cultural History of the Modern World. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Mitchell. Sugar and Spices. Tea and Coffee. Opium and Cocaine. Hop aboard the Indian Ocean dhows, Chinese jun kins, Dutch schooners, and British and American clipper ships that made possible the rise of global capitalism, new colonial relationships, and the intensified forms of cultural change. How have the desires to possess and consume particular commodities shaped cultures and the course of modern history? This class introduces students to the cultural history of the modern world through an interdisciplinary analysis of connections between East and West, South and North. Following the circulation of commodities and the development of modern capitalism, the course examines the impact of global exchange on interactions and relationships between regions, nations, cultures, and peoples and the influences on cultural practices and meanings. The role of slavery and labor migrations, colonial and imperial relations, and struggles for economic and political independence are also considered.

From the role of spices in the formation of European joint stock companies circa 1600 to the contemporary cocaine trade, the course's use of both original primary sources and secondary readings written by historians and anthropologists will enable particular attention to the ways that global trade has impacted social, cultural, and political formations and practices throughout the world.
104. (MUSC060) BeginningTabla I.  
(A) Bhatti.
An introduction to the tabla, the premier drum of north Indian and Pakistani classical music traditions.

105. (MUSC062) BeginningTabla II.  
(B) Bhatti.
A continuation ofTabla I, also open to beginning students.

106. (MUSC061) Beginning Sitar I.  
(D) Miner.
This course is an introduction to the repertoire and performance practices of the North Indian sitar. Fundamentals of sitar technique, composition, and improvisation are presented and practiced in class. Class lectures and discussions, audio and video material, and reading and listening assignments on selected topics supplement practice, to provide an overview of the social and historical context and the formal structures of North Indian music in general. There are no prerequisites for the course, but some experience with instrumental or vocal music is suggested. Each student is expected to put in two hours of individual practice per week, and complete reading, audio, and written assignments. The class gives a group performance at the end of the semester.

107. (MUSC063) Beginning Sitar II.  
(B) Miner.
This is the second semester of a performance course in the North Indian sitar. Students who have not taken the first semester but play any musical instrument are permitted to join. Principles of composition and improvisation will be explored in practice and supplemented by readings and listening. The class gives a group performance at the end of the semester.

108. (ARTH514, MUSC161) Intermediate Sitar I.  
(C) Miner.
This is a performance course open to students who have completed both semesters of Beginning Sitar, or to others by permission from the instructor. Students will work with right and left-hand techniques, study three ragas in depth, learn the contours of several other ragas, and work with concepts of tala, composition, and improvisation. Assigned readings and listenings will complement the performed material. A group performance will be given at the end of the semester.

109. (MUSC162) Intermediate Sitar II.  
(C) Miner.
This is a continuation of an intermediate performance course in the North Indian sitar. It is open to students by permission of the instructor. Students who play other instruments and have had at least a beginning level of training in Hindustani music may also join, with the permission of the instructor.

110. (MUSC164) India's Classical Musics.  
(C) Miner.
Hindustani and Karnatak music are among the great classical music systems of the world. Developed in temple, shrine, court, and concert stage environments in North and South India, they have a strong contemporary following in urban South Asia and a significant international presence. This course is an introduction to theory, structures, instruments, and aesthetics. We will work with primary and secondary texts, recordings, videos, and live performances. Topics will cover selected aspects of raga, tala, composition, improvisation and social contexts. The course aims to give students analytical and listening skills with which to approach and appreciate India's classical music. No prior music training is required.

111. (MUSC266, MUSC466) Music Cultures of North India and Pakistan.  
(C) Miner.
A great variety of song and instrumental genres have thrived in the Hindu and Muslim milieus of North India and Pakistan. In this course we examine a selection of urban and rural musics, such as instrumental music in Baluchistan, qawwals in Delhi, the garba of Gujarat, ballad singing of Rajasthan and the urban music of Calcutta. We will explore the sounds, poetry, historical, and social contexts of chosen genres and trace aspects of continuity and adaptation in the changing environment of contemporary South Asia. Readings are supplemented by audio-visual material and live performances.

124. (COML125, ENGL103) Narrative Across Cultures.  
Arts & Letters Sector.  All Classes.  Staff.
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.

139. (NELC136, RELS143) Introduction to Islam.  
(C) Elias.
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

140. (RELS163) Introduction to Hinduism.  
Staff.
This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.
provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.

143. (RELS169) Religion in Modern India. (C) Staff.
Who has decided what counts as a religion in India in the last two centuries, and how has this shaped political, social, economic and not the least religious life? When did it become obvious that many religious practices in India should be grouped under the rubric 'Hinduism'? How has it come about that the most contentious issues in India today concern religion? This course invites students to formulate answers to these questions by critically examining decisive moments in recent Indian history including: missionary and colonial encounters with Indian religions, the making of Indian nationalism, anti-caste protests that attempt to redefine religion, and a postcolonial secular state's attempts to determine Islamic law.

This course key issues facing Muslims in the modern world with an emphasis on gaining an understanding of how Muslims view themselves and the world in which they live. Beginning with a discussion of the impact of colonialism, we will examine Islamic ideas and trends from the late colonial period until the present. Readings include religious, political and literary writings by important Muslim figures and focus on pressing issues in the Islamic world. In this course we consider these and other questions by tracing the interactions between the three-fold forces of entrepreneurialism, labor, and kinship/sovereignty—considered as the underlying conditions of business activity's possibility—from ancient to modern times in South Asia.

By looking at topics ranging from merchants and their bills of exchange in South Asia's antiquity to the impacts of colonial rule to the current fervor over liberalizing independent India's retail sector, the course will thus be both a history of the past as well as a history of the present.

SM 163. (COML163, HIST227) Empire and Popular Culture: India and the Metropole. (C) Mukharji.
This course will explore the everyday experiences of the empire of those who were located physically in the "metropolitan home". Beyond the politics and economics of the empire, this course studies the impact of the empire on the everyday lives of the British in the imperial age. Structured around how a Briton living in the 'home' might come to experience the empire through his/her encounters with the diverse cultural images and artefacts that were circulating since the turn of the nineteenth century, this course will specifically look at how these popular images of the Indian empire came to be informed by and in turn helped inform the shifting imperial notions of masculinity, sexuality, class, race and even spirituality.

141. (ANTH142, RELS142) Islam in South Asian Culture. (C) Spooner.
Islam reached South Asia in the eighth century and Muslim rulers held sway over large parts of the Subcontinent for much of the period from the late 12th century until the colonial period. However, the majority of the population never converted to Islam, and since independence in 1947 Islam—its interpretation, realization, and influence—has been a major factor underlying many difficult political issues. This has been true not only in the largest country, India, where Muslims form 12% (unevenly distributed) of the population, but in Bangladesh and Pakistan where non-Muslims are relatively insignificant minorities. This course explores the realities and the perceptions related to Muslim identities and the Islamic heritage in the Subcontinent, and sets it in global context by comparison with other parts of the world which share various aspects of the South Asian experience. The course will conclude with an assessment of the larger significance of religion to the study of South Asia today.
connections has changed over time from the ancient to the modern world. We will reconstruct the intertwined mercantile, religious and kinship networks that spanned the Indian Ocean world, across the Middle East, East Africa, South Asia, Southeast Asia and China, illuminating the histories of Hinduism, Buddhism and Islam, while also considering the role of successive imperial political formations, from Rome to Britain. Throughout the semester we will seek to understand the Indian Ocean through the people who lived and worked in its milieu - from consuls and military commanders, to traders, brokers, sailors, prisoners and slaves. Course materials will draw on a variety of disciplines (anthropology, archaeology, material culture, religious studies) to construct the cultural, economic, and environmental history of the Indian Ocean.

SM 170. (ASAM170) Asian American Psychology. Kumar, M. Using a cultural perspective, this course is intended to provide knowledge of Asian American personality, identity, and its relationship to mental well being; analyze psycho-social research pertinent to Asian Americans; and develop critical thinking skills on Asian American issues through experiential learning/discussions.

SM 189. (ANTH189, SAST589) Islam in Modern South Asia. Staff. This course will examine Islam in modern South Asia, particularly in Pakistan, from multiple disciplinary perspectives. In popular discourse and media, Pakistan is usually presented as a volatile Muslim country primarily of interest as a "security problem". Most Western discussions and commentaries about Pakistan abound with stereotypical depictions of religious fundamentalism and/or the threat of the country's nuclear weapons to global security. This course will complicate and bring into question such stereotypes and alarming narratives. It will do so by examining the complexity of Pakistan's religious and political past and present. The focus of this course is on the intellectual history and traditions, as well as the lived practice of Islam in Pakistan. By drawing on a range of primary and secondary sources including film, literature, and anthropological texts, we will explore the diversity of Islam and Muslims in Pakistan. We will begin with the context of colonial India, and interrogate transformations in South Asian Islam during the 19th and early 20th century, before moving to Pakistan in the contemporary period. Among the major themes discussed in this course include modern South Asian Muslim reform movements, intra-Muslim polemics on questions of normative practice and ethics, contestations of religious authority, sectarianism, minorities, Madrases (Islamic seminaries) and Muslim traditions of education, religion and the state, Cyber Islam, and religion and the media. While focusing on modern South Asia and Pakistan, this course will also engage Islam in Afghanistan in both historical and contemporary contexts.

197. (HSOC107) Science, Technology & Medicine in Colonial India. (C) Mukharji. In this course we will explore the broad contours of the histories of Science, Medicine and Technology in Colonial India (c. 1757 - 1947). This broad overview will be developed each week through a case study based on any one particular scientific discipline, technological project or medical event. Overall the course will attempt to locate the development of science, technology and medicine within the social, political and cultural context of Colonial India. It is also worth noting that 'Colonial India', will include discussions of regions which today make up the Republic of India, Pakistan and Bangladesh.

199. Independent Study. (C) Staff. Directed Study for Undergraduates.

200. (ARTH104, SAST500) Introduction to Art in South Asia. (C) Arts & Letters Sector. All Classes. Meister/Staff. This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as 'traditional' or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe, and as diverse. This course attempts to introduce the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.

223. (PSCI220) Comparative South Asian Politics. (C) Frankel. The comparative study of South Asian politics begins with many antecedent questions. What are the reasons why a strong national political identity in the Indian subcontinent was not consolidated and territorial boundaries defined until the advent of the British Raj? Alternatively, given major regional diversities, why did the subcontinent not become differentiated into a large number of national states on the model of Europe? To what extent was the movement toward a unified territorial state weakened by colonial policies that recast social groups in terms of new pan-Indian categories based on caste and religious identities? What factors led to the partition of the subcontinent at the time of independence on the basis of religion, and what consequences did partition have for the strategies adopted by each state to develop an overarching national identity and universal principles of legitimate state power? Although the greater part of the course will address these questions by analyzing the social and political dynamics of democracy in India, they are equally relevant for understanding the difficulties encountered by Pakistan in defining a core identity and a stable form of government.

SM 224. (ENGL293, SAST524) Growing up Funny: Nation and Identity in South Asian Writing. (C) Loomba. It is a curious fact that some of the most compelling fiction about and by South Asians features the coming of age of a child protagonist. This body of writing appropriates and reshapes the classic European Bildungsroman, but it also uses narrative traditions from South Asia in order to tell the story of the postcolonial nation, and to chart the contours of contemporary South Asian identity and sexuality. In this course, we will read novels, short stories and plays--some well known and others less so, some now considered 'classics' and others very recent, produced from within the Indian subcontinent as well as from the West. All of these speak of the excitement and trauma of growing up 'Indian'. Through them, we will discuss key features of the political and social upheavals of the Indian subcontinent, as well as the dynamics of the family, gender relations, sexual identities and cultural belonging. The course will include writings by Rudyard Kipling, Salman Rushdie, Bapsi Sidhwa, Amitav Ghosh, Mahasweta Devi, Hanif Kureishi, Anjana Appachana, Arundhati Roy, Meera Sayal, Sara Sulker, Shyam Selvadurai, and Mahesh Dattani.

SM 249. (RELS249) Re-enchanting Modernity: A Guide to Sufism in South Asia. Sevea. This undergraduate level course introduces students to Sufism in modern South Asia, with a particular focus on how Muslim 'mystics' and their 'mystical' methods interacted with modernity, colonialism,
technological developments and globalization. This course is divided into three parts. In the first part of this course, students are provided with an overview of the theological and historical background of the dominant expression of Islam that came to be identified as 'Sufism' or 'Islamic mysticism', the historical development of Sufi institutions and spaces in South Asia, and the historical emergence of South Asia as a prominent global center of Sufism. The second and main part of this course introduces students to a range of anthropological and historical works that are revelatory about how Sufi in modern South Asia were and remain intimately connected to modern political and technological developments. Providing students with an overview of Sufi re-enchantments of modernity from the 19th to 21st century, this section of the course focuses upon Sufi movements and masters who perpetuated or defended customary Islam through sophisticated appropriations of technologies and print networks, and negotiations with non-Muslim rulers and societies. Moreover, students will be introduced to anthropological and historical scholarship on religious worlds in modern South Asia that were and remain steeped in 'customary Islam' and Sufi performances and interpretations of Islam. These sources reveal how 'mystical' methods of performing Islam through ecstasy and spiritual restoration, and interpretations of dreams and visions, have regularly interacted with contemporaneous technologies. The third part of this course introduces students to the globalization of South Asian Sufism in North America, Europe and Southeast Asia. Herein, students will be encouraged to engage with anthropological and literary works pertaining to itinerant South Asian Sufi masters and their devotional cults, and introduced to active South Asian Sufi centers in Philadelphia.

250. (RELS251) History of Hinduism. Soneji. This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacramental kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

252. (ANTH242, MUSC252) Music of South and Southeast Asia. Sykes. What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim, and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today's public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.

256. (PSCI257) International Relations of South Asia. (C) Frankel. One of the great accidents of history is the Partition of the subcontinent into the two states of India and Pakistan, and the onset of the cold war as a global struggle between the United States and the Soviet Union. The major focus of the course is on the interaction between regional conflicts, the most enduring symbolized by the unresolved dispute between India and Pakistan over Kashmir, and the global strategies of rival great powers which sought to tip the balance of power in their favor by military and ideological influence over the "third world." These conflicts were exacerbated by the Indian leadership's commitment to an independent foreign policy of non-alignment, and its aspirations to leadership of newly independent states in Asia and Middle East, ranged against Pakistan's inability to establish a viable state without external support. The resulting alignments and alliances drew the subcontinent into the center of cold war rivalries. The last part of the course focuses on the changing security environment after the cold war, the rise of India and China as competitors for influence; and problems posed by persisting mutual resentment and distrust in India and the United States, despite recognition on both sides of the need to cooperate and avoid China's domination of Asia.

262. (SAST562) The Making of Medieval India. (C) Ali. This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period--from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia's history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural world views.

Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations.

SM 269. (ASAM239, NELC239) Migration and the Middle East. (M) Sharkey. This is a topics course and will vary from year to year. This reading and discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across
the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions-- notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing.

SM 282. (GSWS282, INTR290, SAST582) Gender & Development in India. (C) Roy.

284. (PSCI256, SAST584) International Relations of the United States and Asia. (C) Frankel.

This course is one of the first arising out of scholarship on cold war international history. It draws on declassified government documents and other archival records to provide a window into the world-view of decision-makers who need to make national security policy based on incomplete information about ambiguous threats. The materials reveal a great deal about the importance of divergent historical perspectives and strategic cultures in the foreign policy-making process. The main focus of the course is on the intersection of the cold war and the rise of Asian nationalism. At the core of the analysis is the clash between America's global strategy of military containment against the Soviet Union and the assertion of Indian, and Chinese nationalism, concerned with preventing the United States from succeeding to Great Britain's imperial rule. The course examines new patterns of US-India and US-China relations in the post-cold war period. This is primarily a lecture course, but the course web is a critical element of class work.

This course investigates the everyday practices and customs of South Asians in America. Every immigrant group has its own history, customs, beliefs and values, making each unique while simultaneously a part of the "melting pot" or salad bowl" of American society. Yet how do people define themselves and their ethnicities living in a diasporic context? By taking into account the burgeoning South Asian American population as our model, this course will explore the basic themes surrounding the lives that immigrants are living in America, and more specifically the identity which the second generation, born and/or raised in American, is developing. South Asians in the U.S. will be divided thematically covering the topics of ethnicity, marriage, gender, religion, and pop culture. Reading and assignments will discuss a variety of issues and viewpoints that are a part of the fabric of South Asia, but will focus on the interpretation of such expressive culture in the United States.

292. (INTR290) Topics in International South Asian Relations. Staff.

293. (SAST593) Caste & Class in South Asia. (C) Sreenivasan.

This course will explore the reality of caste and class in South Asian society, and the theories, classical and modern, that attempt to explain it. We shall survey a wide sweep of sources, from the earliest evidence for a division into caste-classes in the Rig-Veda to reports in modern media of caste-related social problems; from orthodox Hindu normative texts justifying and upholding a rigid hierarchical division of society to voices, in Sanskrit and in vernaculars, criticizing the caste system. Our goal is to gain a nuanced and many-sided insight into a deeply pervasive phenomenon that has shaped South Asian society, culture, and religion in general (Muslim, Sikh, and Christian castes) from ancient time up to the twentieth century.

299. Independent Study. (C) Staff.

300. Directed Study. (C) Staff.

This course is required for all senior honors majors, and open to senior majors. Honors majors must, in addition, prepare a research paper.

SM 312. (ARTH311, ARTH312) 20th Century South Asian Art. Meister.

Topic varies.

Spring 2015: Using resources of the Philadelphia Museum of Art's exceptional collection, this workshop will explore India's remarkable traditions of sculpture produced for singular narrative and iconic ends.

This course will focus solely on the specific genres, themes, and aesthetics of Sanskrit literature (the hymn, the epic, the lyric, prose, drama, story literature, the sutra, etc.) and a study of the history and specific topics of Sanskrit poetics and dramaturgy. All readings will be in translation.

This course will cover most of the genres of literature in South Asia's classical languages through close readings of selections of primary texts in English translation. Special focus will be given to epics, drama, lyric poetry, satirical works, and religious literature.

369. (ANTH369, SAST669) Islam & the Cultural Politics of Nationalism in Modern South Asia. (C) Sreenivasan.

India, Pakistan, and Bangladesh together have the largest population of Muslims in the world. This course provides an introduction to the history of Muslim communities in modern South Asia: their reconstitutions in the modern period and their role in the formation of the region's nation-states in the twentieth century. We will read primary sources - political speeches, newspaper reports, diaries, fiction, poetry, film and music - and interpret them historically as we acquaint ourselves with South Asian Muslim cultures. No prior knowledge of South Asia is required.

380. (PSCI511, SAST680) Society & Politics in India. (C) Frankel.

This course analyzes the changing relations between social dominance and state power from the time of colonial rule. Special emphasis is placed on ways in which the historical-social context of India at Independence shaped the democratic institutions introduced, and reciprocally, how social hierarchy and preferences for group rights have been affected by egalitarian and liberal principles of governance. Within this analytical framework, religion, caste, class and ethnicity are examined as process and as social formation leading to the emergence of new identities and conflicting ideas of political community associated with them.

This seminar will explore a wide range of themes at the intersection of globalization and therapeutic cultures in South Asia and amongst South Asian diasporas. To begin with the course understands 'supraterritoriality' as the key feature in globalization and proceeds to interrogate the myriad ways in which this
supraterritoriality was produced, consumed, used and abused within the therapeutic cultures that have been, and on occasion still are, available in South Asia—both in reality and symbolically. Each week, through a specific case study, framed by a few theoretical readings we will attempt to deepen and problematize the simple definition of globalization with which we start the course. Throughout the course there will be a strong emphasis on combining case study-based empirical material with theoretical interventions in Cultural Theory and Postcolonial Studies.

This is an introduction to studying gender systems and women's situations across cultures and countries with a special emphasis on South Asia. The class focuses on "globalization," the flows of people and culture that are increasing around the world. The class begins with the historical background for understanding the current period of globalization. We will look at the specific case of colonization in South Asia and emphasize its role in the rise of factories in both colonized and colonizing nations. We then consider the role of these factories in today's world as they employ women from the third world (sweatshops), and explore other issues related to gender and globalization and discuss scholarly responses to the changing world system. This class approach stresses that in order to understand women's lives in the non-western world, it is important to understand the on-going connections between the "first world" and between the United States and the rest of the world. The larger objectives of the course are: 1. To learn about the history and current conditions of South Asia, particularly as they affect women and gender. 2. To be able to identify relations between the "first world" and the "third world" through an understanding of elements of globalization that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe, as diverse. This course attempts to introduce the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.

SM 502. (RELS149, RELS549) The Mullah & The Englishman - Islam in Modern South Asia. (C) Sevea.
This course introduces students to Islam in modern South Asia, with a particular focus on the development of "new" Muslim religious idioms, orientations, pedagogies and movements in 19th and 20th century South Asia. This course is divided into three parts. In the first part of this course, students are provided with an overview of: Muslim institutions and spaces in pre-colonial South Asia, the historical emergence of South Asia as a prominent global center of Islam, and the development of Urdu as an Islamic idiom. The second and main part of this course introduces students to academic literature concerning sophisticated encounters between the Muslim elite in north India and modern political and technological developments. The intimate interactions of the 'Mullah' and the 'Englishman' from the 19th to 20th century will thus be revealed to students. This part focuses upon, on the one hand, the role of Islam and pious Muslims in the colonial army, and on the other hand, Muslim initiatives to educate an Islamic 'modernism', 'traditionalism', 'fundamentalism' and 'Sufism', and appropriate print technologies for the creation of public spheres. Students will be introduced to historical scholarship revelatory of how these Muslim pedagogies and print initiatives were based upon sophisticated transcultural networks and exchange.

In the third part of this course, students will be encouraged to engage with contemporary literature on South Asian Muslim political philosophy and nationalism, and the transcultural intellectual exchanges that produced key Muslim political ideologies.

SM 505. (ARTH511) Topics in Indian Art. (C) Meister.
Aspects of sculpture, painting, iconography, or architecture in the Indian sub-continent. Topic varies.

Fall 2016: Important as texts have been to South Asia's history, perceptions of the physical world dominate experience within South Asian cultures. Seeing and being seen, vocalizing and hearing, contribute to the construction of meaning. This pro-seminar will approach South Asia's perceptual world as expressed and tested by art, and methods to frame art as a source of knowledge.

SM 507. (COML007, SAST007) Introduction to Modern South Asian Literature. Sreenivasan, R.
Prerequisite(s): This course provides an introduction to the literatures of South Asia—chiefly India, Pakistan, and Bangladesh—between 1500 and the present. We will read translated excerpts from literary texts in several languages—Braj, Persian, Hindi, Urdu, Bengali, Marathi, Malayalam, and Tamil—and explore the relationship between these literary texts and their historical contexts. No prior knowledge of South Asia is required.

513. (CIMS215, GSWS213, GSWS513, SAST213) Indian Cinema and Society. (C) Staff.
This course will meet for three hours to view and discuss a variety of films/videos in Hindi, Tamil, Bengali, Urdu (with English subtitles), and English, which bring up issues of social, political, and cultural significance. Readings for the course will include articles in various fields ranging from film studies and communication to sociolinguistics and women's studies. Discussions will focus on cinema as a means of expression and as an instrument for social change, examining the various ways in which films both reflect and influence contemporary culture.

524. (SAST224) Growing up Funny: Nation and Identity in South Asian Writing. (C) Loomba.
It is a curious fact that some of the most compelling fiction about and by South Asians features the coming of age of a child protagonist. This body of writing appropriates and reshapes the classic European Bildungsroman, but it also uses narrative traditions from South Asia in order to tell the story of the postcolonial nation, and to chart the contours of contemporary South Asian identity and sexuality. In this course, we will read novels, short stories and plays—some well known and others less so, some now considered 'classics' and others very recent, produced from within the Indian subcontinent as well as from the West. All of these speak of the excitement and trauma of growing up 'Indian'. Through them, we will discuss key features of the political and social upheavals of the Indian subcontinent, as well as the dynamics of the family, gender relations, sexual identities and cultural belonging. The course will include writings by Rudyard Kipling, Salman

SM 528. (PSCI511) Society & Politics in India. (M) Frankel.
This course analyzes the changing relations between social dominance and state power from the time of colonial rule.

This undergraduate-level course introduces students to the multi-religious complexion of South Asia as a region, with a particular focus upon key religious traditions and the resemblances and interactions between them. This course is divided into two parts. In the first part of this course, students are introduced to key religious traditions of South Asia, Hinduism, Buddhism, Jainism, Islam and Sikhism. Students will be encouraged to survey academic works pertaining to, on the one hand, the literature, doctrines, cosmologies, rituals and histories of, and prominent places of worship in, the Hindu, Buddhist, Jain, Muslim and Sikh religious traditions. On the other hand, the development of South Asia into a distinctive space and spiritual 'homeland' for multi-religious communities. Whilst the first part of the course focuses upon religious traditions autonomously, the subsequent section of the course is thematic and encourages students to make comparisons, and discover sophisticated relationships and dynamic interactions between religious traditions in South Asia. Students are introduced to scholarly writings that are revelatory of the materiality of religious traditions in pre-modern and modern South Asia; everyday forms of piety in South Asia; gender positions in religious traditions; encounters of religious traditions with European colonialism; and, perceptions of the 'other' in pre-modern religious traditions. Herein, students will find multiple sites of resemblances or differences, and cultural negotiations, engagements and contests, within religious traditions in South Asia.

This course will cover most of the genres of literature in South Asia's classical languages through close readings of selections of primary texts in English translation. Special focus will be given to epics, drama, lyric poetry, satirical works, and religious literature.

SM 536. (HSSC536) IMPERI MED BRITISH WORLD.

This seminar explores the place of visual religious arts in Islam; we will attempt to get beyond conventional ideas regarding the impropriety of visual representation to examine how Muslims have understood and deployed visual art in a number of historical and cultural contexts. In the process, we will explore the ways in which visuality as a process renders the act of seeing into a religious experience. As such, we will also examine the role of the arts in relation to religion: how does vision affect the understanding and practice of religion, and what do visual arts tell us about religion in ways that texts of speech cannot? Simultaneously, what does the study of religion tell us about visual art that art history cannot?

548. (RELS250, SAST248) Hindu-Muslim Relations in South Asia. Staff.
This seminar examines engagements between Hindu and Muslim traditions in South Asia from medieval to modern times. We explore historical case studies of Hindu-Muslim relations and the formation of religious identities, together with the ways in which these identities have been contested and constructed in modern discourses on religion and politics. Through the course of the seminar, we interrogate the analytical categories of conquest, iconoclasm, conversion, and syncretism, around which several current debates on Hindu-Muslim relations have been framed. Topics discussed include: the interactions of Sufi, Bhakti and Yogic traditions, Mughal religious cultures; the impact of colonialism on religious identities and sectarian relations; the partition of India and creation of Pakistan, and nationalist historiographies.

This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacrificial kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes a well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

SM 560. (HIST384, SAST260) Modern History of Pakistan. (C) Staff.
This course is designed as an introduction to the contemporary history of Afghanistan and Pakistan, with an emphasis on the intertwined history of both countries; their other regional neighbors; and global politics. The course focuses on local trends such as empire, nationalism, the Cold War, superpower competition, and transnational Islamism. At the same time, participants will explore how local people viewed their lives amidst these trends, and how local dynamics on this northwestern fringe of the Subcontinent changed the face of global politics. The readings supplement political and economic history with primary sources drawn from popular poetry, oral narrative, and memoir. Finally, we'll be following current events in the region, and placing them in their sociohistorical context. Therefore, there are two main goals for this course: (1) to introduce the specific history of Afghanistan and Pakistan up to present, and (2) to introduce typologies of social institutions and events, assisting class participants to develop their own frameworks for interpreting current events in the region after the end of the course.

562. (SAST262) The Making of Medieval India. (C) Ali.
This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period—from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia's history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The
focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural worldviews.

Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations.

584. (SAST284) International Relations of the United States and Asia. (C) Frankel.

This course is one of the first arising out of scholarship on cold war international history. It draws on declassified government documents and other archival records to provide a window into the world-view of decision-makers who need to make national security policy based on incomplete information about ambiguous threats. The materials reveal a great deal about the importance of divergent historical perspectives and strategic cultures in the foreign policy-making process. The main focus of the course is on the intersection of the cold war and the rise of Asian nationalism. At the core of the analysis is the clash between America's global strategy of military containment against the Soviet Union and the assertion of Indian, and Chinese nationalism, concerned with preventing the United States from succeeding to Great Britain's imperial rule. The course examines new patterns of US-India and US-China relations in the post-cold war period. This is primarily a lecture course, but the course web is a critical element of class work.

SM 589. (ANTH189, SAST189) Islam in Modern South Asia. Tareen.

This course introduces students to Islam in modern South Asia, with a particular focus on the development of 'new' Muslim religious idioms, orientations, pedagogies and movements in 19th and 20th century South Asia. This course is divided into three parts. In the first part of this course, students are provided with an overview of: Muslim institutions and spaces in pre-colonial South Asia, the historical emergence of South Asia as a prominent global center of Islam, and the development of Urdu as an Islamic idiom. The second and main part of this course introduces students to academic literature concerning sophisticated encounters between the Muslim elite in north India and modern political and technological developments. The intimate interactions of the 'Mullah' and the 'Englishman' from the 19th to 20th century will thus be revealed to students. This part focuses upon, on the one hand, the role of Islam and pious Muslims in the colonial army, and on the other hand, Muslim initiatives to educate an Islamic 'modernism', 'traditionalism', 'fundamentalism' and 'Sufism', and appropriate print technologies for the creation of public spheres. Students will be introduced to historical scholarship revelatory of how these Muslim pedagogies and print initiatives were based upon sophisticated transnational networks and exchange.

In the third part of this course, students will be encouraged to engage with contemporary literature on South Asian Muslim political philosophy and nationalism, and the transcultural intellectual exchanges that produced key Muslim political ideologies.

Graduate Courses - 600 to 999

SM 604. (ANTH503, ARTH104, SAST204, URBS504) Neoliberalism and the City. (C) Mitchell.

Over fifty percent of the worlds population now lives in cities. Neoliberalism-the ideology and accompanying policies and practices that champion the shifting of political decision making from the public sector to the private sector - has been widely recognized as having shown dramatic growth worldwide since the 1970s. It has also been widely regarded as a product of globalization. This course traces the history of neo-liberalism in global context with particular attention to neoliberalism's relationship to cities, and exam the role that urban growth has played in spurring neoliberal policies and practices. It asks how policy makers, voters, and private interest worldwide have responded to the growth of urban poverty and slums, challenges withing urban public education, unequal resource distribution, environmental pressures experienced within urban sanitation and waste disposal systems, and increased demands for municipal services like water, electricity, and transport infrastructors, and examined the rise of public-private partnerships, gated communities, initiatives to privatized education and municipal services, and efforts to relocate slum-dwellers and beautify cities as explicit strategies for attracting "global capital".

The course also asks how the recent rise of neoliberal policies and practices differs from earlier market-driven and private sector led forms of political governance. The British and Dutch East India Companies are two famous examples of joint stock companies that assumed administrative and political roles over their colonies. How did the rise of these colonial relationships differ from current neoliberal shifts. Readings will draw heavily from ethnographic and urban studies, scholarship on South Asia, as well as Latin America, South Africa, the Middle East, Europe, and North America, exploring what each of these specific contexts has to teach us more generally about the relationship between urbanization, global capitalism, public and private sectors, and political processes and decision making.

SM 610. (ENGL591) Topics in South Asian Cinema. (C) Staff.

In this course we will focus on post colonial global modernity as they are imaged through cinema. Foregrounding the concept of affect, we will consider topics such as: the role of mass affect and mass culture; nationalism , community, sentimentality and nostalgia; film technology and film industry development as productive of a history of the senses; affect and the (gendered and racialized) subject and body, film genres and development of post colonial modernism; style; cinephilia and production of publics; representat ions of popular religiosity; and the relationship between feeling and ideology. We will examine films that suggest particular affective states. Our study will be interdisciplinary and readings will draw on fields of cinema, area studies as well as anthropology, philosophy and history.

This seminar deals with the question of modernity in South Asia, with a specific focus on the construction, dissemination, and politicization of Hinduism in nineteenth and twentieth century India. It focuses on three central heuristic lenses—namely those of European imperialism, Orientalism, and nationalism—to study modernity and its contents. What was at stake in the encounter between colonial modernity and India's religions in nineteenth and early twentieth centuries? How did colonial and native discourses on "reform" and "revival" shape Indian religions as we understand them today?
How is modern “Hinduism” inextricably hinged to early forms of cultural transnationalism, Orientalism, and incipient forms of nationalism? This seminar approaches questions such as these and others, with an eye to understanding how nineteenth and early twentieth century discourses continue to shape contemporary understandings of Hinduism in deep and highly politicized ways.

SM 633. (RELS643, RELS743) THE PERSIAN INTELLECTUAL TRADITION. (C) Elias.

What makes Persian culture distinctive within broader Islamic intellectual history, and what constitutes the historical and geographical boundary of the Persianate intellectual and cultural zone? These questions lie at the center of inquiry in this seminar in which participants will read and discuss a broad range of works from the 11th to the 20th centuries. Readings will include works on philosophy and language, Sufi epic poetry, religious and cultural geographies, accounts of natural and manufactured wonders, urban and political histories, as well as other kinds of texts. All readings will be in English for the regular meeting of the seminar; students will offer reading knowledge; and the political roles of the religious and cultural texts in modern South Asia.

680. (PSCI511, SAST380) Society & Politics in India. (C) Frankel.

This course analyzes the changing relations between social dominance and state power from the time of colonial rule. Special emphasis is placed on ways in which the historical-social context of India at Independence shaped the democratic institutions introduced, and reciprocally, how social hierarchy and preferences for group rights have been affected by egalitarian and liberal principles of governance. Within this analytical framework, religion, caste, class and ethnicity are examined as process and as social formation leading to the emergence of new identities and conflicting ideas of political community associated with them.

This course will focus on the history of Islam in Southern India, Sri Lanka and Indian Southeast Asia from its early history to contemporary times. The study of Islam in South Asia has been overwhelmingly oriented toward northern India and more recently the states of the upper Deccan. The goal of this course will be to develop an historical awareness of Islam in South India and Sri Lanka, taking note of the distinctive dynamics that have shaped Muslim communities in these regions. It will also explore the linkages between these regions and the wider world of the Indian Ocean, with a particular focus on Southeast Asia. Themes covered in the course will include the emergence of Muslim trade diasporas in South India, Islamization, the articulation of caste and Islam, the role of Islam in peasant revolt, Sufism in South India, Muslim trading and Sufi networks in the Indian Ocean, Muslim monuments and material culture, inter-religious and inter-ethnic dynamics, modern Muslim identities, and minority politics in South India and Sri Lanka.

SM 707. (ACCT720, SAST780) Accounting Seminar. (M) Staff.

This seminar in South Asia will focus on topics related to the accounting profession and the role of accountants in South Asia. The seminar will cover topics such as the history of accounting in South Asia, the role of the accountant in the development of modern business, and the impact of globalization on accounting practices in South Asia. Students will be required to participate in discussions and present their own research on a topic of their choosing.

This interdisciplinary course introduces graduate students to both classic and more recent theoretical frameworks used in understanding and analyzing society, culture, and the state, with particular reference to South Asia. Topics include bureaucracy and the state; economic liberalization and political transformations; land, law, and eminent domain; capital, banking, and credit; kinship, community, and approaches to the concept of identity (including caste, nation, language, and religion); and the environment, politics, and urban and rural ecologies. Particular emphasis will be placed on the ways in which recent ethnographic and historical monographs have positioned their interventions in relation to broader debates and scholarship, both within South Asia scholarship and more generally.

SM 710. Seminar Classical Indian Studies. (D) Staff. Prerequisite(s): Two years of Sanskrit is required.

SM 711. (ARTH711) Seminar in Indian Art. (C) Meister.

Research seminar. Topics change.

Spring 2016: We will examine the practice and symbolism of South Asian Architecture with case studies of how to build and how to make buildings meaningful.

SM 760. Seminar in Modern South Asian History. (C) Staff.

Centered on major recent work and on writing by class participants, this seminar is primarily for Ph.D candidates doing research on South Asia. Each week we read the equivalent of one book and meet to discuss its contribution to South Asian historiography. Each participant will submit a major piece of writing for discussion and will assign auxiliary readings to be read with their own work for one class meeting.

SM 769. (ENGL769, GSWS769, PSCI683) Feminist Theory.

Specific topic varies. Dissent is a key word in our world today—from the Arab Spring to the American Fall, we have seen expressions of political disobedience and protest around the world. It is more urgent than ever to consider what dissent might mean, what shapes it has taken historically, what connection might exist between it and
literature, and what futures are possible. We will read key critical and theoretical work alongside some powerful, tender and controversial writings and films (largely but not exclusively produced in the postcolonial world), to inquire into the politics and poetics of governance and dissent. Students are invited to make connections with other historical and geographical contexts, and explore the different forms of dissent individual, collective, urban, rural, nationalist, pan-nationalist, religious, Marxist, or feminist, or to name but a few. We will pay special attention to different performances of dissent at a popular, mass or individual level. We will think about the social and cultural channels attention to different performances of dissent at a popular, mass or individual level. We will think about the social and cultural channels through which dissent is expressed, spread or quelled. How might forms of disobedience.

See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.

Students are invited to make connections with other historical and geographical contexts, as we explore the different forms of dissent—individual, collective, urban, rural, nationalist, pan-nationalist, religious, Marxist, or feminist, or to name but a few. We will pay special attention to different performances of dissent at a popular, mass, or individual level. We will think about the social and cultural channels through which dissent is expressed, spread or quelled. How might forms of disobedience rise to new forms of disobedience.

999. Independent Study. (C) Staff. Directed Study for Graduates

Language Courses

500. Beginning Hindi-Urdu, For Graduate Students Only. (E) Staff.
Beginning in the fall semester of 2014 Beginning Hindi and Beginning Urdu will be merged into a single course, Beginning Hindi-Urdu. At the beginning level spoken Urdu and Hindi are identical except for a few minor points. The broad outline of the course will thus remain the same as that of the current Beginning Hindi and Urdu courses. Students will learn to communicate with the language in a variety of everyday culturally authentic situations. Additional Urdu and Hindi culture will be integrated through authentic materials such as Bollywood film and music clips, and simple written texts. There will be equal emphasis on both scripts and cultures, and parallel written materials will be provided in both scripts. Students will be expected to develop first-year proficiency in one script of their choice, and will be encouraged to learn both. By merging the two courses students will be exposed to a broader range of linguistic and cultural styles, and students will thus have the opportunity to develop a deeper understanding that more closely resembles that of Hindi and Urdu native speakers. Please direct further inquiries to Josh Pien at jpien@sas.upenn.edu

520. Intermediate Hindi I for Graduate Students Only. Staff.
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.

530. Advanced Hindi for Graduate Students Only. Staff.
400. Beginning Hindi-Urdu Online (Startalk). (E) Pien, J. This is a summer online course known also as Startalk. This introductory, proficiency-based course covers the core content of first-year Hindi-Urdu. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing), but there is special focus on developing speaking and listening skills. Students will also develop literacy skills in one script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All classes are interactive and students acquire the language by using it in realistic contexts. Culture is introduced through various authentic materials including Bollywood songs.

This program has a special application process. Please visit our website (https://www.southasiascenter.upenn.edu/startalk) for more information on the program and how to apply.

403. Beginning Bengali. (E) Banerjee. Offered through Penn Language Center. This is a two-semester course.
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.

SM 406. (PERS112, PERS512) Beginning Pashtu Part II. (B) Staff. Prerequisite(s): Beginning Pashtu Part I or equivalent ascertained through placement test or permission of instructor. Offered through Penn Language Center.

SM 408. Beginning Kannada Part II. (E) Swaminathan. Prerequisite(s): Beginning Kannada Part I or equivalent ascertained through placement test or permission of instructor. Offered through Penn Language Center.
This is a systematic introduction to the Kannada language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is introduced from the beginning and the language is presented in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments.

421. Intermediate Urdu. (E) Menai. Offered through Penn Language Center. In Intermediate Urdu, the curriculum focuses on the development of reading, listening and speaking skills. Although there are short assignments for writing in Urdu, the emphasis on developing writing as a skill is not part of the course objectives. Authentic texts in the three skills include conversations, short stories, current events, articles, films and plays. There is a continuous emphasis on vocabulary development and students are expected to add about five hundred new words to their active vocabulary per semester. The rules of grammar for structural accuracy and sociocultural propriety are parts of the regular curriculum. Class activities include students' short presentations, role-plays, singing and conversations. There are weekly assignments and quizzes, a midterm and a final examination. The final evaluation will rest on class participation, performance in quizzes and tests, and completed assignments. This is a two-semester course.
SM 426. (PERS114, PERS514) Intermediate Pashtu Part II. (E) Staff. Prerequisite(s): Intermediate Pashtu Part II or equivalent ascertained through placement test or permission of instructor. Offered through Penn Language Center.

SM 428. Intermediate Kannada Part II. (B) Sundaram. Prerequisite(s): Intermediate Kannada Part II or equivalent ascertained through placement test or permission of instructor. Offered through Penn Language Center.

SM 480. (COML507) Readings in Sanskrit Literature. (C) Staff. Readings of selected texts.

462. Urdu Topics Course. Menai.

BENGALI (BENG)

This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.

SM 404. Beginning Bengali Part II. (B) Banerjee. Prerequisite(s): Beginning Bengali Part I or equivalent ascertained through placement test or permission of instructor.
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.

This course develops the student's prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.

SM 424. Intermediate Bengali Part II. (B) Banerjee. Prerequisite(s): Intermediate Bengali Part I or equivalent ascertained through placement test or permission of instructor.
This course develops the student's prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.

433. Advanced Bengali. (M) Banerjee.S.
The objective of this course is to develop the proficiency level of the students in all the four skills by using different genres of Bengali literature (West Bengal and Bangladesh) as its course content. Reading comprehension will be enhanced as students learn to understand authentic texts at the linguistic and cultural level while discussion (description, narration, supporting opinion) on issues related to these texts aim to hone the oral and written skills. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course.

Spring: Bengali Popular Culture- This course aims to use as its content, different aspects of popular Bengali culture as they are represented in media (film, television, magazines, newspapers) and arts (fashion, local and regional art, music). Students will be expected to develop their linguistic skills (description, narration, supporting opinion) and socio-cultural awareness while interacting with these varied types of texts. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course.

GUJARATI (GUJR)

402. Beginning Gujarati Part I. (A) Staff.
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.

SM 403. Beginning Gujarati Part II. (B) Staff. Prerequisite(s): Beginning Gujarati Part I or equivalent ascertained through placement test or permission of instructor.
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.

This course is designed as a continuation of beginning Gujarati. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.

423. Intermediate Gujarati Part II. (B) Suthar, B. Prerequisite(s): Intermediate Gujarati Part I or equivalent ascertained through placement test or permission of instructor.

Page 761
HINDI (HIND)

This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.

401. (NELC402, URDU402) Beginning Hindi-Urdu Part II. (B) Pien.
Prerequisite(s): Beginning Hindi or Urdu Part I or equivalent ascertained through placement test or permission of instructor.
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.

420. Intermediate Hindi Part I. (E)
Pien.
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.

421. Intermediate Hindi Part II. (B)
Pien. Prerequisite(s): Intermediate Hindi Part I or equivalent ascertained through placement test or permission of instructor.
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.

Advanced Hindi aims at systematically developing higher level linguistic functions and cultural nuances. Students learn to describe, narrate and support opinions in informal and formal styles. The objective of the course is to promote a meaningful interaction with written literature and with native speakers in a socially acceptable manner in a variety of simple and complicated situations. A variety of authentic materials are used, such as short stories, plays, newspapers, magazines, videos, television and radio broadcasts, and interviews. Every semester the course materials and foci vary depending on the needs and interests of students in the class.

This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.

This is a fast paced course for learners who have some degree of listening and speaking skills in Hindi, but have minimal or no literacy skills. In the Fall semester students acquire basic reading and writing skills and advance their speaking and listening skills to be able to communicate on everyday personal and social topics in Hindi. Grammatical accuracy and sociocultural appropriateness are emphasized throughout the course. In the Spring semester, students continue to advance all the linguistic skills (speaking, listening, reading and writing) and functions (narration, description, supporting opinion) with a special focus on reading and writing. Students develop formal vocabulary through authentic oral and written input rich in content and culture.

MALAYALAM (MLYM)

408. Beginning Malayalam Part I. (A)
Kurichi.
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.

SM 409. Beginning Malayalam Part II. (B) Kurichi. Prerequisite(s): Beginning Malayalam Part I or equivalent ascertained through placement test or permission of instructor.
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.

This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.

429. Intermediate Malayalam Part II. (B) Kurichi. Prerequisite(s): Intermediate Malayalam Part I or equivalent ascertained through placement exam or permission of instructor.
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.

PANJABI (PUNJ)

This course emphasizes speaking and reading skills in Punjabi. Upon completion of this course, students should be able to interact meaningfully and in a socially acceptable manner in a variety of simple situations involving everyday conversational topics. Further, students should be able to read and understand the main idea and most details of simple connected texts. This course will utilize authentic printed, audio, and video
materials and will provide opportunities for natural communication both within and outside the classroom.

**SM 405. Beginning Punjabi Part II. (B)**

Gahunia. Prerequisite(s): Beginning Punjabi Part II or equivalent ascertained through placement test or permission of instructor.

This course emphasizes speaking and reading skills in Punjabi. Upon completion of this course, students should be able to interact meaningfully and in a socially acceptable manner in a variety of simple situations involving everyday conversational topics. Further, students should be able to read and understand the main idea and most details of simple connected texts. This course will utilize authentic printed, audio, and video materials and will provide opportunities for natural communication both within and outside the classroom.

Gahunia.

This course is designed as a continuation of Beginning Punjabi, but can also be taken by anyone who can demonstrate a similar level in proficiency of the language. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar review and comprehension exercises. A special emphasis will also be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of the spoken and written language.

**SM 425. Intermediate Punjabi Part II. (B)**

Gahunia. Prerequisite(s): Intermediate Punjabi Part I or equivalent ascertained through placement test or permission of instructor.

This course is designed as a continuation of Beginning Punjabi, but can also be taken by anyone who can demonstrate a similar level in proficiency of the language. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar review and comprehension exercises. A special emphasis will also be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of the spoken and written language.

**434. Advanced Punjabi. (A)**

Gahunia. This course is offered through the Penn Language Center.

The objective of the course is to improve proficiency in speaking, listening, reading and writing. This course addresses the individual needs of learners. The focus of the course will be to study the interpretation of written and oral materials on social, political and contemporary cultural topics from modern literature, television, internet, magazines, newspaper, music and film. Weekly written compositions and oral presentations will be assigned. Grading will be based on this.

**SANSKRIT (SKRT)**

**460. Sanskrit 1st Year, Part I. (A)**

Obrock. Contact professor to discuss actual class times that work for all students.

During the first semester of beginning Sanskrit, students will be introduced to the script, phonetics, and grammar of the Sanskrit language. By the end of the semester they will be able to begin to read Sanskrit texts and compose Sanskrit sentences in addition to carrying out simple conversation. They will build the requisite skills to read, by the second semester, simple inscriptions and sections from texts like the Ramayana, the Mahabharata, the Bhagavad Gita, Pancatantra, and Yoga Sutra. Students will also be introduced to many features of Sanskrit culture.

**SM 461. Sanskrit 1st Year Part II.**

Obrock. Prerequisite(s): Beginning Sanskrit Part I or equivalent ascertained through placement test or permission of instructor.

During the first semester of beginning Sanskrit, students will be introduced to the script, phonetics, and grammar of the Sanskrit language. By the end of the semester they will be able to begin to read Sanskrit texts and compose Sanskrit sentences in addition to carrying out simple conversation. They will build the requisite skills to read, by the second semester, simple inscriptions and sections from texts like the Ramayana, the Mahabharata, the Bhagavad Gita, Pancatantra, and Yoga Sutra. Students will also be introduced to many features of Sanskrit culture.

**470. Sanskrit 2nd Year Part I. (G)**

Obrock. Prerequisite(s): SKRT 460. Contact professor to discuss actual class times that work for all students.

This course will lead students to consolidate their knowledge of Sanskrit grammar and increase their familiarity with Sanskrit literature of all kinds, including epic, literary, philosophical, and narrative genres of texts. It will also introduce students to the study and reading of inscriptive materials.

**SM 471. Intermediate Sanskrit Part II.**

Obrock. Prerequisite(s): Intermediate Sanskrit II or equivalent ascertained through placement test or permission of instructor.

This course will lead students to consolidate their knowledge of Sanskrit grammar and increase their familiarity with Sanskrit literature of all kinds, including epic, literary, philosophical, and narrative genres of texts. It will also introduce students to the study and reading of inscriptive materials.

**TAMIL (TAML)**

Renganathan.

This course introduces students to colloquial Tamil and formal written Tamil. A balance between production skills, viz. writing and speaking, and comprehension skills, viz. reading and listening, will be maintained throughout the course. Reading materials will introduce students to customs and habits of the Tamil speakers in Tamil Nadu, Sri Lanka, Malaysia, and Singapore. Lessons in the class will be based on a set of Tamil learning software made available at the MMETS Server. This software will be customized to the needs of students.

**SM 407. Beginning Tamil Part II. (B)**

Renganathan. Prerequisite(s): Beginning Tamil Part I or equivalent ascertained through placement test or permission of instructor.

This course introduces students to colloquial Tamil and formal written Tamil. A balance between production skills, viz. writing and speaking, and comprehension skills, viz. reading and listening, will be maintained throughout the course. Reading materials will introduce students to customs and habits of the Tamil speakers in Tamil Nadu, Sri Lanka, Malaysia, and Singapore. Lessons in the class will be based on a set of Tamil learning software made available at the MMETS Server. This software will be customized to the needs of students.

**426. Intermediate Tamil Part I. (E)**

Renganathan.

This course develops the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil. The emphasis will be on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and video facilities will be used extensively to provide students an exposure to the Tamil
culture and customs. Besides improving their speech and writing, students will also be introduced gradually to Tamil literature, which has two thousand years of literary history. The learning process in this course will be facilitated by appropriate software equipped with multimedia facilities.

SM 427. Intermediate Tamil Part II. (B) Renganathan. Prerequisite(s): Intermediate Tamil Part II or equivalent ascertained through placement test or permission of instructor.

This course develops the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil. The emphasis will be on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and video facilities will be used extensively to provide students an exposure to the Tamil culture and customs. Besides improving their speech and writing, students will also be introduced gradually to Tamil literature, which has two thousand years of literary history. The learning process in this course will be facilitated by appropriate software equipped with multimedia facilities.

TELUGU (TELU)

This course introduces students to the basic Telugu language skills, with an emphasis on practice for listening comprehension, and speaking Telugu. Combined with exposure to Andhra culture, the classroom and online work in this course will enable interested students to pursue further language study in Telugu at the intermediate level, to carry out field research in Andhra Pradesh, or to prepare them to advanced work in Telugu Studies. An introduction to Telugu like this will also be useful for students who just want to acquire basic Telugu language skills for learning a new language or being able to communicate with Telugu speaking family and friends or to enjoy Telugu music and films.

410. Beginning Telugu Part II. (B) Magier. Prerequisite(s): Beginning Telugu Part I or equivalent ascertained through placement test or permission of instructor.

429. Intermediate Telugu Part I. (E) Magier. Prerequisite(s): Beginning Telugu Part II or equivalent ascertained through placement test or permission of instructor.

This course is designed to expand the students' basic language skills in Telugu in order to allow them to function adequately in a Telugu-speaking environment, to immerse themselves in the rich Andhra culture, and to accomplish a more advanced competency in an interesting language. This course is also aimed at students planning to conduct scholarly research in Telugu history, literature or society, or humanities or social science fieldwork in Telugu speaking areas.

430. Intermediate Telugu Part II. Sundaram. Prerequisite(s): Intermediate Telugu Part II or equivalent ascertained through placement test or permission of instructor.

This course is designed to expand the students' basic language skills in Telugu in order to allow them to function adequately in a Telugu-speaking environment, to immerse themselves in the rich Andhra culture, and to accomplish a more advanced competency in an interesting language. This course is also aimed at students planning to conduct scholarly research in Telugu history, literature or society, or humanities or social science fieldwork in Telugu speaking areas.

UDU (URDU)

This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.

402. (HIND401, NELC402) Beginning Hindi-Urdu Part II. Pien.

This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.

431. (NELC431) Advanced Urdu. (A) Menai. Intermediate reading, writing and speaking skills in Urdu are recommended but please contact the instructor if you are unsure of your eligibility and want to discuss further. Topic changes each semester. This course is designed to give in-depth exposure to some of the finest works of classical and modern Urdu prose and poetry along with the historical and socio-political trends they represent. Figures covered range from Ghalib (b.1797) to Faiz, Fehmida Riaz, and post 9/11 Urdu prose and poetry. The course is open to both undergraduates and graduate students, subject to having intermediate level proficiency. The course is repeatable, and the content changes every semester. Multi-media content such as music, videos, blogs...
etc. will be actively incorporated. Every effort will be made to accommodate individual interests. Students are encouraged to contact the instructor with any questions, or if they are unsure about eligibility.

**Other Languages. Pashtu, Kannada, and Marathi are under (SAST)**

**405. (PERS111, PERS511) Beginning Pashtu I. (B)** Staff. Offered through Penn Language Center.

This is a systematic introduction to the Pashtu language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. Pashtu script is introduced from the beginning and the language is presented in its socio-cultural context for achieving a meaningful and operational control of the language.

Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments.

The first year course in Marathi begins with learning the Devnagari script which is common for other important languages like Hindi and Nepali. With proper emphasis on grammar, vocabulary, and phonetics, the syllabus will see the student becoming able to speak conversational Marathi, read Marathi data from the Internet, and compose simple short essays on selected topics.

**411. Beginning Marathi Part II. (B)** Ranade. Offered through Penn Language Center.

**SM 412. Intermediate Marathi Part I. (A)** Ranade. Prerequisite(s): Beginning Marathi Part II or equivalent ascertained through placement test or permission of instructor.

**SM 413. Intermediate Marathi Part II. (B)** Ranade. Prerequisite(s): Intermediate Marathi Part II or equivalent ascertained through placement test or permission of instructor.

**445. (PERS116, PERS516) Advanced Pashtu Prose Literature. (C)** Staff. Offered through Penn Language Center.

**447. Advanced Kannada: Selected Topics. (C)** Rajagopalan.

**494. Early Marathi. (C)** Staff. Offered through Penn Language Center.
101. Introductory Business Statistics. (C) Staff. Prerequisite(s): MATH 104 or equivalent; successful completion of STAT 101 is prerequisite to STAT 102.

Data summaries and descriptive statistics; introduction to a statistical computer package; Probability: distributions, expectation, variance, covariance, portfolios, central limit theorem; statistical inference of univariate data; Statistical inference for bivariate data: inference for intrinsically linear simple regression models. This course will have a business focus, but is not inappropriate for students in the college.

102. Introductory Business Statistics. (C) Staff. Prerequisite(s): STAT 101.

L/R 111. Introductory Statistics. (C) Staff. Prerequisite(s): High school algebra. Introduction to concepts in probability. Basic statistical inference procedures of estimation, confidence intervals and hypothesis testing directed towards applications in science and medicine. The use of the JMP statistical package.

112. Introductory Statistics. (C) Staff. Prerequisite(s): STAT 111.

Further development of the material in STAT 111, in particular the analysis of variance, multiple regression, non-parametric procedures and the analysis of categorical data. Data analysis via statistical packages.

405. (STAT705) Statistical Computing with R. (C) Waterman. Prerequisite(s): STAT 102 or STAT 112 or STAT 430.

The goal of this course is to introduce students to the R programming language and related eco-system. This course will provide a skill-set that is in demand in both the research and business environments. In addition, R is a platform that is used and required in other advanced classes taught at Wharton, so that this class will prepare students for these higher level classes and electives.

422. (STAT722) Predictive Analytics for Business. (C) Staff. Prerequisite(s): STAT 102 or STAT 112 or STAT 431.

This course follows from the introductory regression classes, STAT 102, STAT 112, and STAT 431 for undergraduates and STAT 613 for MBAs.

It extends the ideas from regression modeling, focusing on the core business task of predictive analytics as applied to realistic business related data sets. In particular it introduces automated model selection tools, such as stepwise regression and various current model selection criteria such as AIC and BIC. It delves into classification methodologies such as logistic regression. It also introduces classification and regression trees (CART) and the popular predictive methodology known as the random forest.

By the end of the course the student will be familiar with and have applied all these tools and will be ready to use them in a work setting. The methodologies can all be implemented in either the JMP or R software packages.

430. (STAT510) Probability. (C) Staff. Prerequisite(s): MATH 114 or MATH 115 or equivalent.

Discrete and continuous sample spaces and probability; random variables, distributions, independence; expectation and generating functions; Markov chains and recurrence theory.

431. (STAT511) Statistical Inference. (C) Staff. Prerequisite(s): STAT 430.

Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course. This course does not have business applications but has significant overlap with STAT 101 and 102.

432. (STAT512) Mathematical Statistics. (B) Staff. Prerequisite(s): STAT 430 or 510 or equivalent.

An introduction to the mathematical theory of statistics. Estimation, with a focus on properties of sufficient statistics and maximum likelihood estimators. Hypothesis testing, with a focus on likelihood ratio tests and the consequent development of "t" tests and hypothesis tests in regression and ANOVA. Nonparametric procedures.

433. (STAT533) Stochastic Processes. (C) Steele, Mossel.

Prerequisite(s): STAT 430, or permission of instructor.

An introduction to Stochastic Processes. The primary focus is on Markov Chains, Martingales and Gaussian Processes. We will discuss many interesting applications from physics to economics. Topics may include: simulations of path functions, game theory and linear programming, stochastic optimization, Brownian Motion and Black-Scholes.

This course will introduce students to the time series methods and practices which are most relevant to the analysis of financial and economic data. After an introduction to the statistical programming language R the course develops an autoregressive models, moving average models, and their generalizations. The course then develops models that are closely focused on particular features of financial series such as the challenges of time dependent volatility.

435. (STAT711) Forecasting Methods for Management. (C) Shaman.

Prerequisite(s): STAT 102 or 112 or 431.

This course provides an introduction to the wide range of techniques available for statistical forecasting. Qualitative techniques, smoothing and decomposition of time series, regression, adaptive methods, autoregressive-moving average modeling, and ARCH and GARCH formulations will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations.

436. Stochastic Modeling. (A) Staff. Prerequisite(s): STAT 430 or equivalent or permission of instructor.

This course will allow the student to solve stochastic control problems, arising in economics and finance, as well as in engineering and biology. We will study probability, Markov processes, martingales, and Ito calculus mainly at an intuitive, non-rigorous, level. The student will be expected to put in a lot of effort, but the return will be proportional.
451. (BEPP451, BEPP851, STAT851) Fundamentals of Actuarial Science I. (A) Lemaire. Prerequisite(s): MATH 104, STAT 430. STAT 430 can be taken concurrently with BEPP 451/STAT 451. This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums.

452. (BEPP452, BEPP852, STAT852) Fundamentals of Actuarial Science II. (B) Lemaire. Prerequisite(s): BEPP 451/STAT 451. This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.

453. (BEPP453, BEPP853, STAT853) Actuarial Statistics. (A) Lemaire. Prerequisite(s): STAT 430. This course covers models for insurer’s losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains.

454. (BEPP454, BEPP854, STAT854) Applied Statistical Methods for Actuaries. (B) Lemaire. Prerequisite(s): STAT 430, STAT 431. One half of the course is devoted to the study of time series, including ARIMA modeling and forecasting. The other half studies modifications in random variables due to deductibles, co-payments, policy limits, and elements of simulation. This course is a possible entry point into the actuarial science program. The Society of Actuaries has approved STAT 854 for VEE credit on the topic of time series.

470. (STAT503, STAT770) Data Analytics and Statistical Computing. (C) Buja. Prerequisite(s): STAT 101 and 102 or STAT 111 and 112 or STAT 431. This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scraping, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).

471. (STAT571, STAT701) Modern Data Mining. (C) Zhao. Prerequisite(s): STAT 102 or 112 or 431. Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software “R” in connection with each of the methods exposed in the class.

472. (STAT712) Decision Making under Uncertainty. (M) Stine. Prerequisite(s): STAT 102 or 112 or 431. Fundamentals of modern decision analysis with emphasis on managerial decision making under uncertainty and risk. The basic topics of decision analysis are examined. These include payoffs and losses, utility and subjective probability, the value of information, Bayesian analysis, inference and decision making. Examples are presented to illustrate the ideas and methods. Some of these involve: choices among investment alternatives; marketing a new product; health care decisions; and costs, benefits, and sample size in surveys.

473. (STAT953) Bioinformatics. (B) Ewens. Prerequisite(s): Good background in probability and statistics at the approximate level of STAT 430 and STAT 431. The material will follow the class textbook, Ewens and Grant "Statistical Models in Bioinformatics", Springer, second edition, 2005. An introduction to the use of statistical methods in the increasingly important scientific areas of genomics and bioinformatics. The topics to be covered will be decided in detail after the initial class meeting, but will be taken from the following: - background probability theory of one and many random variables and of events; background statistical inference theory, classical and Bayesian; Poisson processes and Markov chain; the analysis of one and many DNA sequences, in particular shotgun sequencing, pattern analysis and motifs; substitution matrices, general random walk theory, advanced statistical inference, the theory of BLAST, hidden Markov models, microarray analysis, evolutionary models.

474. (CRIM474, STAT974) Modern Regression for the Social, Behavioral and Biological Sciences. (B) Berk. Prerequisite(s): STAT 102 or 112 or equivalent. Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis.

475. (BSTA775, STAT920) Sample Survey Design. (M) Small. Prerequisite(s): STAT 102 or 112 or 431. This course will cover the design and analysis of sample surveys. Topics include simple sampling, stratified sampling, cluster sampling, graphics, regression analysis using complex surveys and methods for handling nonresponse bias.
476. (MKTG476, MKTG776) Applied Probability Models in Marketing. (C) Fader. Prerequisite(s): High comfort level with basic integral calculus, and recent exposure to a formal course in probability and statistics such as STAT 430 is strongly recommended.

This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of customer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.

An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences.

501. (PSYC612) Introduction to Nonparametric Methods and Log-linear Models. (B) Rosenbaum.

An applied graduate level course for students who have completed an undergraduate course in basic statistical methods. Covers two unrelated topics: Loglinear and logit models for discrete data and nonparametric methods for nonnormal data. Emphasis is on practical methods of data analysis and their interpretation. Primarily for doctoral students in the managerial, behavioral, social and health sciences. May be taken before STAT 500 with permission of instructor.

502. (EDUC683) Survey Methods and Design. (B) Boruch. Prerequisite(s): STAT 520 or equivalent.

Methods and design of field surveys in education, the social sciences, criminal justice research, and other areas. It treats methods of eliciting information through household, mail, telephone surveys, methods of assuring privacy, enhancing cooperation rates and related matters. Fundamentals of statistical sampling and sample design are covered. Much of the course is based on contemporary surveys sponsored by the National Center for Education Statistics and other federal, state, and local agencies.

503. (STAT470, STAT770) Data Analytics and Statistical Computing. (C) Buja. Prerequisite(s): Two courses at the statistics 400 or 500 level.

This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).

510. (STAT430) Probability. (C) Brown. Prerequisite(s): A one year course in calculus.

511. (STAT431) Statistical Inference. (C) Staff. Prerequisite(s): STAT 510 or equivalent.

Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course.

512. (STAT432) Mathematical Statistics. (B) Staff. Prerequisite(s): STAT 430 or 510 or equivalent.

An introduction to the mathematical theory of statistics. Estimation, with a focus on properties of sufficient statistics and maximum likelihood estimators. Hypothesis testing, with a focus on likelihood ratio tests and the consequent development of "t" tests and hypothesis tests in regression and ANOVA. Nonparametric procedures.

520. Applied Econometrics I. (A) Shaman. Prerequisite(s): STAT 400 or 500. This is a continuation of STAT 520.

Topics include system estimation with instrumental variables, fixed effects and random effects estimation, M-estimation, nonlinear regression, quantile regression, maximum likelihood estimation, generalized method of moments estimation, minimum distance estimation, and binary and multinomial response models. Both theory and applications will be stressed.

533. (STAT433) Stochastic Processes. (C) Steele, Mossel.

An introduction to Stochastic Processes. The primary focus is on Markov Chains, Martingales and Gaussian Processes. We will discuss many interesting applications from physics to economics. Topics may include: simulations of path functions, game theory and linear programming, stochastic optimization, Brownian Motion and Black-Scholes.

542. Bayesian Methods and Computation. (B) Jensen.

An introduction to Bayesian Methods and Computation. The primary focus is on Markov Chains, Martingales and Gaussian Processes. We will discuss many interesting applications from physics to economics. Topics may include: simulations of path functions, game theory and linear programming, stochastic optimization, Brownian Motion and Black-Scholes.
553. Machine Learning. (B) Staff. Prerequisite(s): STAT 510 and 512 or equivalent.
This course gives a broad overview of the machine learning and statistical pattern recognition. Some topics will be rather glanced over while others will be considered in-depth. Topics include supervised learning (generative/discriminative models, parametric/nonparametric, neural networks, support vector machines, boosting, bagging, random forests), online learning (prediction with expert advice), learning theory (VC dimension, generalization bounds, bias/variance trade-off), unsupervised learning (clustering, k-means, PCA, ICA). Most of the course concentrates on the supervised and online learning.

571. (STAT471; STAT701) Modern Data Mining. (C) Zhao. Prerequisite(s): Two courses at the statistics 400 or 500 level or permission from instructor.
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software “R” in connection with each of the methods exposed in the class.

705. (STAT405) Statistical Computing with R. (C) Waterman. Prerequisite(s): STAT 613 or STAT 621 or waiving the Statistics Core completely.
The goal of this course is to introduce students to the R programming language and related eco-system. This course will provide a skill-set that is in demand in both the research and business environments. In addition, R is a platform that is used and required in other advanced classes taught at Wharton, so that this class will prepare students for these higher level classes and electives.

710. (STAT470, STAT503) Data Analytics and Statistical Computing. (C) Buja. Prerequisite(s): STAT 613 or STAT 621 or waiving the Statistics Core completely.
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).

This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums.
852. (BEPP452, BEPP852, STAT452) Fundamentals of Actuarial Science II. (B) Lemaire. Prerequisite(s): STAT 851 or BEPP 851.
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.

This course covers models for insurer’s losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains.

854. (BEPP454, BEPP854, STAT454) Applied Statistical Methods for Actuaries. (B) Lemaire. Prerequisite(s): One semester of probability.
One half of the course is devoted to the study of time series, including ARIMA modeling and forecasting. The other half studies modifications in random variables due to deductibles, co-payments, policy limits, and elements of simulation. This course is a possible entry point into the actuarial science program. The Society of Actuaries has approved STAT 854 for VEE credit on the topic of time series.

900. Advanced Probability. (M) Staff. Prerequisite(s): STAT 531 or equivalent.
The topics covered will change from year to year. Typical topics include the theory of large deviations, percolation theory, particle systems, and probabilistic learning theory.

901. (OIDD931) Stochastic Processes II. (M) Staff. Prerequisite(s): OPIM 930 or equivalent.
Martingales, optimal stopping, Wald's lemma, age-dependent branching processes, stochastic integration, Itô's lemma.

910. (BSTA852) Forecasting and Time Series Analysis. (K) Stine. Prerequisite(s): STAT 520 or 541 or equivalent.
Fourier analysis of data, stationary time series, properties of autoregressive moving average models and estimation of their parameters, spectral analysis, forecasting. Discussion of applications to problems in economics, engineering, physical science, and life science.

915. Nonparametric Inference. (M) Staff. Prerequisite(s): STAT 520 or equivalent.
Statistical inference when the functional form of the distribution is not specified. Nonparametric function estimation, density estimation, survival analysis, contingency tables, association, and efficiency.

920. (BSTA775, STAT475) Sample Survey Methods. (M) Small. Prerequisite(s): STAT 520, 541 or 550 or permission of instructor.
This course will cover the design and analysis of sample surveys. Topics include simple random sampling, stratified sampling, cluster sampling, graphics, regression analysis using complex surveys and methods for handling nonresponse bias.

921. Observational Studies. (A) Small. Prerequisite(s): STAT 520, 541 or 550 or permission of instructor.
This course will cover statistical methods for the design and analysis of observational studies. Topics will include the potential outcomes framework for causal inference; randomized experiments; matching and propensity score methods for controlling confounding in observational studies; tests of hidden bias; sensitivity analysis; and instrumental variables.

924. Advanced Experimental Design. (M) Staff. Prerequisite(s): STAT 552.
Factorial designs, confounding, incomplete blocks, fractional factorials, random and mixed models, response surfaces.

925. Multivariate Analysis: Theory. (M) Ma. Prerequisite(s): STAT 530, 550 and 552 or permission of instructor.
This is a course that prepares PhD students in statistics for research in multivariate and high dimensional statistical inference. Topics from classical multivariate statistics include the multivariate normal distribution and the Wishart distribution; estimation and hypothesis testing of mean vectors and covariance matrices; principal component analysis, canonical correlation analysis and discriminant analysis; etc. Topics from modern multivariate statistics include the Marčenko-Pastur law, the Tracy-Widom law, nonparametric estimation and hypothesis testing of high-dimensional covariance matrices, high-dimensional principal component analysis, etc.

926. Multivariate Analysis: Methodology. (M) Buja. Prerequisite(s): STAT 541 or permission of instructor.
This is a course that prepares PhD students in statistics for research in multivariate statistics and data visualization. The emphasis will be on a deep conceptual understanding of multivariate methods to the point where students will propose variations and extensions to existing methods or whole new approaches to problems previously solved by classical methods. Topics include: principal component analysis, canonical correlation analysis, generalized canonical analysis; nonlinear extensions of multivariate methods based on optimal transformations of quantitative variables and optimal scaling of categorical variables; shrinkage- and sparsity-based extensions to classical methods; clustering methods of the k-means and hierarchical varieties; multidimensional scaling, graph drawing, and manifold estimation.

927. (BSTA854) Bayesian Statistical Theory and Methods. (M) Zhao. Prerequisite(s): STAT 551.
A course in Bayesian statistical theory and methods. Axiomatic developments of utility theory and subjective probability, and elements of Bayesian theory.

928. Statistical Learning Theory. (B) Rakib. Prerequisite(s): Probability and linear algebra.
Statistical learning theory studies the statistical aspects of machine learning and automated reasoning, through the use of (sampled) data. In particular, the focus is on characterizing the generalization ability of learning algorithms in terms of how well they perform on “new” data when trained on some given data set. The focus of the course is on: providing the fundamental tools used in this analysis; understanding the performance of widely used learning algorithms; understanding the “art” of designing good algorithms, both in terms of
statistical and computational properties. Potential topics include: empirical process theory; online learning; stochastic optimization; margin based algorithms; feature selection; concentration of measure.

930. (MATH546) Probability. (A) Steele. Prerequisite(s): STAT 430 or 510 or equivalent.

932. (BSTA653) Survival Models and Analysis Methods for Medical and Biological Data. (M) Zhao. Prerequisite(s): STAT 551.
Parametric models, nonparametric methods for one- and two-sample problems, proportional hazards model, inference based on ranks. Problems will be considered from clinical trials, toxicology and tumorigenicity studies, and epidemiological studies.

933. Analysis of Categorical Data. (M) Rosenbaum. Prerequisite(s): STAT 541 and 551.
Likelihood equations for log-linear models, properties of maximum likelihood estimates, exact and approximate conditional inference, computing algorithms, weighted least squares methods, and conditional independence and log-linear models. Applied topics, including interpretation of log-linear and logit model parameters, smoothing of tables, goodness-of-fit, and incomplete contingency tables.

940. Advanced Inference I. (M) Staff. Prerequisite(s): STAT 551.
The topics covered will change from year to year. Typical topics include sequential analysis, nonparametric function estimation, robustness, bootstrapping and applications decision theory, likelihood methods, and mixture models.

941. Advanced Inference II. (M) Staff. Prerequisite(s): STAT 540. A continuation of STAT 940.

SM 950. Quantitative Consulting Seminar. (B) Waterman. Prerequisite(s): No prerequisites, but please talk to the instructor to determine your fit with the course.
The seminar offers the opportunity for small teams of MBAs to work on "real life" quantitative consulting projects. These projects are drawn from both business and University sources. The emphasis is on providing a relevant and comprehensible solution to the client's problem. In-class brainstorming sessions, client presentations and written reports give students the opportunity to test for the existence of an intersection between their quantitative and communication skills.

SM 951. Statistical Practice II. (M) Staff. Prerequisite(s): STAT 540, 541, 550 and 551.
A continuation of STAT 950.

953. (STAT473) Bioinformatics. (B) Ewens. Prerequisite(s): Good background in probability and statistics at the approximate level of STAT 430 and STAT 431. The material will follow the class textbook, Ewens and Grant "Statistical Models in Bioinformatics", Springer, second edition, 2005.
An introduction to the use of statistical methods in the increasingly important scientific areas of genomics and bioinformatics. The topics to be covered will be decided in detail after the initial class meeting, but will be taken from the following: - background probability theory of one and many random variables and of events; background statistical inference theory, classical and Bayesian; Poisson processes and Markov chain; the analysis of one and many DNA sequences, in particular shotgun sequencing, pattern analysis and motifs; substitution matrices, general random walk theory, advanced statistical inference, the theory of BLAST, hidden Markov models, microarray analysis, evolutionary models.

955. Stochastic Calculus and Financial Applications. (A) Steele. Prerequisite(s): STAT 530 or equivalent. Selected topics in the theory of probability and stochastic processes.

956. Financial and Economic Time Series. (B) Steele. Prerequisite(s): A graduate course in statistics or econometrics. Familiarity with linear algebra.
This graduate course introduces students to the time series methods and practices which are most relevant to the analysis of financial and economic data. The course will address both theoretical and empirical issues. Extensive use will be made of the S-Plus Statistical Language, but no previous experience of S-Plus will be required. The course begins with a quick review of ARIMA models. Most of the course is devoted to ARCH, GARCH, threshold, switching Markov, state space, and nonlinear models.

SM 957. Seminar in Data Analysis. (M) Staff. Prerequisite(s): STAT 541, 551, 552, 925, or equivalents; permission of instructor.
Survey of methods for the analysis of large unstructured data sets: detection of outliers, Winsorizing, graphical techniques, robust estimators, multivariate problems.

961. Statistical Methodology. (A) Buja. Prerequisite(s): STAT 431 or 520 or equivalent; a solid course in linear algebra and a programming language.
This is a course that prepares 1st year PhD students in statistics for a research career. This is not an applied statistics course. Topics covered include: linear models and their high-dimensional geometry, statistical inference illustrated with linear models, diagnostics for linear models, bootstrap and permutation inference, principal component analysis, smoothing and cross-validation.

970. Mathematical Statistics. (A) Small. Prerequisite(s): STAT 431 or 520 or equivalent; comfort with mathematical proofs (e.g., MATH 360).
Decision theory and statistical optimality criteria, sufficiency, point estimation and hypothesis testing methods and theory.

972. (BSTA820) Advanced Topics in Mathematical Statistics. (C) Cai. Prerequisite(s): STAT 970 and 971.
A continuation of STAT 970.

974. (CRIM474, STAT474) Modern Regression for the Social, Behavioral and Biological Sciences. (B) Berk. Prerequisite(s): Two statistics courses at the graduate school level including a solid foundation in the generalized linear model.
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis.

SM 991. Seminar in Advanced Application of Statistics. (C) Staff.
This seminar will be taken by doctoral candidates after the completion of most of their coursework. Topics vary from year to year and are chosen from advance probability, statistical inference, robust methods, and decision theory with principal emphasis on applications.

024. PENN SUMMER ABROAD. (L)
TELECOMMUNICATIONS
(EG) {TCOM}

601. Advanced Networking Modeling and Analysis. (M) Prerequisite(s): TCOM 501.

SM 770. TCOM Seminar. (M)
THEATRE ARTS
(AS) {THAR}

073. (CIMS073, ENGL073) LIT AND VISUAL ART.

This course will investigate the state of the contemporary, non-profit theatre culture of Philadelphia by examining the history, artistic mission, and current production work of selected city theatre companies. This course will also explore the creative process of theatre-making as undertaken by these theatres through the reading of plays being produced by them this fall, through an analysis of the collaborative contribution of the playwright, director, actors, and designers to the creation of a production, and, finally, through attendance at those productions mounted by the theatre companies under investigation. The members of the class will write individual essays responding to these productions, do research and give group presentations on other Philadelphia theatre companies, and participate daily in a spirited dialogue about the vitality, level of artistic accomplishment, and cultural/social value of contemporary theatre in Philadelphia.

101. (ENGL087) Theatre, History, Culture 1: Classical to Middle Class. Arts & Letters Sector. All Classes.
This course investigates the history of theatre practice in Europe and Asia from Fifth-Century Athens to roughly the end of the Eighteenth Century. In addition to analyzing major dramatic works, this course examines the evolution of production methods - scenography, acting, costuming, theatre architecture - across cultures and key socio-historical moments. Readings will be drawn from historical research, theoretical writings, plays and contemporary social documents. A particular focus will be on the integral role that the theatre plays as a cultural institution in the ongoing civic life of major cities. The course approaches theatre as broadly interdisciplinary and examines its intersection with religious practice, political developments, national identity, geography, the visual arts and the urban landscape.

SM 114. (ENGL114) Playwriting Workshop. (B) Staff.
This course is designed as a hands-on workshop in the art and craft of dramatic writing. It involves the study of existing plays, the systematic exploration of such elements as storymaking, plot, structure, theme, character, dialogue, setting, etc.; and most importantly, the development of students' own plays through a series of written assignments and in-class exercises. Since a great deal of this work takes place in class -- through lectures, discussions, spontaneous writing exercises, and the reading of student work -- weekly attendance and active participation is crucial.

This course investigates the history of theatre practice from the end of the Eighteenth-Century to the present, with an emphasis on interplay of mainstream practices with the newly emerging aesthetics of acting, scenography, and theatrical theory, and the interplay of popular entertainment and audiences with the self-defined aesthetic elitism of the Avant Garde. Among the aesthetics and phenomena we will examine are romanticism and melodrama; bourgeois realism and revolutionary naturalism; emotional-realistic acting; the reaction against realism; political theatre; physical theatre; theatre and media; non-dramatic theatre; and theatre that challenges longstanding categories of national identity, empire, gender, and sexuality.

SM 120. Introduction to Acting. (C) Ferguson, Malague, Schlatter. Required of all Theatre Arts Majors.
This class will introduce the basic principals of stage directing, beginning with the fundamentals of three-dimensional storytelling in script and character analysis. The aim of this course is to provide students with a basic knowledge of directing through an introduction to the functional tools of the craft. Classes provide lectures and practical work in dealing with topics such as the function of the director, analyzing a script, visual composition, blocking, stage business, and working with actors. This course is a prerequisite for Advanced Directing.

125. (ENGL056) The Play: Structure, Style, Meaning. (C) Malague.
How does one read a play? Theatre, as a discipline, focuses on the traditions of live performance. In those traditions, a play text must be read not only as a piece of literature, but as a kind of "blueprint" from which productions are built. This course will introduce students to a variety of approaches to reading plays and performance pieces. Drawing on a wide range of dramatic texts from different periods and places, we will examine how plays are made, considering issues such as structure, genre, style, character, and language, as well as the use of time, space, and theatrical effects. Although the course is devoted to the reading and analysis of plays, we will also view selected live and/or filmed versions of several of the scripts we study, assessing their translation from page to stage.

SM 130. (CIMS131) Introduction to Light, Set, and Costume Design. (C) Baratta and Johnson. Required of all Theatre Arts Majors.
Design for theatre (and all of the performing arts) is a dynamic, collaborative process that engages both intellect and emotion in staging the dramatic moment.
The personal vision of the designer must navigate the often-uncharted waters of the production process, from the earliest, personal moments of design inspiration to the opening night performance. Design flows from creativity, is structured by research and theory, and is realized in living form by collaboration in the dynamic process of theatre-making. This class will integrate history, theory and practice of stage design in the interactive setting of the Collaborative Classroom in Van Pelt Library in this special interdisciplinary, active-learning course offering open to all Penn students. Group and individual projects, field visits, practical projects and guest speakers will be featured in this newly-revised course.

In this course we will cover the basic concepts of the art and craft of Stage Lighting Design. As a craft we will examine the mechanics and technology of lighting design including light sources, power distribution, optics, and control. As an art we will explore how lighting ties together all the visual elements of a production and helps create an appropriate atmosphere that heightens the audience's understanding and enjoyment of the play. Topics include: what light is, what it does, and how light influences our perception and understanding of what we see. Exercises will help the student learn how to see and understand how light shapes and affects the appearance of people and objects on stage and in everyday life. Projects work will emphasize design theory and practice (design methods, script analysis, and drafting skills). Lighting design has its roots in the theatre. The theatre continues to be a prime training ground for lighting designers, no matter what their field.

SM 132. Costume. (B) Staff.
Costume history and design provides a framework for organized study and practice in this particular facet of theatre production. It is a one-semester course, scheduled to meet once a week for a three hour session.

In this course we will cover the basic concepts of Scenic Design for the stage. Scene Design is about the look or physical appearance of the stage for a play. It reflects the way that the stage is composed artistically in regard to props, actors, shapes and color. We will explore Scene Design and the Theatre (story telling, place and local, time and period, society and culture), Scene Design as a Visual Art (principals of design and composition, style, use of space, expression of concept) and examine how it ties together all the visual elements of a production to create an appropriate atmosphere that heightens the audience's understanding and enjoyment of the play. Topics will include: Script Analysis, Technical Production, Period Decor and Ornament; Drawing, Drafting, Model Making; and Scene Painting.

SM 170. Voice for the Actor. (A) Doherty. Prerequisite(s): THAR 120 or equivalent.
This introductory course is designed to help the actor find new freedom and range of expression with their voice and to connect their voice to their impulse. Our focus on relaxation, sensitivity and awareness, using Fitzmaurice Voicework techniques inspired by yoga and meditation, help the student access and develop their own authentic sound. They will learn how to support their voice in a healthy way, with a view to longevity, spontaneity and flexibility of use. In this course, these kinds of vocal exercises will be applied to short, character monologues, in order to foster sensitivity to our voices and breath and to the habits and tensions we have formed around speaking in public. For an actor, reconnecting with their authentic voice is essential for an honest, connected and compelling performance. This training is also useful for anyone who wants to speak in public with confidence, sincerity and ease.

SM 171. Movement for the Actor. (B) Fishbeck. Primarily for majors. Non-majors need permission of the instructor.
The study of the art of bodily expression throughout history in theory and practice, from Classical and Oriental, African and Latin forms of dance and movement theater to the contemporary dance and theater, including mime, modern dance, post modern dance, physical theater, film, and performance art.

214. Advanced Playwriting. Bryan Delaney. Prerequisite(s): Thar 114 - Playwriting Workshop or Permit of the instructor.
This course is intended to reinforce and build upon the areas covered in Level 1 Playwriting (THAR-114) so that students can refine the skills they've acquired and take them to the next level. Topics covered will include techniques for approaching the first draft, in-depth characterization, dramatic structure, conflict, shaping the action, language/dialogue (incl.subtext, rhythm, imagery, exposition etc), how to analyse your own work as a playwright, dealing with feedback, the drafting process, techniques for rewriting, collaboration (with directors, actors etc) and the 'business of the art' - working with theatres, agents, dramaturgs etc. Students will undertake to write their own one-act plays over the course. The classes will be a mixture of lecture, discussion, study of dramatic texts, writing exercises and in-class analysis of students' work.

SM 220. Advanced Acting. (M) Ferguson, Malague, Schlatter. Prerequisite(s): THAR 120 or by special permission of the instructor.
This course continues the work begun in the Introduction to Acting class. The specific focus of the course will be on helping students to connect more deeply and truthfully with each other on stage, freeing up the body of the actor to fulfill the physical demands of characterization, and analyzing the dramatic text to clarify objectives and focus action through unit breakdown. Attention will also be given to helping students work through specific problems and personal, creative obstacles. The basis of the course will be scene work taken from the twentieth-century repertoire (realist and non-realist plays), a classical monologue, and exercises taken from a variety of performance traditions. The course also includes readings from modern theorists and practitioners.

SM 221. Advanced Directing. (M) Schlatter. Prerequisite(s): THAR 121.
The primary goal of this course is to develop students' practical skills and methods as stage directors. The course continues the work of Introduction to Directing, focusing on effective text analysis, communicating with actors, and use of theatrical space and movement to tell the story of the play. The course is structured as a workshop, with students presenting and discussing each other's scene work in class. Students are responsible for three large projects, and each project is presented and discussed twice, first in its workshop and then in its final stage of development. The final project involves minimally staging a one-act play for an audience. Course work is supplemented by readings on the work of major modern directors, and by viewing and writing critiques of selected theatre performances.
will consider the different acting styles performed by legends like Laurence Olivier and Williams; and Shakespearean acting as traditions and the performances of actors. Examples might include: Method acting process, the work of specific actors, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place.

SM 240. (ENGL226, ENGL276) Advanced Topics in Theatre History. (C) Mazer. This class is the next level up from Thar 140 - Topics in Theatre History. The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place.

SM 241. (ENGL276) Actors and Acting: Page, Stage and Screen. (L) We are all dazzled by the performances of certain actors, famous and not; nearly everyone has a favorite actor, or a favorite film or stage performance. This course will pursue the question: How do actors do what they do? We will explore acting theory and practice, examining major treatises on the acting process, the work of specific actors, and their relationship to iconic texts. Examples might include: Method acting traditions and the performances of actors such as Marlon Brando and Geraldine Page in the plays (and films) of Tennessee Williams; and Shakespearean acting as performed by legends like Laurence Olivier and John Gielgud. We will compare British and American acting traditions, and will consider the different acting styles associated with particular historical periods and theatrical genres. Readings will include actor interviews, reviews, biographies, and selected scripts; viewing will include representative moments of brilliant acting on film, as well as live performances on the London stage. We will also plan to converse with actors we see, through class visits or attendance at talk-backs.

SM 250. (ENGL276) Theatre Workshop. (M) Various Theatre Professionals. Cross-listings are contingent upon topics offered. For the current topics contact the Theatre Arts office. This course will examine a specific aspect of theatrical practice, taught by a visiting professional theatre artist. The course, with different topics, may be repeated for credit. Recent topics have included performance art, Jacques LeCoq technique, Suzuki, and Viewpoints.

SM 270. (ENGL256) Acting American Drama: Players and Playwrights. (M) Malague. This course will investigate the interrelationship between American drama and American acting techniques. Connections to be considered include: The Group Theatre and Clifford Odets; The Actors Studio and Tennessee Williams; The Meisner Technique and David Mamet. We will also view the work of individual actors in filmed and live versions of the plays we study, examining the many ways in which actors collaborate with playwrights by creating roles and reinterpreting them. Readings will include the acting texts of American master teachers such as Lee Strasberg, Stella Adler, Sanford Meisner, and Uta Hagen, as well as a number of American plays. This course will include acting exercises and scene work.

SM 271. (CIMS271, ENGL274) American Musical Theatre. (M) Fox. The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operaetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.

272. Twentieth Century American Theatre and Drama. (M) Schlatter. This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O'Neill, Arthur Miller, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off-Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre.

SM 273. (CIMS225, ENGL292) Dark Comedy. (M) Ferguson. From Plautus to Ionesco, dark comedies explore concepts and ideas seemingly at odds with comic traditions and structures they employ. This class uses the study of theory, history, plays and theatrical technique to explore the significance and effect of tragicomedies. Students will acquire an understanding of the genre's unique characteristics through textual and practical work and through viewing pertinent films. In addition to reading and discussing plays and criticism, students will be required to perform a scene from a tragicomic play, experimenting with and creating tragicomic effect through performance. This course will be roughly organized into three sections: historic precedents (Plautus, Shakespeare, Moliere), 19th century transitional dramas (Chekhov, Isben) and 20th century tragicomedies, in which the bulk of the course readings will be done (Beckett, Ionesco, Pinter, Stoppard, Henley, etc.).

SM 274. (ENGL256) Dramaturgy. (M) Mazer. This course will examine the functions and methods of the dramaturg--the person in the theatrical process who advises the artistic collaborators on (among other things) new play development, the structure of the script, the playwright's biography and other writings, the play's first production and its subsequent production history, and the historical and regional details of the period depicted in the plays action. We will study the history of the dramaturg in the American theatre and discuss contemporary issues relating to the dramaturg's contribution to the theatrical production.
(including the legal debates about the dramaturg's contribution to the creation of RENT). And, in creative teams, the class will create dramaturgical portfolios for a season of imaginary (and, potentially, a few actual) theatrical productions.

SM 275. (CIMS225, ENGL276, ENGL356, HIST247, URBS274) Advanced Topics in Theatre. (M) Fox, Ferguson, Malague, Mazer, Schlatter. This course, which may vary with different topics and repeat for credit, will examine specific aspects of theatrical practice. Recent topics have included performance art, Jacques Lecoq technique, improvisation, and puppetry.

This course will combine an intensive practical and intellectual examination of a variety of making theatre: performance techniques, theatrical styles, a particular period of theatre history. For the current topics, contact the Theatre Arts office or visit the website.

One section of 275 every other Spring will consist of a small number of Theatre Arts majors selected by the faculty to become members of "the Edinburgh Project." This ensemble will mount a production that will be performed at the Edinburgh Festival Fringe in August. Many of the readings and exercises in this course will be geared to prepare for production, rehearsals for the project will continue after the exam period at the end of the semester.

SM 276. Theatre Criticism. (M) Mazer.

This course is both a practical writing course, and an examination of the role of the various kinds of theatre criticism and their relation to contemporary theatrical art and the theatre industry. Students (and faculty) will write (and rewrite) one theatre review a week, based on a theatre event everyone will see. Additional readings will be drawn from theatre critics and reviewers through history (Hazlitt, Shaw, Beerbohm, Agate, Clurman, Brustein, Rich, Wardle, Nightingale, Billington, and others).

This course examines the making of theatre from the actor's perspective, focusing on major twentieth century forms and the acting techniques constructed to produce them. Through an investigation of theories of such practitioners as Stanislavsky, Brecht, and Grotowski, the class will consider contrasting models for their actor's work, and such issues as the actor's relationship to the audience, director, playwright, and text. The course will include practical performance exercises and an exploration of representative play scripts.

SM 278. Variety Arts. (M) Fox.

This course examines a series of "variety arts" movements -- theatre in which striking visual and auditory elements are even more important than the traditional story and script. Topics generally include: Grand Guignol, the French "theater of fear and terror," where shocking images are used to stimulate and frighten the audience; tableau vivant, in which actors create stage pictures based on famous paintings and other visual icons; concert song and ballad, where performers interpret character and story through vocal means; American musical theatre, in which music and dance become the highest form of expression; German cabarets, where artists use a combination of song and text to create politically and culturally controversial theatre; contemporary performance art, a genre that mixes comedy, the visual arts, dance, music and text; and more. The course also explores how these visual and auditory elements might be used by actors, directors, and designers to enhance and enrich our more traditional, text-based theatre.

SM 279. (ENGL356, GSWS279) Women in Theatre and Performance. (M) Malague. This is a topics class which include: Dangerous Women and Provocative Performance.

Theatre began as a form that excluded women entirely. The plays of ancient Greece and Elizabethan England were written and performed only by men, beginning a long tradition of theatre that represented women only from male perspectives. Has that tradition been so dominant for so long that women's voices on stage are still a novelty? This course focuses on a wide range of plays and performances by and about women; the work we read (and view) will evidence artistic attempts to represent women's lives, experiences and perspectives on the stage. Among the issues examined and reviewed in these works are the roles of love, sexuality, friendship, career, community, marriage, motherhood, family, and feminism in women's lives - as well as the economic and political position(s) of women in society. The course will also offer contextual background on feminist theatre history, theory, and literature, as well as the diverse (and divergent) creative efforts of female artists to use use live performance as a means of creating social and political change.

SM 320. Scene Study. (A) Malague. Prerequisite(s): THAR 220.

Scene Study is an advanced acting class that combines intensive script analysis with performance of scenes; material to be explored will be chosen specifically for the members enrolled in class. Open to students who have successfully completed Introduction to Acting, this course continues with greater emphasis on the actor's work with the text. We will study several plays together as a group, conducting Stanislavskian table work. We will then workshop and perform scenes from these plays in subsequent class sessions. In consultation with the instructor, students will identify individual goals, building on discoveries made in other Theatre Arts courses and/or prior stage work, exploring roles and plays that present actors with new challenges and expand their range. Depending on the number of students enrolled in the class, we are likely to perform at least three scenes and a monologue. Plays will be read alongside key theoretical texts, and class work will be complemented by attendance at selected live productions on campus and in Philadelphia.

350. (ENGL256) Rehearsal and Performance. (C) Ferguson, Fox, Malague, Mazer and Schlatter.

Theatre Rehearsal and Performance provides students with deep intellectual and artistic immersion in the theatrical process through intensive research, rehearsal, and performance of a full-length stage piece. Students may enroll in this course as actors (by audition only) or as assistant directors, stage managers, dramaturgs, or designers (by permission of the instructor). Each semester, the play will be featured in the Theatre Arts Program production season; the class meeting times will vary, but will typically consist of 16-20 hours per week in the evening hours.

385. PRESENTING THE ARTS GRAD.

Graduate Level - This class meets in conjunction with Thar 285. This graduate level class will also include additional assignments above the 285 requirements as discussed with the instructor for that semester. A study of the creation and presentation of art (e.g., theater, film, sculpture), the cultural context of creativity and the management of individual and institutional performance and exhibition. A combination of lectures by instructors and practitioners, case studies and consulting
projects with local institutions will illustrate the relationship between creativity and presentation. Students will be required to write papers, proposals, and complete a term project.

URBAN SPATIAL ANALYTICS (FA) {USA}

Urban Spatial Analytics is a graduate major in the department of City and Regional Planning (CPLN) in the School of Design.

500. (CPLN671) Spatial Statistics and Data Analysis. (A) Eugene Brusilovskiy.
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.

502. Web Based Gis. (B)

503. (CPLN503) Modeling Geographical Objects. (A) Tomlin or Hillier.
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e. drawing based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.

SM 504. Business and Crime Geographics. (B) Amos. Prerequisite(s): Prior experience with ArcGIS.
In this hands-on course, students will learn how to use ESRI Business Analyst software and data to undertake real estate and social service market studies, business location studies, and consumer expenditure profiles. New this year, the course will also explore techniques and software for tracking and forecasting crime; and deploying police resources.

505. Business and Crime Geographics. (B) Brusilovskiy.
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.

506. Business and Crime Geographics. (B)

507. (CPLN590) Spatial Analysis for Urban and Environmental Planning. (A) Steif. Prerequisite(s): MUSA 501 or CPLN 503 or equivalent.
This course builds on prior knowledge of GIS and basic statistics to help students to develop GIS and spatial analysis applications for use in urban and environmental planning and management. Each weekly session will focus on a particular analytical approach (e.g., buffering, geo-processing, map algebra, network analysis) as applied to a particular urban or environmental planning tasks (e.g., identification of development opportunities, prioritizing conservation lands, urban growth modeling, housing price modeling). The format of the class includes weekly lectures/in-class demos; and weekly homework assignments. The course will make extensive use of ArcGIS and associate Extensions, especially Spatial Analyst, Network Analyst, and Business Analyst. One-year student versions of ArcGIS and ArcGIS extensions will be available free of charge at the City Planning Office. ArcGIS runs best on Windows machines; those with Macs will need to install a Windows emulator.

610. (CPLN690) Javascript Programming for Planning Applications. (B) Faculty.
This course will introduce city planning, MUSA and design graduate students to Java and Javascript. Students will learn the logic and syntax of the Java programming language for use in simple web applications (Weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (Weeks 8 to 14). The "hands-on" uses of Java and Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.

800. MUSA Capstone Project. (C)
URBAN STUDIES
(AS) {URBS}

SM 010. (AFRC041, SOCI041) Homelessness & Urban Inequality. (A) Culhane. This freshman seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation’s history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.

SM 011. Crime and Punishment. (M) Schneider. Previously URBS 110. How have definitions of crime and forms of punishment changed over time? What have been the uses and legacy of extra-legal violence? How have the forms of crime and punishment reflected the structure of American society? Using both historical and contemporary texts, this freshman seminar will explore these and other questions and in the process analyze the development of juvenile justice, the organization of corrections, the application of the death penalty, and the rise of the drug economy.

SM 016. (MUSC016) Intro to Sound Studies. (M) Waltham-Smith. Sound is all around us and shapes almost every aspect of our everyday lives, and yet, in comparison to our rich descriptions of visual culture, we often lack the explanatory power to analyze and assess the overwhelming influence of the sonic. This introduction to sound studies course will provide both a rigorous conceptual and also a creative, hands-on understanding of the phenomena at the center of Penn’s Year of Sound. We will explore how sound and auditory cultures have been theorized, how soundscapes shape and transform built environments and the social relations they underpin or express, how technologies have affected our relationships to sound, and how we might go about investigating aural phenomena.

The course will focus on sound in urban spaces. Structured around a number of themes that cut across disciplinary, historical and geographical boundaries, the course will create a transatlantic dialogue between investigative fieldwork into Philadelphia’s soundscape and the changing auditory profile of Paris from the clatter of medieval sword fights through the cultivation of modern urban experience in Haussmann’s boulevards to the contemporary soundscape. Other topics will include the role of sound-reproduction and mobile technologies, and the consumption and regulation of sound. We will encounter a wide variety of materials from literary texts to mobile apps and video games, not to mention a vast range of sounds, and will tackle the topic from multiple interdisciplinary angles from Continental philosophy to urban anthropology to ask how sound composes urban space, transforming social bonds and power relations. Alongside written work, you will make field recordings on the streets of Philadelphia and develop creative projects using media of your choice to reflect upon urban sound.

SM 018. (MUSC018) Freshman seminar. (A) Staff. The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on course offerings:

http://www.college.upenn.edu/requirements -courses.

SM 050. (GSWS040) Womanism and Identity Politics in the Realm of Hip-Hop. Patterson. This course centers on the intersections of womanism, woman of color identity development, and agency within hip-hop culture. We will touch on several topics that uncover the condition of minoritized women in hip-hop media, including creating/owning space, lyrical assault, defining womanhood, sexuality, and fetishes. In exploring music, literature, advertisements, film, and television, we will discuss the ways women of color construct understandings of self, while navigating and reimagining reality within hip-hop contexts.

SM 103. (HIST209) Industrial Metropolis. (A) History & Tradition Sector. All classes. Vitiello. Course is available to freshmen and sophomores. Although we no longer think of most U.S. cities as industrial cities, metropolitan areas today are all products of industrial economies, technologies, and social systems. This course explores the industrialization and deindustrialization of American cities within their evolving global context from the era of European colonization to the present. It includes weekly readings and discussion, regular response papers and walking tours, in-class exercises, and a research paper using primary sources. Themes include energy and ecology, labor and production, inner city and suburban development, globalization, and economic restructuring.

Ultimately, the class aims to give students a broad knowledge of 1) the history of industrial capitalism, 2) its effects on cities and regions over the past three centuries, and 3) analytical tools for understanding the past, present, and future of metropolitan economies, geography, and society.

104. (HIST153) Transformation of Urban America. (B) Society Sector. All classes. Gillette.

The course traces the economic, social, and political history of American cities after World War II. It focuses on how the economic problems of the industrial city were compounded by the racial conflicts of the 1950s and 1960s and the fiscal crises of the 1970s. The last part of the course examines the forces that have led to the revitalization of cities in recent years.

SM 106. (ARTH100, ENGL016) Freshman Seminar. Staff. For Freshmen Only. Topic varies. Fall 2016: A city is more than just a collection of places. It is a living archive of stories, memories and histories. Whose stories do we hear? Whose stories should we preserve? Are all stories equal? In this course, students will be introduced to a variety of unique historical sites and civic institutions that make visible anew Philadelphia and its cultural history. From the first classroom of the university, which was located at the American Philosophical...
Society, to the Johnson House Underground Railroad Station and House Museum on Germantown Avenue, this course will highlight the social life of the city, approaching the city itself as a living museum. What can the artifacts, objects and institutions we experience each week teach us about the society in which we live? To answer this question, we will meet with artists, archivists, curators and scholars who will illuminate for us the social life of their collections. Through this course, students will be introduced to the study of the history of art. Our discussions will focus on changing aesthetics, the cultural politics of collecting, aspects of display and contextualization, the institution of the museum, and the increasingly blurred boundaries between ethnography, anthropology, and art history.

This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories of urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed countries.

This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages, and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual governmental policies and alternative policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.

This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia by focusing on significant South Asian cities. With one-fifth of the world's population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research drawn from urban studies, architecture, political science, and history, as well as fiction and film.
Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality & the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, and ethnic, cultural, and linguistic identities, differences, and violence in South Asia's urban environments. This is an introductory level course appropriate for students with no background in South Asia or for those seeking to better understand South Asia's urban environments in the context of recent globalization and rapid historical changes. No prerequisites. Fulfills College sector requirement in Society and foundational approach in Cross-Cultural Analysis.

This course focuses on political responses to urbanization in the United States. Topics include local government, national urban politics, and the changing nature of cities.

The archaeology of the complex societies of the Old and New Worlds from the end of the paleolithic up to and including the earliest civilizations.

The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans and multiracials.

This seminar will examine the experiences of recent African immigrants and refugees in Philadelphia in an historical framework. We will employ a variety of sources—newspapers, census data, legal briefs, literature and film, and diaspora internet sites—to explore the lives, aspirations, and perceptions of Philadelphia's African residents. There will be opportunities for dialogue with high school students, teachers, and parents; with representatives of African community and business organizations; and with local government and service agencies. Students will be required to do a final project which involves volunteering with an African immigrant non-profit or business and/or conducting focused research on specific African communities in Philadelphia.
URBAN STUDIES

SM 178. (AFRC078, HIST173) Faculty-Student Collaborative Action Seminar in Urban University-Community Relations. (C) Harkavy. Previously URBS 078; Benjamin Franklin Seminar.

One of the goals of this seminar is to help students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom, on campus, and in the West Philadelphia community. Research teams help contribute to the improvement of education on campus and in the community, as well as the improvement of university-community relations.

Among other responsibilities, students focus their community service on college and career readiness at West Philadelphia High School and Sayre High School. Students are typically engaged in academically based community service learning at the schools for two hours each week.

A primary goal of the seminar is to help students develop proposals as to how a Penn undergraduate education might better empower students to produce, not simply "consume," societally-useful knowledge, as well as function as caring, contributing citizens of a democratic society. Please note new location of the class: The Netter Conference Room is on 111 South 38th Street, on the 2nd floor.

SM 198. CITIES CITIZENS & UTOPIA. (C)

SM 200. Urban Research Methods. (C) Stern, Mark or Goldstein, Ira. Fulfills Quantitative Data Analysis Requirement.

This course will examine different ways of undertaking urban research. The goal will be to link substantive research questions to appropriate data and research methods. Computer-based quantitative methods, demographic techniques, mapping / GIS and qualitative approaches will be covered in this course. There will be a set of assignments including one in which students have an opportunity to undertake their own field research in a Philadelphia neighborhood involving multiple methods of scientific inquiry. All instructional materials will be based on data related to contemporary public policy issues.

SM 202. (EDUC202) Urban Education. (C) Paul Skilton-Sylvestre.

This seminar focuses on two main questions: 1) How have US schools and urban ones in particular continued to reproduce inequalities rather than ameliorating them? 2) In the informational age, how do the systems affecting education need to change to create more successful and equitable outcomes? The course is designed to bridge the divide between theory and practice. Each class session looks at issues of equity in relation to an area of practice (e.g. lesson design, curriculum planning, fostering positive student identities, classroom management, school funding, policy planning...), while bringing theoretical frames to bear from the fields of education, sociology, anthropology and psychology.

Among the theoretical frames students will learn will be the tools of systems thinking (Bertalanffy, 1968). While most of us have internalized the key lesson of the industrial revolution—that to understand something we must break it into its parts; systems thinking, in contrast, is about understanding the parts in relation to whole. The power of systems thinking is that each point of connection also serves as a point of intervention. By showing the importance of decisions of those within classrooms and those outside of them, this course is well-suited to students of education, but also any who seek a role in creating a more just society.

This course will provide a general introduction to the concepts and practice of city planning. Topics to be discussed include: the process and nature of planning - theories, methods and roles as manifested in practice; history and trends in city planning; functional planning practice; planning within constraints—a field project; planning in the international arena; present crisis in planning.

204. Urban Law. (A) Keene.

This course will focus on selected aspects of urban law that are particularly relevant to areas of high population density. After an introduction to the American judicial system, it will examine the legal issues that arise in the management of land development and use, with special attention to constitutional questions involving equal protection, due process, and the "takings" clause, and routine run-of-the-mill zoning challenges. This course meets the Cultural Diversity requirement.

SM 205. People and Design. (B) Berman.

The built environment of a city is more than a mere backdrop; the design can actually affect people’s experiences. Environmental design primarily focuses on the relationship between people and the built environment. It also looks at how the built environment interacts with the natural one (and the potential for greater sustainability). This course will allow students to gain a deeper understanding of how people create, perceive, and use the designed environment. We'll approach these concepts by analyzing design at a variety of scales, from products to interior design to architecture. Finally, using that knowledge, we'll conclude by analyzing urban spaces of the city.

This course will explore the role of public spaces - streets, boulevards, parks and squares - in cities and their social uses. With the University of Pennsylvania campus and the City of Philadelphia serving as our laboratory, we will critically examine the evolution of the movement of corridors, open space and buildings of the urban landscape and their changing uses. Case studies of social spaces on campus and public open spaces in Center City will help inform our understanding of how public environment serves, well or poorly, the varying needs of diverse users. While graphic skills are not required, graphic means as well as writing will be employed to communicate critical thought, ideas, and conclusions.

SM 207. (ASAM205) Asian American Communities. (C) Khan.

Who is Asian American and how and where do we recognize Asian America? This interdisciplinary course explores the multiple factors that define Asian American identity and community. In order to provide a sketch of the multifaceted experience of this growing minority group, we will discuss a wide variety of texts from scholarly, artistic, and popular (film, cinematic) sources that mark key moments in the cultural history of Asia America. The course will address major themes of community life including migration history, Asian American as model minority, race, class, and transnational scope of Asian America. In combination with the readings, this class will foster and promote independent research based on site visits to various Asian American communities in Philadelphia and will host community leaders as guest lecturers.
SM 210. (HIST210) The City. (B)

Urbs/ Hist 210 will focus on Baltimore and use The Wire as one of its core texts. The course will explore the history and development of the city and its institutions, with a thematic focus on issues such as industrialization and deindustrialization; urban renewal and the role of universities; public education and youth; policing and the criminal justice system; drugs and underground markets; public housing and suburbanization; and Baltimore's so-called renaissance amidst persistent poverty. The seminar will include field trips both in Philadelphia and a concluding all-day trip to Baltimore.

212. (COML110, HIST246, THAR110) Theatre, History, Culture I: Classical Athens to Elizabethan London. (M)
Arts & Letters Sector. All Classes. Schlatter.

This course will explore the forms of public performance - most specifically theatre - as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their anthropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on the development of theatre practice in both Western and non-Western cultures intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions, and acting methods, this course will investigate, where appropriate, social and political history, the arts, civic ceremonies and the dramaturgic structures of urban living.

Using Philadelphia as the site of students' praxis, this course explores the symbolic meanings and social production of urban life and culture in the nation's fifth largest city. This course is structured as a seminar with ethnographic background readings from Philadelphia and other urban settings to introduce students to the study of the city as a site of everyday practice, as well as training in conducting an ethnographic fieldwork project. The urban landscape provides an intensification of macro processes such as globalization. Such processes and how humans experience them are more easily studied and understood in an urban setting.

The class will explore social relational and cultural themes such as the ethnic city, the gendered city, the contested city, the sacred city, the global city, and the aesthetic and expressive city. A diverse range of reading assignments, images, and videos will augment our understandings of urban life. Students will design and execute their own ethnographic fieldwork projects on an urban topic that interests them. Through step-by-step instruction throughout the semester, students will learn qualitative research techniques such as field notes, participant-observation, interviewing, and how to interpret their own data, so that they will be able to complete their semester project.

SM 216. Social Entrepreneurship. (M) Mandujano.

Amidst perceptions that public sector and philanthropic support for local communities is increasingly scarce, many community development practitioners are turning to social enterprise as a means to improve social and economic conditions in their neighborhoods. This course will examine and evaluate a number of recognized social enterprises tackling housing, workforce development, and job creation challenges, including several planned field visits. Building on their understanding of these fields, students will then divide into groups and develop business plans for their own social enterprises.

This course provides an introduction to the political experience of African Americans. While the course will explore historical themes, it will be contemporary in its temporal focus. Topics will include African American political thought, leadership and political economy, voting and participation, urban politics, race and electoral politics. Additional topics will also include crime, the judiciary, and punishment; and issues of gender, class, age, and sexual identity at the intersections of black politics.

The Heart of Social Change: Experiments in Urban Development, Activism, and Social Entrepreneurship will seek to challenge those who desire to work for social change to consider how they may not only employ their heads and their hands, but also their hearts as they work to improve the aspects of contemporary society that mean the most to them. This seminar-based class will examine past and contemporary examples of heart-based activism, urban development and social entrepreneurship yet it will also be a space where students will be asked to experiment with ways that they too may be change agents.

In the years since the 1965 repeal of nationality based quotas, immigration to the United States has surged. Not only has the number of immigrants reached record highs, they have come from different places. During the last great wave of immigration in the late nineteenth and early twentieth centuries, immigrants came largely from southern and eastern Europe. Today, they come primarily from Latin America and Asia. Formerly, they usually settled in cities, moving outward as their prosperity increased; today, many bypass cities, heading straight for suburbs where a majority of immigrants now live. They are reviving moribund city economies and providing essential labor for service industries, construction, landscaping, and some manufacturing as well as for some professions and high tech jobs. Yet, new immigration has resulted in massive expenditures on border control, huge increases in deportation, and a fierce national political debate about the impact of immigration and immigration reform. Debates about immigration frequently rest, either implicitly or explicitly on assumptions about the history of immigration and immigration policy. These assumptions frequently are incorrect - with major implications for public understanding and public policy. There are few public issues in which history matters as much as it does for immigration. This seminar will provide the historical background essential for framing discussions of immigration today. It will consider the origins, demography, and geography of immigration and will pay special attention to the history of immigration policy. Requirements include reading approximately one book per week, writing several short commentary papers on readings, and leading workshops on the primary sources for the study of immigration history.

221. CIVIC SCHOLARS PROSEM.

The term Sustainability loosely organizes a diverse mix of issues relating to the
science, politics, and business of how humans can endure on Earth. Sustainability is about carrying capacity: making resource decisions without compromising the ability of future generations to make their own resource decisions. Sustainability thus requires an understanding of the systems whose carrying capacities matter for human endurance; three prominent and interconnected systems are the environment, the economy, and society. Sustainability also requires an understanding of the decision-making that operates on these resource systems and affects their carrying capacities. In sum, the study of Sustainability requires an introduction to environmental science, energy production, human settlements, economic development, social justice, political development, and international relations. This course will provide that introduction through a weekly lecture series drawing on scholars from across the university and a small group project that addresses a real problem confronting an institution in Philadelphia. See posted syllabus for information about recitation sections.

231. (SOCL230) SPECIAL TOPIC

SM 233. (ARTH369, HIST233) World History: East Asia or Latin America. Staff.
Topics Vary

SM 234. (HIST234) TOPICS IN TRANSNATIONAL. (C)

This course surveys the cultural traditions of ancient Mesopotamia, the land between the Tigris and Euphrates Rivers, a region commonly dubbed "cradle of civilization" or "heartland of cities," from an archaeological perspective. It will investigate the emergence of sedentism and agriculture; early villages and increasingly complex Neolithic and Chalcolithic cultures; the evolution of urban, literate societies in the late 4th millennium; the city-states and incipient supra-regional polities of the third and second millennium; the gradual emergence of the Assyrian and Babylonian "world empires," well-known from historical books of the Bible, in the first millennium; and the cultural mix of Mesopotamia under the successive domination of Greeks, Persians and Arabs. The course seeks to foster an appreciation of the rich cultural heritage of ancient Mesopotamia, an understanding of cultural continuities in the Middle East and a sense of the ancient Near Eastern underpinnings of western civilization. No Prerequisite.

What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koeln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, its transformation into an industrial city in the late nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunited Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin. Indeed, Berlin will be a specific example to explore German history and cultural life of the last 300 years.

The course will be interdisciplinary with the fields of German Studies, history, history of art, and urban studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

240. Education in American Culture. (A) Staff.
This course explores the relationships between forms of cultural production and transmission (schooling, family and community socialization, peer group subcultures and media representations) and relations of inequality in American society. Working with a broad definition of "education" as varied forms of social learning, we will concentrate particularly on the cultural processes that produce as well as potentially transform class, race, ethnic and gender differences and identities. From this vantage point, we will then consider the role that schools can and/or should play in challenging inequalities in America.

SM 242. (ANTH252) Food Habits in Phil Comm. (C)

L/R 244. (COML254, GRMN244) Metropolis: Culture of the City. (M) Arts & Letters Sector. All Classes. MacLeod. All lectures and readings in English.
An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doeblin, Marx, Engels, Benjamin, Kraeauer. Films include Fritz Lang's Metropolis and Tom Tykwer's Run Lola Run.

SM 250. Urban Public Policy:
Philadelphia -- A Case Study. (B) Donna Cooper.
An introduction to a broad range of substantive policy areas affecting the city, and an exploration into the complexities of policy formulation and implementation in a large and pluralistic metropolitan setting. The course subtitle, "Philadelphia -- A Case Study," describes our approach. Donna Cooper currently leads the region's foremost child advocacy organization focused on poverty, child welfare and education issues, she formerly served as the Deputy Mayor for Policy for the City of Philadelphia, and Secretary of Policy of the Commonwealth of Pennsylvania.

SM 252. Urban Journalism. (B) Rubin.
This course will examine the state of urban journalism today with special emphasis on how large newspapers are redefining themselves, and the news, in an era of dwindling readership and growing financial pressures. The course will look at online journalism, ethics, and alternative sources of news, and will explore the techniques journalists use in reporting the news. Students will report and write four pieces of their own about Philadelphia and its environs. The course is taught by Dan Rubin, Enterprise Editor of The Philadelphia Inquirer, The Daily News and philly.com.

This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus
on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows, and the impact of these forces on poverty, equity and segregation. Specific topics to be discussed include the factors that make a region competitive, the city's changing role in the region, the impact place has on opportunity, and approaches to revitalizing and improving communities.

The last several decades have witnessed a dramatic acceleration in the interconnection of cities around the world. The globalization of the economy, the spread of communications technology, major migrations between urban locations, increasing disparities between rich and poor, the dramatic growth of the "culture industries", and the increasingly popular quest for "place making" through urban design have all contributed to this process. This course will examine urban neighborhoods in the United States and elsewhere in the world. In particular, class readings and discussions will explore the wide range of ways (political, social, cultural; organized and informal) that individuals and institutions in urban neighborhoods have reacted to global transformations and what effects and consequences those reactions have precipitated.

The stereotypical idea of the city or urban life is neither fixed nor singular. Lifestyle and urban form evolve together in an iterative fashion affected by changes in technology, communication, economics and cultural, social, political values. This seminar examines the underlying forces that are continuing to transform urban form and the relationship of these forces to contemporary urban lifestyles. Lifestyle choices have become an engine of urban growth and are instrumental in the transformation of urban life and form of the city. The spatialization of contemporary life and the physical forms and fabric that support it call into question traditional definitions of 'urban life' and 'city form.' The seminar's broad context is the interface between the physical/psychological permanence of the existing traditional city and the changing spatial and cultural landscape of a new urban realm defined by consumption culture, new technologies and the media age.

The research focus for Spring 2015 will be the transformation of Brooklyn neighborhoods from industrial working class centers to enclaves of hipster lifestyles. Hipsters have become commodified and part of the commercial world but their role as urban shapers who put forth new values, new urban lifestyles and new urban character has left a mark on neighborhoods from economic revival to gentrification. Hipsters wield a combination of technology, values and cultural forces that together are transforming urban places. Many of these underlying values have become the province as well of educated middle-class population often living ideologically. We propose these groups are the seeds of new types of consciousness united by shared values that have the potential to provide an alternative vision for an urban domain that balances a long-term view with more temporal individual choices.

SM 260. (EALC141, HIST233) World Cities. (M) Staff.
Topics vary; see department for current description

This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.

SM 270. (CPLN676, SOCI270) The Immigrant City. (B) Society Sector. All classes. Vitiello, Domenic.
Immigration is among the most important yet controversial forces shaping cities, regions, and neighborhoods. The diversity of immigrant and receiving communities means that the dynamics and impacts of migration are varied and complex. This course examines the development of immigrant and receiving communities in the urban and suburban United States. It surveys public policy and community and economic development practices related to migration at the local, regional, national, and trans-national scale. Class readings, discussions, and visits to Philadelphia's immigrant neighborhoods explore themes including labor markets, housing experiences, political mobilization, civil society, cultural preservation, and the built environment.

This course studies the architecture of Philadelphia from the perspectives of aesthetic and social history. Relationships between architectural patronage, design and location, and community values will be examined and their implications for understanding the built environment will be analyzed.

SM 273. (AFRC145, ENGL145) Advanced Non-Fiction Writing. (M)
Staff. This course is not open to freshmen. May be repeated for credit with a different instructor.

Writing with a view to publication in the freelance sections of newspapers such as THE PHILADELPHIA INQUIRER and THE NEW YORK TIMES, in magazines such as THE ATLANTIC and THE NEW YORKER, and in the literary quarters and the journals of opinion. Among the areas likely to be considered are writing as a public act, issues of taste and of privacy, questions of ethics and of policy, methods of research and of checking, excerpting, marketing, and the realistic understanding of assignments and of the publishing world. Student papers will be the basis of weekly editorial sessions, with concentration on the language: how to render material literate, how to recognize and dispose of padding and self-indulgence, how to tighten structure and amplify substance.

See the English Department's website at www.english.upenn.edu for a description of the current offerings.

SM 274. (THAR275) Advanced Topics in Theatre. (M) Fox, Ferguson, Malague, Mazer, Schlatter. This course, with different topics, may be repeated for credit. Please look at the program website for the current semester's topic(s).

This course will combine an intensive practical and intellectual investigation of some area of the making of theatre: performance techniques, theatrical styles, a particular period of theatre history. For the current topics contact the Theatre Arts office or visit the website.

One section of 275 every other Spring will consist of a small number of Theatre Arts majors selected by the faculty to become members of "the Edinburgh Project." This ensemble will mount a production that will be performed at the Edinburgh Festival Fringe in August.
Many of the readings and exercises in this course will be geared to prepare for production; rehearsals for the project will continue after the exam period at the end of the semester.

This course will examine the idea of the city in history and how that idea has changed over time. We will use literature, philosophy, sociology, and history to explore the ways writers and thinkers have defined and characterized the city and what these definitions reflect in terms of values, assumptions, and knowledge through changing times - as well as how the definitions have been contested.

For Aristotle the city was the inevitable consequence of people's inherent sociability, and as such was a natural, positive agent of acculturation and education. For others, such as Jefferson, Emerson, Thoreau, Melville, and Poe - members of the American literary and political pantheon all - cities embodied the crystallization of moral ruin. Others fell somewhere in between. Thus for Walt Whitman and Jane Addams, cities had numerous defects but also contained the seeds of their own flowering and renaissance. Members of the golden age of urban studies - Lewis Mumford, Jane Jacobs, and the Chicago School - offered new insights and empirical tools for thinking about cities, and we will examine their contributions as well. More contemporaneously, some critics of globalization locate cities at the epicenter of their discontent with modernity while others view cities as a locus for a revitalized form of citizenship.

In this course, we will examine each of these perspectives, with the goal of cultivating a deeper and broader understanding of the many ways the idea of the city has played a leading role in fostering rich debate about how and where humans should live their lives.

SM 280. (CRIM280, SOCI380) Neighborhood Dynamics of Crime. (B) Loeffler.
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.

In order to understand the complex and often skewed relationship between the built and natural systems, we must think in processes and examine different scales simultaneously. The course explores urban sustainability and resilience. At its core, sustainability is a radical concept that integrates the economy, equity (social justice), and the environment. Co-opted by marketing slogans, stripped of meaning and context, it has become vague and pliable. Sustainability and resilience demand holistic systems view of the world. The course focuses on communities such as New Orleans and Eastwick where urban development has focused on economic concerns at the expense of the environment and equity resulting in unintended, and sometimes, catastrophic consequences. Students will have the opportunity to interact with community residents who have organized to develop strategies to address these ongoing issues.

SM 294. (ANTH294) CITIES OF THE FUTURE. (M)

SM 312. (ANTH312, HSOC321) Health in Urban Communities. (A) Johnston.
This course will introduce students to anthropological approaches to health and to theories of participatory action research. This combined theoretical perspective will then be put into practice using West Philadelphia community schools as a case study. Students will become involved in design and implementation of health-related projects at an urban elementary or middle school. As one of the course requirements, students will be expected to produce a detailed research proposal for future implementation.

What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for public office and will discuss the various influences on getting elected, including: Campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania.

Prerequisite(s): COMM 220 or permission of instructor.
How do qualitative social scientists study urban communities? What kinds of powerful tales can be told about urban lifestyles and social issues/conflicts in places like Philadelphia? This course will allow students to study various ethnographic treatments of urban communities in the United States, using films, articles, TV serials, and books as guides for the framing of their own independent research on the streets of Philadelphia. Students will also form production teams of two or three people, and these production teams will be responsible for (i) identifying and researching an important urban issue in contemporary Philadelphia and (ii) turning that research into a 15-30 minute radio documentary that will be broadcast on a local Philadelphia radio station, WURD 900AM. Mixing radio/audio journalism with ethnographic methods, will enhance their skills at archival and social research, participant-observation, interviewing techniques, sound editing, and production.

This course is intended to be a rigorous and exciting opportunity for students to tell empirically grounded stories using the voices of their subjects and the sounds of the city.
Potential texts include: Sidewalk (a book and documentary film by my Mitchell my Mitchell Dunneier), Righteous Dopiefriend (a book and museum exhibit by Philippe Bourgois), and excerpts from other ethnographic work by Ana Ramos-Zayas, Elijah Anderson, Todd Wolfson, David Grazian, Setha Low, Ulf Hannerz, Leith Mullings, John Gwaltney, Dana-ain Davis,
Carol Stack, Melissa Checker, Katherine S. Newman, and others. By Permission Only.

SM 322. (FNAR222, FNAR622) The Big Picture: Mural Arts in Philadelphia. (C) Golden/Walinsky. Previously URBS 222. The Undergraduate Fine Arts Department will now include a $75 fee for this course.

The history and practice of the contemporary mural movement couples step-by-step analysis of the process of designing with painting a mural. In addition, students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The instructor, Jane Golden, is the founder and Director of the Philadelphia Mural Arts Program.

SM 323. (EDUC323) Tutoring in Urban Public Schools: Theory and Practice. (A) Parker, Cheryl.

This course represents an opportunity for undergraduate students to participate in academically based community service involving tutoring in a West Philadelphia public school. This course will serve a need for those students who are already tutoring through the West Philadelphia Tutoring Project or other campus tutoring, and it will also be available to individuals who are interested in tutoring for the first time.

The course provides an opportunity for undergraduate students to participate in academically based community service learning. Student will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.

SM 327. (ASAM321, EDUC410) Schools and Community Development. (C) Puckett/Simon. First class meeting is in McNeil 130.

This seminar engages Penn undergraduates with West Philadelphia High School teachers and students to assist in planning an urban studies academy at both the existing and the proposed new high school. This planning includes developing curricular activities, mapping institutional resources to support curriculum development, and designing school-based public works projects.

SM 330. (URBS350) GIS Applications in Social Science. (A) Hillier. Fulfills the Qualitative Data Analysis Requirement. This course will introduce students to the principles behind Geographic Information Science and applications of (GIS) in the social sciences. Examples of GIS applications in social services, public health, criminology, real estate, environmental justice, education, history, and urban studies will be used to illustrate how GIS integrates, displays, and facilitates analysis of spatial data through maps and descriptive statistics. Students will learn to create data sets through primary and secondary data collection, map their own data, and create maps to answer research questions. The course will consist of a combination of lecture and lab.

SM 332. Digital City: Approaches to Urban Memory & Cartography. (M) Farber.

Cities have existed through time with layered histories. Such histories are intelligible to dwellers of urban space in the present who seek them out and others who by default interact with the effects of memory through art and culture. Through the expansion of digital mapping tools, location-enabled devices, online sharing sites, and social media memes, those layers of urban memory are newly accessible and thus enhance experiences and explorations in a city. How do websites and apps devoted to mapping cities across space and time help us access and redefine the cultures of cities? What approaches, programs, and philosophies do the newfangled mapmakers and their co-creators use, and how do they differ from analog approaches to research and placemaking? What are the possibilities and responsibilities of such digital cartographies and locales? Where and for whom do the digital divides still exist?

In "Digital City: Approaches to Urban Memory and Cartography," we will seek solutions to these prompts by conducting case studies of digital map projects from transnational and local perspectives, including a particular focus on Philadelphia-based sites. Students will gain skills in cultural analysis and the digital humanities, and will produce a final research project that will result in a website, mobile app, or critical assignment of their own direction mapping a city's past onto its present or future spaces.

In this course, Penn undergraduates will explore and examine food habits, the intersection of culture, family, history, and the various meanings of food and eating, by working with a middle-school class in the Philadelphia public schools. The goal of the course will be to learn about the food habits of a diverse local community, to explore that community's history of food and eating, and to consider ways and means for understanding and changing food habits. Middle school students will learn about the food environment and about why culture matters when we talk about food. Topics include traditional and modern foodways, ethnic cuisine in America, food preferences, and 'American cuisine'. The course integrates classroom work about food culture and anthropological practice with frequent trips to middle school where undergraduates will collaborate with students, their teachers, and a teacher partner from the Agatson Urban Nutrition Initiative (UNI). Students will be required to attend one of two time blocks each week to fulfill the service learning requirement-times TBA.

Undergraduates will be responsible for weekly writing assignments responding to learning experience in the course, for preparing materials to use middle school children, being participant-learners with the middle school children, and for a final research project. The material for the course will address the ideas underlying university-community engagement,
relationships that exist between food/eating and culture, and research methods.

Human nutrition and nutritional status within context of anthropology, health, and disease. Particular emphasis on nutritional problems and the development of strategies to describe, analyze, and solve them. Students will participate in the Urban Nutrition Initiative, an academically based community service project in local area schools.

Using Philadelphia as a lens, this course will examine the transformation of American cities from the colonial period to the present. Through readings, lectures, and tours, we will consider urbanization and suburbanization, race, class, and ethnicity, economic development, poverty and inequality, housing and neighborhood change, urban institutions, and politics and public policy.

Urban Agriculture is a growing global trend. This course examines urban agriculture as an issue of sustainability, social justice, public health, and vacant land. It explores the potential of urban agriculture in both the Global North and South to provide a safe and secure source of food to city residents. Major topics include sustainable agricultural practices, operational and spatial requirements, distribution systems, and access to fresh food. Using Philadelphia as a laboratory, the course explores its robust agricultural scene of community gardens, guerilla gardens, and entrepreneurial farms, as well as its distribution system including programs such as City harvest, the emerging Common Market, and established farmers' markets. The course will integrate lectures about sustainable agricultural practices with field trips to and hands-on work at community gardens and farms.

SM 400. Senior Seminar. (A)
Schneider/Simon. Prerequisite(s): URBS 200; URBS 300.
Urban Studies senior research project

SM 401. URBAN STUDIES HONORS. (B) Schneider / Simon. Prerequisite(s): URBS 400.
Students in the fall Urban Studies Senior Seminar (URBS400) whose papers are exceptional and show promise for publication will be invited to participate in the spring honors seminar. If they choose to participate, honors seminar participants will revise and refine their research/papers with the goal of their work for publication in an academic journal relevant to the topic. The seminar meets periodically during the semester, structured around a set of assignments geared to facilitate the process of revision. Students will be assigned to read each other's work and meetings take the form of a workshop with students reporting on progress and providing feedback to improve and develop each other's papers. In addition to completing the revised paper for a grade, participants in the honors seminar are required to present their work to a wider Urban Studies audience in a special session at the end of the semester and to provide documentation that they have submitted their papers for publication. Students who successfully complete the honors seminar will graduate with distinction in the major, noted on their transcripts and in the graduation materials.

SM 402. The City and Homelessness. (L) Freiherr Von Mahs.
This seminar in Urban Studies introduces students to many of the major social issues confronting our nation's cities by focusing specifically on the problem of urban homelessness. The course examines the treatment of homelessness and extreme impoverishment as social problems historically, as well as through contemporary debates. Several areas of intensive study will include: the low income housing crisis, welfare reform and income maintenance strategies, health care issues, and urban/suburban relationships. Particular attention is also paid to the structure of emergency services for people who have housing emergencies. The course concludes by examining current policies and advocacy strategies.

Cory Fischer-Hoffman.
This course introduces students to the historical study of sound, soundscapes, and sound recordings, aural history composition techniques (especially radio documentaries), and oral history as a documentary practice. Designed as a theory and methods workshop, this course will cover theory, ethics, interview techniques and project design along with recording tutorials, interview opportunities and an introduction to digital audio editing. We explore Oral History's rich past while working to define and expand its future as a dynamic research method. The class will include analysis of audio documentary forms and non-fiction storytelling techniques, 20th and 21st century historical radio documentary work, and archival audio source research. Theoretical readings draw from the fields of Oral History, Media Studies and Urban Studies as well as the fields of Psychoanalysis, Trauma Studies, and Anthropology. This course is well suited for those interested in ethnography, multimedia journalism, social advocacy, and/or narrative nonfiction, as well as documentarians who want to learn new approaches to interviewing and storytelling.

SM 404. (NPLD797) Philanthropy & The City. (A) Bauer/Goldman.
This course will focus on how urban communities are shaped by the nonprofit sector and the billions of philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on these important questions: (1) Whose responsibility is the public good? How is that responsibility shared by the public, private, and nonprofit sectors? and (2) Given that responsibility for the public good, which individuals and groups make the decisions about how to serve the public good? How are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary philanthropy and the nonprofit sector.

Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha'i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

From the inception of the discipline, anthropologists have applied their ethnographic and theoretical knowledge to policy issues concerning the alleviation of practical human problems. This approach has not only benefited peoples in need but it has also enriched the discipline, providing anthropologists with the opportunity to develop new theories and methodologies from a problem-centered approach. The class will examine the connection between anthropology and policy, theory and practice (or 'praxis'), research and application. We will study these connections by reading about historical and current projects. As an ABCS course, students will also volunteer in a volunteer organization of their choice in the Philadelphia area, conduct anthropological research on the organization, and suggest ways that the anthropological approach might support the efforts of the organization.

This course will cover the basic elements of building and growing a non-profit organization, including the development of the mission and the board; needs assessment, program design, development, and management; financial management, contract compliance and understanding an audit; fundraising, public, foundation, corporate, and individual; communication and marketing; organizational administration (including staff and volunteer selection, management and development); public policy, research and advocacy. Students will make site visits and engage role play, in addition to research and writing. Note: This class first meets on Sept. 6th.

Note: The first day of this class in Fall 2016 will be on Tuesday, Sept 6th. Class will not meet on Aug 30th.

SM 415. Urban Real Estate Markets. (B) Kozloff.

Cities evolve over time, comprised of various inputs of different sizes at different stages of urban evolution. However, as cities continue to densify and navigate real estate market cycles, opportunities to redefine the urban context, while promoting the individual brand, become ever more sensitive. Projects are increasingly complex, often involving multiple partnerships among private developers, public agencies, non-profits, and community groups. Today's development professionals need to be well-versed across a variety of disciplines and property types to effectively execute in an urban environment. As an introductory course in real estate development, this course will provide the underpinnings for critical decision-making in markets that change frequently and often unevenly - whether for financing, investing, development, public policy formulation, or asset management/disposition.

SM 417. Cities and Sustainability. (M) Ben-Amos.

A good idea is not enough - developing innovative and sustainable projects in cities requires understanding "how to get things done." Developing projects to promote sustainability in major US cities requires sensitivity to the political and operational context within which cities implement innovative initiatives. Cities and Sustainability uses Philadelphia as a case study to explore the issues confronting modern American metropolises as they look to manage their resources and promote environmentally friendly policies. URBS 417 will introduce students to leading Philadelphia practitioners of sustainability and municipal projects. Students will be given the tools to politically, economically and critically analyze various sustainable policy initiatives across the United States.

Transportation affects every aspect of American society; from how we get to work or school, to how we shop and play. Transportation policy at all levels of American government has serious implications for social justice and economic development. Moreover, some of today's most intense political battles center on transportation policy across America and within its cities, be it funding High Speed Rail in California or placing bike lanes in the heart of Manhattan. Transportation and American Society will expose students to the role transportation has played the development of America and its cities as well as its impact on politics and society.

SM 420. (HIST440, SOCI420) Perspectives on Urban Poverty. (C) Fairbanks.

This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constrains meaningful channels of action in urban poverty policy and practice interventions.

Creativity isn't just for artists and inventors. It's an integral aspect of excelling at many jobs. It's problem solving. Recent studies have pointed to creativity as an important factor for achievement in a variety of fields. Additional studies have discussed how creativity can be enhanced in people of any age. This seminar-studio will challenge you with various projects to push your creative skills. No previous art experience is required. We'll also include guest speakers and walking tours. The core premise of this class is that creativity is within all of us. By the end of the class, your understanding of creativity should be deeper, and your personal creativity, enhanced.

SM 423. Fantastic Cities: Urban Landscapes Seen Through Memory Imagination and Dreams. (L) Svendsen.

This seminar introduces the notion of the city, or polis, as a powerful current in our cultural imagination. In contemporary discourse, cities have an edge of glamour: they elicit both fear and desire. Historically, however, cities have been understood as microcosmic models of the organization of human society; a walled city was a place of safety and order, not a site of danger or chaos. This course explores different moments in the cultural fantasies surrounding cities, paying special attention to topics such as the role of the imagination in experiencing cities, historical urban strata, subways and other subterranean spaces below the modern city, urban peripheries, and the modern aesthetic of transparency. The course focuses on representations of some actual cities -- Rome, Berlin, New York, London, Lagos --
as well as a series of utopian and dystopian imagined cities.

SM 427. (FOLK513) URBAN ETHNOGRAPHY. (M) Saverino.

Cities can be exciting, dense, noisy, and dirty. They are places where the unexpected is expected to occur. One thing is certain however - urban settings are always full of the diversity of human expressivity. Through readings, videos, guest lectures, and field trips, this course explores the symbolic meanings and social production of urban life and culture in Philadelphia, the nation's fifth largest city. The urban landscape provides an intensification of cultural processes. How humans experience them are more easily studied and understood in an urban setting, giving this class the opportunity to explore social relational and cultural themes such as the ethnic city, the contested city, the global city, and the creative city. This course is structured as a seminar with readings from Philadelphia and other urban settings that introduce students to the study of the city as a site of everyday practice. In addition, the course offers step-by-step training in conducting an ethnographic fieldwork project on an urban topic of the student's interest.

A seminar run in conjunction with the Institute for Urban Research at Penn, students will learn about the range of cutting-edge topics in urbanism that Penn faculty are working on and work closely with a faculty member on current research. Students will learn about new topics and methods in interdisciplinary urban research, and get first hand experience collecting urban data under the close supervision of an experienced researcher. Students and faculty jointly will present their findings for discussion. This course is a good introduction for how to frame and conduct an urban research project.

Philadelphia is a city that was mapped before it was built. Founder William Penn's original concept for the gridded city continues to inform the historical evolution of Philadelphia, even as city planners, architects, artists, and social justice activists work to transform the layers of our built environment. This class will study the city through a variety of archival maps, historical mapping practices, and emergent digital approaches to representing space and time. We will explore public history projects that seek approaches to place-making and place-keeping at neighborhood intersections, share dialogue with social practice artists who produce site-specific works, and visualize civic data through platforms such as OpenDataPhilly. Each student will pursue a final research project resulting in a close study of a particular street or intersection in the city.

This course provides an introduction to the economic and political theories that have come to shape, for better or for worse, the spatial characteristics of late 20th century urbanism. It is intended to offer a range of analytical approaches to understanding the urban structures and processes that strategies of community-based organizers and urban policy planners seek to influence. The course focuses on postwar U.S. cities (Chicago and other Midwestern/ Northeast rust belt cities in particular) through a number of readings explore these issues in broader contexts. As a way to further understand postwar US urbanism, we will expand our focus briefly to the geopolitical/international scale during the weeks on neoliberalism and microfinance.

Urban political economy refers to different theoretical traditions within the social sciences that explain urban development in terms of the relationship between markets, states, and community actors (or, civil society). Part I of the course covers four different theories of modern political economy: Neoclassical, Keynesian, Marxian, and Neoliberal. Our purpose is to provide a framework for political economic analysis and an historical foundation for understanding postwar transformation. Part II of the course grounds the foundational material of Part I by tracing the economic and political forces that have shaped post-war urban development trends in Northeastern and Midwestern cities (especially Chicago, Detroit, Philadelphia and NY). Particular attention will be given to issues such as race, suburbanization, deindustrialization, welfare state retrenchment, gentrification, and public housing transformation. Part III examines a range of contemporary (post 1970) approaches to urban development, focusing on processes of neoliberalization, neo-clientalism, urban informality, sub-prime mortgage lending, and microfinance.

How do American cities grow? Studies of urban transformation have focused on anchor institutions, the growth model of big business-generated employment, and "creative class" gentrification. After decades of decline, many major cities like Philadelphia are seeing gains in population again, as well as new commercial activity and street life, spurred by the influx of new immigrant communities. Yet few scholars have asked: What role do immigrants play in the current revival of the American metropolis?

In this Social Science Studio course, 16 students will work collaboratively as in a design studio to conduct research that can answer this important social-scientific question. Students will work on independent projects that engage multiple methods and fields to produce new types of knowledge. They will be introduced to multiple methods drawn from architecture, planning, anthropology and political science, including mapping, interviewing, field notes, socio-economic surveys, sketching, photography and web design to develop independent projects. No prior knowledge is required but students with experience in GIS, STATA, photography, drawing or web design are encouraged to apply. This course is pending for an ABCS designation.

This studio style course will follow the method of a traditional architecture and city planning studio, in that the learning will occur while students do a simulated project. A specific neighborhood in Philadelphia will be chosen and students will examine the neighborhood in detail, focusing on the different aspects that comprise the concept of sustainability. This will include issues of density, diversity of uses, transportation, livability, environmentally sustainable buildings, food accessibility, environmentally sustainable materials, and education. It will also look into issues related to social sustainability and social diversity.

Students will have two main projects within the semester. The first is to analyze the chosen neighborhood, in terms of the different aspects of sustainability. The second is to create guidelines to lead it towards a more sustainable future. Definitions of sustainability will be explored throughout this process. As each component of sustainability is examined within the context of the chosen neighborhood, it will simultaneously be explored in readings, class discussions, guest lectures and tours.
L/R 440. (CPLN500) Introduction to City Planning: Past, Present and Future. (A) Vitelli or Ammon.
Orientation to the profession, tracing the evolution of city and regional planning from its late nineteenth century roots to its twentieth century expression. Field trips included.

SM 448. (AFRC448) Neighborhood Displacement & Community Power. (B) Palmer.
This course uses the history of black displacement to examine community power and advocacy. It examines the methods of advocacy (e.g. case, class, and legislative) and political action through which community activists can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative roles in the group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action. Case studies of neighborhood displacement serve as central means of examining course topics.

SM 450. Urban Redevelopment. (B) Raclin, Andrew.
This course will consider urban redevelopment from the early 20th century to the present day, looking at ways the economic, political, and social underpinnings of redevelopment practice have changed over that time. From the City Beautiful movement to Transit Oriented Development, the course will look at why and how the public, private, and non-profit sectors have intervened in urban neighborhoods, and will contemplate consequences - positive and negative - of those interventions. Students will be introduced to some of the technical aspects of redevelopment, including architecture/design, planning, and financing. The class will be in seminar format, mix lecture, discussion, and guest speakers. The course requirements include a mid-term paper, an in-class charrette, and a final development project.

This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as an overview of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden's waterfront and downtown-area neighborhoods.

SM 452. Community Economic Development. (A) Lamas.
Community economic development concerns the revitalization of impoverished communities. As with all things economic, poor and working people may be the subjects or the objects of development. We will utilize case studies from Philadelphia and around the world in an exploration of various models of economic justice and sustainable development.

This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how metropolitan change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.

SM 454. (SWRK712, URBS554) City Limits: The Impact of Urban Policy. (B) Goldstein, Stern. Prerequisite(s): Student must have taken an introduction to research methods course.
This course assesses the changing role of public policy in American cities. In the past, government often believed that it could direct urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - 'player' in a more complete, transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens.

This seminar uses a case-study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region, including Philadelphia's Neighborhood Transformations Initiative and New Jersey's Camden Revitalization plans.

Over the past two decades, the public imagination has been gripped by the concept of globalization. Scholars, corporations, advertisers and government officials have latched onto this idea as a defining feature of our current era. These various constituencies use globalization not only to account for epochal shifts in our economy and society, but also to justify new types of business strategy and public policy. This course will examine three interlinked dimensions of globalization: Global economic processes (e.g. the spread of American brands like Coca Cola, Nike and Hollywood films), and political globalization (e.g. the rise of supranational organizations like the IMF, World Bank and WTO that promote the idea of free markets).

Moreover, we will study globalization in the context of cities because, given their centrality to globalization processes, it is in cities that we can best understand how globalization takes place. In cities, we can study the global economic processes that restructure urban space, giving rise to new financial districts, international art exhibits and post-modern architecture and entrepreneurial strategies that seek to
elevate cities to world city status. The course will examine these processes in a comparative light, contrasting urban globalization processes in Europe and North America with those in Latin America, Asia and Africa.

SM 460. (AFRC460, EDUC712) School Reform and Public Policy. (A) Hershberg.
The course examines the reforms catalyzed by the federal "Race to the Top" competitive grant program and by waivers from No Child Left Behind issued by the federal Department of Education; and explores how these reforms resemble and differ from those mandated by NCLB. Charters, vouchers and competition are discussed along with school governance and funding. Micro as well as macro policy perspectives are provided through the instructor's ongoing work helping Houston's Aldine Independent School District (the 2009 Broad Prize winner with 64,000 low-income and minority students) design and pilot a new teacher evaluation system, a new compensation system, a "peer assistance and and review" process for professional development, remediation and dismissal along with related reforms.

462. (HIST463) History of American Education. (B) Katz.
A survey of the history of American education from the Colonial Period to the present. Special emphasis on the relations between education and major themes in social history.

This course gives an overview of the genesis of the so-called "Brownfield" problem and of the various efforts that our society is taking to try to solve, or at least ameliorate it. The course will place the "Brownfield" problem in the broader context of the growth and decline of industrial base cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by federal and state governments to address remediation and redevelopment of abandoned industrial sites. In addition, the course will explore environmental equity issues.

A survey of worldwide urbanization, focusing on development disparities among cities in the Global North and Global South and within each area, with special attention to the provision of housing, basic infrastructure (water, sanitation, transportation) and social and health services.

SM 470. (PSCI470) Executive Power in Metropolitan American Politics. (M) Rendell;Siskind.
Focusing on presidents, governors, and big-city mayors, this course will explore a wide range of historical and recent examples of executive leadership and decision-making. How do their actions in office shape and get shaped by long-term historical and political forces? How and why do executive office holders use (and occasionally abuse) their power? What opportunities exist to transform both policy and public opinion? What kinds of constraints circumscribe the options available and limit the impact of executive choices? Exploring presidents such as Franklin Roosevelt, Lyndon Johnson and Barack Obama, governors including Ronald Reagan, Nelson Rockefeller and Bill Clinton, and mayors like Richard Daley, Sr. and Jr., Ed Koch, and Ed Rendell, this course at once examines the personalities and predilections of individuals as well as the political ideas and institutions that shape their time in office.

Registration in this course is by permission of the instructors only. To seek a permit for the course please provide a short personal statement of not more than one page with the following information: your name and contact information; your year; your major; other courses you have taken on related subjects; how this course would fit into your larger academic and intellectual development; any other personal or extenuating circumstances you think it would be useful for us to know about you. Email personal statements to Peter Siskind (siskind@sas.upenn.edu) no later than April 3 and enrollment decisions will be made by April 18.

This course will integrate the history and theories of community organizing in order to provide each student with the foundation to develop a transformational praxis for creating change in their own communities. The class will include a focused analysis of theory, a historical examination of community organizing in the labor movement, the civil rights movement and the disability rights movement, case study reviews, guest speaker presentations and practical organizing skill-building. We will examine social inequality and intersectionality and explore effective strategies in organizing for social change. This course is inter-disciplinary and draws from political economy, sociology, history, social work, and social movement theory. Students will have the option of doing a final project in collaboration with a Philadelphia-based community organization.

475. (THAR475) Public Performance Art in the Global Age. (M) Public Performance Art in the Global Age. Master of Liberal Arts open to undergraduates. Variously termed relational aesthetics, socially engaged art, or new genre public art, the exploding global expansion and wildly proliferating forms of what this course will term public performance art is one of the most exciting and consequential artistic, cultural, and political movements of the start of the 21st Century. This course will chart the history of this phenomenon from its radical origins in Futurism, Constructivism, and Dada cabaret, through Happenings, the inter-disciplinary collaborations of Merce Cunningham, Robert Rauschenberg, and Jasper Johns, site-specific and installation art, to current practitioners around the world, such as Ai Weiwei, Thomas Hirschhorn, Marina Abramovic, and Christo and Jeanne-Claude, among others. The course will outline the theoretical and philosophical foundations of this work and the political controversies it has ignited. Special focus will be on the engagement of this work with public space and contemporary urban life.

Course requirements include wide reading and class discussion, and oral presentations on artists, collectives, and movements that have significantly shaped the current landscape. The course includes a laboratory component in which students will have the opportunity to construct a performance art or installation piece in campus public space. This public art piece will serve as site research for a final paper. All students welcome. No previous experience or special expertise in the field required. Just genuine interest or curiosity.

SM 476. BANKERS, ACTIVISTS, & GOVT: THE MAKING OF URBAN HOUSING POLICY IN AMERICA. (M) Stern, Goldstein.
This course examines how public policy influences housing markets and how markets influence public policy. The
course reviews the development of housing policy since World War II and how shifts in policy have influenced people's ability to find suitable shelter. Topics include: poverty and affordability, residential segregation / civil rights in housing, the financial crisis of 2008, mortgage foreclosure, affordable housing, and homelessness. The course focuses on the changing roles of different levels of government in housing policy and how the financial sector, the construction industry, and non-governmental organizations influence Americans housing options.

This course has several objectives. The central focus will be on developing a comprehensive understanding of the principles of sustainable development, a broad, deep, and in fact, revolutionary new way of shaping the operations of society. It was first defined in the 1987 Report of the United Nations' World Commission in Environment and Development (the Brundtland Report) as: "... development that meets the needs to the present without compromising the ability of future generations to meet their own needs." The course will combine lectures on general concepts and ways of viewing sustainable development with individuals and team presentations on a wide variety of sustainable development programs. Students will examine the efforts of universities, companies, local governments, state governments, and national governments to being to moderate man's impact of the natural environment and to make societies more economically viable and just - and therefore, more sustainable - in the long run. Students will learn how sustainable development strategies involve the full range of human activities, such as energy production and use, creation of urban communities, transportation, food systems, building construction and operation, waste disposal, control of environmental pollution, water use and treatment, and social inclusion, migration, and global poverty.

SM 480. (AFRC480) Liberation and Ownership. (A) Lamas.

Who is going to own what we all have a part of creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about: the ties that bind and those that separate; production, participation, and control; the creation of community and the imposition of hierarchies--racial, sexual, and others; dreams of possessing and the burdens of debt and ecological despoliation; dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, injustice, and inequality, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives--with a particular emphasis on radical and critical theories of liberation, and by focusing on particular global sites and processes of capitalism, students will assess and refine their views regarding ownership and liberation in light of their own social, political, religious, aesthetic, and ethical commitments.

SM 483. (ANTH483) Interfaith Action.

This course will connect students with artists from the 40th Street Artist-in-Residence (AIR) program, which provides free studio space and in exchange asks residents to share their talents with the local community. This course is designated as an Academic-based Service Learning (ABCS) class, meaning that students will be evaluated partly on their work in the community outreach situation. Course registration is open to advanced undergraduates.

This course will explore the role of public spaces - streets, boulevards, parks and squares - in cities and their social uses. With the University of Pennsylvania campus and the City of Philadelphia serving as our laboratory, we will critically examine the evolution of the movement of corridors, open space and buildings of the urban landscape and their changing uses. Case studies of social spaces on campus and public open spaces in Center City will help inform our understanding of how public environment serves, well or poorly, the varying needs of diverse users. While graphic skills are not required, graphic means as well as writing will be employed to communicate critical thought, ideas, and conclusions.

Using Philadelphia as the site of students' praxis, this course explores the symbolic meanings and social production of urban life and culture in the nation's fifth largest city. This course is structured as a seminar with ethnographic background readings from Philadelphia and other urban settings to introduce students to the study of the city as a site of everyday practice, as well as training in conducting an ethnographic fieldwork project. The urban landscape provides an intensification of macro processes such as globalization. Such processes and how humans experience them are more easily studied and understood in an urban setting.

The class will explore social relational and cultural themes such as the ethnic city, the gendered city, the contested city, the sacred city, the global city, and the aesthetic and expressive city. A diverse range of reading assignments, images, and videos will augment our understandings of urban life. Students will design and execute their own ethnographic fieldwork projects on an urban topic that interests them. Through step-by-step instruction throughout the semester, students will learn qualitative research techniques such as field notes, participant-observation, interviewing, and how to interpret their own data, so that they will be able to complete their semester project.

SM 516. (AFST516, ANTH516, GSWS516) Public Interest Workshop. (A) Suss.

This is a Public Interest Ethnography workshop (originally created by Peggy Reeves Sanday - Department of Anthropology) that incorporates an interdisciplinary approach to exploring social issues. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann's call for interdisciplinary cooperation across the University and to the Department of Anthropology's commitment to developing public interest research and practice as a disciplinary theme. Rooted in the rubric of public interest social science, the course focuses on: 1) merging problem solving with theory and analysis in the interest of change motivated by a commitment to social justice, racial harmony, equality, and human rights; and 2) engaging in public debate on human issues to make the research results accessible to a broad audience. The workshop brings in guest speakers and will incorporate original ethnographic research to merge theory with action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. This is an academically-based-community-service (ABCS) course that partners directly with Penn's Netter Center Community Partnerships.

SM 519. (PSCI519) Cities in Global Econ.
This course examines contemporary labor markets through two thematic lenses. One is the growing discussion of knowledge industries and "knowledge workers" and their importance to regional innovative capacity and competitive advantage in a global economy. The other is the persistent challenge of unemployment, underemployment and working poverty within metropolitan regions. In exploring these themes, readings for the class synthesize perspectives on work, labor markets and economic growth from economics, sociology, history and political science. Class lecture and discussion, supplemented by the occasional guest practitioner, will focus on translating academic research into knowledge that can be used in local economic and community development practice.

The United States leads the world in imprisonment. More than 2.3 million people are locked up in prisons and jails around the country, plus thousands more in immigrant detention centers. In this course, students will develop an understanding of the U.S. prison system and its widespread, differential impacts. We will utilize an inter-disciplinary approach that draws from critical theory, political economy, history, geography and sociology as well as critical race and gender studies. We will examine the social dynamics of incarceration and prison activism. Our readings and discussion will include detailed attention to matters of race, class, gender, and sexuality. This class will be a reading- and discussion-intensive seminar in which we will explore debates around the reform or abolition of prisons and the recent increase in public attention to the problem of mass incarceration. Students will learn about local prison activism and complete final projects that will focus on the mapping the carceral geography of Philadelphia.

SM 530. (URBS330) GIS Applications in Social Science. (A) Hillier.
This course will introduce students to the principles behind Geographic Information Science and applications of (GIS) in the social sciences. Examples of GIS applications in social services, public health, criminology, real estate, environmental justice, education, history, and urban studies will be used to illustrate how GIS integrates, displays, and facilitates analysis of spatial data through maps and descriptive statistics. Students will learn to create data sets through primary and secondary data collection, map their own data, and create maps to answer research questions. The course will consist of a combination of lecture and lab.

547. (ANTH547, EDUC547) Anthropology and Education. (C) Hall or Posecznick.
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.

SM 554. (URBS454) City Limits: The Impact of Urban Policy. (B) Goldstein, Stern. Prerequisite(s): Student must have taken a research methods course.
This course assesses the changing role of public policy in American cities. In the past, government often believed that it could direct urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - 'player' in a more complete, transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens.

This seminar uses a case study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region - including Philadelphia's Neighborhood Transformations Initiative and New Jersey's Camden Revitalization plans.

SM 560. (URBS460) School Reform and Public Policy. (A) Hershberg.
This course will examine how changes in the global economy require America's schools to educate all students to new and demanding standards, and will review the arguments why the current school system, designed for a different economy and a different century, must be fundamentally reorganized if the nation is to succeed in meeting its human capital development challenge. Topics covered will include school funding and governance, the precedent-breaking federal legislation, No Child Left Behind, and charter schools and the voucher movement. Students can effect real-world change through research designed to elaborate the comprehensive school-reform model developed at Penn's Operation Public Education, which is now being pilot in some of the nation's schools.

Open to PhD students, this scholar-oriented seminar explores how academic researchers from different disciplines define researchable questions, craft research designs, and contribute to knowledge through an examination of important and/or recently published books and monographs with an urban focus. Required of all first- and second-year CPLN doctoral students and those doctoral students enrolled in the Urban Studies Graduate Certificate Program, enrollment is limited to 15 students. Other doctoral students may enroll on a space available basis. Course requirements include completion of a major research paper on a topic selected in consultation with the instructor.

619. (EDUC619) Critical Perpectives in Contemporary Urban Education. (C) Schultz.
The focus of this course is the conditions for teaching and learning in urban public schools, current theories of pedagogy in urban education, and perspectives on urban reform efforts.

The ethnographic and sociological interpretation of urban life. Conceptual and methodological issues will be thoroughly discussed. Ongoing projects of participants will be presented in a "workshop" format, thus providing participants the opportunity of learning from and contributing to ethnographic work in progress. Selected ethnographic works will be read and assessed.
the Un

Immigrant and receiving communities in course examines the development of migration are varied and complex. This means that the dynamics and impacts of immigrant and receiving communities regions, and neighborhoods. The diversity yet controversial forces s

course will explore environmental equity abandoned industrial sites. In addition, the address remediation and redevelopment of taken by federal and state govern

ments to carry out an ethnographic site read and discussed. Students will be expected to carry out an ethnographic site study.

Dimensions of Brownfields in Old Industrial Cities. (M) Keene.

This course gives an overview of the genesis of the so-called "Brownfield" problem and of the various efforts that our society is taking to try to solve, or at least ameliorate it. The course will place the "Brownfield" problem in the broader context of the growth and decline of industrial base cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by federal and state governments to address remediation and redevelopment of abandoned industrial sites. In addition, the course will explore environmental equity issues.

SM 670. Ethnicity: The Immigrant City. (B)

Immigration is among the most important yet controversial forces shaping cities, regions, and neighborhoods. The diversity of immigrant and receiving communities means that the dynamics and impacts of migration are varied and complex. This course examines the development of immigrant and receiving communities in the United States. It surveys public policy

and community and economic development practices related to migration at the local, regional, national, and trans-national scale. Class readings, discussions, and visits to Philadelphia's immigrant neighborhoods explore themes including labor markets, housing experiences, political mobilization, civil society, cultural preservation, and the built environment.

The first half of the course surveys migration and community formation among a broad range of ethnic groups in different parts of the city and suburbs, mainly through history, sociology, and geography; the second half focuses on specific policy and community and economic development initiatives. The major class project will be a study of gentrification in Philadelphia's Chinatown with the community organization Asian Americans United, part of a multi-city Chinatown study in collaboration with the Asian American Legal Defense and Education Fund and colleagues in Boston and New York.

672. (EDUC672, FOLK672) Introduction to Ethnographic and Qualitative Research in Education. (C) Hall, Wortham.

A first course in ethnographic participant observational research, its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course.

706. (ANTH704, COML706, EDUC706, FOLK706) Culture/Power/Subjectivities. (C) Hall. Prerequisite(s): EDUC 547.

This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.

SM 713. (EDUC712) Comprehensive School Reform as Applied Public Policy. (C) Hershberg.

This course examines how K-12 education policy is designed and implemented in the United States. It uses a systems analysis as the framework for looking at who makes what kinds of demands on the education policy system, how these demands are placed on the policy agenda, the decision making process, and resulting education policies and policy outcomes. The course pays particular attention to the roles of federal, state and local governments in education policy, and the impact of our intergovernmental system on the design and implementation of policy. Students will also examine major education policies and debate key education policy issues that arise at each level of government.

Exploration of the intended and unintended consequences of public policy pertaining to land use, transportation, housing, education, growth management and economic development.
VISUAL STUDIES (AS) {VLST}

We live in an increasingly visual culture. New technologies and philosophies of vision influence how we see ourselves and our world, and how we think about seeing itself. Students can engage these developments through a multidisciplinary course of study, connecting the theory, practice, and culture of seeing.

L/R 101. Eye, Mind, and Image. (C)
May be counted toward the Hum/SocSci or NatSci/Math Sectors. Class of 2010. Hatfield/Leja. Fulfills General Education in Sectors IV (Humanities and Social Sciences) and VII (Natural Science and Mathematics). This course is required of all Visual Studies Majors (stage 1).

Visual Studies 101 provides an introduction to the collaboration of eye, mind, and image that produces our experience of a visual world. How and what do we see? How do we perceive color, space, and motion? What is an image? Does seeing vary across cultures and time? What can art tell us about vision? Is there a 21st-century form of seeing? This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields.

This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields.

102. Form and Meaning. (C)
Bendtsen/Hyland. This course is required of all Visual Studies Majors (stage 1 or 2).

This course will introduce students to the theory and practice of image making, focusing on the development of observational skills and analytical thinking. We will look at conventions of artistic representation across time and cultures; discuss types of visual information and modes of formal language; explore visual narrative techniques; and seek to expand our understanding of the role images play in our culture.

We will look at conventions of pictorial representation across time and cultures; discuss types of visual information and modes of formal language; explore visual narrative techniques; and seek to expand our understanding of the role images play in our culture.

103. 3 Dimensions: Time and Space. (C) Freedman/Neighbor. This course is required of all Visual Studies Majors (stage 1 or 2).

Through studio projects, readings and class discussion, this class will begin to address, both conceptually and physically, basic 3D structures and translations between 3D and 2D, as well as materiality, experiential phenomena, light and time-based processes. The interconnection between mediums in our cultural climate employs a wide range of tools, processes, and ideas. It is imperative that visual studies students recognize and think through these connections. The work produced and ideas confronted in this class will facilitate discussions and constructive criticism on the fundamentals of space and time via the experiential, conceptual, and the formal as essential elements of meaning.

The interconnection between mediums in our cultural climate employs a wide range of tools, processes, and ideas. It is imperative that visual studies students recognize and think through these connections. The work produced and ideas confronted in this class will facilitate discussions and constructive criticism on the fundamentals of space and time via the experiential, conceptual, and the formal as essential elements of meaning.

L/R 211. (PSYC111) PERCEPTION. (C) Staff. Topics for this course vary each semester. Dept permission required. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

SM 212. (PSYC311) Research Experience in Perception. (C) Rust. Prerequisite(s): One semester of statistics, and one of the following: PSYC 111, 149, 151, 217, or permission of instructor. Dept permission required. Undergraduates only. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

In this research course, students will begin by first replicating earlier experiments to measure human visual memory capacity. After several class discussions to discuss ideas, each student will design and conduct their own experiment to further investigate visual and/or familiarity memory.

L/R 217. (BIBB217, PSYC217) Visual Neuroscience. (B) Rust. Prerequisites: PSYC 001, COGS 001, or VLST 101. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.

L/R 221. (PHIL244) Introduction to Philosophy of Mind. Domotor, Miracchi. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

In this course, we will explore philosophical questions concerning the nature of minds. In seeking to understand the nature of minds, philosophers and psychologists have often used metaphors drawn from the forms of technology available to them. Leibniz once described the mind as a mill, while Freud compared the mind to a hydrolytic and electromagnetic system. In our own time, many have followed Alan Turing's proposal and have viewed the mind as a special kind of computer; indeed, this "Computational Theory of Mind" forms the foundation for much work in contemporary cognitive science. In this class, we will explore the extent to which the computational theory of mind can adequately characterize the distinctive capacities involved in representing an external environment and having conscious experiences that is displayed by minds in general and human minds in particular. Although an introductory class in philosophy or logic will aid students' understanding, no prior familiarity with the philosophy of mind or cognitive science will be presumed.

SM 222. (PHIL330) Philosophy of Perception. (M) Hatfield. Department Majors Only. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

Taking our perceptual experience as a given, what causes it? In a realistic mood, we accept that objects in the environment, or in the "external world," cause us to have the perceptual experiences that we do (as of a table with a food, or as of a garden with flowers in it). Yet on this realistic view, our perception is the result of a causal chain that leads from object to eye to brain to experiences, and we are only given the last element: the experience. How do we really know how our experiences are caused, and where do we get the idea that...
they are casued by an external world of physical objects? The seminar will focus on the problem of the external world as examined by David Hume, Thomas Reid, G. E. Moore, and Bertrand Russell, along with recent authors.

SM 223. (ARTH667, PHIL223, PHIL423) Philosophy and Visual Perception. (C) Hatfield, Connolly. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

In this course, we'll use the biology, psychology and phenomenology of vision to explore philosophical questions about color, such as these: Color vision helps us get around in our environments, but in what sense is it a window onto reality, if it is? Are colors properties of objects, or are they inherently private, subjective properties of minds? What can non-human forms of color vision teach us about the nature of color, and how should we empirically study color vision? Do we need to see in color to understand it? How do our ordinary ways of talking and thinking about colors relate to the experiences we have in color? How does color vision figure in aesthetic judgment? And to what degree can it be influenced by learning, or by social biases like sexist or racist prejudices?

L/R 232. (ARTH102, EALC013) Art and Civilization in East Asia. (M) Arts & Letters Sector. All Classes. Davis/Steinhardt. This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

Introduction to major artistic traditions of China and Japan and to the methodological practices of art history. Attention given to key cultural concepts and ways of looking, in such topics as: concepts of the afterlife and its representation; Buddhist arts and iconography; painting styles and subjects; and more broadly at the transmission of styles and cultural practices across East Asia. Serves as an introduction to upper level lecture courses in East Asian art history cultures. If size of class permits, certain sessions will be held in the University Museum or the Philadelphia Museum of Art.

234. (ARTH104, SAST200, SAST500) Introduction to Art in South Asia, (C) Arts & Letters Sector. All Classes. Meister. This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as 'traditional' or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe and diverse. This course introduces the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.

235. (AAMW635, ARTH235, ARTH635, NELC285, NELC685) Introduction to Visual Culture of the Islamic World. (C) Humanities & Social Science Sector. Class of 2010 & beyond. Holod. This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.

L/R 236. (ARTH294, ARTH694, ENGL059, GSWS294) Art Now. (M) Silverman. This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

250. (FNAR250, FNAR550) Introduction to Printmaking. (B) Staff. Course Fee $75.00.

The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.

251. (FNAR271, FNAR571) Introduction to Photography. (C) Course Fee $75.00.

This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the
semester for reservation and checkout from the photography equipment room.

252. (FNAR145, FNAR545) Sculpture Practices. (C) Staff.
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more.

This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing.

260. (FNAR150) Photography Practices. (C) Staff. Course Fee $75.00.
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student's aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making.

261. (CIMS061, FNAR061, FNAR661) Video I. (C) Staff. Course Fee $75.00.
This course provides students with the introductory skills and concepts related to producing short works that explore the language of the moving image. Students will learn the basics of cinematography and editing through a series of assignments designed to facilitate the use of the medium for artistic inquiry, cultural expression and narrative storytelling, through both individual and group projects.

264. (FNAR264, FNAR636) Art, Design and Digital Culture. (C) Course Fee $75.00.
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture.

265. (FNAR340, FNAR640) Digital Photography. (C) Staff. Course Fee $75.00.
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department.

267. (ARTH301, VLST501) What is Visual Studies?. (C) Staff.
Prerequisite(s): VLST 101 or Instructor Permission. This course is required of all Visual Studies Majors (Stage 2). Visual Studies 267 is a seminar-format course that challenges students to develop independent ideas about how the eye, the mind and the image that is created therein, all work together to inform our conception of the world at large. Rather than present a unified viewpoint, the course asks the question, "What is visual studies?" by examining parallel and sometimes antagonistic approaches to the ways that human beings understand sight and the concept of visibility. Over the course of the semester, students will discuss and write about various approaches to vision, examining this contested field through the lenses of several disciplines -- including psychology, philosophy, and art history. By parsing and assimilating diverse ideas, students will decide for themselves what are the most pertinent and relevant approaches to the various avenues of research that present themselves in the emerging interdisciplinary field of Visual Studies.

268. (ARTH303, VLST503) The Rise of Image Culture: History and Theories. (C) Leja.
This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major. Images are ubiquitous in the cultural life of the 21st century, yet only two centuries ago they were rare. When and how did pictures come to permeate daily life? How has ordinary experience--psychological, social, cultural, intellectual--changed as a result? This seminar addresses these questions through close reading of influential historical and theoretical writings about the rise of image culture and its effects, including Benjamin, Debord, McLuhan, Mitchell.

269. (VLST303, VLST505) What is an Image?. (C) Verstegen. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.
The course explores various concepts of images. It considers natural images (as in optics), images as artifacts, virtual images, images as representations, and works of art as images. Themes to include: the image controversy in cognitive science, which asks whether some cognitive
representations are irreducibly imagistic; the question of whether some images resemble what they represent; the development of the concept of the virtual image and of three-dimensional images; the notions of pictorial representation and non-representational images in art. Readings from C. S. Peirce, Nelson Goodman, Robert Hopkins, Dominic Lopes, W. J. T. Mitchell, John Kulvicki, and Mark Rollins, among others.

SM 395. Senior Project. (E) Staff. This course is required of all Visual Studies Majors. (Stage 4) Seniors only. Permission of Instructor Required.

399. Independent Study. Staff. See department for appropriate section numbers.

SM 501. (ARTH301, VLST301) What is Visual Studies?. (C) Staff.
Visual Studies 301 is a seminar-format course that challenges students to develop independent ideas about how the eye, the mind and the image that is created therein, all work together to inform our conception of the world at large. Rather than present a unified viewpoint, the course asks the question, "What is visual studies?" by examining parallel and sometimes antagonistic approaches to the ways that human beings understand sight and the concept of visuality. Over the course of the semester, students will discuss and write about various approaches to vision, examining this contested field through the lenses of several disciplines -- including psychology, philosophy, and art history. By parsing and assimilating diverse ideas, students will decide for themselves what are the most pertinent and relevant approaches to the various avenues of research that present themselves in the emerging interdisciplinary field of Visual Studies.
